

## **Appendix 1: City Plan 2030 Schedule 4 Forms**

- 1 Introduction and Aims
- 2 Spatial Strategy
- 3 Delivery of the Strategy
- 4 Proposed Sites - Central Edinburgh
- 5 Proposed Sites - North and East Edinburgh
- 6 Proposed Sites - West Edinburgh
- 7 Proposed Sites - South West Edinburgh
- 8 Proposed Sites - South East Edinburgh
- 9 Suggested Additional Greenfield Sites
- 10 Other Sites
- 11 Design and Placemaking Policies
- 12 Density
- 13 Sustainable Design
- 14 Historic Environment Policies
- 15 Natural Environment Policies
- 16 Blue Green Infrastructure, Water and Amenity Policies
- 17 Open Space Policies
- 18 Blue Green Network Proposals
- 19 Housing Supply Target and Land Requirement
- 20 Assessment of Housing Land Supply
- 21 Housing Land Supply Policy
- 22 Housing Development Policy
- 23 Affordable Housing
- 24 Mixed Communities
- 25 Student Accommodation
- 26 Housing Policies
- 27 Infrastructure Delivery and Developer Contributions
- 28 Infrastructure Delivery - Community Facilities
- 29 Infrastructure Delivery - Education
- 30 Infrastructure Delivery - Transport
- 31 Transport Strategy
- 32 Transport Policy
- 33 Transport Proposals
- 34 Resources and Services
- 35 Economy Policies
- 36 Commercial Development
- 37 Economy Proposals
- 38 Retail and Leisure
- 39 Other Issues - Consultation, Engagement and Representation

<b>Issue 1</b>	<b>Introduction and Aims</b>	
<b>Development plan reference:</b>	Part 1 Introduction and Part 2 Strategy p8-p38	<b>Reporter:</b>
<b>Body or person(s) submitting a representation raising the issue (including reference number):</b>		
<div> Adam Richardson (0590)  Alexander Sutherland (0193)  Andrew Anderson (0535)  Andrew Heald (0566)  Andy Inglis (0138)  Anna Brand (0742)  Anne Wellman (0229)  Archie Clark (0003)  AREAA (0358)  Arnold Clark Automobiles Ltd (0750)  Arnold Myers (0758)  Astley Ainslie Community Trust (0318)  Bo Adams (0363)  Brian Tiplady (0641)  Brian Smith (0333)  Carol Duncan (0143)  Carolyn Wilson (0134)  CBRE Global Investors (0644)  Cockburn Association (0777)  Cramond &amp; Barnton Community Council (0243)  Crosswind Developments (0184)  Dave Berry (0463)  David McGowan (0168)  David Price (0224)  Derek Mitchell (0171)  Des Hackett (0125)  Desmond Docherty (0485)  Douglas Tharby (0148)  Dr David Houston (0655)  Dr Helen Forrest (0315)  Dr Jane Gear (0487)  Dr Tim Duffy (0503)  Dunedin Canmore Housing Limited (0766)  Edinburgh Access Panel (0620)  Edinburgh BioQuarter Partners (0478)  Edinburgh Chamber of Commerce (0379)  Edinburgh Napier University (0731) </div> <div> Michelle Mckinley (0432)  Mike Richardson (0109)  Mr John G. --	--

<b>Provision of the development plan to which the issue relates:</b>	This section of the Plan sets out the introduction, strategy, aims and outcomes of City Plan 2030.
<b>Planning authority's summary of the representation(s):</b>	
<p><u>Adam Richardson (0590) – support</u></p> <p>Supports City Plan Aims 1 and 2 as they are fundamental to Edinburgh's sustainable development</p> <p><u>Anne Wellman (0229) – support</u></p> <p>Support the retention of all green space in Edinburgh.</p> <p><u>Brian Smith (0333) -support</u></p> <p>Considers that the 20 minute walkable neighbourhoods are so important to reducing car use and the various positives that generates as well as promoting society based around neighbourhoods.</p> <p><u>Carol Duncan (0143) -support</u></p> <p>Supports City Plan 2030, including local place plans, encouraging active travel routes and walkable neighbourhoods. Supports climate mitigation and sustainability City Plan policies. Concerned about the energy use of buildings and the energy requirements of building new buildings.</p> <p><u>Carolyn Wilson (0134) -support</u></p> <p>Support the retention of all green belt Spaces, Local Nature Conservation Sites, allotments and heritage sites.</p> <p><u>Dave Berry (0463) -support</u></p> <p>Supports strategy and aims. Net zero and 20 minute neighbourhood objectives are vital and considers that the Plan addresses this.</p> <p><u>David Price (0224) -support</u></p> <p>Supports strategy and aims and feels passionately that access to green space is essential for everyone's physical and mental well-being. Areas like Midmar Paddock and Cammo Park are there for everyone.</p> <p><u>Desmond Docherty (0485)-support</u></p> <p>Strongly support the commitment to sacrifice no green belt land for development in plan period. LEZ scheme needs to be well enforced with appropriate pricing.</p> <p><u>Derek Mitchell (0171) -support</u></p> <p>Supports the policies aims of protecting greenspace with Edinburgh.</p> <p><u>Des Hackett (0125) -support</u></p>	

Strongly supports the Plan in its emphasis on protecting greenfield land, measures for more sustainable housing, transport etc and the protection and enhancement of the natural environment.

Dunedin Canmore Housing Limited (0766)-support

Agrees that the City Plan reflects national, regional, and council strategies.

Agrees that the city must also be part of a green recovery by being proactive in reversing biodiversity loss and maximising the wider benefits of nature through improving greenspaces as well as the accessibility of these spaces to enhance physical and mental wellbeing.

Edinburgh BioQuarter Partners (0478) -support

Broadly support all of para 2.2. Notes that the Edinburgh BioQuarter will encompass many, if not all, the listed aims. Notes that EBQ's partner's Place Strategy 2021 are consistent with the aims listed in para 2.2 as demonstrated in table 1 of the attached submission.

Fiona Macleod (0505) -support

Supports strategy and aims and emphasises the benefits of greenspace for wellbeing.

Fiona Wragg (0780) -support

Ensuring that all residents of Edinburgh, regardless of income or situation, have access to services, green space and decent affordable housing is essential. This plan acknowledges that need for equity of access, as well as the need for change.

Fife Council (0514)

No objection to plan.

George W S Heatley (0009) -support

Supports plan as green spaces are beneficial to the mental and physical health of residents and visitors. The extent of greenspace provided in the Plan is proportionate to the urban area of the city.

Gordon McKay Brown (0573) -support

Support zero and sustainable transport strategy.

Graham Miller (0158) -support

Supports the aim of "Directing new development to, and maximising the use of, brownfield land rather than greenfield land..." the long-term development strategy for Scotland, in particular Outcome 3. This is important in high density urban areas to meet the Programme for Government objective of promoting lifelong health and wellbeing. Supports the outcome that Edinburgh is a sustainable city which supports everyone's physical and mental wellbeing as this is vital to ensure sustainable communities and equality of outcome for different groups and places. Notes that there are two areas of greenbelt within the city, Holyrood Park; and Blackford and Braid Hills, supplemented by larger and smaller

areas of greenspace and these must be preserved, and the use of brownfield land maximised. Support in particular the Outcome that Edinburgh is a sustainable city which supports everyone's physical and mental wellbeing. The green belt is important for this.

Hazel Macaulay (0178)-support

Green spaces within the city are crucial for resident's health and wellbeing, as evidenced during the pandemic. Strongly support any proposals which preserve green spaces.

Iain Morris (0431) -support

Supportive of strategy, particularly of site BGN 26 Green Blue Network proposal.

Ian Ross (0423) -support

Support strategy and aims but expresses disappointment at how long it has taken to amend piecemeal approach to development around the city.

Ian Thompson (0406) -support

Supports strategy and considers the need to grow as housing needs increase is important but it must be done with a view to protect what makes Edinburgh such a special place to live, work and play and better use of brown field sites is vitally important.

Jim Baird (0001) -support

Support for 20 Minute neighbourhoods. Support for local businesses would improve the sense of place in 20 minute neighbourhoods.

Judith Webber (0104) -support

Supports strategy and think it is really important that green spaces are valued and maintained in the city. They contribute hugely to the mental and physical health of the population as well as being vital for the environment, climate control and biodiversity.

Kim Denholm (0294) -support

Supports the retention of as much green space in Edinburgh as possible.

Lady Road Investment S.A.R.L. (0625)-support

Supports many of the policies in City Plan 2030 relating to the use of brownfield land and encourages a flexible approach to the type of new uses supported on these sites as they come forward. Supports Aims 1, 2 3, 4, 8 and 10.

Liberton & District Community Council (0084) -support

Supports section of the plan.

Michael Adrian Hall (0261) -support

Agree in principle with the Introduction to City Plan 2030

National Galleries of Scotland (0725) -support

Supports the aims of City Plan 2030 particularly aims 1, 2 and 4. These align well with NGS's proposals to redevelop The Art Works, Granton site.

Neil Ross (0610) -support

Supports spatial strategy

Nicholas Hepworth (0052) -support

Supportive of protecting greenspaces in Edinburgh, improving sustainability performance, and improving the wellbeing of the population. Edinburgh exhibits global leadership with the Plan by protecting greenspace and allowing development only on brownfield sites; reducing traffic; increasing growing areas for communities; community heating; improving insulation; provision of recreational facilities for young people.

Nikki Sinclair (0337) -support

Supports cross cutting policies around net zero and 20 minute neighbourhoods. Supports policies around protecting green belt in order to deliver objectives of City Plan.

Portobello Community Council (0206) – support

Portobello Community Council consulted our local community on the Main Issues Report, focussing on where new housing should be delivered. Response indicated support (71%) for prioritising brownfield development. This is reflected in the proposed plan.

Scottish Water (0342) -support

Support introduction, aims, strategy and outcomes.

Sheila Chapman (0157) -support

Support the plan, especially to protect places of value and to preserve green space to ensure a good quality of life for everyone. Considers green belt areas important wellbeing and it is extremely important to protect local nature areas.

Shelagh Sharp (0111) -support

Supports strategy and 20 minute neighbourhoods.

Tiger Developments Ltd (0602), Arnold Clark Automobiles Ltd (0750)– support

Supports Aim including 1, 2, 3, 4, 8 and 10.

Tony Gray (0291) -support

Supports City Plan 2030 in general. The previous LDP allowed too much green belt land to be developed, particularly in SE Edinburgh, allowed too much development without supporting infrastructure, and delivered insufficient affordable housing.

Visit Scotland (0689) -support

Pleased to see recognition of the need to develop areas of the city where tourism development can still expand, for example, the Waterfront which will allow for a further distribution of visitors to the city in peak times. Agree with outcomes that seek to protect

the historic and natural environments from inappropriate development and welcome the recognition that both environments play an important role in enhancing the quality of life of residents and the city's appeal as a place for tourism and investment. Welcomes the inclusion of strategic projects and safeguards for active travel.

#### West Town Edinburgh Ltd (0660) -support

Support aims that: create 20-minute walkable neighbourhoods; a 'place based' approach to development; deliver new communities in West Edinburgh; create sustainable communities, build net-zero; mitigation and adapt to Climate change; Integrate infrastructure with place making; Provide an appropriate level of affordable housing; and Deliver on Edinburgh's key economic land use needs. Supports the principle of addressing the impacts of climate change, contributing to the delivery of a net zero city by 2030.

### **Plan Format and Mapping**

#### Archie Clark (0003)

Notes the similarity in paragraph 2.141 between the first and fourth sentences.

Notes that maps on page 23 are difficult to read. Notes that there is no map of the 22 Special Landscape Areas being designated, as referred to in paragraph 2.66.

Plan is complex and difficult to use, discriminating against those without access to a computer and internet. Change to a single plan covering the whole Edinburgh area creates a unwieldy document. The Plan needs to be made much more flexible for example with a inclusive 'strategic plan' for general items and truly 'local plans' for the separate parts of Edinburgh. The local parts could be dealt with by separate local town halls who have an understanding of local issues and react more quickly. Document is hard to read and full of jargon.

Considers sustainable development definition should be revised so that it includes reference to the 13 principles included in the Scottish Land Use Strategy.

#### Crosswind Developments (0184)

Quality of both Map 1 and Map 2 is poor and renders the map to a degree unreadable. The maps in this section would benefit from having policy references to aid the reader.

#### Dr Helen Forrest (0315)

The whole plan is much too long and complicated. The diagrams are much too difficult to read and there is too much jargon in the whole document.

#### Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Site briefs should contain all information for that location in one place – including place names, map references, project references, housing allocation and any other reference numbers associated with that place.

#### Edinburgh World Heritage (0339)

Reference should be made at paragraph 3.3 as to the importance and method of engaging the local community and wider stakeholders in the development of principles for development of their areas.

Note that there are a number of references relevant to the historic environment missing within this glossary and advise that reference is made to previous Council documents to include and define relevant historic environment terms.

Note numerous good references to the skyline study and protected city views in Appendix D however advise that appropriate overarching reference is made in the appropriate place within the Plan referring to the Edinburgh Design Guidance, associated study and views for protection.

#### Hallam Land Management (0615)

Map 1 Spatial Strategy (Illustrative), appears to be inaccurate in parts and Map 2 Spatial Strategy (Technical) is intelligible and lacks clarity in geographical and policy terms.

#### Juniper Green & Baberton Mains Community Council (0306)

Plan is difficult to comment on as there are variations in layout, different map types, missing maps, maps that are too small to read, and maps lacking annotation, inconsistency in listing typos, complex sentences prohibiting understanding and buzzwords. Plan formatting, grammar, maps and explanations should be improved.

#### Leith Central Community Council (0614)

Comment that there is a repeated sentence at paragraph 2.141. Consider the Spatial Strategy - Map 2 hard to read. Notes that maps on p17, p19 and p21 are not clearly identified/labelled on the online version and comments they are hard to read.

#### NatureScot (0528)

Map 6 and on-line maps do not show the city's green blue network and as currently shown consider it difficult for individual proposals to "protect, enhance and link to" as information on the city-wide network is not available.

#### New Town and Broughton Community Council (0254)

Proposals maps are complex and detailed and ability to access via consultation hub difficult.

#### Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

To ensure that the local development plan fully incorporates the overall principles of "Creating Places" and "Designing Streets" the Plan should make reference that the Place Briefs, to be prepared, will incorporate the detailed design considerations as set out in "Designing Streets".

#### Southside Community Council (0781)

The Plan is too long and uses too much text and is not in line with planning reforms in 2006 and 2009 which aimed to create shorter more user-friendly Local Development Plan documents.

## **Introduction**

### Cockburn Association (0777)

Supports many areas of City Plan 2030, however climate impact and preparedness, Covid and post-Covid resilience and Brexit are insufficiently considered. Revisions should be made to the Plan to account for these factors. Plan needs to be applicable towards the end of its lifespan.

Supports 20-minute neighbourhoods, however more detail on what this will mean in practice and how it will be delivered is necessary.

### Dr Jane Gear (0487)

Introductory section is incomplete and requires paragraphs specifically to explain what measures exist to protect or enhance mental and physical wellbeing of current residents. No mention which directly supports the use of the term mental wellbeing or protection from the impact of negative change. Limited guidelines about architectural policies and aesthetics, but nothing about protection of existing qualities of properties which support the psychological and emotional needs of wellbeing. Consider the Plan includes development which would indubitably impact negatively by increasing stress by taking away or diminishing existing amenities.

### Elspeth Wills (0293)

Considers being a good place to live should have greater priority and that comments to Choices of the Grassmarket Residents' Association have not been addressed by City Plan.

Supports City Plan but consider it does not include measures to improve the lives of residents of the Old Town. Concerned about the commercialisation of public space in the Old Town, the conversion of housing to short-term lets in the city centre, and negative consequences on the area. Upset about the loss of public transport. Considers policies need to be applied more strictly. Considers there has been no action by the Council to prevent over tourism, and City Plan does not change this.

### Grange/Prestonfield Community Council (0192)

Consider that the Plan repeats aims of the current LDP and that these have not been achieved in part due to external factors. Considers that the introduction should state that an early review of City Plan will consider and learn lessons from previous LDP policies. Period of plan should be stated throughout the document.

Support the aims set out on p8 and strategy on p9 and p10. Notes that some strategies referred to are not finalised and that there will be a need to ensure continued alignment with approved strategies.

### Gilmerton & Inch Community Council (0716)

In favour of introduction but is concerned that it is unclear what many statements mean. Paragraph 1.5 and 1.6 are not being reflected in the Gilmerton & Inch area currently, and are similar to those in the 2016 LDP. There needs to be more detail provided about the statements in the plan, and all parties must be held accountable for making it work.

#### Hallam Land Management (0615)

Objects to City Plan as quality of life is predicated on economic growth and competitiveness, and a balanced approach to sustainable development is not taken, which is statutory requirement. Paragraph 1.2 is confusing and contradictory.

Sections of the community will not agree that the Plan will promote a city that is 'fair', particularly strategic house developers, hotel developers, tourist accommodation operators and taxi drivers. The Plan should recognise the importance of private housing and its economic and social benefits.

A net zero carbon city by 2030 is laudable but has costs. The Plan should not prevent new development. Parts of the goals of the vision are outwith the control of planning legislation and regulation.

Choices 12 has been unduly amended without due consideration of alternatives. There is insufficient evidence to justify City Plan 2030, and as such cannot accept it as the settled view of the Council. Procedural irregularities need to be tested at Examination. These irregularities refer to SEA / Environmental Assessments, Integrated Assessment and Socio- Economic Assessment of the proposed 'brownfield first' strategy. There has not been a Risk Assessment and the implications for Economic Impact have not been analysed. Costs associated with the strategy are not accounted for or integrated in the Action Plan. Concerned that CEC underestimates housing, economic development and infrastructure pressures, that City Plan 2030 will not attract necessary investment, and that many non-place policies are restrictive, constraining potential sites such as Craigiehall. Need to consider importance of range of tenures.

#### Julie Robertson (0210)

The reasons for poverty need to be addressed as well as emphasising it's importance. The Plan should emphasise training for people who can work but don't and training for people to enable them to do more productive jobs. People who can work should be able to work nearby to where they live. Worried about high density living and noise amenity impacts of living in apartment blocks.

#### Juniper Green & Baberton Mains Community Council (0306)

Concerned there is a lack of consideration of existing infrastructure and how new developments will integrate. Unable to develop a clear idea of Edinburgh in 2030 is the city plan is formed, as the Plan references other documents without providing links to them. Plan only refers to new development, ignoring existing development. Problematic where old buildings will require retrofitting to achieve the "sustainable and net zero city" goal. Too many qualifying statements are attached to categorical statements.

#### Leith Harbour and Newhaven Community Council (0776)

Supports introduction subject to changes being made.

Leith Links Community Council (0617)

The Plan should show it is cognisant of the impact of the pandemic, which has changed working patterns, the relationship between people and places, and our understanding of 'the local', changes to the local and national economy towards a focus on wellbeing away from measurement by GDP, community wealth building, local governance review, flexibility and responsiveness.

Supports plans ambition, but unrealistic ambitions present risks to credibility. Without detail of how plan will result in net zero emissions by 2030, including annual progress milestones, the ambition will have to be met by carbon offsetting measures which are not explained. Eliminating poverty by 2030 is misleading as poverty is caused by factors out with the control of Council.

Barriers to meeting ambitions understated. A public interest test should be implemented Compulsory Purchase Orders and rigorous monitoring of private developer commitments is required.

Affordable housing objectives cannot be delivered by the private sector, and Local Place Plans require additional consideration in the plan. At Seafield the Plan indicates that local communities will be consulted on the Place Brief but this is inadequate and insufficient, local communities have been working for two years on a masterplan. The four community councils instead should benefit from additional opportunities beyond standard consultation to shape the area, as described in NPF4.

Concerned that current areas of mixed use, will be replaced with 'housing-led mixed use' which is code for extremely dense housing with a few small, unsuitable, and unaffordable units. Concerned that Leith will change into a dormitory commuter corridor, and worried about where existing businesses will relocate to.

Para 1.4. is laudable, but unrealistic and misleading. There are in many cases no indication of how these aims will be delivered. It is unclear where the money to pay for the aims will come from. Developer contributions are unlikely to be sufficient. Council needs to intervene substantially in the market to achieve City Plan's goals, and there is no mention of this.

Para 1.5 The word communities is missing. Houses are not homes unless they are in a community, and locations and neighbourhoods are not communities without proactive efforts Communities consist of many different uses. Concerned about silo thinking in the Plan

Regarding Paras 1.5, 1.6 and 1.7 there needs to be evidence of greater commitment to community consultation and coproduction.

Mactaggart & Mickel Homes Ltd (0312)

Ensuring a sufficient range of new homes of all tenures is an essential challenge which must be met. Request that the role of the private sector in the economic success of the city is recognised within the introduction.

#### Melford Developments Ltd (0308)

Objects as City Plan is unambitious, will not create a more sustainable or prosperous city, contains many unnecessary policies that create barriers and difficulties for developers, will further complicate a depleted planning service, and will make development management decisions more difficult, costly and lengthier. The economic value of the construction industry in the city is underestimated and City Plan will have negative consequences for it.

#### Mr T Klan (0307)

Section should emphasise housing and employment provision to allow economic growth and resilience. Introduction does not reflect the Plan approach which lacks vision and does not reflect the importance of market housing and land development for economic development and social goals. Concerned that the Council underestimates housing and economic development pressures in the city, and with City Plan will not attract sufficient investment whilst being too restrictive regarding development on greenfield sites. City Plan contains many unworkable policies that are regressive and belong in guidance.

#### SEPA (0012)

Support introduction, approach to net zero and integration with other strategies. Suggest that the plan's 'regenerative approach' should be made implicit in opening paragraphs. Refers to December 2020 update to Scotland's 2018 -2032 Climate Change Plan and consider this sets the framework for achieving net zero and adapting to climate change through the plan.

#### Sergey Gorobets (0414)

Consider Low Emission Zone to be waste of time. Questions why 20,000 homes are being built in in Edinburgh if the space is very limited, contrary to other areas. Seeks definition of affordable and low cost housing. Considers places of value are not protected. Considers that if Edinburgh cannot grow the growth should be moved to other locations. Plan is too large, with too many non-specific proposals. Too many buzzwords. Development in the green belt, should be prevented. Consider policy which does not take carbon footprint of manufacturing and recycling into account is a political gesture. Questions why the Plan is expanding Edinburgh rather than addressing existing city.

#### Southside Community Council (0781)

Concerned that whilst addressing poverty and inequality is a key aim, that is inadequately addressed despite affordable housing provision and access to greenspace policies.

#### Tarmac (0244)

Objects to City Plan as quality of life is predicated on economic growth and competitiveness, and a balanced approach to sustainable development is not taken which is statutory requirement. Paragraph 1.2 is confusing and contradictory.

Sections of the community will not agree that the Plan will promote a city that is 'fair', particularly strategic house developers, hotel developers, tourist accommodation operators and taxi drivers. The Plan should recognise the importance of private housing and its economic and social benefits.

A Net Zero carbon city by 2030 is laudable but has costs. The Plan should not prevent new development. Parts of the goals of the vision are outwith the control of planning legislation and regulation.

The overall aims and objectives of the Plan should not suppress the supply of market and affordable housing or the need for high quality employment locations. Some of the issues raised as part of the vision related to the alleviation of poverty and access to employment are outwith the control of planning and reliant on other primary legislation.

The Friends of Midmar Paddock, Edinburgh (0121)

Broadly supportive of City Plan. The Plan should indicate where development should not happen. Cannot find reference to Braid Hills in the Plan. Notes that developers have bought land in the Braids area, indicating developers believe that green belt status is insufficient to prevent development there.

Thomas Tierney (0400)

Vague proposals and no up to date costing of proposed projects. Proposal is out of date and overtaken by the effects of the pandemic on industry and travel patterns.

Scottish Wildlife Trust Lothian Group (0560), Dr Tim Duffy (0503)

Suggest Council's Climate and Biodiversity Emergency declarations are included in the introduction.

University of Edinburgh (0464)

Support ambition for a sustainable city, that improves health and wellbeing by encouraging. Active Travel and reducing unnecessary car travel, aligning with the University's own strategy and partner objectives. The Plan must be flexible, reflecting current needs while accounting for viability and deliverability. Supports the greenbelt, however, site specific factors and assessment need to reflect changing circumstances. Supports carbon neutral building aims. Sustainability is more than this however. Supports the promotion of health and wellbeing, including access to green space, improving of biodiversity and active travel; 20 Minute Neighbourhoods; Active Travel Routes and public transport and active travel network safeguards. Given the pace of change and reflecting the proposed 10 year lifespan of the plan, it is impossible to capture all eventualities in terms of future needs of the University. It is therefore critical that the content of the Plan is viewed with a need for flexibility, and to allow review of approaches where appropriate to reflect current needs whilst balancing viability and deliverability pressures.

William Moyes (0305)

Overall the Plan is not a good document. Maps very hard to follow, few specific KPIs, many of the Council's will require the cooperation of others. No clear identification of the role other agencies such as NHS will play in delivering plan. Cost to the Council of the plan's many proposals and source and availability of funds are barely mentioned. There is no risk analysis. There is no assessment of the impact of the Covid-19 pandemic. Not confident that much of the Plan will be delivered.

Wright PDL (0078)

Economic and social benefits of house building need to be restated.

**Aims**

Andrew Anderson (0535)

Considers plan objectives are not realistic, plan does not give enough detail of how they will be achieved and what the measurable targets are around net zero, poverty and 20-minute neighbourhoods.

Anna Brand (0742)

Considers net zero targets are not enough if they rely on offsets to compensate for high emissions elsewhere.

Andy Inglis (0138)

Edinburgh doesn't need to grow. Considers Edinburgh should aim to have as good active travel and public transport infrastructure as Paris and aim 1 should be more ambitious than providing "better" active travel infrastructure.

Archie Clark (0003)

Agrees with aims but notes the mobility difficulties of some communities of people.

Arnold Myers (0758), Jennifer Hess (0771)

Plan should prioritise preservation of open space over development

AREAA (0358)

Supports aim 1 and 4. Supports aim 2, however urges that where greenfield development within the city would meet an identified need, while meeting other objectives it should be considered. Supports aims 5 and 8, however this is qualified by reference to detailed comments elsewhere.

Bo Adams (0363)

Considers plan not bold enough and all new developments need to have shops, restaurants, schools GPs, small shops.

Brian Tiplady (0641)

Supports 20-minute neighbourhoods but public transport network should also be prioritised

CBRE Global Investors (0644), Nuveen Real Estate (0564), Nuveen Real Estate (0734)

Suggest amendment to aim 10 to better reflect the key role that commercial centres play within the wider retail hierarchy, and their varied and interchangeable nature.

Cramond & Barnton Community Council (0243)

Concerned about loss of small scale industrial & commercial sites as this impacts on business and conflicts with the 20-minute neighbourhoods' strategy. Whilst a brownfield first approach is appropriate where sites are unoccupied, removing occupied sites would be contrary to 20-minute neighbourhoods and economic policies.

Concerned that the definition of a 20-minute neighbourhood does not provide a list of amenities to be provided within it, or what a key community facility is. The difficulties of providing these amenities within existing neighbourhoods have been underestimated.

Douglas Tharby (0148)

Questions why if 'Infrastructure is first' is it listed as aim 8 and aim 9 and suggests reordering.

Dr David Houston (0655)

Considers aims are not achievable without a larger financial budget. The aims should be more realistic given the financial constraints and focus on redevelopment rather than substantial new growth.

Edinburgh Chamber of Commerce (0379)

Support 20 minute neighbourhood agenda in local residential areas but city centre businesses must also be protected. It is not yet clear that the new housing sites allocated will be more easily accessible by public transport/active travel options than other non-allocated sites. Several of the new sites allocated for residential development have been put forward by the Council, but it is unclear what the view of the respective landlords are and what consultation has been done with them before selecting these sites. Allocating these sites risks compromising the business plans they may be in place which seems at odds with the overarching economic ambitions stated in this section. The level of displacement of businesses that currently occupy the newly allocated sites may lead to an increase in car dependency for some. Welcome specific reference to the retail core of the City Centre and the recognition it makes to the economic and cultural life of the city and wider region. However, economic factors will be impacted by the restriction of available homes, thereby restricting the available workforce.

Suggest that at Aim 1 the 20 minute neighbourhood policy should be more nuanced to also protect city centre businesses.

Edinburgh Napier University (0731)

Supports 20-minute neighbourhoods, however the wording used is not inclusive and should refer to walking, wheeling and cycling, alongside retaining the reference to active travel and public transport.

Edinburgh World Heritage (0339)

Consider that the World Heritage Site and historic environment generally are vitally important to Edinburgh and carefully integrated policies and proactive action is required to maintain and protect it therefore the conservation and enhancement of the historic environment must be a key aim of the plan. Should reflect that embodied carbon is of high

importance to net-zero alongside operational emissions. Note the contribution that the historic environment makes to drivers and outcomes of plan. The city also needs to respond effectively to what is an unprecedented period of change from national retail trends, to working patterns and risk of building vacancy, to the impact of tourism, to the impacts of Covid-19 and climate change. Ensuring that heritage is protected and at the heart of decision-making will be vital for Edinburgh's success.

Frances Guy (0589)

Emphasis should be on all city dwellers having access to all services, including culture, sport and the amenities of the historical centre. Should elaborate on what services will be offered within the 20-minute walk.

Considers plan is not ambitious enough to meet zero carbon emissions target. At aim 4 recognition is needed of the need to also retrofit all housing stock in order to cut heating costs and carbon emissions from heating poor quality infrastructure, noting that this is one of the biggest sources of emissions.

Graeme Parry (0230)

Supports strategies to make Edinburgh greener, cleaner and sustainable city, the preservation of green spaces for recreational use, strategies to encourage active travel and improve public transport, and the reduction of car use in the city. Supports protection of green spaces and places for people. Pleased to see plan refers to impacts of development on local infrastructure but believe this needs more thought.

Hallam Land Management (0615), Tarmac (0244)

There is no evidence or detailed justification for important parts of the strategy such as how sustainable 20-minute neighbourhoods will or can be retrofitted into the spatial strategy or how major strategic and economic designations relate.

The aims of the Plan are described in very general terms, and it is not obvious where these are derived from in terms of available evidence. The objectives, whilst reasonable, do not offer developers clear guidance on what will be expected in planning submissions. Objectives are laudable in themselves it is not clear that they have a locus in the formulation of planning decisions under the Act or the Local Development Plan Regulations. Plan is in danger of being submersed in unworkable policies that are largely regressive and belong in guidance rather than the LDP itself.

Jay Chimo (0674)

Should improve liveability rather than promoting growth.

John Bremner (0140)

The city does not need to grow, it is already at the limit and traffic congestion is the result. As the traffic cannot be improved since the roads cannot get wider, development into the greenbelt must stop as it solves nothing but instead destroys the beautiful city as it is now. Considers LEZ is pointless as the number of non-compliant cars is going down fast naturally.

Juniper Green and Baberton Mains Community Council (0306)

Support aims in general but consider some need to be given more concrete form.

Leith Harbour and Newhaven Community Council (0776)

Supports aims in principle but is concerned that high quality/high density is not synonymous with creating intergenerational sustainable communities essential for 20-minute walkable neighbourhoods and may exclude the vulnerable, elderly and disabled.

Aim 2 is essential in Edinburgh Waterfront (EW 1a) Central Leith Waterfront area.

Requests clarification regarding approval of legislation for the implementation of Local Place Plans. Policies should be included to ensure heating and energy infrastructure is non-gas for all new developments well before 2030 to achieve net zero before this date.

Flooding reduction to be achieved by the minimisation of hardstanding and preventing the use of astro turf.

Lynn Grattage (0362)

Suggests change to aim 2 to "Directing new development to brownfield sites, and some greenfield sites within the city boundary, currently used for agriculture, with the proviso that large parks are provided in areas where fields existed, to allow access to nature, and ensure good air quality can be maintained."

Melford Developments Ltd (0308)

Objects to the aims as they are nebulous, rhetorical and pointless. Development is sacrificed in favour of environmental and energy objectives.

Michael Ramsay (0011)

Support the strategy as the Plan allows for development and growth in appropriate locations. Suggests that the target should be net zero for the city in the future while maintaining its character and heritage.

Murray Estates (0197), Stewart Milne Homes (0118)

Objects to City Plan 2030's strategy and specifically Aim 10 to reallocate active business/industrial sites and allocated employment land to housing use. Object to reallocation of IBG and Bioquarter. Consider the Plan is radical, and its consequences have not been considered. There is no explanation of the strategy and outcomes sections, making City Plan 2030 misleading.

Nicola McCowan Hill (0195)

Support the aims of the plan, but the strategy proposed is insufficient to deliver on them.

Patricia Willder (0205)

Development has reduced the available greenspace in Edinburgh reducing residential amenity and creating more dense communities that are not good for resident health and wellbeing, biodiversity, woodland and trees, and flood risk.

Robert Falcon (0640)

Supports infrastructure first approach however several aspects of the Plan propose developments in areas where infrastructure is missing or inadequate, which suggests this principle is being ignored in some part. Aim 10 should not include West Edinburgh development which is building on greenfield sites. Existing land is available and provided with services at the Gyle and Edinburgh Park, and there is no evidence to suggest need for further office or distribution developments - especially given the very large amount of empty office space that exists post-pandemic. Prior to any West Edinburgh site approvals being given existing capacity should be used. Developers will always build first on greenfield sites, so allowing this will effectively leave better connected and currently blighted brownfield sites undeveloped.

RSPB Scotland (0648)

Welcome the recognition of the twin nature and climate emergencies in the Plan and the inclusion of policies and text throughout which weave nature, biodiversity, climate adaptation and resilience and nature. Concerned about aim to direct development to brownfield as many sites support biodiversity.

Sarah Adamson (0523)

Considers use of brownfield sites is short-sighted in that these areas are often those with greatest biodiversity value. On the other hand green areas are often of mown grass and particularly used by dog walkers thus making these green areas less desirable to our native predators and visitors reliant on invertebrates for their survival. The sites are probably of lower biodiversity value. Disused brownfield sites are good for wildlife. Formal parks often have mown grass which are not good for wildlife. Considers grand statements in the introduction are empty rhetoric.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Suggest consideration of a stronger planning policy position in relation to vacant and derelict land and buildings in line with policy as proposed in draft NPF4.

Shortbread House (0619)

Comments that areas identified as employment centres would appear to be minimal in relation to the amount of residential areas and asks if this means that people living in the city of Edinburgh will mostly be expected to travel to work out with Edinburgh. Support aim 2 however consider that jobs will be lost where areas are redeveloped. Allocation of active employment sites to meet housing requirements is an unsustainable approach as workers will need to travel long distances.

National outcomes do not mention providing a meaningful number of jobs within the city as being part of the national context. It is essential for local jobs and employment in all sectors to also be at the heart of development.

Do not consider that City Plan has a key role in helping to deliver economic strategy. By removing a whole area of local light industrial activity in Leith by developing it for housing, it removes both job opportunities and a healthy hub of activity which is an important focus for people living in the area.

#### Southside Community Council (0781)

Supports City Plan's focus on climate change and prioritising brownfield land for development. However, the prioritisation of brownfield land could be emphasised more strongly. Supports 20 minute neighbourhoods, but it is not clear how these will be implemented. Guidance will be needed on how to submit proposals that meet this aim. Supports the 35% affordable housing contribution. The strategic objectives need to be expressed in City Plan 2030 and planning decisions at the site level to match.

#### Homes for Scotland (0404), Steve Loomes (0767)

Considers there are contradictions in the Plan. The Council is committed to building 20,000 affordable and low-cost homes over the next 10 years versus proposing a brownfield only approach to housing land release that will have a major detrimental effect on the steady annual delivery of the much-needed homes. The need to support business versus the high percentage of new housing sites allocated on existing active business land. Density requirements versus amenity/placemaking/open space/family housing requirements. Considers that the statutory context that this Plan is to be prepared under is NPF3. Surprised that there has been just a 6-week consultation period and that the supporting evidence to justify the Council's strategy has been so limited.

#### The Royal London Mutual Insurance Society Ltd (0149)

Objects to aims 2 and 10. City Plan will involve the displacement of employment (particularly industrial) to accommodate residential development, but there are no coherent plans for relocation of employment uses. Evidence to support City Plan is insufficient and it is not justified. The Plan is misleading and needs to make greater provision for business and industry. Land allocated for housing includes land in active employment use, including Royal London's land holding at Seafeld Way. Objects to Place 15, as provision is not made to support the continued employment use. Plan is not informed by sufficient evidence. The Edinburgh Commercial Needs Study: Mixed Use Delivery (ECNS)(December 2020) has not informed City Plan 2030, as it is not identified as a background report, but has been referred by previous consultations.

The representation argues that as a consequence of City Plan 30% of Edinburgh's industrial stock will be reallocated to other uses, and large numbers of jobs and businesses will be lost, therefore the plan's aims and policies should be revised to support business and employment land within the urban area.

#### **National Strategies**

##### Andy Inglis (0138)

City Plan does not consider animals enough and will fail because of this. Refers to 2017-2027 Pollinator Strategy. Increased wellbeing for humans should not be only metric.

##### Archie Clark (0003)

Requests clarification on para. 2.19, if the words "Rural Development" refer to building in the countryside, or to ensuring that there is an adequate domestic food supply available for the population. Agrees with water management conceptually and hopes this can be

delivered through local water features, but feels the Plan is unclear about how water management will be delivered.

Cockburn Association (0777)

Radical changes are needed to land-use policy to meet net-zero targets. There should be examination and explanation of how the Plan meets net zero targets.

City Plan's impacts on wellbeing are not substantiated and it is unclear how public health will be framed, with 20-minute neighbourhoods being given as the mechanism. More clarity and in-depth information should be specified.

Edinburgh World Heritage (0339)

Should include reference to relevant historic environment protection legislation, policies and strategies.

Grange/Prestonfield Community Council (0192)

As some strategies are not yet finalised it is not possible to comment on how City Plan will work with them. It is up to Council to ensure that plan continues to align with other approved strategies.

Hallam Land Management (0615), Tarmac (0244)

Consider that the Plan will not be able to properly integrate NPF4 changes and regional spatial strategies and these matters have not been properly consulted on. Plan has been prepared in the context of SPP and needs to reflect that document as well as the fact that there is no strategic guidance in the form of an approved or up to date SDP. This is not competent in terms of the Development Planning Regulations, nor will it prevent the LDP from becoming out of date almost immediately. Interim Regional Spatial Strategy and City Deal cannot be accepted as a substitute for effective regional guidance and targets. Transport assessments cannot be considered as legitimate guidance that have been consulted upon as part of this LDP process, which is therefore deficient.

Edinburgh and local planning policy drivers repeats previous statements and are general statements of intent derived from other research or policy documents. Plan has not been subject to Economic Health or Housing Impact analyses that would be expected. At present the success of the key drivers more related to conjecture than evidence, almost exclusively reliant on the untested 20-minute place-based approach. There is a need to recognise the objective to take communities, landowners and developers with the Council on this journey towards climate resilience. In particular the scope for social housing targets will not be achieved without co-operation and related funding as well as a compromise in terms of policy flexibility.

Brownfield strategy will remove mixed uses and employment in urban areas dispersing these to the suburbs and increasing commuting trips. There is no assessment of how 20-minute neighbourhoods will be integrated into the urban area. The Plan writes off employment land in favour of housing and related commercial uses without any justification, evidence or real consultation. This is contrary to the emerging NPF4 and the strategy for West Edinburgh presented at Choices, which now appears to be severely diluted.

Leith Harbour and Newhaven Community Council (0776)

Support City Plan 2030 in principle, subject to changes listed.

Leith Links Community Council (0617)

Paragraph 2.11 seems to be a pre-pandemic perspective. Extra support will be needed by the hospitality industry, changes in universities mean less need for student accommodation, tourism will be rethought and made less intensive, more localised and more sustainable. Edinburgh Airport may be shrinking in importance and rail services need to be reconsidered and prioritised.

Think that the overall design concept in Edinburgh currently is low quality. Sceptical about the city's plans and capacity to deliver. Particular concern with development in the North East area and consider heritage of the area is being damaged. New and planned buildings are too tall, featureless, over dense, internal apartments are too small. City Plan should be taking the lead, drawing up a blueprint, and should set the bar much higher in terms of design standards.

Sceptical about the city's plans and capacity to deliver on ending poverty.

Melford Developments Ltd (0308)

Objects to this section of the Plan as do not consider that it is well aligned with The Planning Act, Scottish Planning Policy or economic development strategies for the ending poverty and wellbeing & equalities do not represent what is expected from a LDP nor that these are the appropriate drivers. Contrary to national policy guidance insufficient land has been identified to meet development requirements in full.

NHS Lothian (0596)

Supportive of the reference to wellbeing and Inequalities at paragraph 2.35 and would welcome the introduction of a new paragraph that makes reference to key health and care strategies for the city, including the Lothian Strategic Development Framework and the Edinburgh Integration Joint Board Strategic Plan.

Robyn Kane (0091)

Aware that the council took part in the poverty commission however nothing has been done on the ground to actually fix things.

Roger Thomas (0345)

Consider aviation to be unsustainable and incompatible with the green ambitions of the Council and will remain so for the foreseeable future.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

No changes required, however, the Council should consider the recently published draft NPF4, and the emerging position in relation to national developments. The publication of draft NPF4 signals a shift in the national policy direction over national developments. Of

particular relevance are proposed national developments for Edinburgh Waterfront; Urban Sustainable, Blue and Green Drainage Solutions; and National Walking, Cycling and Wheeling Network; in addition to the Central Scotland Green Network. Draft NPF4 does not propose to continue the national development designation for Strategic Airport Enhancements. When the national developments are finalised as part of adopted NPF4, they will interact with what is in the Environmental Proposals (Table 1), Active Travel Strategic Projects and Safeguards (Table 3), as well as policies and proposals for Edinburgh Waterfront and North East Edinburgh as set out in the proposed plan.

Stronger links to the marine planning framework should be made given the extent of coastal development proposed in the plan. Should include reference to Scottish Government's Heat in Buildings Strategy, and the Heat Network delivery targets in section 92 of the Heat Networks (Scotland) Act 2021. Suggest that whilst no regional marine plan has been published to date it would be prudent for plan to reference the need for alignment with any future regional marine plan, either in the 'Regional context and change' section or in any of the subsequent policy chapters. Should reference the City Region Deal for Edinburgh and South East Scotland and highlight any spatial implications or consequences arising from this.

#### SEPA (0012)

Suggest inclusion of Climate Change Strategy and Water Vision. Refers to December 2020 update to Scotland's 2018 -2032 Climate Change Plan and consider this sets the framework for achieving net zero and adapting to climate change through the plan. Consider outcome for economic success to be linked to mobility.

#### Southside Community Council (0781)

Clarification of how plan policies will interface with NPF4 is necessary. Notes that City Plan 2030 must be integrated with other Council plans and strategies, such as the City Mobility Plan.

### **Outcomes – General**

#### Cramond & Barnton Community Council (0243)

Suggest that outcomes should give greater emphasis to climate change, climate change adaption and mitigation, and reflect the natural and built heritage conservation aspirations of residents.

#### Grange/Prestonfield Community Council (0192)

Support outcomes but suggests replacing phrase 'we want Edinburgh to be' with a to state what the LDP can do. Suggest strengthening of para 2,58 to ensure green belt land does not become degraded and improve access. Development in green belt should be resisted. Considers much of Edinburgh will be untouched by city plan as most of the infrastructure and built environment for the period is already provided.

### **A sustainable city which supports everyone's physical and mental wellbeing**

#### Alexander Sutherland (0193)

Supports the aim of Edinburgh becoming a sustainable and net zero city, particularly paragraph 2.28.

Andrew Heald (0566)

Should have specific reference to i-tree survey and Edinburgh's Trees in the City Action Plan 2014.

Archie Clark (0003)

Agrees with paragraph 2.39. and wishes to know if amenity benefits of 20 Minute Neighbourhoods will apply to existing communities. Notes paragraph 2.43. Requests clarification about extent of Council support to communities when communities design place briefs. Concerned allocation of Land at Land East of Millburn Tower will create precedent for green belt development beyond outer City Bypass. Notes that development in flood risk areas is not prohibited by City Plan 2030. Worried about flood risk as this will increase over time because of sea level rise. Requests clarification about the timescales that City Plan covers, and the timescales of increases in Council resourcing to manage increasing flood risk.

Disagrees with LEZ proposals in paragraph 2.84 as technological progress will resolve the issue. The LEZ proposals will cause drivers to shop outside of the city centre which is not sustainable, will result in people parking far away from where they live.

Requests clarification on the quantity of emissions resulting from the LEZ along Lanark Road at Gillespie Crossroads, the centre of Juniper Green, Blinkbonny Road/Lanark Road West and any narrowed parts of the road. Wishes to know how 20 minute neighbourhoods will be delivered in Balerno, Currie and Juniper Green.

Disagrees with maximum parking limits as they will result in increased illegal parking in areas where people need to drive.

Cockburn Association (0777)

Generally welcome proposed outcomes outlined in City Plan. However, in many sections, there is no clear statement of outcome which undermines the usefulness of this section and weakens a focused delivery of the plan. Welcomes the commitment to no new green belt releases in plan period but has concerns with some of the land removed from countryside policy where it pursues development proposals on the western approach corridors. In terms of meeting its net-zero carbon strategy, the loss of any green space should be avoided, and the policy commitment to protecting countryside land needs to be strengthened.

Supports the wider ambitions to develop and reinforce the blue-green network across the city and suggest a new policy advocating protection of private green spaces such as the large, treed gardens in the inner suburbs should be established, enhancing existing policies.

Cramond & Barnton Community Council (0243)

Considers there should be greater emphasis on climate change adaption and mitigation and on the conservation and positive management of the city's unique built and natural heritage.

Strongly supports continued green belt designation shown on map 5, p.21 of land at Cammo, and land including the former Craigiehall MoD Estate.

Edinburgh World Heritage (0339)

Should reflect the wider contribution the historic environment makes to social, environmental and economic health. To protect heritage and the many benefits it brings, it will in some cases be necessary to not apply or apply new requirements in a bespoke manner, particularly within the Old and New Towns World Heritage Site and this must be supported in policy wording. It does not imply stopping change but considering appropriate application and tailored approaches to positively manage change. Suggest an additional bullet to paragraph 2.62.

Considers plan should heavily promote the reuse of historic buildings and highlight the benefits of their embodied carbon. Critical to ensure alignment of priorities between the City Plan 2030, the future World Heritage Site Management Plan, and the draft 2030 Climate Strategy and its subsequent policies.

Grange/Prestonfield Community Council (0192)

Support detailed statements on outcome for Edinburgh to be a sustainable city which supports everyone's physical and mental wellbeing, except for green belt as consider it has failed to prevent development and large scale agricultural, sports and leisure developments should be resisted. Development in green belt should be resisted.

Homes for Scotland (0404), Steve Loomes (0767)

Considers policies on brownfield only and high-density requirements to be restrictive and will make aims of plan difficult to achieve. A balanced approach to design/density is required. Should not be blanket requirement for 65 dwellings per hectare.

Concerned that design and place policies align with the conservation area character appraisals. Questions how the twin ideals of delivering 20-minute neighbourhoods and respecting the existing character of these areas can be met. Comments that existing urban fabrics will need to be re-shaped to meet the 20-minute neighbourhood requirements.

Consider that the green belt boundary and policy is extremely restrictive and will mean growth requirements will not be met.

High-density strategy will leave little or no opportunity for quality and effective green infrastructure. Many of the newly allocated brownfield sites are within central/urban areas, near to business/industrial uses, and will experience significant noise impacts.

John Torrance Glencross (0509), Oliver Glencross (0489)

Supports strategy and aims but requests more open greenspace in Cramond.

Juniper Green & Baberton Mains Community Council (0306)

Agrees with section 2.39. requires gaps in provision of amenity to be developed and how these will be resolved identified.

Agrees with masterplans being produced as per paragraphs 2.43 and 2.44, but the Council should create these. Further information about Place Briefs and how they will facilitate early stakeholder engagement should be provided.

Concerned that if Land East of Millburn Tower is granted planning permission this will encourage further greenbelt development. The Council should contain development to the existing city footprint.

Requests clarification about emissions created along Lanark Road at Gillespie Crossroads, the centre of Juniper Green, Blinkbonny Road/Lanark Road West and other parts of the A70 where schoolchildren walk to and from school, and at narrowed parts of the road - e.g. Bridge Road/Lanark Road West in Balerno.

Leith Central Community Council (0614)

Questions if a Strategic Flood Risk Assessment has been undertaken. Should include reference to industrial built heritage.

Leith Harbour and Newhaven Community Council (0776)

Supports this section in principle, on condition that changes are made. Suggests strengthening of wording. Consider section is biased towards World Heritage Site and other areas of the city should be named. Should restore rather than demolish buildings. Considers that paragraphs 2.68 - 2.70 contradicts paragraph 3.130.

Liz Glass (0645)

Support one million tree strategy however native species should be prioritised to prevent spread of disease.

Mark Ockendon (0419)

Notes the omission of the sky and considers one of Edinburgh's endearing features to be a lack of high-rise buildings, and ability to see much of the sky even from within the city and this should be explicitly added to plan and should be protected from overdevelopment.

Melford Developments Ltd (0308)

Objects to each of the outcomes as currently articulated. These need to be more precise and articulate a planning purpose together with proportionality and the ability to deliver. Sustainability is a legitimate outcome. Physical and mental well-being is not the responsibility of the planning system, although land use can contribute through environmental quality and urban design standards as well as heritage and culture. This outcome and its explanation is confused with the interests of Public Health Scotland. Good quality facilities and amenities need to be accessible but the Plan will disperse local employment sites businesses and mixed use areas increasing the number and length of trips.

Mr John G. Skinner (0065)

The new strategy for West Edinburgh, Waterfront, South East and Bioquarter in particular, will have an impact on the City's topography. Considers it would be helpful to decision makers to have a computer generated image of their effect on the existing relationship with the City's natural features and its high rise strategy.

NatureScot (0528)

Consider that plan underplays scale and impact of coastal change. Support protection of green belt however should acknowledge that developing green belt has opportunities for climate resilience and nature enhancement. More explicit links with active travel routes, proposals and safeguards would more effectively deliver 20 minute neighbourhoods and a city where you don't need a car to move around. Integrating active travel into the north and south orbital proposals would make modal shift, including changing mode during a trip, more feasible for most residents. Suggests Council needs a Coastal Adaptation Plan and City Plan should address issue of coastal change to a great extent across policies.

Consider that the state of nature and the role of natural capital in underpinning prosperity needs to be more fully and explicitly recognised. Welcome the overall plan objectives for compact city growth and the ambitions for the green blue network however suggest that further work is needed to ensure that there is a clear and deliverable approach to addressing these aims. Should be considered as integral part of infrastructure first approach. Should include relevant on and off site requirements to be identified for allocated sites. Welcome the use of Dynamic Coast but note that the project is led by Scottish Government, managed by NatureScot and research carried out by Glasgow University. Generally welcome the proposals for the North and South Orbital and consider that these proposals should link with active travel routes.

Refers to draft NPF4 which establishes a broader purpose for green belts in future. Consider that this broader purpose aligns well with the aims and objectives of the Proposed Plan and it would be relevant to include at paragraph 2.58. Suggest that in support of Policy Env 6 Green Blue infrastructure, the Plan should include information on the existing green blue network and opportunities for delivery of green blue infrastructure in development to contribute to enhancement of the wider network.

NHS Lothian (0596)

Encourage flexible policy approach to the provision of community services and emphasise the importance of collaboration and partnership across the public, private and third sector, as well as with communities. Would welcome the opportunity to engage with the Council in seeking to develop walkable neighbourhoods, as well as the ability to engage with the CEC on their delivery of these communities, to ensure that the themes of the Lothian Strategic Development Framework are supported. Note that there are significant opportunities in the city for sharing energy, sustainable energy and transport infrastructure, which should be referenced within the concept of creating 20 minute neighbourhoods.

Ratho and District Community Council (0289)

Considers low carbon city at paragraph 2.29 to be over ambitious.

Roger Thomas (0345)

Considers that there should be a presumption in favour of natural sandstone and slate in order to preserve unique character of Edinburgh.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

State that paragraph 2.52 is factually incorrect and should read “In conservation areas, conservation area consent is required for demolition of buildings. Additionally planning consent may be required for some developments, such as window alterations to a house or flat, which elsewhere in the city would not generally require a specific grant of planning permission. This additional level of control helps to ensure that small scale incremental changes do not damage the character or appearance of the conservation areas. The Proposals Map and Appendix A show which parts of the city are covered by conservation areas.”

To signpost scheduled monument consent, where to source advice and to align with paragraph 145 of Scottish Planning Policy suggest insertion of text requiring scheduled monument consent and need to seek advice from Historic Environment Scotland.

SEPA (0012)

Consider that there is a direct relationship between a poor environment and poor physical and mental well-being and improvements to the environment have direct consequences on improved conditions for physical and mental well-being. Suggest inclusion of text to emphasise the importance of citizens’ hyperlocal’ environment.

Stirling Developments (0303)

As part of a 20 minute neighbourhood the Plan needs to ensure that new homes are delivered close to existing employment clusters. Furthermore, sustainable development should be supported where it can benefit economic aims.

The Association for the Protection of Rural Scotland (0334)

Support the aims and principle of 20 minute neighbourhoods but considers a clear definition is needed. Consider that use of 20 minutes may lead to a sense of disappointment for areas or groups of the population where the implied numerical target is missed, even if it leads to improvements in wellbeing and amenity. Strongly support retention of current green belt and suggest consideration of opportunities to enhance the protection of peri-urban countryside through green belt designation. Suggest that in addition to the planning purposes of the green belt the designated areas can also contribute to tackling the climate emergency, through storing carbon in soils and woods and contain significant areas of prime agricultural land, important for home-grown food production, and of semi-natural woodland, valuable for carbon storage and biodiversity. Recommend stronger protection for the green belt, including the presumption against development on its designation. Suggest care required to ensure that 2.67 does not undermine the aims of 2.65 and 2.66 as consider there is little space for Edinburgh to

expand, which is not already valuable designated green belt, countryside or blue/green network. Consider the need to monitor the health of the city's trees an omission.

University of Edinburgh (0464)

The approach to health and wellbeing should seek to encourage this to be a factor to be considered in the design of new facilities as well as considered from the perspective of wider health and wellbeing infrastructure. This should include healthcare infrastructure, active travel networks and access to open spaces and sport and recreational facilities. Physical and psychological wellbeing has also been linked to contact with biodiversity or nature. The sports and exercise facilities also provide a valuable resource for the wider community. It is recommended that the importance of health and wellbeing in design and the provision of facilities is strengthened in the context of the Plan. Support the promotion of 20 minute walkable neighbourhoods and consider that they can play an important role in realising the Council's ambition.

Wright PDL (0078)

Consider that the accompanying text contains numerous contradictions and issues. Paragraph 2.38 recognises the importance that land use planning must play in both climate change adaptation and delivering sustainable communities. However, this is clearly contrary to the extremely restrictive and unrealistic policies on brownfield only and high-density requirements. Paragraph 2.39 notes that the Plan aims to ensure that everyone has access to a range of amenities in their area through the promotion of 20-minute neighbourhoods. This ignores existing neighbourhoods that do not have the range of amenities required. Paragraph 2.42 states that new development, through its design and contribution to place-making, should enhance not detract from the city's overall character and quality of environment and should help mitigate against, and adapt to, the impacts of climate change. Agree entirely with this statement, but the restrictive policies in the Plan make these goals very difficult to achieve. A balanced approach to design is required, not an overly prescriptive one. Paragraph 2.87 notes that the Proposed Plan contains policies which protect amenity and ensure noise levels are acceptable for future and existing residents. There is a contradiction here, in that many of the newly allocated brownfield sites are within central/urban areas, near to business/industrial uses, and will undoubtedly experience significant noise impacts.

**A city which everyone lives in a home they can afford (includes housing land requirement and housing land supply)**

Archie Clark (0003)

Considers building houses on land previously used for factories is a bad idea because houses require supporting infrastructure, services, schools, and cause traffic problems as new and neighbouring residents must commute further where there is not a mix of uses in an area.

David McGowan (0168)

Considers it is wrong to compromise the wellbeing of established residents for the expansion of the city.

The Davidson's Mains and Silverknowes Association (0454)

Support the principle at 2.90 that new development will only be supported where it can be demonstrated there is infrastructure capacity to absorb the additional impact of the new development, but the application of the principle needs to be significantly strengthened.

Douglas Tharby (0148)

Consider the use of the term 'everyone lives in a home which they can afford' too nebulous. Term is meaningless as it cannot be quantified. Considers housing figures are at best only a guess.

Edinburgh World Heritage (0339)

Suggest page 26 could be enhanced by noting the reduction for demand in retail in some areas to re-introduce much-needed housing supply, also enhancing their historic character/use. Suggest paragraph 2.88 could be enhanced to reflect that drainage capacity will also be a key consideration.

Grange/Prestonfield Community Council (0192)

Support outcome for Edinburgh to become a city in which everyone lives in a home which they can afford except for para 2.92 as consider ensuring provision of truly affordable housing is outwith scope of LDP.

Homes for Scotland (0404), Steve Loomes (0767)

Brownfield only approach and high-density standards make aspiration for housing difficult to achieve. A range and choice of sites including greenfield release would create a much more effective balance in the delivery of the right product at the right time with the right amenities. Expect the Council to have assessed each new housing allocation on the basis of infrastructure capacity as part of its brownfield only approach. Cannot be assumed that higher density equates to better design, mix and place making. It is dependent on the surrounding built-up area and the housing mix requirements for that area. Higher density can also put more strain on the existing services.

Private sector has been and will continue to be, a major contributor to the delivery of essential affordable homes across the city therefore essential that the views of the home building sector, are properly considered. A brownfield only approach to new housing allocation is a threat to the fast, effective and value for money delivery that the affordable sector requires.

Kathryn Poolman (0574)

Support emphasis on brownfield development and would like action to repopulate the city centre and oppose short-term letting.

Nicola McCowan Hill (0195)

The Plan is not consistent with SPP. The Plan is inflexible with regards to the overarching strategy to focus solely on the allocation of additional brownfield land for residential development. The Plan does not support existing businesses.

NHS Lothian (0596)

Note that the aspiration for 37,000 new homes over the period of the City Plan 2030 will have a major impact on many aspects of health and social care planning. Consider this might be experienced as tipping points for some services and for larger developments, such as those in West Edinburgh, may mean that a more fundamental consideration of wider NHS strategic planning and masterplanning is required. Therefore, encourage the Council to establish a regular forum with NHS Lothian that focuses on housing proposals as they develop, as well as in relation to the creation of Place Briefs and their associated Development Principles.

Peter Allen (0336)

Agrees with paragraph 2.91 that design should be at the heart of new developments but would like to see more detail about how volume house builders will be compelled to use good design principles, and create amenity, given the current mono-cultural approach. Considers community-led collective custom build delivers better design than volume house building.

Roger Thomas (0345)

Should prevent housing loss by reducing number of short-term lets and include within 2.94.

Simon Thomson (0248)

Supports aims but notes that the commitment to build 20,000 affordable homes extends only to 2027, and that this number does not accord with the demand figure set out in the supporting housing paper. Considers that many of the proposed housing allocations are not deliverable to meet housing targets and the strategy should encompass suitable, sustainable greenfield sites in addition to brownfield land to assist with meeting the affordable housing demand in full.

Tessa Haring (0112)

Comments that people need affordable homes and considers that short-term lets have swamped the market in Edinburgh. Consider climate change to be an urgent issue and public transport should be improved.

Wright PDL (0078)

Brownfield only approach and high-density standards make aspiration for housing difficult to achieve. A range and choice of sites including greenfield release would create a much more effective balance in the delivery of the right product at the right time with the right amenities. Expect the Council to have assessed each new housing allocation on the basis of infrastructure capacity as part of its brownfield only approach.

The Plan is not consistent with SPP. The Plan is inflexible with regards to the overarching strategy to focus solely on the allocation of additional brownfield land for residential development. The Plan does not support existing businesses.

**A city where you don't need to own a car to move around (includes transport and infrastructure)**

David McGowan (0168)

Disagrees with transport provision in the city and the promotion of cycling. The city has many hills and an aging population. The Council has not considered people with disabilities or families with young children.

Douglas Tharby (0148)

Sections 2.115 to 2.118 assume that most journeys will be within the city. Does not factor in visits to family, countryside and beyond.

Edinburgh Access Panel (0620)

Should demonstrate more commitment to equality of access for disabled people. Highlight reliance of some disabled people on cars.

Goff Cantley (0032), Peter Fantes (0319)

Braid Hills area not mentioned in City Plan and considers plan should state areas where no development should occur.

Jean Morley (0461)

Protect greenbelt in North West of Edinburgh. More consultation required before land is offered to developers.

Jennifer Inglis (0437)

Aims of City Plan are insufficient to achieve net zero targets. Stronger environmental policies are needed.

John Martin (0008)

Strongly supports policies that relate to the protection of the green belt, other green spaces and natural environment. States that stronger measures to address traffic congestion, pollution and climate change are necessary, but whilst some changes to the balance of the use of the public realm are needed, the anti-car position of the 2030 City Plan is too extreme. Considers that the car is good for society in many ways, and sustainable, proportionate motor vehicle use should be supported by supporting technological change to electric vehicles.

Leith Links Community Council (0617)

Concerned by the promise of extended waste management facilities at Seafield, due to proximity to existing and proposed housing. Concerned by lack of provision for upgrading of sewage disposal facilities.

Too much emphasis placed on cycling, and not enough on walking and public transport. Anxious to ensure that accessibility is given adequate consideration in all planning, Public transport and parking policies are currently not well-adapted to the day-to-day travel patterns of diverse and ageing population. Patterns of travel are changing and new

research and due consideration needs to be taken of these changes. Cycle routes need to be segregated from traffic. Need better park and ride facilities serving the north east of the city. New development will put pressure on on-street parking. Needs to be consideration of increasing the number of disabled pick-up/drop-off points, and disabled parking spaces.

Michelle Mckinley (0432)

Consider that the strategy would remove ability to use car which is important for disabled people.

Melford Developments Ltd (0308)

Objects to each of the outcomes as currently articulated. Need to be more precise and articulate a planning purpose together with proportionality and the ability to deliver. Reference to car travel needs to be re-thought in terms of alternatives to allow effective travel internally within the city and to neighbouring locations for employment or leisure purposes. Whilst modal shift is desirable this will not be achieved without improved public transport, further incentives and changes to travel practices. Measures in the LDP are wholly inadequate and are unlikely to facilitate meaningful modal shift over the Plan period.

Mike Richardson (0109)

Notes that at paragraph 2.30 that the policy to reduce private car ownership is continuing. Public transport not suitable for all. Irrelevant to mix up methods of transport and moving around the city with education, health and waste management.

NHS Lothian (0596)

Welcome reference to the provision of primary care facilities however would encourage development of this section further to make reference to NHS Lothian as part of the Edinburgh Health and Social Care Partnership, as well as to the wider healthcare system, in recognition of the full range of facilities and services that are required in relation to public health.

Nicola McCowan Hill (0195)

Comments that aims in paragraph 2.118 all relate to new developments and asks what the Council doing to help and improve the situation for the existing housing stock. Welcomes the shift to sustainable transport modes, however, the current public transport network isn't nearly good enough.

Sport Scotland (0671)

Consider that as there are spatial policy aspects relating to opportunities to be active, it should be referenced in paragraphs 2.37-2.44. Having an understanding what their changing requirements will be is needed and should be part of the evidence base. Consider it would be helpful if preamble to the outcome 'A sustainable city which supports everyone's physical and mental wellbeing' included explicit reference to physical activity and its contribution to this outcome. Suggest reference to need to undertake work to understand the demand for sports facilities in the city (as per Open Space Strategy, p47).

Understand that the Council intend to develop an integrated sport and physical activity strategy for the city and consider this should be referenced as a piece of work which will inform future spatial policy in the city. Suggest that there is a specific definition for 'outdoor sports facilities' in legislation and suggest this be included in the glossary.

Susie Ross (0440)

Considers that the Council is too inefficient to repair roads therefore objectives of City Plan such as eliminating poverty are empty rhetoric.

**A city where everyone shares in its economic success (includes retail and economy)**

Archie Clark (0003)

States that page 35 is aspirational, but it is unclear what the Council will do to help people in poverty. Notes the lack of variety in the retail shopping offer of the city centre and that smaller towns have a greater variety of shops, possibly because of high rents in Edinburgh, and that Edinburgh must be almost unique in not providing a market. Notes that the Town Centres and Local Centres maps show the lack of facilities to support 20-minute neighbourhoods. Notes that the viability of shops is impacted by the need to provision them, the lack of suitable free or affordable parking spaces, and the proposed LEZ. States that map 10 on p36 shows that the centre of town is decanting to the edge of City, even into the green belt at the International Business Gateway. Consider that Bryce Road is not a local centre. Notes that the large new housing estates in Balerno and South Queensferry do not have enough variety of shops within them to support 20-minute neighbourhoods, a situation repeated in other locations in Edinburgh. States that 20-minute neighbourhoods are uncommon in Edinburgh. States that actions described in paragraph 2.148 to keep retail spending and provision under review is insufficient.

Edinburgh World Heritage (0339)

Suggest paragraph 2.138 is amended to include the role of the historic environment to economic success - making Edinburgh an attractive place to live, work and do business.

Grange/Prestonfield Community Council (0192)

Considers that the introduction to the outcome for Edinburgh to become a city where everyone shares in its economic success does not deal with vulnerability to factors outwith the control of the Plan or Council.

Juniper Green and Baberton Mains Community Council (0306)

Considers there should be a clear description of what is to be provided for the 16% of the City's population that live on incomes below the UK poverty threshold

Leith Central Community Council (0614)

Considers plan should provide robust guidance in anticipation of CPO and CSO powers.

NatureScot (0528)

Support the strategy set out in paragraphs 2.138 and 2.139 however consider that the state of nature and the role of natural capital in underpinning Edinburgh's prosperity needs to be more fully and explicitly recognised.

Nuveen Real Estate (0564)

Requests minor changes to the supporting text to provide clarity and require that any future review to respond to changing retail trends be guided by the town centre first principle.

Queensferry & District Community Council (0568)

Objects to the description of Queensferry as a village on p35, it should be described as a town. Concerned inadequate infrastructure is to be provided for a 40% growth in housing units in Queensferry.

SEPA (0012)

Consider outcome for economic success to be linked to mobility. Recommend referring to importance of Nature Based Solutions market in supporting the ecosystem services on which future economic growth relies.

**Modifications sought by those submitting representations:**

**Formatting and mapping**

Archie Clark (0003)

Implies inclusion of map to show Special Landscape Areas.

The conservation area map on p19 should be accompanied by a numbered table listing the conservation areas to aid understanding of the map.

Change format of plan to provide strategic overview and separate plans for different parts of Edinburgh

Simplify language.

Revise sustainable development definition in Glossary to include reference to the 13 principles included in the Scottish Land Use Strategy.

Archie Clark (0003), Leith Central Community Council (0614)

Remove repeated sentence at 2.141

Crosswind Developments (0184)

Improve quality of Map 1 and Map 2 and include policy references.

Dr Helen Forrest (0315)

No modification specified

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Provide all information relevant to a site within site brief.

Edinburgh World Heritage (0339)

At paragraph 3.3 include reference to the importance and method of engaging the local community and wider stakeholders in the development of principles for development of their areas.

Include reference to previous Council documents to include and define relevant historic environment terms.

Include overarching reference to the Edinburgh Design Guidance, associated study and views for protection.

Hallam Land Management (0615)

Correct inaccuracies in Map 1.

Improve clarity of Map 2

Juniper Green & Baberton Mains Community Council (0306)

Improve quality of map, grammar and formatting.

Leith Central Community Council (0614)

Label on-line maps on p17, p19 and & p21.

New Town and Broughton Community Council (0254)

No modification specified however representation implies that maps should be simplified.

NatureScot (0528)

No modification specified however representation implies that the city-wide green blue network should be shown on a map.

Southside Community Council (0781)

Implies plan should be shorter.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Include reference that the Place Briefs, to be prepared, will incorporate the detailed design considerations as set out in "Designing Streets".

**Introduction**

Cockburn Association (0777)

City Plan 2030 should be amended to account of climate impact and preparedness, Covid and post-Covid resilience and Brexit, as well as to be suitable for the end of its lifespan.

More detail about the implementation of 20 minute neighbourhoods should be provided.

Dr Jane Gear (0487)

Include paragraph to explain what measures exist to protect or enhance mental and physical wellbeing of current residents.

Dr Tim Duffy (0503), Scottish Wildlife Trust Lothian Group (0560),

At introduction include reference to the Council's Climate and Biodiversity Emergency declarations.

Edinburgh Access Panel (0620)

Demonstrate more commitment to equality and inclusion issues.

Elsbeth Wills (0293)

No modification is specified but the representation implies that there needs to be a greater variety of shops on the Grassmarket not aimed at tourists, commercial events in Princes Street Gardens should be prohibited, public space should not be commercialised in the Old Town.

No more housing should be used as short-term lets in the city centre.

Public Transport should be improved and action to reduce carbon emissions

Prevent over tourism.

Gilmerton & Inch Community Council (0716)

More details and explanation should be provided about the statements in the plan.

Goff Cantley (0032), Peter Fantes (0319), The Friends of Midmar Paddock, Edinburgh (0121)

No modification is specified but the representation implies that City Plan should state which areas of land are except from development.

Braid Hills should be explicitly mentioned.

Grange/Prestonfield Community Council (0192)

Amend paragraph 1.7 to stress the vulnerability of the LDP to factors outside its control.

At paragraph 1.7 include statement that an early review of City Plan will consider and learn lessons from the application of previous LDP policies.

Include reference to period of the Plan throughout the document.

Hallam Land Management (0615), Tarmac (0244)

Paragraph 1.1 omit the section of text following 'climate change'.

Paragraph 1.2 only state the city vision.

Paragraph 1.3 the target for net zero by 2030 requires a reference.

Paragraph 1.4 Should mention the importance of providing land for market housing. Add at end of the last sentence 'and providing sufficient land to allow for a range of housing types and tenures'.

Paragraph 1.5 omit all but the last sentence.

Paragraph 1.5 should be after para 1.1.

#### Julie Robertson (0210)

No modification is specified but the representation implies that homes should be close to employment.

#### Juniper Green & Baberton Mains Community Council (0306)

Plan should provide references to other documents it mentions.

Plan should explain how existing development will be brought up to new standards.

#### Leith Harbour and Newhaven Community Council (0776)

Paragraph 1.1 should be changed to ensure that culture and heritage is not limited to City Centre.

Paragraph 1.3 should be changed to expand the Low Emissions Zone beyond the city centre.

Paragraph 1.5 should be changed to ensure that it is 'homes' that are being built not 'houses'.

Paragraph 1.6 should be changed to ensure that City plan 2030 protects places of value across the City and adds intergenerational communities to good quality of life.

Paragraph 1.7 should be changed to ensure the use of high density housing is not detrimental to heritage, listed buildings, conservation and waterfront areas.

#### Leith Links Community Council (0617)

Representation implies that paragraph 1.1 should address over-tourism and housing unaffordability for residents.

Representation implies that at paragraph 1.5 the word "communities" should be added.

Representation implies that paragraph 1.5, 1.6 and 1.7 should include commitments to greater community involvement.

Representation implies that City Plan 2030 should show it is cognisant of the impact of the pandemic.

Representation implies that greater explanation of how City Plan 2030 will meet net zero emissions and elimination of poverty aims by 2030.

Representation implies that Local Place Plans should be given more prominence in the plan.

Representation implies that greater detail of how the aims in paragraph 1.4 will be delivered need to be provided, and where resources to pay for the aims will come from.

Mactaggart & Mickel Homes Ltd (0312)

Recognise the role of the private sector in the economic success of the city within the introduction.

Melford Developments Ltd (0308)

Change to be more positive and proactive towards developers and landowners promoting development in the city, focusing on land use development and infrastructure.

Mr T Klan (0307)

Make reference to the importance of providing land for market housing.

At paragraph 1.4 add at end of last sentence “and providing sufficient land to allow for a range of housing types and tenures”.

SEPA (0012)

Refer to ‘regenerative approach’ in opening paragraphs.

At paragraph 1.3 include the Climate Change Strategy and Water Vision, as integral parts of the steps the City of Edinburgh is taking to meet the challenges of climate change.

Sergey Gorobets (0414)

Clarify definition of ‘affordable’ and ‘low cost’ housing.

Allocate land in Midlothian for housing

Southside Community Council (0781)

No modification is specified but the representation implies that additional emphasis needs to be given in the Plan to addressing poverty and inequality.

Thomas Tierney (0400)

No modification specified however representation suggests that costings should be provided and that the Plan should take account of the pandemic.

University of Edinburgh (0464)

No modification specified however representation suggest that the Plan contents should be viewed flexibly.

William Moyes (0305)

No modification specified however representation implies that document quality should be improved and the role of others in delivery should be identified.

Wright PDL (0078)

Economic and social benefits of house building need to be restated.

**Aims**

Andrew Anderson (0535)

No modification is specified but the representation implies that the Plan should provide more measurable and realistic objectives.

Andy Inglis (0138)

At aim 1 use stronger wording than “better”

Anna Brand (0742)

No modification is specified but the representation implies that City Plan should strive for an absolute zero carbon target rather than a net zero target.

Archie Clark (0003)

No modification specified however representation implies that those with mobility difficulties should be considered.

Arnold Myers (0758), Jennifer Hess (0771)

Prioritise preservation of open space over development.

AREAA (0358)

No modification is specified but the representation implies that aim 2 should be modified to allow for use of greenfield sites where there is an identified need.

Bo Adams (0363)

No modification specified however representation implies that all new developments should be required to have shops, restaurants, schools and GPs.

Brian Tiplady (0641)

No modification is specified but the representation implies that City Plan should prioritise public transport alongside commitment to active travel and 20-minute neighbourhood agenda.

CBRE Global Investors (0644), Nuveen Real Estate (0564), Nuveen Real Estate (0734)

Amend aim 10 to:

“Deliver Edinburgh’s key economic land use needs, including supporting the city centre and wider defined hierarchy of centres, Edinburgh Waterfront, West Edinburgh, the Edinburgh BioQuarter, retail and leisure, and land for modern business space as part of

housing-led mixed-use development and deliver policies which support businesses to thrive.”

Cramond & Barnton Community Council (0243)

At Aim 2 p.8 and Map 7, p.27 recognise that several sites identified in City Plan as brownfield sites are current industrial and/or commercial estates.

At Aim 2, p8 include a commitment that the Council will conduct robust assessments of the potential impacts of displacing current businesses, or otherwise affecting their viability and operational requirements, to enable residential development, and means of mitigating any adverse economic or operational impacts on the current businesses.

Douglas Tharby (0148)

Reorder aims - aims 8 and 9 should be aims 1 and 2.

Dr David Houston (0655)

No modification is specified but the representation implies that City Plan should revise the aims to be more realistically achievable focussing on redevelopment.

Edinburgh Chamber of Commerce (0379)

At paragraph 1, 20 minute neighbourhood policy should be more nuanced to also protect city centre businesses.

Edinburgh Napier University (0731)

Aim 1 should be amended to include reference to walking, wheeling and cycling.

Edinburgh World Heritage (0339)

Add aim “Actively conserving and enhancing Edinburgh’s World Heritage Sites and wide range of heritage assets for the cultural, social, environmental and economic benefits they bring.”

Amend part 4 of paragraph 2.2 to: “Requiring all new building to have very low embodied carbon and be net-zero...”

Frances Guy (0589)

At aim 1 Provide detail on services to be within a 20-minute walk

At aim 4 recognise the need to retrofit housing stock to reduce emissions.

Graeme Parry (0230)

Include more consideration of infrastructure requirements

Hallam Land Management (0615), Tarmac (0244)

Provide evidence and detailed justification for how 20-minute neighbourhoods will be retrofitted into the spatial strategy, and how major strategic and economic designations will relate to this.

Amend paragraph 2.1 to read “City Plan is an ambitious vision that will drive investment into the city for the benefit of all communities. We want the future growth of our city to be sustainable and net zero balancing these factors with economic growth and a generous supply of land for housebuilding.”

Aims 6, 8 and 10 should be prioritised above other aims.

Aim 2 should be amended to read “Where possible directing new development and maximising the use of brownfield land rather than greenfield land. Delivering new or extended communities on suitable land that will deliver economic social and environmental benefits “.

Aim 4, sentence 2, should be amended to make sense. Representation implies aim 4 should be altered to be within the scope of development planning.

Aim 5 should omit “protect our beautiful green setting” and include, “protect valuable areas of greenbelt and countryside”.

Aim 6 should be amended to read ‘Developing land to fully meet Edinburgh’s housing needs over the next decade and securing a minimum of 35% affordable housing contribution from new developments across the city.’

Aim 10 should omit “as part of housing led mixed use development.”

Policies relating to sustainable buildings and net zero should be moved to guidance documents.

Homes for Scotland (0404), Steve Loomes (0767)

No modification specified.

Jay Chimo (0674)

No modification is specified but the representation implies that Edinburgh should not be densified or developed any further.

John Bremner (0140)

City should not grow

At Aim 2 brownfield should be only option.

At Aim 6 make clear that no greenbelt would be used.

At Aim 8 representation suggest removal of infrastructure first approach.

Development should be high density.

Short-term lets should be limited.

Juniper Green & Baberton Mains Community Council (0306)

Aims should be described in more detail.

Set out key community facilities for 20 minute neighbourhood.

Provide map indicating current service provision and where there are gaps in provision.

Provide a glossary of acronyms.

At Aim 2 require the conversion of existing buildings over demolition, as well as requiring buildings to be designed to be easily repurposed in future.

Prevent greenfield development in all circumstances.

On page 4, Table 11 a reference to the proposal to expand Currie Community High School and its cost should be made.

Account for existing development and extant permissions in its development.

Requests further detail about how 20 minute neighbourhoods will be applied to existing communities.

Leith Harbour and Newhaven Community Council (0776)

No modification is specified but the representation implies that consideration should be given to compatibility of high density neighbourhoods and intergenerational integration.

Include clarification regarding approval of legislation for the implementation of Local Place Plans.

Lynn Grattage (0362)

Change Aim 2 to ""Directing new development to brownfield sites, and some greenfield sites within the city boundary, currently used for agriculture, with the proviso that large parks are provided in areas where fields existed, to allow access to nature, and ensure good air quality can be maintained."

Melford Developments Ltd (0308)

The 10 aims should be prioritised in importance, with housing, economic development and mixed uses prioritised above other aims.

Michael Ramsay (0011)

Target should be net zero for the city in the future while maintaining its character and heritage.

Murray Estates (0197), Stewart Milne Homes (0118)

Alter aim 10 to safeguard employment land in existing use otherwise amend Aim 10 to acknowledge the negative consequences.

Nicola McCowan Hill (0195)

No modification specified but implies strategy will not meet the aims.

Patricia Willder (0205)

Development on greenfield sites should only be permitted after all brownfield sites have been developed.

Robert Falcon (0640)

No modification is specified but the representation implies that City Plan should not allow development in West Edinburgh until other brownfield sites are developed.

RSPB Scotland (0648)

Ensure appropriate ecological survey work is conducted on mature brownfield sites which are wildlife corridors.

Sarah Adamson (0523)

No modification is specified but the representation implies that brownfield sites should not be developed in order to protect wildlife corridor.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Page 8, Paragraph 2.2 bullet 2 consider how it could take a stronger planning policy position in relation to vacant and derelict land and buildings in line with policy as proposed in the recently published draft NPF4.

Shortbread House (0619)

No modification specified however representation suggests that active employment sites should not be allocated for housing development.

Southside Community Council (0781)

Each section should demonstrate how it helps achieve Aim 2 and a stronger statement on the prioritisation of brownfield sites for development should be made.

Greater details of how 20 minute neighbourhoods will be implemented should be included.

Susie Ross (0440)

No modification is specified but the representation implies that City Plan should create more realistic and achievable aims.

The Royal London Mutual Insurance Society Ltd (0149)

Amend Aim 2 to read "Directing new development to, and maximising the use of, brownfield land rather than greenfield land, improving and re-imaging Edinburgh's neighbourhoods, rebuilding the city from within and delivering new communities whilst ensuring the needs of business and industry are met in Edinburgh Waterfront, West Edinburgh and on other major development sites across the city."

Amend Aim 10 to read – “Deliver Edinburgh’s key economic land use needs, including supporting the city centre, Edinburgh Waterfront, West Edinburgh, the Edinburgh BioQuarter, local centres, retail and leisure, business and industry in the wider urban area and deliver policies which support businesses to thrive.”

### **National strategies**

#### Andy Inglis (0138)

No modification is specified but the representation implies that City Plan should give more consideration to the needs of animals and set a wider range of metrics for the city’s success than economic growth.

#### Archie Clark (0003)

Encourage food growing

Provide clarity on water management

#### Cockburn Association (0777)

Set out analysis and explanation of how City Plan will achieve net zero targets, and how public health outcomes will be delivered.

#### Edinburgh World Heritage (0339)

At page 11/12 add reference to and proportionate description of:

The Planning (Listed Buildings and Conservation Areas) (Scotland) Act 1997 and other relevant historic environment legislation

The Historic Environment Policy for Scotland (Historic Environment Scotland)

At page 13 add reference to and proportionate description of the Old and New Towns of Edinburgh World Heritage Site Management Plan.

#### Grange/Prestonfield Community Council (0192)

No modification specified.

#### Hallam Land Management (0615) Tarmac (0244)

Revise paragraph 2.5 to provide a more accurate and detailed description of the Planning Scotland Act in relation to LDP.

Update paragraph 2.14 in relation to NPF4.

Revise paragraph 2.16 on minimum housing land figures as reflected in the Housing Technical Note.

Update paragraph 2.17 in relation to the Strategic Transport Projects Review 2.

Revise paragraphs 2.18 and 2.19 to more closely and accurately reflect SPP particularly in relation to housing land, economic development and greenbelt and countryside.

Revise Paragraph 2.22, 2.23 and 2.24 in relation to NPF4 and the Regional Spatial Strategies.

Leith Harbour and Newhaven Community Council (0776)

Amend paragraph 2.18 to “Scottish Planning Policy sets out plans that (should) must be designed around local area characteristics etc. and ‘Placemaking (needs) must ensure strategies are linked to design policies.”

Amend paragraph 2.33 to ‘The City Housing Strategy enforces priority for delivering housing and related services across all tenures and types of housing’.

Leith Links Community Council (0617)

No modification specified however suggest that the strategy should take account of the pandemic.

Policies should require a high standard of design.

Melford Developments Ltd (0308)

Align plan with other strategies and plans.

NHS Lothian (0596)

At paragraph 2.35, include a new paragraph that makes reference to key health and care strategies for the city, including the Lothian Strategic Development Framework and the Edinburgh Integration Joint Board Strategic Plan.

Robyn Kane (0091)

No modification specified.

Roger Thomas (0345)

At paragraph 2.11 remove "Strategic enhancement of Edinburgh Airport".

At paragraph 2.17 include flying alongside private car use.

Southside Community Council (0781)

Set out how City Plan 2030 will integrate with NPF4 and Council's plans and strategies.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

At 2.11 consider the recently published draft NPF4, and the emerging position in relation to national developments.

At page 11-12 National Context include reference to and explanation of the National Marine Plan 2015.

At page 11-14 Section: “National, regional, local context” - reference the Scottish Government’s Heat in Buildings Strategy, and the Heat Network delivery targets in section 92 of the Heat Networks (Scotland) Act 2021.

At page 13 Reference to the need for alignment with any future regional marine plan, either in the ‘Regional context and change’ section or in any of the subsequent policy chapters.

At page 13 Regional context and change - reference the City Region Deal for Edinburgh and South East Scotland and highlight any spatial implications or consequences arising from this.

#### SEPA (0012)

At paragraph 2.7 change the Climate Change (Scotland) Act 2019 to The Climate Change (Emissions Reduction Targets) (Scotland) 2019.

### **A sustainable city which supports everyone’s physical and mental wellbeing**

#### Alexander Sutherland (0193)

Development should not be permitted on the green belt or designated countryside areas where this would impact on food growing opportunities.

#### Andrew Heald (0566)

Include on page 24 reference to i-tree survey and Edinburgh’s Trees in the City Action Plan – published in 2014.

Infers amendment of paragraph 2.70 to state that 310,000 trees will be required by 2030.

#### Archie Clark (0003)

Masterplans should be produced by the Council, not private developers.

Second bullet point of paragraph 2.58 should read: “protect and enhance the quality, character, landscape setting and identity of the city and neighbouring settlements and prevent coalescence”.

No LEZ.

No maximum limits on parking spaces in new development.

#### Cockburn Association (0777)

At paragraph 2.45-46 include outcome statement that a commitment be given that Edinburgh’s unique urban landscape will be improved through active conservation policies and innovative design policies so that the qualities of the city are improved by the end of the Plan period.

At paragraph 2.47-48 include commitment that the Management Plan for the World Heritage Site will be a material consideration.

At paragraph 2.49-2.56 include a firm outcome statement to the effect that the city heritage assets will form a key part of the delivery of the plans economic and environment policies and the Plan commits to improvements to all assets where possible.

Include an outcome statement which makes clear that proposals affecting heritage assets and conservations areas considered by non-planning mechanisms such as Traffic Regulation Orders will be required by City Plan to meet the policy objects set out within it.

Include policy advocating protection of private green spaces such as the large, treed gardens in the inner suburbs.

Cramond & Barnton Community Council (0243)

At paragraph 2.36 amend outcome to me: “A sustainable City, progressing to net zero, which cherishes and maintains its built and natural heritage and supports everyone’s well-being”.

Edinburgh World Heritage (0339)

At paragraphs 2.45 and 2.46 reflect the wider contribution the historic environment makes to social, environmental and economic health.

Add an additional bullet to paragraph 2.62 as follows:

- Protecting the intrinsic heritage values and assets of green and blue network of the Old and New Towns of Edinburgh World Heritage Site and other designated heritage assets

Grange/Prestonfield Community Council (0192)

At paragraph 2.58 strengthen protection of the green belt.

Homes for Scotland (0404), Steve Loomes (0767)

Remove requirement for 65 dwellings per hectare.

Relax green belt policy.

Jean Morley (0461)

No modification is specified but implies protection of green belt in North West Edinburgh.

Jennifer Inglis (0437)

Include policy assessing and minimising carbon of the whole life cycle of developments.

Include policy that presumes against felling of mature trees, loss of green space and demolition of buildings without a clear assessment that they cannot be refurbished or re-purposed are necessary.

Include policy that addresses the environmental impact of building design choices.

John Torrance Glencross (0509), Oliver Glencross (0489)

No modification is specified but the representation implies that City Plan should revise open space strategy for Cramond to provide more greenspace.

Juniper Green & Baberton Mains Community Council (0306)

No modification is specified but the representation implies masterplans should be prepared by the Council.

Set out further information about Place Briefs and how they will facilitate early stakeholder engagement.

Restrict development to the existing city footprint.

Leith Central Community Council (0614)

Representation implies that a Strategic Flood Risk Assessment should be produced for City plan 2030.

At paragraph 2.45 and 2.46 include industrial built heritage.

Leith Central Community Council (0614)

At paragraph 2.45 and 2.46 include industrial built heritage.

Leith Harbour and Newhaven Community Council (0776)

At paragraph 2.42, replace 'should' with 'will' in 1st sentence. Replace 'can' with 'will' in 3rd sentence

At paragraph 2.46 other areas of the city should be named including Leith.

At paragraph 2.49 - 2.52 Areas. Buildings should be restored/redeveloping buildings rather than demolished to help a carbon free environment

At paragraph 2.57 the natural environment in Leith should be protected by preventing tree removal, new hard standing and Astro Turf.

Amend paragraph 2.68 - 2.70 to not contradict Env 20.

Liz Glass (0645)

No modification specified however representation implies native species should be prioritised to prevent spread of disease.

Mark Ockendon (0419)

Add reference to the importance of the sky.

Melford Developments Ltd (0308)

Provide more precise outcome and articulate a planning purpose together with proportionality and the ability to deliver.

Mr John G. Skinner (0065)

No modification specified however representation suggest that views of the city should be protected.

NatureScot (0528)

Amend paragraph 2.58 to include the purpose of green belt in supporting new uses that enhance climate resilience and emission reductions, provide access to green networks and support nature networks.

Amend paragraph 2.79 to “City Plan has had regard to current and ongoing work undertaken by Glasgow University and NatureScot which considers a range of coastal processes and predicted change. It has also had regard to related work on Strategic Flood Risk Assessment being undertaken by City of Edinburgh Council, Scottish Water, Dynamic Coast and SEPA.”

#### Ratho and District Community Council (0289)

No modification specified but consider low carbon city to be ambitious.

#### Roger Thomas (0345)

More detail should be provided to ensure that new development has a presumption in favour of sandstone and slate.

Mention should be made here that alterations in conservation areas should use building materials which blend in with existing materials so as not to dilute the area's character and that normally these materials will be appropriate natural sandstone and slate.

#### Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Amend 2.52 to “In conservation areas, conservation area consent is required for demolition of buildings. Additionally planning consent may be required for some developments, such as window alterations to a house or flat, which elsewhere in the city would not generally require a specific grant of planning permission. This additional level of control helps to ensure that small scale incremental changes do not damage the character or appearance of the conservation areas. The Proposals Map and Appendix A show which parts of the city are covered by conservation areas.”

At paragraphs 2.54-2.56 insert: “Any works directly affecting a designated Scheduled Monument require Scheduled Monument Consent (SMC) which is obtained from Historic Environment Scotland. Advice on the SMC process and requirements should be sought at an early stage from Historic Environment Scotland.”

#### SEPA (0012)

At paragraph 2.39 add “The current pandemic has emphasised the importance of citizens’ hyperlocal’ environment. Embedding nature-based solutions /blue-green infrastructure in our neighbourhoods will be key to maximising place-led benefits including mental and physical health whilst supporting climate resilience.”

#### Sport Scotland (0671)

At paragraphs 2.37-2.44 include specific reference to physical activity and its contribution to this outcome.

At paragraphs 2.62-2.64 refer to need to undertake work to understand the demand for

sports facilities in the city (as per Open Space Strategy, p47). Refer to council intention to develop an integrated sport and physical activity strategy.

Include in Glossary definition for 'outdoor sports facilities' in legislation and suggest this be included in the glossary.

#### Stirling Developments (0303)

No modification specified however representation implies that new homes should be delivered close to existing employment clusters and sustainable development should be supported where it can benefit economic aims.

#### The Association for the Protection of Rural Scotland (0334)

At paragraph 2.58, 2<sup>nd</sup> bullet include opportunities to enhance the protection of peri-urban countryside by Green Belt designation.

At paragraph 2.58-2.60 include reference to the contribution of green belt to tackling climate emergency through storing carbons in soils and woods and contain significant areas of prime agricultural land, important for home grown food production, and of semi-natural woodland, valuable for carbon storage. And role in providing a nature network to preserve biodiversity.

At paragraph 2.68 -2.70 refer to the need to monitor the health of the City's trees.

#### University of Edinburgh (0464)

Strengthen the importance of health and wellbeing in design and the provision of facilities.

#### Wright PDL (0078)

No modification specified.

### **A city which everyone lives in a home they can afford**

#### Archie Clark (0003)

At paragraph 2.88 add that where brownfield land is to be developed, the historic use of the land should be retained.

#### David McGowan (0168)

No modification is specified but the representation implies that expansion of the city should not be allowed to impact on resident's amenity.

#### The Davidson's Mains and Silverknowes Association (0454), Douglas Tharby (0148)

No modification specified.

#### Edinburgh World Heritage (0339)

At page 26 note the reduction for demand in retail in some areas to re-introduce much-needed housing supply, also enhancing their historic character/use.

Grange/Prestonfield Community Council (0192)

At paragraph 2.92 add “The impact of this policy change will be regularly monitored throughout the Plan period so see how it relates to other social housing provision, to enable further change to be introduced if necessary.”

Kathryn Poolman (0574)

No modification is specified however representation implies that the city centre should be re-populated.

NHS Lothian (0596)

No modification specified however representation implies that there should be consideration of healthcare requirements created by new housing.

Nicola McCowan Hill (0195)

No modification specified however representation suggests that greenfield sites should be allocated.

Peter Allen (0336)

No modification specified but implies that City Plan should support community-led custom housing projects through policy and land allocation.

Roger Thomas (0345)

Strengthen paragraph 2.94 by including ‘short term lets’ and ‘second homes’ in description of ‘other uses’

Simon Thomson (0248)

At paragraph 2.101 delete 20,000 figure and replace with “building sufficient affordable homes to meet assessed demand”.

Amend Paragraph 2.109 to reflect need for appropriate densities based on site context rather than a defined minimum.

Amend paragraph 2.2, 2.88, 2.110 and 2.112 to reflect the allocation of greenfield sites that can be sustainably developed

Homes for Scotland (0404), Steve Loomes (0767), Wright PDL (0078)

No modification specified however representation suggests that greenfield sites should be allocated.

An assessment of the infrastructure requirements of each housing allocation should be undertaken.

Tessa Haring (0112)

No modification is specified but the representation implies that the number of short-term lets in Edinburgh should be reduced.

**A city where you don't need to own a car to move around (includes transport and infrastructure)**

David McGowan (0168)

No modification is specified but the representation implies transportation options in the city need to be improved, and that cycling should not be provided for.

Douglas Tharby (0148)

No modification specified.

John Martin (0008)

No modification is specified but the representation implies that stronger measures to address traffic congestion, pollution and climate change should be taken, but not measures that are anti-car.

Leith Links Community Council (0617)

No modification specified however representation suggests:

Provision for upgrading of sewage disposal facilities.

More emphasis on walking and public transport.

Segregation of cycle routes.

Increase in disabled drop off points and parking spaces.

ew park and ride facilities for north east of city.

Melford Developments Ltd (0308)

Provide more precise outcome and articulate a planning purpose together with proportionality and the ability to deliver.

Michelle Mckinley (0432)

No modification is specified but the representation implies that City Plan should ensure disabled car users have access to the city.

Mike Richardson (0109)

No modification specified however representation implies that policies should allow for private car ownership.

NHS Lothian (0596)

At paragraph 2.125 make reference to NHS Lothian as part of the Edinburgh Health and Social Care Partnership, as well as to the wider healthcare system, in recognition of the full range of facilities and services that are required in relation to public health.

Nicola McCowan Hill (0195)

No modification specified however representation implies that public transport should be improved and plan should set out how existing areas will be addressed in terms of 20-minute neighbourhoods.

### **A city where everyone shares in its economic success**

#### Archie Clark (0003)

At paragraph 2.33 provide a description of what is to be provided for the 16% of the city's population that live on incomes below the UK poverty threshold.

No modification specified but implies that Council needs to act to improve the variety of the retail offer in Edinburgh city centre, in each 20 minute neighbourhood.

No modification specified but implies more free parking or affordable should be prevented in the city centre and the LEZ should not be implemented.

No modification specified but implies that Bryce Road and other similarly sized centres should not be designated as Local Centres.

Reword paragraphs 2.143 to 2.144 to be clearer.

#### Edinburgh World Heritage (0339)

Amend paragraph 2.138 to include the role of the historic environment to economic success - making Edinburgh an attractive place to live, work and do business.

#### Grange/Prestonfield Community Council (0192)

At paragraph 2.138 set out what would be done to address a situation if inward investment to the level required is not available or affordable and therefore what has priority.

At paragraph 2.140 add "These aims do not over-ride other LDP policies."

#### Juniper Green and Baberton Mains Community Council (0306)

Provide a description of what is to be provided for the 16% of the City's population that live on incomes below the UK poverty threshold.

#### Leith Central Community Council (0614)

Provide guidance in plan on CPO and CSO.

#### NatureScot (0528)

Amend paragraph 2.139 to "The strength of Edinburgh's economy is based on a range of key sectors and assets, for example, tourism, financial services, life sciences and higher education. Edinburgh also has a wide range of natural, cultural, arts and sports venues and places which bring economic benefits as well as enhancing the wellbeing of residents and visitors."

#### Nuveen Real Estate (0564)

Update paragraph 2.146 to refer to the 'St James Quarter', in place of 'Edinburgh St James'.

Strengthen paragraph 2.148 to require that any future review be guided by the town centre first principle.

Queensferry & District Community Council (0568)

On p35 describe Queensferry as a town.

SEPA (0012)

At p35 refer to the importance of Nature Based Solutions Market in supporting the ecosystem services on which the future economic growth relies.

### **Summary of responses (including reasons) by planning authority:**

#### **Plan Format and Mapping**

Archie Clark (0003), Crosswind Developments (0184), Juniper Green & Baberton Mains Community Council (0306) Leith Central Community Council (0614), New Town and Broughton Community Council (0254), Southside Community Council (0781)

An exercise has been undertaken to identify formatting and mapping inaccuracies. A table of technical amendments has been submitted which address the concerns raised. Maps 1 and 2 are diagrammatic. The scale of map does not allow for policy references to be included. Allocations and designations are shown on the proposals map which forms part of the plan. The Plan has been set out to be user friendly and is organised into clear sections identified by colour coding. Page 4 sets out how to use the plan. While the document is lengthy this is necessitated by the scope of the content. The Plan contains a glossary of terms and where acronyms are used the full text is included as an initial reference. **No modification proposed.**

Archie Clark (0003)

The proposals map and online map provide the boundaries of the special landscape areas. This is stated in paragraph 2.66. It does not state that a map is provided within the written statement. It would not be practical to include them within the Plan due the scale of map which would be required. **No modification proposed.**

The map provided at page 19 is illustrative. The proposals map and online map provide the detail of conservation area boundaries. **No modification proposed.**

The Plan is set out in parts. Part One provides the strategy for the whole Edinburgh area and Part Two provide place based policies. The Plan therefore does provide area specific policies along with those set out in Part Three which apply across the area. **No modification proposed.**

The definition of sustainable development within the Glossary is in line with Scottish Planning Policy (CD096). **No modification proposed.**

Dr Helen Forrest (0315)

The Plan has been set out to be user friendly and is organised into clear sections identified by colour coding. Page 4 sets out how to use the plan. While the document is lengthy this is necessitated by the scope of the content. The Plan contains a glossary of terms and where acronyms are used the full text is included as an initial reference. **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Place policies in the Plan set out site specific requirements. Other policies of the Plan will apply however it is not possible to specify which policies which apply as this will be dependent on the individual proposals which come forward. The online proposals map identifies the relevant proposals and policies for individual locations. **No modification proposed.**

Edinburgh World Heritage (0339)

It is not necessary to set out methods for the preparation of place briefs within the Plan. The process is most appropriately addressed on an individual basis to provide the most appropriate approach for the circumstances. **No modification proposed.**

Historic environment policies in the plan, and in particular paragraph 3.119, refer to Council documents and Historic Environment Scotland guidance which provide detail and definition of terms. **No modification proposed.**

Paragraph 3.151 refers to the Council's study which identifies key public viewpoints and makes reference to the Council's Edinburgh Design Guidance (CD047). **No modification proposed.**

Hallam Land Management (0615)

The representation does not specify the inaccuracies on Map 1 Spatial Strategy. An exercise has been undertaken to identify mapping inaccuracies. This identifies some technical changes to the Spatial Strategy map. **No modification proposed.**

NatureScot (0528)

The green blue network is set out in Map 3, p26 of the plan. **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Paragraph 3.3 sets out the place based policies of the plan. Policy Env 1 addresses design quality and context and Env 2 encourages a comprehensive approach to development through Place Briefs to identify the full potential for creating successful places. The role of Designing Streets and how this applies to development Edinburgh is set out in the Council's Edinburgh Design Guidance (CD047). **No modification proposed.**

**Introduction**

Cockburn Association (0777)

The Plan sets out environmental policies to deal with climate change mitigation and adaptation, reduce flooding and other climate impacts. The long term impacts of the pandemic and Brexit are unknown. The policies of the Plan allow sufficient flexibility. The Plan has been prepared for the period of 2022-2032. The 20-minute neighbourhood principle is embedded in the Plan policies. These provide the detail of implementation.

**No modification proposed.**

Dr Tim Duffy (0503), Scottish Wildlife Trust Lothian Group (0560),

Paragraph 1.1 refers to the impacts of climate change. Paragraph 2.31 refers to the climate emergency as a policy driver and there are references to the climate emergency within the relevant policies. Aims 5 includes increasing biodiversity and Policies Env 31 and Env 37 address biodiversity. **No modification proposed.**

Dr Jane Gear (0487)

The introduction sets out what the Plan does and how it works with other strategies. Paragraphs 2.37-2.87 provides details of how the Plan improves the physical and mental wellbeing of residents and the importance of maintaining and enhancing Edinburgh's built and natural environment. The strategy proposals and policies set out within the Plan take a place-based approach to deliver greater equality in health, wellbeing and sustainability outcomes through the delivery of 20-minute neighbourhoods. Impact on residential amenity of adjacent housing arising from effects on daylight, privacy and sunlight is a matter of detailed design. Policies are provided within the Plan which address these detailed matters which, along with the Council's Edinburgh Design Guidance (CD047) and other non-statutory guidance, will be used to assess proposals through the planning application process. **No modification proposed.**

Edinburgh Access Panel (0620)

Addressing inequality is integrated within the plan. As set out within the four outcomes at paragraphs 2.4-2.35 the Plan addresses inequality in a number of ways. This includes aims to ensure that everyone has access to a range of amenities, a range of house types that are adaptable, access to green blue network and creating accessible places. While car parking free or low parking developments are encouraged in the Plan it sets a requirement to meet accessible parking standards. Equality of access is appropriately addressed through individual proposals and the Edinburgh Design Guidance (CD047) provides detail on the need for Access Statements. **No modification proposed.**

Elsbeth Wills (0293)

Impacts of tourism development are addressed through the policies of the plan. It is not possible to control the occupiers of shops. The use of open spaces is outwith the scope of the local development plan. Policy Hou 7 Loss of Housing addresses the use of dwellings for short-term lets. The Plan safeguards land for future public transport improvements. Place policies and development principles identify requirements for public transport improvements for allocated sites. **No modification proposed.**

Gilmerton & Inch Community Council (0716)

Paragraph 1.1-1.7 set out an introduction to the Plan and further detail is then set out within the plan. Paragraphs 2.37 -2.148 set out detail of the statements made. **No modification proposed.**

Goff Cantley (0032), Peter Fantes (0319), The Friends of Midmar Paddock, Edinburgh (0121)

The City Plan spatial strategy identifies the areas of the city where development is directed and also the areas of countryside and green belt where development is not supported except under certain circumstances set out in policy Env 18 and Hou 4. **No modification proposed.**

Grange/Prestonfield Community Council (0192)

It is not necessary to refer specifically to external factors at paragraph 1.7. The paragraph sets out what the Plan does and how it will be used to guide development. **No modification proposed.**

It is not necessary to refer to the 2022-2032 period continuously throughout the document. The period of the Plan 2022-2032 is set out within paragraph 1.6 of the introduction. Where specific targets are provided for the Plan period the period of 2022-2032 is stated. **No modification proposed.**

The City Plan Monitoring Statement (CD023) assesses the effectiveness of current planning policies. It is not necessary to refer to this within the introduction which is forward looking. **No modification proposed.**

Hallam Land Management (0615), Tarmac (0244)

It is suggested that text is removed from paragraph 1.1 which states that there are poverty and health inequalities, demand for new homes, rising housing costs, traffic congestion and poor air quality. The Council do not accept this deletion. The references are relevant to the outcomes of the plan. **No modification proposed.**

Text at paragraph 1.2 states the Council's commitment to change and sets out the City Vision. The Council and others have signed up to this vision. The text simply set out the themes of the Vision. **No modification proposed.**

Paragraph 1.3 refers to the target for the city to be net zero by 2030. Paragraph 2.7 contains further reference to targets to achieve net zero. **No modification proposed.**

Paragraph 1.4 sets out the commitments of the Council. It is not necessary to include within this section reference to sufficient land for a range of types and tenures. This detail is contained with paragraphs 2.88- 2.110. **No modification proposed.**

The suggestion to remove text from paragraph 1.5 is not accepted. The text sets out what is required to meet objectives. **No modification proposed.**

Re-ordering of paragraphs to place 1.5 following 1.1 is not accept. Paragraphs 1.1-1.4 set out what the Council wish Edinburgh to be and 1.5 sets out what needs to be done. The ordering is therefore correct. **No modification proposed.**

The Plan does not prevent new development. Reference is made within paragraph 2.89 to the need for homes to support economic growth. The introduction sets out the need for future growth to meet ambitions for a climate ready city. It focusses on achieving development while meeting this need. Paragraph 2.27-2.35 sets out the policy drivers which are the Council's three main area for change – becoming a sustainable and net zero city, ending poverty by 2030 and delivering wellbeing and equalities. Paragraphs 2.37-2.148 set out how the Plan can achieve the outcomes set out in paragraph 2.36. **No modification proposed.**

#### Hallam Land Management (0615)

The Proposed Plan was approved by the Council's Planning Committee on 29 August 2022. It therefore represents the settled view of the Council. The Council does not consider there have been procedural irregularities. Infrastructure costs will be set out in the Plan's Action Programme. The Plan is supported by an SEA set out in the Environmental Report (CD010), Integrated Impact Assessment (CD013), Strategic Flood Risk Assessment (CD011), Habitat Regulations Appraisal (CD012), Transport Appraisal (CD014), Education Appraisal (CD015) and Healthcare Appraisal (CD016). **No modification proposed.**

#### Julie Robertson (0210)

The Plan aims to deliver a network of 20-minute walkable neighbourhoods and create mixed use neighbourhoods. It supports business use in town and local centres. The Plan therefore aims to ensure that employment opportunities are available as part of a mix of uses including residential. **No modification proposed.**

#### Juniper Green & Baberton Mains Community Council (0306)

It is not within the scope of the local development plan to address the standard of existing development. The Plan addresses new development. Where change of use of exiting development is proposed policies of the Plan set out the approach to design which includes sustainability measures. **No modification proposed.**

#### Leith Harbour and Newhaven Community Council (0776)

The statement on culture and heritage refers to the whole of Edinburgh and is not limited to the city centre. There is therefore no requirement to state at paragraph 1.1 that this is not limited to the city centre. **No modification proposed.**

The low emissions zone is subject to separate legislation and process and it is not within the scope of the local development plan to determine the extent of any low emission zone, consequently paragraph 1.3 should not be changed. **No modification proposed.**

Paragraph 1.5 as worded only refers to homes and not houses therefore no amendment is needed. **No modification proposed.**

Paragraph 1.6 sets out that the Plan protects places of value. The Plan applies across the Council area and it is not considered necessary to provide any specific reference to this protection applying across the city. **No modification proposed.**

The protection of built heritage is set out within the policies of the plan. It is not appropriate to refer to this within paragraph 1.7. The purpose of this paragraph is to set

out what the Plan does and how it will be used to guide development. **No modification proposed.**

Leith Links Community Council (0617)

Paragraph 1.1 sets out a general statement on Edinburgh and makes reference to the need for new homes and rising housing costs. Impacts of tourism development are addressed through the policies of the plan. **No modification proposed.**

Paragraphs 1.5-1.7 set out what the Plan is and what its purpose is. There is no need to make specific reference to communities within these paragraphs. Reference to communities is made throughout the Plan and place policies set out that local communities will be consulted through the development of place briefs. The long term impacts of the pandemic are not known. The policies of the Plan allow sufficient flexibility. **No modification proposed.**

Paragraph 2.21 identifies the 20-minute neighbourhood approach to addressing net zero carbon and paragraphs 2.28-2.32 provide further information on the role of the Plan in becoming a net zero city. Paragraph 2.33 sets out the ways in which the Plan can contribute towards elimination of poverty. **No modification proposed.**

Support for Local Place Plans is provided at Aim 3 and this is considered sufficient reference. **No modification proposed.**

Paragraph 1.4 sets out a commitment to eliminating poverty, ensuring residents have enough money to live on, have access to work, learning and training opportunities and have a good place to live. The Plan sets out the policies and proposals to contribute to achieving these aims. Policies and proposals address infrastructure requirements for development. **No modification proposed.**

Mactaggart & Mickel Homes Ltd (0312)

The introduction sets out the role of the Council and the Plan in achieving the city vision. It is not appropriate to refer to the role of the private sector in this context. **No modification proposed.**

Melford Developments Ltd (0308)

The introduction sets out the need for future growth to meet ambitions for a climate ready city. It focusses on achieving development while meeting this need. Paragraph 2.27-2.35 sets out the policy drivers which are the Council's three main area for change – becoming a sustainable and net zero city, ending poverty by 2030 and delivering wellbeing and equalities. It is therefore appropriate for the introduction to reflect this. **No modification proposed.**

Mr T Klan (0307)

Reference is made within paragraph 2.89 to the need for homes to support economic growth. The introduction sets out the need for future growth to meet ambitions for a climate ready city. It focusses on achieving development while meeting this need. Paragraph 2.27-2.35 sets out the policy drivers which are the Council's three main area for change – becoming a sustainable and net zero city, ending poverty by 2030 and delivering

wellbeing and equalities. It is therefore appropriate the for the introduction to reflect this. The Plan is supportive of housing development in appropriate locations. Paragraph 1.4 sets out the commitments of the Council. It is not necessary to include within this section reference to sufficient land for a range of types and tenures. This detail is contained with paragraphs 2.88- 2.110. It is not the purpose of the introduction to set out development opportunities. The spatial strategy identifies where development is proposed. **No modification proposed.**

#### SEPA (0012)

The introduction sets out an approach which focusses on responding to climate change and addressing inequalities. Paragraph 1.5 sets out that this involves addressing climate change objectives as an integral part of all development as it set out the need to build homes to the highest emissions quality standards resilient, connected neighbourhoods, in the right location with the right infrastructure and also to support business and promote an inclusive wellbeing economy. This essentially sets out the regenerative approach referred to therefore it is not considered that this needs to be made explicit. **No modification proposed.**

Paragraphs 2.27 - 2.35 set out the policy drivers at an Edinburgh level. The Water Management Vision is referred to in this section and also at paragraph 2.76. Paragraph 2.28 refers to the draft 2030 Climate Strategy. It is considered to be appropriate to set out these strategies within this section rather than within the introduction. The 2030 Climate Change Strategy (CD064) was produced in December 2021 following the publication of the proposed plan. The Council acknowledges that the reference should be corrected as a minor drafting/technical matter. **No medication proposed.**

#### Sergey Gorobets (0414)

The definition of affordable housing is set out in the Glossary. The Council's non-statutory Guidance on Affordable Housing (CD053) sets out definitions of housing tenures including low cost housing. It is appropriate for this level of detail to be contained within guidance. The low emissions zone is subject to separate legislation and process and it is not within the scope of the local development plan. The Plan relates to the Edinburgh area and cannot make allocations within other local authority areas. The approach to meeting the housing need and demand in Edinburgh is set out in paragraphs 2.88-2.110. The Plan allocates sufficient land to meet the requirement within Edinburgh. **No modification proposed.**

#### Southside Community Council (0781)

Addressing poverty and inequality are integrated within the plan. As set out within the four outcomes at paragraphs 2.4-2.35 the Plan addresses poverty and inequality in a number of ways. This includes aims to ensure that everyone has access to a range of amenities, a range of house types that are adaptable and affordable, access to green blue network, creating accessible places and supporting development that contributes to good growth including community and social enterprises.

The Plan has been set out to be user friendly and is organised into clear sections identified by colour coding. Page 4 sets out how to use the plan. While the document is lengthy this is necessitated by the scope of the content. **No modification proposed.**

Thomas Tierney (0400)

The City Plan Proposed Action Programme (CD008) sets out how the infrastructure and services required to support the growth of the city will be delivered. The long term impacts of the pandemic and Brexit are unknown. The policies of the Plan allow sufficient flexibility. The pandemic emphasised the benefits of local living and the 20-minute neighbourhood principle is embedded in the Plan policies. **No modification proposed.**

University of Edinburgh (0464)

Decisions on planning applications must be made in accordance with the development plan unless material considerations indicate otherwise. Any flexibility is a matter for individual decision in accordance with this. **No modification proposed.**

William Moyes (0305)

The format of the document is addressed above. The Plan contains numerous references to other agencies and partnerships. Proposals tables set out in Part 2 of the Plan include references to funding and delivery. The Proposed City Plan Action Programme (CD008) sets out how the infrastructure and services required to support the growth of the city will be delivered. **No modification proposed.**

Wright PDL (0078)

Reference is made within paragraph 2.89 to the need for homes to support economic growth. It is not considered necessary to include any further statement of the economic and social benefits of housing. The Plan is supportive of housing development in appropriate locations. **No modification proposed.**

## **Aims**

Andrew Anderson (0535), Susie Ross (0440)

Paragraph 2.1 acknowledges that the Plan is ambitious and aims reflect this. **No modification proposed.**

Andy Inglis (0138)

Edinburgh's population is forecast to grow. The Plan is required to meet the housing needs to support this growth. The reference to "better active travel" at aim 1 is considered to be appropriate. This acknowledges that there is existing active travel infrastructure and the Plan aims to improve upon this. **No modification proposed.**

Anna Brand (0742)

The commitment in City Plan is to help deliver the Council's commitment to net-zero by 2030. This exceeds the targets set by the Climate Change (Emissions Reduction Targets)

(Scotland) Act 2019 (CD151) for Scotland to achieve net zero by 2045. **No modification proposed.**

Archie Clarke (0003)

Addressing inequality is integrated within the plan. As set out within the four outcomes at paragraphs 2.4-2.35 the Plan addresses inequality in a number of ways. This includes aims to ensure that everyone has access to a range of amenities, a range of house types that are adaptable, access to green blue network and creating accessible places. While car parking free or low parking developments are encouraged in the Plan it sets a requirement to meet accessible parking standards. Equality of access is appropriately addressed through individual proposals and the Edinburgh Design Guidance (CD047) provides detail on the need for Access Statements. **No modification proposed.**

AREAA (0358)

The aim of the Plan is to direct development to brownfield land. It would not be appropriate within the aims to set out exceptions to this. Policy Env 18 sets out circumstances where development in the green belt and countryside may be acceptable and policy Hou 4 sets out that where there is need for housing land due to shortfall in the maintenance of the 5-year housing land supply development in the green belt or countryside may be permitted subject to a number of criteria. **No modification proposed.**

Arnold Myers (0758), Jennifer Hess (0771)

The Plan directs development to brownfield land rather than greenfield land. Policies of the Plan protect open space. **No modification proposed.**

Bo Adams (0363)

Policy Inf 1 requires that key community facilities are walkable within a 20-minute return trip and where this is not met services are delivered. Key community facilities include local shops, doctors and dentist surgeries. **No modification proposed.**

Brian Tiplady (0641)

Aim 1 refers to mixed use sustainable communities linked by better active travel and public transport. It is considered that this provides equal emphasis to active travel and public transport. **No modification proposed.**

CBRE Global Investors (0644), Nuveen Real Estate (0564), Nuveen Real Estate (0734)

The text as worded refers to retail and leisure. It is not necessary to include reference to the wider hierarchy of centres. The hierarchy of centres is supported within the retail policies and paragraph 2.141-2.148. **No modification proposed.**

Cramond & Barnton Community Council (0243)

The purpose of this section of the Plan is to set out the aims of the plan. Aim 2 sets out that new development is directed to brownfield land. It would not be appropriate to set out the current use of sites within this section of the Plan or any requirement of assessment of

impacts on businesses. Impacts on business are addressed in the Council's response to issue 3 Delivery of the Strategy. **No modification proposed.**

Neither aim 1 or policy Inf 1 Community Facilities specify particular community facilities. This is appropriate as the individual circumstances will vary depending on the location of a proposed development and proposals will be considered on their individual merits taking into account various factors. The text set out in paragraph 3.195 gives examples of community facilities. **No modification proposed.**

The definition of brownfield is set out in the Glossary at page 198. The definition is land which has previously been developed. This includes developed land within the urban area. It is not necessary to set out within the aims the current use of any allocated sites. **No modification proposed.**

The Plan is seeking to deliver mixed use housing led development on all allocations. However, the Council acknowledges that there may be some businesses that have to relocate, particularly class 5 developments which are not appropriate in a residential environment and the Council has identified additional land (40.3ha) at Newbridge Industrial Estate in the form of an extension to the West. There is also 12ha of land still available within the existing Newbridge Industrial Estate that could accommodate relocating businesses. There is also existing Business and Industrial land identified at, Brunstane (8.6ha) and Seafield, Site EW1d (26 ha) that could potentially accommodate some relocated businesses. This gives a total of approximately 87ha of land for potential industrial relocation. As a result, the Council considers that the development plan has a mitigation strategy for the impacts on businesses that are unable to be retained within redeveloped sites and the suggested text is unnecessary. **No modification proposed.**

Douglas Tharby (0148), Melford Developments Ltd (0308)

All aims are equal and are not set out in order of priority. **No modification proposed.**

Dr David Houston (0655), Jay Chimo (0674).

Edinburgh's population is forecast to grow. The Plan is required to meet the housing needs to support this growth. **No modification proposed.**

Edinburgh Chamber of Commerce (0379)

It is not considered that the ability to provide a 20-minute neighbourhood is a threat to businesses. The Plan aims to deliver business space as part of mixed use housing development on allocated sites and sites within the urban area. Impacts on businesses is considered in the Council's response to Issue 3 Delivery of the Strategy. Housing sites have been identified through a process of site assessment set out in the Choices Housing Study, January 2020 (CD026). The identification of sites is addressed in Issue 20 Assessment of Housing Land Supply. The Plan identifies local centres which serve local retail function and policy protects the retail function of these centres. Policy Inf 1 requires that key community facilities are walkable within a 20-minute return trip and where this is not met services are delivered. Transport strategy is considered in the Council's response to Issue 31 Transport Strategy. **No modification proposed.**

Edinburgh Napier University (0731)

Aim 1 refers to active travel which includes wheeling and cycling. It is not necessary to identify wheeling and cycling separately. **No modification proposed.**

Edinburgh World Heritage (0339)

An additional aim to conserve and enhance the heritage of the city is not necessary. This is sufficiently addressed within the Plan policies. **No modification proposed.**

Policy Env 7 addressed embodied carbon. It is not necessary to refer to the policy within the aims. **No modification proposed.**

Frances Guy (0589)

Neither aim 1 or Policy Inf 1 Community Facilities specify particular community facilities. This is appropriate as the individual circumstances will vary depending on the location of a proposed development and proposals will be considered on their individual merits taking into account various factors. The text set out in paragraph 3.195 gives examples of community facilities. **No modification proposed.**

The Plan sets out policies to be applied to new development and change of use. It is not within the scope of the Plan to address retrofitting. **No modification proposed.**

Graeme Parry (0230)

The Plan is informed by an Education Appraisal (CD015), Healthcare Appraisal (CD016) and Transport Appraisal (CD014). These identify infrastructure requirements of planned development. **No modification proposed.**

Hallam Land Management (0615), Tarmac (0244)

The Plan was prepared in line with the Planning (Scotland) Act 2019 (CD102). This sets out that the purpose of planning is to manage the development and use of land in the long term public interest including development which contributes to sustainable development or achieves the national outcomes. The Plan outcomes reflect these national outcomes and paragraphs 2.37 to 2.148 set out how City Plan will contribute to achieving them.

The Plan had regard to emerging national spatial strategy and policies, as provided by the Scottish Government's Position Statement on NPF4 (CD098), draft NPF4 (CD099) and the Programme for Government 2021 (CD100) and by regional and local approaches through the interim Regional Spatial Strategy (CD093) (approved by the SESplan Joint Committee, City Region Deal Joint Committee and ratified by the constituent authorities) and the emerging Wider West Edinburgh Spatial Strategy, all relevant considerations for an emerging Local Development Plan in terms of the Act.

Spatial strategy is addressed at Issue 2, impacts on business is addressed at Issue 3, housing supply targets and land requirement is addressed at Issue 19, consultation and the approach to West Edinburgh are addressed at Issue 39. **No modification proposed.**

Paragraph 2.1 refers to future growth. This is all encompassing and includes economic growth. **No modification proposed.**

All aims are equal and are not set out in order of priority. **No modification proposed.**

Aim 2 reflects the spatial strategy. This is considered in the Council's response to Issue 2 Spatial Strategy. Sufficient land has been allocated in line with the spatial strategy and this is addressed in the Council's response to Issue 20 Assessment of Housing Land Supply. It is not necessary to refer to the extension of communities. **No modification proposed.**

Policy Env 8 New Sustainable Building set out the requirements for net-zero. This is addressed in the Council's response to Issue 13 Sustainable Design. **No modification proposed.**

The green setting of the city is not limited to the effect of countryside and green belt therefore it is appropriate to keep the text as worded to refer the green setting of the city in general. **No modification proposed.**

Housing need and demand is addressed in the Council's response to Issue 19 Housing Supply Target and Land Requirements **No modification proposed.**

The strategy, as set out in aim 2 of the Plan, to direct new development to and maximise the use of brownfield land through housing led mixed use development will deliver space for businesses supporting aim 10 to deliver the key economic land uses. The reference to modern business space as part of housing-led mixed use development should therefore be retained. **No modification proposed.**

Homes for Scotland (0404), Steve Loomes (0767)

The Council does not consider that aims of the Plan are contradictory. City Plan aims to ensure that the planning of housing, employment and services addresses the need for net-zero development, resilience to climate change, quality places and green spaces, delivery of community infrastructure and job opportunities where people live and embeds a 20-minute neighbourhood principle at the heart of all places in Edinburgh. **No modification proposed.**

John Bremner (0140)

Edinburgh's population is forecast to grow. The Plan is required to meet the housing needs to support this growth. **No modification proposed.**

The Plan directs new development to brownfield land. Policy Hou 1 supports housing development on the allocated sites and other suitable sites within the urban area. Policy Env 18 supports development in the green belt and countryside only in exceptions circumstances. **No modification proposed.**

Aim 6 sets out the aim to deliver land to meet housing needs. Aim 2 sets out the locations for this. The aims are interrelated, and therefore it is not necessary to refer to locations for housing development within aim 6. While the Plan aims to deliver housing on the allocated sites and other suitable sites in the urban area policy Hou 4 Housing Land Supply allows for greenfield development in circumstances where there is a shortfall in the maintenance of the 5-year housing land supply. This is in line with Scottish Planning Policy. The suggestion that aim 6 refer to limiting development to brownfield only would therefore be incorrect. **No modification proposed.**

It is suggested that as roads are at their limit of width the infrastructure first approach should be removed. The infrastructure first approach directs development to where there is existing infrastructure. Proposals are identified in the Plan to provide infrastructure required to support development. Policy Inf 3 supports development where there is sufficient infrastructure capacity already being available or can be delivered at the appropriate time to mitigate any negative impacts. **No modification proposed.**

Policy Env 26 addresses housing density. It promotes an appropriate density of development taking account of site characteristics and location. It highlights the benefits of high density. Densities for allocated sites are set out in Part 4, Table 2. **No modification proposed.**

Policy Hou 7 Loss of Housing addresses the use of dwellings for short-term lets. This presumes against the change of use of dwellings to short-term letting. **No modification proposed.**

#### Juniper Green & Baberton Mains Community Council (0306)

Aims are considered to be set out in sufficient detail. Further detail on the aims is set out in paragraph 2.37- 2.148. **No modification proposed.**

Paragraph 3.195 sets out facilities which are necessary to foster community life and reduce the need to travel for everyday services. **No modification proposed.**

There may be potential for existing areas to benefit from the provision of community facilities in association with new development however the Plan can only provide policies against which to assess development proposals. **No modification proposed.**

A glossary of terms is provided at page 158. Where acronyms have been used the full terms are set out within the associated text. **No modification proposed.**

Policy Env 7 requires that a sustainability statement is provided for new developments setting out how the development has been designed to allow future adaptation to different uses. Where is proposed to replace a building, proposals must be accompanied by a carbon assessment which provides a comparative assessment to the option of re-using the building. The issues raised in the representation are therefore addressed in the policies of the Plan and it is not considered necessary to refer to these within the aims. **No modification proposed.**

The Plan directs new development to brownfield land. Policy Hou 1 supports housing development on the allocated sites and other suitable sites within the urban area. Policy Env 18 supports development in the green belt and countryside only in exceptions circumstances. **No modification proposed.**

The Plan identifies education infrastructure required to support development. Education proposals are set out in Part 2, Table 11 and cost estimates are set out in the Action Programme. The Plan does not contain a proposal for Currie Community High School. **No modification proposed.**

#### Leith Harbour and Newhaven Community Council (0776)

The Plan aims to provide a mix of house types to provide for multi-generational communities. There are many examples in Edinburgh of development both historic and new which are high density but also provide for a range of housing needs. There are many benefits to high density including the maintenance of local services which contribute to 20-minute neighbourhoods and public transport making the area suitable for a range of ages. **No modification proposed.**

Reference to local place plans is made at paragraph 2.12. It is not the role of the Plan to set out legislative progress. **No modification proposed.**

Lynn Grattage (0362)

The spatial strategy of the Plan directs new development to, and maximises the use of, brownfield land rather than greenfield land and is in accordance with SPP 2014 (CD096) paragraph 40. The spatial strategy of the Plan directs new development to, and maximises the use of, brownfield land rather than greenfield land and is in accordance with SPP 2014 (CD096) paragraph 40. The emerging national policy provided by draft NPF4 (CD099) sets an overarching principle for compact growth limiting urban expansion where brownfield land and buildings can be used more efficiently. Spatial Strategy is addressed in the Council's response to Issue 2 Spatial Strategy. **No modification proposed.**

Michael Ramsay (0011)

Aim 4 refers to the requirement for all new buildings to be net zero and the support of the Plan to the delivery of heat networks and infrastructure development including in heritage buildings. Environment policies of plan protect the cities heritage. **No modification proposed.**

Murray Estates (0197), Stewart Milne Homes (0118)

City Plan does not have a strategy of reallocating active business/industrial sites and allocated employment land to housing uses. The part of the strategy of the Plan is to promote the redevelopment of existing brownfield sites, of which only a proportion are in industrial use, for mixed use housing led development. The Council's response to displacement of business and economic strategy is dealt with under issue 3 Delivery of the Strategy. It is not necessary to change Aim 10 as suggested. **No modification proposed.**

Nicola McCowan Hill (0195)

The Council consider that the policies and proposals identified in the Plan will deliver the strategy. Paragraphs 2.37-2.148 set out how the Plan will meet the outcomes set out at paragraph 2.36. **No modification proposed.**

Patricia Willder (0205)

The Plan directs new development to brownfield land. Policy Hou 1 supports housing development on the allocated sites and other suitable sites within the urban area. Policy Env 18 supports development in the green belt and countryside only in exceptions circumstances. **No modification proposed.**

Robert Falcon (0640)

The Plan directs new development to brownfield land. Policy Hou 1 supports housing development on the allocated sites and other suitable sites within the urban area. Policy Env 18 supports development in the green belt and countryside only in exceptional circumstances. West Edinburgh development is addressed in the Council's Response to issue 6 proposed Sites West Edinburgh. **No modification proposed.**

RSPB Scotland (0648), Sarah Adamson (0523)

City Plan policies, supplementary planning guidance and the Edinburgh Biodiversity Action Plan (CD068) recognise the value and potential for biodiversity outwith designated areas and sets out key principles for connecting and enhancing biodiversity through habitat creation and restoration. The Plan contains proposals to link and expand the city's green and blue network which will help to reverse the decline in biodiversity. The value of brownfield sites is recognised in Place Policies. Policy Env 21 requires that features of biodiversity value should be safeguarded and enhanced. It is therefore considered that sufficient protection is provided for biodiversity where proposals come forward on brownfield sites. **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The representation acknowledges that no changes are required at this stage given that the proposed plan meets its aims by directing new development to, and maximising the use of, brownfield land rather than greenfield land, in accordance with SPP Para 40 (CD096). Draft NPF4 (CD099) proposes under Policy 30: Vacant and Derelict Land that "Local development plans should seek to reuse vacant and derelict land and redundant buildings as a priority including in proposals to creatively and sustainably repurpose buildings and structures." In identifying sites to deliver housing land an assessment of urban brownfield land was undertaken. The methodology for this is set out in the City Plan 2030 Housing Study, January 2020 (CD026). The Scottish Vacant and Derelict Land Survey (CD123) was used as a data source. Where such sites were identified as having potential for housing development they were taken forward for further assessment. It is therefore considered that the Plan has sought to reuse vacant and derelict land as a priority prior to seeking further land for housing development. **No modification proposed.**

Shortbread House (0619)

Brownfield sites allocated in City Plan are within the general urban area. They are not allocated as employment land within the current development plan. 64% of allocated brownfield sites have operational businesses. City Plan aims to deliver mixed use communities. Policy Econ 5 Employment Sites and Premises requires that redevelopment of employment sites of all sizes includes floorspace designed to provide for a range of business and commercial users. This will retain and include small business commercial units within mixed use developments. Displacement, relocation and the need for employment land are dealt with under Issue 3 Delivery of the Strategy. **No modification proposed.**

Southside Community Council (0781)

Aim 2 sets out that development will be directed to and maximise the use of brownfield land rather than greenfield land. This is considered to be a strong statement and there is no requirement to strengthen this. **No modification proposed.**

The 20-minute neighbourhood principle is embedded in the Plan policies. These provide the detail of implementation. It is not necessary to set this out within the aims. **No modification proposed.**

The Royal London Mutual Insurance Society Ltd (0149)

Aim 10 addresses the delivery of key economic land uses. The aims are interrelated. It is not necessary to refer to the needs of business and industry within Aim 2. Adequate provision is made for economic land use and this is addressed in the Council's response to Issue 3 Delivery of the Strategy. **No modification proposed.**

The Plan aims to deliver business space as part of mixed-use housing development on allocated sites and sites within the urban area. Policies in the Plan support businesses development on identified business and industry sites and for employment purposes in the urban area. The aim is to provide this as part of a mix of uses and Policy Econ 2 requires that commercial developments over 0.25ha provide at least 50% of the site for housing. The text as set out in Aim 10 reflects this approach. **No modification proposed.**

### **National strategies**

Andy Inglis (0138)

Reversing and preventing loss of biodiversity are integral to the plan. Specifically paragraphs 2.71 -2.74 and policies Env 21 Protection of Biodiversity and Env 37 Designing-in Positive effects for Biodiversity require consideration of biodiversity. The city's growth is not a metric for success of City Plan. Paragraph 2.36 sets the outcomes for City Plan. **No modification proposed.**

Archie Clark (0003)

Proposals are identified in Part 2, Table 1 for new allotments/ and or food growing areas. **No modification proposed.**

Policy Env 6 requires that proposals for new buildings are accompanied by a surface water management plan. The Vision for Water Management in the City of Edinburgh (CD152), referenced in paragraph 2.31 of the plan, sets out key principles of how the city should manage its water environment. **No modification proposed.**

Cockburn Association (0777)

Paragraphs 2.282.30 set out how City Plan can contribute towards a net zero city. **No modification proposed.**

Edinburgh World Heritage (0339)

Scottish Government's policies on alteration or change in the historic environment are set out in Scottish Planning Policy (CD096) and this is identified at paragraph 2.19. The Historic Environment Policy for Scotland sets out how to approach decisions in the planning system affecting the historic environment and is referenced in the Council's

Edinburgh Design Guidance (CD047). It is not considered necessary to refer to this specific policy within the plan. **No modification proposed.**

The purpose of the section at page 11 titled “How does the City Plan strategy work with national, regional and Council strategies? is to set out the key policy frameworks and council programmes. It is not its purpose to specify legislation. Paragraph 3.103 refers to The Planning (Listed Buildings and Conservation Areas) (Scotland) Act 1997 (CD107) as a statutory consideration in the assessment of applications. **No modification proposed.**

Planning policy drivers are set out at paragraphs 2.27 – 2.35 based around the Council’s three main areas of change- becoming a sustainable and net zero city, ending poverty by 2030 and delivering wellbeing and equalities. It is not appropriate to refer to the World Heritage Site Management Plan within these areas of change. Reference to the World Heritage Site Management Plan is made at paragraph 2.48. **No modification proposed.**

#### Grange/Prestonfield Community Council (0192)

The Plan has been prepared in the context of SPP 2014 (CD096) and NPF3 (CD097), however in line with the Town and Country Planning (Scotland) Act (1997) Act (CD101) section 16 2 (c) the Council has considered emerging policy and strategy where this is relevant in preparation of the Plan, particularly where this is more recent. This has included Fourth National Planning Framework: position statement (2020) and other emerging work at national, regional and local level in preparation of the proposed plan. This approach is supported by the representation from the Scottish Government (0309). **No modification proposed.**

#### Hallam Land Management (0615), Tarmac (0244)

The level of detail provided at paragraph 2.5 in relation to the Planning Act is considered to be sufficient. It sets out the purpose of planning. **No modification proposed.**

Paragraph 2.14 refers to the NPF4 Position Statement. Since the publication of the proposed plan a draft NPF4 has been published. The Council acknowledges this reference is now dated and this should be corrected as a minor drafting/technical matter.

NPF4 has been published in draft form (CD099) and is yet to be finalised. It would therefore not be appropriate to include the minimum housing land figures provided in the draft NPF4. **No modification proposed.**

Since the publication of the proposed plan the Final (Draft) report of STPR2 has been published. It was subject to consultation in early 2022. The Council acknowledges this reference is now dated and this should be corrected as a minor drafting/technical matter.

Paragraph 2.18 provides set out the two main policies covering sustainability and placemaking. It provides a list of subject policies. It is not necessary to restate the entire contents of SPP. **No modification proposed.**

The Plan has been prepared in the context of SPP 2014 (CD096), NPF3 (CD097), however in line with the Town and Country Planning (Scotland) Act (1997) Act (CD101)) section 16 2 (c) the Council has considered emerging policy and strategy where this is relevant in preparation of the Plan, particularly where this is more recent. This has

included Fourth National Planning Framework: position statement (2020) (CD098) and other emerging work at national, regional and local level in preparation of the proposed plan. This approach is supported by the representation from the Scottish Government (0309). **No modification proposed.**

Delivery of the strategy is addressed in the Council's response to Issue 3, the approach to West Edinburgh is addressed in Issue 6 and issues related to consultation are addressed in Issue 39.

Leith Harbour and Newhaven Community Council (0776)

Paragraph 2.18 is factually correct as worded. As set out on p3 of SPP 2014 (CD096) where 'must' is used it reflects a legislative requirement to take action and where 'should' is used it reflects Scottish Ministers' expectations of an efficient and effective planning system. **No modification proposed.**

Paragraph 2.33 is factually correct as worded. The City Housing Strategy sets priorities and does not enforce them. **No modification proposed.**

Leith Links Community Council (0617)

The long term impacts of the pandemic are unknown. The policies of the Plan allow sufficient flexibility. The pandemic emphasised the benefits of local living and the 20-minute neighbourhood principle is embedded in the Plan policies. **No modification proposed.**

Design policies are set out in the Plan which promote a high standard of design and further guidance is provided in the Council's Edinburgh Design Guidance (CD047) and suite of non-statutory planning guidance. **No modification proposed.**

Melford Developments Ltd (0308)

It is not agreed that the Plan does not align with the Planning Act, SPP 2014 (CD096) or the Edinburgh Economy Strategy (CD063). The Plan has been prepared in line with the Planning (Scotland) Act 2019 (CD102). This sets out that the purpose of planning is to manage the development and use of land in the long term public interest including development which contributes to sustainable development or achieves the national outcomes. The Plan outcomes reflect these national outcomes and paragraphs 2.37 to 2.148 set out how City Plan will contribute to achieving them.

The Plan reflects the Council's economy strategy which seeks sustainable growth. City Plan supports existing businesses, continues to promote previously identified economic proposals and highlights new investment opportunities. The Plan provides for key land use needs and supports development where there is contribution to good growth for Edinburgh.

As required by SPP 2014 (CD096) the Plan allocates sufficient land to meet the housing land requirement and the Council's response to this is set out in Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

NHS Lothian (0596)

Paragraph 2.35 refers to the Improvement Service and Public Health Scotland's document Place and Wellbeing which places emphasis on the role of Local Development Plans working in partnership with public health practitioners. **No modification proposed.**

Robyn Kane (0091)

Addressing poverty and inequality are integrated within the plan. As set out within the four outcomes at paragraphs 2.4-2.35 the Plan addresses poverty and inequality in a number of ways. This includes aims to ensure that everyone has access to a range of amenities, a range of house types that are adaptable and affordable, access to green blue network, creating accessible places and supporting development that contributes to good growth including community and social enterprises. **No modification proposed.**

Roger Thomas (0345)

Strategic enhancement of Edinburgh Airport is a national development identified in NPF3 (CD097). While draft NPF4 (CD099) does not continue the national development designation, until the adoption of NPF4 it is considered appropriate to include this reference to the adopted NPF3 as part of the current national strategy context. **No modification proposed.**

The reference at 2.17 is to the sustainable transport hierarchy. Flying does not feature in this hierarchy. **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The representation suggests that consideration is given to the draft NPF4 (CD099) and the emerging position in relation to national developments. Paragraph 2.11 of the Plan refers to the national developments identified in NPF3 (CD097) that are particularly relevant to Edinburgh. This includes the strategic enhancement of Edinburgh Airport and the Central Scotland Green Network. The Council note the shift in policy direction over national developments and note that Edinburgh Waterfront; Urban Sustainable Blue and Green Drainage Solutions; National Cycling and Wheeling Network and continuation of the Central Scotland Green Network as national developments. While draft NPF4 does not continue the national development designation of strategic enhancement of Edinburgh Airport, until the adoption of NPF4 it is considered appropriate to include this reference to the adopted NPF3 as part of the current national context. The outcomes and policy direction of the Plan reflect this policy shift. The representation acknowledges that no changes are required at this stage. **No modification proposed.**

To provide a stronger link with economic development it is suggested that a reference to City Deal is included within the plan. Within paragraphs 2.22- 2.26 which set out the regional context there are references to City Deal. This makes reference to the Interim Regional Spatial Strategy which has been influenced by City Deal and also to the City Region Deal funding for West Edinburgh Transport Appraisal and West Edinburgh Transport Improvement projects to address cross boundary transport issues in the West of Edinburgh. The Council consider that the link is already contained within the Plan as worded. **No modification proposed.**

The representation suggests that reference is made to the National Marine Plan, Regional Marine Plan, Scottish Government's Heat in Buildings Strategy, and the Heat Network

delivery targets in section 92 of the Heat Networks (Scotland) Act 2021. No modification proposed however should the Reporter see merit in including reference to these plans and strategies the Council would accept this. **No modification proposed.**

#### SEPA (0012)

The Council acknowledge that paragraph 2.7 incorrectly refers to the Climate Change (Scotland) Act 2019 in relation to reduction in emissions. This is technical error and should be corrected as a minor drafting/technical matter. **No modification proposed.**

#### Southside Community Council (0781)

Paragraph 2.4- 2.35 sets out how the City Plan strategy works with national, regional and council strategies. This sets the current context in relation to finalised strategies. It also includes the emerging NPF4. Paragraphs 2.37-2.148 set out further details of the outcomes of the Plan and make reference to the key policy frameworks and council programmes and how city plan will address these. **No modification proposed.**

#### **Outcomes – General**

#### Cramond & Barnton Community Council (0243)

The four outcomes set out at 2.36 include a sustainable city. The outcome as set out is considered to be appropriate as it encompasses a range of issues within the heading of sustainability, it would not be appropriate to list every aspect contributing to this and paragraphs 2.37-2.87 sets out more detail on this outcome which addresses natural and built heritage and climate change and adaptation. **No modification proposed.**

#### Grange/Prestonfield Community Council (0192)

The use of the words “we want Edinburgh” to be is considered appropriate in this context in setting out a vision for Edinburgh in 2030. Paragraphs 2.37- 2.148 set out how the Plan will achieve these outcomes. **No modification proposed.**

#### **A sustainable city which supports everyone’s physical and mental wellbeing**

#### Alexander Sutherland (0193), Jean Morley (0461)

The Plan directs new development to brownfield land. Policy Hou 1 supports housing development on the allocated sites and other suitable sites within the urban area. The green belt and countryside are identified on the proposals map. Policy Env 18 supports development in the green belt and countryside only in exceptions circumstances. **No modification proposed.**

#### Andrew Heald (0566)

Edinburgh’s Trees in the City Action Plan, January 2014 (CD069) sets out policies that will inform how the Council manages trees and woodlands in its own ownership. Policy 20 referred to in the representation states that the Council will ensure that all construction and development, including temporary installations and placement of movable equipment, near to trees follows BS:5837 (2012) and “Guidelines for the planning, installation and maintenance of utility apparatus in proximity to trees” are followed where carrying out

works in root protection areas cannot be avoided. The Action Plan does not set policies in relation to planning or development control but deals with management therefore it is not accepted that reference needs to be made to this document within the plan. **No modification proposed.**

Policy Env 20 requires that a tree survey, that is accepted as competent by the Council, is provided for proposals that may adversely affect trees. It is not considered appropriate to limit this to one type of survey. The Council's process for decision making in planning applications in accordance with the Planning Act follows the recognised process set out in British Standard 5837 (2012) – Trees in Relation to Design, Demolition and Construction, alongside ecological appraisal. Where necessary, further impact statements or intrusive investigation will be requested in order to reach an informed decision on the amenity and biodiversity value of trees and woodland. Any change to the British Standards will be reflected in updates to guidance. **No modification proposed.**

The Million Tree Project was planned before the potential impact of ash dieback was assessed. There are an estimated 730,000 trees in the city, of which almost 44,000 are ash. It is not accurate to say that all ash trees will be lost by 2030. Estimates vary, but it is expected that 70-90% of ash trees will be lost and it may take longer than eight years to reach that point. An updated authority-wide tree survey is planned as part of the Million Tree City programme, which will capture currently unavailable data and provide more detailed estimates of tree numbers, species and distribution. As the reference at 2.70 is to the Million Tree Project and there has been no reassessment of the number of trees required considered appropriate to retain paragraph 2.70 as worded. **No modification proposed.**

#### Archie Clark (0003)

Paragraph 3.86 sets out the expectation for masterplans. Place policies set development principles for sites which provide the context for the preparation of masterplans. The Edinburgh Design Guidance sets out their expectations for masterplans. It is not the role of the Council to prepare masterplans in every situation. **No modification proposed.**

The purpose of paragraphs 2.58-2.60 is to set out the objectives of the green belt. The text reflects the purpose as set out in Scottish Planning Policy. **No modification proposed.**

Low Emissions zones are not within the scope of the development plan. **No modification proposed.**

To meet the Council's citywide target to reduce car kilometres by 30% by 2030 measures are required to increase the use of modes other than private car. Parking standards help by setting maximum limits for general car parking to restrict excessive provision, while setting minimum levels for accessible car parking, cycle parking, motorcycle parking and electric vehicles. Parking standards are set out in the Edinburgh Design Guidance (CD047) and not within the plan. Mode shift is addressed in Issue 31 Transport Strategy. **No modification proposed.**

#### Cockburn Association (0777)

Material considerations can only be determined in the context of each case. It is therefore appropriate to retain the wording “may be a material consideration”. **No medication proposed.**

Policies of the Plan protect and enhance heritage assets. Policy Env 3 requires enhancement of existing features, Paragraphs 3.103-3.123 set out policies to protect and enhance historic assets. These policies contribute to the outcome set out at paragraph 2.36 for Edinburgh to be a sustainable city which supports everyone’s physical and mental wellbeing. **No modification proposed.**

Plan policies can only be applied to proposals for development within the scope of the Planning Act. Policies cannot be applied to other regulatory regimes. **No modification proposed.**

Open space is protected by Policy Env 23. Open Space is identified on the proposals map. This includes private green spaces such as gardens. **No modification proposed.**

#### Cramond & Barnton Community Council (0243)

The outcome as worded is considered to be appropriate. Net zero extends across all outcomes. Reference to both physical and mental wellbeing are important. Maintenance of the built and natural heritage are captured but ‘sustainable’ city. **No modification proposed.**

#### Edinburgh World Heritage (0339)

The Council acknowledge that the historic environment makes a contribution to social, environmental and economic health. The first sentence of paragraph 2.45 states that Edinburgh’s built environment contributes to its distinctive character, local appeal and world-wide reputation. This is considered to express the same sentiment as the proposed addition. **No modification proposed.**

Paragraph 2.62 sets out the benefits of blue/green infrastructure. Protection of heritage assets is suitably referenced in paragraphs 2.45-2.56. **No modification proposed.**

#### Grange/Prestonfield Community Council (0192)

The Plan directs new development to brownfield land. Policy Hou 1 supports housing development on the allocated sites and other suitable sites within the urban area. The green belt and countryside are identified on the proposal map. Policy Env 18 supports development in the green belt and countryside only in exceptional circumstances. **No modification proposed.**

#### Homes for Scotland (0404), Steve Loomes (0767)

The Council does not agree that the policies of the Plan contradict with the aims. Higher density development is promoted subject to ensuring new development has a positive impact on the urban design of its location. Higher density development makes efficient use of land, helps maintain or create viability of services, encourages effective provision of public transport and is in line with sustainability aims. **No modification proposed.**

The Plan contains policy which addresses built heritage and new development. Policy Inf 1 supports housing development where key community facilities are walkable within a 20 minute round trip. There are many community facilities located within conservation areas and policies of the Plan protect these areas while allowing for appropriate development. **No modification proposed.**

Sufficient land has been identified to meet the housing land requirement and this issue is addressed in Issue 20 Assessment of Housing Land Supply. Green belt policy is addressed under Issue 15 Natural Environment Policies. **No modification proposed.**

Policy Env 26 addresses housing density. It promotes an appropriate density of development taking account of site characteristics and location. The Council considers requirements for open space and provision of green blue network to be compatible with density requirements. Appendix 1 of the City Plan Housing Study (CD026) provides illustrations of how green blue infrastructure and greenspace/open space can be provided at different density scales. City Plan has policies which protect amenity and ensure noise levels are acceptable for future and existing residents alike. **No modification proposed.**

Jennifer Inglis (0437)

Policy Env 7 Sustainable Developments requires that a sustainability statement is submitted that addresses construction materials and life-long construction. It requires that construction materials have low or negative embodied greenhouse gas emissions and are local and/or sustainably sourced and/or recycled and capable of re-use at the end of a building's lifecycle. Policy Env 20 presumes against development that risks having a damaging impact on any tree. Policy 23 protects open space. It is therefore considered that the suggested inclusion is already contained within the policies of the plan. **No modification proposed.**

John Torrance Glencross (0509), Oliver Glencross (0489)

It is acknowledged that Cramond is inadequately served by the large standard open space in line with standards set out in the Council's Open Space Strategy (CD066). The Plan identified a proposal BGN26 at Cramond Road. The site is currently open-space however it has scope for improvement to provide greater amenity for the surrounding area. The site should deliver a minimum of 2 hectare area of good quality open space which is publicly accessible. The proposal is identified in Part 2, Table 1 **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306)

Paragraph 3.86 sets out the expectation for masterplans. Place policies set development principles for sites which provide the context for the preparation of masterplans. The Edinburgh Design Guidance (CD047) sets out their expectations for masterplans. It is not the role of the Council to prepare masterplans in every situation. **No modification proposed.**

The Plan sets out the requirement for place briefs. The detail of the process does not require to be set out in the plan. **No modification proposed.**

The Plan directs development to brownfield land and sites within the urban area. **No modification proposed.**

Leith Central Community Council (0614)

A Strategic Flood Risk Assessment (SFRA) (CD011) was undertaken to inform and support the development of the City Plan and its spatial strategy. The SFRA assessed possible City Plan development sites with their level of flood risk holistically considering different forms of flooding, such as Coastal, Fluvial and Pluvial, as well as factoring in related considerations such as erosion. This is referred to in paragraph 2.80 of the plan. **No modification proposed.**

Paragraph 2.45-2.46 refers to the built form and how this contributes to the city's distinctive character. It is not necessary to refer to individual elements of the city's heritage. **No modification proposed.**

Leith Harbour and Newhaven Community Council (0776)

The suggested strengthening of paragraph 2.42 by replacing the words 'should' and 'can' with 'will' is not accepted. The use of the word 'will' predicts an outcome **No modification proposed.**

Paragraph 2.46 is a general statement about Edinburgh, and it is not appropriate to identify particular areas of the city. **No modification proposed.**

Paragraph 2.49-2.50 relate to listed buildings and conservation areas. Policies Env 10 and Env 13 address demolition. Policy presumes against demolition of a listed building and demolition within a conservation area is only permitted in exceptional circumstances and it must be demonstrated that all option to retain the building have been fully explored. **No modification proposed.**

Paragraph 2.57 is a general statement about the natural environment, and it would not be appropriate to refer to such detailed matters as suggested in the representation. Policy Env 20 protects existing trees. Hard standing is addressed in the Edinburgh Design Guidance. **No modification proposed.**

There is no contradiction between paragraphs 2.68-2.70 and paragraph 3.130. Paragraph 2.68 refers to legislation which protects specific trees and paragraph 3.130 refers to the Plan policy which applies to all trees. **No modification proposed.**

Liz Glass (0645)

Policy Env 27 sets policy for new planting. It requires that design follows the principles in the Council's Edinburgh Design Guidance (CD047), Edinburgh Biodiversity Action Plan (CD068) and other appropriate guidance. The types of species are best determined through application of this guidance. **No modification proposed.**

Mark Ockendon (0419)

Policy Env 30 sets out criteria to be met for development which rises above the building height prevailing generally in the surrounding area. **No modification proposed.**

Melford Developments Ltd (0308)

The Plan aims to deliver a network of 20-minute walkable neighbourhoods and create mixed use neighbourhoods. It supports business use in town and local centres. The Plan therefore aims to ensure that employment opportunities are available as part of a mix of uses including residential. **No modification proposed.**

Mr John G. Skinner (0065)

Policy Env 26 aims to promote an appropriate density of housing development and recognises at paragraph 3.142 that where appropriate increasing density and building heights can enhance an area's character and lead to better placemaking. Policy Env 30 sets out criteria to be met for development which rises above the building height prevailing generally in the surrounding area. Key views are specifically addressed within development principles for some sites set out in the plan. **No modification proposed.**

NatureScot (0528)

Paragraphs 2.58-2.60 provides the objectives of the green belt as set out in SPP (CD096). Draft NPF4 (CD099) continues this approach. It is acknowledged that draft NPF4 (CD099) sets out a wider range of uses which could be supported in the green belt than those set out in SPP. Acceptable uses within the green belt and countryside are set out at Env 18. This policy is addressed in Issue 15 Natural Environment. **No modification proposed.**

The text at paragraph 2.79 is considered to be correct. The work on dynamic coast is being undertaken by Glasgow University and SEPA. **No modification proposed.**

Ratho and District Community Council (0289)

The Council acknowledge that achieving a net zero city by 2030 is ambitious. The Council's 2030 Climate Strategy (CD064) leads on actions for change across Edinburgh by identifying what actions the city needs to take to improve resilience as well as achieve a reduction in greenhouse gas emissions by 2030. City Pan sets out policies which are designed to help deliver this commitment. **No modification proposed.**

Roger Thomas (0345)

Policy Env 14 Conservation Areas-Development criteria (c) requires that development within a conservation area utilises materials appropriate to the historic environment. Further detail is set out in the Council's Non-statutory Guidance for Listed Buildings and Conservations Areas (CD049). **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The Council is satisfied that the text at paragraph 2.52 is correct. No modification proposed, however, should the Reporter see merit in the representation to replace with the alternative text suggested the Council would have no issue with this change. **No modification proposed.**

Paragraph 3.121 and 3.122 sets out supporting text to archaeology policies Env 16 and Env 17. Paragraph 3.122 states that where a development may affect a scheduled monument or its setting, early contact should also be made with Historic Environment

Scotland. The Council consider that this provides sufficient signposting to the need to consult with Historic Environment Scotland. **No modification proposed.**

#### SEPA (0012)

It is suggested that text is added to refer to the importance of the local environment and in particular the role of green blue infrastructure in maximising place-led benefits. Paragraph 2.39 refers to the aim of City Plan to ensure that everyone has access to a range of amenities in their area through the promotion of 20-minute neighbourhoods. This includes the green blue network. **No modification proposed.**

#### Sport Scotland (0671)

Paragraph 2.37-2.44 set out the role of the Plan in improving the physical and mental wellbeing of residents. The suggestion that the contribution of physical activity to its outcome is therefore not appropriate to include within this section. **No modification proposed.**

Sports facilities are addressed within the Council's Open Space Strategy (CD066). It is not necessary to refer to the detail of this within the plan. **No modification proposed.**

The Council acknowledge that there is no definition within the Plan of outdoor sports facilities. A definition of sports areas is provided in PAN 65 (CD122). **No modification proposed.**

#### Stirling Developments (0303)

The housing policies, along with the other policies of the Plan aim to provide the required housing in mixed use sustainable communities. The Plan allocates housing sites within the urban area where there is a mix of uses including employment. Housing allocations are identified close to existing strategic business centres of West Edinburgh and Leith. **No modification proposed.**

Sustainable development is supported by the plan. Scottish Planning Policy (CD096) states that due weight is expected to be given in planning decisions to net economic benefit and this is a consideration for the decision maker through the development management process. **No modification proposed.**

#### The Association for the Protection of Rural Scotland (0334)

The Plan contains a policy, Env 28, which applies to all new development situated at the edge of the urban area. It supports development on sites at the green belt boundary where it conserves and enhances the landscape setting, promotes access to the surrounding countryside and includes landscape and environmental improvement that strengthen the green belt boundary. It is not necessary to refer to specific policies within paragraph 2.58. **No modification proposed.**

The purpose of paragraphs 2.58-2.60 is to set out the objectives of the green belt. It is not necessary to set out the contribution of the green belt to climate change. Paragraphs 2.62 recognises the multiple benefits of Edinburgh's green blue infrastructure, including the green belt, such as capturing carbon emissions, sustainably managing surface water and reducing flood risk. **No modification proposed.**

Paragraphs 2.68 -2.70 set out the legislation and strategies in relation to tree and woodland. Monitoring of trees is not within the scope of the development plan. **No modification proposed.**

University of Edinburgh (0464)

The importance of health and wellbeing is stressed throughout the plan. The strategy proposals and policies set out take a place-based approach to deliver greater equality in health and wellbeing through the delivery of 20-minute neighbourhoods. **No modification proposed.**

Wright PDL (0078)

The Council does not agree that the policies of the Plan contradict with the aims. Higher density development is promoted subject to ensuring new development has a positive impact on the urban design of its location. Higher density development makes efficient use of land, helps maintain viability of services, encourages effective provision of public transport and is in line with sustainability aims.

Policy Inf 1 supports development where key community facilities are walkable within a 20 minute trip. This supports the aim to ensure that everyone has access to a range of facilities through the promotion of 20 minute neighbourhoods. There may be potential for existing areas to benefit from the provision of community facilities in association with new development however the Plan can only provide policies against which to assess development proposals. As stated in the representation the Plan contains policies which protect amenity and ensure noise levels are acceptable for future and existing residents alike. **No modification proposed.**

**A city which everyone lives in a home they can afford**

Archie Clark (0003)

The proposed brownfield development sites identified within City Plan which currently have business uses on them are being promoted for mixed use housing led development and not just housing development, which is a fundamental part of the strategy. The Plan identifies infrastructure requirements of new development and supports housing development where key community facilities are walkable within a 20-minute return trip. **No modification proposed.**

David McGowan (0168)

City Plan aims to deliver a place based approach to growth. Policies are set out to protect residential amenity and to ensure that any community infrastructure required as a result of development is provided. **No modification proposed.**

The Davidson's Mains and Silverknowes Association (0454)

Policy Inf 3 supports the principle set out at paragraph 2.90. It requires that there is sufficient infrastructure either available or that it can be delivered at the appropriate time to mitigate negative impacts. **No modification proposed.**

Douglas Tharby (0148)

It is not necessary for terms to be quantifiable. Figures used to calculate the housing supply targets are addressed in Issue 19 Housing Supply Targets and Land Requirement. **No modification proposed.**

Edinburgh World Heritage (0339)

Paragraph 2.93 on page 26 states “There is strong potential for commercial centres, stand-alone supermarkets and other retail sites, to include housing as part of any future redevelopment and City Plan provides support for this.” Policy Hou 1 supports redevelopment of commercial centres to include residential. Housing as part of mixed-use development will be encouraged on appropriate sites to help meet housing need and create strong, sustainable communities. **No modification proposed.**

Grange/Prestonfield Community Council (0192)

The representation suggests that the increase in affordable housing requirement to 35% on market sites should be monitored. The policy will be monitored, along with all policies of the Plan as part of future plan review. Any change to policy would require to be made through the development plan process. It is not necessary to refer to this within the plan. **No modification proposed.**

Kathryn Poolman (0574)

Alongside identified sites policy Hou 1 supports housing development in urban area which includes the city centre. Place 1 sets specific policy for the city centre. Place 1 (a) requires a mix of uses including residential. Policy Hou 7 presumes against the change of use of dwellings, including to use as a short-term let. The Plan therefore supports residential development in the city centre. **No modification proposed.**

NHS Lothian (0596)

The Plan has been informed by a Healthcare Appraisal (CD016) prepared by the Edinburgh Health and Social Care Partnership which identifies the requirement for healthcare resulting from housing allocations. Policy Inf 3 requires that where there is not sufficient infrastructure, including healthcare that this is provided. This issue is addressed in the Council’s response to Issue 27. **No modification proposed.**

Homes for Scotland (0404), Nicola McCowan Hill (0195), Simon Thomson (0248), Steve Loomes (0767), Wright PDL (0078)

Paragraph 2.2 sets out the aims of City Plan. The spatial strategy which directs new development to and maximises the use of brownfield land rather than greenfield land, is in accordance with SPP 2014 (CD096) paragraph 40 and the emerging national strategy of draft NPF4 (CD099) which has an overarching principle of compact growth, limiting urban expansion where brownfield can be used more efficiently. Spatial Strategy is addressed in the Council’s response to Issue 2 Spatial Strategy. Existing allocations and new proposals provide a range of sites, which are effective or expected to become effective in the Plan period, more than sufficient to ensure that should some sites not come forward for development as expected there will be adequate land to meet the housing land

requirement and maintain a five year effective supply. The overall housing land supply identified in the Plan provides a range of sites. 40% is greenfield and 60% brownfield. It is considered that the Plan provides a generous supply of housing land on a range of sites across the city and it is not necessary to allocate further sites. Housing Land Supply is dealt with under Issue 20 Assessment of Housing Land Supply. Policy Hou 4 provides for circumstances where a shortfall in the maintenance of the 5-year housing land supply is identified. It is dealt with under Issue 21 Housing Land Supply Policy. Impacts on business are addressed in the Council's response to issue 3 Delivery of the Strategy **No modification proposed.**

The Plan is supported by an Education Appraisal (CD015) which is an assessment of the infrastructure required to mitigate growth arising from additional pupils from new housing developments. Per unit rates will be set out in non-statutory guidance and reviewed and updated as part of annual reporting of the LDP Action Programme. **No modification proposed.**

Peter Allen (0336)

Paragraph 2.91 states that design should be at the heart of any new housing development. It is suggested that further detail should be provided on how this will be enforced. The design policies of the Plan set out requirements for design of development including amenity. In particular policy Env 1 Design Quality and Context does not support poor quality design. **No modification proposed.**

Roger Thomas (0345)

Paragraph 2.94 as worded contains reference to short-term letting. The presumption against loss of dwellings which is set out in Policy Hou 7 Loss of Housing applies to changes of use from a dwelling. A second home would not involve a change of use. **No modification proposed.**

Simon Thomson (0248)

Reference at 2.101 is to the Council commitment to developing a programme to build 20,000 homes by 2027 and should therefore remain. Housing supply targets and land requirement are addressed in the Council's response to Issue 19. Paragraph 2.109 refers to sites located partly or wholly in the green belt or countryside delivering a density of at least 65 dwellings per hectare. This is required in order to make the most efficient use of land, achieve 20 minute neighbourhoods and build sustainable communities which support local facilities and public transport. Density is addressed in the Council's response at Issue 12. **No modification proposed.**

Tessa Haring (0112)

Paragraph 2.94 refers to the number of properties being used for short-term letting. Policy Hou 7 Loss of Housing presumes against change of use from a dwelling to other uses including short-term letting. **No modification proposed.**

**A city where you don't need to own a car to move around**

David McGowan (0168), John Martin (0008)

The policies of the Plan support the City Mobility Plan's (CD062) ambition to shift car trips to more sustainable modes in line with the sustainable transport hierarchy. This prioritises walking, wheeling and cycling. The Plan identifies active travel proposals and transport infrastructure required to support development. **No modification proposed.**

Douglas Tharby (0148)

City Plan 2030 is planning for a city in which you don't need to own a car to move around. Policies aim to reduce the need to travel and promote the shift from private car use to sustainable travel modes. Walking, wheeling and cycling are prioritised. As set out in paragraph 2.115 this is intended to ensure that these are a first choice over the use of a private car. This acknowledges that there will continue to be an element of private car use. **No modification proposed.**

Leith Links Community Council (0617)

Policy Inf 22 requires adequate water supply or foul waste water sewerage availability to meet the demands of the development. **No modification proposed.**

Policies of the Plan prioritise walking, wheeling and cycling. Active travel routes should meet the Council's Edinburgh Design Guidance (CD047) and street design guidance which has specific information in relation to cycle lanes, segregated cycle lanes and footways. The City Centre Transformations delivery plan (CD061) includes improved access for all through measures such as dropped kerbs, widened footways, improved surfacing and disabled parking. Policy Inf 7 requires that private car parking meets standards for accessible parking. Park and Ride facilities are addressed at Issue 32. Policy Inf 12 provides support for proposals for new park and ride facilities. **No modification proposed.**

Melford Developments Ltd (0308)

On 11 November 2021, the Council's Transport and Environment Committee (CD0154) approved a citywide target to reduce car kilometres by 30% by 2030. All development must work towards meeting this target. The infrastructure policies of the Plan support the City Mobility Plan's (CD062) ambition to shift car trips to more sustainable modes, in line with sustainable transport hierarchy. Support is given to development (or its mitigation) that is people focussed and reduces the reliance on private car use and helps the Council to meet its target. Mode shift is addressed in Issue 31 Transport Strategy. **No modification proposed.**

Michelle Mc Kinley (0432)

The City Centre Transformations delivery plan (CD061) includes improved access for all through measures such as dropped kerbs, widened footways, improved surfacing and disabled parking. Policy Inf 7 requires that private car parking meets standards for accessible parking. **No modification proposed.**

Mike Richardson (0109)

Paragraphs 2.111-2.137 set out how the Plan will meet the outcome of a city where you do not need a car to move around. It is appropriate to include education, health and waste

management within this section as these are elements of creating 20-minute neighbourhoods and reducing the need for a car. To meet the Council's citywide target to reduce car kilometres by 30% by 2030 measures are required to increase the use of modes other than private car. While car parking free or low parking developments are encouraged in the Plan it sets a requirement to meet accessible parking standards. Mode shift is addressed in Issue 31 Transport Strategy. **No modification proposed.**

NHS Lothian (0596)

Paragraph 2.125 refers to the Edinburgh Health and Social Care Partnership. This is a partnership between the City of Edinburgh Council and NHS Lothian. It is not necessary to refer separately to the partners that combine to form this partnership. **No modification proposed.**

Nicola McCowan Hill (0195)

The Plan sets out Edinburgh's mass transit network, including proposed new public transport actions from the City Mobility Plan (CD062) and the Edinburgh Sustainable Strategic Transport Study (CD071). The Plan identifies where public transport provision could be improved and extended, including strategic infrastructure such as the tramline from Granton to BioQuarter, new public transport routes to support growth in West Edinburgh and better connecting the city with orbital bus routes. The Plan enables delivery through its Action Programme, and policies on Community Infrastructure and Developer Contributions in conjunction with the City Mobility Plan. **No modification proposed.**

Policy Inf 1 supports development where key community facilities are walkable within a 20 minute trip. This supports the aim to ensure that everyone has access to a range of facilities through the promotion of 20 minute neighbourhoods. There may be potential for existing areas to benefit from the provision of community facilities in association with new development however the Plan can only provide policies against which to assess development proposals. **No modification proposed.**

**A city where everyone shares in its economic success**

Archie Clark (0003), Juniper Green and Baberton Mains Community Council (0306)

Paragraph 2.33 makes reference the number of residents living on incomes below the UK poverty threshold. As referred to in this paragraph the final report of the Edinburgh Poverty Commission sets out actions to end poverty. It is not agreed that the Plan should set out actions. **No modification proposed.**

Supplementary Guidance, City Centre Shopping and Leisure (CD046), sets out the approach to proposed changes of use of shop units within the city centre retail core. This guidance is kept under review and where appropriate will be updated to respond to changing retail trends. It is appropriate that this is guidance rather than include in the plan. As referred to in paragraph 3.10 the emerging Princes Street and Waverley Valley Strategy will consider opportunities to enhance the retail and leisure experience on Princes Street. It is not necessary to include further detail within the plan. **No modification proposed.**

Bryce Road is a designated local centre. It is listed in Part 2, Table 14 and identified on Map 11 and the proposals map. It is also identified within the adopted Edinburgh Local Development Plan (CD039) as a local centre. The centre contains 6 unit including a take-away, dentist and shops. As stated in the City Plan glossary for the purpose of the plan, a local centre is a shopping centre which usually has 10 units or more serving a local retail function, however in some instances centres of less than 10 units have been included to provide a local centre within walking distance of residents. Bryce Road is identified within the current LDP and serves a local retail function. **No modification proposed.**

Paragraphs 2.143 and 2.144 set out the key findings of the Commercial Needs Study (CD032, CD033, CD034, CD035, CD036) and are considered to be clearly worded. **No modification proposed.**

#### Edinburgh World Heritage (0339)

Paragraph 2.138 does not include any reference to the role of any element of the city in economic success. It would not be appropriate to include the suggested reference to the historic environment. **No modification proposed.**

#### Grange/Prestonfield Community Council (0192)

Paragraph 2.138 sets out what the Council's economic strategy seeks to do. It is a factual statement on the strategy. It is not the role of the Plan to set priorities. **No modification proposed.**

Paragraph 2.140 sets out what City Plan will do to deliver key land uses. Proposals for development will be assessed against the policies of the Plan and any other material considerations. It is not necessary to state the elements set out at paragraph 2.140 do not over-ride LDP policies. **No modification proposed.**

#### Leith Central Community Council (0614)

Compulsory Purchase is provided for in legislation and national guidance is available. It is not necessary for the Plan to set out guidance. **No modification proposed.**

#### NatureScot (0528)

The addition of the words "assets" and "natural" to paragraph 2.139 is not necessary. The paragraph provides examples of key sectors and is not an exhaustive list. **No modification proposed.**

#### Nuveen Real Estate (0564)

The Council does not consider it necessary to change the reference at paragraph 2.146 to St James Quarter. The use of Edinburgh St James provides a suitable and commonly understood reference. **No modification proposed.**

It is not appropriate for the Plan to set out the parameters of any future review of retail trends. The policies of the Plan establish the town centre first principle. **No modification proposed.**

#### Queensferry & District Community Council (0568)

Queensferry is identified in the Plan as a local centre. Reference to Queensferry as a town would cause confusion as retail policies within the Plan distinguish between local and town centres. **No modification proposed.**

SEPA (0012)

Paragraphs 2.138-2.140 sets out the key elements of the Council's economic strategy and provides examples of key sectors. The purpose of this section is to set out how the Plan can contribute to the economic success of the city. It is not necessary to include reference to particular markets and their role in supporting economic growth. **No modification proposed.**

**Reporter's conclusions:**

**Reporter's recommendations:**

Issue 2	Spatial Strategy	
Development plan reference:	The overarching spatial strategy of the plan	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):		
<div><div><div>Barratt David Wilson Homes (0677)</div><div>BDW Trading (0350)</div><div>BDW Trading (0678)</div><div>CALA Management Ltd (0465)</div><div>Calex Group Ltd (0556)</div><div>Dunedin Canmore (0766)</div><div>Friends of Cammo (0387)</div><div>Hallam Land Management (0457)</div><div>Hallam Land Management (0599)</div><div>Hallam Land Management (0615)</div><div>Howard Jones (0424)</div><div>J. Provision of the development plan to which the issue relates:	The strategy for directing new growth within the plan area.	
Planning authority's summary of the representation(s):		
<div>General Strategy</div> <div>Wright PDL (0078), Barratt David Wilson Homes (0677)</div> <div>Sites allocated have not been promoted by landowners. Allocation of active business sites affects business plans and confidence in operations.</div> <div>The tightly wrapped nature if the green belt will not meet growth requirements and the description of the green belt's purpose is contrary to this. The plan is over reliant on brownfield placing strain on existing services.</div> <div>Should consider the views of Homes for Scotland on affordable housing. A brownfield only approach threatens delivery of affordable housing.</div>		

Barratt David Wilson Homes (0677)

Object to high risk nature approach and brownfield only strategy. Strategy conflicts with policy and aims of the plan. Greenfield development has been important for delivering homes of all tenure in recent years. Concerned about the Plans ability to deliver the required volume and range of housing to meet needs.

Spatial strategy is almost entirely dependent on reallocating sites to housing which are actively in other uses or allocated for employment uses.

Strategy will restrict availability of land for residential development and push home buyers outside the city into less well connected areas increasing reliance on car use. This will also be true of displaced businesses which will then use greenfield land.

There is no assessment of environmental impacts of demolishing/renovating existing buildings or business relocation including traveling to new locations and displacement of communities.

Areas of the city with no new land allocations limits the ability to deliver 20 minute neighbourhoods in these locations e.g. Balerno. Greenfield sites can better support sustainable development and 20 minute neighbourhoods.

BDW Trading (0678), BDW Trading (350), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential Group Ltd (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

The Plan is likely to deliver outcomes which are the opposite of the aims of the Plan. The spatial strategy proposes large scale displacement of employment land including active industrial estates and strategic business sites including the IBG and BioQuarter. There are no coherent plans for relocation. The Mixed Use Delivery Study outlines the scale of potential impacts on jobs. Proposals could leave Edinburgh as 'the UKs most unbalanced major city in terms of employment base, moving ahead of London'.

Support the aims but spatial strategy will not deliver them. Should be clearer ambition to support job creation and delivery of homes to meet growing population.

Housing targets fall substantially short of the full need and demand in HNDA2. Land supply will only deliver half of the homes in the plan (refers to Housing Land Supply Assessment supporting doc ref) Housing Land Supply table sets unrealistic delivery assumptions and incorrectly compares this inflated supply to the Housing Supply Target rather than the Housing Land Requirement.

Continuing with a spatial strategy where need and demand is not met in full is likely to lead to an uneven distribution of the benefits of growth benefitting homeowners over renters.

CALA Management Ltd (0465)

The Council has provided no evidence to demonstrate the strategy can be delivered. Choices states that it may not be financially viable to deliver the strategy and CPO is needed. If CPO is required then the costs, timescales and a strategy for the relocation of businesses should have been presented. Without this it is not possible to fully scrutinise

and respond to the proposed development strategy. That undermines the representation period and is unfair to parties making representations.

CALA Management Ltd (0465), Hallam Land Management (0599) Miller Homes Ltd (0649)

The proposed development strategy for housing relies only on brownfield land and the redesignation of existing employment allocations as housing led mixed use allocations. It does not propose new greenfield sites to meet its housing land requirement.

New site allocations identified by the Council for housing as part of its development strategy are identified in SESplan (2013) and are potentially not suitable for mixed use or are currently occupied commercial and employment purposes.

The Ryden Commercial Needs Study: Industrial Property Market (November 2018) and Commercial Needs Study: Mixed Use Delivery (December 2020) highlight issues with a brownfield first strategy. The Mixed Use Study predates MIR and is not a background document to the proposed plan. It notes the impacts of businesses having to relocate outside of Edinburgh.

The Environmental Report did not carry out an assessment of the potential impacts of the proposed development strategy. Methodology too narrow and does not consider all factors including population impacts from relocating businesses and CPO. Integrated Impact Assessment does not consider impacts from business displacement.

SESplan (SDP) requires 186 hectares of strategic land supply for employment use in Edinburgh. The SESplan Economy Technical Note (November 2011) did not identify the scale of strategic land supply for employment use at International Business Gateway (IBG). This was to be confirmed. Argues that if this was included the total requirement is 271Ha. Plan needs to demonstrate that the proposed mixed use communities do not result in a net loss to the overall strategic employment land supply.

All sites should be suitably programmed to ensure that the housing land requirement will be met in the development plan period.

Refers to further information in Development Strategy Statement (RD Ref)

Dunedin Canmore (0766)

Does not consider that all development should be directed to brownfield rather than greenfield land. An opportunistic approach should be taken. A number of allocated brownfield sites are constrained or unavailable

Hallam Land Management (0615)

Need more balanced strategy. Plan is not conducive to future investment. Policies are restrictive and inconsistent with Plan's aims. Strategy is not deliverable. Brownfield only strategy is unrealistic, unreasonable and unnecessary and inflexible and reliant on employment land.

No PAN (planning advisory note) on 20 minute neighbourhoods and policy objectives including place plans.

Examples of the use of brownfield first in other cities should be explored and measured. Consider strategy will result in the likelihood of removing existing mixed use communities.

Hallam Land Management (0615), Mr T Klan (0307)

Failure to plan for sufficient volume of housing in feasible and viable locations and question Housing Land Requirement. Failure to effectively review the greenbelt boundaries for City Plan 2030 and the overreliance on existing designation without any real environmental assessment in qualitative terms.

Lack of transparency and evidence regarding the preferred strategy being adopted by the Council during a period of resilience and recovery. No review of green belt boundaries has been undertaken and definition of green belt varies between SPP and SDP1.

City Plan is reliant on existing employment land to deliver its brownfield Spatial Strategy to the exclusion of greenfield land. Plan fails to link housing and employment markets with transport infrastructure as is the case in West Edinburgh. Plan will starve communities of investment.

Hallam Land Management (0457)

Should the Council continue to pursue a brownfield only strategy, they risk a significant housing land shortfall within the Plan period. Brownfield first is overly restrictive and lacks flexibility.

Calex Group Ltd (0556)

Consider that the brownfield strategy with no consideration of greenfield housing release is flawed and acts directly against the aims of the 20 minute neighbourhood. Believe that a combined option, of both brownfield development and a degree of greenfield land release is required for Edinburgh to meet its future housing requirements in the City Plan in full including housing for the elderly

J. Smart & Co (Contractors) PLC (0483)

The strategy has failed to make any new provision for industrial land. The majority of sites allocated are in active use.

Mactaggart & Mickel Homes Ltd (0312)

By seeking to provide new homes on existing and operational employment land the Council will not meet its basic aim of providing more homes, ensuring they are affordable, in the most appropriate location to allow and facilitate future economic growth. The plan highlights the greatest requirement is for affordable housing in paragraph, however, without any controlled or limited greenfield housing land release via a blended brownfield and greenfield strategy, the Council's stated strategy is going to exacerbate the affordable housing need, yet further. Pursuing new housing on existing and operational employment land present planning challenges before they can eventually be developed. This may in turn lead to a situation where the level of affordable housing that can be offered, on any of

the new strategic housing led developments will be far less than 35%. This encapsulates the flawed strategy.

Mactaggart and Mickel Homes Ltd (312), The Stoddart Family (0749), Homes for Scotland (0404)

Strategy does not allocate brownfield land as per the definition in Scottish Planning Policy. Allocated sites are active employment uses. Strategy should be based on a combined brownfield and greenfield strategy. A combined strategy will deliver the homes an expanding city requires, providing a range of tenure and choice. Strategy will fail to deliver the homes the city requires.

The phraseology of 'brownfield land rather than greenfield land' would make you believe that it was an either or situation. This is a gross simplification and vast distortion of the actual planning options available to the City of Edinburgh Council.

Melford Developments Ltd (0308)

Maps 1 and 2 (spatial strategy) are overly restrictive in terms of boundaries and designations.

Sites may not come forward for housing given existing uses. If Council wishes to encourage urban redevelopment allocations must be more flexible.

Miller Homes Ltd (0256)

Risk that the reliance of brownfield land to deliver new homes will result in neighbourhoods which have gaps in their service provision and will not deliver on 20 minute neighbourhoods. The ability of greenfield sites, like that at Riccarton Village, to deliver this has simply been overlooked without justification.

By relying on brownfield land to address development needs there remains a significant shortfall in the scale of new housing allocations required to meet the housing land requirements in full.

NatWest (0477)

Brownfield strategy will not deliver required housing targets as sites will not come forward. CPO is time consuming and costly and will not deliver sites by 2032. Not releasing new greenfield land will mean the council will not be able to build enough homes to meet its objectives. Option C of the choices consultation should be pursued.

Robertson Residential (0537)

Strategy should be amended to include a balanced approach of greenfield and brownfield sites to ensure no housing shortfall.

Tarmac (0244)

Plan uses green belt and countryside designations without focussing on critical tests for development. Plan will starve communities such as Ratho of investment.

Lack of transparency and evidence regarding the preferred strategy being adopted by the Council during a period of resilience and recovery. Brownfield only' strategy as it is inflexible.

Plan fails to link housing and employment markets with transport infrastructure, this particularly being the case in West Edinburgh. Promotes site at Bairdview Ratho.

The Catchelraw Trust (0137)

Overreliance on non deliverable and constrained brownfield sites.

Steve Loomes (0767)

Brownfield only strategy high risk and conflicts with aims and policies of the plan. Will not deliver volume and range. Lack of housing reduces the workforce and negatively impacts on the City's economy.

LPBZ Commercial Ltd (0391)

The plan focusses on housing on brownfield sites only at all costs, to the detriment of existing and expanding operational business sites and new sites for office development. The plan does not support sustainable economic growth and does not propose truly mixed-use development as office use is largely not permitted on these sites.

Scottish Property Federation (0144)

We are concerned that the plan places too much confidence in the successful compulsory purchase and reallocation for housing of several employment sites. Even if successful on a timely basis, the reallocation of existing businesses means that far from finding new opportunities to grow the economy, the city will find itself struggling to maintain the current number of industrial jobs and businesses.

Luke Robertson (0114)

Concerns over the destruction of greenfield sites and the need for green spaces to be maintained.

Tom Proudfoot (0740)

Concerns that best quality arable land is being built on need more allotments and less shopping malls and endless sprawl, Eastwards East Lothian and Musselburgh needs to be a separate un-consolidated urban area.

Spokes Lothian (0545)

Concerned that strategy releases more greenfield land that locks in car dependency.

West Craigs (0352)

The environmental impact of the brownfield strategy is not properly assessed in terms of carbon emissions and embodied carbon. Refers to RD Savills Embodied Carbon Report.

## **Green Belt and Greenfield**

### **Tarmac (0244)**

Failure to effectively review the greenbelt boundaries for City Plan and the overreliance on existing designation without any real environmental assessment in qualitative terms.

### The Association for the Protection of Rural Scotland (0334)

Opportunities to enhance the protection of peri-urban countryside by Green Belt designation should also be considered. (2.58 2nd bullet)

CEC must also be consulted about proposed development on Green Belt administered by Midlothian Council and East Lothian Council so that the quality of adjoining city edges can be properly protected/enhanced.

### Newcraighall Heritage and Residents Association (0759)

Plan shows green belt has been eroded on the east, causing coalescence with Musselburgh and other developments in East and Mid Lothian. Green space easily lost to more development. There does not appear to be sufficient 'joined up thinking' about the ability of the infrastructure to cope with developments being made from the city and also East and Mid Lothian, and how the demand at the commercial centre at Fort Kinnaird overloads the roads and other services

### University of Edinburgh (0464)

Consider green belt limits growth at Kings Buildings and Peffermill and that these boundaries have not recently been reviewed and assessed. Considers a review of green belt allocations is required so that the land designated is fit for purpose and meets the criteria for protection.

### Friends of Cammo (0387)

Support the aim of directing development to brownfield not greenfield land. In particular, there should be no additional housing development on the green belt beyond Maybury Road. Further development in West Edinburgh should be limited to the area shown in red in Map 1 - Spatial Strategy.

### Juniper Green & Baberton Mains Community Council (0306)

Parts of the green belt have been pierced and others appear vulnerable and could easily be breached. Green belt should be reinforced to halt further urban sprawl.

### Howard Jones (0424)

Concern areas of greenspace will be allocated for development but will fail to deliver and land will be developed for developer's profit at the expense of residents.

## **Modifications sought by those submitting representations:**

### **General Strategy**

Wright PDL (0078), Barratt David Wilson Homes (0677), Steve Loomes (0767)

A greater volume and range of land should be allocated for residential and business development and that do not displace businesses.

Barratt David Wilson Homes (0677), BDW Trading (0678), BDW Trading (350), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential Group Ltd (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

A greater volume and range of land is required to be allocated for residential development in accessible areas and that does not result in the displacement of businesses that are accessible, and do not result in the displacement of existing operational businesses. Consider amendments are needed to facilitate achieving the aims.

BDW Trading (0678), BDW Trading (350), Murray Estates (0197)

Support the aims but spatial strategy will not deliver them. Should be clearer ambition to support job creation and delivery of homes to meet growing population.

Amend spatial strategy to blended approach allocating deliverable greenfield and brownfield land sufficient to meet housing need and demand.

Housing Land Requirement and Housing Land Supply are deficient and should be changed and substantially more housing allocations made.

CALA Management Ltd (0465), Hallam Land Management (0599) Miller Homes Ltd (0649)

The Council should reconsider its special strategy. Option 3 Blended approach in Choices would balance brownfield and greenfield allow reasonable alternatives from greenfield to deliver the housing land requirement.

Dunedin Canmore (0766)

Promotes site at Cammo Fields.

Hallam Land Management (0615)

Amend strategy to blended approach with greenfield release. Amend plan to be in accordance with SPP and NPF3. Include Craigiehall and Goodtrees Farm sites. Countryside designation should not be same as green belt.

Mr T Klan (0307)

The strategy should be amended to reflect a more balanced and sustainable mixed blended approach with a good share of greenfield release in accordance with the Choices Strategy. Greater cognisance needs to be taken of housing demand and affordability together with effective delivery of the volume of land required in the city

Hallam Land Management (0457)

Should identify further greenfield sites to supplement the brownfield land identified in the plan.

Calex Group Ltd (0556)

Amend strategy for a combined option for housing delivery for all tenures of both brownfield development and a degree of greenfield land release.

J. Smart & Co (Contractors) PLC (0483)

Support a blended approach that includes both brownfield and greenfield land for development.

Mactaggart and Mickel Homes Ltd (312), The Stoddart Family (0749), Homes for Scotland (0404)

A combined brownfield and greenfield strategy is required to deliver the homes the city needs over the City Plan period.

Melford Developments Ltd (0308)

Allocations must be more flexible.

Miller Homes Ltd (0256)

Strategy should be a blended approach.

NatWest (0477)

Strategy should be amended to include a balanced approach of greenfield and brownfield sites.

Robertson Residential (0537)

Strategy should be amended to include a balanced approach of greenfield and brownfield sites.

Tarmac (0244)

Differentiate between greenbelt and countryside. Improve baseline mapping on maps 1 and 2. Clearly define West Edinburgh Strategy Area.

The Catchelraw Trust (0137)

Should be a blend of greenfield and brownfield sites.

Scottish Property Federation (0144)

Revise paragraph 2.41 to remove emphasis on CPO.

Luke Robertson (0114)

None specified.

West Craigs (0352)

Should compare strategies in terms of embodied carbon.

### **Green Belt and Greenfield**

#### **Tarmac (0244)**

Representation implies a review of the green belt should be undertaken.

Newcraighall Heritage and Residents Association (0759)

There should be green belt protection on the east side of the city. Open space should be protected to prevent housing areas proposed by the city and also East and Mid Lothian all meeting up at the boundaries, creating one huge housing estate.

p19 para 2.5.1 Newcraighall mining village should be made a conservation area

University of Edinburgh (0464)

A review of green belt allocations is required.

Friends of Cammo (0387)

No modification specified.

Juniper Green & Baberton Mains Community Council (0306)

Green belt should be reinforced to halt further urban sprawl.

Howard Jones (0424)

No modification specified.

### **Summary of responses (including reasons) by planning authority:**

Wright PDL (0078), Barratt David Wilson Homes (0677), BDW Trading (0678)

The plan allocates a total land supply for housing which is in excess of the housing targets and the allocation of employment land has also increased over that of the existing plan. Overall housing allocations are split 60% brownfield and 40% greenfield. 68% of larger 'strategic sites' are on greenfield land. The strategy therefore provides enough land to meet needs on a range of different sites. More details can be found in Issues 19, 20 and 37. A response to impact on businesses can be found in issue 3. **No modification proposed**

Barratt David Wilson Homes (0677), BDW Trading (0678), BDW Trading (350), Hallam Land Management (0615), Steve Loomes (0767)

The Plan does not have a strategy of reallocating active business/industrial sites and allocated employment land to housing uses. Part of the strategy of the plan is to promote the redevelopment of existing brownfield sites. These sites are within the urban area and are not allocated for employment use within the existing LDP (CD039). These sites are to be mixed use and will be required to re-provide for business uses as part of mixed use communities. They will not displace all businesses. The Mixed Use Delivery Report (CD036) recognises the existing long term trend for the redevelopment of older industrial buildings as sites for housing and the strategy seeks to address this trend and ensure we deliver sustainable communities by requiring mixed use development on sites. Issue 3 provides further information on the delivery of the strategy in relation to businesses.

Whilst there will be need for demolition and refurbishment, the Commercial Needs Study undertaken to inform the Choices, notes that a significant amount of existing industrial stock (as proposed for allocation) is older and of poorer quality. Many of these buildings would not meet modern requirements for energy efficiency. Demolition or refurbishment provides the opportunity to improve efficiency and minimise environmental impacts and will be assessed under policies Env 7 and 8 in terms of suitability and sustainability.

The strategy allocates new development to sustainable locations where they are or can be served by public transport and services. **No modification proposed.**

Steve Loomes (0767)

City Plan provides sufficient housing land to meet its workforce needs. This is addressed further in Issue 19: Housing Supply Target and Land Requirement. **No modification proposed.**

CALA Management Ltd (0465)

The delivery of the strategy is considered in full under Issue 3. This demonstrates that the strategy is deliverable and does not rely solely on a programme of CPO and relocation of businesses. The Council has prepared development phasing (CD REF) which demonstrates that a supply of land throughout the plan period. **No modification proposed.**

BDW Trading (0678), BDW Trading (350), Murray Estates (0197)

The plan meets the market housing requirement of HNDA2 in full and sets an affordable housing target which is considered 'reasonable' in line with the requirements of SPP and based on wider economic, social and environmental factors, issues of capacity, resource and deliverability. Housing targets and land supply are addressed under issues 19 and 20. **No modification Proposed.**

**General Strategy**

CALA Management Ltd (0465), Hallam Land Management (0599) Miller Homes Ltd (0649), Melford Developments Ltd (0308), Miller Homes Ltd (0256), NatWest (0477), The Catchelraw Trust (0137), Steve Loomes (0767)

The spatial strategy of the plan does not only rely on brownfield land for the delivery of housing. As noted above, housing allocations are split 60% brownfield and 40% greenfield. 68% of strategic sites are greenfield and relate to existing LDP allocations or sites with existing planning permission.

Part of the strategy of the plan is to promote the redevelopment of existing brownfield sites. These sites are within the Urban Area and are not allocated for employment use within the existing LDP. These sites are proposed as housing-led mixed-use allocations and will not displace all businesses. The Mixed Use Delivery Report (CD036) recognised the existing long term trend for the redevelopment of older industrial building as sites for housing and the strategy seeks to address this trend and ensure we deliver sustainable communities on mixed use sites with facilities available close by. Issue 3 Delivery of the Strategy provides further information on the strategy in relation to businesses.

The Environmental Report and Integrated Impact Assessment measure the proposed plan against criteria relevant to the plan and its strategy. No strategy of business displacement and accompanying programme of CPO is proposed as part of the plan. CPO powers would only be used if necessary, needed or required. **No modification proposed.**

Dunedin Canmore (0766)

The plan does not direct all development to brownfield land. It is unclear what is meant by an 'opportunistic approach'. However, the Council maintains the importance of a plan led system with a range of sites allocated. The Council has prepared development phasing (CD176) which demonstrates that a supply of land throughout the plan period. **No modification proposed.**

Hallam Land Management (0615), Mr T Klan (0307)

The Plan's spatial strategy provides for a range of sites on both brownfield and greenfield land. The delivery of the strategy is considered in full under Issue 3. The Council has prepared development phasing (CD176) which demonstrates that a supply of land throughout the plan period.

In line with the Town and Country Planning (Scotland) Act (1997) (CD101) section 16 2 (c) the Council consider that it is appropriate to consider emerging policy and strategy where this is relevant in preparation of the Plan, particularly where this is more recent. This has included Fourth National Planning Framework: position statement (2020) (CD098) and other emerging work at national, regional and local level in preparation of the proposed plan. It is not considered that national planning advice notes are required to support 20 minute neighbourhoods or place plans. The concept of ensuring communities are within walkable distance to services and served by public transport are not new concepts to planning even if the term 20 minute neighbourhood is more recently used to describe similar ambitions. Place plans are prepared by communities and these are generally in early stages of production. Setting out that City Plan will support these is not considered unreasonable.

The Plan and its strategy have been subject to appraisal through the Environmental Report (CD010). Review of allocating sites as part of the current green belt or countryside designation was part of the Choices MIR. The purpose of a Green Belt is outlined in the Scottish Planning Policy and it is for Development Plans to designate.

Housing targets and land supply are addressed under issues 19 and 20. The suggested inclusion of Craigiehall and Goodtrees Farm are addressed under issue 9 Additional Greenfield Sites. **No modification proposed.**

Hallam Land Management (0457)

The spatial strategy of the plan does not only rely on brownfield land for the delivery of housing. As noted above, housing allocations are split 60% brownfield and 40% greenfield. 68% of strategic sites are greenfield and relate to existing LDP allocations or sites with existing planning permission.

The Council has prepared development phasing (CD176) which demonstrates that a supply of land throughout the plan period. **No modification proposed.**

Calex Group Ltd (0556)

Paragraph 2.2 sets out the aims of City Plan. The spatial strategy which directs new development to and maximises the use of brownfield land rather than greenfield land, is in accordance with SPP 2014 paragraph 40 (CD096). **No modification proposed.**

J. Smart & Co (Contractors) PLC (0483)

As noted in Issue 3: Delivery of the Strategy, the Council considers that allocating further land for industrial development is unnecessary. The proposed brownfield development sites identified within the plan which currently have business uses on them are being promoted for mixed use housing led development and not just housing development which is a fundamental part of the strategy. **No modification proposed.**

Mactaggart and Mickel Homes Ltd (312), The Stoddart Family (0749), Homes for Scotland (0404)

As noted above the strategy provides for allocations on a range of brownfield and greenfield sites at a range of scales. Part of the strategy of the plan is to promote the redevelopment of existing brownfield sites. These sites are within the Urban Area and are not allocated for employment use within the existing LDP. These sites are proposed as housing-led mixed-use allocations and will not displace all businesses. The Mixed Use Delivery Report (CD036) recognised the existing long term trend for the redevelopment of older industrial building and the strategy seeks to address this trend and ensure we deliver sustainable communities on mixed use sites with facilities available close by. Issue 3 Delivery of the Strategy provides further information on the strategy in relation to businesses

At the Choices MIR stage three options for the spatial strategy were presented with a brownfield led strategy set as the preferred option. The proposed plan is not required to set out alternative options. **No modification proposed.**

Tarmac (0244)

Maps 1 and 2 are diagrammatic. Allocations and designations are shown on the Proposals Map which forms part of the plan. Map 24 also defines the West Edinburgh Strategy Area.

As noted above, the strategy was subject to consultation as part of the Choices MIR (CD022).

Site proposals are dealt with in Issue 9 suggested additional greenfield sites. **No modification proposed.**

LPBZ Commercial Ltd (0391)

As noted above the plan does not solely focus on brownfield only sites. Office use is generally considered an acceptable use alongside housing. The plan does not state that this would not be permitted. **No modification proposed.**

Scottish Property Federation (0144)

As set out in Issue 3 Delivery of the Strategy, there is not a strategy to CPO brownfield sites. The use of CPO would be limited to exceptional circumstances when other options had been explored. It is not intended to reallocate all businesses as the redevelopment of sites are to be on a mixed use basis including reprovision of employment. **No modification proposed.**

Luke Robertson (0114)

The strategy of the plan protects existing green spaces and minimises new greenfield sites. **No modification proposed.**

Tom Proudfoot (0740), Spokes Lothian (0545)

The plan does not propose any further greenfield release for housing other than sites which are previously allocated or subject to an existing planning consent. **No modification proposed.**

West Craigs (0352)

The strategy of the plan has been assessed in the Environmental Report (CD010). Comparison of alternative strategies is not required at the proposed plan stage. Under City Plan policy Env 7 proposals for the replacement of existing buildings are required to prepare a carbon assessment this will allow assessment of individual development proposals. **No modification proposed.**

Simon Thompson (0248)

The Council considers the wording of paragraphs 2.88, 2.110, 2.112 and 2.109 to be robust and will ensure that the aims of the strategy are delivered. The Council's position relative to suggested additional greenfield sites can be found in issue 9. **No modification proposed.**

## Green Belt and Greenfield

### Newcraighall Heritage and Residents Association (0759)

The release of green belt to the east of the city was planned and released as part of the current set of development plans - Strategic Development Plan 1 (SDP1) (CD087) and Local Development Plan, 2016. The growth has been coordinated at a strategic level through SDP1. City Plan does not propose further green belt release in this area. **No modification proposed**

### University of Edinburgh (0464), Tarmac (0244)

The Housing Study (CD026) which accompanied the Choices MIR assessed all greenfield sites including those within the green belt. This information was used to inform the approach to the spatial strategy of the plan. A review of the green belt is not considered appropriate or necessary at this time. Changes or growth of existing uses within the green belt can be assessed through the development management process under relevant policies and this approach is acknowledged by the representee. Comments on individual sites are addressed under Issue 9. **No modification proposed.**

### Friends of Cammo (0387)

The plan does not release any further green belt land as shown on the proposals map and spatial strategy diagram map 2. **No modification proposed.**

### Juniper Green & Baberton Mains Community Council (0306)

The plan does not propose any new green belt release for housing and allocates sufficient land for housing to ensure green belt release is not needed preventing sprawl. The proposals map provides clear boundaries for the green belt and the urban area. **No modification proposed.**

### Howard Jones (0424)

The plan does not allocate any new greenfield or green spaces for development. **No modification proposed.**

### **Reporter's conclusions:**

The proposals in the Plan to redevelop large areas of the city with currently active businesses could leave Edinburgh as the UK's most unbalanced major city in terms of employment base, moving ahead of London.

It would also appear to be the case that reallocating employment sites for housing use, particularly without a clear reprovisioning strategy is contrary to the terms of SESplan. The proposals in the Plan are therefore inconsistent with current regional and national policies.

BDW Trading (0350), Murray Estates (0197), SEEDco (0198) Taylor Wimpey (0200), Robertson Residential Group Limited (0490), Persimmon Homes (0495)

Re-allocating approximately 400 active businesses and strategic employment sites for housing will not deliver Edinburgh's key economic land use needs. Such an approach will be completely contrary to aim 10 of the Plan in respect to the City's industrial economy base. If this displacement strategy is ultimately adopted, then aim 10 needs to be revised to acknowledge that.

Object to the Proposed City Plan's over-arching strategy of reallocating active business/industrial sites and allocated employment land to housing uses. This objection is not to specific proposals contained in the Plan, rather it is an objection to the over-arching strategy. In particular the allocation of land accommodating approximately 400 active businesses in the City for housing use, to be delivered within the plan period by 2032, and with the threat of compulsory purchase to achieve that objective.

This is a very radical strategy, the direction of which is without precedent in any major City in the UK. However, there appears to have been no meaningful consideration of its consequences. There is no substantive explanation of the approach taken in the 'Strategy' or 'Outcomes' sections of the Plan. That has the significant potential to mislead stakeholders, particularly the wider public, and may therefore lead to people not making representations which they might otherwise have made.

Richard March of 4-Consulting has been commissioned to consider the implications of the Proposed Plan's strategy for employment land, however, the report was not available in time for the representation period deadline. Therefore, he has provided an overview of the strategy and has highlighted that significant further assessment is required to fully understand the likely consequences. This is the kind of work that the Council is obliged to undertake, but it has not been done in this case. Planning Circular 6/2013 'Development Planning' states the following:

"Evidence is required to inform plan-making, justify the plan's content, and provide a baseline for later monitoring. Information gathering and analysis should serve efficient high quality plan-making. Certain aspects of the evidence base (such as Housing Need and Demand Assessment, and transport appraisals) are likely to be essential at each plan review. Authorities should therefore take a proportionate approach and consider what is required, and where scarce resources can best be spent, to inform the particular issues being addressed in the plan. A robust evidence base will also be critical at any subsequent development plan examination."

Therefore, the Council is strongly encouraged to undertake a robust assessment of the Plan's 'economic strategy' prior to the Examination and provide the opportunity for stakeholders to comment upon it. It seems likely that the outcome of this assessment

would confirm the view that the strategy will have significant negative consequences and should lead to a rethink of the decision not to allocate any additional greenfield land for development in the City. It is not clear whether Council will undertake this assessment and therefore objectors are considering whether to commission the work directly.

#### 4 Consulting Overview: Conclusions

Redeveloping industrial buildings to accommodate new housing is not simply a matter of matching the supply and demand of industrial land. The approach should consider the key role played by Edinburgh's industrial and related business sites in providing much needed jobs and income for some of the City's most deprived communities. This issue is not addressed in City Plan 2030. A fuller consideration of how competing demands could be better balanced is more likely to realise the ambition of a city where everyone shares in its economic success.

City Plan 2030 could leave Edinburgh as having the UK's most unbalanced economic employment base of any major city in the UK, moving ahead of London.

The proposals present clear challenges to the development of key Scottish Government policies, but their consequences have hardly been considered by the Council.

#### SEEDco (0198)

The spatial strategy proposes the large-scale displacement of employment land, including many active industrial sites and large-scale strategic business sites (International Business Gateway and Edinburgh Bioquarter), but there are no coherent plans for relocation. The Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery, prepared for the Council, outlines the potential scale of the impact of this on jobs.

The proposals in City Plan 2030 to redevelop large areas of the city with currently active businesses could leave Edinburgh as the UK's most unbalanced major city in terms of employment base, moving ahead of London.

It would also appear to be the case that reallocating employment sites for housing use, particularly without a clear reprovisioning strategy is contrary to the terms of SESplan. The proposals in the Plan are therefore inconsistent with current regional and national policies.

#### Hallam Land Management (0615)

The Council needs to make provision for the employment and economic needs of a growing population. It should not be de-allocating or diluting employment land in favour of replacement housing in less appropriate or less sustainable locations across the city.

New housing allocations and neighbourhoods are best planned in sustainable locations such as Balerno rather than on formerly designated employment land.

#### Stirling Developments Limited (0303), Dandara East Scotland (0757)

Have concerns regarding the displacement of existing businesses (to make way for housing) and overall economic concerns resulting from an under-delivery of homes by pursuing the brownfield only approach.

Econ 1- the Council's Economy Strategy sets out steps and actions needed to enable good growth for Edinburgh's economy. We would consider the proposed loss of significant amounts of employment land to be contrary to this aim.

It is also worth noting the contribution that house building itself makes to the local economy, including in terms of creating and supporting jobs.

Has the Council identified which current landowners and businesses will willingly clear/vacate employment sites in order to facilitate housing development? Has it undertaken a cost analysis of voluntary or compulsory land purchase for those sites where it will be working against landowner and occupier preferences?

Econ 2 - the Plan proposes to displace a significant number of active businesses so their current sites can be repurposed for housing development. This Policy gives those displaced businesses the additional headache of having to also ensure 50% of their new site is also used for housing development.

Steve Looms (0767)

The Plan is too reliant on existing employment land to deliver new homes. To enable a sufficient volume and range of homes to be built as required by SPP and to combat the housing affordability crisis facing the City, a wider variety of housing land requires to be allocated or otherwise given policy support. This should include an element of the greenfield land that has been such an important contributor to housing delivery in Edinburgh under the current and previous plans.

Whilst the Council appears accepting of the need to meet more of its own housing need and demand within city limits, reducing the displacement of families to elsewhere in the region and in consequence increasing car commuting between Edinburgh and surrounding areas, it has on the other hand inadvertently planned for the mass displacement of the businesses currently *occupying* the newly allocated housing sites. It has not considered where these businesses will go and what the car travel impacts of their dispersal will be. The spatial strategy proposes the large-scale displacement of employment (particularly in industry), but there are no coherent plans for relocation in the city. Greenfield land would need to be released to accommodate the displacement, but that would defeat the Plan strategy not to allocate any new greenfield sites. Also, active employment sites would need to be purchased at existing use value, which in some cases could outstrip residential development value due to income in perpetuity versus residential value of land, thus some sites won't be viable to purchase.

These issues mean City Plan is non-compliant with Scottish Planning Policy (SPP) (2014), which states (paragraph 119); "Local development plans in city regions should allocate a range of sites which are effective or expected to become effective in the plan period to meet the housing land requirement".

Several of the newly allocated sites currently have a retail element. Policy Re 4 presumes against the conversion of shop units to residential use, and safeguards these for shopping and small business use. However, conversion to residential use could be supported where the shop unit has been vacant for a significant period of time and been actively marketed, where there is a local need and demand for a range of housing types and for

town centre living. It is not clear how this requirement aligns with the allocation of these businesses for residential development. It is not clear if existing and operational retail premises that have been allocated will also be required to remain vacant for a “significant period” of time.

At the heart of City Plan Proposed Plan is a spatial strategy which is almost entirely dependent on reallocating sites to housing which are actively in other uses or allocated for employment uses.

There is no assessment of the environmental impacts of, firstly, the embodied carbon release as a result of demolition/renovation of the existing buildings, nor secondly, the consequences of business relocation more broadly in terms of the displacement of communities, increased travelling times for businesses that relocate in more peripheral areas, etc. We are concerned at the level of displacement of businesses that currently occupy the newly allocated sites, which may lead to an increase in car dependence for some, as these businesses may well relocate to more peripheral areas. We object to the fact the Council has failed to properly consider this.

The spatial strategy of developing homes on a patchwork of employment sites will erode the mixed-use nature of the city and would force jobs and people out of the city, into the surrounding areas. This was made clear to the Council in the Ryden report and appears to have been ignored. There is no clear strategy of re-provision for displaced businesses.

The Plan certainly does not support existing businesses. Representations submitted by RRG and others, indicates that the vast majority of sites proposed for housing are currently in active employment uses and that displacement of these is likely to have significant impacts on Edinburgh’s employment base. In any circumstances, the Council has failed to justify this strategy or consider its consequences.

Furthermore, driving operational businesses away from the city will affect the economic resilience of the city.

It is unclear whether the Ryden Mixed Use Delivery Report has been considered. This report highlighted that the allocation of these sites for residential development would lead to a significant reduction in employment land and require a very active industrial development programme to reaccommodate even a proportion of this displaced activity. The report concluded that it was likely that larger users would continue to migrate to West Lothian and small/medium users to estates in East Lothian and Midlothian around the A720 City Bypass, as well as potentially to south Fife, as a result of the proposed allocation of these sites.

Several of the new sites allocated for residential development have been put forward by the Council, not promoted by the landowner. Allocating these sites (particularly those that are occupied by currently active businesses) risks compromising the business plans that may be in place. Confidence in continued operation will decrease, and this is particularly relevant with regards to the possible threat of CPO. This affect will be felt particularly strongly in North-East Edinburgh, wherein there are several newly allocated sites on premises occupied by operational businesses.

Furthermore, the allocation of several of the new sites across Edinburgh would result in the displacement of numerous active and functional businesses. It is not clear what stage

negotiations with each of the landowners and occupiers has got to. It is not clear what the Council's strategy for relocating these businesses is. It is not clear how does this approach assists with the aim of reducing the need to travel via/own a car.

Furthermore, it appears the Council has not properly considered the economic/socio-economic/environmental impacts on the businesses and the moving out of these businesses. Without this, it is difficult for consultees or even the Council itself to fully understand the impacts of the spatial strategy, and therefore its appropriateness.

Finally, the businesses displaced as a result of the proposed housing allocations will likely need to relocate, and this could result in them moving to less sustainable, greenfield sites. It is not clear if a relocation strategy been established to provide certainty that the relocation of these businesses will result in a fundamentally more sustainable land use and transport pattern.

Barratt David Wilson Homes (0677), Dandara East Scotland (0757)

The Plan is too reliant on existing employment land to deliver new homes.

The Council looks to accept the need to meet more of its own housing need and demand within city limits, reducing the displacement of families to elsewhere in the region and in consequence increasing car commuting between Edinburgh and surrounding areas. The reliance on brownfield land, often constrained and containing with existing businesses will reduce the rate of housing delivery and exacerbate social problems.

It has on the other hand inadvertently planned for the mass displacement of the businesses currently occupying the newly allocated housing sites. It has not considered where these businesses will go and what the car travel impacts of their dispersal will be. The spatial strategy proposes the large-scale displacement of employment (particularly in industry), but there are no coherent plans for relocation in the city. Also, active employment sites would need to be purchased at existing use value, which in some cases could outstrip residential development value due to income in perpetuity versus residential value of land, thus some sites won't be viable to purchase.

Several of the newly allocated sites currently have a retail element. Policy Re 4 presumes against the conversion of shop units to residential use, and safeguards these for shopping and small business use. However, conversion to residential use could be supported where the shop unit has been vacant for a significant period of time and been actively marketed, where there is a local need and demand for a range of housing types and for town centre living. It is not clear how this requirement aligns with the allocation of these businesses for residential development. It is not clear if existing and operational retail premises that have been allocated will also be required to remain vacant for a "significant period" of time.

The allocation of several of the new sites across Edinburgh would result in the displacement of numerous active and functional businesses. What stage have negotiations with each of the landowners and occupiers got to? What is the Council's strategy for relocating these businesses?

It is unclear whether the Ryden Mixed Use Delivery Report has been considered. This report highlighted that the allocation of these sites for residential development would lead

to a significant reduction in employment land and require a very active industrial development programme to reaccommodate even a proportion of this displaced activity. The report concluded that it was likely that larger users would continue to migrate to West Lothian and small/medium users to estates in East Lothian and Midlothian around the A720 City Bypass, as well as potentially to south Fife, as a result of the proposed allocation of these sites.

CALA Management Ltd (0465)

The Council should re-consider its spatial strategy as set out in the Plan. The most appropriate spatial strategy is referred to as Option 3 A blended approach as set out in Choice 12 in the MIR. The Plan is not supported by a background document that addresses the impact on the loss of the economic or employment land supply for pursuing the proposed development strategy – the Plan is silent on the impact of mixed use housing proposals on the economic sites identified as part of SESplan Policy 2 Supply and Location of Employment Land.

Scottish Property Federation (0144)

The challenge of large scale relocation of existing businesses from their current premises will mean that new sites will need to be found before additional supply of much needed industrial sites.

Framework (Edinburgh) Limited (0743)

Stewartfield is a thriving industrial estate with a variety of tenants. These plans would impact existing businesses, who do not fall within Class 4 business use, with their ability to trade and with no offer of viable replacement industrial sites. Relocating businesses to the outskirts of the city will entail lengthy commutes for employees and their customers, leading to a contravention of the Council's " 20 Minute Neighbourhood " goal. More housing will create fewer places to work locally and put an increased strain on an existing overburdened community infrastructure. The proposed development and loss of one of Leith's few remaining light industrial sites would set an undesirable precedent.

Hallam Land Management (0599)

Council has failed to set out a strategy for the relocation of businesses that would be displaced and this should have been presented and explained before the Planning Committee approved the Proposed LDP for the representation period. Without this information, it is not possible to fully scrutinise and respond to the proposed development strategy. That undermines the representation period and is unfair to parties making representations.

Stewart Milnes Homes (0118)

Re-allocating approximately 400 active businesses and strategic employment sites for housing will not deliver the outcome, "A city where everyone shares in its economic success". Instead there will be a disproportionate negative impact on some of the most deprived communities in the City. Therefore, a fundamental change in strategy is required, which supports business and industry in the city.

Object to the Plan's over-arching strategy of reallocating active business/industrial sites and allocated employment land to housing uses but not specific allocations.

This is a very radical strategy, the direction of which is without precedent in any major City in the UK. However, there appears to have been no meaningful consideration of its consequences. There is no substantive explanation of the approach taken in the 'Strategy' or 'Outcomes' sections of Proposed City Plan. That, in our view, has the significant potential to mislead stakeholders, particularly the wider public, and may therefore lead to people not making representations which they might otherwise have made.

Consultants 4-Consulting has been commissioned to consider the implications of the Proposed Plan's strategy for employment land. They provided an overview of the strategy and have highlighted that significant further assessment is required to fully understand the likely consequences. This is the kind of work that the Council should be obliged to undertake, but it has not been done in this case. As it says in Planning Circular 6/2013 'Development Planning':

"Evidence is required to inform plan-making, justify the plan's content, and provide a baseline for later monitoring. Information gathering and analysis should serve efficient high quality plan-making. Certain aspects of the evidence base (such as Housing Need and Demand Assessment, and transport appraisals) are likely to be essential at each plan review. Authorities should therefore take a proportionate approach and consider what is required, and where scarce resources can best be spent, to inform the particular issues being addressed in the plan. A robust evidence base will also be critical at any subsequent development plan examination."

Therefore, the Council should be encouraged to undertake a robust assessment of the Plan's 'economic strategy' prior to the Examination and provide the opportunity for stakeholders to comment upon it. It seems likely that the outcome of this assessment would confirm the view that the strategy will have significant negative consequences and should lead to a rethink of the decision not to allocate any additional greenfield land for development in the City. It is not clear whether Council will undertake this assessment and therefore objectors are considering whether to commission the work directly.

#### 4 Consulting Overview: Conclusions

Redeveloping industrial buildings to accommodate new housing is not simply a matter of matching the supply and demand of industrial land. The approach should consider the key role played by Edinburgh's industrial and related business sites in providing much needed jobs and income for some of the City's most deprived communities. This issue is not addressed in City Plan 2030. A fuller consideration of how competing demands could be better balanced is more likely to realise the ambition of a city where everyone shares in its economic success.

City Plan 2030 could leave Edinburgh as having the UK's most unbalanced economic employment base of any major city in the UK, moving ahead of London.

The proposals present clear challenges to the development of key Scottish Government policies, but their consequences have hardly been considered by the Council.

Wright PDL (0078)

There are several contradictions noted in the Plan and it is unclear how these are to be resolved. In particular, the need to support business versus the high percentage of new housing sites allocated on existing active business land.

Whilst the Council appears accepting of the need to meet more of its own housing need and demand within city limits, reducing the displacement of families to elsewhere in the region and in consequence increasing car commuting between Edinburgh and surrounding areas, it has on the other hand inadvertently planned for the mass displacement of the businesses currently occupying the newly allocated housing sites. It has not considered where these businesses will go and what the car travel impacts of their dispersal will be. The spatial strategy proposes the large-scale displacement of employment (particularly in industry), but there are no coherent plans for relocation in the city. Greenfield land would need to be released to accommodate the displacement, but that would defeat the Plan strategy not to allocate any new greenfield sites. The failure to meet housing targets will significantly accelerate housing costs in a city where affordability pressures are already pronounced.

Also, active employment sites would need to be purchased at existing use value, which in some cases could outstrip residential development value due to income in perpetuity versus residential value of land, thus some sites won't be viable to purchase. If any Council opts to CPO land, it needs to recognise that this may not be a wise financial decision to make.

It is not clear how the Council has satisfied itself that this approach is deliverable. This has not been provided in the narrative. There is a gap between the Council's aspirations, and what will be technically and financially achievable.

The Plan certainly does not support existing businesses. Representations submitted by several HfS members, indicates that the vast majority of sites proposed for housing are currently in active employment uses and that displacement of these is likely to have significant impacts on Edinburgh's employment base. In any circumstances, the Council has failed to justify this strategy or consider its consequences.

We are concerned at the level of displacement of businesses that currently occupy the newly allocated sites, which may lead to an increase in car dependence for some, as these businesses may well relocate to more peripheral areas. We object to the fact the Council has failed to properly consider this.

Economic factors will be impacted by the restriction of available homes, thereby restricting the available workforce. Furthermore, driving operational businesses away from the city will affect the economic resilience of the city.

It is unclear whether the Ryden Report (City of Edinburgh Council: Edinburgh Commercial Needs Study: Mixed Use Delivery – December 2020) has been considered. This report highlighted that the allocation of these sites for residential development would lead to a significant reduction in employment land and require a very active industrial development programme to reaccommodate even a proportion of this displaced activity. The report concluded that it was likely that larger users would continue to migrate to West Lothian and small/medium users to estates in East Lothian and Midlothian around the A720 City Bypass, as well as potentially to south Fife, as a result of the proposed allocation of these sites. How does this Policy assist with the aim of reducing the need to travel via/own a

car?

Furthermore, it appears the Council has not properly considered the economic/socio-economic/environmental impacts on the businesses and the moving out of these businesses. Without this, it is difficult for consultees or even the Council itself to fully understand the impacts of the spatial strategy, and therefore its appropriateness.

Finally, the businesses displaced as a result of the proposed housing allocations will likely need to relocate, and this could result in them moving to less sustainable areas. Has a relocation strategy been established to provide certainty that the relocation of these businesses will result in a fundamentally more sustainable land use and transport pattern?

#### Homes for Scotland (0404)

The Plan proposes to displace a significant number of active businesses so their current sites can be repurposed for housing development. Policy Econ 2 gives those displaced businesses the additional problem of having to also ensure 50% of their new site is also used for housing development. The Council has given no thought to how this programme of displacement and/or redevelopment will be delivered. Each and every site will need to be project managed by either a willing landowner, a willing home builder or the Council itself through the compulsory purchase process. It appears the Council has given no thought to which of those delivery methods will suit each of the sites it is expecting homes to be built on and/or businesses relocated to. If the existing businesses can't be re-provided for on their existing sites (which seems unlikely given the lack of detailed planning for this) then in all likelihood, this policy realises the Ryden report conclusion that existing businesses will have to relocate to areas outwith the city.

Furthermore, whilst the Council appears accepting of the need to meet more of its own housing need and demand within city limits, reducing the displacement of families to elsewhere in the region and in consequence increasing car commuting between Edinburgh and surrounding areas, it has on the other hand inadvertently planned for the mass displacement of the businesses currently occupying the newly allocated housing sites. It has not considered where these businesses will go and what the car travel impacts of their dispersal will be. The spatial strategy proposes the large-scale displacement of employment (particularly in industry), but there are no coherent plans for relocation in the city. Greenfield land would need to be released to accommodate the displacement, but that would defeat the Plan strategy not to allocate any new greenfield sites. The failure to meet housing targets will significantly accelerate housing costs in a city where affordability pressures are already pronounced.

Also, active employment sites would need to be purchased at existing use value, which in some cases could outstrip residential development value due to income in perpetuity versus residential value of land, thus some sites won't be viable to purchase. If any Council opts to CPO land, it needs to recognise that this may not be a wise financial decision to make.

It is not clear if the Council has satisfied itself that this approach is deliverable. This has not been provided in the narrative, and there is a gap between the Council's aspirations, and what will be technically and financially achievable.

Several of the newly allocated sites currently have a retail element. Policy Re 4 presumes against the conversion of shop units to residential use, and safeguards these for shopping and small business use. However, conversion to residential use could be supported where the shop unit has been vacant for a significant period of time and been actively marketed, where there is a local need and demand for a range of housing types and for town centre living. It is not clear how this requirement aligns with the allocation of these businesses for residential development. It is not clear if existing and operational retail premises that have been allocated will also be required to remain vacant for a “significant period” of time.

It is unclear whether the Ryden Mixed Use Delivery Report has been considered. This report highlighted that the allocation of these sites for residential development would lead to a significant reduction in employment land and require a very active industrial development programme to reaccommodate even a proportion of this displaced activity. The report concluded that it was likely that larger users would continue to migrate to West Lothian and small/medium users to estates in East Lothian and Midlothian around the A720 City Bypass, as well as potentially to south Fife, as a result of the proposed allocation of these sites.

Furthermore, it appears the Council has not properly considered the economic/socio-economic/environmental impacts on the businesses and the moving out of these businesses. Without this, it is difficult for consultees or even the Council itself to fully understand the impacts of the spatial strategy, and therefore its appropriateness.

#### J. Smart & Co. (Contractors) PLC (0483)

The Spatial Strategy has failed to make any provision for new industrial land which is essential in order to increase supply.

An alternative strategy must be pursued, one which identifies land for new industrial development in appropriate locations near to major transport links and available infrastructure.

Rather than a ‘brownfield only’ strategy this will require City Plan 2030 to adopt a blended approach that includes both brownfield and greenfield land for development.

The Spatial Strategy prioritises delivery of new homes on brownfield land. It identifies a number of ‘Major New Development Areas’ across the city which contain 95 new housing sites.

The majority of these sites are in active alternative use – primarily business and industrial land - and in private ownership.

As both an owner of a significant industrial land portfolio and a developer of industrial and residential property, the Spatial Strategy is fundamental to the interests of J.Smart & Co.

While supportive of aspects of the strategy there is a need to reconsider other matters if the City Plan is to achieve its stated aims and outcomes.

Unfortunately, the Proposed Plan has not identified any new business and industrial land to replace the industrial sites it seeks to repurpose for housing development. This is a

significant concern.

The lack of any such provision within the plan significantly undermines its overall strategy and will not support Edinburgh's economic or housing needs.

We note the findings of Ryden's 'Edinburgh City Plan 2030 Commercial Needs Study: Industrial Property Market' which was commissioned to inform preparation of the plan.

The study identified continued high market demand for industrial property in Edinburgh set against a decline in available supply and take-up. In short, it concluded that a low supply of industrial land is constraining market demand.

In their assessment, with reference to the potential impacts of the plan's brownfield first strategy, Ryden noted:-

"The potential rate of stock loss is also 6 times the current, active rate of new industrial development in the city (largely in the west). The implication is that a very active industrial development programme would be required to re-accommodate even a proportion of this displaced industrial activity. More likely the migration of larger users to West Lothian and small-medium users (especially trades servicing the city) to the western estates in East Lothian and to north Midlothian around the A720 City Bypass, as well as potentially to south Fife, would continue, alongside the accommodation of some in new premises in Edinburgh. Some re-accommodation of non-industrial service uses in secondary retail frontages or business centres could also occur depending on individual occupier needs, particularly where those smaller businesses service the immediate residential and business populations and may not be able to stretch financially to a new-build industrial unit."

Proposed City Plan does not reflect these findings, and this is a crucial omission.

The plan's failure to make provision for an increased industrial land supply and, in turn, the re-accommodation of displaced industrial users undermines its overall aims and desired outcomes.

As a direct result, this will restrict the number of existing industrial sites that come forward for housing/mixed-use development while those industrial occupiers that are displaced by redevelopment will be pushed out of the city.

As a consequence both housing and industrial land supply and availability will be restricted, and City Plan 2030 will fail to address need and demand in either sector.

For these reasons J Smart & Co. do not support the Spatial Strategy of Proposed City Plan 2030.

It is considered that an alternative strategy must be pursued, one which identifies land for new industrial development in appropriate locations near to major transport links and available infrastructure.

Rather than a 'brownfield only' strategy this will require City Plan 2030 to adopt a blended approach that includes both brownfield and greenfield land for development.

West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352)

Proposed City Plan 2030 has not made any provision for the numerous businesses that would be displaced to facilitate successful implementation of the Spatial Strategy - what is the strategy for relocating these businesses in the absence of any new industrial land allocations within the Plan?

Has the Council considered circumstances where existing industrial use value is in excess of residential value and there is no financial logic in site owners obtaining vacant possession and selling for residential use? Factors such as 35% affordable housing provision and at least 20% of site area being usable open space will increase the potential for such circumstances to occur.

Cala Management (0316)

Proposed City Plan 2030 has not made any provision for the numerous businesses that would need to be displaced to facilitate successful implementation of the Spatial Strategy. Given there are no new industrial land allocations within the Proposed Plan, where does the Council propose these businesses relocate to? In the absence of any suitable alternative for these businesses, this will surely limit the number of brownfield sites that come forward for housing development.

The Spatial Strategy does not account for the findings of the 'Edinburgh City Plan 2030 Commercial Needs Study: Industrial Property Market'. The Study identified high market demand for industrial property in Edinburgh but at the same time a decline in available supply and take-up of industrial property i.e. low supply levels are constraining market demand. The proposed repurposing of much of Edinburgh's existing industrial supply will compound this issue.

Edinburgh Chamber of Commerce (0379)

Understand the principles behind the spatial strategy as proposed in City Plan 2030, but have significant concerns about the displacement of businesses currently occupying the planned new housing sites.

The plan does not make provision for the relocation of c.400 businesses (mainly industrial) which would be directly impacted by the Plan. It does not seem to have considered where these businesses will go, what the impact on local employment and communities will be, and what the car travel impacts of their dispersal will be.

Would like to see more consideration in the Plan about how these issues will be addressed, what other options may be available to minimise impact both on their operations and the local communities they support, and what meaningful assistance will be made available to them to relocate to appropriate alternative spaces if this is the only option.

**Economic Strategy**

Steve Loomes (0767), Wright PDL (0078)

Policy Econ 1 (Supporting inclusive Growth, innovation and culture) sets out steps and

actions needed to enable good growth for Edinburgh's economy. The proposed loss of significant amounts of established employment land is contrary to this aim.

It is not clear if the Council has identified which current landowners and businesses will willingly clear/vacate employment sites in order to facilitate home building.

It is not clear if the Council has undertaken a cost analysis of voluntary or compulsory land purchase for those sites where it will be working against landowner and occupier preferences.

The Council has given no thought to how this programme of displacement and/or redevelopment will be delivered. Each and every site will need to be project managed by either a willing landowner, a willing home builder or the Council itself through the compulsory purchase process. It appears the Council has given no thought to which of those delivery methods will suit each of the sites it is expecting homes to be built on and/or businesses relocated to. If the existing businesses can't be re-provided for on their existing sites (which seems unlikely given the lack of detailed planning for this) then in all likelihood, the Ryden report conclusion that existing businesses will have to relocate to areas outwith the city will be realised.

If any Council opts to CPO land, it needs to recognise that this may not be a wise financial decision to make. It is not clear if the Council has satisfied itself that this approach is deliverable. This has not been provided in the narrative, and there is a gap between the Council's aspirations, and what will be technically and financially achievable.

#### Barratt David Wilson Homes (0677)

The Council has given no thought to how this programme of displacement and/or redevelopment will be delivered. Each and every site will need to be project managed by either a willing landowner, a willing home builder or the Council itself through the compulsory purchase process. It appears the Council has given no thought to which of those delivery methods will suit each of the sites it is expecting homes to be built on and/or businesses relocated to. If the existing businesses can't be re-provided for on their existing sites (which seems unlikely given the lack of detailed planning for this) then in all likelihood, the Ryden report conclusion that existing businesses will have to relocate to areas outwith the city will be realised.

If any Council opts to CPO land, it needs to recognise that this may not be a wise financial decision to make. CPO of land cannot be relied upon to deliver the required housing sites. There is a high probability that the CPO procedure of an existing employment site will result in a Public Inquiry (triggered if there is only one objection); not to mention protracted discussions on the value of the site between the landowner and the district valuer, which may ultimately also result in a Lands Tribunal Inquiry. The Council should evidence the timescale and overall cost relating to the acquisition of the identified sites.

It is not clear if the Council has satisfied itself that this approach is deliverable. This has not been provided in the narrative, and there is a gap between the Council's aspirations, and what will be technically and financially achievable.

The Council's Economy Strategy sets out steps and actions needed to enable good growth for Edinburgh's economy. BDW considers the proposed loss of significant

amounts of employment land to be wholly contrary to this aim.

#### Scottish Property Federation (0144)

This section (Paragraph 3.238) fails to recognise the urgent need for reinvestment in the industrial and distribution sector. In their latest annual review, Ryden have reported that much of the existing stock is old, on average forty years old. This stock will need refurbishing and possibly even entirely replacing. There is also an under-supply of existing premises or effective sites that will add to upwards rental pressures in the near term. In addition, the challenge of large scale relocation of existing businesses from their current premises will mean that new sites will need to be found before additional supply of much needed industrial sites. The plan needs to meet the growth in demand for industrial sites and distribution of goods from the online economy. At the same time the city will need to recognise the impact of relocation from other employment sites as land is reallocated for housing. Neither of these factors are represented under Econ 4 as it now stands.

The strategy for achieving affordable housing targets (Paragraphs 2.93, 2.103 and 2.110) through use of CPOs on employment land sites is not likely to achieve the stated targets within the intended timescales. CPOs are a resource intensive and uncertain process, especially where land is in existing use and occupied.

We disagree with this section (paragraphs 2.142 to 2.148) of the plan because it does not, we believe, fully represent several economic challenges including the requirement for industrial/logistics sites across the city. First, there has arguably been an historic under-investment in industrial/logistical premises within the city, with many industrial or logistical businesses instead being sited in Livingston and other regional locations. With the growing emphasis upon distribution we feel there should be more focus on supporting logistics across the city. Instead, industrial sites are to be subject to CPO for housing, so the city will need to find alternative sites within its boundaries for these dislocated businesses before seeking to grow the distribution economy.

The Plan does not appear to appreciate the scale of challenge for retail and leisure in the first half of the plan period, as the city recovers from the Covid-19 pandemic. The plan should not overlook the need for the city to be able to support the experience economy, which Edinburgh is particularly dependent on. This will need significant reinvestment in the city centre as well as the towns. This will depend upon attracting investment and development capital not just from the wider UK, but internationally yet the wider plan requirements for significant contributions to housing and affordable housing, as well as other social infrastructure, will inhibit the appeal of Edinburgh to investors. Simply put, the investment case for many forms of development are already finely balanced and the addition of housing to most forms of commercial development, including student accommodation and the nascent build-to-rent sector, will be a potential barrier to much needed commercial investment.

#### The Royal London Mutual Insurance Society Ltd (0149)

Use of compulsory purchase powers:

CPOs entail lengthy and complex procedures. Their use has implications for businesses, the Council and the delivery of the Proposed Plan's strategy. The key issues are summarised below with further detail provided in supporting document.

The proposed use of CPO is further complicated in this instance by the fact that the Plan contemplates using it to acquire land used by operational businesses. Where there is lack of alternative provision and businesses are forced to close, the Council could be required to buy the whole businesses valued as a going concern not just premises. This could add significantly to the costs of CPO, which is already an expensive process. Timing of compensation payments may also be challenging for the Council or any other acquiring authority. Advance payments to some interests may be payable while other matters are unresolved, potentially requiring significant payments well before development begins let alone yields any income.

As a publicly funded body the Council will also have to have regard to obtaining best value for the money it does spend. The money and officer time spent running multiple contentious CPOs simultaneously will have a significant opportunity cost and in any case would likely be prohibitive. It would also appear questionable whether pursuing development on such costly and complex sites, with the attendant disruption to businesses, would be the best use of the Council's finances when other options could be made available such as allocating more unconstrained sites.

There is a lack of evidence to support the Plan's proposed approach to redevelopment of land including employment (mainly industrial) land to satisfy the requirement for housing.

The Plan is not supported by background papers which consider the impact of its strategy on established employment and business uses. A 'Edinburgh Commercial Needs Study: Mixed Use Delivery (ECNS)(December 2020)' has been undertaken by Ryden on behalf of the Council.

This document is relevant to the Plan, but it is not clear to what extent it has informed the Council's approach. It is not referred to in the Plan which just refers to the 4 reports available at the MIR stage in paragraph 2.143.

Ryden's Mixed Use Delivery Report updates their 2018 Commercial Needs Study: Industrial Property Market Report which accompanied the MIR and considers the potential impact of Choice 12 (A) / Option 1 of the MIR which proposed the redevelopment of existing brownfield industrial sites for residential-led development to support the City's housing requirements.

It observes that the industrial occupier base is diverse and includes a wide range of trades and services. It cites the example of a small multi-let industrial estates in Granton as a typical reflection of occupier type 'providing a range of urban goods and services' typical of Edinburgh's multi-occupied industrial estates (p9).

The industrial market is considered to perform well with strong demand for modern space, smaller units and on managed industrial estates. The study suggests that limited supply may be suppressing or displacing demand, particularly for smaller units below 5,000 sq ft.

The Report concludes that 56 sites in scope for redevelopment as part of the strategy account for 30% of the City's industrial stock. The Report provides a general assessment of stock.

The implications for the industrial market of progressing with the brownfield strategy are identified in the Report and are significant.

The Report makes some key observations:

- Proposed loss of stock is skewed towards the north east of the City(p30) and new stock has been developed only in the west of the City (p15).
- 30% of the 30,000 jobs supported by industrial stock could be affected, noting the number could be lower as vacancy rates in the affected stock are 13% compared to the market figure of 5.6% (p30).
- Not all industrial stock identified for redevelopment is of a poor standard – there are exceptions where stock is well suited to market needs, is full and popular (and attracts high rents (p30).
- In assessing the impact on the Bonnington area, the Report cautions that there will still be an overall loss of job numbers and services from the area and that this should be balanced against the residential and economic impact of new residents in the area (p40).
- The case studies demonstrate that policy requirements to replace employment uses on site are tending to yield only a small number of flexible small units, some of which are designed to convert to flats if they do not attract tenants, and are thus unlikely to contribute to the replacement need if industrial stock is lost at the potential rate indicated in this report (p43).

The Strategy fails to recognise that:

- The industrial market services the demands of the local urban market;
- The market is performing well with limited supply potentially suppressing or displacing demand, particularly for smaller units;
- The strategy represents redevelopment of 30% of the City's industrial stock including premises such as Royal London's which is modernised and well suited to market needs, full, popular and achieve high rents;
- Jobs would be lost and businesses would be displaced beyond the City;
- The potential loss of around 250,000 sq.ft. of industrial space annually to 2030 which is around five times the historic rate of stock loss;
- The potential stock loss rate around six times the current, active rate of new industrial development; and
- A very active industrial development programme would be required to reaccommodate even a proportion of this displaced activity.

The strategy also ignores Ryden's advice in their 2018 Report (see Appendix 2 MIR response) on two counts:

- Understand the nature of the occupiers to be accommodated, and their related needs for locations and types of premises.
- Market intervention to protect or allocate sites and support provision of serviced sites may be required.

#### Tarmac (0244)

The linkage between housing and employment markets is poorly defined in the Proposed LDP. Bairdview is directly adjacent to West Edinburgh and can contribute to the success of this strategy by delivering a sustainable local housing development providing a local workforce.

The Council has underestimated employment land needs and this is being further undermined by the Council's proposal to utilise such allocated for housing. There appears to be no alignment with the Choices Report on strategic sites such as IBG. Furthermore, the approach taken appears to be contrary to the Ryden Report - Commercial Needs Study: Mixed Use Delivery. Displacement of business from urban land and the restriction for major employers on economic development land will further displace economic activity to neighbouring areas.

#### Hallam Land Management (0615)

The economic development strategy contained within the Proposed LDP requires to be completely reviewed as it is already out of date in terms of its information base (Ryden Commercial Needs Study). There is an overreliance on a limited number of areas and sectors which are expected to cater for a rapidly growing population. Little emphasis is given to the economic value of housebuilding.

Assumptions made in relation to commercial needs are too broad brush and unrelated to any assessment of local needs and demands or aligned with 20-minute neighbourhoods which would make locations such as Craigiehall sustainable, reducing commuting by car.

The Council's Economic Strategy seeks sustainable growth through investment in jobs – focussing on development and regeneration, inward investment, support for businesses and assistance to the unemployed. It is acknowledged that City Plan has a key role in helping to deliver this strategy, but this is being done in the absence of strategic or regional targets. In addition, the baseline studies for the Plan relating to commercial and industrial growth are now significantly out of date and pre-Covid. As a result, it is likely that employment patterns in different sectors will have changed in the interim.

There is as yet no evidence that less commercial / employment space will be required during the plan period as has been assumed in relation to the International Business District and Bio- Quarter where space has been substituted by homes. This is not consistent with the LDP strategy or its vision for West Edinburgh.

The LDP is not consistent with the Ryden Commercial Needs Assessment. Whilst this now requires review it warns against the loss of employment land.

City Plan 2030 undertakes to provide development opportunities for 'good growth' and to provide land for all types of businesses – big and small – whether they are office based or require industrial units, or as part of mixed-use development as well as protecting local centres that local retail, leisure and community services for residents.

#### Hallam Land Management (0599), Miller Homes Limited (0649)

The Council has accepted that the likely conclusion from the proposed development strategy is that the use of compulsory purchase powers (CPO) will be required. However, the Council has produced no evidence to demonstrate that its strategy can be delivered despite the Council's acknowledgement in the MIR consultation that the preferred strategy may not be financially viable for the Council and its partners to deliver or, possible for the Council to achieve an annual delivery rate to prevent the release of further green belt land. If CPO is required then the costs, including market value and disturbance

compensation, as well as the timescales of that process along with a strategy for the relocation of businesses that would be displaced should have been presented and explained before the Planning Committee as it approved the Proposed LDP for the representation period. Without this information, it is not possible to fully scrutinise and respond to the proposed development strategy. That undermines the representation period and is unfair to parties making representations.

The Proposed LDP is not supported by a background document that addresses the impact on the loss of the economic or employment land supply for pursuing the proposed development strategy the Proposed LDP is silent on the impact of mixed use housing proposals on the economic sites identified as part of SESplan Policy 2 Supply and Location of Employment Land.

#### Homes for Scotland (0404)

Policy Econ 1 (Supporting Inclusive Growth, innovation and culture) sets out steps and actions needed to enable good growth for Edinburgh's economy. The proposed loss of significant amounts of established employment land is contrary to this aim.

It is also worth noting the contribution that house building itself makes to the local economy, including in terms of creating and supporting jobs.

It is not clear if the Council has identified which current landowners and businesses will willingly clear/vacate employment sites in order to facilitate home building. It is not clear if the Council has undertaken a cost analysis of voluntary or compulsory land purchase for those sites where it will be working against landowner and occupier preferences.

#### West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352)

The Spatial Strategy does not account for the findings of the 'Edinburgh City Plan 2030 Commercial Needs Study: Industrial Property Market'. The study identified continued high market demand for industrial property set against a decline in available supply and take-up of industrial property – indicative of low supply constraining market demand. The Spatial Strategy's repurposing of much of Edinburgh's existing industrial supply will compound this issue, particularly as there are no new business and industrial land allocations within Proposed City Plan.

The success of the Proposed Plan's Spatial Strategy is reliant on a range of commercial factors outwith the Council's control. Recognising this, Choices for City Plan acknowledged the proposed approach "may not be financially viable" and would "require a significant CPO programme to ensure land comes forward."

The need for compulsory purchase is again referenced within Proposed City Plan 2030. Paragraph 2.103 states "use of compulsory purchase powers to facilitate development may be needed." Paragraph 3.176 states "On sites in private ownership the Council will, where necessary, intervene to ensure that land comes forward utilising compulsory purchase powers if required".

Given the limitations in both Council owned land supply and the potential to acquire sites on the open market it is clear that, to deliver the Spatial Strategy, use of compulsory purchase powers may need to be extensive.

This cannot be considered a robust or reliable basis upon which to underpin delivery of the plan's Spatial Strategy. Has the Council undertaken detailed cost analysis to understand the implications of pursuing compulsory purchase contrary to landowner intentions? Has the Council taken the advice of the District Valuer to establish land values associated to its brownfield/CPO strategy?

West Craigs Ltd instructed Savills to consider the values paid for existing industrial stock and investments within Edinburgh and whether this underlying value will be an impediment to the Council's strategy (having regard to the value of residential land). Savills specialist Compulsory Purchase Team also provided comment on the practicalities of implementing the Council's strategy, and the likely costs should CEC exercise their CPO powers to obtain vacant possession of provisionally allocated residential sites currently in industrial use. Savills findings are presented within the submitted Recommendations for Housing on Multi-Let Industrial Sites report.

The Savills report identifies that, were CEC to implement CPO powers this would be costly, time consuming and involve a high degree of risk of being successful. Using a number of case studies as a basis for their analysis, the report notes that if the Council were to use its CPO powers to acquire existing active industrial land they would most likely need to pay ahead of existing headline residential land values to assemble sites. Such a strategy appears commercially unviable and raises questions as to how this could be supported by the public purse.

#### CALA Management Ltd (0465)

If any Council opts to CPO land, it needs to recognise that this may not be a wise financial decision to make. CPO of land cannot be relied upon to deliver the required housing sites. There is a high probability that the CPO procedure of an existing employment site will result in a Public Inquiry (triggered if there is only one objection); not to mention protracted discussions on the value of the site between the landowner and the district valuer, which may ultimately also result in a Lands Tribunal Inquiry. The Council should evidence the timescale and overall cost relating to the acquisition of the identified sites.

It is not clear if the Council has satisfied itself that this approach is deliverable. This has not been provided in the narrative, and there is a gap between the Council's aspirations, and what will be technically and financially achievable.

#### Lord Dalmeny (0475)

The Strategy should confirm the number and total acreage of brownfield sites identified for redevelopment that do not comprise part of the established vacant or derelict supply in the city, but instead remain as operational sites, occupied by either by business and industrial uses or for any other purpose.

The Strategy should subsequently confirm the quantum of currently operational employment land that will be displaced in order to facilitate the focus on re-use of 'brownfield land' to achieve the aims of the strategy as regards prioritising use of brownfield over greenfield land.

The Strategy should then set out how much additional employment land will be required to accommodate the businesses that are currently occupying land earmarked in the Plan as 'brownfield redevelopment' sites to facilitate new housing and community uses; a strategy to accommodate these displaced business needs to be included in explicit terms.

To clarify this information, a new paragraph or paragraphs should be added after para 2.2, point 2, on page 8 of City Plan 2030 to address each of the points above.

The Strategy fails to recognise that a significant proportion (perhaps as much as 95%) of the brownfield land that is proposed to be redeveloped for housing purposes is currently occupied by other uses – those uses include many productive businesses whose local communities depend on their presence for employment. The Environmental Report confirms that Edinburgh has a relatively low incidence of vacant and derelict land compared with other Central Belt authorities.

The spatial strategy the Council proposes to adopt as regards delivery of housing may require higher levels of intervention than might be the norm; this reference relates to the potential requirement to use compulsory purchase powers to acquire currently occupied 'brownfield sites' to facilitate development. This is both a costly and time consuming process which is unlikely to deliver timeous supply of housing land.

The Plan does not appear to include a robust strategy to facilitate relocation of businesses displaced from their current location in order to deliver the 'brownfield first' approach. We suggest that the LDP is therefore not consistent with the Commercial Needs Assessment 2020 prepared in support of the Choices for City Plan consultation; whilst the assessment now requires review to capture changes in working patterns post Covid-19 one of the key messages therein warns against the loss of employment land and we suggest this remains a very valid issue.

This issue is amplified by a requirement under Housing Delivery policies for all sites identified that come forward for commercial development to provide housing as part of the scheme, where such proposals are compatible with other policies in the plan.

The cumulative impact of these aims has the potential to frustrate the delivery of future business and industrial land supply across the City as there is currently a complete lack of clarity surrounding the total quantum of employment land development that will be required, or indeed can be achieved, during the Plan period. Strategy is deficient in not directly addressing this matter and that there are opportunities available to identify a generous supply of employment land across the Plan area in order to meet the future needs of displaced business and industrial operators.

We suggest that the Council should adopt a similarly generous and flexible approach to enable additional employment land to come forward for development as it does to the identification of land to meet housing supply targets; in this instance this would equate to a generosity allowance of 20% over and above the current quantum of identified land for employment development. This target could be met on sites either within or adjacent to the urban area that are not constrained by physical, environmental or ownership issues and which are not in locations that contribute to the landscape setting of the city.

We note, for example, that the Council has taken steps to include an area of land to the west of Newbridge (north of the M8) within the urban area as an extension to the

settlement's Business and Industry Area; to the best of our knowledge this land was not promoted for development through the Choices for City Plan consultation.

There are other sites located in close proximity to existing strategic employment locations that have potential to facilitate additional employment development, thereby offering additional options to accommodate businesses displaced as part of the 'brownfield first' strategy.

The Commercial Needs Study undertaken to inform the Choices for City Plan consultation confirms that the National Planning Framework supports further development of industrial space at a strategic level and highlights that the waterfront in Edinburgh is a key area for regeneration, new homes and port, energy and industrial development. It also confirms that West Edinburgh is a significant location for investment. The study also highlighted that demand is increasingly directed towards strategic locations with good transportation links on the edge of urban Edinburgh.

As a result, the study confirms that unlocking new industrial development sites in these strategic locations around Edinburgh is important not only to meet current demand, but because inner city, older industrial estates with poorer buildings, accessibility and layouts are under constant pressure for redevelopment for alternative uses.

#### Taylor Wimpey East Scotland (0770)

Proposed City Plan 2030 appears not to have made any provision for the numerous active and functional businesses that would be displaced to facilitate successful implementation of the Spatial Strategy:

- What is the Council's strategy for relocating these businesses and how does this support the wider 'sustainability' aspirations which underpin their 'brownfield first' approach?
- Has the Council considered circumstances where the current industrial use value of the land is in excess of the residential value and there is no financial logic in the site owners obtaining vacant possession and selling for residential use?

The Spatial Strategy does not account for the findings of the 'Edinburgh City Plan 2030 Commercial Needs Study: Industrial Property Market' which was commissioned to inform preparation of City Plan 2030.

The Commercial Needs Study identified high market demand for industrial property in Edinburgh whilst noting a decline in available supply and take-up of industrial property i.e. low supply levels are constraining market demand. The Spatial Strategy's suggested repurposing of much of Edinburgh's existing industrial supply will compound this issue, particularly given the lack of any new business and industrial land allocations within the Proposed Plan to replace what would be lost.

It is clear the success of the Proposed Plan's Spatial Strategy is reliant on a range of commercial factors that are not within the Council's control. Recognising this, the Choices for City Plan consultation document acknowledged that the proposed approach "may not be financially viable" and would "require a significant CPO programme to ensure land comes forward."

The need for compulsory purchase is again referenced within Proposed City Plan 2030. Paragraph 2.103 states “use of compulsory purchase powers to facilitate development may be needed.” Paragraph 3.176 states “On sites in private ownership the Council will, where necessary, intervene to ensure that land comes forward utilising compulsory purchase powers if required”.

There are obvious limitations in terms of both Council owned land supply and the potential to acquire private sites on the open market. Therefore, to deliver the Spatial Strategy as proposed, use of compulsory purchase powers may need to be extensive.

This cannot be considered a robust or reliable basis upon which to underpin delivery of the plan’s Spatial Strategy - has the Council undertaken detailed cost analysis to understand the implications of pursuing compulsory purchase contrary to landowner intentions? Has the Council taken the advice of the District Valuer to establish land values associated to its brownfield/CPO strategy?

#### Rosebery Estate (0618)

It is not clear whether the Ryden Report (City of Edinburgh Council: Edinburgh Commercial Needs Study: Mixed Use Delivery – December 2020) has been considered. This report highlighted that the allocation of these sites for residential development would require a very active industrial development programme to reaccommodate even a proportion of this displaced activity. The report concluded that it was likely that larger users would continue to migrate to West Lothian and small/medium users to estates in East Lothian and Midlothian around the A720 City Bypass, as well as potentially to south Fife, as a result of the proposed allocation of these sites. How does this Policy assist with the aim of reducing the need to travel via/own a car?

Furthermore, it appears the Council has not properly considered the economic/socio-economic/environmental impacts on the businesses and the moving out of these businesses. Without this, it is difficult for consultees or even the Council itself to fully understand the impacts of the spatial strategy, and therefore its appropriateness. One of the Plan’s key aims is to deliver policies which support businesses to thrive. This appears to contrast with the Council’s settled view on the location of housing moving forward.

Finally, the businesses displaced as a result of the proposed housing allocations will likely need to relocate, and this could result in them moving to less sustainable areas. Has a relocation strategy been established to provide certainty that the relocation of these businesses will result in a fundamentally more sustainable land use and transport pattern?

#### Landowner of East Foxhall (0544)

The Council further acknowledges at paragraph 2.103 of City Plan that to deliver their brownfield strategy, that CPO powers may be required. CPO is a lengthy and costly process, and we have concerns that if CPO is required, these sites will not be deliverable within the plan period. This is clearly contrary to paragraph 119 of SPP which states “Local development plans in city regions should allocate a range of sites which are effective or expected to become effective in the plan period”.

The need to even recognise a potential requirement to utilise CPO powers clearly demonstrates that the Council are questioning the deliverability of the sites within the plan to achieve the housing numbers required, particularly in the latter years of the plan once the existing greenfield allocations are progressed. To address the above, it is clear that further sites, likely greenfield in nature, such as land at East Foxhall, should be allocated to ensure housing targets can be met.

In regards to the delivery of brownfield sites, a large proportion of sites identified by the Council for housing are currently within current and active employment use, likely with operators working to a business plan which may not include opportunities for relocating their premises.

It is also unclear as to whether all brownfield sites have been promoted by landowners, or that they are willing to sell. If either of these is not the case, it is questionable whether all of these sites will be able to come forward for delivery within the plan period, even with the CPO powers which the Council have already acknowledged might be required.

#### Cala Management (0316)

The Proposed Plan's Spatial Strategy is reliant on numerous commercial factors that are not within the Council's control. Recognising this, the Choices for City Plan consultation document acknowledged that the proposed approach "may not be financially viable" and would "require a significant CPO programme to ensure land comes forward." No evidence has been presented by the Council to assess the financial implications of such a significant CPO programme and how these existing businesses will be supported in relocating within the City.

The need for compulsory purchase is again referenced within Proposed City Plan 2030. Paragraph 2.103 states "use of compulsory purchase powers to facilitate development may be needed." Paragraph 3.176, in support of Policy HOU1 Housing Development, states "On sites in private ownership the Council will, where necessary, intervene to ensure that land comes forward utilising compulsory purchase powers if required".

There are obvious limitations in terms of both Council owned land supply and the potential to acquire private sites on the open market. Therefore, to deliver the Spatial Strategy as proposed, use of compulsory purchase powers would need to be extensive. This cannot be considered a robust or reliable basis upon which to underpin delivery of the plan's Spatial Strategy.

#### Forth Ports (0496)

FP object to the use of Compulsory Purchase Order Powers (CPO) to deliver the Council's brownfield housing delivery strategy. The potential for their use in relation to the Port of Leith, which is wholly owned and controlled by FP, would have serious and permanent implications for the Port.

Forth Ports Ltd is a port infrastructure organisation and will continue to operate as such, utilising its land holdings for port related uses, unless it considers any land within its ownership is no longer required for operational use. FP is also the Statutory Harbour Authority and the Competent Harbour Authority for the Firth of Forth and performs a number of functions as prescribed by legislation (Forth Ports Authority Order Confirmation

Act 1969) including overseeing of safety of navigation and licencing of all works below MHWS between the tidal limits inland and the mouth of the Firth. They operate the Forth and Tay Navigation Service which controls vessel movements on the Firths of Forth and Tay. In accordance with the Confirmation Act, FP also put in place byelaws to protect the health, safety and security of both operators and members of the public within its operational estates. They also have a duty to ensure port facilities are securely protected in accordance with International Ship and Port Facility Security (ISPS) code.

The Port of Leith is the City's port and has been so for centuries, adapting to the City's needs over time. It is the largest enclosed deepwater port in Scotland. It is a resource which the City must take care to nurture, as it provides port infrastructure which cannot be easily replicated. As well as being the City's Port, which provides full modern docking and cargo handling services for a range of operations, vessels, cargoes, it also performs a wider strategic role:

- At a National level, it supports essential actions to address the climate change emergency including supporting the off-shore renewables industry, which is recognised by national policy; and
- At a City Region level, it supports a range market requirements.

Port operations can broadly be described as operations which relate to shipping and activities related to handling associated passengers and goods. These are largely industrial in nature. By their association with shipping, port operations can only take place in a port. The transitional nature of port activities requires port operators (including their agents and lessees) to handle, store and process different commodities in a flexible manner. The associated development requirements are permitted in accordance with Class 35 of The Town and Country Planning (General Permitted Development) (Scotland) Order 1992, as amended. Forth Ports are seeing increases in demand for its infrastructure services and support for Use Classes 4, 5 and 6 is required to fully address its potential.

The proposed Plans' commitment to the use of Compulsory Purchase Powers has the potential to undermine the City's fabric, including the Port of Leith, which has developed and adapted over centuries. In seeking to address the need for housing, the proposal fails to recognise the wider impact and implications for the City's economy and infrastructure.

#### Leith Central Community Council (0614)

Paragraph 2.2.2, Directing new development to, and maximising the use of, brownfield land rather than greenfield land. The definition of brownfield (p198) can be interpreted as a self justifying condition for demolishing any non residential building in an urban area as it has no timescale associated with the terms redundant or unused . Are forced-closed industrial premises defined as brownfield?

#### Stoddart Family (0749)

The delivery of new homes and employment opportunities, whilst retaining employment land in sustainable locations must be a consideration for the plan. The Council has outlined a 'brownfield' only approach to the provision of housing and a number of locations are proposed for housing which have existing businesses located on them. However, there is no provision for the relocation of these businesses and the Council's own supporting information to the plan, the Ryden report into mixed-uses, states that many of these businesses may relocate out of the area.

Hallam Land Management (0615)

Modify the plan's strategy to identify new housing allocations and neighbourhoods in sustainable locations such as Balerno.

Homes for Scotland (0404), Stirling Developments Limited (0303), Dandara East Scotland (0757), Steve Looms (0767), Barratt David Wilson Homes (0677), Hallam Land Management (0599), Stewart Milnes Homes (0118), Wright PDL (0078), CALA Management Ltd (0465), West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352), Cala Management (0316), Steve Loomes (0767), Taylor Wimpey East Scotland (770)

Modify the plan's strategy to promote a 'blended' approach of green and brownfield development.

Scottish Property Federation (0144)

Modify plan to identify new business sites for relocated businesses before identifying additional supply of industrial sites.

Framework (Edinburgh) Limited (0743)

No modification identified.

Edinburgh Chamber of Commerce (0379)

Modify Plan to give more consideration to the impact on businesses of the spatial strategy and their relocation.

### **Economic Strategy**

Steve Loomes (0767), Barratt David Wilson Homes (0677)

Modify the plan's strategy to promote a 'blended' approach of green and brownfield development.

Wright PDL (0078)

Modify plan. A greater volume and range of land is required to be allocated for residential development, particularly in areas that are accessible, and do not result in the displacement of existing operational businesses.

Scottish Property Federation (0144)

Modify the Plan to allocate new sites for the industrial and distribution sector.

The Royal London Mutual Insurance Society Ltd (0149)

Plan should be modified to identify the Royal London's land holding at Seafeld Way as Business and Industry under Econ 4.

Tarmac (0244)

Modify the plan's strategy to promote a 'blended' approach of green and brownfield development.

Hallam Land Management (0615)

Modify plan to allocate land at Craigiehall which contains serviced employment land.

Hallam Land Management (0599)

Modify the plan's strategy to promote a 'blended' approach of green and brownfield development. This is dealt with under Issue2 Spatial Strategy

Miller Homes Limited (0649)

Modify Plan to allocate land at South of Lang Loan for housing development

Lord Dalmeny (0475)

Modify plan by adding paragraphs after 2.2, point 2 to address the following;

- Number and acreage of brownfield sites identified for redevelopment that are not part of the established vacant and derelict land supply and are operational sites.
- Confirm the quantum of current operational employment land that will be displaced.
- Set out how much additional employment land will be required to accommodate the businesses that are currently occupying identified brownfield sites.
- Set out a strategy to accommodate these displaced business needs in explicit terms.

Modify plan to allocate land to north of Lennymuir at Turnhouse road for business and mixed use offering.

Rosebery Estate (0618)

Modify plan by allocating sites at Bankhead Steading for mixed use and Lennie Cottages

for housing.

Landowner of East Foxhall (0544)

Modify the plan's strategy to promote a 'blended' approach of green and brownfield development including site at East Foxhall.

Cala Management (0316)

Modify the plan's strategy to promote a 'blended' approach of green and brownfield development including site at Currievale.

Forth Ports (0496)

Modify Plan as follows;

Remove provision for compulsory purchase from paragraphs 2.103 (p28) and 2.110 (p29) and paragraph 3.83 (p101) which supports policy ENV 2

2.103 - delete sentence 4 which reads, "...The Council has also acknowledged that use of compulsory purchase powers to facilitate development may be needed."

2.110 - delete the following text from the second sentence, "... and the use of compulsory purchase powers where necessary."

3.86 - delete the last sentence of the paragraph which reads, "Piecemeal development is less likely to lead to the creation of well-defined and cohesive networks of streets and spaces. In some cases, it may be necessary for the Council to use its powers of compulsory purchase to assemble a site for development and enable a satisfactory outcome to be achieved."

Leith Central Community Council (0614)

No modification specified

Stoddart Family (0749)

Modify the Plan to allocate land at Baberton Road for housing development.

**Summary of responses (including reasons) by planning authority:**

**Business Impacts**

BDW Trading (0350)

The Council sets out the justification for its approach of directing new development to and maximising the use of brownfield land rather than greenfield land under Issue 2: Spatial Strategy.

The Council considers the displacement of businesses is not as significant or extensive as alleged in the representations. The Plan identifies sites H62 and H63 in west Edinburgh for a high density mixed use urban extension. These sites, along with IBG phase 1 (Map 25 of the Plan), were previously identified as the International Business Gateway (IBG) in the adopted Local Development Plan (LDP) (CD039). This area continues to be identified as a strategic business centre and an area of economic importance, reflecting the aim of

the Plan to bring forward a mixed use urban extension rather than a housing only allocation. As the West Edinburgh area sites and the Edinburgh BioQuarter site are identified for mixed use development, it is clear that the overall intention of the strategy is to retain existing businesses uses where relevant and feasible.

Policy Place 16 covers West Edinburgh, and as stated in para 3.55 the City Plan continues to support economic development opportunities whilst introducing a balanced mix of uses that promote healthy lifestyles and a strong sense of place. To assist in the delivery of this approach the Plan sets out a series of development principles and an indicative layout on Map 24. Development Principle o specifically covers the mix of uses. Proposals are also expected to conform with a West Edinburgh Master Plan to be prepared to guide mixed use development. Although most of the land identified in West Edinburgh, sites H62 and H63, is currently greenfield it was allocated previously by the Edinburgh LDP. The intention of the Plan is to re-envisage the area, its form, and its mixture of uses with a focus on place making, sustainability, connectivity, biodiversity and strong landscape framework. One site (site H61) is part of the former emergency runway, however, it is now redundant and will have no impact on the functioning of the airport. Therefore, development of these sites will not result in active displacement of existing businesses and will provide for a range of new commercial, business and employment uses.

Where sites in West Edinburgh are in current business use, for example sites H59 and H60, the intention of the plan, as stated, is to deliver mixed use development in accord with the development principles set out in the Plan. With regard to the Edinburgh BioQuarter, the Plan sets out its Policy in Place 31. It is important to stress than the Plan similarly supports mixed use development on this site as set out in criterion b. In addition, none of the existing uses within the existing BioQuarter site will have to relocate as a result of the Plan's strategy. Instead the plan envisages a broader mix of uses on the remaining undeveloped parts of the site to support existing and future Life Science research and related commercial developments. Therefore, the Council does not agree that the Plan's proposals in this context will result in large scale displacement of businesses requiring their relocation.

The Plan is in accord with SDP Policy 2: Supply and Location of Employment Land. The policy states; *"Local Development Plans will support the delivery of the quantity of the established strategic employment land supply as identified below. Local Development Plans should also ensure that this provides a range and choice of marketable sites to meet anticipated requirements. The development of mixed communities (with residential and compatible employment opportunities jointly provided) on strategic employment sites may be appropriate provided this is justified through an LDP and does not result in a net loss to the overall strategic land supply."*

The figure identified for Edinburgh is 186ha. The Plan continues to identify 1802ha of land for employment purposes across Edinburgh as shown in the Appendix to Issue 3 (CD144) through a range of sites in various locations. Although 46ha of land has been taken up since the SDP was approved there is still 144.5ha of vacant employment land available for this type of development, which demonstrates that the requirements of SDP Policy 2 have and are continuing to be met. 483ha out of the 1675ha of land is also identified on the Plan's Proposals map as 'Business and Industry Area', and is protected from loss to alternative uses under Policy Econ 4, as shown in Appendix to Issue 3 (CD144). Policy Econ 4 Business and Industry Areas, supports their use for business, industrial or storage

uses. The policy has a presumption against changes of use on these sites which results in loss of these uses. In addition, SDP Policy 2 does allow the development of mixed communities on strategic employment sites where this is justified through an LDP. Therefore, the policy is also supportive of the re-envisioned mixed use development in West Edinburgh. As a result, the Council does not agree the Plan is contrary to the terms of the SESplan SDP with regard to Policy 2.

The proposed brownfield development sites identified within the Plan which currently have business/employment uses on them are being allocated for mixed use housing led development and not just housing development, which is a fundamental part of the strategy. Of the sites allocated in the Plan for mixed use housing led development only a small proportion (16%), are in active use as industrial sites/workshops as demonstrated in Appendix to Issue 3 (CD144) i.e. uses that may be incompatible with residential use. The rest of sites are either uses that are compatible with a residential environment or are open space/vacant/car parks. There have been no objections from landowners of the industrial estates and only 5 occupiers, out of the 2758 units, have objected which is a very small percentage of the number of units.

Most of these sites already fall within the existing Urban Area as identified on the Proposals Map of the existing adopted LDP (CD039). None of them fall within the 'Business and Industry Area' as defined in the adopted plan (or in other words they are not allocated employment sites), and therefore are not afforded any protection from change of use under Policy Emp 8 of the adopted plan. As a result, they are subject to Edinburgh LDP Policy Emp 9 Employment Sites and Premises. This policy allows such sites to be redeveloped for other uses including residential development subject to three criterion. Only one of the criterion in the adopted plan refers to mixed uses, which states that where a site is larger than 1ha there is a requirement to include floorspace for a range of business users and a further reference to this is included within paragraph 218. Of the 15 industrial estates/workshops allocated in the Plan eight are smaller than 1ha. As a result, the Council considers that if proposals were brought forward on such sites for only residential development many of the proposals would be consistent with existing planning policy and could not be refused. The adopted LDP is very supportive of delivering the housing land supply within the urban area on suitable sites as set out in Policy Hou1 and the provisions of Emp 9 must be seen in that context.

Therefore, under the existing adopted plan (CD039) there is only modest policy protection against change of use of the sites identified in the Plan to housing led mixed use. The Council's view is that the approach set out in the Plan is to recognise this existing trend of sites in employment use being redeveloped for housing use and seek to influence it more directly by formally allocating such sites for mixed use housing led development in the development plan. This approach allows the Council to more directly influence the mix of uses, the distribution of the uses within sites, for example by preparing development briefs, and to give the development planning system a more active role in the redevelopment of brownfield sites across the city. It will also provide the Council an opportunity to retain more business uses as part of their redevelopment than the existing policy position would allow, including sites of less than 1ha, in the context of 20 minute neighbourhoods. This will also promote the replacement of outdated business premises which otherwise may not be provided for or invested in.

In summary, the Council is seeking to influence existing trends for more positive outcomes of better retention of employment space and mix of uses rather than create a new radical trend.

The Council does not agree that Edinburgh will be left unbalanced in terms of its employment base, as much of the existing business land will be retained and protected under the Plan Policy Econ 4. In addition, the Plan has identified additional land (40.3ha) at Newbridge Industrial Estate in the form of an extension to the West. There is also 12ha of land still available within the existing Newbridge Industrial Estate that could accommodate relocating businesses. In addition, existing Business and Industrial land identified at, Brunstane (8.6ha) and Seafield, Site EW1d (26 ha), is available and could potentially accommodate some relocated businesses. This gives a total of approximately 87ha of land for potential industrial relocation.

**No modification proposed.**

BDW Trading (0350), Murray Estates (0197), SEEDco (0198) Taylor Wimpey (0200), Robertson Residential Group Limited (0490), Persimmon Homes (0495)

Only 16% of the sites identified within the Plan for mixed use development are in use as Industrial Estates/workshops as demonstrated in the Appendix to Issue 3 (CD144). The Plan continues to protect 483ha of land for Business, Industrial and Storage use and is promoting identified brownfield or formerly allocated sites for mixed use development not just residential development. As a result, the Council does not consider the strategy is in conflict with Aim 10 of the plan.

The Plan does not have a strategy of reallocating active business/industrial sites and allocated employment land to housing uses. This part of the strategy of the plan is to promote the redevelopment of existing brownfield sites, of which only a proportion are in industrial/workshop use, for mixed use housing led development. The Council's response to compulsory purchase is set out in its responses to matters related to the Economic Strategy below.

The Council does not consider the strategy radical. As set out in the Council's response to 0350 above, the Council's view is that the approach set out in the Plan is to recognise the existing trend whereby speculative proposals are brought forward by the market for the redevelopment of brownfield sites, such as those in employment use, within the urban area and to seek to influence it more directly by formally allocating such sites for mixed use housing led development in the development plan. Such an approach will enable the Council to retain more businesses uses where sites are being redeveloped than the existing policy approach as set out in the adopted plan (CD039).

The Council considers the strategy and aims of the Plan are clearly articulated and do not mislead stakeholders. Aim 2 makes it clear that development is being directed towards maximising the use of brownfield land and Aim 10 makes it clear that the strategy is seeking to deliver housing led mixed use development. It is important to recognise that the strategy is seeking to deliver a broad range of objectives including the need for future growth to be sustainable and net zero and the aims reflect and reinforce this. In contrast a strategy based on an alternative approach, as advocated in some responses, which included a less determined effort to deliver development on brownfield sites and a significant amount of greenfield development would risk a more significant loss of brownfield employment sites whilst having other environmental impacts such as the loss of

prime agricultural land and the risk of longer distance commuting, which would have to be subject to meaningful consideration and the Council considers could be contrary to the wider objectives of the plan. The strategy of the plan is seeking to avoid these alternative impacts.

The Council considers the representations misinterpret the development strategy of the Plan which seeks to maximise the use of brownfield sites for residential led mixed-use development, many of which could be granted consent for specifically residential development under the existing development plan policy. The Council also considers the representations also overstate the significance of the impact on existing businesses. It is important to recognise, as identified in the Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) by Ryden that the Council commissioned, that the redevelopment of older industrial buildings is not a new trend. The city has seen a significant amount of former industrial land redeveloped for other purposes as industry has evolved, changed or relocated. The report recognises that demand is strong for modern specification floorspace and smaller units, which fits with the Council's approach of promoting mixed use developments. It also provides justification for the Council to more directly intervene in the existing trend by altering the development plan strategy from the existing policy stance.

The plan is seeking to deliver mixed use housing led development on all allocations. However, the Council acknowledges that there may be some businesses that have to relocate, particularly class 5 developments which are not appropriate in a residential environment and the Council has identified additional land (40.3ha) at Newbridge Industrial Estate in the form of an extension to the West. There is also 12ha of land still available within the existing Newbridge Industrial Estate that could accommodate relocating businesses. There is also existing Business and Industrial land identified at, Brunstane (8.6ha) and Seafeld, Site EW1d (26 ha), that could potentially accommodate some relocated businesses. This gives a total of approximately 87ha of land for potential industrial relocation. In contrast the total size of the existing 15 industrial/workshop sites identified for development in the Plan is just 22.4ha. As a result, the Council considers that the development plan does have a mitigation strategy for the impacts on businesses that are unable to be retained within redeveloped sites.

The Council commissioned Ryden to prepare the Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) to update the 2018 Commercial Needs Study: Industrial Property Market report (CD035) and to consider the impacts of Option 1 of Choices for City Plan 2030. Option 1 was to deliver all development within the urban area. The Council considers the findings of the report helpful for its purpose of understanding the overall implications of the Plan development strategy in terms of its impact on employment land or land in employment use. The Council's view is that the approach and policies set out in the Plan seek to minimise the loss of employment uses and is expected to have positive benefits overall compared to the existing policy position set out in the adopted LDP (CD039). The impacts of the specific developments on land in employment use will also be considered at the time of proposals coming forward. For example, many businesses may be capable of being rehoused in smaller but more efficient units better suited to modern business needs. The Ryden (CD036) report points out on page 3 that "demand is strong for modern space, smaller units". In addition, some of the businesses may have already chosen to relocate and/or existing units may be vacant, for example site H59 was allocated on the basis that the occupier had chosen to relocate. As a result, the Council does not agree with objectors that further detailed analysis of the impacts should

be undertaken. In addition, the Council does not agree that it is possible to conclude at this time with certainty there is going to be significant impacts of the development strategy on employment land. **No modification proposed.**

#### Seedco (0198)

As stated above in its responses to 0350 the Council considers the displacement of businesses is not as significant or extensive as alleged in the representations. In addition, it considers the impacts of the strategy on existing businesses, particularly industrial uses, will be addressed sufficiently by mitigation measures set in the plan. The Council does not agree the strategy will leave Edinburgh the most unbalanced major city nor that it is contrary to the SDP strategy for the reasons set out in its response to 0350 above. **No modification proposed.**

#### Hallam Land Management (0615)

The Council considers it is making provision for the employment and economic needs of a growing population by promoting the development of mixed use housing led developments, thereby helping to renew dated employment real estate. It is also promoting significant development to the west of Edinburgh for mixed use development in the form of a city district, which meets sustainability and net-zero objectives. The Council considers the impacts on business are overstated and that the alternative proposals in some responses for greenfield sites around the city are a less sustainable option than the proposed strategy. **No modification proposed.**

#### Stirling Developments Limited (0303), Dandara East Scotland (0757)

The Council has addressed points relating to displacement of businesses in its responses to 0350 above. Matters relating to the delivery of housing are addressed under Issue 20 Assessment of Housing Land Supply.

The Council does not consider there is a contradiction in the Plan with regard to Econ 1. The Council considers the strategy of the plan is clear and is based on a mixed use development approach, to meet a wide set of aims and objectives, focusing on the delivery of brownfield sites. The Council acknowledges the economic value of house building and has identified a range of brownfield and greenfield sites in the Plan to deliver future housing development.

The Council is required to place the Proposed Plan on deposit for a statutory period to allow interested parties, including individuals, landowners and businesses to submit representations. In addition, in accordance with statutory requirements the Council has notified the occupiers and neighbours of properties directly to bring to their attention to the fact that their sites or adjacent sites have been allocated for mixed use housing led development. In response, a small number of representations (5) have been submitted to the Council from businesses occupiers on industrial estates in response to these notifications, which object to their site's allocation. Furthermore, there has been no objection from industrial estate owners and some support. Therefore, the Council considers it has met its statutory requirements.

The Council considers the impact of the development strategy on businesses, directing development to brownfield sites, is not as significant or extensive as alleged in the

representations and has set out its position in detail in its responses to 0350 above. As a result, the Council does not consider there is a cumulative impact in the context of Econ 2, which requires commercial development proposals over a certain size to include housing development. **No modification proposed.**

Steve Looms (0767)

The Council has addressed points relating to delivery of new homes etc in its response under Issue 20 Assessment of Housing Land Supply.

As stated above in its responses to 0350 the Council considers the displacement of businesses is not as significant or extensive as alleged in the representations. The overall traffic impacts of the strategy have been assessed by a Transport Appraisal that the Council has commissioned (CD014). The Council considers pursuing a predominantly brownfield redevelopment strategy, as set out in para 2.112 of the Plan, is likely to have fewer overall traffic impacts than a greenfield led housing development strategy because it will bring forward sites with much better accessibility to sustainable transport modes, helping to reduce car trip kilometres and increasing mode share. As a result, the Council does not consider the overall car travel impacts of redeveloping existing business or industry sites to be significant.

The Council considers the land identified for relocating businesses is sufficient as referred to in its response to 0350 above and does not consider that further greenfield land will be required to accommodate relocating businesses. The redevelopment of brownfield industrial sites is an existing trend as demonstrated in the findings of the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) where existing brownfield sites including site in employment uses are coming forward for redevelopment, particularly residential development.

Not all sites in employment use are the same, particularly with regard to their location, particular existing uses, values, and projected future income. Many of the sites allocated for redeveloped are occupied by real estate which is reaching the end of its working life and approaching obsolescence. Legislation such as section 63 of the Climate Change (Scotland) Act 2009 (CD143) (will limit the ability of landlords to lease out non-domestic properties with poor energy efficiency. The value of older real estate and the income it produces will therefore inevitably fall as it becomes obsolete and owners will be faced with the choice of investing in the real estate to refurbish/replace the buildings or selling the site for redevelopment. Market forces will mean that sites in locations less suited to modern employment uses are more likely to be redeveloped for alternative uses than those in strategic locations where employment uses can achieve high returns. It is for this reason that there has been long term trend for the redevelopment of certain sites in employment use to alternative uses. Residential land values have historically been higher, particularly compared to dated industrial stock, and as a result the Council does not consider the fact that sites have been in active employment use will intrinsically hinder the delivery of the strategy. In addition, it is important to recognise that the mixed-use strategy is seeking to provide new business units as part of the redevelopment proposals. As a result, the Council does not consider this likely to impede the implementation of the Plan Strategy.

The Council considers a range of sites have been identified in the Plan some of which have already been subject to planning applications. In particular, a large area of existing

(legacy) greenfield land in West Edinburgh has been re-envisaged for a high density mixed use urban extension in contrast to the range of smaller brownfield development opportunities identified throughout the city. In addition, it should be recognised that there are a number of much larger urban brownfield sites identified within the plan e.g. H55 Seafield. As a result, the Council considers that is fully compliant with SPP. In addition, the approach is also consistent with the emerging draft NPF4 as it seeks to ensure that new allocations are consistent with the principles of 20 minute neighbourhoods and an infrastructure first approach.

The Council considers the plan must be read as whole. Policy Re 4 applies to proposals for change of use of existing shop units, and would not be relevant to allocated sites being proposed for redevelopment. Furthermore, the plan is proposing the redevelopment of sites for mixed use development which would provide the opportunity to provide new retail units if required as part of the development.

The Council has prepared an Environmental Report (CD10) that carries out a strategic environmental assessment of the plan and its strategy. The Council has not received any significant criticism of the assessment approach adopted or the findings of the report by the consultation authorities (Nature Scot, Historic Environment Scotland, and Scottish Environment Protection Agency).

The Council considers the redevelopment of the identified brownfield sites for mixed use development will help to maintain the mixed-use nature of the city compared to the existing policy position set out in the adopted LDP (CD039). Matters related to displaced businesses are addressed in its response to 0350 above. The Council does not consider the strategy will have a significant impact on the City's employment base and considers its strategy is justified on many grounds for the reasons set out 0350 above.

The Council took into account the range of findings of the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) as one source of information in preparing the Plan. It must be recognised that the plan has many aims and objectives; for example delivering sustainable development and net zero. The redevelopment of existing brownfield sites, a proportion of which are in industrial use, dated and no longer fit for modern business needs, is not a new trend. The Council is seeking to directly influence this trend as set above in its response to 0350. The Council has identified sites for industrial uses that may have to relocate within the Plan and therefore considers it has helped to mitigate the risk of businesses relocating outside the Edinburgh area.

The Council does not consider it a necessary requirement for a site to be promoted by a landowner before it is identified as a suitable redevelopment opportunity in a Local Development Plan.

For the reasons stated above in its response to 0350 the Council considers the findings of the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report sufficient for its purpose of informing its understanding the overall implications of the Plan development strategy in terms of its impact on employment land. **No modification proposed.**

Barratt David Wilson Homes (0677), Dandara East Scotland (0757)

The Council has addressed points related to the displacement of businesses, relocation of businesses travel impacts, and land/residential value issues in response to 0350 and 0767 above.

The Council has addressed points related to retail policy Re 4 in its response to 0767 above.

The Council took into account the range of findings of the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) as one source of information in preparing the Plan. It must be recognised that the plan has many aims and objectives; for example delivering sustainable development and net zero. The redevelopment of existing brownfield sites, a proportion of which are in industrial use, dated and no longer fit for modern business needs, is not a new trend. The Council is seeking to directly influence this trend as set above in its response to 0350. The Council has identified sites for industrial uses that may have to relocate within the Plan and therefore considers it has helped to mitigate the risk of businesses relocating outside the Edinburgh area.

**No modification proposed.**

CALA Management Ltd (0465)

The Council has addressed points related to loss of land in employment use and suggested conflicts with Strategic Development Plan Policy 2, Supply and Location of Employment Land in its response to 0350 above. **No modification proposed.**

Scottish Property Federation (0144)

The Council has addressed points relating to the relocation of businesses in its response to 0350 above. The Council considers there is sufficient land identified to meet future employment needs over and above the needs of relocated businesses. Information on vacant land is set out in the Council's response to 0350 above. The Council does not consider the delivery of the strategy will be impeded by the compulsory purchase process which it considers is unlikely to be required. The Council addresses the issue of compulsory purchase in further detail in its response to (0677) below. **No modification proposed.**

Framework (Edinburgh) Limited (0743)

The majority of the existing businesses within the Stewartfield Industrial Estate (site H48) would be compatible with residential development in the context of a mixed use development. They include businesses such as gyms, bike repair, joinery, bakery, picture framers etc. As stated in the Council's response 0350 above the sites identified in the Plan are being promoted for mixed use housing led development. The estate is owned by J Smart and Co (page 39, Edinburgh Commercial Needs Study: Mixed Use Delivery report) who are active developers in the area and support the allocation of the site. **No modification proposed.**

Hallam Land Management (0599)

The Council has addressed points relating to the impact and relocation of businesses in its response to 0350 above. The Council has approved the Proposed Plan and it forms its

settled view. The Council considers the representation period met the statutory requirements. **No modification proposed.**

Stewart Milnes Homes (0118)

The Council has addressed points relating to the impact and relocation of businesses in its response to 0350 above. The Council considers the plan continues to safeguard 483ha of land across Edinburgh for business and industrial purposes. The Council does not consider the plan will have a disproportionate impact on the most deprived communities in the city.

The Council does not consider the strategy is radical for the reasons set out in its response 0350 above. For the reasons stated in its response to 0350 above the Council considers the findings of the Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) sufficient for its purpose of understanding the overall implications of the Plan development strategy in terms of its impact on employment land. **No modification proposed.**

Wright PDL (0078)

The Council does not consider there are several contradictions in the Plan. The Council considers the strategy of the plan is clear and is based on a mixed use development approach, to meet a wide set of aims and objectives, focusing on the delivery of brownfield sites. Points raised with regard to impacts on businesses, potential car travel impacts and business relocation are addressed in the Council's responses to 0350 and 0767 above. Matters relating to housing affordability are addressed under Issue 20: Assessment of Housing Land Supply.

The Council has addressed points related to existing land values and residential values in its response to 0767 above and considers the housing led mixed use development strategy is deliverable.

The Council considers its strategy, as set out in Aim 2 of the Plan, to direct new development to and maximise the use of brownfield land through housing led mixed use development will assist businesses by delivering more modern real estate that's better suited to modern businesses needs that the existing development plan policy position.

The Council considers its strategy, as set out in Aim 2 of the Plan, to direct new development to and maximise the use of brownfield land through housing led mixed use development will not restrict available homes, but will deliver more sustainable development by providing housing within the urban environment closer to existing infrastructure, including public transport and services/facilities.

The Council has set out its position with regard to the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) in its response to 0350 above.

The Council has addressed points relating to the impact and relocation of businesses in its response to 0350 above. **No modification proposed.**

Homes for Scotland (0404)

The Council has identified land for any displaced businesses within Business and Industrial land which is covered by Policy Econ 4 Business and Industry Areas. As a result, Policy Econ 2 would not apply.

There are numerous brownfield sites across the city that have been developed in recent years for mixed use development and the Council considers that developers are more than capable of redeveloping brownfield sites for mixed use development. An example of a mixed use development can be found on Macdonald Road which involved a garage below a residential development and is set out in the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036). In addition, there are numerous examples of small businesses below new residential development on Salamander Place in Leith. The Council acknowledges that the redevelopment of brownfield sites for mixed use development can be more challenging than bringing forward mono use greenfield residential sites. However, the Council considers that in order to deliver a sustainable development strategy and meet the other various aims and objectives including net zero it is vital that a strategy of directing development to and maximising use of brownfield land rather than greenfield land is pursued.

The Council has addressed points with regard to displacement of businesses in its response to 0350 above.

The Council has addressed points related to existing land values and residential values in its response to 0767 above and considers the housing led mixed use development strategy is deliverable.

The Council has addressed points related to retail policy Re 4 in its response to 0767 above.

The Council took into account the range of findings of the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) as one source of information in preparing the Plan. It must be recognised that the plan has many aims and objectives; for example delivering sustainable development and net zero. The redevelopment of existing brownfield sites, a proportion of which are in industrial use, in accommodation that is dated and no longer fit for modern business needs, is not a new trend. The Council is seeking to directly influence this trend as set above in its response to 0350. The Council has identified sites for industrial uses that may have to relocate within the Plan and therefore considers it has helped to mitigate the risk of businesses relocating outside the Edinburgh area.

For the reasons stated above in its response to 0350 the Council considers the findings of the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report sufficient for its purpose of informing its understanding the overall implications of the Plan development strategy in terms of its impact on employment land. **No modification proposed.**

#### J. Smart & Co. (Contractors) PLC (0483)

The Plan has allocated additional land (40.3ha) in the form of an extension to Newbridge Industrial Estate. This land is in close proximity to the M8 and motorway network with good access to the central belt. There is also 144.5ha of existing vacant industrial land across Edinburgh as shown in Appendix to Issue 3 (CD144). In addition, the Plan continues to safeguard land (483ha) (CD144) for Business, Industry and Storage

purposes across Edinburgh under Policy Econ 4. As a result, the Council considers that allocating further land for industrial development is unnecessary. The proposed brownfield development sites identified within the Plan which currently have business uses on them are being promoted for mixed use housing led development and not just housing development which is a fundamental part of the strategy. For the reasons set out in its response to 0350 above the Council considers the Plan's strategy will allow Council to more directly influence the existing redevelopment trend by altering the development plan strategy from the existing policy stance, ultimately to the benefit of businesses by updating the real estate to more modern facilities. The Council does not consider it necessary for the strategy to identify more greenfield development as addressed in Issue 2 Spatial Strategy. **No modification proposed.**

West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352)

The Council has set out its position with regard to the relocation of businesses under its responses to 0350 above.

The Council has set out its position with regard to land values under its responses to 0767 above.

Cala Management (0316)

The Council has addressed points relating to displacement of businesses in its responses to 0350 above. The Council has set out its position with regard to the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) in its response to 0350 above. **No modification proposed.**

Edinburgh Chamber of Commerce (0379)

The Council considers the loss of employment land is not as significant or extensive as alleged in the representations as set out in its response to 0350 in the Business Impacts section above. **No modification proposed.**

**Economy Strategy**

Steve Loomes (0767), Wright PDL (0078)

The Council considers the loss of employment land is not as significant or extensive as alleged in the representations as set out in its response to 0350 in the Business Impacts section above. As a result, the Council considers the Plan's strategy is not contrary with Econ 1.

The Council is required to place the Proposed the Plan on deposit for a statutory period to allow interested parties, including individuals, landowners and businesses to submit representations. In addition, in accordance with statutory requirements the Council has notified the occupiers and neighbours of properties directly to bring to their attention to the fact that their sites or adjacent sites have been allocated for mixed use housing led development. In response, a small number of representations (5) have been submitted to the Council from businesses occupiers on industrial estates in response to these notifications, which object to their site's allocation. Furthermore, there has been no

objection from industrial estate owners and some support. Therefore, the Council considers it has met its statutory requirements.

The Council has not undertaken any cost analysis of compulsory land purchase at this stage as it considers this is unlikely to be required. The Council considers the redevelopment of existing employment brownfield sites is an existing and long established market trend, particularly where sites have out of date real estate, which it wishes to directly influence by formally allocating redevelopment sites to ensure mixed use development is delivered. Further details relating to the Council's position are set out in its response to 0767 under Business Impacts above with regard to land use values.

There are numerous brownfield sites across the city that have been developed in recent years for mixed use development and the Council considers that developers are more than capable of redeveloping brownfield sites for mixed use development. An example of a mixed use development can be found at Macdonald Road involving a garage and residential development is set out in the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036). In addition, there are numerous examples of small businesses below new residential development on Salamander Place in Leith. The Council acknowledges that the redevelopment of brownfield sites for mixed use development is more challenging than bringing forward mono use greenfield residential sites. However, the Council considers that in order to deliver a sustainable development strategy and meet the various other aims and objectives of the strategy including net zero it is vital that a brownfield led strategy is pursued.

The Council acknowledges that, should it be necessary, it may have to use its compulsory purchase powers and this is referred to in the plan. However, it is envisaged that these powers would only be utilised in special circumstances and as a last resort rather than on a widespread basis. The Council has not undertaken any cost analysis of compulsory land purchase at this stage as it considers this is unlikely to be required; any usage of compulsory purchase powers would be analysed on a case-by-case basis. The Council considers the redevelopment of brownfield sites in employment use is an existing market trend which it wishes to directly influence by formally allocating redevelopment sites to ensure more mixed-use development is delivered. **No modification proposed.**

Barratt David Wilson Homes (0677)

There are numerous brownfield sites across the city that have been developed in recent years for mixed use development and the Council considers that developers are more than capable of redeveloping brownfield sites for mixed use development. An example of a mixed use development can be found on Macdonald Road involving a garage and residential development is set out in the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036). The Council acknowledges that the redevelopment of brownfield sites for mixed use development is more challenging than bringing forward mono use greenfield residential sites. However, the Council considers that in order to deliver a sustainable development strategy and meet the other various aims and objectives including net zero it is vital that a brownfield led strategy is pursued.

The Council acknowledges that the process of compulsory purchase can in some circumstances be challenging, costly, and time consuming. However, as stated above in its response to 0767 above the Council considers that compulsory purchase is unlikely to be required as the redevelopment of existing employment brownfield sites is an existing

and long established market trend which it wishes to directly influence by formally allocating redevelopment sites to ensure more mixed-use development is delivered. The fall in the value of outdated industrial real estate, as set out in the Council's response to 0767 under Business Impacts above, is a key market factor in perpetuating this trend and is a reason why the Council thinks compulsory purchase is unlikely. The Council is only likely to instigate compulsory purchase powers with regard to specific identified sites where there is market failure and this failure has implications in terms of delivering the strategy and more specifically the housing land supply. The Council has used these powers sparingly in the past for example as part of the St James Quarter redevelopment. In the unlikely event that the Council has to instigate compulsory purchase procedures to deliver sites it has the necessary expertise in house to action this. The Strategy of the plan has policy in place (Policy Hou4 Housing Land Supply) to ensure that it continues to maintain a sufficient land supply, whatever circumstances arise, including the release of greenfield sites should policy requirements be met. As a result, the Council considers the strategy approach is deliverable.

The Council has addressed points relating to loss of employment land in its response to 0350 in the Business Impacts section above. The Council considers the plan is in accord with the Council's economic strategy to enable good growth. **No modification proposed.**

#### Scottish Property Federation (0144)

The Council considers the loss of employment land is not as significant or extensive as alleged in the representations for the reasons set out in its response to 0350 in the Business Impacts section above. In addition, the Council considers the representations misinterpret the development strategy of the Plan which is to maximise the use of brownfield sites for residential led mixed-use development many of which could be granted consent for specifically residential development under the existing adopted development plan policy. The Council also considers the representations also overstate the significance of the impact on existing businesses. The Council's position with regard to the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) is set out in its response to BDW Trading (0350), 0197 Murray Estates (0197), SEEDco (0198) Taylor Wimpey (0200), Robertson Residential Group Limited (0490), Persimmon Homes (0495) under Business Impacts above. The Council considers Policy Econ 4 a key part of the strategy as it seeks to protect identified areas of Business and Industry from change of use which results in loss of floorspace. Finally, it is important to recognise that none of the sites that have been identified for mixed use housing led development have been allocated previously under the adopted LDP (CD039) as protected Business and Industry land.

The Council considers that compulsory purchase is unlikely to be required for the reasons set out in its response to 0677 above and as a result it is unlikely to have an impact on achieving affordable housing targets.

The Council considers the Plan does address the challenges for retail and leisure in the context of Covid 19 as referred to in paragraph 2.145 of the Plan. The retail policies in the Plan continue to support the retail role of the city centre whilst allowing other complimentary uses including leisure as set out in Policy Re9. The Council does not consider the requirements set out in the plan to provide social infrastructure and affordable housing will inhibit delivery of development and these issues are addressed in the

Council's responses in Issue 27: Infrastructure Delivery and Developer Contributions and Issue 23 Affordable Housing. **No modification proposed.**

The Royal London Mutual Insurance Society Ltd (0149)

The Council has set out its position with regard to compulsory purchase in its responses to 0767 and 0677 above.

The Council Commissioned Ryden to prepare an Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) to update the 2018 Commercial Needs Study: Industrial Property Market report (CD035) and to consider the impacts of Option 1 of Choices for City Plan 2030. Option 1 was to deliver all development within the urban area. The Council considers the findings of the report sufficient for its purpose of understanding the overall implications of the Plan development strategy in terms of its impact on employment land for the reasons set out in its response to BDW Trading (0350), Murray Estates (0197), SEEDco (0198) Taylor Wimpey (0200), Robertson Residential Group Limited (0490), Persimmon Homes (0495) under Business Impacts section above.

The Council considers the loss of employment land is not as significant or extensive as alleged in the representations for the reasons set out in its response to 0350 in the Business Impacts section above. In addition, none of the sites identified have previously been protected in the adopted LDP (CD039) for business and industrial purposes. The Plan continues to identify and protect a significant amount of land for business and industrial purposes as set out in its response to 0350 in the Business Impacts section above. **No modification proposed.**

The Council's responses to individual sites are dealt with under Issues 4-8 Proposed Sites.

Tarmac (0244)

The Council considers the strategy and aims of the plan are clearly articulated. Aim 2 makes it clear that development is being directed towards maximising the use of brownfield land and Aim 10 makes it clear that the strategy is seeking to deliver housing led mixed use development. It is important to recognise that the strategy is seeking to deliver a broad range of objectives including the need for future growth to be sustainable and net zero and the aims reflect and reinforce this. In contrast a strategy based on an alternative approach which included a less determined effort to deliver development on brownfield sites and a significant amount of greenfield development would have other environmental impacts such as the loss of prime farm land and the risk of longer distance commuting, which would have to be subject to meaningful consideration and could be contrary to the wider objectives of the plan. The strategy of the plan is seeking to avoid these alternative impacts.

With regard to the Choices report and the IBG, matters relating to individual sites are dealt with in the Council's responses in Issues 4-8 Proposed Sites.

The Council considers the loss of employment land is not as significant or extensive as alleged in the representations for the reasons set out in its response to 0350 in the Business Impacts section above. The Council Commissioned Ryden to prepare a Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) to update the

2018 Commercial Needs Study: Industrial Property Market report (CD035) and to consider the impacts of Option 1 of Choices for City Plan 2030. Option 1 was to deliver all development within the urban area. The Council considers the findings of the report sufficient for its purpose of understanding the overall implications of the Plan development strategy in terms of its impact on employment land for the reasons set out in its response to BDW Trading (0350), 0197 Murray Estates (0197), SEEDco (0198) Taylor Wimpey (0200), Robertson Residential Group Limited (0490), Persimmon Homes (0495) under Business Impacts section above. **No modification proposed.**

#### Hallam Land Management (0615)

The Plan continues to identify 1802ha of land for employment purposes as shown in the Appendix to Issue 3 (CD144). This land is spread right across the city. Although 46 ha of land has been taken up since the SDP was approved there is still 144.5ha of vacant employment land available for this type of development. Land for approximately 483ha is also identified on the Plan Proposals map as 'Business and Industry Area', (CD144). These areas are covered by the Plan Policy Econ 4 Business and Industry Areas, which supports their use for business, industrial or storage uses. The policy has a presumption against changes of use on these sites which results in loss of these uses. Also 40.3ha of additional land has been identified as an extension to Newbridge Industrial Estate to accommodate businesses that have to relocate. The Council acknowledges the economic value of house building and has identified a range of brownfield and greenfield sites in the Plan to deliver future housing development.

The Council does not consider the assumptions made in relation to commercial needs are too broad brush or unrelated to any assessment of local needs and demands. The Council employed consultants to look at the potential impacts of the redevelopment of specific industrial sites right across Edinburgh. The Council considers the study gives a helpful strategic overview of this and is sufficient for its purposes in preparing the Plan. The Council considers its strategy aim of directing new development to and maximising the use of brownfield land rather than greenfield is much more conducive to delivering a network of 20 minute walkable neighbourhoods. Where the Council is supporting large scale development this is in the context of a highly accessible urban extension to the west of the city with good connections to existing infrastructure, which will also help to deliver 20 minute walkable neighbourhoods, unlike remote standalone developments.

The Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) updates the 2018 Commercial Needs Study: Industrial Property Market report (CD035) and includes analysis that takes account of the impacts of Covid at the time of publishing. As the situation is dynamic and subject to unpredictable events, for example the current cost of living crisis, the Council considers the report's contents and findings are sufficient for the purposes of understanding the industrial property market, the existing trends, possible impacts and preparing the Plan strategy. It is not feasible for the Council to regularly commission consultants to update reports throughout the lengthy LDP preparation process. The Council does not consider it necessary for the Plan to include strategic or regional economic related targets.

Representations have been received supporting in principle the Plan strategy to deliver housing development in West Edinburgh on part of the IBG and on the Edinburgh Bioquarter as part of mixed use development. These changes reflect broader market

changes pre and post Covid and are considered an important response to deliver the broad range of aims of the Plan's strategy.

The Council does not consider its strategy is contrary to the Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report. The Council considers it has taken cognisance of the findings of the study in preparing the Plan to ensure its strategy is robust and includes appropriate mitigation. **No modification proposed.**

Hallam Land Management (0599), Miller Homes Limited (0649)

The Council has addressed points with regard to compulsory purchase under its responses to 0767 and 0677 above.

The Council considers the findings of the Ryden Mix Use Delivery report (CD036) sufficient for its purpose of understanding the overall implications of the Plan's development strategy as set out in detail in its response to 0149 above. **No modification Proposed.**

Homes for Scotland (0404)

The Council considers the loss of employment land is not as significant or extensive as alleged in the representations as set out in its response to 0350 in the Business Impacts section above. As a result, the Council considers the Plan's strategy is not contrary with Econ 1.

The Council has addressed the point with regard to the contribution house building makes to the economy in its response to 0615 above.

The Council has addressed the point with regard to contacting existing businesses in its response to 0767 above. The Council has addressed the point with regard to compulsory purchase in its responses to 0767 above. **No modification proposed.**

West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352)

The Council considers the displacement of businesses is not as significant or extensive as alleged in the representations as it sets out in its response to 0350 in the Business Impacts section above. The Council took into account the findings of the 'Edinburgh City Plan 2030 Commercial Needs Study: Industrial Property Market' (CD035) when preparing the Plan. The Plan continues to identify and safeguard a significant amount of land for industrial and businesses purposes. There is a significant amount of vacant land available for business and the Plan also identifies an extension to Newbridge Industrial Estate. In addition, as stated in the Ryden Mixed Use Delivery study (CD036), only a third of the brownfield sites considered in preparing the plan are in active industrial use. As a result, the Council considers it has taken into account the findings of the study and has specifically allocated business and industrial land to address any business relocation.

The Council has addressed points with regard to compulsory purchase and delivery of the strategy in its responses to 0767 and 0677 above. **No modification proposed.**

CALA Management Ltd (0465)

The Council has addressed points with regard to compulsory purchase and delivery of the strategy in its responses to 0767 and 0677 above. **No modification proposed.**

Lord Dalmeny (0475)

The Council has provided information with regard to whether or not sites are in operational business use in its response to 0350 in the Business Impacts section above. The Council stresses that none of the brownfield sites allocated for redevelopment are safeguarded under the Plan's policy for business or industrial purposes. As a result, the Council does not consider it necessary for the Plan strategy to set out this additional information with the plan.

The Council does not consider it feasible to identify the amount of current operational employment that will be displaced. As the Council is pursuing a mixed-use housing land delivery strategy it is intending to retain as many businesses as feasible within the redeveloped sites. The Council's view is that the approach and policies set out in the Plan seek to minimise the loss of employment uses and is expected to have overall positive benefits compared to the existing policy position set out in the adopted LDP (CD039). The impacts of the specific developments on employment uses will be considered at the time of proposals coming forward, for example, many businesses may be capable of being rehoused in smaller but more efficient units better suited to modern business needs. The Ryden Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) points out on page 3 that "demand is strong for modern space, smaller units". In addition, some of the businesses may have already chosen to relocate and or existing units may be vacant, for example site H59 was allocated on the basis that the occupier had chosen to relocate. As a result, the Council does not agree with objectors that further detailed analysis of the impacts should be undertaken. In addition, the Council does not agree that it is possible to conclude at this time with certainty there is going to be significant impacts of the development strategy on employment land. The plan has allocated additional land at Newbridge for relocated businesses. The Council considers this and existing business and industrial land identified in the Plan exceeds the amount of industrial land identified for redevelopment.

The Council considers the impact of the development strategy on businesses, directing development to brownfield sites, is not as significant or extensive as alleged in the representations and has set out its position in detail in its responses to 0350 above. As a result, the Council does not consider there is a cumulative impact in the context of Econ 2, which requires commercial development proposals over a certain size to include housing development.

The Council considers the need for the compulsory purchase of land is unlikely for the reasons set out in its responses to Steve Loomes (0767), Wright PDL (0078) above.

The Council considers it has provided sufficient land to accommodate the needs of any businesses having to relocate for the reasons set out in its response to 0483 above. In addition, the extension of Newbridge Industrial Estate was identified under Choice 16 in Choices for City Plan 2030 on page 59.

The Council considers that the plan provides a generous supply of land for business and industry purposes as set out in its responses to 0350 and BDW Trading (0350), 0197

Murray Estates (0197), SEEDco (0198) Taylor Wimpey (0200), Robertson Residential Group Limited (0490), Persimmon Homes (0495) above. **No modification proposed.**

#### Taylor Wimpey East Scotland (0770)

The Council considers the displacement of businesses is not as significant or extensive as alleged in the representations and sets out its position in its response to 0350 in the Business Impacts section above.

Matters relating to industrial use value have been addressed in the Council's response to 0767 in the Business Impacts section above.

The Council considers it has taken into account the findings of the 'Edinburgh City Plan 2030 Commercial Needs Study: Industrial Property Market' (CD035) when preparing the Plan as set out in its response to 0352.

The Council has set out its position with regard to the findings of the Commercial Needs Study in its response to 0352.

The Council has set out its position with regard to compulsory purchase and delivery of the strategy in its responses to 0767 and 0677. **No modification proposed.**

#### Rosebery Estate (0618)

The Council considers it has taken into account the findings of the 'Edinburgh City Plan 2030 Commercial Needs Study: Mixed Use Delivery' (CD036) when preparing the Plan as set out in its response to 0149 above and it considers the findings of the report helpful for its purpose of understanding the overall implications of the Plan's development strategy in terms of its impact on employment land. Traffic impacts of the strategy have been assessed by a Transport Appraisal (CD14) that the Council has commissioned and the impacts are considered less than a greenfield housing development strategy as set out in the Council's response to 0767 in the Business Impacts section above.

Only 16% of the sites identified within the Plan for mixed use development are industrial estates/workshop units as demonstrated in the Appendix to Issue 3 (CD144) i.e. uses that may be incompatible with residential uses. The rest of the sites are either uses compatible with a residential environment or are open space/vacant/car parks. The Plan continues to protect 483ha of land for Business, Industrial and Storage use and is promoting identified brownfield sites for mixed use development not just residential development. Further details of the Council's position are set out in its response to BDW Trading (0350), 0197 Murray Estates (0197), SEEDco (0198) Taylor Wimpey (0200), Robertson Residential Group Limited (0490), Persimmon Homes (0495) in the Business Impacts section above. As a result, the Council does not consider the strategy is in conflict with Aim 10 of the plan.

The Council considers it has considered the impacts on businesses as set out in its responses to 0144 and 0767 above. **No modification proposed.**

#### Landowner of East Foxhall (0544)

The Council has set out its position with regard to compulsory purchase and delivery of the strategy in its response to 0767 and 0677. The Council considers a range of sites have been identified in the Plan some of which have already been subject to planning applications. In particular, a large area of existing greenfield land has been identified in West Edinburgh for a high density mixed use urban extension in contrast to the range of smaller brownfield development opportunities identified throughout the city. In addition, it should be recognised that there is a number of much larger urban brownfield sites identified within the plan e.g. H55 Seafield. As a result, the Council considers that is fully compliant with SPP.

The Council considers the redevelopment of brownfield industrial sites is an existing trend as demonstrated in the findings of the Ryden Mixed Use Delivery report (CD036), where existing brownfield sites including site sin employment use are coming forward for redevelopment particularly residential development on sites with aging real estate. There is already some support for allocation of sites from existing land owners and the Council considers it will be able to deliver a sufficient housing land supply. The Strategy of the plan has policy in place (Policy Hou4 Housing Land Supply) to ensure that it continues to maintain a sufficient land supply, whatever circumstances arise, including the release of greenfield sites should policy requirements be met. As a result, the Council considers the strategy approach is deliverable. **No modification proposed.**

#### Cala Management (0316)

The Council has set out its position with regard to compulsory purchase and delivery of the strategy in its responses to 0767 and 0677. **No modification proposed.**

#### Forth Ports (0496)

The Council has addressed points with regard to compulsory purchase and delivery of the strategy in its responses to 0767 and 0677 above. **No modification proposed.**

#### Leith Central Community Council (0614)

The definition of brownfield in the Plan is consistent with definition in SPP. **No modification proposed.**

#### Stoddart Family (0749)

The Council considers the loss of employment land is not as significant or extensive as alleged in the representations as set out in its response to 0350 in the Business Impacts section above. The Council considers it has provided sufficient land to accommodate the needs of any businesses having to relocate for the reasons set out in its response to 0483 above. **No modification proposed.**

#### **Reporter's conclusions:**

#### **Reporter's recommendations:**

--

## **Appendix to Issue 3**

**Table 1: Summary of employment land allocated in the Proposed Plan including employment land take-up since 2009**

	<b>Total area in Plan</b>	<b>Vacant / Available for</b>	<b>Takeup 2009 - 2022</b>	<b>Vacant + Takeup</b>
Business and Industry Land	483	59.5	25.3	84.8

<p><b>Provision of the development plan to which the issue relates:</b></p>	<p>This section of the Plan sets out place policies and identifies housing proposals in Central Edinburgh.</p>
<p><b>Planning authority's summary of the representation(s):</b></p>	
<p><b>General</b></p> <p><u>New Town and Broughton Community Council (0254)</u></p> <p>Generally supportive of the principle of brownfield development rather than in the outer environs of Edinburgh, however have some concerns with the extent of development proposed. Note from a brief analysis of the North East locality proposals map that it allocates a number of sites totalling approximately 950 units. However note there are sites currently either in pre-consultation or with planning applications already submitted and that these, along with understatements that there are over 400 units on sites not included in the proposals map for the North East Locality. Concerns with a number of the brownfield sites which are currently occupied with commercial activities. Believe sites are beneficial to both the overall character of the area and provide employment opportunities or services to city centre residents. There is a danger in this approach – in that it may sterilise many</p>	

areas in the inner city and consider approach is it at odds with the broader '20 minute' neighbourhood approach.

## **Place 1 – Edinburgh City Centre Policy**

### Dave Berry (0463)-support

Agrees with reducing car use and making the city centre more friendly for pedestrians

### Katharine Quinn (0015) – support

Supports proposals for Central Edinburgh.

### Network Rail (0071) - support

Supports the recognition of the need for change, delivered through the emerging Waverley Station Masterplan in order to deliver increased rail passenger capacity at paragraph 3.10.

### Archie Clark (0003)

Considers that traffic free streets create problems for residents and result in loss of population. Considers that promoting 'last-mile delivery by cargo bikes and low or zero emissions vehicles impractical and better low-cost parking facilities are needed. Considers opening sentence of Place 1 to be lengthy and considers it suggests that a planning application has only to satisfy the stated criteria in order to be approved. Provide alternative wording and suggest that this change in emphasis should be applied to all Places Policies. Consider Place 1 paragraph 3.11 to be outdated and contrary to 20-minute neighbourhoods. Primary requirement should be housing. Office space may also be encouraged as needed for balance. Suggests that Waverley Station should be integrated with tram and bus networks and to enhance the retail experience in Princes Street there is a need for pedestrian crossings and suggests underground passages and adjustment of traffic light timings. Considers that George Street would benefit from an underground car park and temporary attractions in the centre of the street do not enhance its appearance.

### Aviva Life and Pensions UK Limited (0598)

Overall supportive of Place 1 and flexibility that it provides. Acknowledge that there are limited land resources available to support further significant investment and development, therefore submit, the Council should further support a higher density and taller scale of development at Haymarket. Encourage the Council to develop policy further, and suggest that reference could be made to the fact that development of a significantly higher density, and potentially taller height, should be designed for scarce, brownfield city centre development sites such as Rosebery House and those in the Haymarket area, to ensure that their potential is realised, subject to prospective applicants demonstrating that there would be no adverse impact on existing uses, the city skyline, key views and surrounding amenity, as required.

### Cynthia Shuken (0632)

Objects to major development in the city centre and consider this would ruin the unique character of the city and its neighbourhoods.

Cockburn Association (0777)

Broadly supportive of the City Centre Transformation project and its various proposals however have concerns with renewal of the Ross Bandstand and other facilities in West Princes Street, and do not support the radical redevelopment vision of the Ross Development Trust to create a 4-6,000 seat venue in the heart of West Princes Street Gardens. Consider a number of the plan's environmental policies are relevant and Place 1 should be amended to include reference to other policy objectives such as protecting the special characteristics and outstanding universal values.

Edinburgh Chamber of Commerce (0379)

Considers that the re-purposing and re-imagining of Princes Street particular will be critical to how the city centre is supported to cope with the changes in citizen behaviour which both changing retail habits and the long term impact of the pandemic will have.

Focus on mixed use spaces, and specific reference to the city's office space requirements are particularly welcomed, and note the Council's City Centre Transformation Plan's impact on this strategy, alongside City Plan 2030.

With regard to references to reduced parking and vehicle access, re-iterate the need for close engagement and consultation with affected businesses. More detail required as to how this will be done effectively, and happy to work with the Council to ensure affected businesses can engage appropriately.

Edinburgh World Heritage (0339)

Fully support the principle of the emerging Princes Street and Waverley Valley Strategy and Place Brief. Consider that a more varied mix of uses be explored and encouraged, to ensure that upper floors in particular remain in use, which may be in residential, cultural or other use. Suggests amendments to Place 1 to reflect the importance of area as a World Heritage Site and the need to protect and enhance this and advise reference to design, quality and source of materials, height, scale, massing, layout and local details. Suggest inclusion of reference at paragraph 3.3 to the importance and method of engaging the local community and wider stakeholders in the development of principles for development of their areas. Also suggests amendment to 3.6 to refer to co-supporting and competing priorities.

Elgin Haymarket Limited (0292)

Support the encouragement of a comprehensive approach to redevelopment and regeneration. Consider Haymarket District to be an evolving area of change, with many opportunities to be acknowledged and planned for comprehensively. Consider there is a mis-match between what city centre is and what it could be. Consider that Haymarket District is particularly important for the City Centre and consider it to be a sustainable location at a major public transport hub, proximity to local/long distance cycle routes and its role as a 'transition buffer zone' for Edinburgh's World Heritage Site. Consider there is an opportunity, through redevelopment, to positively address the image of Haymarket for

those travelling from the west and for site to become an important frontage/arrival place. Through emerging planning application have identified Development Principles and consider this approach mirrors the place-based policies in the Plan and should be formalised as Place 1b. Submit a supporting document which identifies the site. Should continue key principles of current LDP and intensify these in the context of City Plan 2030 place based approach.

Hazledene House Limited (0695)

Support development in the City Centre which promotes its role as the hub of the city region as well as the creation of 20-minute walkable neighbourhoods and embedding a 'place-based' approach. Fully support the preparation of the Princes Street and Waverley Valley Strategy. Strategy should seek to address: the future role of Princes Street and the level of vacancies at all floors; the shift of the focus of retail within Edinburgh away from Princes Street to the Eastern End of the City Centre and the new St James Centre; Rose Street and connecting streets given relationship to Princes Street and the opportunity to make better use of the lanes between them. Strategy should recognise that selective demolition to remove redundant buildings could assist in delivering a greater mix and density of uses and provide opportunities for new permeability and greater use of the lanes; and underutilised floorspace at upper floors on both Princes Street and its immediate, surrounding streets.

Juniper Green & Baberton Mains Community Council (0306)

Consider that Place 1 suggests that a planning application has only to satisfy the stated criteria in order to be approved and it would be better stated, "Planning permission will only be considered for development which lies within the area of the City Centre as defined on the Proposals Map and which at a minimum retains and enhances its character, attractiveness, vitality and accessibility and contributes to its role as a strategic business and regional shopping centre and Edinburgh's role as a capital city." Considers that this change in emphasis should be applied to all Places and policies that contain the same initial phrase. Place 1 paragraph 3.11 seems outdated and contrary to the 20-minute neighbourhood concept. Consider that while some further office space may be necessary, the primary requirement should be housing in order to retain a vibrant city centre that is lived-in rather than hollowed out in the evenings and weekends, while also reducing commuting. Office space may also be encouraged as needed for balance.

LaSalle Investment Management (0262)

Overall supportive of Place 1 and flexibility that it provides. Welcome retained reference from the current Local Development Plan Policy Del 2 City Centre that the Council will support "comprehensively designed proposals which maximise the potential of the site". Acknowledge that there are limited land resources available to support further significant investment and development, therefore submit that given the unique, brownfield opportunity that Haymarket presents, the Council should further support a higher density and taller scale of development in this location. Subject to prospective applicants demonstrating that there would be no adverse impact on existing uses, the city skyline, key views and surrounding amenity.

Living Streets Edinburgh Group (0486)

Support paragraph 3.7 and paragraph 3.8 but suggest paragraph 3.8 is reworded more positively to state "To achieve these outcomes, the allocation of street space will be rebalanced to reflect the transport hierarchy with walking prioritised...." Considers that Place 1 (d) as worded "where achievable" gives developers a way out. Considers developments have to provide traffic-free pedestrian routes. Where it is demonstrated that vehicle access is required and assessment shows that it is not possible to provide separate pedestrian routes development should not be permitted. Considers a less preferable alternative could be a shared route with clear pedestrian priority and traffic managed appropriately.

#### Melford Developments Ltd (0308)

Considers that central Edinburgh is a distinct and diverse locations and the policy response is uniform and formulaic. Some locations and buildings will not be able to accommodate a mix of uses. Consider that the policy, in combination with design and environmental policies, is potentially damaging redevelopment potential. Consider that the requirement for urban realm and civic space is unclear. The capacity for the city centre to accommodate office development in favour of other locations needs to be reviewed against public transport accessibility and capacity. Refers to Policy Econ 3 where there is a threshold of 2,500 sqm and does not consider this to be reasonable in a city centre location.

#### SEPA (0012)

Pleased to see proposals for the city centre come forward into the Plan however consider paragraph 3.12 (c) could be more explicit in mentioning green/blue infrastructure as part of train station upgrade, capturing water nearby e.g. Princes Street Gardens and council car park areas.

#### Nuveen Real Estate (0564)

Generally supports Policy Place 1 but requests that the supporting text at paragraph 3.11 explicitly acknowledge that activation of the city centre's publicly and privately owned external spaces represent an opportunity to provide a diversity of uses and activities, generate additional footfall for the city centre and as such maintain and enhance the vitality of the retail offer in the city centre.

#### Southside Community Council (0781)

Strongly supports the aims set out in paragraph 3.7 of prioritising walking, wheeling and cycling to create a largely traffic-free city centre by 2030 and Place 1 (d) "the creation of new civic spaces and traffic-free pedestrian routes where achievable", however consider that the addition of where achievable weakens the aspiration.

#### The Institute of Chartered Accountants of Scotland (0182)

Supportive of City Centre Policy and the flexibility. Welcome retention of LDP Policy Del 2 City Centre at Place 1 (a) that the Council will support "comprehensively designed proposals which maximise the potential of the site" and encourage the Council to develop policy requirement further, making reference to the fact that development of a significantly higher density, and potentially taller height, should be designed for scarce city centre

development sites, to ensure that their potential is truly realised.

Propose that reference could be made to Haymarket Yards in the context of the proposed policy as an area within the city centre where such density of development, and additional height, could be supported, subject to prospective applicants demonstrating that there would be no adverse impact on existing uses, the city skyline, key views and surrounding amenity, as required. Haymarket Yards as an area would benefit from increased support for development from the Council as a means of realising its potential and suggest that making reference to the area within the context of the proposed Place 1 should be considered.

#### West End Community Council (0692)

Considers that there has been inadequate consideration of the West End as a place and as a consequence issues have been created which will last for many generations and degrade rather than improve the locality. Considers that the lack of a distinct locality plan makes council officers decision-making on many matters difficult and inconsistent, affects investment decisions and therefore it suffers as a great place to live, work or play. Considers that the vitality of the West End is founded on diversity, not a monoculture commercial district nor a residential neighbourhood and the locality plan should address all the aspects that support this diversity in all its many dimensions.

#### **Place 2 – Fountainbridge**

##### Cockburn Association (0777)

Broadly supportive of Place 2 however recommend an additional statement supporting the vertical integration of uses in each development area. Large, mono-use blocks should be avoided.

##### Janet Woolley (0470)

Concerned new development will reduce the availability of community space. Would like to see a permanent site allocated to community garden. Supportive of active travel plans.

##### Living Streets Edinburgh Group (0486)

Express qualified support. Considers policy needs to be stronger and include separate not shared pedestrian and cycle links, and statement that with any other required works they remove not reduce the barrier effect to accord with the transport hierarchy.

##### Mark Ockendon (0419)

Place 2 (g) "protect and enhance key townscape views" - add "including clear views of the existing skyline by restricting the height of new developments"

##### SEPA (0012)

Consideration should be given to the risk the canal poses and contact should be made with Scottish Canals. Site layout and design should take account of this risk. Review of the

surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site.

### **Place 3 and H8 Astley Ainslie**

#### SEPA (0012)

Support the daylighting of the Jordan Burn and the identification of the need for buffer zones and the reference made to blue corridors to reduce impacts on Jordan Burn. Stress that any daylighting at this site should be informed by a flood risk assessment and the 5' new' watercourse may have to be included in future FRA to inform new development but consider there are good opportunities to improve the water environment.

#### Alison Stoddart (0658)

Considers the proposal will completely change the site and deny community access to green space. Priorities should be green space, community infrastructure and then housing. Plans do not consider impact on the biodiversity. The proposed building is excessive, and buildings should at the very least be carbon neutral. Ideally any new development should only be permitted on the existing footprint of current or recently demolished buildings and take account of the existing trees.

Considers that a full archaeological survey should be undertaken. Existing rights of way across the whole site must be preserved. Provision of education, healthcare infrastructure and community facilities should be on-site.

#### Andrew Gray (0388)

Should not be made into a high-density village. Woodland should be encouraged and the grounds should become a park with the older houses made into private properties. The modern hospital buildings should be demolished and then built in traditional style for, perhaps, an artists' community, or a similar grouping with an interest in ecology/the arts/urban farming etc. This would both protect the area, connect it with the Hermitage/Midmar Paddock and enhance the quality of life in the area, as well as providing accommodation for perhaps four or five hundred people whilst meeting exacting environmental standards.

#### Annie Bell (0136)

Priority for site should be greenspace, community infrastructure and then housing. Considers that development should only take place on the footprint of existing, non-listed buildings. All buildings should be carbon neutral. In particular the area/site of Woodburn House is not conducive to development due to flooding. Views from Blackford Hill of the site and its existing tree canopy and public access should be maintained. Trees should be protected. A protected species assessment should be undertaken and other flora and fauna should also be protected. Consider 500 units to be excessive in Conservation Area. Supportive of daylighting the Jordan Burn though the suggested separation of 15m from any new development is insufficient.

#### Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Noticeable that hospitals are not included in the 20-minute neighbourhoods and questions if hospital provision should be retained. Would be undesirable to remove hospitals to difficult-to-access areas and there is no policy to cover this.

Principles refer to density requirements in Table 2 but none are set out. 500 units is contrary to statement that "Proposals for any part of this site in advance of an approved Place Brief will be considered as premature".

Considers there to be typos and that bullets should be replaced by numbers and the full plan should be grammatically correct and easy to read.

Considers the description of mobility hubs in the Glossary to be limited and would be helpful to show an example.

#### Astley Ainslie Community Engagement Group (AACEG) (0275)

Explains that the Astley Ainslie Community Engagement Group was set up by NHS Lothian in 2016 to represent the local community councils and to advise on consultation with the community. Submits views from 191 completed which suggested keeping the open green spaces and parkland feel, voiding high-rise flats, keeping as many of the trees as possible, mixed residential including affordable housing, facilities for the community, protection of rights of way, protecting existing buildings (especially listed), inclusion of medical facilities, educational facilities, small commercial units, avoiding luxury accommodation, no through roads and improved public transport.

Site is valuable resource as little other open space for recreation within a short walking distance. Consider a non-statutory brief inadequate and should be policy. Trees, formal rights of way and public access to the site as a whole should be preserved. Suggest the addition of development principles to require that affordable/social rent housing should be on site and integrated in the development, new or refurbished housing offers the opportunity for modern eco-friendly development and views from Blackford Hill are especially important for the city.

Consider that additional primary and secondary places will be required and some of this must be in the new primary school under construction in Canaan Lane and in Gillespie's secondary school. Considers that primary care facilities will be required. Consider that public transport will be essential and there are no details of this.

#### Astley Ainslie Community Trust (0318)

Generally supportive but note that a lot will depend on place brief. Consider proposed density is incompatible with retaining the greenspace and note that the site provides accessible greenspace at present which needs to be retained and enhanced (paragraph 2.28), meet the Councils Open Space Strategy (paragraph 2.32) and goal of 1 million trees (paragraph 2.70). Proposed 500 units could be considered excessive in a conservation area. All buildings should be carbon neutral.

Considers that a full archaeological survey should be undertaken before any development is authorised. Supportive of Place 3 (e). Supportive of daylighting the Jordan Burn but consider a 50 m set back should be required. Existing rights of way across the whole site

must be preserved. Provision of education, healthcare infrastructure and community facilities should be on-site.

Cockburn Association (0777)

Generally supportive however request that the first bullet point should be amended to preserve the mature landscape setting of the site to ensure that any development starts from the objective of conserving the character of the site.

Colin Fraser (0106)

Site should not default into the housing-led development category and Council should consider the opportunity to protect the area for future generations using a community-based policy that focuses on facilities that can embrace and enhance this location and maintain its healing ethos.

Dave Berry (0463)

Considers existing play provision is inadequate and does not meet the requirements of the Council's Open Space Strategy therefore it is incumbent on the development of the Astley Ainslie site to provide facilities for houses beyond the site.

Fiona Brownlee (0796)

Should retain the old houses and wards as they are of historical interest and would convert into other uses.

Frances Guy (0589)

Unique trees need to be preserved. Area does not need more wealthy flats and houses and social housing could greatly benefit from being situated on such a site. Considers that different parts of the plan make different commitments for the site which collectively seem to add up to preserving trees, providing 35% affordable housing and encouraging mixed use. For clarity provisions need to be set out all in one place.

Grange/Prestonfield Community Council (0192)

Support principles but consider timing is uncertain and NHS Lothian must be urged to determine their long term need for this site. Consider that the Place Brief will be crucial and must be timely.

Hervé Saint-Amand (0276)

Concerned by the lack of explicit protection for the site's green areas. Policy only mentions a 15-meter protection area, which could mean woods would be razed. Crucial to preserve the area for wildlife. Applaud that the redeveloped site include a playground, but does not think it could compensate for the loss of wildlife areas.

Inverdunning (Hatton Mains) Ltd (0427)

Consider that the site not available in plan period with disposal on hold indefinitely due to funding issues with replacement facilities.

Jennifer Roe (0407)

Objects to Place 3 on the basis of the need to maintain this vital 'green lung' for community health and wellbeing. Priorities should be greenspace and community infrastructure in light of your place and wellbeing strategy, and the original bequest of the land to the NHS. The proposed 500 units of housing is excessive in a conservation area and will lead to increased traffic, congestion, noise and air pollution, safety risks at the new South Morningside school on Canaan Lane and on adjacent Woodburn Terrace.

Ian Ross (0423)

Consider that the site should be looked upon as an opportunity to create a new way of looking at development with a holistic approach taking in more than the opportunity to build houses. Health and wellbeing for the area and the city should be the first priority with various other constructions as well as housing.

Jan Hulme (0420)

Priorities should be greenspace, community infrastructure and then housing which is carbon neutral. Housing should be restricted to the existing footprint of current or previous buildings on the site. The density of the housing should be reviewed. Biodiversity should be valued, preserved and protected. Weight should be given to history and archaeology of the site. Place Brief needs to be undertaken thoroughly before any for plans for building development on the site are encouraged in any way.

Jane Dudman (0563)

Considers it is good to see the overall commitment to developing the site sympathetically however there is little detail about access to the site, given the planned increase in homes, and the impact this would have on local streets and residents which should be addressed and made clear as part of any public consultation on development of the site.

Janet Woolley (0470)

Support a Place Brief and acknowledge that some development, including housing, will be required in order to maintain the site and would like to see a mixture of housing tenures including affordable homes and cohousing as an 'affordable middle way' between high end properties and social housing and as an example of how communities can be created.

Jennifer Hall (0534)

Priority should be given to the contribution of the green space to Edinburgh achieving net zero, particularly recognising the importance of the existing trees and open space, improving the bio-diversity of the site, health and well-being of local residents, ensuring access to the site for leisure and recreation, development on site of sustainable facilities for community groups, including for health, education and creativity and workshops for local craftspeople and small businesses and development of mixed, affordable and sustainable housing using existing buildings where possible and at an appropriate density.

John Falconer (0401)

Considers the view from Blackford Hill to be crucial, and nothing must be built which interferes with the parkland appearance, or the very striking shape of the butterfly pavilions.

Considers that housing-led development is wrong. Priorities should be preservation of all trees, grass and shrub areas, listed buildings and butterfly pavilions. Should be adaption of existing buildings where possible for community use, and new housing limited to existing footprints or hard standing. Should be limitation on height and rights of way through the site should be preserved, and if possible enhanced.

Julia Caroline Higgitt (0067)

Development principles should not be driven by housing development. Priorities should be green space, community infrastructure and then housing. Plans do not consider the impact on the biodiversity. The proposed building is excessive, and buildings should at the very least be carbon neutral. Ideally any new development should only be permitted on the existing footprint of current buildings or recently demolished ones and any new build take account of the existing trees. Blue and green corridors should be prioritised and the site should be car free.

Considers that a full archaeological survey should be undertaken before any development is authorised. Existing rights of way across the whole site must be preserved. Provision of education, healthcare infrastructure and community facilities should be on-site. Supportive of daylighting the Jordan Burn but consider set back to be insufficient.

Kathryn Poolman (0574)

Site must be protected, and mature trees must be preserved. Site is an invaluable natural site with diverse plant and animal life. Any development should be limited and respect wildlife corridors and give space for local people to enjoy nature. Support the provision of appropriate play facilities. Keep development and noise to a minimum. Safeguard the views to the Blackford Hill to the south.

Living Streets Edinburgh Group (0486)

Site offers opportunity close to the city centre, excellent connectivity by foot, cycling and public transport. Principles should make it clear that development is to be car free apart from disabled and servicing provision. Layout and design should be at a human scale with walking at its heart.

Contributions must not only be for active travel infrastructure, which must clearly set out separate requirements for walking and cycling, but also existing nearby pedestrian infrastructure that will be subject to added use arising from the development.

Liz Glass (0645)

Generally supportive of the plan however, disappointed to see that under most of the specific sites a top priority is given to housing even within current green spaces.

Considers aims do not fit with the overall plans for the city to both improve its existing and increase green spaces. Considers that priority given to housing and proposed density does not fit with the overall plans for the city to improve and increase green spaces. Not clear whether housing would be allowed to increase the percentage of built environment. Tree preservation order should be respected. A specific aim for should include improving biodiversity and conserving the special landscape. There is mention throughout the plan of the need for green corridors yet the potential for connecting distinct green spaces through walking/cycling etc along green corridors is not considered.

For Astley Ainslie site there is no mention is made of these green corridors yet consider there is potential to connect the site to Midmar Paddock and the Hermitage & Blackford.

Maggie Carson (0105)

Development principles should not be driven by housing development. Priorities should be green space, community infrastructure and then housing. Plans do not consider impact on the biodiversity. The proposed building is excessive, and buildings should at the very least be carbon neutral. Ideally new development should only be permitted on existing footprint of current or recently demolished buildings and any new build take account of the existing trees. Blue and green corridors should be prioritised and the site should be car free.

Considers that a full archaeological survey should be undertaken. Existing rights of way across the whole site must be preserved. Provision of education, healthcare infrastructure and community facilities should be on-site. Considers a protected species assessment should be undertaken and that the site offers potential for green prescribing, arts based therapies, mindfulness and forest bathing.

Maciej Malaszuk (0179)

Site should be converted to a public park which would support net zero target. Development would have significant impact on local facilities. Health and wellbeing benefits of green space on site would outweigh one off cash injection from the sale of the site. Existing rights of way should be converted to accessible walking paths and cycle ways and existing historic building converted to public use. Does not agree with principles in Place 3.

Mark Ockendon (0419)

Suggests addition of new requirement at Place 3: "Protect the heritage of the area and retain clear views of the sky by restricting the height of new developments".

Michael Adrian Hall (0261)

Considers policy should not be housing-led and priority should be open space. New development should only be in zones that currently have buildings on them. All existing trees should be protected, capacity too great and buildings should be built to carbon neutral standards. A full archaeological survey should be required. 15 m buffer for Jordan burn too small, existing rights of way should be preserved and consider that there is enough space for an enhanced direct contribution on the site to education, healthcare

infrastructure and community facilities within any development, alongside the retained and enhanced existing greenspace.

Mr Roger Thomas (0345)

Considers the preservation and maintenance of the ancient boundary walls which cross the site essential to an understanding of the history and development of the site.

NatureScot (0528)

Generally support principles, particularly the clear emphasis on the need for a master plan. Site hosts natural heritage assets of importance and is a key element of landscape and townscape quality in The Grange. To maintain these assets and the benefits derived recommend that development principle b) is amended to include a requirement to assess visual context as well as landscape assets and to support consideration of opportunities to improve the site and its wider setting. Building on this principle c) should be amended to more clearly reference the importance of the tree and woodland assets on the site and clarify the role of this asset and the Tree Preservation Order in directing development of this site.

Neil Ross (0610)

Consider existing development represents a reasonable balance of buildings and open green space consistent with the Conservation Area character appraisal. Development of 500 housing units would intensify the density of buildings on the site and directly conflict with the character appraisal. Number of units should be reduced to fit within the footprint of existing and recently demolished buildings. Support the day-lighting of the Jordan Burn doubt that the suggested separation of 15m from any new development will be sufficient to provide protection in a severe weather event.

NHS Lothian (0596)

Supportive policy that encourages the redevelopment of the Astley Ainslie campus. Have worked closely with the Council to prepare a Place Brief and request that the Plan reflects this updated position.

Olwyn Alexander (0351)

Priorities should be greenspace and community infrastructure. Equity in access to green space must be maintained for this community. New development should only be permitted on the existing footprint of current buildings or recently demolished ones with heights / density of buildings matching that existing footprint. Existing Tree Preservation Orders for the site must be upheld. The proposed 500 units of housing is excessive in a conservation area and will lead to increased traffic congestion, noise and air pollution, and significant safety risks for children/families traveling on foot/ by bike to the new South Morningside school.

Patricia Willder (0205)

Considers that proposals for more housing development at Astley Ainslie and likely at Royal Edinburgh Hospital site in the future will add to the already dense urban area in

South of the city. Consider that the area is already suffering from current over development of high end housing and any proposals need to consider the need for more affordable homes in on available brownfield sites only. Considers it will increase transport difficulties for commuters and consideration should be given to transport.

Peter Edwards (0601)

Believes Place 3 is in conflict with paragraph 2.28 of the Plan which states that "The City must also be ... proactive in ... maximising the wider benefits of nature through improving greenspaces and food growing opportunities as well as the accessibility of these spaces to enhance physical and mental wellbeing". Site is one of the very few significant areas of greenspace left in Edinburgh near the City Centre and its trees, flora and fauna are varied and worth protecting. Considers a large housing development would destroy the value of site. to the detriment of the whole city. Supports criteria (e) and (f).

Prof D N Bateman (0004)

The Astley Ainsley development should be carefully revalued to preserve green space for future generations. Considers the plan is not well developed and requires more detail. Development of a valued green area within the city seems contradictory to the green space policy in other parts of the plan. As the council wishes to reduce car use it must provide accessible local green areas

Richard Beauchamp (0604), Ruth Beauchamp (0458)

Priority for site should be greenspace, community infrastructure and then housing. Considers that development should only take place on the footprint of existing, non-listed buildings. All buildings should be carbon neutral. The existing Tree Preservation Orders for the site must be upheld. Views from Blackford Hill of the site and its existing tree canopy and public access should be maintained. Consider 500 units to be excessive.

Considers that a full archaeological survey should be undertaken before any development is authorised. Existing rights of way across the whole site must be preserved. Considers a protected species assessment should be undertaken. Supportive of daylighting the Jordan Burn but consider separation of 15m from any new development is insufficient.

Richard Doake (0436)

Generally supports the principles of the relevant policies, but the considers that capacity is incompatible with maintaining the landscape and special character and would limit the effectiveness of the site as an open space

Robert Falcon (0640)

Considers that to preserve the site development should be limited both in density height. Support a development of no more than 500 units. Building heights should be lower than existing buildings and trees, and therefore limited to 4 storeys only.

Sally Kerr (0435)

Detail provided is insufficient and does not protect site from significant change. Consideration of current public use of the site should be highlighted in terms of the health and wellbeing it provides. An extensive development will add to an already busy area and cause social and environmental change which must be addressed in the Place Brief. There is a need for a protected species assessment. Impact on biodiversity should be considered.

Scottish Wildlife Trust Lothian group (0560)

Tree Preservation Order for the entire site should remain. Site contributes to an important sense of place to the residents of the city which should continue. Welcome biodiversity policies expressed in plan that developments must enhance existing biodiversity. Support the enhancement of the environment and for this to be at the heart and at the start of all plans for site. Reducing the need for cars should be integrated into the thinking for this site which is especially important for the high number of houses proposed. Spirit of the NHS site should remain.

Sergey Gorobets, (0414)

Site should be preserved as much as possible for the community. Development must not be housing-led as it would add no value. Green space should be preserved re-purposing buildings or replaced by what the community badly needs - schools, nursery, community centre, sport centre, playgrounds.

Shelagh Sharp (0111)

Concerned that enough appropriate affordable housing is integrated in all the developments and not separated into different sites, thinks it is important to have mixed communities. In the case of Astley Ainslie important to keep the through links for cyclists and pedestrians and the open green areas for the benefit of the local communities.

Simon Thomson (0248)

The City Plan sets out 'Place-based' policies which appear to be development briefs for various parts of the city. A number of these briefs refer to specific sites which are not going to be available during the plan period or on sites which have existing businesses. These should be removed and the briefs retained as guidance only for sites coming forward as windfall opportunities.

Tom Proudfoot (0740), Teresa Fernandes (0194)

Priority for site should be greenspace, community infrastructure and then housing. Considers that development should only take place on the footprint of existing, non-listed buildings. All buildings should be carbon neutral. The existing Tree Preservation Orders for the site must be upheld. Consider 500 units to be excessive.

Considers that a full archaeological survey should be undertaken before any development is authorised. Existing rights of way across the whole site must be preserved. Provision of education, healthcare infrastructure and community facilities should be on-site. Considers a protected species assessment should be undertaken. Supportive of daylighting the Jordan Burn but consider separation of 15m from any new development is insufficient.

Provision of education, healthcare infrastructure and community facilities should be on-site.

William Brotherston (0754)

Grounds are of great importance to the community and continued access, rights of way and tree preservation orders should be retained. Any development should be focused on provision of facilities for the community, such as nursery schools, provision for physical, recreational and creative activities for young and old, community gardens, cafés, etc. continuing the health-centred uses. Hope there will be a range of housing including affordable and sheltered housing and that their placing and density will not diminish the sense of natural space. Consider 15 metres between new buildings and the Jordan Burn to be too close. Archaeology of site should be investigated.

William Mason (0438)

Believes site should not be considered for development but managed as part of a green network linking Blackford Hill and the Braids to the centre of the city via the Meadows. This would have the possibility of making the southern part of the city into a green corridor linking the wider countryside with the city centre. Considers that as written, the primacy given to development appears to foreclose this option. Considers that the allocation assumes NHS disposal and that this is not considered to be the case.

William Moyes (0305)

Need to be clear about how much current green space will be used if the strategy is fully implemented. Substantial proportion of the current greenspace should be retained as public open space and its use tightly controlled to prohibit gatherings, concerts, hospitality facilities during the festivals. Walking should be given priority. Provision for cycling and wheeling should be limited and directed off-site. Any new development should be of a high standard of design and construction. All buildings should be carbon neutral or better. The majority of new buildings should be houses, not just flats. All properties should have dedicated charging points for electric cars. The siting of any new build should protect the existing trees and allow access for maintenance of trees and grounds. There should be no wild areas. The existing Tree Preservation Orders for the site must be upheld. The strategy should make clear that existing rights of way across the whole site will be preserved. Development and infrastructure will reduce greenspace and final version of the strategy must show how much land would be devoted to housing and associated infrastructure, to facilities for education, healthcare and community activities and to public open space.

**H1 Dundee Street and H2 Dundee Terrace**

E Ritchie and D Melrose (0430)

Have concerns over drainage and that consideration may be given to further homes being built on site H1 and H2 (Dundee Street and Dundee Terrace) thereby increasing stress on an already overstretched system.

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

#### SEPA (0012)

Agree with Proposed Plan Appendix D. No flood risk assessment is required. Note that the sites are close to the Union Canal at a location which has experienced flooding from this source. Consideration should be given to the risk the canal poses. Site layout and design should take account of this risk. Consider including this source of flooding within the Site Assessment. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site.

#### Simon Thomson (0248)

Suggest sites should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown.

### **H3 Chalmers Street**

#### Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

#### Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown

#### SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer.

### **H4 Dalry Road**

#### Dalry Local Residents (0267)

Do not support the existing plans but would fully support if specifications were included the text. Views from Dalry Park should be retained. A new road facing square would provide for activity with residential above. A link path would complement existing plans for the park and connectivity. Suggests extension of the site footprint by extending into under used car park.

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown

SEPA (0012)

Agree with Proposed Plan Appendix D. No flood risk assessment is required. The Union Canal is elevated above the site but is 350 metres away from site. Recommend that contact is made with Scottish Canals.

**H5 Roseburn Street**

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown

Murrayfield Community Council (0146)

Support conversion to housing but concerned to see that there should be very specific proposals for the developer to fund improvements to Roseburn Park in order that there should be adequate provision of high-quality open space.

SEPA (0012)

SEPA ask that consideration is given to changing Appendix D to require a flood risk assessment. A strategic flood risk assessment (SFRA) for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required. Site may be constrained due to flood risk. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer. The draft SFRA mentions significant

flooding adjacent to the development and a flood risk assessment is required with consideration given to blue/green opportunities. This should be consistent with the requirements requested in H6.

### **H6 Russell Road (Royal Mail)**

#### Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

#### Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown

#### Murrayfield Community Council (0146)

Support conversion to housing but are concerned about specific proposals for the developer to fund improvements to Roseburn Park in order that there should be adequate provision of high-quality open space.

#### Royal Mail Group Limited (0501)

No short, medium- or long-term interest or intention in relocating delivery office to an alternative location. The housing allocations proposed not considered to be deliverable and should be removed.

Express concern that new residential development will result in noise complaints and seek to ensure mitigation in order that Royal Mail operations are not negatively impacted.

#### SEPA (0012)

SEPA ask that consideration is given to changing Appendix D to require a flood risk assessment. A strategic flood risk assessment (SFRA) for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required. Site may be constrained due to flood risk. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer. The draft SFRA mentions significant flooding adjacent to the development and a flood risk assessment is required with consideration given to blue/green opportunities. This should be consistent with the requirements requested in H5.

### **H7 Murieston Lane**

#### Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown

Nick Johnstone (0368)

Submits comments on behalf of the landowner of properties 3,4,5,7,8,9,10 and 11 Murieston Lane. Owner has no intention of selling these for development and asks that these are removed.

SEPA (0012)

Agree with proposed Plan Appendix D. A flood risk assessment is not required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer when any pre-planning enquiry or planning application is made.

### **H9 Falcon Road West**

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown

SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required for this site.

### **H10 Watertoun Road**

Andrew and Alison Ferguson (0429)

Accept that the site is suitable in principle for housing however capacity would have a negative impact on the character and residential amenity of the surrounding area. Refers

to planning application 21/03813/FUL. Express disappointment that capacity of 72 units set out in plan disregards objections on density in relation to this. Consider that capacity of 72 units could only be accommodated if no amenity space were provided.

Dr Y Wang (0522)

Object to the capacity. Considers that the density will result lack of amenity for new residents in terms of recreational and environmental provisions. Considers that local schools are overcapacity and there are other deficiencies regarding amenity. Current density will provide buildings of no aesthetic value to the detriment of the and exacerbate damage to ecology. Traffic and parking problems will increase.

Grange/Prestonfield Community Council (0192)

Support in principle but should reduce capacity to 49 in line with planning application 21/03813/FUL.

SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer.

### **H11 Watson Crescent Lane**

Patricia Gray (0608) – support

Fully welcome the designation of the site for a housing development and would welcome guidance on forming a long term brief for the site.

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown

SEPA (0012)

Agree with Proposed Plan Appendix D. No flood risk assessment is required. The site is directly adjacent to the Union Canal. Consideration should be given to the risk the canal poses and contact should be made with Scottish Canals. Site layout and design should take account of this risk. Consider including this source of flooding within the Site Assessment.

## **H12 Temple Park Crescent**

Yinshuang Ding (0086)

Consider 5 storey building will impact on sunlight to properties. Would accept lower height.

SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required. However, the site is directly adjacent to the Union Canal. Consideration should be given to the risk the canal poses and contact should be made with Scottish Canals. Site layout and design should take account of this risk. Consider including this source of flooding within the Site Assessment. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer.

## **H13 Gillespie Crescent**

Brenda Rowan (0488), Nick Sherington (0500)

Object to H13 as not consistent with the Conservation Area Character Appraisal. Concerned about loss of landscape features, loss of green space and its impact on drainage, traffic, loss of privacy, light, noise.

Gabriela Medero (0022)

Does not support H13 as site is historical building that should be kept. Concerned about change to the character of the road and affect safety, traffic and noise.

George Goussetis (0269)

Considers that site is in an already dense area and will substantially deteriorate Gillespie Crescent, which already suffers from lack of parking area for residents. Concerned about strain on local facilities and considers there is no practical way of making a new housing development while also respecting the character of the neighbourhood.

Inverdunning (Hatton Mains) Ltd (0427)

Site is currently sheltered housing owned by Viewpoint Housing Association and no confirmation as to future plans so this requires clarification.

Louise Blanke (0675)

Considers density of proposed building would have a negative effect on the visual appeal of Gillespie Crescent and increase traffic and parking issues. Concerned about loss of trees, overlooking and impact on trees.

Luke Treadwell (0748)

Considers that the proposal will change the character of the crescent, increase traffic and remove Viewpoint complex, which is a socially valuable housing project. No detail provided on proposal.

Sandy Ramsay (0026)

Considers site should not be included as no consent from landowner.

Shona Simon (0242)

Concerned by potential scale of development and this should not go above the current height of the buildings and be well back from boundary walls, with appropriate screening with trees etc. Consider the area is dense and development would have impact on balance of green space.

Steve Garrett (0359)

Unclear why site has been included and should be removed.

Tollcross Community Council (0332)

Would like site removed as owners Viewpoint Housing Association have no intention of changing the use of their site and were not consulted about its inclusion.

SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required.

**H14 Ratcliffe Terrace**

Alix Speed (0043)

Concerned that the Council will approve planning for student accommodation. Would like some green space. Concerned about access to private garden during construction.

Felix Freund (0530)

Object to H14 as concerned development will not respect and match the design and uniqueness of the conservation area, impact on privacy, views, safety and noise. Current use by industrial and retail tenants provides the local community with shops, a petrol station and a garage. Ratcliffe Terrace and Causewayside are local retail centres in City Plan and this proposal would change the use of land covered by the proposal.

Grange/Prestonfield Community Council (0192)

Suggests expansion of site to include the whole of the area surrounded by Conservation Areas as likely to come forward for redevelopment within plan period, to encourage better place making and integration with adjacent neighbourhoods. Place Brief required.

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown

Margaret Newman (0697)

Concerned about light, views, overshadowing, privacy. Consider housing preferable to warehousing but building should not be higher than existing houses, set back from wall of their property with parking or landscaped garden on the other side of the 4 ft. high wall, and trees planted along the other side of the wall.

SEPA (0012)

Agree with Proposed Plan Appendix D. No flood risk assessment is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer.

### **H15 St Leonard's Street (car park)**

Julie McIlroy (0373)

Considers it is important that the current light and views to Salisbury Crags and Arthurs Seat are protected. Any development should be restricted in height and historical nature of the street needs to be protected. Should be dedicated parking.

Simon Paget-Tomlinson (0375)

Objects due to ability of site to provide capacity without compromising the units being built as well as the quality of life of the inhabitants of the surrounding area. Concerned about light, overlooking, privacy, over population, need for site to provide parking.

SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required.

Anne Binckebanck (0372)

Consider proposal would overcrowd area. Road would need to be widened and pavement provided. Would not be enough parking spaces, houses would be too close to Parkside Street and Hermits Croft resulting in loss of daylight and privacy. An old wall and trees would be destroyed, considers schools to be overpopulated and that there are issues with

water pressure. Would damage housing within a conservation area. Suggests using site for greenspace.

## **H16 Eyre Terrace**

### Jennifer Inglis (0437)

Considers it difficult to see how the statement that the expected number of units is only 245 is justifiable in the context of planning permission. The site should be moved into the "larger site" category of the document. Consider it foreseeable that site could be subject to further applications therefore the site should be subject to a place brief. The list of items in Appendix D is inaccurate. There is an incorrect reference to views down Dundonald Street. Important to protect view down Dundonald St and the northern part of Nelson St. Items that should be added to the appendix with respect to H16 include replacement of trees, treatment of Fettes Row, greater clarity on what 5m from mature trees means, state that there are a number of listed buildings, building height should be restricted.

Considers that the adjacent King George V Park is smaller than is listed in Open Space Audit of 2016. Future development should provide 20% usable green space not just open space as area is deficient in good quality large usable green space. Open Space policy should be specified in Place Brief. Should specify impact on sunlight as well as daylight. Value of another connection through the park is dubious. The high quality boundary treatments should be preserved. The trees on Fettes Row and Royal Crescent should be preserved, the height and massing should reflect the adjacent buildings, an active fronting onto Dundas St can still be achieved with new tree planting on Dundas St. Site should be natural sandstone, there should not be glass roof terraces or pavilions creating an extra usable floor, roofs should be pitched using natural slate. More careful attention to the way that sewage will flow through the site and not back up is required. New outdoor play should be provided because the play areas are very limited.

### Mr Gareth J Roberts (0335)

Considers there is insufficient detail. Concerned about traffic congestion, safety, impact on open space, road drainage, sewers and flooding, noise, proximity to dwellings and local building resilience.

### New Town and Broughton Community Council (0254)

City Plan 2030 (Appendix D) states inaccurately that the site is only likely to have 240 housing units. Would be helpful to develop a Place Brief for this site as soon as practicable so that any future applications would continue to support retention of some non-residential uses. Would not support more residential development on this site. A Place Brief would ensure that any future development had clear guidance for any further development proposal.

### SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues

within/adjacent to the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer.

Wendy Johnson (0002)

Concerned that H16 will overwhelm area, increase traffic and residents and impact on daylight to existing properties. Consider that local facilities are already strained. Suggests using land to extend George IV Park.

**H17 Eyre Place**

Alasdair Wilson and Gaelle Geveaux (0807)

Object to H17. Concerned about traffic congestion, parking, capacity of recycling and reduced light to gardens.

Alexandra Stevenson (0304)

Does not support proposal as considers it would cause unnecessary disruption to the area, create noise, block views, disrupt privacy. Considers space could be used for more beneficial community use.

Angela Ball (0277)

Concerned about structural impact to the properties on Rodney Place. No plans to show the impact to quality of life with loss of light and increased noise from the works and additional residents. No provisions for the impact on infrastructure. Consider the area lacks green space and site would be better used as a community garden or allotments. Owner of building to the rear of Rodney Place and there has been no approach or consultation from the Council. Building is used as storage, bicycle keep and safe and covered area to carry out any bike repairs. Consent should be obtained, or confirmation given of plans in place to ensure I can still make use of the active travel scheme in safety.

Cameron Prentice (0076)

Opposes the construction of housing units and considers there are more beneficial uses including outdoor, green community space with cafe and recreational area. Area already has a lot of high rise housing and more green space, vegetation and trees are crucial with increasing amounts of rainfall and flooding.

CASL Stanley Place Property Owner Limited (0737)

Request that allocation is amended to accommodate a mix of uses, such as Purpose built Student Accommodation, residential housing and other commercial uses. The site is located conveniently close to existing transport links, services and parks, University of Edinburgh, Napier University and Edinburgh College of Art. Considers there is not an over-concentration of students and other types of mixed-commercial uses would also be appropriate.

Charlie Clark (0790)

Cannot see need for site given proposal H16. Area cannot cope with more traffic or footfall and exit should be via Rodney Street. No detailed plans trust daylight, sunlight, privacy and outlook rules will be abided by. Parking must be provided on site and adequate drainage. Questions if local infrastructure cope. Concerned about height of units and impact on surrounding area.

Daniel Gough (0421)

Object to the proposed plans. Area is already severely overcrowded. Concerned about health provision, parks, noise pollution and impact of construction. Plans contradict a carbon neutral city. Area needs green spaces.

Dr Jane Gear (0487)

Considers proposal would be detrimental to residents bordering site. Considers there are limitations of the existing infrastructure, traffic congestion & parking, Eyre medical practice and other medical services. Consider that there is a need for recreational space. Suggest alternative uses for the site as allotments, a green meeting place for the elderly, pocket of city centre 'greening' and rewilding with plants and flowering plants.

E Roberts (0471)

Understand need for reusing brownfield sites and approve of the general plan however taller design of the housing on the north side of the of the site would mean four-storey buildings, which would significantly negatively impact the light and privacy of existing housing. Suggests development is of a lower level over the whole site and with decent set back from the property boundary to maintain existing light levels. Should be no additional on-street parking.

Ewan Gray (0103)

Not consistent with previous proposals. Concerned about increased traffic, safety, emissions and public services. Should prioritise a non-residential option, and suggests a green space, to be consistent with the city's proposed net zero plans.

Francesca Fiori (0390)

Residents of Rodney Street, Logan Street, Rodney place, Eyre Place and Eyre Place Lane will be heavily affected in socio-emotional and financial well-being due to impact on their privacy and reduce the amount of direct sunlight. Extra household will place strain on local services and increase traffic. Suggest using land to create a leisure/recreational community service and a car park for the exclusive use of electric vehicles.

Hannah and Chris Edwards (0696)

Oppose H17 due to concern around health and education provision, impact on light and privacy, parking, congestion, air quality, impact of construction on properties. Believe provision for electric vehicles car park could be a good option for the future.

Iain Leslie (0586)

Area already a high-density population. Resources already above capacity for the area. Introduction of 60+ homes alongside the approved development on Eyre Terrace will put excessive pressure on services and infrastructure. Many alternatives such as a larger health centre, primary school, or allotments, all of which would alleviate the capacity issue rather than exacerbate it.

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Irene Kernan (0549)

Concerned due to impact on existing properties, impact on local health services, roads, transport, noise, volume of people. Worried about gradual closing in of the skyline and access to sunlight, and erosion of quality of green space. No intentions or policies to protect or care for existing residents.

Need mixed housing including low level housing suitable for older people, people with young families, accommodation for homeless people. Need for a health centre. Suggests developing site for allotments, sheltered facility or medical centre.

Lee Davis (0117)

Consider proposal would have negative impact on property, standard of living and community. Concerned about level of new building in the area and impact on traffic, community infrastructure, light to garden ground and poor bus service.

Lorraine Smith (0462)

Concerned about impact on daylight to existing properties, traffic and need for greenspace. Considers proposal compromises character of city.

Marton Feigl (0196)

Disagrees with allocation for housing. Considers that there have been numerous developments in the area which have unpleasantly densified it and design of new housing is destroying the character of the area. Should be used for community such as a park. Fears housing will be student accommodation.

Mr Gareth J Roberts (0335)

Considers there is insufficient detail. Concerned about traffic congestion, safety, impact on open space, road drainage, sewers and flooding, noise, proximity to dwellings and local building resilience.

New Town and Broughton Community Council (0254)

Estimated number of housing units on this site seems high. The proposal appears to include 25 Rodney Street, which provides both commercial and leisure facilities for the local residents. Believe that the proposal for 69 units is a significant overdevelopment of the site. Note that due to an anomaly, this area does not sit within either the New Town Conservation area nor the Inverleith Conservation area.

Sarah Roberts (0630)

Concerned about privacy, risk of flooding, drainage system, daylight, pressure on parks, congestion and oversubscribed services and risk to buildings in the conservation area due to existing subsidence in the area. Considers recent developments car parking rather than garden space. Creating a new green space would be a benefit to all residents.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown

Stephanie Stevenson (0793)

Proposal contradictory as it is stated that the purpose of building 69 units on the land is to accommodate affordable housing as 35% of that but considers that 24 affordable flats are going to make very little difference. Considers there is a lack of green spaces in the central area and would benefit from more green spaces. Concerned about impact of construction and would like timeline.

Theo Scott (0014)

Fully support the proposal and considers that the number of units should be increased, and consideration given to doubling the height of the proposed block.

Vanessa Steven (0755)

Objects to H17 Eyre Place (69 flats) dues to loss of light, overshadowing, loss of privacy, loss of view, traffic, community infrastructure and disruption from construction.

Vincent Meiklejohn (0069)

Considers proposal problematic and will cause parking issues, overlooking, impact on daylight, pressure on existing park. Suggest site becomes a park.

William Craigie (0186)

Considers that capacity of H17 should be reduced dues to flooding, traffic, pollution, access for emergency services, access to private garages, lack of community infrastructure and impact of construction.

SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required. Based on LiDAR, the site is elevated approximately 7 metres above the banks of the Water of Leith. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer.

### **H18 Royston Terrace**

Amy Middlemass (0629)

Object to proposal as considers it will affect daylight to property.

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Jonty Bredin (0682)

Oppose the proposals due to parking, congestion, noise, loss of sunlight/daylight, privacy.

Melissa Sharkey (0684)

Expresses concern due to traffic and parking, noise and disturbance, loss of sunlight and daylight and privacy.

Michal Rozynek (0626)

Object due to insufficient community infrastructure, parking, congestion, distance between buildings, overlooking, privacy and light. Suggest current height of buildings should be maintained and access maintained for emergency vehicles.

SEPA (0012)

Agree with Proposed Plan Appendix D. No flood risk assessment is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown.

### **H19 Broughton Road (Powderhall)**

SEPA (0012)

Agree with Proposed Plan Appendix D. No flood risk assessment is required. Site is suitably elevated above the Water of Leith (>5metres above). Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer.

## **H20 Broughton Market**

Corline Elisabeth Scholes (0713)

Worried about a reduction in privacy, changes in building height or size of window would have direct impact. A less dense development with the same footprint and height as existing buildings and without substantial changes to windows would be preferable.

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown.

Terry Levinthal (0313)

Considers that allocation of site presumes that demolition on a Conservation Area is acceptable. National and local policies and guidance make it clear that the presumption is in favour of retention of building that make a positive contribution unless significant mitigating factors suggest it is incapable of use. Site does not meet the policy test of Env 13 or Env 10 of City Plan. As such, this is not an effective housing site and should be deleted from the Plan.

Edinburgh World Heritage (0339)

Amend first bullet point in Appendix D to appropriately reflect its location within and need to conserve the World Heritage site.

## **H21 East London Street**

Amanda Michie (0217)

Oppose the plan for East London Street H21. There is no information on what is being built other than housing with business facilities underneath which suggests more tall

blocks of flats. There have been a number of new developments in an already congested area yet there is no corresponding increase in refuse or recycling facilities. Agree that Edinburgh should be accessible without the need to own a car but there needs to be a significant change in the attitude of residents and building housing without parking is not a solution.

Helen Sugden (0797)

Does not welcome proposed development for which there is little detail. Combined with an existing planning approval for Gayfield Square residents will be surrounded by new building works, facing many years of construction noise and traffic disruption. Will negatively impact visual amenity, natural light availability and quality of life for residents and introduce additional traffic danger for school. The quality and density of any proposals is also worrying. Much of what has been approved appears inconsistent with the constraints of New Town development and wishes details of how these significant issues will be addressed.

Inverdunning (Hatton Mains) Ltd (0427)

Consider that site should be reduced in size with amended capacity as site is part-owned by Lothian Buses which may come forward but part-owned by a mosque with no confirmation of disposal.

Italian Consulate General for Scotland and Northern Ireland (0320)

H21 covers an area that extends to the outer boundary of No. 20-22 East London Street which houses the offices of the Consulate General of Italy for Scotland and Northern Ireland and the Institute of Culture in Edinburgh. It has been granted consular/diplomatic status. The Italian State is the holder of exclusive property rights to the strip of land highlighted in pink in and non-exclusive right of way which are included in the H21. Request that the boundaries of the area be redefined in such a way as to preserve the rights acquired by the Italian State over the strips of land on account of the immunities, exemptions and privileges. A reasonable level of security must be ensured by means of an external perimeter which provides a sufficient area of separation from other buildings.

Jennifer Newton (0679)

Street character needs to be preserved without a huge dominant building at one end. Proposed density is too high. Any building should not increase the existing building height. There is no parking provision envisaged and traffic too heavy for the width of this road. Any building should be set back to line up with the rest of East London Street and should not be dominant.

Nigel Sedgwick (0680)

Objects to allocation as considers density too high and that building heights should not change the existing character of East London Street. In particular, the heights of the nearby mosque and community centre should not be exceeded by any significant margin that would dominate those existing buildings.

SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required.

Thomas Unter (0204)

Considers the capacity is excessive and should be revised down and that consented development in the area should be taken into account in reducing capacity. Consider that building massing would dominate East London Street northern aspect and any proposal should seek to minimise the scale and height of the development to reflect the existing height and nature of the site and significant public realm improvements needed.

**McDonald Road (B) H22**

Blandfield Residents Association (0426)

Consider site is constrained with poor access. Site has existing businesses that provide local employment, church / community hall and in line with Scottish Government policies on 20 minute neighbourhoods a mixed use should be retained. Considers area has seen extensive conversion to housing, without corresponding investment in amenities. Public transport services are limited and existing parking options are constrained. Overdevelopment should be avoided. Concerned about existing greenspace and capacity of development to provide green space. Development of the site must take account of access to the Powder Hall railway as a cycle track. Would consider withdrawing objection based on details related to density, green space provision, parking provision and access to the cycleway. Issues concerning the site boundary, boundary wall ownership and impacts of construction on this structure must be resolved before development.

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

SEPA (0012)

Agree that a flood risk assessment should be requested as set out in Appendix D. Review of historic maps indicates the Broughton Burn may be culverted beneath the site. A flood risk assessment which assesses the risk from this source is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown.

**H23 McDonald Place**

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

SEPA (0012)

Agree with Proposed Plan Appendix D. No flood risk assessment (FRA) is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown.

**H24 Norton Park**

Annie McIntyre (0802)

States that there has been no environmental impact assessment of the proposed plan and no mention of the diversity of habitats flora and fauna in the proposal other than in an overall aim of the Plan.

Consider that the area has been subject to intense building, population and traffic increase with no proper infrastructure or landscape impact consideration given.

Consider that due to the pandemic there has been no proper consultation and building has continued with no provision for new schools or GP services.

Consider the density of buildings, and layouts plus the design and appearance of materials do not appear to take into account the existing residences and communities, paying only passing commentary on listed buildings. Consider that the importance of trees and woodland to quality and character of urban areas are not in evidence.

Chris Byrne (0297)

Considers that proposal should be sensitive to the area and in keeping with existing buildings. Refers to recent construction of towers blocks which have changed the character of the area and object to this approach. Support access to the proposed active travel corridor along the Powderhall Railway and principle of any development being in keeping with and enhancing the nearby conservation area and listed buildings.

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken

an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown.

SEPA (0012)

Agree that a flood risk assessment should be requested as set out in Appendix D. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer. The draft Strategic Flood Risk Assessment and Appendix D identified the opportunity for a strategic SUDS basin to manage surface water on site and to assist with reducing surface water flood risk in the area.

## **H25 London Road (B)**

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown.

SEPA (0012)

Agree that a flood risk assessment should be requested as set out in Appendix D. Cannot discount the potential for a culverted small watercourse within or immediately adjacent to the site, however review of historic maps does not clearly identify any. This may require further ground investigation. Flooding reported in 2018 on London Road adjacent to the allocation. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer. The surface water flood map is picking up low points associated with Clockmill Lane.

## **H26 Portobello Road**

Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown.

#### SEPA (0012)

The draft Strategic flood Risk Assessment does note that a watercourse may exist here while a review of historic maps does not indicate a small watercourse on site. Any applicant must establish whether or not there is a small watercourse which may have been in culvert when the historic maps were compiled. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer.

#### **H27 Willowbrae Road**

##### Inverdunning (Hatton Mains) Ltd (0427)

The site is potential windfall site which should not form specific housing proposal. No contact has been made with site owners by Council and state that they have undertaken an exercise which indicates a strong opposition to releasing sites from existing business use. Timescale and resource for CPO not deliverable within the plan period.

##### Simon Thomson (0248)

Suggest site should be removed along with a number of other housing allocations as either being unavailable or currently occupied by trading businesses with timescales for disposal unknown.

#### SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required. The site is out with the Braid Burn or Figgate Burn Flood Protection Scheme. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer. The draft SFRA mentions consideration of blue/green corridors.

#### **H28 Cowans Close**

##### Inverdunning (Hatton Mains) Ltd (0427)

Consider that site should be reduced in size with amended capacity as part-owned by the Council and part-owned by a retail unit owner with no confirmation of disposal.

##### Ruth Buchanan (0083)

Fully support the development of housing at H28 in terms of housing need however unclear if the issue of parking has been considered. Support the views of Southside Community Council in terms of reducing cars however for some people a car is an

essential and therefore assume that the Cowan's Close development will generate a need for further parking availability.

#### SEPA (0012)

Agree with proposed Plan Appendix D. No flood risk assessment is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further, and it is recommended that contact is made with the flood prevention officer.

#### **Modifications sought by those submitting representations:**

##### **General**

#### New Town and Broughton Community Council (0254)

No modification specified.

##### **Place 1 – Edinburgh City Centre Policy**

#### Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Amend text of Place 1 to:

“Planning permission will only be considered for development which lies within the area of the City Centre as defined on the Proposals Map and which at a minimum retains and enhances its character, attractiveness, vitality and accessibility and contributes to its role as a strategic business and regional shopping centre and Edinburgh’s role as a capital city.”

And apply to all Places and policies that contain the same initial phrase.

Infers amendment of paragraph 3.11 to make primary requirement for housing.

#### Archie Clark (0003)

Infers provision of parking

At paragraph 3.10 and 3.12 include integration with tram and bus networks.

Provide for pedestrian crossings on Princes Street.

Provide for an underground car park on George Street.

#### Aviva Life and Pensions UK Limited (0598), LaSalle Investment Management (0262), The Institute of Chartered Accountants of Scotland (0182)

In Place 1 make reference to the fact that development of a significantly higher density, and potentially taller height, should be designed for scarce, brownfield city centre development sites such as Rosebery House and those in the Haymarket area, to ensure that their potential is realised, subject to prospective applicants demonstrating that there

would be no adverse impact on existing uses, the city skyline, key views and surrounding amenity, as required.

Cockburn Association (0777)

Amend Place 1 to include reference to other policy objectives such as protecting the special characteristics and outstanding universal values.

Cynthia Shuken (0632)

No major development in city centre or Morningside.

Edinburgh Chamber of Commerce (0379)

No modification specified.

Edinburgh World Heritage (0339)

At para 3.3 include reference to the importance and method of engaging the local community and wider stakeholders in the development of principles for development of their areas.

Amend paragraph 3.6 to "...the right balance between several co-supporting and sometimes competing"

At 3.10 amend third bullet to:

"Opportunities to enhance the retail, leisure, community and cultural experience on Princes Street"

Amend first paragraph of Place 1 to:

"...enhances its character, heritage values, attractiveness, vitality and accessibility and contributes to its role as a World Heritage Site, a strategic business and regional shopping centre..."

Amend Place 1 (b) to:

"...topography, accessibility characteristics, heritage values and the historic or otherwise positive character of the surrounding area."

Amend 3.11 to:

"...of a high quality of design and taking account of the characteristics of the historic environment to protect and enhance the Outstanding Universal Value of the Old and New Towns of Edinburgh World Heritage Site."

Elgin Haymarket Limited (0292)

Request that the Haymarket District is included as a strategic city centre 'Place' in Central Edinburgh Place 1.

#### Central Edinburgh Place 1b: Haymarket District

Planning permission will be granted for development within the boundary of Haymarket District as defined on the Place Map (see Figure 1) provided it accords with the Haymarket District Development Principles, and the approved or subsequently approved master plan. Located in the west of the city centre, just beyond the World Heritage Site and conservation area boundaries (see Figure 2), Haymarket District includes Haymarket Station and tram stop, national cycle and core paths routes, M&G's Edinburgh Haymarket, Rosebery House, Osbourne House, Cosla, the site of the proposed PBSA, Elgin House and Royal London. Comprehensive office led mixed-use development is encouraged, and already underway at Edinburgh Haymarket.

Haymarket District Development Principles:

- a. create layouts which integrate with adjoining developments;
- b. improve east-west linkages along Haymarket Yards as an active travel route and linkages north to Haymarket Terrace as a strategic corridor;
- c. turn Haymarket Yards into a local 'active' street frontage in accordance with the Edinburgh Design Guidance;
- d. proposals should explore potential to provide attractive frontages and arrivals to the tram network/Haymarket Station, safeguarding heritage and any listed buildings;
- e. proposals should also take the opportunity to enhance the use, physical appearance and linkages to/from the national cycle and core path networks, supported by a low vehicle speed environment, improving public realm;
- f. contribute to wider zero carbon and wellbeing objectives;
- g. protect and enhance key townscape views, and help determine appropriate densities, through townscape and visual assessments;
- h. encourage higher densities on brownfield sites close to public/active travel hubs; and
- h. provide or contribute towards transport infrastructure and community facilities.

#### Hazledene House Limited (0695)

Strategy should seek to address:

- The future role of Princes Street and the level of vacancies at all floors.
- The shift of the focus of retail within Edinburgh away from Princes Street to the Eastern End of the City Centre and the new St James Centre
- Rose Street and connecting streets and the opportunity to make better use of the lanes between them. Recognise that selective demolition to remove redundant buildings could assist in delivering a greater mix and density of uses and provide opportunities for new permeability and greater use of the lanes

#### Mark Ockendon (0419)

Include provision for new greenery, whether trees or other planting in all policies.

#### SEPA (0012)

At Place 1 (c) include specific reference to green/blue infrastructure as part of the station upgrade, capturing water nearby.

Living Streets Edinburgh Group (0486)

Amend paragraph 3.8 to:

"To achieve these outcomes, the allocation of street space will be rebalanced to reflect the transport hierarchy with walking prioritised...."

Infers removal of 'achievable' from Place 1 (d)

Melford Developments Ltd (0308)

Provide more flexibility within Policy Place 1

Review Map 12, page 43 Edinburgh City Centre in relation to boundaries.

Nuveen Real Estate (0564)

At paragraph 3.11 explicitly acknowledge that activation of the city centre's publicly and privately owned external spaces represent an opportunity to provide a diversity of uses and activities, generate additional footfall for the city centre and as such maintain and enhance the vitality of the retail offer in the city centre.

Southside Community Council (0781)

At Place 1 (d) strengthen wording about ambition to create new civic spaces and traffic free zones.

West End Community Council (0692)

Include a specific place plan for the West End.

## **Place 2 – Fountainbridge**

Cockburn Association (0777)

Include an additional statement supporting the vertical integration of uses in each development area.

Janet Woolley (0470)

No modification specified.

Living Streets Edinburgh Group (0486)

At Place 2 include separate not shared pedestrian and cycle links, and statement that with any other required works they remove not reduce the barrier effect.

Mark Ockendon (0419)

At Place 2 (g) add "including clear views of the existing skyline by restricting the height of new developments"

#### SEPA (0012)

Explore discharge of surface water to the canal if the potential for the risk of flooding from the canal be ruled out.

#### **Place 3 and H8 Astley Ainslie**

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Jan Hulme (0420), Jennifer Hall (0534), Jennifer Roe (0407), Julia Caroline Higgitt (0067), Neil Ross (0610), Olwyn Alexander (0351), Richard Beauchamp (0604), Ruth Beauchamp (0458), Sally Kerr (0435), Teresa Fernandes (0194), Tom Proudfoot (0740), William Brotherston (0754), Michael Adrian Hall (0261)

At Place 3 (a) reorder priorities - greenspace, community infrastructure and then housing.

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Jan Hulme (0420), Jennifer Hall (0534), Jennifer Roe (0407), Julia Caroline Higgitt (0067), Olwyn Alexander (0351), Richard Beauchamp (0604), Ruth Beauchamp (0458), Sally Kerr (0435), Teresa Fernandes (0194), Teresa Fernandes (0194), Tom Proudfoot (0740), Michael Adrian Hall (0261)

Amend place 3 (b) to: Any new development will only be permitted on the existing footprint of current buildings or recently demolished ones. Any new build take account of the existing trees which must be protected. The existing Tree Preservation Orders for the site must be upheld.

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Jan Hulme (0420) Jennifer Hall (0534), Jennifer Roe (0407), Julia Caroline Higgitt (0067), Olwyn Alexander (0351), Sally Kerr (0435), Teresa Fernandes (0194), Tom Proudfoot (0740),

At Place 3 (c) add "all buildings should be carbon neutral".

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Maggie Carson (0105), Jennifer Hall (0534), Julia Caroline Higgitt (0067), Peter Edwards (0601), Richard Beauchamp (0604), Ruth Beauchamp (0458), Sally Kerr (0435), Tom Proudfoot (0740), William Brotherston (0754), Michael Adrian Hall (0261)

At Place 3 (d) require a full archaeological survey before any development of the site is approved.

Annie Bell (0136), Astley Ainslie Community Trust (0318), Jennifer Hall (0534), Julia Caroline Higgitt (0067), Teresa Fernandes (0194), Tom Proudfoot (0740), Richard Beauchamp (0604), Ruth Beauchamp (0458), Michael Adrian Hall (0261)

At Place 3 (f) change 15 m to 50m.

Alison Stoddart (0658), Annie Bell (0136), Jennifer Hall (0534), Julia Caroline Higgitt (0067), Maggie Carson (0105), Peter Edwards (0601), Richard Beauchamp (0604), Ruth Beauchamp (0458), Sally Kerr (0435), Teresa Fernandes (0194), Tom Proudfoot (0740), Michael Adrian Hall (0261)

At Place 3 (h) state that existing rights of way across the whole site must be preserved.

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Jennifer Hall (0534), Julia Caroline Higgitt (0067), Maggie Carson (0105), Teresa Fernandes (0194), Tom Proudfoot (0740), Michael Adrian Hall (0261)

At Place 3 (i) require provision of education, healthcare infrastructure and community facilities on-site.

Alison Stoddart (0658), Annie Bell (0136), Archie Clark (0003), Astley Ainslie Community Trust (0318), Jennifer Roe (0407), Juniper Green & Baberton Mains Community Council (0306), Michael Adrian Hall (0261), Olwyn Alexander (0351), Richard Beauchamp (0604), Ruth Beauchamp (0458), Teresa Fernandes (0194), Tom Proudfoot (0740), William Brotherston (0754)

Implies that capacity of site should be reduced.

Andrew Gray (0388)

No new development within Astley Ainslie.

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

At Place 3 include readable map.

Infers retention of hospital provision.

Use bullets rather than numbers

Include an example of mobility hubs in glossary.

Astley Ainslie Community Engagement Group (AACEG) (0275)

Place 3 at paragraph 3.14 change lines 4 & 5 to "Once approved the Place Brief will become planning policy."

Place 3 (b) add "The location, design and building of new houses must respect and protect the existing trees and their protected root zone."

Place 3 (h) Replace "Provision of several pedestrian/cycle routes through the site...." with "Preserve the existing rights of way as pedestrian/cycle routes through the site...."

Place 3 add additional principles

1) "The proportion of new housing that is affordable and/or for social rent must be at least

the current statutory proportion (35% in 2021).

2) "Affordable housing should all be on-site in the Astley Ainslie not located elsewhere".

3) "All buildings on the site should be built or renovated to the highest environmental standards so as to be carbon neutral and, if appropriate, linked to a shared ecological heating system.

4) "Any new development must not appear as an intrusive or alien feature in the views from Blackford Hill across the Grange and towards the city centre skyline. These views are precious and new development should sit comfortably and harmoniously in its setting."

Provide sufficient primary and secondary school places and primary care facilities.

Provide public transport from within the site to local shops in Morningside and the city centre.

Within Appendix D H8 require a protected species survey.

At Table 1, page 150 BGN23 add "New building and digging of trenches should avoid the root protection area of the established trees."

At Table 1, page 150 BGN23 include the preservation and maintenance of the ancient boundary walls which cross the site.

At Table 2 Housing Proposal H8 change "once approved the Place Brief will become non-statutory planning guidance." to "Once approved the Place Brief will become planning policy".

#### Cockburn Association (0777)

At Place 3 (a) replace "respects the mature landscape setting of the site" with "preserves the mature landscape setting of the site".

#### Colin Fraser (0106), Maggie Carson (0105), Sergey Gorobets (0414)

At Place 3 (a) remove "housing led"

#### Dave Berry (0463)

Amend Place 3 (e) to "outdoor play and exercise space facilities needed on site to ensure all new homes in the development and the surrounding area are adequately served by play areas in line with the requirements of the Council's Open Space strategy".

#### Fiona Brownlee (0796)

At Place 3 require retention of buildings.

#### Frances Guy (0589)

Set out priorities of the plan for site in one place.

Grange/Prestonfield Community Council (0192)

No specific modification suggested but infer that at Place 3 timing of development should be set out.

Hervé Saint-Amand (0276)

At Place 3 (f) provide stronger protections for the existing woodland areas

Ian Ross (0423)

Amend Place 3 to provide for community led development.

Inverdunning (Hatton Mains) Ltd (0427)

Delete H8

Jan Hulme (0420)

At Place 3 give weight to history and archaeology.

Review capacity of site.

Require Place Brief before encouraging development.

Jane Dudman (0563)

At Place 3 provide more detail on access to the site.

Janet Woolley (0470)

No modification specified.

John Falconer (0401)

At Place 3 (a) remove housing led and state priorities as 1) preservation of all trees and all grass and shrub areas to keep the parkland character, 2) preservation of listed buildings and butterfly pavilions 3) adaption of existing buildings, where possible, for community use.

At Place 3 (b) add construction of new housing only on brownfield parts of the site where modern buildings have been pulled down, or which are already car-parks or similar. New housing should be of very limited height and should not disturb the view of the parkland and butterfly pavilions from the top of Blackford Hill.

At Place (i) add:

“All current rights of way through the site should be preserved, and if possible enhanced.”

Infers capacity should be reduced.

Kathryn Poolman (0574)

Limit development and respect wildlife corridors and provide space for people to enjoy.

Safeguard the views to the Blackford Hill.

Living Streets Edinburgh Group (0486)

At Place 3 include:

- development is to be car free apart from disabled and servicing provision.
- The layout and design should be at a human scale with walking at its heart.
- Contributions for active travel infrastructure and existing nearby pedestrian infrastructure

Liz Glass (0645)

Include a specific aim to improve biodiversity and conserve the special landscape.

Address green corridors.

Maciej Malaszuk (0179)

No modification specified but implies change should be made to principles of Place 3.

Maggie Carson (0105)

Implies that Place 3 (b) should include reference to repurposing existing buildings rather than new buildings and require preservation of views from Blackford Hill.

At Place 3 (g) prioritise blue and green corridors and require site to be car free.

At Place 3 (i) include requirement for consultation to ensure that provision is adequate for all in the immediate area and adjacent neighbourhood/town centre.

At Place 3 add requirement for protected species assessment.

Mark Ockendon (0419)

At Place 3 add new requirement: "Protect the heritage of the area and retain clear views of the sky by restricting the height of new developments"

Mr Roger Thomas (0345)

At Table 1, page 150 expand BGN23 to include the preservation and maintenance of the ancient boundary walls which cross the site.

At Place 3 (c) include that the old stone boundary walls which cross the site should be preserved and maintained.

At Place 3 (f) clarify if this means exposing of currently culverted sections of the Jordan Burn.

NatureScot (0528)

Amend Place 3 (b) to:

“Determination of the location, scope and scale of development through a thorough assessment of the landscape, visual and heritage assets and opportunities of the site.”

Amend Place 3 (c) to:

“The extensive woodland, which is covered by a whole site Tree Preservation Order, should inform the location, design and density of development.”

Neil Ross (0610)

At Place 3 (c) any developments must be consistent with the Conservation Area character appraisal.

NHS Lothian (0596)

Update Plan to reflect that a Place Brief has been prepared.

State in supporting text that Place Briefs will be created in partnership with NHS Lothian.

Patricia Willder (0205)

No modification specified.

SEPA (0012)

No modification specified.

Peter Edwards (0601)

At Place 3 (a) change priority to green space and nature conservation, not housing.

At Place 3 (b) any housing should be restricted to the footprint of existing buildings.

Prof D N Bateman (0004)

At Place 3 provide more detail and revalue approach to preserve green space.

Robert Falcon (0640)

At Place 3 include reference to density.

Sally Kerr (0435)

At Place 3 (e) consider opportunities for innovation in play facilities with consideration of their sustainability and how they sit in the environment.

Scottish Wildlife Trust Lothian group (0560)

At Place 3 (b) the TPO for the entire site should remain.

At Place 3 include reducing the need for cars.

Shelagh Sharp (0111)

No modification specified.

Simon Thomson (0248)

Delete H8

Remove place policy and retain development principles as guidance only for sites coming forward as windfall opportunities.

William Brotherston (0754)

Infers principles should include reference to types of housing.

William Mason (0438)

Amend Place 3 to manage site as part of a green network linking the existing natural sites at Blackford Hill and the Braids to the centre of the city via the Meadows.

William Moyes (0305)

Retain substantial portion as public open space with use tightly controlled.

Give priority to walking.

Limit provision for cycling and wheeling.

Require new development to be of a high standard of design and construction and carbon neutral.

Set requirements for type of housing.

Require charging points for electric cars.

No wild areas.

Make clear that existing rights of way across the whole site will be preserved.

Specify how site can provide or contribute towards education, and healthcare infrastructure and community facilities alongside greenspace.

Richard Doake (0436)

At Section 4, Table 2 remove the capacity and have this determined through Place Brief.

### **H1 Dundee Street and H2 Dundee Terrace**

E Ritchie and D Melrose (0430)

No modification specified.

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H1 and H2

SEPA (0012)

No modification specified

### **H3 Chalmers Street**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H3

SEPA (0012)

No modification specified

### **H4 Dalry Road**

Dalry Local Residents (0267)

Include the following specification in plan text:

1. Limited in height - one story less than properties on Dalry Road, same height as properties on the same side of the road, to retain views of historic Dalry and sun set from Dalry Park.
2. A new road facing square for public and tourist activity, cafes and seating with ground floor commercial units facing into the square supporting new businesses, employment and rates. Residential units above.
3. A link path from the back of the square to the park, connecting Dalry Road to the park via the square. Complimenting the existing plans for the park and connectivity across the city.
4. Extension of the site footprint, overall the development footprint actually increases even with the addition of the square and path. This is achieved by extending into the very under used car park, which at present is not a good use of the city centre space. Both the site and the carpark belong to the same owner so this should be feasible.

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H4

SEPA (0012)

No modification specified

#### **H5 Roseburn Street**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H5

Murrayfield Community Council (0146)

No modification specified.

SEPA (0012)

At Appendix D require a flood risk assessment.

#### **H6 Russell Road (Royal Mail)**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H6

Murrayfield Community Council (0146)

No modification specified.

Royal Mail Group Limited (0501)

Remove H6 and re-allocated as Business and Industry Areas under Policy Econ 4 of the plan.

Or if H6 retained include at Appendix D reference to Royal Mail's operations and ensure that any necessary mitigation is to guarantee that there is no undue impact to Royal Mail.

SEPA (0012)

At Appendix D require a flood risk assessment.

#### **H7 Murieston Lane**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H7.

Nick Johnstone (0368)

Remove 3,4,5,7,8,9,10 and 11 Murieston lane from H7.

SEPA (0012)

No modification specified.

### **H9 Falcon Road West**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H9.

SEPA (0012)

No modification specified.

### **H10 Watertoun Road**

Andrew and Alison Ferguson (0429)

No modification specified but suggests removal of site or reduction in capacity.

Dr Y Wang (0522)

Reduce capacity.

Grange/Prestonfield Community Council (0192)

Reduce capacity to 49.

SEPA (0012)

No modification specified

### **11 Watson Crescent Lane**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H11.

SEPA (0012)

No modification specified.

### **H12 Temple Park Crescent**

Yinshuang ding (0086)

Reduce height of development.

SEPA (0012)

No modification specified.

### **H13 Gillespie Crescent**

Brenda Rowan (0488), Gabriela Medero (0022), George Goussetis (0269), Louise Blanke (0675), Luke Treadwell (0748), Nick Sherington (0500), Sandy Ramsay (0026), Steve Garrett (0359), Tollcross Community Council (0332)

Remove H13.

Inverdunning (Hatton Mains) Ltd (0427)

No modification specified but require clarification of intention for site or removal.

Shona Simon (0242)

No modification specified but suggest that building should be below the height of current buildings and adequate greenspace should be provided.

SEPA (0012)

No modification specified.

### **H14 Ratcliffe Terrace**

Alix Speed (0043)

No modification specified.

Felix Freund (0530)

No modification specified but suggests removal of H14.

Grange/Prestonfield Community Council (0192)

Expand H14 to include the whole of the area surrounded by Conservation Areas as likely to come forward for redevelopment within plan period, to encourage better place making and integration with adjacent neighbourhoods. And require a place brief.

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H14

Margaret Newman (0697)

No modification specified but suggests building should not be higher than existing houses, set back from wall of their property with parking or landscaped garden on the other side of the 4 ft. high wall, and trees planted along the other side of the wall.

SEPA (0012)

No modification specified

### **H15 St Leonard's Street (car park)**

Julie McIlroy (0373)

No modification specified suggests any development should be restricted in height and historical nature of the street needs to be protected. Should be dedicated parking.

Simon Paget-Tomlinson (0375)

No modification specified but suggest removal of H15.

SEPA (0012)

No modification specified

Anne Binckebanck (0372)

Remove proposals and use site for greenspace.

### **H16 Eyre Terrace**

Jennifer Inglis (0437)

Require Place Brief for site.

Add to Appendix D:

- a) Replacement of trees at a level that matches the considerable loss of trees that has already taken place.
- b) Treatment of Fettes Row - the buildings opposite the listed Georgian Terrace on Fettes row should be appropriate in height and massing and architecturally sympathetic.
- c) greater clarity on what 5 m from the trees means
- d) Building height should be restricted on Royal Crescent, or those that are within the setting of Grade A listed buildings on Royal Crescent
- e) Any future development proposal should provide 20% usable greenspace not just open space.
- f) Specify impact on sunlight.
- g) high quality boundary treatments should be preserved.
- h) Materials should be natural sandstone, there should not be glass roof terraces or pavilions, roofs should be natural slate
- i) New outdoor play should be provided

Appendix D should refer to "Dundonald St" not "Drummond Place"

New Town and Broughton Community Council (0254)

No modification specified however representation suggests that Appendix D is inaccurate and should be corrected to reflect planning consent.

Mr Gareth J Roberts (0335)

Remove H16 and allocate for other amenity uses or reduce the number of units.

SEPA (0012)

No modification specified

Wendy Johnson (0002)

No modification specified but suggest removal of H16 and allocation for park extension.

### **H17 Eyre Place**

Alexandra Stevenson (0304), Alasdair Wilson and Gaelle Geveaux, (0807) Daniel Gough (0421), Vanessa Steven (0755), Hannah and Chris Edwards (0696), Lee Davis (0117), Cameron Prentice (0076)

Remove H17.

Angela Ball 0277)

Fully consult and set out plans.

CASL Stanley Place Property Owner Limited (0737)

Amend allocation to accommodate a mix of uses, such as purpose built student accommodation. residential housing and other commercial uses.

Charlie Clark (0790)

No specific modification suggested but infers requirement for the site:

- Access via Rodney Street
- On-site parking
- Adequate drainage

Dr Jane Gear (0487)

No modification specified however representation suggests that the site should not be allocated for housing.

E Roberts (0471)

Limit building height.

Require parking to be contained within site.

Ewan Gray (0103)

Remove and replace with green space proposal.

Francesca Fiori (0390)

Remove H17

Use the land to enhance service provisions the local community

Iain Leslie (0586)

No modification specified but infer removal and allocation for alternative use.

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H3.

Irene Kernan (0549)

No specific modification proposed but suggests that the site should be developed for allotments, sheltered facility or health centre.

Lorraine Smith (0462)

No modification specified.

Marton Feigl (0196), Vincent Meiklejohn (0069)

Remove and create park.

Mr Gareth J Roberts (0335)

Remove H17 and allocate for other amenity uses or reduce the number of units.

New Town and Broughton Community Council (0254)

No modification specified however representation implies that the capacity should be reduced and the area should be included in a conservation area.

Sarah Roberts (0630)

Provide detail on building heights.

Restrict building heights

Include new parkland, community centre, skate park or other facility for teen use.

Stephanie Stevenson (0793)

No modification specified.

Theo Scott (0014)

Increase number of units.

William Craigie (0186)

Reduce capacity

SEPA (0012)

No modification specified.

### **H18 Royston Terrace**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H18.

Jonty Bredin (0682)

No modification specified but suggests reviewing proposal.

Michal Rozynek (0626)

No modification specified but suggests current height of buildings should be maintained and access maintained for emergency vehicles.

Melissa Sharkey (0684)

No modification specified.

SEPA (0012)

No modification specified.

Amy Middlemass (0629)

No modification specified.

### **H19 Broughton Road (Powderhall)**

SEPA (0012)

No modification specified.

### **H20 Broughton Market**

Corline Elisabeth Scholes (0713)

Reduce density with the same footprint and height as existing buildings and without substantial changes to windows.

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H20

Terry Levinthal (0313)

Delete H20

SEPA (0012)

No modification specified

Edinburgh World Heritage (0339)

Amend first bullet point in Appendix D to:

“The site is located in the Old and New Towns of Edinburgh World Heritage Site and within the immediate setting of a number of listed buildings. The design of the development should seek to fully understand and preserve and/or enhance these heritage assets and their setting.”

### **H21 East London Street**

Amanda Michie (0217)

No modification specified.

Helen Sugden (0797)

Provide details of development.

Italian Consulate General for Scotland and Northern Ireland (0320)

Redefine boundaries of site.

Inverdunning (Hatton Mains) Ltd (0427)

Reduced site in size and amended capacity.

Jennifer Newton (0679)

Reduce density.

Align buildings with the surrounding dwellings.

Provide parking.

SEPA (0012)

No modification specified

Thomas Unter (0204), Nigel Sedgwick (0680)

Reduce capacity.

Require limit on building height.

### **H22 McDonald Road (B)**

Blandfield Residents Association (0426)

Remove H22 and retain for commercial, employment and community use.

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H22.

SEPA (0012)

No modification specified.

### **H23 McDonald Place**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H23.

SEPA (0012)

No modification specified.

### **H24 Norton Park**

Annie McIntyre (0802)

No modification specified.

Chris Byrne (0297)

At Appendix D H24 add condition regarding the heights and massing of buildings and frontages. These should not exceed the heights and massing of adjacent tenements on Rossie Place, and any proposed development should not overshadow the sheltered housing to the north of the site.

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H24.

### **H25 London Road (B)**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H25.

SEPA (0012)

No modification specified.

### **H26 Portobello Road**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H26.

SEPA (0012)

No modification specified.

### **H27 Willowbrae Road**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Remove H27

SEPA (0012)

No modification specified.

### **H28 Cowan's Close**

Inverdunning (Hatton Mains) Ltd (0427)

Consider that site should be reduced in size with amended capacity as part-owned by the Council and part-owned by a retail unit owner with no confirmation of disposal.

Ruth Buchanan (0083)

No modification specified however infers that parking needs to be addressed.

SEPA (0012)

No modification specified.

## **Summary of responses (including reasons) by planning authority:**

### **General**

New Town and Broughton Community Council (0254)

The proposals map identifies the allocations of the Plan. Outwith these allocations there may be proposals for housing development which have come forward and these are taken account of in the overall housing land supply. Policy Econ 5 requires that proposals to

redevelop employment sites in the urban area should include floorspace designed to provide for a range of business and commercial users. **No modification proposed.**

## **Place 1 – Edinburgh City Centre Policy**

Archie Clark (0003)

The suggestion of inclusion of a car park in George Street is not accepted. The city centre is highly accessible by a range of transport modes and City Plan Policy Inf 3 does not support proposals for new off-street car parking within the city centre. The City Centre Transformation addresses movement in George Street. **No modification proposed.**

Place 1 provides high level principles for the city centre. Provision of pedestrian crossings and integration of tram and bus networks are detailed matters which are more appropriately addressed through the City Centre Transformation (CD060), emerging Princes Street and Waverley Valley Strategy and Place Briefs for Princes Street. **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The policy as worded requires that development retains and enhances the character, attractiveness, vitality and accessibility and contributes to its role as a strategic business and regional shopping centre and Edinburgh's role as a capital city. The inclusion of the word minimum is suggested as the representee considers that the policy as worded suggests that only the criteria set out in the policy must be met to make the development acceptable. This is not accepted as the development plan must be read as a whole, other policies will apply, and it is not necessary to state this within the policy. **No modification proposed.**

Paragraph 3.11 requires office provision as part of major mixed-use development, and it encourages housing on appropriate sites. The requirement for office development is not considered to be contrary to the concept of 20 minute neighbourhoods. The city centre contains a range of uses including residential and employment. The city centre is a prime location for office development due to proximity to other office, service and transport hubs. The requirement for office development meets demand in the city centre and ensures an appropriate mix of uses to support economic growth. The city centre performs a number of roles as a capital city and regional centre and place where people live. It is not accepted that the primary requirement in the city centre should be for housing. **No modification proposed.**

Aviva Life and Pensions UK Limited (0598), LaSalle Investment Management (0262), The Institute of Chartered Accountants of Scotland (0182)

Policy Env 26 aims to promote an appropriate density of housing development and recognises at paragraph 3.142 that where appropriate increasing density and building heights can enhance an area's character and lead to better placemaking. Policy Env 30 sets out criteria to be met for development which rises above the building height prevailing generally in the surrounding area. Within the city centre there are a range of heights and specific proposals are best addressed against Policy Env 30, taking account of their precise location and prevailing building heights, through the planning application process. **No modification proposed.**

Cockburn Association (0777)

Paragraph 3.5 makes reference to the World Heritage Site and listed buildings. Paragraph 3.6 sets out the aim of the Plan including to ensure that development in the city centre achieves the right balance between competing priorities including protecting the built and natural heritage. Paragraph 3.11 also refers to the purpose of the policy to ensure development takes account of the characteristics of the historic environment. Further reference to these policy objectives is therefore not necessary. **No modification proposed.**

Cynthia Shuken (0632)

As a capital city and regional centre, it is important that the Plan allows for the city to realise its economic potential. It is recognised that this needs to be balanced with protecting the built and natural heritage. Paragraph 3.6 of the Plan sets this out. Place 1 supports development in the city centre which retains and enhances its character. It guides development to ensure proposals take account of the characteristics of the historic environment. **No modification proposed.**

Edinburgh Chamber of Commerce (0379)

Princes Street is within the identified City Centre Retail Core. Policy Re 2 City Centre Retail Core sets specific policy. Planning guidance, City Centre Shopping and Leisure, January 2020 (CD046), guides development proposals in the city centre retail core. The emerging Princes Street and Waverley Valley Strategy will guide opportunities to enhance the retail and leisure experience on Princes Street. Princes Street is also within the City Centre Transformation programme which aims to make streets more people-friendly and inclusive places that support the local economy. The City Centre Transformation programme is supported by a Delivery Plan (CD060) which sets out how consultation will be undertaken on individual projects. **No modification proposed.**

Edinburgh World Heritage (0339)

Paragraph 3.10 sets out that change in the city centre will be guided by the emerging Princes Street and Waverley Valley Strategy. It provides bullets of some elements that will be guided by the strategy which includes opportunities to enhance the retail and leisure experience on Princes Street. This does not imply that Princes Street is purely shopping and leisure, only that this is one element of the city centre that will be guided by the strategy. Paragraph 3.10 is a summarised reference to the strategy and does not require to set out every aspect that will be guided by it. **No modification proposed.**

Suggested amendments to Place 1 to reflect the importance of the area as a World Heritage Site and the need to protect and enhance this is not considered necessary. Paragraph 3.5 makes reference to the city centre's World Heritage status. Paragraph 1 of Place 1 requires that development retains and enhances the character of the city centre and paragraph 3.11 that proposals should provide a high quality of design taking account of the characteristics of the historic environment. These statements along with Policy Env 9 World Heritage Sites are considered sufficient. **No modification proposed.**

Elgin Haymarket Limited (0292)

The Plan sets out the strategy and policies to be applied to proposals for development across the city. Place policies are provided for major sites, where there are allocations for development within the plan, to guide their development. Place 1 applies across the city centre. The boundary is identified on the proposals map. It includes the area identified in the supporting document submitted with the representation, City Plan 2030: Representation, as the Haymarket District. Place 1 sets out requirements for development within this area. This supports comprehensively designed proposals in accordance with any relevant development brief. Policy Env 2 Co-ordinated Development encourages the preparation of development frameworks, master plans, development briefs or Place Briefs. The principles set out are sufficient to guide development of the Haymarket area, as part of the city centre. **No modification Proposed.**

Hazledene House Limited (0695)

Support for the Princes Street and Waverley Valley Strategy is noted. Paragraph 3.10 sets out key elements of the emerging Princes Street and Waverley Valley Strategy. This includes opportunities to enhance the retail and leisure experience on Princes Street. Suggested inclusions are detailed matters which are more appropriately addressed through the Princes Street and Waverley Valley Strategy and Place Briefs for Princes Street than in the plan. **No modification proposed.**

Living Streets Edinburgh Group (0486)

Paragraph 3.7 sets out that walking, wheeling, cycling and public transport use will be prioritised. There is no need to refer to the transport hierarchy in paragraph 3.8. Paragraph 3.8 sets out actions that will be taken not what the priorities are. Place 3 (h) requires provision of pedestrian/cycle routes through the site. Design principles for footpaths and cycle routes are set out in the Edinburgh Design Guidance (CD047). The design and priority would be appropriately addressed through the planning application process on a site specific basis. **No modification proposed.**

Place 1 (d) requires the creation of new civic spaces and traffic-free pedestrian routes where achievable. The word achievable is included to acknowledge that this may not always be possible and should be retained. **No modification proposed.**

Melford Developments Ltd (0308)

The policy is considered to provide sufficient flexibility. The policy is worded to provide flexibility using terms – where achievable, where practicable, appropriate to location and maximising the potential of the site. The city centre is a prime location for office development due to proximity to other offices, services and transport hubs and is therefore a preferred location for office development along with strategic business centres, town or local centres and commercial centres as set out in Econ 3. **No modification proposed.**

Map 12 provided on page 43 is illustrative. The boundary of Edinburgh City Centre is shown on the proposals map. **No modification proposed.**

Nuveen Real Estate (0564)

Place 1 (d) requires the creation of new civic spaces. It is not considered to be necessary to include further reference to the benefits of external spaces within supporting text at paragraph 3.11. **No modification proposed.**

#### SEPA (0012)

Paragraph 3.10 sets out that change in the city centre will be guided by the emerging Princes Street and Waverley Valley Strategy. It provides bullets of some elements that will be guided by the strategy. Paragraph 3.10 is a summarised reference to the strategy and does not require to set out every aspect that will be guided by it. **No modification proposed.**

#### Southside Community Council (0781)

Place 1 (d) sets out a policy criterion which requires creation of new civic spaces where achievable. This is considered to be strong enough while being realistic that it may not always be possible to provide. **No modification proposed.**

#### West End Community Council (0692)

The Plan sets out the strategy and policies to be applied to proposals for development across the city. Place policies are provided for major sites, where there are allocations for development within the plan, to guide their development. Place 1 applies to the city centre. The boundary is identified on the proposals map. This area includes a large part of the West End Community Council area. It is not considered appropriate to include a specific Place Policy for the West End. Local Place Plans introduced by the Planning (Scotland) Act 2019 (CD102) will provide an opportunity for communities to set out aspirations for future development of their area. **No modification proposed.**

### **Place 2 – Fountainbridge**

#### Cockburn Association (0777)

Place 2 sets out general principles for development. The layout within buildings is a more detailed matter which is addressed through other policies of the Plan and the Council's Edinburgh Design Guidance (CD047) and other non-statutory guidance. **No modification proposed.**

#### Janet Woolley (0470)

Place 2 (c) requires the creation of new public spaces and Policy Env 23 and Env 24 protect open space. **No modification proposed.**

#### Living Streets Edinburgh Group (0486)

Place 2 confirms that proposed development must accord with the Fountainbridge Development Principles and the approved, or subsequently approved masterplan. Where active travel proposals are required, they will have to meet the Council's Edinburgh Design Guidance and Street Design Guidance (CD047) which has specific information in relation to cycle lanes, segregated cycle lanes and footways. Where the active travel proposals are likely to be delivered by the Council and funded in part by developer contributions, the

details will be finalised as part of the Active Travel Action Plan (in preparation). Once this is finalised, this can be reflected in iterations of the City Plan Action Programme. The barrier effect mentioned in criterion (b) relates to the Western Approach Road acting like a barrier to improved active travel connectivity across the city. Reducing the barrier effect will accord with the transport hierarchy as it will prioritise walking, wheeling and cycling. The Council considers the wording of policy Place 2 to be appropriate and it will enable the Council to ensure that no impediment to delivery arises. **No modifications proposed.**

Mark Ockendon (0419)

Building height is controlled by Policy Env 30 (c) which requires that there is no adverse impact on, the historic skyline. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **Place 3 and H8 Astley Ainslie**

#### **General**

Andrew Gray (0388)

The location and scale of housing within the site will be determined through an assessment of the landscape and heritage assets on the site. A Place Brief will establish high level principles to inform future mater planning and design processes. The appropriateness of building on areas not previously occupied will be established through these processes. Policy Env 6 requires that proposals link to the city's green/blue network. **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

As set out in Place 3 (b) the location of development is to be determined through an assessment of the landscape and heritage assets on the site. It is therefore not appropriate to include a map at Place 3 until this has been carried out. **No modification proposed.**

Hospital provision is a matter for NHS Lothian. Policy Inf 1 requires access to key community facilities which includes healthcare and schools, therefore if required this would be achieved through Policy Inf 3 and it is not necessary to state this requirement within Place 3. **No modification proposed.**

A definition of a mobility hub is provided in the Plan Glossary at page 201. It is defined as "a local and accessible place which brings together different transport modes alongside associated facilities, services and information to encourage more sustainable travel. Can include a range of shared mobility services, click and collect and electric vehicle charging."

This is considered to provide an example of what a mobility hub might contain. Further details including key elements of mobility hubs and a diagram of components of a mobility hub are set out in the City Mobility Plan 2021-2030 (CD062). This level of detail is not considered necessary within the plan. **No modification proposed.**

Astley Ainslie Community Engagement Group (AACEG) (0275)

Planning Policy is set out in the local development plan. There is no provision for Place Briefs to become planning policy. **No modification proposed.**

Astley Ainslie Community Engagement Group (AACEG) (0275), Maggie Carson (0105)

Appendix D sets out technical requirements for sites and is the appropriate place to set out any requirement rather than within the principles of Place 3. It is suggested that Appendix D should include a requirement for a protected species assessment on this site. Policy Env 21 and Env 37 require proposals to take account of biodiversity considerations, and to achieve this may require a protected species assessment. Therefore, the Council considers no modification is required, however the Reporter may see merit in amending Appendix D for clarity. **No modification proposed.**

The entire site is covered by Tree Preservation Order number 147. Policy Env 20 protects trees and woodlands. Detailed consideration of tree protection measures will be required of any development proposal. It is therefore not necessary to include at Part 4, Table 2, BGN23 that digging of trenches should avoid tree roots. **No modification proposed.**

Frances Guy (0589)

Place 3 provides specific requirements for Astley Ainsley. The other policies of the Plan may also apply to the site depending on the nature of proposals. It would not be practical and would result in duplication if all policies were to be quoted for individual sites. The Plan should be read as a whole, and it is therefore not necessary to repeat these requirements at Place 3. **No modification proposed.**

Grange/Prestonfield Community Council (0192)

It is not appropriate to set out timings for development within the plan. Future Housing Land Audit and Completions programme will set out expected house completions. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. This anticipates a site start in 2027/28. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

Astley Ainslie has been identified as a housing site to contribute towards meeting the housing land supply target set out in the plan. It has been identified through a process of site assessment set out in the City Plan Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. In their response to the proposed plan NHS Lothian were supportive of policy that encourages the redevelopment of the Astley Ainslie campus. The Council has carried out consultation on the future redevelopment of the Astley Ainslie site in order to help shape a Place Brief. The Lothian Strategic Development

Framework 2022-2027 (CD130) prepared by the Lothian Health and Care System (a collaboration which includes NHS Lothian) sets out actions to deliver over the next five years. The framework identifies in years 2/3 that proposals for Astley Ainsley will be developed. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. This anticipates a site start in 2027/28. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

Jan Hulme (0420)

Place 3 (c) and (d) address history and archaeology. Appendix D identifies that archaeological mitigation will be required. **No modification proposed.**

Place 3 requires that development should accord with a place brief. The Place Brief will establish high level principles to inform future master planning and design processes. Once approved the Place Brief will become non-statutory planning guidance. Proposals for any part of the site in advance of an approved Place Brief will be considered premature in line with Policy Env 2 Co-ordinated Development. **No modification proposed.**

Jane Dudman (0563)

Place 3 sets out high level principles for the site. The detailed design including access will be established through the planning application process. **No modification proposed.**

Janet Woolley (0470)

Support for Place Brief is noted. The site principles set out in Place 3 require a housing-led mixed use development. Policy Hou 2 requires that 35% of the total number of units is affordable housing and Policy Hou 3 requires an appropriate range of type and size of housing. The Plan therefore provides for a mixture of tenure and type. **No modification proposed.**

Kathryn Poolman (0574)

The location and scale of development within the site will be determined through an assessment of the landscape and heritage assets on the site. The entire site is covered by a tree preservation order. Place 3 requires that any development respects the mature landscape setting of the site and retains its special character. Reference is made in paragraph 3.14 to the assessment of proposals against the Astley Ainslie Development Principles and other relevant local plan policies, for example on matters such as design, accessibility, landscaping and biodiversity. Policy Env 21 requires that all proposals should safeguard habitat features of biodiversity value and priority species. Policy Env 27 requires that proposals must have a positive effect on biodiversity. Env 25 supports proposals which are designed to create and retain public views of the site as well as through the development and from it. The Plan should be read as a whole, and it is therefore not necessary to repeat these requirements at Place 3. **No modification proposed.**

Maciej Malaszuk (0179)

The site at present contains areas of green space. There are a number of landscape constraints and designations which will necessitate retention of open space within the site. Place 3 also requires that the development should provide open space. A Place Brief will establish high level principles to inform future master planning and design processes. The balance of uses will be determined through this process and subsequent planning applications. **No modification proposed.**

There are existing rights of way recorded through the site which are protected through legislation. In addition, Place 3(h) requires that pedestrian/cycle routes are provided through the site. **No modification proposed.**

The Plan sets out principles, the use of buildings is a matter to be addressed through the development of the place brief, future master planning and design processes and any subsequent planning applications. It would be premature to set out uses at this stage. The principles would allow for community use as part of the housing led development. **No modification proposed.**

NHS Lothian (0596)

The Council carried out consultation in 2019 on the future redevelopment of the Astley Ainslie site. Due to the nature of the site a Landscape and Heritage Assessment is to be provided by NHS Lothian to inform development of a place brief. There is at present no approved Place Brief for the Astley Ainslie site. Paragraph 3.14 states that key stakeholders will be consulted on the development of a place brief. **No modification proposed.**

Patricia Willder (0205)

There are many benefits to higher density development. An education appraisal (CD015) and healthcare appraisal (CD016) have been carried out to assess the impact of the City Plan housing proposals and required infrastructure proposals are set out in part 4, Table 11 and 12. Development is only supported where there is sufficient infrastructure capacity, or it can be delivered at the appropriate time or negative impacts can be mitigated and this is set out in Policy Inf 3 of the plan. Policy Inf 1 requires provision of community infrastructure and Policy Inf 4 requires provision of transport infrastructure. Proposals over 12 units are required to provide affordable housing by Policy Hou 2 and Policy Hou 3 Mixed Communities requires a range of size and type of housing. **No modification proposed.**

Prof D N Bateman (0004)

The level of detail provided in the Plan is considered to be appropriate. The Plan sets out development principles for the site. The detail will be developed from these principles. The location and scale of housing within the site will be determined through an assessment of the landscape and heritage assets on the site. A Place Brief will establish high level principles to inform future master planning and design processes. It would be premature to set out further details at this stage. **No modification proposed.**

The allocation of the site is not considered to contradict the other policies of the plan. 40% of the site is currently allocated open space in the adopted Edinburgh Local Development Plan (CD039), the remainder is built development. The proposal does not imply a loss

open space. The principles require that development of the site should provide open spaces and respect the mature landscape setting and be consistent with the conservation area character appraisal. Policies Env 31 and Env 32 set requirements for open space in new development. **No modification proposed.**

Sally Kerr (0435)

Requirements for health, education and community infrastructure are considered to be sufficiently strong. Place 3 (i) requires provision or contribution towards education, healthcare and community facilities. Policy Inf 1 and Inf 3 set out requirements. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Shelagh Sharp (0111)

Policy Hou 2 Affordable Housing would be applicable to any housing development over 12 units and requires that provision is normally on site. Policy Hou 3 Mixed Communities requires a range of size and type of housing. Place 3 (i) recognises the importance of thorough routes and identifies provision of pedestrian/cycle routes. Place 3 (a) requires provision of new connections and open spaces. **No modification proposed.**

William Mason (0438)

The identification of the site for housing-led development does not prevent the site from being part of a green network. Place 3 requires that the development of the site provides new connections and open spaces. Policy Env 6 requires proposals to protect, enhance and link to the city's green/blue network. In their response to the proposed plan NHS Lothian were supportive of policy that encourages the redevelopment of the Astley Ainslie campus. Lothian Strategic Development Framework 2022-2027 (CD130) prepared by the Lothian Health and Care System (a collaboration which includes NHS Lothian) sets out actions to deliver over the next five years. The framework identifies in years 2/3 that proposals for Astley Ainsley will be developed. It is expected that the site will become available within the period of the plan. **No modification proposed.**

William Moyes (0305)

The Council's Adopted Open Space Strategy (CD066) sets out standards for open space provision. The site meets with the standards set out for access to open space. The strategy also identifies open space proposals. In addition, City Plan has Blue Green Network proposals that are identified in Part 4, Table 1 of the Plan along with proposals required to support development. Policies Env 31 and Env 32 set out requirements for open space in new-build development. All forms of development are required to provide a minimum of 20% of the total site area as open space. Policies and proposals in the Plan should ensure an improvement in open space provision. A review of the Open Space

Strategy and associated Open Space Audit will provide an update regarding access to open space provision and further proposals for enhancement.

The site at present contains significant areas of open space. There are a number of landscape constraints and designations which will necessitate retention of open space within the site. Place 3 also sets a requirement for the provision of open space. A Place Brief will establish high level principles to inform future mater planning and design processes. The balance of uses will be determined through this process and subsequent planning applications. **No modification proposed.**

Place 3 (i) requires provision or contribution towards education, healthcare infrastructure and community facilities. Policy Inf 3 sets out how this ill be provided. An education appraisal (CD015) and healthcare appraisal (CD016) have been carried out to assess the impact of the City Plan housing proposals and required infrastructure proposals are set out in part 4, Table 11 and 12. The site is within the Boroughmuir/James Gillespie's Education Contribution Zone. Table 11 identifies requirements for additional primary, secondary and ELC capacity. While required to contribute to the cost of the infrastructure the location for this provision would not necessarily be on this site therefore there would be no issue in terms of competing with provision of greenspace. **No modification proposed.**

### Capacity

Alison Stoddart (0658), Annie Bell (0136), Archie Clark (0003), Astley Ainslie Community Trust (0318), Jan Hulme (0420), Jennifer Roe (0407), John Falconer (0401), Juniper Green & Baberton Mains Community Council (0306), Olwyn Alexander (0351), Richard Beauchamp (0604), Richard Doake (0436), Ruth Beauchamp (0458), Teresa Fernandes (0194), Tom Proudfoot (0740), William Brotherston (0754)

Capacities of housing proposals are set out in Part 4, Table 2 of the Plan. This identifies a capacity of 500 units for H8 Astley Ainslie. The capacity of the site has been estimated based upon an initial assessment of the site with regard to the landscape and built heritage constraints. As set out in Place 3 (b) the location, scope and scale of development is to be determined through an assessment of the landscape and heritage assets on the site. Capacity will be refined through the development of the Place Brief and any subsequent planning application. **No modification proposed.**

### Neil Ross (0610)

The location and scale of housing within the site will be determined through an assessment of the landscape and heritage assets on the site. A Place Brief will establish high level principles to inform future mater planning and design processes. The appropriateness of restricting building to previously occupied land will be established through these processes. It would be premature to set limitations on location and scale of development at this stage. **No modification proposed.**

### Principles

#### Place 3 (a)

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Jan Hulme (0420), Jennifer Hall (0534), Jennifer Roe (0407), Julia Caroline Higgitt (0067), Michael Adrian Hall (0261), Neil Ross (0610), Olwyn Alexander (0351), Peter Edwards (0601), Richard Beauchamp (0604), Richard Doake (0436), Ruth Beauchamp (0458), Sally Kerr (0435), Teresa Fernandes (0194), Tom Proudfoot (0740), William Brotherston (0754)

It is suggested that priorities are re-ordered however Place 3 (a) does not set priorities. It sets out that there is a requirement for housing led-mixed use development and what it should achieve – respect the landscape setting, create a sustainable place, and provide new connections, open space and other community infrastructure. **No modification proposed.**

Cockburn Association (0777)

The text as worded in the Plan is considered to be appropriate and achieve the same outcome as the suggested replacement of “preserve” with respect. **No modification proposed.**

Colin Fraser (0106), Ian Ross (0423), John Falconer (0401) Maggie Carson (0105), Sergey Gorobets (0414)

The requirement for a housing-led mixed use development set out in place 3 (a) is considered to be appropriate for the site. Astley Ainslie has been identified as a housing site to contribute towards meeting the housing land supply target set out in the plan. It has been identified through a process of site assessment. It provides brownfield sites in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land.

While the requirement is for development to be housing-led a mix of uses should be provided and as set out in Place 3 (b) this is to be developed in the context of the landscape and heritage assets of the site. Principles set out in Place 3 and other relevant plan policies set requirements to preserve greenspace, provide active travel routes and play facilities which should contribute towards health and wellbeing and a green and blue infrastructure proposal is identified in Part 4, Table 1 BGN23. As set out in Place 3 (a) the development should create a sustainable place through the provision of new connections, open spaces and other community infrastructure, not just housing. **No modification proposed.**

### **Place 3 (b)**

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Jan Hulme (0420), Jennifer Hall (0534), Jennifer Roe (0407), John Falconer (0401), Julia Caroline Higgitt (0067), Michael Adrian Hall (0261), Olwyn Alexander (0351), Peter Edwards (0601), Richard Beauchamp (0604), Richard Doake (0436), Ruth Beauchamp (0458), Sally Kerr (0435), Teresa Fernandes (0194), Tom Proudfoot (0740)

The location and scale of housing within the site will be determined through an assessment of the landscape and heritage assets on the site. A Place Brief will establish high level principles to inform future mater planning and design processes. The appropriateness of building on areas not previously occupied will be established through these processes. Place 3 (c) requires that the development design is consistent with the

Conservation Area Character Appraisal (CD054) and this includes the setting. Building height is controlled by Policy Env 30 (c) which requires that there is no adverse impact on, the historic skyline, landscape features in the urban area or landscape setting of the city. It would be premature to set limitations on location and scale of development at this stage. The entire site is covered by a tree preservation order. Policy Env 20 presumes against any development that risks damaging impact on any tree and applies to all trees, including those outwith a tree protection order. **No modification proposed.**

Astley Ainslie Community Engagement Group (AACEG) (0275)

The suggested additional text is unnecessary. Place 3(b) as worded sets out that location, scope and scale of development will be determined through an assessment. The whole site is covered by a tree preservation order and this is referred to in Place 3 (b) **No modification proposed.**

Maggie Carson (0105)

Place 3 (c) requires that listed buildings are preserved. Policy Env 3 Development Design also requires that where features worthy of retention, including built structures, are identified and incorporated. The location, scope and scale of any development on this site will be determined through an assessment of the landscape and heritage assets of the site. Policy Env 25 supports proposals which are deigned to create and retain public views of the site as well as through the development and from it. The Plan policies therefore provide appropriate protection. **No modification proposed.**

NatureScot (0528)

Place 3 (b) is considered to sufficiently address the suggested references to assessment of visual context and the need for the tree protection order to inform the location, design and density of development. An assessment of the landscape and heritage assets would include visual context. **No modification proposed.**

Scottish Wildlife Trust Lothian group (0560)

The entire site is covered by a tree protection order. Place 3 (b) refers to this. **No modification proposed.**

**Place 3 (c)**

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Jan Hulme (0420) Jennifer Hall (0534), Jennifer Roe (0407), Julia Caroline Higgitt (0067), Olwyn Alexander (0351), Sally Kerr (0435), Teresa Fernandes (0194), Tom Proudfoot (0740), Richard Doake (0436)

Policy Env 8 provides policy for sustainable new buildings. In addition to the principles set out at Place 3 the proposals should meet with the other requirements of the plan. The Plan should be read as a whole, and it is therefore not necessary to repeat these requirements at Place 3. **No modification proposed.**

Astley Ainslie Community Engagement Group (AACEG) (0275), Mr Roger Thomas (0345)

Place 3 requires that development design should be consistent with the conservation area character appraisal and Policy Env 3 requires that existing features including built structures are incorporated in development design. This is considered sufficient reference and it is not considered necessary to refer specifically to the preservation of the boundary walls within the principles of Place 3 or BGN23 at Part 4, Table 2. **No modification proposed.**

Fiona Brownlee (0796)

Place 3 (c) requires the preservation/enhancement of listed buildings. In addition, Env 3 requires that existing features, including built structures, worthy of retention on the site are incorporated into the development. The Plan should be read as a whole, and it is therefore not necessary to repeat these requirements at Place 3. **No modification proposed.**

NatureScot (0528)

It is not necessary to amend Place 3 (c) as suggested. Place 3 (b) states that the location, scope and scale of development will be determined through a thorough assessment of the landscape and heritage assets on the site. **No modification proposed.**

### **Place 3 (d)**

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Maggie Carson (0105), Michael Adrian Hall (0261), Jennifer Hall (0534), Julia Caroline Higgitt (0067), Peter Edwards (0601), Richard Beauchamp (0604), Richard Doake (0436), Ruth Beauchamp (0458), Sally Kerr (0435), Teresa Fernandes (0194), Tom Proudfoot (0740), William Brotherston (0754)

Paragraph 3.122 of the Plan set out that developers should seek early advice from the Council's Archaeologist for sites where historic remains are known or thought likely to exist. Appendix D identifies that archaeological mitigation is required. Policy Env 16 and 17 protect archaeological remains and sites. **No modification proposed.**

### **Place 3 (e)**

Dave Berry (0463)

Place 3 (e) requires provision of outdoor play facilities in line with the Council's Open Space Strategy (CD066). The extension of this to include exercise facilities is not considered to be necessary and is not a requirement of the Council's Open Space Strategy. **No modification proposed.**

Sally Kerr (0435)

Place 3 (e) requires that play facilities are integrated into the site layout. This is considered to be sufficient and consideration of the detail of play facilities will be addressed through the development of the Place Brief, future master planning and design processes and any subsequent planning applications. **No modification proposed.**

### **Place 3 (f)**

Annie Bell (0136), Astley Ainslie Community Trust (0318), Jennifer Hall (0534), Julia Caroline Higgitt (0067), Michael Adrian Hall (0261), Teresa Fernandes (0194), Tom Proudfoot (0740), Richard Beauchamp (0604), Ruth Beauchamp (0458), Richard Doake (0436)

The provision of a 15m buffer zone is consistent with Policy Env 29 and reflects what the Council estimates to be appropriate at this juncture for the size. Buffer zones are further addressed at Issue 18 Blue Green Network Proposals BGN23. **No modification proposed.**

Hervé Saint-Amand (0276)

The protection of green space provided in the Plan is considered to be sufficiently explicit. Place 3 development principles require that the development respects the mature landscaping, retains the special character of the site and preserve the setting of buildings. It also states that the location, scope and scale of development will be determined through assessment of the landscape assets. In addition, Policy Env 20 protects trees and woodlands. As set out in Place 3 (b) the entire site is covered by a tree preservation order it is therefore not necessary to include stronger protection for existing woodland area at Place 3 (f). **No modification proposed.**

Mr Roger Thomas (0345)

The Council consider that the use of the term daylighting at Place 3 (f) is sufficiently clear, however, should the Reporter see merit in giving greater clarity then the term de-culverting could replace daylighting. **No modification proposed.**

### **Place 3 (g)**

Maggie Carson (0105)

Policy Env 6 requires proposals to protect, enhance and link to the city's green/blue network. It is not necessary to repeat this at Place 3. Policy Inf 7 sets out the Council's policy on parking. This encourages parking free or low parking developments. It is appropriate that the level of parking is determined through the planning application process on a case by case basis. **No modification proposed.**

Car free development is encouraged and supported in Policy Inf 4. The appropriate level of provision depends on a number of factors. The level of provision is most appropriately determined through the development management process on an individual site basis. **No modification proposed.**

### **Place 3 (h)**

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Engagement Group (AACEG) (0275), Jennifer Hall (0534), Julia Caroline Higgitt (0067), John Falconer (0401), Maggie Carson (0105), Michael Adrian Hall (0261), Peter Edwards (0601), Richard Beauchamp (0604), Richard Doake (0436), Ruth Beauchamp (0458), Sally Kerr (0435), Teresa Fernandes (0194), Tom Proudfoot (0740) William Moyes (0305)

There are existing rights of way recorded through the site. Legislation is in place to protect rights of way and it is not necessary to refer to this within the plan. In addition, Place 3 (h) requires that pedestrian/cycle routes are provided through the site. **No modification proposed.**

### **Place 3 (i)**

Alison Stoddart (0658), Annie Bell (0136), Astley Ainslie Community Trust (0318), Jennifer Hall (0534), Julia Caroline Higgitt (0067), Maggie Carson (0105), Michael Adrian Hall (0261), Richard Doake (0436), Teresa Fernandes (0194), Tom Proudfoot (0740)

Place 3 (i) requires provision or contribution towards education, healthcare infrastructure and community facilities. Policy Inf 3 sets out how this will be provided. An education appraisal (CD015) and healthcare appraisal (CD016) have been carried out to assess the impact of the City Plan housing proposals and required infrastructure proposals are set out in Part 4, Tables 11 and 12 of the Plan. While required to provide or contribute to the cost of the infrastructure the location for this provision would not necessarily be on site. The site is within the Boroughmuir/James Gillespie's Education Contribution Zone. Table 11 identifies requirements for additional primary, secondary and ELC capacity. These do not require a school within the site. Policy Inf 1 requires that key community facilities are walkable within a 20-minute return trip. It is not considered appropriate to state that provision should be on site. **No modification proposed.**

Maggie Carson (0105)

Place 3 (i) requires provision or contribution towards education, healthcare infrastructure and community facilities. Policy Inf 3 sets out how this will be provided. To ensure adequate provision an education appraisal (CD015) and healthcare appraisal (CD016) have been carried out to assess the impact of the City Plan housing proposals and required infrastructure proposals are set out in Part 4, Table 11 and 12 of the Plan. This is considered to be the appropriate means of identifying requirements. **No modification proposed.**

### **Additional Principles**

Astley Ainslie Community Engagement Group (AACEG) (0275)

Reference is made in paragraph 3.14 to the assessment of proposals against the Astley Ainslie Development Principles and other relevant local plan policies, for example on matters such as design, accessibility, landscaping and biodiversity. Policy Hou 2 Affordable Housing sets out the requirement for 35% affordable housing. It also requires that provision is normally on site. Policy Env 7 requires that proposals involving construction or change of use of buildings must incorporate all reasonably practicable measures to address the climate emergency and contribute to sustainable living. Policy Env 30 addresses building heights. Policy Inf 1, Inf 3 and Inf 4 set requirements for schools, primary care provision and transport infrastructure. The Plan should be read as a whole, and it is therefore not necessary to repeat these requirements at Place 3. **No modification proposed.**

Living Streets Edinburgh Group (0486)

Car free development is encouraged and supported in Policy Inf 4. The appropriate level of provision depends on a number of factors. The level of provision is most appropriately determined through the development management process on an individual site basis.

**No modification proposed.**

The location scope and scale of development will be established through an assessment of the landscape and heritage assets on the site. Place 3 (h) requires the provision of pedestrian/cycle routes. **No modification proposed.**

Place 3 (i) requires provision or contribution to active travel infrastructure in the vicinity. These are out in Part 4, Table 2 as ATPR7, ATPR8 and ATPR9. They are identified on the proposals map and extend outwith the site and include crossings. **No modification proposed.**

Liz Glass (0645)

Place 3 (a) sets out a requirement for development to respect the landscape setting of the site which has the effect of conserving the special landscape. It is therefore considered that the aim suggested is already included. The entire site is covered by a tree protection order. Reference is made in paragraph 3.14 to the assessment of proposals against the Astley Ainslie Development Principles and other relevant local plan policies. Policy Env 21 requires that all proposals should safeguard habitat features of biodiversity value and priority species. Policy Env 27 requires that proposals must have a positive effect on biodiversity. Policy Env 6 requires proposals to protect, enhance and link to the city's green/blue network. Env 25 supports proposals which are designed to create and retain public views of the site as well as through the development and from it. The Plan should be read as a whole, and it is therefore not necessary to repeat these requirements at Place 3. **No modification proposed.**

It is not accepted that there is a conflict between the allocation of the site and the aims of the Plan to increase green space. 40 % of the site is currently allocated open space in the Edinburgh Local Development Plan, November 2016 (CD039) the remainder is built development. The proposal does not imply a loss open space. The principles require that development of the site should provide open spaces and respect the mature landscape setting and be consistent with the conservation area character appraisal. Policies Env 31 and Env 32 set requirements for open space in new development. The balance of open space and built development will be determined through an assessment of the landscape and heritage assets on the site. The Place Brief will establish high level principles to inform future master planning and design processes. **No modification proposed.**

Mark Ockendon (0419)

Building height is controlled by Policy Env 30 (c) which requires that there is no adverse impact on the historic skyline. **No modification proposed.**

Robert Falcon (0640)

It is not considered necessary to refer to density at Place 3. Capacities of housing proposals are set out in Table 2. This identifies a capacity of 500 units for H8 Astley Ainslie. The capacity of the site has been estimated based upon an initial assessment of the site with regard to the landscape and built heritage constraints. As set out in Place 3

(b) the location, scope and scale of development is to be determined through an assessment of the landscape and heritage assets on the site. Capacity will be refined through the development of the Place Brief and any subsequent planning application. **No modification proposed.**

Scottish Wildlife Trust Lothian group (0560)

It is not considered necessary to refer to reducing the need for cars within the development principles. The allocation of the site is in line with the aim of the Plan to deliver a network of 20-minute walkable neighbourhoods where it is not necessary to have a car to get around. The principles of Place 3 include requirements for active travel routes through and connecting the site to the wider area. **No modification proposed.**

William Brotherston (0754)

The Plan sets out development principles for the site. The detail will be developed from these principles. The scope and scale of housing within the site will be determined through an assessment of the landscape and heritage assets on the site. A Place Brief will establish high level principles to inform future mater planning and design processes. Policy Hou 3 sets requirements for an appropriate range of housing of different types and sizes. It is not necessary to repeat this at Place 3. It would be premature to set out further details at this stage. **No modification proposed.**

William Moyes (0305)

Paragraph 3.118 states that the Council wish to see all development prioritise walking, wheeling and cycling. Place 3 (h) requires provision of pedestrian/cycle routes through the site. Design principles for footpaths and cycle routes are set out in the Council's Edinburgh Design Guidance (CD047). The design and priority would be appropriately addressed through the planning application process on a site specific basis. **No modification proposed.**

The requirement for a high standard of design is set out within Policy Env 14 and Policy Env 7 requires that new buildings should achieve a net zero level of operational greenhouse gas emissions. It is not necessary to state these requirements within the principles of Place 3. **No modification proposed.**

The Plan sets out development principles for the site. The detail will be developed from these principles. The scope and scale of housing within the site will be determined through an assessment of the landscape and heritage assets on the site. A Place Brief will establish high level principles to inform future mater planning and design processes. Policy Hou 3 sets requirements for an appropriate range of housing of different types and sizes. It would be premature to set out further details at this stage. **No modification proposed.**

Place 3 (i) requires the provision of a mobility hub. As set out in the glossary a mobility hub is a local and accessible place which brings together different transport modes alongside associated facilities, services and can include electric vehicle charging. Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement at Place 3. **No modification proposed.**

The Plan set out principles. The detail of landscaping will be considered through the development management process. **No modification proposed.**

A Place Brief will establish high level principles to inform future mater planning and design processes. The principles require an element of open space and the balance of uses will be determined through this process and subsequent planning applications. **No modification proposed.**

### **H1 Dundee Street and H2 Dundee Terrace**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

E Ritchie and D Melrose (0430)

Flooding can be addressed through the development management process. Policy Env 36 requires a Surface Water Management Plan to accompany detailed applications and sets out further criteria including that the design is safe, reliable and effective over the design life of development and long-term maintenance has been considered and agreed. It also requires that where possible existing surface water pipework is replaced by SuDS. In addition, developments should comply with the Council's Surface Water Management Plan guidance (CD077). Policy Inf 22 Water Supply and Foul Waste Water requires an adequate water supply and foul waste water sewerage are available to meet the demand of the developments. Where any enhancement is needed, and it cannot be delivered by the developer directly developer contributions would be sought in line with Policy Inf 3 Infrastructure Delivery and Developer Contributions. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H3 Chalmers Street**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site is the current location of the Princess Alexandra Eye Pavilion. It has been identified as a housing site to contribute towards meeting the housing land supply target set out in the plan. It was identified in the Edinburgh Local Development Plan Housing Study 2014 which assessed the potential for new residential development within the urban

area. The Choices Housing Study, January 2020 (CD026) carried forward undeveloped sites from the 2014 Housing Study. The site was re-assessed through this process. It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. The Lothian Strategic Development Framework 2022-2027 (CD130) prepared by the Lothian Health and Care System (a collaboration which includes NHS Lothian) identifies the redesign & reprovision of the Princess Alexandra Eye Pavilion at the Royal Infirmary campus. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. This anticipates a site start in 2029/30. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### **H4 Dalry Road**

##### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

##### Dalry Local Residents (0267)

H4 Dalry Road is identified at Part 4, Table 2. This states that development should accord with the Development Principles set out in Appendix D. Appendix D requires that the layout and building design need to positively address the boundary to Dalry Community Park and overlook the park; links to the pedestrian and cycle path network to the south and west need to be provided; and an active frontage is to be provided to Dalry Road. The Plan sets out general principles for the development. Detailed matters of design would be dealt with through the planning application process. The suggested extension of the site extends into the adjacent supermarket site. Should this adjacent site come forward for development proposed plan Policy Hou 1 would support the principle of housing development. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with

the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H5 Roseburn Street**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

Murrayfield Community Council (0146)

Development is required to contribute towards an upgrade of play facilities in Roseburn Public Park to excellent standard to ensure that the site meets the Play Access Standard set out in the Council's Open Space Strategy (CD066) and are adequately served by a suitable standard of play facilities space within walking distance. This is necessary in this instance as these sites are not within such a walking distance at present and there is insufficient space on this site or the adjacent H6 site to provide a suitable quality play space. **No modification proposed.**

SEPA (0012)

Appendix D sets out technical requirements for housing proposals. This does not require a flood risk assessment for this site. Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. It is therefore considered that the policies in the Plan are sufficient to address any flooding risk. However, if the Reporter sees merit in providing additional clarity then that requirement could be added to the text. **No modification proposed.**

### **H6 Russell Road (Royal Mail)**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### Murrayfield Community Council (0146)

Development is required to contribute towards an upgrade of play facilities in Roseburn Public Park to excellent standard to ensure that the site meets the Play Access Standard as set out in the Council's Open Space Strategy (CD066) and are adequately served by a suitable standard of play facilities space within walking distance. This is necessary in this instance as these sites are not within such a walking distance at present and there is insufficient space on this site or the adjacent H5 site to provide a suitable quality play space. **No modification proposed.**

#### Royal Mail Group Limited (0501)

Whilst the Royal Mail Group may need their existing sites for current business requirements, those requirements may change over the life-time of the plan. By identifying this site for potential redevelopment for housing led mixed use development the Plan is showing its support for future redevelopment of this site, in line with the principles set out in Appendix D. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. This anticipates a site start in 2032. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. The Agent of Change principle puts the onus on developers of new, noise-sensitive properties to effectively deal with potentially problematic noise. **No modification proposed.**

#### SEPA (0012)

Appendix D sets out technical requirements for housing proposals. This does not require a flood risk assessment for this site. Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. It is therefore considered that the policies in the Plan are sufficient to address any flooding risk. However, if the Reporter sees merit in providing additional clarity, then that requirement could be added to the text. **No modification proposed.**

#### **H7 Murieston Lane**

#### Inverdunning (Hatton Mains) Ltd (0427), Nick Johnstone (0368), Simon Thomson (0248)

The site was identified through the Edinburgh Local Development Plan Housing Land Study 2014 (CD044) which assessed the potential for new residential development within the urban area. The study identified a potential capacity of 107 dwellings per hectare using the methodology set out in the 2014 Housing Study. The Choices Housing Study, January 2020 (CD026) carried forward undeveloped sites from the 2014 Housing Study. The site was re-assessed through this process. The capacity has been recalculated using the updated capacity methodology set out in the Choices Housing Study 2020. A medium-high level of density was applied in line with the methodology set out in the Housing Study. This density applies to sites which can support a mixture of building and unit types, have good to medium public transport access and where parking would be generally lower than 100%. Whilst the current owner may have no intentions of disposing

of the site this may change over the life-time of the plan. By identifying this site for redevelopment for housing-led mixed use development the Plan is showing its support for future redevelopment of this site, in line with the development principles set out in Appendix D, should it become available.

Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### **H9 Falcon Road West**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020. It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### **H10 Watertoun Road**

Andrew and Alison Ferguson (0429), Dr Y Wang (0522), Grange/Prestonfield Community Council (0192)

The site has been subject to a planning application 21/03813/FUL. On 6 September 2022 a notice of intention was issued on behalf of Scottish Ministers to allow an appeal DPEA ref PPA-230-2375 (CD174) for the development of 49 units. The site should be retained in the Plan to allow for the circumstance should the decision not be issued, or the planning consent not implemented. Issues of amenity, transport, flooding, trees and education

infrastructure have been considered through the planning application process. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### **H11 Watson Crescent Lane**

##### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### **H12 Temple Park Crescent**

##### Yinshuang ding (0086)

The Plan does not specify a height for proposed development. Appendix D sets out principles for the site which include that new development should reflect the roofscape articulation of the tenements along Temple Park Crescent. This also notes that the site is within the viewcones of several Protected City Views and that excessive overshadowing of the canal should be avoided. Policy Env 30 Building Heights only supports development which rises above the prevailing building height in certain circumstances. The layout and design of development will be considered through the detailed planning application process against this, and other relevant policies of the plan. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with

the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H13 Gillespie Crescent**

Brenda Rowan (0488), Gabriela Medero (0022), George Goussetis (0269), Louise Blanke (0675), Luke Treadwell (0748), Nick Sherington (0500), Sandy Ramsay (0026), Steve Garrett (0359), Tollcross Community Council (0332), Inverdunning (Hatton Mains) Ltd (0427), Shona Simon (0242)

The site is currently in the ownership of Viewpoint Housing Association. It was identified through the Edinburgh Local Development Plan Housing Land Study 2014 (CD044) which assessed the potential for new residential development within the urban area. The study identified a potential capacity of 100 dwellings per hectare using the methodology set out in the 2014 Housing Study. The Choices Housing Study, January 2020 (CD026) carried forward undeveloped sites from the 2014 Housing Study. The site was re-assessed through this process. It continues to be included due to the potential to increase the density of development on the site. The capacity has been recalculated using the updated capacity methodology set out in the Choices Housing Study 2020. A medium-high level of density was applied in line with the methodology set out in the Housing Study (CD026). This density applies to sites which can support a mixture of building and unit types, have good to medium public transport access and where parking would be generally lower than 100%. Appendix D sets out principles for the site. This includes that the design of the development should seek to fully understand and preserve and enhance the setting of the listed building and should be subservient to the opposite tenements and sympathetic to the adjacent single storey Royal Blind School with which an improved relationship should be investigated. Along with other policies of the Plan these are considered to address the issues of concern related to traffic, scale, amenity, character of area, community facilities, drainage and open space. While the site is not currently being proposed for development by its owner the site offers an opportunity for increased density and an appropriate location for housing. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H14 Ratcliffe Terrace**

Alix Speed (0043)

In the current local development plan the site forms part of the urban area where the LDP and proposed plan support housing development. Identification of the site for housing in

the proposed plan sets the principle of the development of this site for housing before any other use. Impact on residential amenity of adjacent housing arising from effects on daylight, privacy and sunlight is a matter of detailed design. City Plan includes either place policies or development principles for all allocated sites. Policies are provided within the Plan which address these detailed matters which, along with the Council's Edinburgh Design Guidance (CD047) and other non-statutory guidance, will be used to assess proposals through the planning application process. Matters related to access during construction are not within the scope of the plan. **No modification proposed.**

Felix Freund (0530)

The site was identified through the Edinburgh Local Development Plan Housing Land Study 2014 (CD044) which assessed the potential for new residential development within the urban area. The Choices Housing Study, January 2020 (CD026) carried forward undeveloped sites from the 2014 Housing Study and also included a new assessment of urban brownfield land. The site was re-assessed through this process. It was assessed against active travel, public transport, community infrastructure and flooding. At the time of assessment, the site did not meet the criteria for community infrastructure due to school capacity. An education appraisal (CD015) has been carried out for the proposed plan which identifies requirements for education infrastructure as a result of the proposed plan sites including H14. The site is not in a Conservation Area however it is adjacent to the boundary of the Grange Conservation Area and there are a number of listed buildings adjacent to the site. It is considered that the policies in the Plan address these matters sufficiently. In addition, Appendix D sets out that the design of the development should seek to fully understand and preserve and/or enhance the setting of the listed buildings. It also acknowledges that the site is within the viewcones of several Protected City Views which is addressed by Policy Env 30 Building Heights. Appendix D also addresses this requiring that the design and building heights should respect the adjacent villas and be subservient to the tenements.

Policy Env 33 addresses amenity issues. The site does not fall within a designated local centre. It is however within a short walk of Ratcliffe Terrace Local Centre which provides a range of services. **No modification proposed.**

Grange/Prestonfield Community Council (0192)

H14 is a housing proposal which is supported for housing development by Policy Hou 1. It would not be appropriate to expand the allocation to a much wider area. It was identified through the Edinburgh Local Development Plan Housing Land Study 2014 (CD044) which assessed the potential for new residential development within the urban area. The Choices Housing Study, January 2020 carried forward undeveloped sites from the 2014 Housing Study and also included a new assessment of urban brownfield land. This did not identify further sites in the immediate vicinity. Environment and design policies of the Plan provide appropriate policy context for consideration of placemaking and integration with the surrounding area. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020. It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional

programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

Margaret Newman (0697)

Appendix D sets out principles for development of the site including that the design and building heights should respect the adjacent villas and be subservient to the tenements. Along with Policy Env 30 and other relevant policies of the Plan this is considered sufficient. The design and layout of the development along with amenity are matters to be considered through the planning application process. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

**H15 St Leonard's Street (car park)**

Anne Binckebanck (0372), Simon Paget-Tomlinson (0375)

The Plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified through the Choices Housing Study, January 2020 (CD026) which provides an assessment of urban brownfield land to identify land with potential for housing development and estimate the housing capacity that could be delivered on that land. It was assessed against active travel, public transport, community infrastructure and flooding and considered to be suitable for development. The Council's Adopted Open Space Strategy (CD066) sets out standards for open space provision. The site meets with the standards set out for access to open space. The strategy also identifies open space proposals. In addition, City Plan has Blue Green Network proposals that are identified in Part 4, Table 1 of the Plan along with proposals required to support development. Policies Env 31 and Env 32 set out requirements for open space in new-build development. All forms of development are required to provide a minimum of 20% of the total site area as open space. Policies and proposals in the Plan should ensure an improvement in open space provision. A review of the Open Space Strategy and associated Open Space Audit will provide an update regarding access to open space provision and further proposals for enhancement.

The Plan sets out policies to ensure that any infrastructure required to support the development is provided. An education appraisal (CD015) has been carried out for the proposed plan which identifies requirements for education infrastructure as a result of the proposed plan sites including H15 and addresses any capacity issue. Policies are also set out to protect trees and features worthy of retention. In addition, development principles set out in Appendix D require that the design of the development should seek to fully understand and preserve and/or enhance the setting of listed buildings and that non-

designated heritage assets on the site (stone walls to the former railway yard) should be considered when developing proposals.

Impact on residential amenity of adjacent housing arising from effects on daylight, privacy and sunlight is a matter of detailed design. City Plan includes either place policies or development principles for all allocated sites. Policies are provided within the Plan which address these detailed matters which, along with the Council's Edinburgh Design Guidance (CD047) and other non-statutory guidance, will be used to assess proposals through the planning application process. Parking policies are set out in the plan. It is considered that policies in the Plan address the matters raised sufficiently. **No modification proposed.**

Julie McIlroy (0373)

In addition, development principles set out in Appendix D require that the design of the development should seek to fully understand and preserve and/or enhance the setting of listed buildings and that non-designated heritage assets on the site (stone walls to the former railway yard) should be considered when developing proposals. Policy Env 30 provides policy on building heights. Parking policies are set out in the plan. It is considered that policies in the Plan address the matters raised sufficiently. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

## **H16 Eyre Terrace**

Jennifer Inglis (0437), Mr Gareth J Roberts (0335), Wendy Johnson (0002)

The site was identified in the Edinburgh Local Development Plan Housing Study 2014 (CD044) which assessed the potential for new residential development within the urban area. The Choices Housing Study, January 2020 (CD026) carried forward undeveloped sites from the 2014 Housing Study. The site was re-assessed through this process. It was assessed against active travel, public transport, community infrastructure and flooding. At the time of assessment, the site did not meet the criteria for community infrastructure due to school capacity. An education appraisal (CD015) has been carried out for the proposed plan which identifies requirements for education infrastructure as a result of the proposed plan sites including H16 which addresses this deficiency. It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land.

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). A medium-high level of density was applied. This density applies to sites which can support a mixture of building and unit types, have good to medium public transport access and where parking would be generally lower than 100%.

Impact on residential amenity of adjacent housing arising from effects on daylight, privacy and sunlight is a matter of detailed design. City Plan includes either place policies or development principles for all allocated sites. Policies are provided within the Plan which address these detailed matters which, along with the Council's Edinburgh Design Guidance (CD047) and other non-statutory guidance, will be used to assess proposals through the planning application process.

Planning consent 20/03034/FUL (CD172) was issued in September 2021 for a mixed use development including 349 dwellings. It is considered appropriate to retain the allocation within City Plan until such time as construction begins. This would allow for any change in circumstances such as responding to changes in the market.

Policies are contained within the Plan which address the issues suggested for inclusion in Appendix D. It is not the purpose of the Appendix to set out all the policies which may apply to proposals. The Plan should be read as a whole.

The Council's Open Space Strategy (CD066) sets out open space standards measured in terms of distance and quality. The large greenspace standard states that all homes should be within 800m walking distance of an accessible large greenspace of at least two hectares and of 'good' quality. The Open Space Strategy states that King George V Park contributes to the large greenspace standard, falling only slightly below the two hectare threshold at 1.97 ha. It was last audited as being of 'good' quality. The Open Space Strategy and associated action plans show the areas that are meeting/not meeting the large open space standard. These indicate that the homes within the vicinity of the site are meeting the standard for large greenspace. Likewise, the play standard shows similar results.

Requirement for place briefs is set out in the Plan for sites which cover a wider area, however where this is not specified policy Env 2 (b) provides for circumstances in which the Council considers a Place Brief is required as part of a planning application submission.

The Council acknowledge that Appendix D incorrectly refers to views down Drummond Place rather than Dundonald Street. This should be corrected as a technical amendment to the Plan. **No modification proposed.**

#### New Town and Broughton Community Council (0254)

Appendix D and Part 4, Table 2 sets out a capacity of 245. The capacity has been calculated using the. It is appropriate to retain the allocation with the capacity identified in methodology set out in the Choices Housing Study 2020 (CD026). Planning consent 20/03034/FUL (CD172) was issued in September 2021 for a mixed use development including 349 dwellings the Plan until such time as construction begins. Should the current consent not be implemented the actual capacity of any future proposal will be determined through the design and planning application process. Policy Econ 5 requires that proposals to redevelop employment sites in the urban area should include floorspace designed to provide for a range of business and commercial users. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H17 Eyre Place**

Alexandra Stevenson (0304), Alasdair Wilson and Gaelle Geveaux (0807), Charlie Clark (0790), Cameron Prentice (0076), Daniel Gough (0421), Dr Jane Gear (0487), Roberts (0471), Ewan Gray (0103), Francesca Fiori (0390), Hannah and Chris Edwards (0696), Iain Leslie (0586), Irene Kernan (0549), Lee Davis (0117), Lorraine Smith (0462), Marton Feigl (0196), Mr Gareth J Roberts (0335), Sarah Roberts (0630) Stephanie Stevenson (0793) ) Vanessa Steven (0755), Vincent Meiklejohn (0069), William Craigie (0186)

The Plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2014 (CD044) which assessed the potential for new residential development within the urban area. The study identified a potential capacity of 124 dwellings per hectare using the methodology set out in the 2014 Housing Study. The Choices Housing Study, January 2020 (CD026) carried forward undeveloped sites from the 2014 Housing Study. The site was re-assessed through this process. It was assessed against active travel, public transport, community infrastructure and flooding. At the time of assessment, the site did not meet the criteria for community infrastructure due to school capacity. An education appraisal (CD015) has been carried out for the proposed plan which identifies requirements for education infrastructure as a result of the proposed plan sites including H17 which addresses this deficiency. The capacity has been recalculated using the updated capacity methodology set out in the Choices Housing Study 2020 (CD026). A medium-high level of density was applied in line with the methodology set out in the Choices 2020 Housing Study. This density applies to sites which can support a mixture of building and unit types, have good to medium public transport access and where parking would be generally lower than 100%. It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land.

The Council's Open Space Strategy 2021 (CD066) sets out standards for open space provision. The site meets with the standards set out for access to greenspace. The strategy also identifies open space proposals. These are identified in Part 4, Table 1 of the Plan along with proposals required to support development. Policies Env 31 and Env 32 set out requirements for open space in all new-build development. Housing development is required to provide a minimum of 20% of the total site area as open space. Policies and proposals in the Plan should ensure an improvement in open space provision. A review of the Open Space Strategy will set out detail on open space provision and will advance proposals for its enhancement.

The Plan sets out policies to ensure that any infrastructure required to support the development is provided. An education appraisal (CD015) has been carried out for the proposed plan which identifies requirements for education infrastructure as a result of the proposed plan sites including H17 and addresses any capacity issue. A healthcare appraisal identifies requires for primary care provision.

In addition, development principles set out in Appendix D require that the character of Eyre Place Lane is to be retained, including the setted street and high quality boundary treatments, development to the north of the site should reflect the height and massing of the adjacent tenements along Eyre Place, that the height and scale of buildings should step down to the south of the site to reflect the existing mews buildings along Eyre Place Lane, that a link to the pedestrian and cycle routes along Rodney Street should to be provided along with a link into the King George V park if possible.

Impact on residential amenity of adjacent housing arising from effects on daylight, privacy and sunlight is a matter of detailed design. City Plan includes either place policies or development principles for all allocated sites. Policies are provided within the Plan which address these detailed matters which, along with the Council's Edinburgh Design Guidance (CD047) and other non-statutory guidance, will be used to assess proposals through the planning application process. Parking policies and requirements for drainage are set out in the plan. It is considered that policies and development principles in the Plan address the matters raised sufficiently. **No modification proposed.**

Angela Ball (0277)

The Plan sets out policies to ensure that any infrastructure required to support the development is provided. An education appraisal (CD015) has been carried out for the proposed plan which identifies requirements for education infrastructure as a result of the proposed plan sites, including H17, and addresses any capacity issue. A healthcare appraisal identifies requires for primary care provision.

It is not accepted that the area lacks green space. The Council's Adopted Open Space Strategy 2021 (CD066) sets out standards for open space provision. The site meets with the standards set out for access to open space. The strategy also identifies open space proposals. In addition, City Plan has Blue Green Network proposals that are identified in Part 4, Table 1 of the Plan along with proposals required to support development. Policies Env 31 and Env 32 set out requirements for open space in new-build development. All forms of development are required to provide a minimum of 20% of the total site area as open space. Policies and proposals in the Plan should ensure an improvement in open space provision. A review of the Open Space Strategy and associated Open Space Audit will provide an update regarding access to open space provision and further proposals for enhancement. The site is close to King George V Park and development principles set out at Appendix D requires that a link into King George V Park should be investigated and provided if possible.

The Plan sets out general principles for the development. The proposed plan has been consulted upon as set out in the Report of Conformity (CD021). Detailed matters of design would be dealt with through the planning application process which provide for consultation. Structural impacts are not matters to be addressed in the plan. **No modification proposed.**

CASL Stanley Place Property Owner Limited (0737)

The Plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Choices Housing Study, January 2020 (CD026) which assessed the potential for new residential development within the urban area. It provides

a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the Plan it is appropriate that this site is allocated for housing. Policy Hou 6 supports student accommodation in appropriate locations and economy policies provide support for other commercial uses. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Theo Scott (0014), William Craigie (0186), Mr Gareth J Roberts (0335), New Town and Broughton Community Council (0254)

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). The capacities of sites in general is covered in Issue 20: Assessment of Housing Land Supply. A medium-high level of density was applied to the site in line with the methodology set out in the Choices 2020 Housing Study. This density applies to sites which can support a mixture of building and unit types, have good to medium public transport access and where parking would be generally lower than 100%. The actual capacity will be determined through the design process and planning application process. **No modification proposed.**

New Town and Broughton Community Council (0254)

The Council has a statutory duty to review and designate conservation areas. Conservation Areas in the city are regularly reviewed through review of Conservation Area Character Appraisals. Any changes to boundaries would be made through this process. Policy Env 3 addresses existing characteristics and features worthy of retention on site and in the surrounding area and along with other policies of the Plan would be used to assess development proposals. **No modification proposed.**

**H18 Royston Terrace**

Amy Middlemass (0629), Jonty Bredin (0682), Michal Rozynek (0626), Melissa Sharkey (0684)

The site was identified in the Edinburgh Local Development Plan Housing Study 2014 (CD044) which assessed the potential for new residential development within the urban area. The Choices Housing Study, January 2020 (CD026) carried forward undeveloped sites from the 2014 Housing Study. The site was re-assessed through this process. It was assessed against active travel, public transport, community infrastructure and flooding. At the time of assessment, the site did not meet the criteria for active travel. Appendix D identifies an opportunity to provide footpath connection through the site between Royston Terrace and Goldenacre Terrace.

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). A high level of density was applied in line with the methodology set out in the Choices 2020 Housing Study. The height of building is set out in development principles for the site at Appendix D which requires that the building line along Royston Terrace should align with the east elevation of Monmouth Terrace, and the height and massing of new development should reflect that of the existing adjacent tenements along Royston Terrace and Goldenacre Terrace.

Impact on residential amenity of adjacent housing arising from effects on daylight, privacy and sunlight is a matter of detailed design. City Plan includes either place policies or development principles for all allocated sites. Policies are provided within the Plan which address these detailed matters which, along with the Council's Edinburgh Design Guidance (CD047) and other non-statutory guidance, will be used to assess proposals through the planning application process. The appropriate level of parking provision will be established through the planning application which would assess the proposal against Policy Inf 3 Private Car Parking. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

**H19 Broughton Road (Powderhall)**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land

rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### **H20 Broughton Market**

#### Corline Elisabeth Scholes (0713)

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). A medium high level of density was applied in line with the methodology set out in the Choices 2020 Housing Study. This density applies to sites which can support a mixture of building and unit types, have good to medium public transport access and where parking would be generally lower than 100%. The actual capacity will be determined through the design process and planning application process.

Impact on residential amenity of adjacent housing arising from effects on daylight, privacy and sunlight is a matter of detailed design. City Plan includes either place policies or development principles for all allocated sites. Policies are provided within the Plan which address these detailed matters which, along with the Council's Edinburgh Design Guidance (CD047) and other non-statutory guidance, will be used to assess proposals through the planning application process. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Terry Levinthal (0313)

The allocation of the site does not presume demolition. There are no listed buildings on the site. Proposals for demolition would be considered against Policy Env 13 Conservation Areas – Demolition of Buildings and Env 7 Sustainable Buildings which requires a comparative carbon assessment. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council considers the wording of the bullet points for H20 in Appendix D to be sufficiently robust whilst still providing the decision maker a degree of flexibility when assessing a planning application. Policy Env 9 (World Heritage Sites) would be applicable in the assessment of any application that could harm the qualities of World Heritage Sites. Policy Env 11 (Listed Buildings-Setting) would also be applicable. The Council's position relative to the historic environment is covered in detail in Issue 14 Historic Environment Policies. **No modification proposed.**

**H21 East London Street**

Amanda Michie (0217), Helen Sugden (0797), Jennifer Newton (0679), Nigel Sedgwick (0680), Thomas Unter (0204)

The level of detail provided in the Plan is considered to be sufficient. Impact on residential amenity of adjacent housing arising from effects on daylight, privacy and sunlight is a matter of detailed design. City Plan includes development principles for the site at Appendix D. Policies are provided within the Plan which address detailed matters which, along with the Edinburgh Design Guidance (CD047) and other non-statutory guidance, will be used to assess proposals through the planning application process.

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). A medium high level of density was applied in line with the methodology set out in the Choices 2020 Housing Study. This density applies to sites which can support a mixture of building and unit types, have good to medium public transport access and where parking would be generally lower than 100%. The actual capacity will be determined through the design and planning application process. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. It is not

agreed that the site size should be reduced in the basis of land ownership. **No modification proposed.**

Italian Consulate General for Scotland and Northern Ireland (0320)

The Republic of Italy owns the adjacent site. H21 is not within that ownership. The Plan establishes the principle of housing development on the site. Layout of the site in relation to its surroundings would be considered at planning application stage when detailed matters would be taken into account. Property rights are a private legal matter for the developer and holder of those rights. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

**H22 McDonald Road (B)**

Blandfield Residents Association (0426)

The site was identified in the Choices Housing Study, January 2020 (CD026). It was assessed against a number of criteria and considered to be suitable for development in terms of walking distance to local convenience services and employment clusters and access to the wider cycle network. It was considered only partially suitable for development based upon public transport accessibility. The site has a PTAL score of 2. While the PTAL score is at the lower end of the scale for public transport accessibility the site is within walking distance of Leith Walk which is well served by public transport and in future will be served by the tram. The site also scored low in terms of education and as a result community infrastructure. An Education Appraisal (CD015) has been carried out for all proposed plan sites, including H22. Actions are identified to provide the capacity to support development and set out in Part 4, Table 2.

The Council's Adopted Open Space Strategy (CD066) sets out standards for open space provision. The site meets with the standards set out for access to open space. The strategy also identifies open space proposals. In addition, City Plan has Blue Green Network proposals that are identified in Part 4, Table 1 of the Plan along with proposals required to support development. Policies Env 31 and Env 32 set out requirements for open space in new-build development. All forms of development are required to provide a minimum of 20% of the total site area as open space. Policies and proposals in the Plan should ensure an improvement in open space provision. A review of the Open Space Strategy and associated Open Space Audit will provide an update regarding access to open space provision and further proposals for enhancement.

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). A medium high level of density was applied in line with the methodology set out in the Choices 2020 Housing Study. The actual capacity will be determined through the design process, which would consider massing, and the planning application process.

The Powderhall Railway line is identified as an active travel safeguard in the plan. Policy Inf 10 requires that development proposals design for and deliver direct connections to adjacent segregated active travel infrastructure. Policy Inf 7 addressed car parking.

While there may be existing businesses operating this is not seen as a barrier to development. Issue 3 Delivery of the Strategy deals with re-provision of business space. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H23 McDonald Place**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H24 Norton Park**

Annie McIntyre (0802)

A Strategic Environmental Impact Assessment has been carried out and is reported in the City Plan Environmental Report (CD010). A site assessment is provided at Appendix 4. The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). A medium high level of density was applied in line with the methodology set out in the Choices 2020 Housing Study. This density applies to sites which can support a mixture of building and unit types, have good to medium public transport access and where parking would be generally lower than 100%. The actual capacity will be determined through the design process and planning application process.

Policies within the Plan address the issues raised. Policy Env 37 ensures positive effect on biodiversity and infrastructure policies require that the infrastructure is available or will be made available to serve development. Policy Env 4 Development Design addresses height, scale and materials and detailing. Policies Env 33 addresses amenity and Policy Env 34 addresses pollution. The Plan establishes the principle of housing on the site and the detail will be established through the planning application process. **No modification proposed.**

Chris Byrne (0297)

It is not considered necessary to add a condition regarding heights and massing. Policy Env 30 Building sets policy to be applied. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

**H25 London Road (B)**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional

programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H26 Portobello Road**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H27 Willowbrae Road**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The site was identified in the Choices Housing Study, January 2020 (CD026). It provides a brownfield site in line with the aim of the Plan to maximise the use of brownfield land rather than greenfield land. Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

## **H28 Cowan's Close**

### Inverdunning (Hatton Mains) Ltd (0427)

It is not agreed that the capacity or size of the site requires to be altered. A Planning Application (21/06745/FUL) (CD173) for an affordable housing development of 19 units, on part of H18, in Council ownership was approved by the Council's Development Management Sub-Committee on 17 August 2022. In relation to the remaining site the Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. **No modification proposed.**

### Ruth Buchanan (0083)

Car free development is encouraged and supported in Policy Inf 4. The appropriate level of provision depends on a number of factors. The level of provision is most appropriately determined through the development management process on an individual site basis. **No modification proposed.**

### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **Reporter's conclusions:**

<b>Provision of the development plan to which the issue relates:</b>	Place Policies 4-15, Housing Proposals; Table 2 Housing Proposals (North Edinburgh); Table 2 Housing Proposals (East Edinburgh); City Plan Appendix D
<b>Planning authority's summary of the representation(s):</b>	
<p><b>Various North and East Proposed Sites</b></p> <p><u>Suzanne Bruce (0565)</u></p> <p>The plan acknowledges that the areas allocated for housing will result in a population exceeding the capacity of current general practices in the north part of Edinburgh's North East Locality. This is in addition to the thousands of other properties that have already been built. Wrong to deliberately over-develop an area when the negative social and environmental impacts are well known. For those living in these rapidly expanding areas, the effects of the massive increase in developments and the resulting residents/tourists/students is enormous. The reduced environmental quality is significant and traffic and pollution levels have increased enormously. Green space being removed from public use has meant the negative effects of over development are already felt and there appears to be a lack of understanding or unwillingness to gather data and analyse it. Over exceeding population capacity it is contrary to Scottish government aims.</p> <p><u>Howard Jones (0424)</u></p>	

Resulting population density would impact negatively on existing residents and users of this area across all areas including public transport, active travel, drainage (flood areas already in existence), education and private motor traffic.

#### **Place Policy 4 - Edinburgh Waterfront**

##### SEPA (0012)

Flood risk is mentioned as something to inform design and layout. We consider there is potential to provide more detail. (Please see our comments elsewhere on Docks area, e.g. H35 & H55).

Some sites require a flood risk appraisal and some a flood risk assessment. Advise the use of common terminology throughout to be clear that what is required is a flood risk assessment.

##### RSPB (0648)

The Waterfront 'Major New Development area' shown in Map 1 is adjacent to the Firth of Forth SPA and the Imperial Dock Lock SPA, and proposed developments in this area are likely to require to undergo a Habitats Regulation Assessment to ensure there are no adverse effects on the integrity of these protected sites.

Do not support text in section 3.23. It mentions that the site is supported by a Granton Waterfront Development Framework and Appropriate Assessment. The Appropriate Assessment identified disturbance, and collision risk/barriers to movement, as potential impacts on the qualifying interest of the Firth of Forth SPA. The mitigation measures described in section 3.24 are focused on minimising disturbance during construction, but other than the lighting strategy, there is no mention of means to reduce operational disturbance. A former industrial area changed to residential developments is likely to bring much more human (and canine) visits to the shore in winter which could lead to higher levels of disturbance than currently seen. The Appropriate Assessment must assess cumulative and in-combination effects - Measures such as the screening of sensitive areas of the shoreline to reduce disturbance by dog walker and providing signage discouraging disturbance of designated species while the feed at low tide may go some way to mitigating this issue but any development must be assessed in detail on a case by case basis.

##### LPBZ Commercial Ltd (0391)

"Mixed use regeneration" description for the waterfront is misleading - It is basically a large housing allocation.

A long-term issue for Edinburgh is that it has been unable to meet its housing demand in full. LPBZ have a concern that by focussing housing on "brownfield only" sites within the city boundary is to the detriment of maintaining and providing new sites for office development.

Office supply in Edinburgh city centre has been on a downward trend since 2009 and is now at an all-time low mainly due to the lack of new purpose-built offices being developed. Not all organisations require a central location and supply restrictions may see a movement of these occupiers to more peripheral and locations. It is essential that

brownfield sites within the city boundary are allocated for mixed use development which includes office development to meet some of this pent-up demand and to facilitate the continued growth of Edinburgh's economy.

Policy HOU5 in the draft city plan states that planning permission will be granted for the change of use of existing buildings in non-residential use to housing. The criteria under this policy does not explicitly exclude strategic business centres and the wording only discusses criteria relating to the loss of retail units to residential uses. Additionally, Policy ECON3 encourages office development as a "significant element" of mixed-use development in Business Centres rather than directing development to office use only and Policy ECON 5 supports the loss of employment and industrial sites to residential use within the urban area.

Where will employment and business development go in Edinburgh in light of the general subject policy support for residential development in many employment, office and business areas (for example, HOU5, ECON 3 and ECON 5)

In representation at the "Choices" stage, LPBZ suggested that the former Casino site and car park were allocated for business or commercial led mixed use so LPBZ are disappointed to see that the site is still located on white land and has not been allocated for a specific use.

Disappointed that this policy only permits major office development within the strategic business centre which is located to the west of the site at Victoria Dock.

#### Forth Ports Limited (0496)

Forth Ports are the Statutory Harbour Authority and the Competent Harbour Authority for the Firth of Forth and perform a number of functions as prescribed by legislation. Forth Ports put in place bye-laws to protect the health, safety and security of both operators and members of the public within its operational estates. They also have a duty to ensure port facilities are securely protected in accordance with International Ship and Port Facility Security (ISPS) code. For these reasons, it is not possible to permit public access through the Port estate.

Forth Ports initiated engagement with the Council to review the Leith Docks Development Framework. Whilst initial engagement was constructive, Forth Ports were advised that the review of the LDDF would take place through the proposed City Plan however the proposed Plan has failed to address the matter.

#### National Galleries of Scotland (0725)

Considers the principle of requirements in Place 4 are reasonable but would benefit from wording changes to increase clarity. As currently worded, the Policy (place 4) does not differentiate between different forms of development that may come forward in the Granton Waterfront Development Framework

#### Sapphire Land (0247)

It would be appropriate to ensure the overall vision for Edinburgh Waterfront contains reference to providing a mix of housing types, densities and sizes, as well as supporting

ancillary uses - the current wording relating to “high density urban quarters” is unhelpful and overly restrictive in this regard.

Crosslane Co-Living SPV 2 Limited (0687)

City Plan should be modified.

Network Rail (0071)

Generally support the proposed new street associated with EW1d (Proposal R1) and the potential to create new development plots as part of the delivery project. However, access into this area is taken from Seafield Road at the junction with Marine Esplanade where there is an existing level crossing. This is a Public Highway Manually Controlled Gate and has a high-risk rating in terms of public safety

Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), LPBZ Commercial Ltd (0391)

City Plan should be modified.

Union Property Services Ltd/VRS Ltd (0584)

City Plan should be modified.

Living Streets Edinburgh Group (0486)

City Plan should be modified.

Cockburn Association (0777)

Do not support the first bullet point “comprehensively designed proposals which maximise the development potential of the area”.

Maximising the development potential should not be a policy objective. Need to emphasise that the delivery of sustainable neighbourhoods is the primary objective and one consistent with the 20 minute neighbourhood ambition.

Western Harbour and Central Leith Harbour policy areas need to fully explore the impact of rising sea levels on the suitability and feasibility of development.

Welcome the development principle to create a new Coastal Park at Granton and Granton Waterfront.

Dave Berry (0463)

The city plan needs to start thinking about sea level rise now.

HCPII Properties 101LP (0517)

Query the proposed approach depicted in Map 15 which designates specific sites for specific uses. The urban context of Central Leith Waterfront is changing rapidly. It is overly

rigid to direct commercial-led uses to specific sites, particularly in areas where the office market is relatively weak.

Ocean Point 1 is currently a 9-storey office building located to the south-east of Ocean Terminal shopping centre. Only briefly been fully occupied indicating high density office development may not be optimum land use. Pandemic may result in office demand not fully recovering.

#### SEPA (0012)

Granton and Granton Harbour: City Plan should be modified.

#### Leith Harbour and Newhaven Community Council (0776)

Transformation that has taken place so far is not consistent with this paragraph: - Loss of large areas of green space and removal of more than 80 trees to developments/Tram work. There are several controversial proposed planning applications that are concentrating on high density but certainly not high quality or attracting community support.

The Park however is more than the recommended 800m distance from other recent and planned developments for Central Leith Waterfront that have no public greenspace.

#### Henry Sandercock (0044), Celia Mainland (0447)

City Plan should have much more emphasis on green space.

The tree conservation area should be extended to cover all of North Leith, up to the waterfront.

The Northernmost red-coloured development area of Map 14 should be removed and left as a green space - That section of this proposal contains two ponds which have become vital habitats for wildlife, especially birds. The ponds also provide a key area for exercise. These two wild ponds that have developed naturally at the NE corner of Western Harbour - the park proposals for the rest of the Western Harbour development look very manicured and sterile by comparison.

#### Mark Ockendon (0419)

City Plan should be modified.

#### NatureScot (0528)

There would be benefits to the approach set out in NPF4 and we welcome objectives for a co-ordinated look and a master-planned approach for the whole of the Place 4 area. Ensuring that there is a strategic look at the issues and a wider co-ordination between individual allocations and development sites, will help to ensure the delivery of NPF4 and City Plan objectives, including those for 20 minute neighbourhoods, green/blue networks, active travel provision, the creation of a coastal promenade and the issues relating to coastal defences. A co-ordinated look at these issues would be of practical benefit in relation to consideration of our interests with the Firth of Forth SPA.

Jayne Thurlow (0037)

Object to housing being built on the green space between Western Harbour Terrace and Western Harbour Way. The green space is somewhere for people to walk and for children to play. The city plans emphasise retaining sufficient green spaces for the well-being of residents. Buildings will block light from the existing flats. The view of the Firth and bridges beyond will be lost. The building process itself will produce a high level of disruption and noise for all current residents.

Asda Stores Limited (0142)

City Plan should continue the Adopted LDP allocation of the Asda site as a Local Centre that acknowledges the role that the store plays in the local community and would encourage other local services to locate in the area, in line with the aspirations of the National Planning Framework.

SEPA (0012)

EW1a- City Plan should be modified.

Andrew John Parnell and Brigitta Marianne Sjoberg Parnell (0344)

The listed buildings and their curtilage are allocated partly in the Proposals Map as an "LDP Legacy site" proposal "EW 2b" and partly as "Open Space". Both of these allocations are completely inaccurate and inappropriate.

It is also inappropriate to allocate part of these properties as "open space" as this infers that there is a public access, which there is not. 5 Caroline Park and Caroline Park House including Royston House, are in private residential use. Neither the buildings nor the curtilage are dedicated in any way to public use.

SEPA (0012)

EW1b- City Plan should be modified.

Hilary Hines (0265)

EW1b, EW1c, EW2b, EW2d: Housing proposed for Edinburgh Waterfront is far too dense and the Shore views will be severely damaged by the erection of high rise apartment blocks. This will also result in overcrowded neighbourhoods that are far too dense.

SEPA (0012)

EW1c- City Plan should be modified.

SEPA (0012)

EW2a: Forth Quarter: City Plan should be modified.

#### SEPA (0012)

EW2b: Central Development Area: City Plan should be modified.

#### Sapphire Land (0247)

EW2c Granton Harbour: Sapphire Land may wish to apply for fresh planning consents across their three development plots at Granton Harbour which may result in amendments to previously approved housing numbers in each of these locations.

#### SEPA (0012)

EW2c Granton Harbour: City Plan should be modified.

#### Biffa (0804)

EW2d: North Shore: The West Shore Trading Estate site is a long standing existing industrial estate and therefore an appropriate location for a Waste Transfer Station and Depot. The broad-brush allocation of the area as having potential for housing led development fails to take account of the industrial estate and as such the industrial estate should be removed from the proposals for future redevelopment of the area and a suitable safeguarding distance applied around it. The site is clearly not suitable for housing-led development as introducing housing allocations around industrial premises is at odds with existing operational industrial development.

#### Living Streets Edinburgh Group (0486)

Reference to contributions towards paths for pedestrians and cyclists is not sufficient. All of the sites are accessible by public transport and whilst some are closer to a range of facilities than others, they are all capable of having walking at their heart. Car free developments should be the default expectation.

#### **H29: Silverlea**

#### SEPA (0012)

This reach is part of the Niddrie Burn NFM study and should complement any Pentlands to Portobello environmental improvements projects.

#### **H30: Ferry Road**

#### Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

#### The Salvation Army (0189)

There are B and C listed buildings adjacent to the site [Ashbrook and Wardieburn House

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

SEPA (0012)

SEPA agree with Proposed Plan Appendix D. No flood risk assessment (FRA) is required.

### **H31: Royal Victoria Hospital**

Ian McRae (0028)

The area cannot deal with the additional impact of this proposal on infrastructure is already overwhelmed e.g GPs, Dentists, Schools are already stretched.

Craigleith/Blackhall Community Council (0403)

Principle a. "Deliver a housing led mixed use development in line with density requirements in part 4, table 2" should not lead to an inappropriate scale of development adjacent to existing single and one and half storey housing in Craigleith Hill Gardens and Craigleith Hill Loan which would have a negative impact on existing residential amenity.

It is notable that wildlife is absent from the list of considerations to be addressed in the present principles.

Jacqueline Christie (0023)

Traffic congestion in the area is already bad, especially around start and end of school periods; schools in the area are already at capacity; more work will have to be done to ensure the flooding issues within the Craigleith areas and Stockbridge have been addressed; and the environmental impact of the current proposal does not seem to have been considered for the loss of very large greenspace/corridor areas

Susie Ross (0440)

This site should be allocated to a new Flora Stevenson Primary School. It would afford a safe and secure location for children in a clean environment unlike the existing school in a dangerous location at the centre of a vehicle congestion area and air pollution. The entire site of currently protected trees and the wildlife would be preserved. There would be room too for the Gaelic School. This would further enhance an area already surrounded by a significant number of educational facilities creating an educational hub.

Inverdunning (Hatton Mains) Ltd (0427)

City Plan should be modified.

Susan Burney (0360), Lesley Moyes (0703), Naomi Appleton (0271),  
Dr Liam Keegan (0389), Helen Mitchell (0484)

There is already more than adequate local availability of shops in the general area.

Victoria Hart (0191)

Development of taller housing would be overbearing to the existing residential housing.

Page 55 3.34 mentions two listed buildings (the East Lodge and Hospital Administration building). There is a third building marked on map 21 p58 in the top left corner of the map – possibly an old stable block.

Mark Ockendon (0419)

It is quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life) - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

Naomi Appleton (0271)

Increased driveways may result from the reduced parking in this site and there would be a detrimental impact on green space and wildlife.

Living Streets Edinburgh Group (0486)

Pedestrian priority throughout must mean exactly that, so any reference to active travel route is not a substitute for that. It should be car free, so remove reference to limited car parking other than disabled and essential servicing.

SEPA (0012)

Development principles relating to this site and proposals relating to future fitting water management (page 57) should be considered in the context of proposals relating to Crewe Road South.

A multi-agency group has been formed to understand more fully the flood risk and opportunities to this area of Craigleith/Comely Bank.

Elizabeth M Kungu (0063)

There is a likelihood that the requirements of BGN 22 shall be watered down once a developer submits plans.

Simon Thomson (0248)

The site is not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

Christopher Fraser (0371)

The proposal has a high density and will impact negatively in terms of increased traffic volumes, flooding and the availability of services such as nursery/schooling, healthcare, recreation.

Dr Liam Keegan (0389)

The objector in particular has a back garden across Craigleith Crescent from the west wall of the Royal Victoria site. The plan for the site shows a new large building coming too close to this on this side of the site.

More apartments without parking as this would force all the old terrace houses to remove old gardens and put in parking.

Elizabeth Morton (0772), Howard Jones (0424)

360 units is excessive. This will have definite effects on existing residents and users of the area, for example health provision, drainage, flood risk, schools, shops, parking, and all forms of transport. These impacts do not appear to have been properly assessed.

Ian R N Stewart (0131)

This site is not "brownfield " in the same sense as say, Orchard Brae. It has a substantial area of green space which forms a part of a "green corridor" running through Pilrig Park, St Marks Park, Warriston playing fields, RBG, Inverleith Park/ Arboretum playing fields & Ferryfield to the east and Ravelston Woods, Craigcrook Park, Corstorphine Hill and Cammo to the west. These form a valuable green lung, recreation options and biodiversity all of which should be preserved to the maximum extent possible. The plan seems to underplay these aspects in favour of housing development.

There are references to existing listed buildings at 3.34 and 3.34c but no mention of how they will be protected or utilised sympathetically in any future development

Subsection g and the map suggest a new exit onto Craigleith Hill Crescent. That is not needed if the existing access to the west is properly managed.

The health and education infrastructures could not cope with 800 additional dwellings

Sewage and drainage remain a problem here. Scottish Water have started work to alleviate catchment problems and backing up in Craigleith Road and Orchard Drive. It remains to be seen how successful this will be. The addition of further dwellings (approximately 360) will place a further burden on upstream and downstream drainage, especially if there are further developments at (Plan) Place 6 (Crewe Road) and Orchard Brae.

The City Plan has a heavy emphasis on housing and housing development. The use of various sites for education / recreation and community purposes are less well considered and there is little sign of how various uses have been evaluated and balanced.

### **H32: Crewe Road South**

#### Police Scotland / Scottish Police Authority (0659)

Police Scotland are supportive of the principle of development however do not support the following aspects of the development principles and diagram:

- The amount and location of proposed greenspace and blue/green infrastructure;
- The appropriateness of the development areas proposed;
- Lower capacity of development; and
- The inclusion and location of the proposed primary school annexe.

#### Ian McRae (0028)

Insufficient consideration to demands on infrastructure - GPs, Dentists, Schools already stretched.

Existing flooding issues.

#### NHS Lothian (0596)

NHS Lothian welcome the reference to the Western General Hospital within the context of the Place Policy.

#### Craighleith/Blackhall Community Council (0403)

City Plan should be modified.

#### Sheila Strathdee (0448)

Support the revised proposals, especially the reduction of the number of housing units proposed, preserving the city skyline, and the very necessary flood prevention measures to be put in place. Should resist any diminution of these measures, especially at the behest of developers.

#### Mark Ockendon (0419)

It is quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life) - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

#### Susie Ross (0440)

This site should not be used for additional housing - another housing scheme in addition to those on Orchard Brae will place an unbearable burden on the water sewage system and the area is congested being on a main arterial road into Edinburgh.

Flora Stevenson, Broughton High and Fettes College are particularly going to be affected by new development, although other schools just beyond this will be adversely affected.

There will be detrimental effects in terms of traffic, air quality, flood risk and biodiversity.

Developing the site as proposed in this document would endanger not only the protected species currently on the site but those in Fettes College, Inverleith Park, Comely Bank Cemetery and the RVH.

Cockburn Association (0777)

City Plan should be modified.

Living Streets Edinburgh Group (0486)

Pedestrian priority throughout must mean exactly that, so any reference to active travel route is not a substitute for that.

Susan Burney (0360)

The provision of shops in the local area is already more than adequate.

Deidre Brock MP (0801)

Any future development must take account of protected species on the site and ensure as far as possible their continued access can be maintained through careful design and planning.

SEPA (0012)

There is a culverted watercourse to the south of the site. Our understanding is that is it culverted underneath Flora Stevenson's Primary School. Since our last site review, a multi-agency group has been formed to better understand the flood risk and opportunities to this area of Craigleith/Comely Bank.

Sheila Young (0251)

City Plan should be modified in respect of suggested condition.

Flora Stevenson Primary School is already at maximum capacity as is Stockbridge Primary School and other schools are some distance away.

Elizabeth M Kungu (0063), Andrew Brown (0007)

Flooding is an ongoing problem for the houses at the lower end of Craigleith Hill Avenue, and these proposals, provided they are enacted in full, should go some way towards

alleviating these problems. City Plan 2030 offers a unique opportunity to have work done to relieve the pressure on the drainage system with a nature based solution and at no cost to the Council.

Jacqueline Christie (0023)

Traffic congestion in the area is already bad, especially around start and end of school periods, schools in the area are already at capacity, more work will have to be done to ensure the flooding issues within the Craighleith areas and Stockbridge have been addressed, and the environmental impact does not seem to have been considered for the loss of very large greenspace/corridor areas.

Christopher Fraser (0371)

Proposal would have a negative impact on availability of services such as nursery/schooling, healthcare, recreation. Traffic volumes and possible additional impacts on floodwaters are also of significant concern.

Helen MacLeod (0364)

The area is prone to flooding.

The development should not change view of new-town skyline and open space should be maintained and improved.

The local primary and secondary schools are already completely full. The children in any new homes would have to travel to school as suggested by City Plan. There is no need for this.

Howard Jones (0424)

The site is a large much needed greenspace within the city periphery, linking other smaller areas of greenspace together for wildlife. It is used by rare wildlife such as Curlews. Area also incorporates major flood issues, as surface water from the Western General Hospital is allowed to drain into the exposed culvert that runs along the gardens of Craighleith Hill Avenue East. Current school at capacity and in an area with pollution problems (air and noise).

Inverdunning (Hatton Mains) Ltd (0427)

the site is part-owned by Police Scotland (which is understood to be a planned disposal) but the remainder of site is in two further ownerships: Royal Mail and a private owner with no confirmation of disposal.

Naomi Appleton (0271)

The north of the site is a regular feeding ground for curlews (and occasionally oystercatchers). It provides a beautiful open view of the Edinburgh skyline. The current proposals might not give due consideration to these two aspects.

Royal Mail Group (0501)

The Edinburgh North West Delivery Office at number 41 Comely Bank is allocated for residential development. The site is an important asset for Royal Mail and there is no short or long term intention in relocating to an alternative location.

Ian R N Stewart (0131)

The comments below apply to Site 6- Crewe Road South on pages 56, 57 and Map 21 , para 3.35

This site (page 56) has not been declared as vacant or about to be vacated. I am unsure therefore what the rubric "Planning permission will be granted....." means or implies. Does it mean acquisition by CPO? Does it mean a decided predisposition in favour of " housing - led development" to the exclusion of all and any other uses? Is this to be in perpetuity? This should be clarified.

This site is not "brownfield in the same sense as say former industrial use , or the Orchard Brae sites. It has a substantial area of "green space" and forms part of a "green corridor" which runs from the east at Pilrig Park, St Marks Park, Warriston playing fields, RBG, Inverleith Park/Arboretum playing fields and Ferryfield; and to the west via Ravelston Woods and Craigcrook park, Corstorphine Hill to Cammo and beyond. These areas singly and collectively form a valuable green lung, offer recreation options and diverse biodiversity all of which should be preserved to the maximum extent possible, if not enhanced. The Plan seems to underplay these aspects in favour of housing and they should feature equally in the Plan

The Plan does not explore other options for this site such as recreation, allotments or exclusive school/community use. The Plan should do this in a balanced way.

The recreation area of the police site at Fettes (ie NW of the current buildings) is frequented by a colony of bats. The location of their nests should be established, and that may constrain any future use of the site, including development. The same area is frequently visited by curlews which feed there on the damp playing fields.

The recognition of capacity problems at Flora Stevenson's school in the form of a proposal for an annexe is welcome. Consideration should be given to a complete new school built to energy efficient standards either here or (preferably) at site 5 to take advantage of cleaner environments. Alternatively the site could be used for the mooted Gaelic High School. The existing Flora Stevenson site could then be treated as part of the Orchard Brae site. There is a need for greater emphasis on public good / community use including a new school. Section 3.35 should address this.

There have been continual drainage and flooding problems in the Craighleith Hill estate, particularly at the Crewe Rd end of Craighleith Hill Avenue where a burn which runs at the bottom of several gardens enters a conduit under Crewe Rd S on its way to the Water of Leith. The result has been flooded gardens and more recently flooded houses. There has also been a case of sewage backup. The addition of some 320 dwellings here as proposed plus 360 at Site 5 (page 55) and possibly about 180 at Orchard Brae are likely to make existing drainage capacity problems even worse. Notwithstanding 3.35m (page 57) nothing should be done with this site until downstream drainage problems have been addressed and no development should take place which would make these problems worse -including the effects of site development downstream in Comely Bank/ Inverleith.

Infrastructure/ capacity problems also apply to education and health provision. Section 3.35 should address this clearly.

The Plan is predisposed to housing led mixed development (para 3.35). It should present a balanced evaluation of other possible uses too-educational; recreational allotments etc.

Para 3.35 refers to 2 electricity substations and at 3.35m the possible relocation of a gas District Governor. Will these all be relocated and if so, to where?

Para 3.35 refers to a development on the corner of Comely Bank Rd and Crewe Rd S equivalent to a 4-storey tenement. Rather than being a "strong urban form" this would be out of proportion with the surrounding area; would dominate that corner and surroundings; and would trap traffic noise and pollution next to the school. If developed this corner should be lower height and be in sympathy with the surroundings.

Para 3.35 e includes a potential new annexe for Flora Stevenson's . This is welcome recognition of capacity problems, but arguably Flora Stevenson's needs a complete new school which would be more energy efficient. It could be located at this site or, preferably at Place 5, with surrounding playing fields away from traffic and in a cleaner environment . There would also be space for a Health Centre / wider community use. The existing school site would then be part of that at Orchard Brae. There has been speculation that this site might be used for a new Gaelic High School. This would be sensible in principle as part of a new educational hub and should be supported at this site or at Site 5.

The Craigleith Hill estate area has had localised problems with flooding and drainage for some time. These have been attributed to lack of capacity in the system to deal with existing volume. The addition of 320 dwellings here plus 360 at site 5 , plus app 180 at Orchard Brae (H33 &H34) would further compromise the existing infrastructure and possibly lead to problems further downstream in Comely Bank/ Inverleith. No development at this density should precede infrastructural problems being rectified.

3.35n refers to a new open river channel along the northern boundary of the site. This might help reduce flooding risk in general at the expense of a localised flood plain but to relieve flooding risk in the Craigleith Hill area, the culvert under Crewe Rd S would need to be renewed and enlarged. The open channel would require respect and responsibility from users of the site and the surrounding areas to prevent it becoming a dumping ground for litter and general misuse leading to problems such as those at Cameron Toll a few years ago; b an open river course might also throw up safety fears, particularly if there is a high incidence of younger school pupils close by.

### **H 33: Orchard Brae Avenue**

Elizabeth M Kungu (0063)

The number of units set out in the housing proposals is the most that should be allowed.

Susanna Sharp (0638)

Too many substantial, old trees would be felled in creating this development - they form an important, natural barrier and are part of the green heritage. There is also insufficient parking, will add pressure in an already congested area

SEPA (0012)

A multi-agency group has been formed to understand more fully the flood risk and opportunities to the wider Craigleith/Comely Bank area.

**H34: Orchard Brae**

Alasdair Grant (0089)

The proposed development is too large.

Finance Development LLP (0688)

Object to the following Development Principle: New proposals must avoid replicating the scale and massing of the existing building. Heights must be lower and the layout / massing must be sympathetic to the surrounding urban form. It is considered that, in order to achieve an appropriate built form and density of development suitable for the surrounding streetscape, it is not necessary for the heights to be lower than the existing.

It is considered that ground floor office uses are appropriate and will assist in the creation of an active frontage to Orchard Brae.

Callum Melville (0155)

The "path" all round the entire site comes very close to the building at 48 Learmonth Avenue and some of the flats at the end of Learmonth Crescent raising concerns about security and privacy.

SEPA (0012)

A multi-agency group has been formed to understand more fully the flood risk and opportunities to the wider Craigleith/Comely Bank area.

Isabel Steel (0245)

No objection to this area of ground being developed as long as the development is sensitive and appropriate for the area. Objections to the current proposals are:

It is a greedy development trying to squeeze in too many flats/houses;  
the height of the proposed buildings is not compatible with the local area;  
the proposed buildings come too close to and crowd existing residences; and

the lack of parking spaces may be in accord with council policy but is completely unrealistic. People will have cars regardless of available spaces and will park in the local Comely Bank area which is already congested. Far more provision for parking should be provided. The lack of spaces also discriminates seriously against the elderly and disabled.

### **H35: Salamander Place**

#### Alison Winkler (0041)

Oppose plan of housing and business use on the former scrap yard plot. Apartments in 10 Salamander Court have bedrooms facing towards this plot – New development will have cause less daylight in these rooms as well as balconies and living rooms overlooking bedrooms. Development will increase traffic along Salamander Place. Since building commenced in the surrounding area for new housing and the disruption caused by the tramworks, noise pollution has gone up severely, impacting quality of sleep and increasing air pollution. Council should support surrounding apartment owners in giving grants for new triple glazed windows if development goes ahead.

#### Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

#### Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

#### Hilary Hines (0265)

EW1b, EW1c, EW2b, EW2d: Housing proposed for Edinburgh Waterfront is far too dense and the Shore views will be severely damaged by the erection of high rise apartment blocks. This will also result in overcrowded neighbourhoods that are far too dense.

#### SEPA (0012)

Based on LiDAR, part of the site is below 4mAOD. An FRA is required to assess the risk from the Water of Leith, coastal interaction, including the operation of the harbour. Site may be constrained. Sedimentation studies have been undertaken along the tidal reach of the Water of Leith. Harbour gates control water levels along this reach with a range of flood levels provided depending on future sea level projections and failure of harbour gates

### **H36: North Fort Street**

#### Simon Thomson (0248)

The site is not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

#### SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site

#### **H37: Coburg Street**

##### Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

##### Simon Thomson (0248)

The site is not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

##### Emma Whitfield (0031)

The proposal for housing on this site would massively intrude on the wellbeing of the adjacent building, number 32. The proposed development may drive essential businesses and services out of the area. The area immediately next to the proposal already contains so much newly built housing on a narrow, cobbled street in an historical area of Leith.

#### SEPA (0012)

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be used in conjunction with the Developer Pack to identify whether more site-specific detail is required. Site may be constrained due to flood risk. Sedimentation studies have been undertaken along the tidal reach of the Water of Leith. Harbour gates control water levels along this reach.

#### **H38 Commercial Street**

##### Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

##### Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

### SEPA (0012)

The site is approximately 4.8-5.8mAOD based on LiDAR. Sedimentation studies have been undertaken along the tidal reach of the Water of Leith. Harbour gates control water levels along this reach. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further. Draft SFRA identifies an FRA needed to inform proposal and blue/green opportunities.

An AECOM Leith Connections Active Travel Route is also exploring blue/green infrastructure along Dock Street/Commercial Street.

### **H39: Pitt Street**

#### Kenneth MacLean (0046)

This proposal includes existing residential properties and there is concern and confusion about if this are proposed to be redeveloped.

### SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. Although this appears to be picking up the low point along the Water of Leith Walkway. This should be investigated further.

### **H40: Steads Place**

#### Living Streets Edinburgh Group (0486)

Pedestrian priority throughout must mean exactly that, so any reference to active travel route is not a substitute for that.

#### Leith Central Community Council (0614)

Wish to see options for a future active travel route at high level safeguarded ("Leith Walk Highline") to support connections from Pilrig Park and the North Edinburgh cycle network to East Edinburgh and the coast line between Marine Esplanade and Portobello.

#### Mark Ockendon (0419)

City Plan should be modified.

#### Cockburn Association (0777)

We would strongly advocate a unified urban design framework be prepared to ensure the architectural and streetscape coordination of any new development coming forward

#### Leith Central Community Council (0614)

City Plan should be modified.

## **H41: Jane Street**

### Shortbread House of Edinburgh Ltd (0619)

Consideration must be given to existing businesses in the area. Concerns about existing and proposed access to their business, Shortbread House.

Oppose plans to turn H41 into a housing led mixed-use site. Site is part of Leith's industrial heritage and it is important to allow industry to thrive. Their use is light industrial and dependent on its location to operate. Their unit and other surrounding it have proved important for start up businesses and providing local employment.

Site requires constant visits not possible by further travel/public transport. Need to have opportunity to start up businesses where you live and existing businesses would not exist without this opportunity. Mixed use would only cater for retail and not support businesses such as theirs. Healthcare provision would not be inadequate, and the development would remove two foodbanks.

Full consideration has not been given to employment and commercial needs of the area. Business would not be able to function under new plans. It does not emit vibrations, fumes etc other than the smell of baking, but does create a small amount of noise and requires delivery by small and large vehicles throughout the day. Current plans do not allow for this access to continue.

Business is more than land and buildings, advocates quality of business and skilled workforce created. Plan to expand into site next door as a second bakery additionally supporting tourism. Business would likely be lost/ cease if forced to relocate.

Proposed new sites are not large enough or close enough to existing industrial sites to replace those proposed to be redeveloped.

Safe access is also not being maintained the business. In the development proposal (H41) Jane Street would no longer be a road with vehicular access. This would mean that the business is no longer able to ensure lorries and other vehicles can get on and off site safely. In addition, a cycle path is proposed to go through the car park. This would not allow for vehicles to move safely and would also not allow our forklifts to operate safely in the car park. Proper consideration of these routes should be made before the plan is developed any further.

Plans go against creating 20 minute neighbourhoods. Jane Street area is not an empty brownfield site waiting for redevelopment. It is an area of thriving local businesses and this should be acknowledged rather than just designating the area for housing.

### Deidre Brock MP (0801)

The proposals aim to replace a primarily industrial site with a housing-led, mixed use development which is unsuitable for the Jane Street site. Recent decades have seen the loss of much of Leith's industrial space and to remove one of the remaining sites would have a deleterious impact on the business and commercial needs of the community. Many of the Jane Street industrial units have, in recent years, been utilised as start-ups, with the site even being described as an 'incubator' for small business development.

Many businesses on site are of the view that the residential requirements in the plans would severely impact on their ability to trade. Place 8 development principles specify that units in the new developments would be intended for Class 4 uses. As a result, existing businesses will be unable to carry out their usual on-site operations and forced to move out of the area.

The proposal seems at odds with Econ 5 Employment Sites and Premises 3.241 which states that "redevelopment proposals on all employment sites, regardless of size, need to take into account the impact of activities of neighbouring businesses and in the context of criterion b (the proposal will contribute to the regeneration and improvement of the wider area where relevant) any other regeneration or redevelopment proposals for the wider area"

Questions must be raised over where existing businesses would be expected to relocate and how this relocation would impact on the current Jane Street workers' access to their '20-minute neighbourhood', - this should be a goal attainable for all workers, not just those in office-based, retail or hospitality roles.

Question whether the local area can shoulder another housing led development of this scale. A lot of recent development and approved plans for further housing within walking distance of this site. Must ensure the community infrastructure keeps pace. Question the impact of more housing on one of the city's most densely populated areas has been fully examined.

#### Leith Links Community Council (0617)

Existing mixed-use area (small businesses, offices, light industry, commerce, workshops, garage etc. which all offer good local employment opportunities) should not be replaced by housing-led mixed use which in practice are high density housing schemes with very small amount of other uses. Not clear where the existing businesses would go – contrary to the 20 minute neighbourhood idea.

#### Newbarns Brewery (0653)

Replacing industrial estate with housing-led mixed use is unsuitable for Jane Street. Contrary to Econ 5 Employment Sites and Premises 3.241 which states that "redevelopment proposals on all employment sites, regardless of size, need to take into account the impact of activities of neighbouring businesses and in the context of criterion b (the proposal will contribute to the regeneration and improvement of the wider area where relevant) any other regeneration or redevelopment proposals for the wider area".

Relocating business could lead to loss of jobs/workers. Questions must be raised over where existing businesses would be expected to relocate and how this relocation would impact on the current Jane Street workers' access to their '20-minute neighbourhood'

#### APS Group (Scotland) Ltd (0518)

Proposal will have an unacceptable negative impact on the Jane St Industrial Estate, displacing many businesses. The estate contains single storey industrial and warehousing units, including a mix of unit sizes, as well as yards, office facilities and on-site parking. The importance of this area to the life of the city and to numerous

businesses working across various sectors, should not be underestimated the estate is presently full, or very close to full. The Estate should be recognised as a valued resource and protected as such within City Plan. Further engagement with its multiple occupiers and land owners is needed.

A more sustainable alternative would be to change City Plan to include an element of greenfield land release, in order to protect and avoid losing this valued small business community.

Ramsay Cornish Auctioneers Ltd. (0685)

The proposals aim to replace a primarily industrial site with a housing-led mixed use development which is unsuitable for the Jane Street site. Recent decades have seen the loss of much of Leith's industrial space and to remove one of the remaining sites would have a deleterious impact on the business and commercial needs of the community.

Many of the industrial units have been utilised as start-ups, with the site even being described as an 'incubator' for small business development. Place 8 development principles do not, however, make provision for these businesses so any units provided in the new developments would be for Class 4 use only.

Paul Gibson (0559)

Proposed redevelopment of Jane Street Industrial estate and turning it into residential properties will be of huge detriment to the community of Leith and have a significant impact on local tourism.

Many of Leith's industrial estates are hives for the local community, places that artisan producers are allowed develop their skills and hubs to nurture new businesses. Many have local residents working in them helping to keep their carbon footprint to a minimum.

Mark Ockendon (0419)

It is quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life) - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

Inverdunning (Hatton Mains) Ltd (0427)

H41 (Jane Street) is a large area with multiple ownership. In response to enquiries directly with site owners, there was significant opposition to having to sell and relocate existing business.

SEPA (0012)

There seem to be inconsistencies in how to deal with Jane Street. No flood risk assessment is required in Appendix D but there is a request for the Water of Leith flood extent to be considered here and in the Strategic Flood Risk Appraisal.

Leith Central Community Council (0614)

City Plan should be modified.

Living Streets Edinburgh Group (0486)

Pedestrian priority throughout must mean exactly that, so any reference to active travel route is not a substitute for that.

**H42: Leith Walk/Manderston Street**

SEPA (0012)

Some clarification is needed to avoid confusion about this site. Previously it was identified in the Strategic flood risk assessment (SFRA) as Leith Walk (depot) but there are other references and names Appendix D refers to H42 as Leith Walk/Manderston Street.

**H43: West Bowling Green Street**

Water of Leith Conservation Trust (0392)

The main walkway follows the river from Anderson Place round to West Bowling Green St and the along the river to join the other spur from West Bowling Green St. This should be included on the map as a pedestrian route

There are challenges with the connection with H44 to the walkway (although the walkway is welcome)

Point i on page 63 is welcome but should be strengthened for ALL development by the river. Maintain a 20m buffer zone between the top of the bank to the Water of Leith and built form and use the buffer to create natural space for resilience and overland flow. This would benefit biodiversity and create an attractive river edge. This space can also be used for recreation and amenity.

Leith Links Community Council (0617)

The proposal should not be included in the Plan as it stands given existing mixed-use area (small businesses, offices, light industry, commerce, workshops, garage etc. which all offer good local employment opportunities) should not be replaced by housing-led mixed use which in practice are high density housing schemes with very small amount of other uses. It is not clear where the existing businesses would go – contrary to the 20 minute neighbourhood idea.

SEPA (0012)

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be requested from the council and used in

conjunction with the Developer Pack to identify whether more site-specific detail is required.

Site may be constrained due to flood risk. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further.

Inverdunning (Hatton Mains) Ltd (0427)

In response to enquiries directly with site owners, there was significant opposition to having to sell and relocate existing business. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period. As such, the identified site should be removed from specific reference.

Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

Synergy Group Fitness (0806)

Support the provisions of the Plan which suggest that ground floor business units will be provided but require assurance that suitable premises will be provided for existing businesses that do not wish to relocate.

City Plan should clarify how housing land requirement can be met when allocations have been made on land that is not promoted by landowners - CPO would take many years

Should Scottish Government Reporters be minded to support the redevelopment of Place 9, we appeal to them to require further discussion and consultation with the landowners and business in this area.

Living Streets Edinburgh Group (0486)

Pedestrian priority throughout must mean exactly that, so any reference to active travel route is not a substitute for that.

Mark Ockendon (0419)

It is quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life) - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

Jodi Duffin (0264)

Object to the proposal for the following reasons:

- Risk of traffic accidents with multiple sites in the area, the area is already a danger with multiple building sites and planned road closures
- Area has building fatigue, residents have had non-stop site developments/disturbance/noise issues which make it an unpleasant area to live in
- New housing would be directly into WBS housing, blocking more day light and causing privacy issues
- Will cause issues to on street parking, in the short term with more builders parking illegally in the area and long term for residents.

#### Katie Soane (0260)

The circa 600 new homes planned for the area will be around 6 stories which will impact on the designated view of Arthurs Seat from Newhaven Road. The scale of development will impact of the character of the neighbour, reduce the opportunity for local population to exercise reduce local employment opportunities and impact the local beverage production.

The proposal does not confirm to aspirations laid out in 20 minutes neighbourhoods - removing employment sites providing jobs and access to services within walking distance for the existing local population. Also existing facilities will be stretched - no new nurseries, schools or healthcare facilities being provided.

#### **H44: Newhaven Road 1**

#### Leith Central Community Council (0614)

The proposal is not clear on mapping.

#### SEPA (0012)

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach.

Site may be constrained due to flood risk and may not be suitable for residential development. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further.

#### Inverdunning (Hatton Mains) Ltd (0427)

In response to enquiries directly with site owners, there was significant opposition to having to sell and relocate existing business. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period. As such, the identified site should be removed from specific reference.

The scale of development will impact of the character of the neighbour, reduce the opportunity for local population to exercise reduce local employment opportunities and impact the local beverage production.

The proposal does not confirm to aspirations laid out in 20 minutes neighbourhoods - removing employment sites providing jobs and access to services within walking distance for the existing local population. Also existing facilities will be stretched - no new nurseries, schools or healthcare facilities being provided.

**H45: Newhaven Road 2**

SEPA (0012)

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach.

Site may be constrained due to flood risk and may not be suitable for residential development. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further

Living Streets Edinburgh Group (0486)

Pedestrian priority throughout must mean exactly that, so any reference to active travel route is not a substitute for that.

Inverdunning (Hatton Mains) Ltd (0427)

In response to enquiries directly with site owners, there was significant opposition to having to sell and relocate existing business. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period. As such, the identified site should be removed from specific reference.

Leith Central Community Council (0614)

This proposal is not clear on maps.

This proposal could overshadow the Water of Leith and/or existing buildings.

Inverdunning (Hatton Mains) Ltd (0427)

Accept Place-based approach taken by City Plan 2030, but this should remain as a guide for certain areas rather than specifically linked to proposed allocations. In areas where proposed sites are only potential windfall opportunities, the Place Policies and Development Principles can be retained as development guidance.

Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

Legal & General Property Partners (Industrial Fund) Limited and Legal & General Property Partners (Industrial) Nominees Limited (0736)

Due to existing leases Bonnington Industrial Estate is unlikely to come forward for redevelopment until the latter part of the City Plan period.

Mark Ockendon (0419)

It is quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life) - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

Liane Montgomery (0030)

The proposal will affect privacy of current residents, the building will be noisy, parking in the area will be adversely affected and there is insufficient local infrastructure which already has issues with drainage/sewage.

Katie Soane (0260)

The circa 600 new homes planned for the area will be around 6 stories which will impact on the designated view of Arthurs Seat from Newhaven Road. The scale of development will impact of the character of the neighbour, reduce the opportunity for local population to exercise, reduce local employment opportunities and impact the local beverage production.

The proposal does not confirm to aspirations laid out in 20 minutes neighbourhoods - removing employment sites providing jobs and access to services within walking distance

for the existing local population. Also existing facilities will be stretched - no new nurseries, schools or healthcare facilities being provided.

#### **H46: Bangor Road**

##### Living Streets Edinburgh Group (0486)

Pedestrian priority throughout must mean exactly that, so any reference to active travel route is not a substitute for that

##### SEPA (0012)

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further.

##### Mark Ockendon (0419)

It is quicker and easier to use a car for many journeys. As such, the identified site should be removed from specific reference.

#### Simon Thomson (0248)

The proposal site not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

#### Mark Ockendon (0419)

It is quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life) - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

#### **H48: Stewartfield**

#### Rachel Ross (0784)

Relocating businesses to outskirts of the city will increase traffic/congestion and have adverse effect on businesses and their customers. Many businesses will not be compatible as part of housing-led mixed use due to deliveries, noise and smell

#### Living Streets Edinburgh Group (0486)

Pedestrian priority throughout must mean exactly that, so any reference to active travel route is not a substitute for that.

Mark Ockendon (0419)

It is quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life) - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

SEPA (0012)

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach.

The draft SFRA mentions an FRA is required, consideration of blue/green corridors, and the opportunity for a strategic SUDS basin to manage surface water on site and to assist with reducing surface water flood risk in the area.

Site may be constrained due to flood risk. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further.

Inverdunning (Hatton Mains) Ltd (0427)

In response to enquiries directly with site owners, there was significant opposition to having to sell and relocate existing business. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period. As such, the identified site should be removed from specific reference.

Simon Thomson (0248)

The proposal site not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

Gareth Hutchinson (0290)

Permit parking proposals for the area should be cancelled

David Williams (0643)

This proposal is dismantling Leith's rich light industrial heritage. Precedents would be set which will seriously alter the well-established sensibility of the area. There needs suitable alternative locations for businesses affected. Will lead to job losses or employees having to travel much further to relocated sites. Also concerns about lack of sufficient infrastructure for increased population.

Jennifer Reaves (0299), Anne Meikle (0286), Sarah Farrell (0473)

The proposal would have the following detrimental impacts:

- Setting or character of a listed building (Category C, the Mill Wheel) which attracts many visitors would be affected.
- Site is above Bonnyhaugh Lane and higher level housing would overshadow the area and lead to loss of light, sunlight and privacy.
- Recent and future new builds in the area will put pressure on levels of traffic feeding into main routes through increased numbers of cars and delivery vans.
- Local new builds have not added proportionate increases in health and social infrastructure. Additionally the pandemic has led to the loss of local retail outlets and the opportunity to 'shop local'. The current light industrial use offers several well used services and some leisure opportunities.
- Mature trees and shrubs currently fringing Stewartfield and Bonnyhaugh Lane provide habitats for wildlife which add character to the area.

Liane Montgomery (0030)

The proposal will affect privacy of current residents; building will be noisy; insufficient local infrastructure; impact existing issues with drainage/sewage and parking in the area will be adversely affected.

Gillian Rae (0571)

The proposal fails to meet a key principle of Scottish Planning Policy with regard to the 'right development in the right place' for the following reasons:

- Layout of this proposal is not appropriate to the site and its impact on existing environment is contrary to design principles that that development should fit into existing surrounding environment and not change them adversely.
- Proposal for the ground floor to be made available for business units. However, the proposed residential density (100-175) is very high and would involve the construction of tall buildings. Given the size of the site, a lower density would be more appropriate in order to maintain the character and appearance of the area.
- The reference to height and mass is rather vague. It is likely that the Council would prepare a development brief prior to inviting any planning application – but this is in no way guaranteed by the Place 14 principles.
- A new residential development here could result in significant loss of habitable light and threaten the privacy of the single aspect rear facing properties at Burns Place, 1A Bonnyhaugh Lane and adversely affect the residential amenity of neighbouring owners.
- Will negatively impact on the existing road network and the traffic assessment undertaken to date is insufficient. Flats built without parking spaces will not prevent car ownership in this area.
- Would adversely impact local amenity in terms of traffic movement, construction impacts, visual impact and the loss of small but unique and valued outdoor green networks.

- Further work is required to demonstrate that the development will not exacerbate historic flooding issues in the area local to the proposed development.
- Risking the amenity of this area would have a negative impact on the wellbeing of people already living area with the highest population density in Edinburgh. There are trees, self-seeded scrub and wildflowers on the periphery fence of the existing industrial site which help to screen the industrial units from view, add amenity and support our wellbeing, while they also sequester carbon, reduce flooding, mitigate air pollution, cool urban environments, enhance local biodiversity and are a home for wildlife living in and around the river. New trees would simply not be ready to provide the same greenspace, wellbeing and ecosystem services for decades.
- The process of demolition and rebuilding would involve significant carbon release. Contrary to aim of carbon neutral by 2030
- Although the 'Place 14' principles talk about height, mass and housing typology they do not make reference to materials or design. The Place 14 principles need to be strengthened to give greater emphasis on good design and greater protection to the character, appearance and amenity of the neighbouring area.
- The small but unique private residence at the entrance to the estate has been included within the plan so risks compulsory purchase. However, the amenity it adds to the area has been underappreciated
- The redevelopment will almost certainly result in the loss of local service industries. Should not be replacing the existing light-industrial buildings that are not at the end of their commercial viability with other small business units located in the basement of a residential complex with little / limited street visibility.
- Existing businesses are providing income, jobs and local services for people within the community, enabling 20 minute lifestyles.
- The intention to open a link between Redbraes and Ladehead in Bonnyhaugh is also worrying. These two areas were designed and have existed as cul-de-sacs decades ago and provide tranquil residential areas with a low footfall on either side providing an area for safe street play and a sense of community. There are already several routes on the other side of the river that are well-surfaced, with good lighting Should maintain the perception of safety gained from the footfall on these existing corridors and preserve the more secluded aspect within the Bonnyhaugh estate.

#### Hew Dalrymple (0238)

The site should retain mixed use development allowing small business parks to remain as they are an essential part of the community.

#### Framework (Edinburgh) Limited (0743)

The proposal would have the following reasons detrimental impacts:

- It would impact ability to trade of existing businesses which do not fall within Class 4 business use with no offer of viable replacement industrial sites.

- Relocating businesses to the outskirts of the city will entail lengthy commutes for employees and their customers contrary to " 20 Minute Neighbourhood " goal.
- More housing will create fewer places to work locally and put an increased strain on an existing overburdened community infrastructure .
- The proposed development and loss of one of Leith's few remaining light industrial sites would set an undesirable precedent.

#### Katie Soane (0260)

The circa 600 new homes planned for the area will be around 6 stories which will impact on the designated view of Arthurs Seat from Newhaven Road. The scale of development will impact of the character of the neighbour, reduce the opportunity for local population to exercise, reduce local employment opportunities and impact the local beverage production.

The proposal does not confirm to aspirations laid out in 20 minutes neighbourhoods - removing employment sites providing jobs and access to services within walking distance for the existing local population. Also existing facilities will be stretched - no new nurseries, schools or healthcare facilities being provided.

#### Katrina Danson (0301)

The proposal is unacceptable for the following reasons:

- Insufficient parking in the area.
- Already considerable congestion at Newhaven Road..
- Loss of open space, less daylight will have effect on mental health.
- High buildings will overlook existing property – effect on privacy.

#### **H49: Coruna Place**

##### Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

##### Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

#### **H50: Bonnington Road**

##### Christine Nurse (0323), Catherine Ness (0642)

Proposal would have a detrimental impact on the local economy and would further exacerbate the problem of there being limited infrastructure and shopping available in the

Bonnington area. The trading estate currently provides an essential service to the local community and to those visiting the area. There are no outlets selling equivalent items to the public in the local vicinity. Removal of the trading estate would therefore lead to an increase in road traffic.

Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

Sarah Roberts (0630)

The industrial estate generates employment, allows for agile new business to develop and provides vital services to local residents. Removing the retail outlets is not supporting the 15 minute city idea. More residential developments will require park space/gardens/allotments/shops.

Richard Cherns (0476)

It is indicated the proposal is unacceptable for the following reasons:

- No detail in terms of height and appearance. But 56 units in this space will be detrimental to the park. Buildings over 2 stories will overshadow a children's play park.
- Along with other development in the area, proposal will greatly increase traffic. Car parking will also be an issue.
- The nature of the commercial units there would change in any condensed development. Unlikely to provide affordable space for current occupiers.

Forth District Salmon Fishery Board - Crown Estate Scotland (0346)

City Plan should be modified.

SEPA (0012)

The proposal may not require a flood risk assessment (FRA), although it is recognised the Council's Flood Team may have requested that surface water management to be considered within the site design and this may form the basis of an assessment.

**H51: Broughton Road**

Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

SEPA (0012)

The site is sufficiently elevated above/set back from Water of Leith, with approximately 10 metres elevation between site and Water of Leith.

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach.

Site may be constrained due to flood risk. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site.

**H52: Iona Street**

SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within the site. This should be investigated further.

**H53: Albert Street**

Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

Matthew Gason (0090)

The proposal will have negative impact on quality of life and the appeal, value and marketability of the neighbouring tenement which currently have some open views to Carlton Hill.

#### SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

#### **H54: St. Clair Street**

##### Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

##### Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

#### SEPA (0012)

A flood risk assessment (FRA) is requested in Proposed Plan Appendix D. The risk identified was from surface water flooding only. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further. Site was identified in the draft SFRA as an opportunity site for a strategic SUDS basin.

#### **H55: Seafield**

##### The Royal London Mutual Insurance Society Ltd (0149)

The estate is 100% let and tenant leases are in place until November 2036, which is beyond the duration of the Plan.

The landholding is situated in a location well suited for employment use within the City's established urban area. It is accessible by foot, cycle and vehicle.

There is a lack of evidence to support the proposed Edinburgh CityPlan 2030 (PECP) approach to redevelopment of land including employment (mainly industrial) land to satisfy the requirement for housing. Plan is not supported by background papers which consider the impact of its strategy on established employment and business uses.

It is not clear to what extent The 'Edinburgh Commercial Needs Study: Mixed Use Delivery (ECNS)(December 2020)' which has been undertaken by Ryden on behalf of the Council has informed the Council's approach. It is not identified as a background report to the plan but is located within the Choices for City Plan 2030 consultation webpage. The implications for the industrial market of progressing with the brownfield strategy are identified in the Report and are significant - Implied potential is the loss of around 250,000 sq. ft. of industrial space annually to 2030.

The Report makes some key observations, which must not be overlooked:

- Proposed loss of stock is skewed towards the north east of the City and new stock has been developed only in the west of the City (p15).
- 30% of the 30,000 jobs supported by industrial stock could be affected
- Not all industrial stock identified for redevelopment is of a poor standard
- In assessing the impact on the Bonnington area, the Report cautions that there will still be an overall loss of job numbers and services from the area and that this should be balanced against the residential and economic impact of new residents in the area.
- The case studies demonstrate that policy requirements to replace employment uses on site are tending to yield only a small number of flexible small units, some of which are designed to convert to flats if they do not attract tenants, and are thus unlikely to contribute to the replacement need if industrial stock is lost at the potential rate indicated.

The Strategy fails to recognise that:

- The industrial market services the demands of the local urban market;
- The market is performing well with limited supply potentially suppressing or displacing demand, particularly for smaller units;
- The strategy represents redevelopment of 30% of the City's industrial stock including premises such as Royal London's which is modernised and well suited to market needs, full, popular and achieve high rents;
- Jobs would be lost and businesses would be displaced beyond the City;
- The potential loss of around 250,000 sq.ft. of industrial space annually to 2030 which is around five times the historic rate of stock loss;
- The potential stock loss rate around six times the current, active rate of new industrial development; and
- A very active industrial development programme would be required to reaccommodate even a proportion of this displaced activity.

#### David Thomson (0538)

**Access.** The addition of residents from the proposal would lead to unacceptable traffic congestion. On its landward side it is bounded by the operational railway. The only exits are via the King's Road traffic lights (a bottleneck), Leith (complex and inadequate road system) and Fillyside Road - residential area of Craigentinny.

**Pressure on residents Parking.** Many new developments only provide a single parking space but households may have more than one car.

**Pressure on visitors parking.** With the beach-front set to be developed along Seafield, there will also need to be adequate parking for people from elsewhere.

**View Blocking.** The high-rise nature of the housing developments is likely to block the sea view from the houses in Nantwich Drive and Wakefield Avenue. Consideration should be given to the population density, which can be ameliorated if the Council will constrain developers to build homes of a size and height appropriate to the area.

Utility of Beach and Prom. Portobello Prom and Beach are now established as a highlight of Edinburgh life and tourism, but the area is actually quite small. There are cyclists, dog owners, water sports enthusiasts, swimmers and simply families enjoying a nice time on the sand. If the number of people living nearby is increased by this development, the space each can use, and consequently the utility value of the place to the people is reduced

#### Scottish Water (0342)

This site is located approximately 50m from the boundary of Seafield WwTW. In addition to the proximity to the WwTW, there are a number of large strategic wastewater pipes intersecting this site that may require considerable measures to ensure they are protected from any impact of development. This could potentially have an impact on the financial viability of the site.

#### Alastair Cameron (0145)

Concerned that a 'housing-led mixed use' development at Seafield will lead to missed opportunities to develop a coherent community, based on 20-minute neighbourhood principles.

#### Manse (Seafield) LLP (0212)

It is not appropriate or necessary to preclude granting planning permissions at Seafield until a Place Brief has been finalised and approved - unnecessarily restrictive and could lead to a considerable delay in bringing the housing development forward in the timescales relied upon by the Council to meet its housing land requirement. Place 15 requires a Place Brief and Masterplan to be prepared for an extensive area covering the whole of the Proposal H55 but the Council has not consulted all of the many landowners affected by Proposal. The single largest landowner – Royal London – who control about a quarter of the land, have objected to Proposal 55 because they have no intention of bringing their land forward for redevelopment. If significant areas of land cannot be procured for redevelopment, then the Place Brief as a whole will not be deliverable.

#### Anne Thomson (0551)

Proposal will lead to very limited prom resources being over-stretched.  
Proposal will have an effect on current prom users who will find hundreds, if not thousands, of residents sharing the prom and the beach with them.

Proposal will create traffic problems. There are already traffic jams along Seafield Road.

#### Mark Ockendon (0419)

It is quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life) - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV

charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

Ursula Wright (0662)

Open space for productivity is important and must not be overlooked or omitted.

Living Streets Edinburgh Group (0486)

As it stands there is a lack of adherence to transport hierarchy. There is reference to active travel, but not to pedestrian priority.

RSPB (0648)

It is not correct to say in Section 3.51 that “The mitigation measures noted above would ensure development of the Seafield Industrial Estate would not have a significant effect upon the Firth of Forth SPA and the Outer Firth of Forth and St Andrews Bay Complex SPA; the structure or the functioning of the Qualifying features (sps) populations or the habitats that they support.” Development of Seafield may cause acoustic and visual (including lighting) disturbance to waders feeding and roosting within 150 meters of the site, particularly during construction but also once new development is occupied/operational and human activity. A series of mitigation measures are mentioned in Section 3.50 but these mitigation measures DO NOT effectively mitigate occupied/operational disturbance

Action Party (0250), Jennifer Elliot (0791), Anna Brand (0742), Gemma Sethsmith (0694), David Cooper (0735), Serge Marti (0745)

The development at Seafield requires a stronger community steer:

- Place Brief: Establish a community-led body to prepare a Place Brief for the site. A Place Brief should have been developed in collaboration with the community to feed into the Seafield proposals in the City Plan.
- No development should take place until the Masterplan is produced
- No informal consultation between landowners/ developers and council/ planners should take place in parallel with the Place Brief or Master planning processes, or else it needs parallel input - or oversight - by all relevant community representatives.

Seafield requires a community-centred comprehensive holistic approach:

- Welcome a joined-up environmentally-sensitive, socially-inclusive community development at Seafield that creates a vibrant sister community.
- Oppose any process leading to a negative development

Expect that a development that is responsive to the following 7 points:

- Housing that is climate resilient and responsive - inclusive and affordable new homes build to adequate thermal efficiency to allow for low/zero carbon heating.
- Transport: a design led approach.

- Community infrastructure: a new school and facilities centrally located, focussed on a neighbourhood centre and transportation hub.
- Green space: open community green spaces and recreational space
- Coast, nature and climate change: ensure net biodiversity gain
- Prom and beach: deliver a renewed and sustainable Seafield prom
- Integrated development: No development unless an overall Masterplan is approved by the wider community.

#### Edinburgh Dog and Cat Home (0310)

States that the Edinburgh Dog and Cat Home (EDCH) is a valued and widely recognised facility for dog and cat welfare and provides an important facility across Edinburgh and the wider area. Maintaining service and improving the facility is fundamental to EDCH. Notes many benefits of current site in terms of location, but also the challenges of the physically constrained site that is aging and requiring maintenance and improvement which could be addressed through a new, modern, purpose built facility elsewhere. They are considering options of refurbishment, redevelopment or relocating to a new site and would like the plan to be flexible to support these options.

They request that City Plan 2030 recognises the development potential of their Seafield site by including it within the H55 allocation, adopting the same criteria used by the Council in assessing Site 383 of the Environmental Report at Main Issues Stage (CD024), including broad environmental constraints, public transport accessibility and physical and social infrastructure, the EDCH site would achieve many if not all criteria under the same analysis, retaining the potential to improve existing facilities either in situ or in a new location.

Currently, the EDCH site is outwith the H55 allocation. In considering the case for its inclusion it is stated that the site would meet the assessment criteria of the wider Seafield site and could make a meaningful contribution consistent with the plan's strategy to promote sites within the urban area for housing. Inclusion of the site within Place Policy 16/H55 site provides an opportunity for comprehensive masterplanning, increased capacity, improved connections and approach to flood risk and drainage.

#### Peter Allen (0336)

Future development at Seafield must provide education, and healthcare infrastructure and community facilities. If only a "contribution" is made then these facilities will have to be provided elsewhere which will run counter to the principles of creating a 20-minute neighbourhood.

Development principle a): "A housing –led mixed use urban extension with a sense of community...". In order for this to be achieved, the community must lead on some of the housing development, so that the housing being provided is what the community actually want.

City Plan should mention the sewage treatment works at Seafield as this is a key part of the area and the smell must be dealt with in order to create a thriving community in the area.

Anne Thomson (0551)

Proposal will require adequate parking for residents. In addition, some of the development should be parking for beach-users.

An investment in a prom upgrade and leisure activity support will be required.

Use of the railway should be considered. It could become a tram or express bus route.

NatureScot (0528)

As currently proposed there is concern that the requirements in principle for development at Seafield will not support the required flood risk and coastal erosion appraisal - it appears that the flood risk and coastal erosion appraisals will be developer led. Flood risk and coastal erosion along Edinburgh's coast will be of such significance that appraisal should be led by the Council, taking a strategic approach to the issue through development of some form of Coastal Adaptation Plan.

Welcome the requirements of the associated BGN57 proposal but consider that Seafield's location offers more opportunities for green blue network enhancement and extension and that incorporating this into site requirements would help this site meet overall City Plan 2030 aims and objectives.

Paragraph 3.52 presents a conclusion of no "significant effect" which is terminology used at an earlier stage of Habitats Regulations Appraisal than the Appropriate Assessment stage. The correct term, and conclusion, is that there will be "no adverse effect on site integrity".

Miller Homes (0256)

Regulation 48 of The Conservation (Natural Habitats, &c.) Regulations 1994 provides that a competent authority (in this case the Council), may agree to a plan or project only after having ascertained that it will not adversely affect the integrity of the European site.

A Habitat Regulations Appraisal, dated September 2021, is included in the evidence base of the City Plan. It identifies that two place based policies are likely to have significant effect on Firth of Forth SPA and Outer Firth of Forth and St Andrews Bay Complex SPA; Place 4 – Edinburgh Waterfront and Place 15 – Seafield.

However, the Habitats Regulations Appraisal effectively delegates the acceptability of development at Place 15 – Seafield to project-specific habitat regulations appraisal and recommends that specific wording be included in the City Plan to this effect. Not only does the City Plan fail to incorporate the recommended wording suggested in the Habitats Regulations Appraisal but the Council are not able to confirm that development at Place 15 – Seafield would not have an adverse effect on European sites until such time that the project-specific habitat regulations appraisal is undertaken.

Regulation 49 says that if the authority is satisfied that, there being no alternative solutions, the plan or project must be carried out for imperative reasons of overriding public interest (which may be of a social or economic nature), they may agree to the plan or project notwithstanding a negative assessment of the implications for the European site.

It has not been demonstrated development at Place 15 – Seafield would not have an adverse effect on European sites. As such, the Council should have considered alternative solutions with a lower potential for adverse impacts on European sites, such as this site, but they have not done.

Julie Robertson (0210)

Need to safeguard areas of Seafield Road for business. Does not support removing businesses to further away or hoping that they cease to trade. Car dealerships are needed. Require supporting infrastructure for homes.

Diana Cairns (0452)

Support housing on this site but the design must be community-led so it is of a human scale, is sympathetic to the local area and does not overload local infrastructure.

Lawrence Marshall (0702)

The portion of Seafield running from King's Road to the sewage works is essentially a westwards extension of Portobello. The beach must not be overshadowed.

Arnold Clark Automobiles Ltd (0750)

Generally understanding of the need for the assessments required in Appendix D – Technical Requirements for Housing Proposals but City Plan should state that the Council undertake the studies in Appendix D in early course to inform the upcoming masterplanning exercise.

Portobello Amenity Society (0612), Stephen Ian Hawking (0469)

Support for a mixed use but subject to an imaginative enforceable Masterplan and Place Brief being developed that has been thoroughly consulted on and demonstrably has the support of the surrounding communities. The Place Brief should show how it has met the aspirations of existing surrounding communities.

Suzanne McIntosh (0409)

Infrastructure required in relation to H55: a new primary school, an extension to the high school, a new medical surgery, good cycle infrastructure, public transport, the Edinburgh suburban rail line - a station at Seafield and a potential future tram extension could be planned for as part of this major expansion.

Oonagh O'Brien (0585)

City Plan should be modified.

Inverdunning (Hatton Mains) Ltd (0427)

Proposal is a large site with multiple ownership – part is owned by Lothian Buses and potentially could come forward in plan period but the remainder is owned by a range of

investment companies, private owners and car dealerships - disposal timescales are unknown.

#### SEPA (0012)

A flood risk assessment (FRA) is requested in Proposed Plan Appendix D. Historic maps indicate the presence of numerous small watercourses through the site which may be culverted. An FRA is required which assesses the coastal flood risk to the site. Consideration should also be given to any culverted watercourses. Future sea level rises should also be taken into consideration.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer. The draft SFRA mentions strategic attenuation pond to mitigate flooding.

#### Portobello Community Council (0206)

In line with emerging NPF4 and infrastructure first principle to allocation and development then it should be clarified that any development in advance of full production of the Place Brief, FRA and erosion appraisal, development principles, masterplan should be considered premature. Presently only development ahead of the Place Brief is stated as being premature.

#### **H56: Sir Harry Lauder Road**

#### Portobello Community Council (0206)

Site requirements need to be refined to provide clarity to the proposed scale and preferred location of the class 4/ commercial uses that are to be required within the allocation.

Reference should also be made to the need to provide landscaped streetscape and active travel connectivity to reflect the newly created condition in the neighbouring section of Fishwives Causeway (The recently completed Barratt development)

#### Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

#### Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

#### SEPA (0012)

A flood risk assessment FRA is requested in Proposed Plan Appendix D. There is uncertainty, however, regarding the Braid/Figgate Burn Flood Protection Scheme. An FRA which assesses the Figgate Burn is needed. Consideration should be given to any culverts/bridges which may exacerbate flood risk. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer. Draft SFRA identifies consideration of blue/green connections which should also be considered.

### **H57: Joppa Road**

Mary Burgess (0456), Beverley Burgess (0605)

The density of housing would be out of character with the surrounding area.  
It would lead to an increase in car parking in an area that already has an extremely high car density with unmanaged on street parking.  
The height of the building would lead to substantial loss of daylight/sunlight for neighbouring properties.  
There would be a very lengthy period of traffic and noise disruption on a busy main road whilst the development took place.  
My house backs on to the proposed site and development would lead to loss of privacy.

Kim McFarlane (0698)

Increase in building heights would lead to overshadowing of our garden – loss of light and privacy.

Craig McIntyre (0709), Nadia McIntyre (0704)

Development would lead to loss of light/privacy, along with the visual amenity of Joppa Road being eroded/lost.  
Site is subject to flooding.  
Site has already had several planning applications refused.

Portobello Community Council (0206)

Any proposed development on this site should be carefully handled and guided by clear site requirements. While we welcome reference to the Conservation Area as set out in Appendix D, we would advise that additional reference should be added to reflect the need for built form to relate to the setting and scale of neighbouring buildings in the Conservation Area.

SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer.

Oonagh O'Brien (0585)

Object to the proposed density of buildings and the potential impact this density will have on the quality of life of the residential units in the immediate neighbouring vicinity including potential loss of light, potential loss of privacy and increased problems with traffic, access and parking.

Morgan Smith (0788)

Additional housing would bring an increase in demand for car parking in an area that is already under strain.

The creation of 8 housing units would likely necessitate an increased height in comparison with surrounding buildings - this would also create further restrictions in the amount of sunlight in neighbouring houses.

New houses on the site would be incongruous with the existing style and period of surrounding buildings.

Development would result in a prolonged period of disruption/noise and traffic problems in a main thoroughfare.

Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

Bridget Campbell (0706)

Development would be at a greater density of housing than is typical for this area. A development of 8 units would likely to result in a structure of such height that would negatively impact on the daylight into the homes and gardens of existing properties and dramatically alter the skyline in this conservation area.

John Gerard Holligan (0412)

The density of 8 potential dwellings on that site seems excessive and out of keeping with this area of Joppa. Concerned about the potential loss of privacy/light to our home and garden if it were to be over looked by a large building.

Corrie Fairweather-Mills (0527)

Development would cause loss of privacy and potential impact to light to neighbouring properties. If properties are accessed via Bedford terrace at the back this will be too much pressure on the cul-de-sac.

#### **H58: Eastfield**

##### Inverdunning (Hatton Mains) Ltd (0427)

The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

##### Simon Thomson (0248)

The site is not available for housing development as it is currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

##### Portobello Community Council (0206)

Welcome the proposal to set development 15m back from the Brunstane Burn but consider this must also clarify that public access should be facilitated in this safeguarded space- through the provision of a path which connects from Eastfield/ Edinburgh Road to the coast and linking to the proposed Active Travel path ATSG21. This will be a necessary link to facilitate access and appreciation of the coast and is a welcome and natural extension to the Brunstane Burn Path which currently terminates at Eastfield/ Edinburgh Road.

We also note the existing trees on the roadside edge and consider that the site requirements should require for a landscape frontage to be retained or reconfigured. Maintaining a landscape frontage will help retain a positive degree of perceptual separation between Musselburgh and Portobello.

##### SEPA (0012)

The FRA required for this proposal must assesses the risk from the Brunstane Burn, coastal flood risk, and the interaction between the two sources of flood risk. Consideration should be given to any culverts/bridges which may exacerbate flood risk and we would highlight the comments we made to the draft SFRA which mentions that the site should be considered for removal. Comments from the CEC Flood Team also mention erosion susceptibility in the draft SFRA. The site will likely be constrained due to flood risk.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer.

**Modifications sought by those making representation(s):**

## **Various North and East Proposed Sites**

### Suzanne Bruce (0565)

No modification specified but it is indicated that the proposed North and East housing proposals should be deleted.

### Howard Jones (0424)

It is indicated many, if not all, of the housing proposals in the North and East area should be deleted from the Plan.

## **Place 4 - Edinburgh Waterfront**

### SEPA (0012)

It is indicated more detail should be provided on how flood risk should inform design and layout.

It is indicated City Plan should use common terminology to specify a Flood Risk Assessment instead of a Flood Risk Appraisal

### RSPB (0648)

It is indicated that further appropriate assessment should be undertaken and any development proposed must be assessed on a case by case basis to ensure impacts are adequately addressed.

### LPBZ Commercial Ltd (0391)

It is indicated that the proposal description should be modified to reflect the fact the proposal is essentially a large housing allocation.

The car park element of the site at 2 Ocean Drive should be allocated in the emerging development plan for a high-density mixed-use development which includes office uses as there is a need for this type of use and to facilitate the continued growth of Edinburgh's economy.

The emerging local development plan should ensure that a policy is in place to protect existing employment uses in Leith and encourage office development as part of any residential development proposed.

To achieve a truly mixed-use community at Edinburgh's Waterfront, particularly in line with the emerging national policy relating to 20-minute neighbourhoods, it is essential that office space is included in this list of uses stated in Policy Place 4.

The Strategic business centre area should be widened and allocated for a mix of uses (to include the site at Ocean Drive) so that offices can come forward alongside residential uses to create the desired mixed use.

It is indicated that the former Casino site and car park should be allocated for business or commercial led mixed use and that Place Policy 4 should be amended to permit office development beyond the strategic business centre.

#### Forth Ports Limited (0496)

Pages 47 to 49 Place 4 Maps 14, 15, 16 and 17 require to be revised, re-routing footpath and cycle connections to exclude the operational land within the Port estate.

Page 49 Place 4 Ew1d and Ew1e Northern and Eastern Docks Amend bullet point as follows:

Delete **c.** “the Seafeld Industrial Estate (EW 1d) is the subject of a waste management / combined heat and power safeguard (see Policy Inf 18)”

Replace the text at bullet point **d** with the following text, “Cycle and pedestrian routes will require to be routed around the boundary of the operational Port of Leith estate.” - to recognise that cycle and pedestrian routes are required to be routed around the operation Port of Leith estate.

Map 10 marks out part of the Port of Leith as a ‘business and industrial area’ however it does not include all appropriate parts of the operational port estate. The designation should be extended to include Britannia Quay (BQ) and a new designation should be created for Land South of Edinburgh Dock (LSED), ‘Port of Leith Area with Potential for Change:

- Amend map 10 to include land at Britannia Quay for Business and Industry and amend map 10 to show new designation ‘Port of Leith Area with Potential for Change.’
- Page 48 Map 15 requires to be revised to identify land at BQ as land for Business and Industry and identify LSED as ‘Port of Leith Area with Potential for Change.’
- Page 35 New supporting text should be provided after paragraph 2.139 and before paragraph 2.140 which states “There is potential for land within the Port of Leith, located to the south of Edinburgh Dock to be released from Forth Ports’ operational port estate. Potential exists for mixed use development which may include residential development, student housing, hotel, leisure, commercial, including retail and business uses. However, if land is not released and/or subsequent Planning Permission for such development is not forthcoming land will continue in operational port and associated uses and business and industry uses commensurate with port operational use will be supported.”
- Page 33 Resources and services: Amend paragraph 2.136 last sentence as follows: “Accordingly, this plan supports existing and new waste management facilities at operational quarries and safeguarded sites. Seafeld Industrial Estate (EW1d) has potential to accommodate the development of a new waste management facility but is not safeguarded for such use.” Amend map 9 to remove identification of the site.
- Page 130, Inf 14 Rail Freight: Delete the second sentence of paragraph 3.215, which reads “Keeping a reduced general freight rail head to the east in Seafeld will

complement the safeguard for a waste management facility in that location (see Policy Inf 18).” There is no justification provided for the safeguarding of a waste management facility at Seafeld.

- Page 132 Inf 18 Provision of New Waste Management Facilities: Delete the following text, “Seafeld Industrial Estate is designated EW 1d on the Proposals Map for a waste management facility incorporating thermal treatment with energy recovery. Other development proposals at Seafeld will only be permitted if they do not adversely affect this waste management option.”
- Amend paragraph 3.233 last sentence as follows: “Land at Seafeld Ind (identified as EW 1d) has locational advantages: it is sufficiently remote from housing areas; it has the benefit of rail access; and it has an outlet in nearby regeneration and potentially industrial uses for energy recovered after thermal treatment. Accordingly, it’s potential as a location for energy from waste and combined heat and power uses is recognised.”
- Page 49 Amend relevant bullet points as follows:
  - Delete” c. the Seafeld Industrial Estate (EW 1d) is the subject of a waste management / combined heat and power safeguard (see Policy Inf 18)”
  - Replace the text at bullet point d to recognise that cycle and pedestrian routes are required to be routed around the operation Port of Leith estate with the following text, “Cycle and pedestrian routes will require to be routed around the boundary of the operational Port of Leith estate.”

#### Related Changes -

- Page 9, Map 1 – The City Plan Spatial Strategy - Identify Britannia Quay as ‘Industry’ / ‘Employment Centre’.
- Identify Land South of Edinburgh Dock as ‘Port of Leith Area with Potential for Change.’
- Page 10, Map 2 – The City Plan Spatial Strategy:
  - Identify Britannia Quay as Business and Industry Area
  - Identify Land South of Edinburgh Dock as ‘Port of Leith Area with Potential for Change.’
  - Relocate Strategic Active Travel Project and Safeguards and Active Travel Safeguards from operational port estate boundary
- Page 27 Map 7 – Remove residential designations in respect of Britannia Quay and Land South of Edinburgh Dock
- Page 31 Map 8: Remove and relocate ‘active travel safeguards’ (both strategic and local) and ‘indicative schools proposals’
- Policy inf 10 Cycle and Footpath Network page 129: Amend the policy to recognise that it will not always be possible to provide active travel routes as identified in the proposed Plan. The following revision to the Policy is proposed.“... Development will not be supported which would:
  - a. prevent the implementation of proposed cycle paths and pedestrian/wheeling routes shown on the Proposals Map and Part 4, safeguarded routes identified in this plan, other routes identified in the Council’s Active Travel Action Plan, or other routes identified through Place

Policies and Development Principles or Place Briefs following community consultation, unless it is demonstrated that the routes cannot be delivered. Alternative routes may be required where it is not possible to deliver the proposed routes.”

- Table 3 page 166: Re-route proposal ATSR1 – Edinburgh Waterfront Promenade. Amend description text to address the requirement to re-route around the operational Port of Leith estate boundary as follows, “Form a continuous walkway/cycleway extending for almost 17km from Joppa in the east to Cramond in the West. The route will not pass through the Port of Leith operational port estate and will require to be routed around its landward boundaries.”
- Western Harbour – Proposal GBN44d G52 requires to be amended to reflect the consented Park which has an area 4.4ha
- Ew1b Central Leith Waterfront
- Proposals Map – Identify Britannia Quay as Business and Industry Area and Identify Land South of Edinburgh Dock as ‘Port of Leith Area with Potential for Change.’

#### National Galleries of Scotland (0725)

Suggested wording of Policy Place 4:

c. *for residential development*, proposals should include a mix of house types, sizes and affordability

f. *where relevant to development proposals*, provide or contribute towards education, and healthcare infrastructure and community facilities.

Criterion g split after first sentence to new criterion for clarity.

Request that the heading above para 3.22 ‘Granton’ is updated to include site references “EW 2a-d”, to correspond with the Proposals Map.

Request minor drafting alterations to paragraph 3.29 to make it clear that ‘The Art Works, Granton’ and the ‘National Collections Facility’ are one and the same.

Request minor alterations are made to the seven Development Principles (a to g), which follow paragraph 3.29.

a. Appropriate re-use of the B listed Madelvic Car Factory and C listed Madelvic House should be a priority development. *Where appropriate*, the design of ....

b. A route for a tramline along Waterfront Avenue is to be safeguarded with a stop by the ~~National Collections Facility~~ *The Art Works, Granton* site,

d. *Where possible*, all routes should be lined by active frontages, *recognising that an active frontage can take different forms*

#### Sapphire Land (0247)

Specific wording should be included within the policy to make it clear the Council would be supportive of low, mid and high-density residential-led development.

#### Crosslane Co-Living SPV 2 Limited (0687)

The allocation of the Ocean Point 2 site on 'Map 15 – Central Leith Waterfront' should be revised to housing-led mixed use development.

Network Rail (0071)

The Seafield Industrial Estate (EW1d) allocation should make clear where the waste management / combined heat and power safeguard is to be located. This should not be within the Network Rail land ownership in this location

Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), LPBZ Commercial Ltd (0391)

The key for Map 15 evident in the adopted LDP is included at page 47

Union Property Services Ltd/VRS Ltd (0584)

The potential to accommodate higher densities should be specifically encouraged as part of the waterfront regeneration area.

Living Streets Edinburgh Group (0486)

Place 4 principle g. needs a clear statement on the transport hierarchy and walking in the principles that will be applied throughout development in all locations.

Contributions should be sought for upgrading pedestrian infrastructure in surrounding areas, not just linking paths.

Cockburn Association (0777)

The first bullet point "comprehensively designed proposals which maximise the development potential of the area" should be merged with the second point – "provision of a series of mixed-use sustainable neighbourhoods that connect to the waterfront, with each other and with nearby neighbourhoods"

A revised set of land-use allocations should be produced that actively plan for increased storm surges and sea-based flooding.

Some small pavilion buildings and a larger focal building could erode the positive values of the park. These would also displace activity better directed toward existing businesses.

Dave Berry (0463)

The policy needs to address the likely increase in sea level arising from global heating. The city plan needs to start thinking about this now, for example by building a sea wall, and/or requiring buildings to be raised above ground level.

HCPII Properties 101LP (0517)

Sufficient flexibility should be built into City Plan 2030 to respond to the rapidly changing urban context.

Request Map 15 is updated to reflect and support a range of development types across Leith Waterfront which would be supportive of a mixture of uses including potential residential or hotel uses at Ocean Point 1.

#### SEPA (0012)

Provide more detail on how flood risk should inform design and layout

Granton: The culverted watercourse should be considered for flood risk potential as well as coastal flood risk/erosion.

Flood defence system referred to in Coastal Granton section 3.25 - The requirements behind the system should be clarified: is it to protect existing development or new development? Setting back development from the coast may offer a more long-term sustainable solution rather than increasing the area of development which may need further protection.

Granton Harbour – The strategic flood risk assessment is referenced, which we support. We advise that the area for this strategic flood risk assessment is extended to support and inform development along the entire Leith/Granton Waterfront.

The principles of this Place should be integrated with considerations of blue green infrastructure with active travel, 20 minute neighbourhood, biodiversity, net zero and inclusivity objectives. SEPA would strongly recommend further consideration of the 'Green Facilitator model taken forward in Dordrecht, Holland' which uses 'green social workers' to take forward hyperlocal change at street level implementing a broad suite of measures reflecting climate resilience/net zero/biodiversity enhancement.

#### Leith Harbour and Newhaven Community Council (0776)

It is indicated that para 3.15 should be stronger in emphasising high quality and generating community support.

Make Map 15 up to date to show any of the recent developments already Underway. Development of Western Harbour (EW1a: a. b. & c.) already under way and includes large Park and new School that is supported.

It is indicated park/open space needs to be provided within 800m distance from other recent and planned developments for Central Leith Waterfront that have no public greenspace.

It is indicated Page 48 Central Leith Waterfront Development Principles should be amended as follows:

- b. Provide clarity on how to create a publicly accessible waterside path given the types of developments that are proposed.
- c. Provide clarity on how the development will meet open space standards.
- d. Mention existing heritage, listed and conservation areas and need for new housing to compliment this. Also need to encourage support for small independent industrial units that provide local business opportunities.

- e. Address how flood risk is already having effect in the area for local residents

It is indicated Pages 49 Northern & Eastern Docks (EW1e & EW1d) should be amended to reflect the following:

- Address issue about reduction/loss of major Tern Colony, and removal of greenspace, trees and hedging having impact.
- Note that views from the shore will be a factor when considering proposals for new larger, higher and denser buildings already underway e.g. Rennie's Isle development, Skyliner. Crosslane and Ocean Terminal.
- The coastal route to include Salamander Street that is already highly polluted and busy with proposed new developments that will tunnel the street, be overpowering and reduce light. It is also not coastal as buildings obscure any views/access to coast
- Plans must be conditional ensuring Open Space strategy is adhered to.

#### Celia Mainland (0447)

Policy Place 4 needs much more emphasis on green space.

The tree conservation area should be extended to cover all of North Leith, up to the waterfront.

#### Henry Sandercock (0044), Celia Mainland (0447)

The Northernmost red-coloured development area of Map 14 should be removed and left as a green space.

#### Mark Ockendon (0419)

Requirement B: "views from The Shore will be a factor in considering proposals for new larger buildings" - add "which will be restricted in height and in keeping with a historic design"

#### NatureScot (0528)

Paragraph 3.24. should be changed as follows: "appropriate mitigation measures were identified, which will be relevant to all future development to ensure there will be no adverse effect on the site integrity of the Firth of Forth SPA and the Outer Firth of Forth and St Andrews Bay Complex SPA."

The final mitigation measure following paragraph 3.24 (page 50), requires amendment to: "Prior to consent, developers will be required to agree the full scope of the ECoW (environmental clerk of works) role with the Planning Authority and in consultation with NatureScot."

Coastal Granton: Whereas development principle a) on page 51 appears to establish the principle of flood defence only towards the east end of the new park, principle f) could indicate an intention to prevent any coastal flooding through it. We recommend that an

adaptive approach to coastal management should be adopted as a Development Principle. Reference to flood prevention should be either removed from the principle a) or further clarified.

Jayne Thurlow (0037)

It is indicated that proposal EW1a should be deleted.

Asda Stores Limited (0142)

City Plan should continue the Adopted LDP allocation of the Asda site as a Local Centre.

SEPA (0012)

**EW1a-** Leith Western Harbour: A flood risk assessment (FRA) is required to assess the risk from the Water of Leith and coastal interaction giving due consideration to predicted sea level rise. The site will likely be constrained by flood risk. A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be used in conjunction with the Developer Pack to identify whether more site-specific detail is required.

Access/egress will also require consideration.

As this area is identified for numerous development plots we would recommend the council consider a holistic approach and undertake a wider FRA which will inform suitable development locations and land-use types. Site will likely be constrained due to flood risk. Sedimentation studies have been undertaken along the tidal reach of the Water of Leith. Harbour gates control water levels along this reach.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further. An AECPM Leith Connections Active Travel Route is exploring green blue infrastructure along Dock Street/Commercial Street.

Andrew John Parnell and Brigitta Marianne Sjoberg Parnell (0344)

The allocation as an "LDP Legacy site" proposal, if it is to be retained, should be moved west of these properties. None of these properties should be allocated as open space.

SEPA (0012)

**EW1b** - A flood risk assessment (FRA) is required to assess risk from coastal flooding considering future sea level rise and coastal processes.

Due to large areas earmarked for development around Leith Docks, a holistic approach to flooding, and climate change is recommended.

Access/egress will also require consideration.

Sedimentation studies have been undertaken along the tidal reach of the Water of Leith. Harbour gates control water levels along this reach. Review of the surface water 1 in 200

year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer

Hilary Hines (0265)

EW1b, EW1c, EW2b, EW2d: A much larger proportion of land should be designated for green, natural, open space and play areas.

Amend plan to limit block height to a maximum of six storeys high.

SEPA (0012)

**EW1c- Leith Waterfront (Salamander Place):** A Flood risk assessment (FRA) is required to assess risk from coastal flooding considering future sea level rise and coastal processes. Due to large areas earmarked for development around Leith Docks, a holistic approach to flooding, and climate change is recommended.

Access/egress will also require consideration.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

SEPA (0012)

**EW2a: Forth Quarter:** Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

SEPA (0012)

**EW2b: Central Development Area:** It is indicated that this allocation should recognise that a culverted watercourse is identified on site and this site extends close to the Forth Estuary.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

Sapphire Land (0247)

**EW2c Granton Harbour:** The total housing figure of 1,546 should be treated as 'indicative'.

SEPA (0012)

**EW2c Granton Harbour:** A flood risk assessment (FRA) is required to assess risk from coastal flooding considering future sea level rise and coastal processes. Due to large areas earmarked for development around Granton, a holistic approach to flooding, climate change, and coastal erosion is recommended.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

Biffa (0804)

**EW2d: North Shore:** It is indicated that this proposal should be revised to retain the West Shore Trading Estate and safeguarding Biffa's Waste Transfer Station and Depot from housing-led development.

SEPA (0012)

**EW2d: North Shore:** A flood risk assessment (FRA) is required to assess risk from coastal flooding considering future sea level rise and coastal processes. Due to large areas earmarked for development around Granton, a holistic approach to flooding, climate change, and coastal erosion is recommended.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

**H29: Silverlea**

SEPA (0012)

A flood risk assessment (FRA) is required to assess risk from the Niddrie Burn/Brunstane Burn and tributaries. This reach is part of the Niddrie Burn NFM study and should complement any Pentlands to Portobello environmental improvements projects.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

**H30: Ferry Road**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

The Salvation Army (0189)

There are B and C listed buildings adjacent to the site [Ashbrook and Wardieburn House]. The design of the development should seek to fully understand and preserve and/or enhance the setting of the listed buildings adjacent to the site.

Simon Thomson (0248)

It is indicated the proposal should be deleted from the plan.

**H31: Royal Victoria Hospital**

Ian McRae (0028)

It is indicated that further assessment on impacts on infrastructure is required as this has been insufficient.

Permanent upgrades required in terms of flood risk before any further development.

Rather than upgrade Flora Stevenson Primary School, it should be relocated, with playing fields to Crewe Road South site.

Craigleith/Blackhall Community Council (0403)

Policy principles should be strengthened to give greater priority to the amenity of existing adjacent housing as well as the greater protection of biodiversity on the site.

Development Principles for the Royal Victoria Hospital site in para 3.34. An explicit reference to the protection of biodiversity (policy Env 21) should be added to the list as the Site is also important for wildlife.

Jacqueline Christie (0023)

It is indicated that this site is used for a new larger Flora Stevenson PS with a large greenspace.

The old Flora's site could also be developed into affordable flats (not too many) with on site parking and extensive landscaping to assist with run off for flooding and nature.

Susie Ross (0440)

This site should be allocated to a new Flora Stevenson Primary School.

Sheila Strathdee (0448)

It should also be considered to use this area to build a new Flora Stevenson's school.

It is indicated that further detail on the kinds of units proposed is needed given how high the number is and the increased pressure on the local infrastructure.

All possible flooding alleviation plans should be non-negotiable and built-over and paved areas should be kept to a minimum.

It is indicated that it should be made clear that public park and gardens are required and on the preservation of this as a wildlife site and corridor, with trees etc., existing walls and old buildings retained.

It should be clear also that the skyline should not be adversely affected .

It should be stipulated that sufficient school places and services, such as doctors, dentists etc. are guaranteed.

Inverdunning (Hatton Mains) Ltd (0427)

Delete Place 5 including H31 reference on Map 21. Site not likely to be available in plan period as shortlisted for site for Gaelic secondary school.

Susan Burney (0360), Lesley Moyes (0703), Naomi Appleton (0271),  
Dr Liam Keegan (0389), Helen Mitchell (0484)

There should be no shops on this residential site .

Victoria Hart (0191)

Page 55 Development Principle a says “a. Deliver a housing-led mixed-use development in line with the density requirements in Part 4, Table 2”. This should say that the development should respect surrounding residential character which is predominately 1/1.5 storey bungalows.

The status of the third building marked on map 21 p58 in the top left corner of the map – possibly an old stable block - should be clarified.

Mark Ockendon (0419)

Place 5, requirement E: "Demonstrate pedestrian priority throughout, providing limited private car parking, all on-street" - remove, and replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

Naomi Appleton (0271)

It is indicated that increasing access to the green space and mature trees by people should not spoil wildlife habitat.

It is indicated that increased driveways may result from the reduced parking in this site and that City Plan should resist such moves.

Living Streets Edinburgh Group (0486)

The policy should use “must” instead of “expected to”.

SEPA (0012)

We would recommend that any development here takes into account surface water runoff and any nearby small watercourses as part of a holistic approach. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to/within the site. This should be investigated further.

Elizabeth M Kungu (0063)

It is indicated that it should be clear that the requirements of BGN 22 shall not be watered down once a developer submits plans.

Simon Thomson (0248)

It is indicated that the site should be removed as a housing proposal.

Christopher Fraser (0371)

It is indicated the housing proposal should be removed or decreased in units proposed.

There should be associated plans to considerably expand supporting services.

Dr Liam Keegan (0389)

It is indicated that there is an objection to the layout of the site in its impact on house(s) to the north side of Craigleith Road.

Object to insufficient details of the proposal being available.

It is indicated that there is an objection to building more apartments without parking.

Elizabeth Morton (0772), Howard Jones (0424)

It is indicated that the proposal should be removed or density and number of units being reduced.

Howard Jones (0424)

Site would benefit from re-use as hospital site instead of over-use within the constraints of the Western General site.

Ian R N Stewart (0131)

Site would be better to be retained by the Health Board and used for redevelopment: for example a replacement Eye Pavilion.

In the context of the plan, the site should be used to build a replacement for Flora Stevenson's school and depending on scope a health centre and community facilities. Gaelic High school could be co located here.

Colony of bats here and should be addressed specifically at para 3.34 with equal weight as given to trees.

### **H32: Crewe Road South**

Police Scotland / Scottish Police Authority (0659)

Request that the development principles diagram for Place 6 (map 21 on page 51) should be amended:

- A more appropriately scaled green edge with new areas of greenspace integrated with the development;
- More appropriate development areas with two zones of development - a higher density development zone at the south of the site and a lower density zone 2 in the northern zone to mediate between urban and lower density spatial structure; and
- The Flora Stevenson school annexe should be removed from the development principles diagram until school requirements are more resolved and fully justified. At

the very least, the potential school should be located to a more appropriate, less central part of the site.

The wording of the following development principles should also be revised:

- Deliver a housing-led mixed-use development in line with the density requirements in Part 4, Table 2. - Request that the density of the site is increased from 256 units to 380-450 units to maximise the use of the brownfield site and to respond to the characteristics of the site and surrounding area.
- Development principle b) should be revised to state: "Respect green landscape setting of Inverleith Conservation Area. Retain and enhance greenspace on northern and eastern boundaries with a new structure of tree/woodland planting and a blue-green infrastructure buffer and reinforce green network between Comely Bank Cemetery and Inverleith Park." - The amount of proposed greenspace on the site, particularly along Fettes Avenue should be reduced and replaced with a more appropriate landscaped perimeter buffer with new open space provision proposed within the development site. The amount of greenspace on the site should also be reduced to take into account the significant open space provision, including allotments, which already exists in the immediate area.
- Development principle e – should be deleted. Do not consider that the proposed plan or its supporting education appraisal provides sufficient justification for or evidence of the need for a new annexe to Flora Stevenson Primary School on the site, or evidence to justify the requirement for a school site of 0.8ha.
- Development principle j) should be amended to state: "Demonstrate pedestrian priority throughout, providing limited private car parking". The wording of this principle should be consistent with the wording of the neighbouring Royal Victoria Hospital site which allows provision of limited private car parking. Both sites have similar accessibility and therefore justify similar provision.
- The unlettered development principle regarding an open river channel should be updated to make it clear that any proposals for a new open river channel should be fully informed and justified by the findings and requirements of a detailed flood-risk and surface water management assessment/plan for the site.

#### Ian McRae (0028)

It is indicated that further consideration should be given to impact on infrastructure - GPs, Dentists, Schools already stretched.

Issues with flooding – permanent upgrades required before any further development.

Rather than upgrade Flora Stevenson Primary School, it should be relocated, with playing fields, to Crewe Road South site.

#### NHS Lothian (0596)

Given the proximity of the area to the Western General Hospital, NHS Lothian would welcome reference to the Western General Hospital Place Brief, or for the Place Policy to adopt similar Placemaking Principles, to ensure any new development at Crewe Road South forms good linkages with the Hospital.

Craigleith/Blackhall Community Council (0403)

The policy states that "the developer shall upgrade any remaining length of culvert.....under Crewe Road South.." We recommend the policy wording be strengthened to say "the developer shall upgrade and increase the capacity of any remaining length of culvert....."

Sheila Strathdee (0448)

The option of using local space for a complete rebuild in line with modern educational needs should also be considered.

The option of further medical or social care provision, e.g. in the way of a new Health Centre and day-care for old folk should be considered.

Mark Ockendon (0419)

Place 6, requirement J: "Demonstrate pedestrian priority throughout, providing no or very limited private car parking apart from accessible parking spaces and vehicular access for servicing and deliveries." - remove, and replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

Susie Ross (0440)

New transport arrangements are not needed- the area is very well-served with an excellent bus service. It is already approachable by bicycle and foot.

This site should be used for a new Eye Pavilion - It would have access to the innumerable hospital features at the WGH, including ambulances and meeting rooms and research facilities etc

The greenfield site could be retained for the endangered curlews, the many other unusual birds, protected bats etc. and returned to its earlier function as allotments.

Cockburn Association (0777)

Existing trees should be protected as a matter of principle. Also advocate the removal of large areas of hardstanding where not required and their return to green space. Substantial levels of new tree planting should form part of any development masterplan. It should be stated that the TVIA must proceed any development coming forward for this site.

Living Streets Edinburgh Group (0486)

Development principle j. "Demonstrate pedestrian priority throughout, providing no or very limited private car parking apart from accessible parking spaces and vehicular access for servicing and deliveries." Support this statement if reinforce by clarifying circumstances for very limited car parking i.e. cut out wriggle room.

Susan Burney (0360)

Do not support the provision of commercial premises.

Deidre Brock MP (0801)

It is indicated City Plan should make clear protected species on the site are protected and ensure as far as possible continued access can be maintained through careful design and planning.

SEPA (0012)

We advise of the need to be explicit that a flood risk assessment is required in paragraph between 3.35 m & n

The relationship between this site and future-fitting water management for the Royal Victoria Hospital Site should be drawn out and made explicit.

The confirmed presence of a culverted watercourse within/on the boundary of the site should be investigated to inform development layout. This site is key to the successful management of flood water in the area and a holistic approach is required.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

Sheila Young (0251)

Suggested condition in respect of this site should be put in place, - " a flood alleviation measure which will involve diverting the culver under Crewe Road Sought, upgrading that stretch and having it run as an open watercourse along the site currently occupied by Police Scotland at Fettes HQ".

Development at the site at Crewe Road South and nearby should provide for mixed use aspects including an annexe to Flora Stevenson Primary School and community healthcare facilities.

Elizabeth M Kungu (0063), Andrew Brown (0007)

It should be made clear there will be no relaxation of the requirements in terms of BGN 22 as once a developer is involved they will pressure the council to remove these requirements from the development plan

Any development on the Crewe Road South site, must include proposals to mitigate the adjacent current flooding problems. The Strategic Flood Risk Assessment does not recognise the flooding currently impacting on properties immediately adjacent to the site.

Elizabeth M Kungu (0063)

City Plan should make clear that the current proposed numbers of units are the maximum number allowed, and are not increased, and that the proposal is a mixed development including social housing.

Jacqueline Christie (0023)

It is indicated that the proposal is not supported as proposed.

The site would be suitable for a new larger Flora Stevenson PS with a large greenspace. The old Flora's site could also be developed into affordable flats (not too many) with on site parking and extensive landscaping to assist with run off for flooding and nature.

Christopher Fraser (0371)

It is indicated that the proposal is not supported.

Notwithstanding the above, the large volumes of high density housing proposed should include plans to considerably expand supporting services.

Helen MacLeod (0364)

This site should not be developed for housing.

If this proposal is to remain in the Plan however it should be made clear new development should not change view of new-town skyline and open space should be maintained and improved, with an opportunity for annex to Flora Stevenson primary school to provide to provide outdoor learning space given schools are already at capacity.

Need some kind of flood alleviation measure perhaps creating an open watercourse along the site currently occupied by Police Scotland at Fettes HQ.

Howard Jones (0424)

It is indicated the proposal is not supported.

The existing site would be put to better use by being used to provide a low-level new primary school to allow Flora Stevenson's to relocate. Current Flora Stevenson School site is more appropriate for housing if housing is needed in this area.

Inverdunning (Hatton Mains) Ltd (0427)

This site should not be a housing proposal and is a potential windfall opportunity at best.

Naomi Appleton (0271)

It is indicated that the proposal should make clearer provision for the preservation of the green space at the north of the site, which is a regular feeding ground for curlews (and occasionally oystercatchers too). It also provides a beautiful open view of the Edinburgh skyline. The current proposals might not give due consideration to these two aspects.

Royal Mail Group (0501)

Remove the Edinburgh North West Delivery Office and re-allocate as business and industry area under policy Econ 4.

Iain R N Stewart (0131)

It should be clarified what is meant/implied by the statement "Planning permission will be granted..."

It is indicated that the site should not be developed for housing, or if it is then this should not build on existing areas of greenspace.

City Plan should explore other options for this site such as recreation, allotments or school uses.

Section 3.35 should particularly address the potential for the site for a replacement Flora Stevenson High school or the mooted Gaelic High School

The location of bat nests should be established, and that may constrain any future use of the site, including development. The same area is frequently visited by curlews which feed there on the damp playing fields. These points should be recognised and addressed in section c page 56.

It is indicated that, Notwithstanding 3.35m (page 57), nothing should be done with this site until downstream drainage problems have been addressed and no development should take place which would make these problems worse -including the effects of site development downstream in Comely Bank/ Inverleith.

Section 3.35 should address Infrastructure/ capacity problems applying to education and health provision.

Will the 2 electricity substations and gas District Governor be relocated? If so, to where?

It is indicated that the culvert under Crewe Rd S would need to be renewed and enlarged and safety needs to be addressed in respect of the new river channel.

**H 33: Orchard Brae Avenue**

Elizabeth M Kungu (0063)

City Plan should make clear the proposed number of units are the maximum number allowed and the development is to be a mixed development including social housing.

Susanna Sharp (0638)

It is indicated this proposal is not supported, at least in the form proposed as too many substantial, old trees would be felled in creating this development - they form an important, natural barrier and are part of the green heritage. There is also insufficient parking, will add pressure in an already congested area.

Notwithstanding this, tall blocks of flats should not be allowed and new buildings should be located away from the existing housing and not have principal windows placed to overlook the existing housing.

SEPA (0012)

We would recommend that any development here takes into account surface water runoff as part of a holistic approach. Linked to adjacent site H34.

**H34: Orchard Brae**

Alasdair Grant (0089)

It is indicated that the proposal should be reduced in scale.

Finance Development LLP (0688)

It is requested that the development principle relating to height is amended to say 'no higher'.

It is requested that this allocation for 124 residential units is amended to accommodate residential with ancillary office use (an application has been submitted on this basis).

Callum Melville (0155)

It is indicated that the "path" all round the entire site is removed or amended since it comes very close to the building at 48 Learmonth Avenue and some of the flats at the end of Learmonth Crescent raising concerns about security and privacy.

SEPA (0012)

We would recommend that any development here takes into account surface water runoff as part of a holistic approach. Linked to adjacent site H33.

Isabel Steel (0245)

It is indicated that the proposal should be reduced in scale to be lower in height and reduce the number of flats/houses as well space these apart from existing homes. Increase parking provision within the development.

**H35: Salamander Place**

Alison Winkler (0041)

It is indicated this proposal should be deleted.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

It is indicated this proposal should be deleted.

Hilary Hines (0265)

It is indicated that a lower density of houses should be proposed as the presently proposed levels are far too dense and will result in overcrowded neighbourhoods.

A much larger proportion of land should be designated for green, natural, open space and play areas.

SEPA (0012)

We would recommend the council take a holistic approach to development within the tidal reach of the Water of Leith and harbour area to inform development type, location and mitigation.. Access/egress will also require consideration.

**H36: North Fort Street**

Simon Thomson (0248)

It is indicated the proposal should be deleted.

SEPA (0012)

Flooding issues adjacent to the site should be investigated further.

**H37: Coburg Street**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

Indicated the proposal should be deleted.

Emma Whitfield (0031)

It is indicated this proposal should be deleted.

SEPA (0012)

Consider a holistic approach and undertake a wider FRA which will inform suitable development locations and land-use types as this area is identified for numerous development plots. An FRA is required to assess the risk from the Water of Leith and coastal interaction giving due consideration to predicted sea level rises. Access/egress will also require consideration.

**H38 Commercial Street**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

It is indicated this proposal is deleted.

SEPA (0012)

An FRA is required to assess the risk from the Water of Leith and coastal interaction, incorporating future climate change

Access/egress will also require consideration.

### **H39: Pitt Street**

Kenneth MacLean (0046)

It is indicated that the proposal should be clear on whether existing residential properties on-site would be demolished.

SEPA (0012)

Flooding issues adjacent to the site should be investigated further.

### **H40: Steads Place**

Living Streets Edinburgh Group (0486)

Reinforce development principle f by clarifying accessible parking and cutting out wiggle room.

Leith Central Community Council (0614)

Wish to see options for a future active travel route at high level safeguarded ("Leith Walk Highline").

Mark Ockendon (0419)

Place 7, requirement E: add "and restrict development height to ensure clear sky views are maintained"

Cockburn Association (0777)

City Plan should make provision for unified urban design framework .

Cockburn Association (0777), Leith Central Community Council (0614)

Make provision for the proposed extension of the Leith Conservation Areas which proposes to add the former railway embankment and bridge abutments into the area.

SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

**H41: Jane Street**

Shortbread House of Edinburgh Ltd (0619), Deidre Brock MP (0801), Leith Links Community Council (0617), Newbarns Brewery (0653), APS Group (Scotland) Ltd (0518), Ramsay Cornish Auctioneers Ltd. (0685), Paul Gibson (0559)

It is indicated this proposal should be deleted.

Mark Ockendon (0419)

Place 8, requirement F: "Demonstrate pedestrian priority throughout, providing accessible parking only (no private car parking) and vehicular access for servicing and deliveries." - remove, and replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

Place 8, requirement H: add "and restrict development height to ensure clear sky views are maintained".

Inverdunning (Hatton Mains) Ltd (0427)

Map 22 – replace H41 and H46 references with “Place 8”.

Accept Place-based approach taken by City Plan 2030, but this should remain as a guide for certain areas rather than specifically linked to proposed allocations. In areas where proposed sites are only potential windfall opportunities, the Place Policies and Development Principles can be retained as development guidance.

A proportion of the site is owned by the Council and should be retained but the balance of the site should be removed as an allocation. Site should be considered as potential windfall only with no commitment to housing.

SEPA (0012)

Clarify flood risk requirements.

Leith Central Community Council (0614)

Add to Jane Street Development Principles: more new green space and tree planting

Map 23 – Bonnington Cluster: Wish to see the Powderhall Green Corridor (conversion of disused railway line between St Mark's Park and Easter Road, and further east) safeguarded as a linear park with multiple access points (steps, ramps) connecting

developments east of Easter Road to St Mark's Park and the North Edinburgh path and cycle network.

Living Streets Edinburgh Group (0486)

Support statement on pedestrian priority if reinforced by clarifying accessible parking i.e. cut out wriggle room. Pedestrian priority throughout must mean exactly that, so any reference to active travel route is not a substitute for that.

**H42: Leith Walk/Manderston Street**

SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

**H43: West Bowling Green Street**

Water of Leith Conservation Trust (0392)

Map 23 - Bonnington cluster: The main walkway follows the river from Anderson Place should be included on the map as a pedestrian route.

No modification specified however it is indicated that there are challenges with the connection with H44 to the walkway (although the walkway is welcome)

Point i on page 63 is welcome but should be strengthened for ALL development by the river. Maintain a 20m buffer zone between the top of the bank to the Water of Leith and built form and use the buffer to create natural space for resilience and overland flow.

Leith Links Community Council (0617)

No modification specified however it is indicated the proposal should not be included in the Plan.

SEPA (0012)

It is indicated Place 9 should address the fact that a flood risk assessment is required as set out in Appendix D. A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required.

There may be flooding issues within/adjacent to this site which should be investigated further.

Inverdunning (Hatton Mains) Ltd (0427)

Map 23 – replace H41, H43, H44, H45, H46, H47, H48 and H49 references with “Places 9-14”

Accept Place-based approach taken by City Plan 2030, but this should remain as a guide for certain areas rather than specifically linked to proposed allocations. In areas where proposed sites are only potential windfall opportunities, the Place Policies and Development Principles can be retained as development guidance.

Site should be considered as potential windfall only with no commitment to housing.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

Synergy Group Fitness (0806)

City Plan should clarify how housing land requirement can be met.

Living Streets Edinburgh Group (0486)

It should be made clear there is no scope to allow 'wiggle room' in the implementation of the statement in g by clarifying circumstances for very limited car parking.

Mark Ockendon (0419)

Place 9, requirement G: "Demonstrate pedestrian priority throughout, providing no or very limited private car parking apart from accessible parking spaces and vehicular access for servicing and deliveries." - remove, and replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

It is quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life) - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

Jodi Duffin (0264)

No modification specified however it is indicated that the proposal should be deleted given the following grounds of objection are raised:

Katie Soane (0260)

It is indicated that fewer/smaller/lower properties should be proposed or the proposal should be deleted.

**H44: Newhaven Road 1**

Leith Central Community Council (0614)

Amend City Plan to more clearly label this proposal on maps.

SEPA (0012)

It is indicated that the Place policy should refer to the need for a flood risk assessment in line with Appendix D. The strategic FRA for the Water of Leith should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required.

There may be flooding issues within/adjacent to this site which should be investigated further.

Inverdunning (Hatton Mains) Ltd (0427)

Map 23 – replace H41, H43, H44, H45, H46, H47, H48 and H49 references with “Places 9-14”

Accept Place-based approach taken by City Plan 2030, but this should remain as a guide for certain areas rather than specifically linked to proposed allocations. In areas where proposed sites are only potential windfall opportunities, the Place Policies and Development Principles can be retained as development guidance.

Site should be considered as potential windfall only with no commitment to housing.

Living Streets Edinburgh Group (0486)

It should be made clear there is no scope to allow ‘wiggle room’ in the implementation of the statement in g by clarifying circumstances for very limited car parking.

Mark Ockendon (0419)

Place 10, requirement G: "Demonstrate pedestrian priority throughout, providing no or very limited private car parking apart from accessible parking spaces and vehicular access for servicing and deliveries." - remove, and replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

Katie Soane (0260)

It is indicated that fewer/smaller/lower properties should be proposed or the proposal should be deleted.

**H45: Newhaven Road 2**

SEPA (0012)

It is indicated that the Place policy should refer to the need for a flood risk assessment in line with Appendix D. The strategic FRA for the Water of Leith should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required.

There may be flooding issues within/adjacent to this site which should be investigated further.

Living Streets Edinburgh Group (0486)

It should be made clear there is no scope to allow 'wiggle room' in the implementation of the statement in g by clarifying circumstances for very limited car parking.

Leith Central Community Council (0614)

City Plan should more clearly label this proposal on maps.

Developments along Water of Leith need to be accompanied by added public transport capacity and permeability on foot and by bike (in particular across and along the river).

City Plan should ensure this proposal must not overshadow the Water of Leith Walkway or existing residential buildings.

Inverdunning (Hatton Mains) Ltd (0427)

Map 23 – replace H41, H43, H44, H45, H46, H47, H48 and H49 references with "Places 9-14"

Site should be considered as potential windfall only with no commitment to housing.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

Legal & General Property Partners (Industrial Fund) Limited and Legal & General Property Partners (Industrial) Nominees Limited (0736)

The proposed allocation should therefore not prejudice the estate from operating as an industrial estate in the short / medium term. This could include minor development within the estate to meet the needs of current or future tenants of the estate.

Principle a: Part 4, Table 2 give a density range of 100-175 dwellings per hectare. A density range of 125-200 dwellings per hectare is considered far more appropriate given the site's highly sustainable location and the density of some of the newer developments in the local area.

Principle b and c: Too specific as currently worded and would be better if combined into a single principle which deals with non-residential uses - "Provision of flexible non-residential floorspace (Class 1-4) as part of a mixed-use development. The scale and type of uses and associated floorspace to be informed by market and need assessments."

Principle g: Given the size of the site it is considered that there is an opportunity to include slightly taller elements than the surrounding context (up to 8 storeys) to provide variety within the local area and to act as wayfinding buildings linked to the new permeable network of streets and paths. The potential for taller elements should be written into the development principle – suggested rewording: "Vary height, mass and housing typology in response to diverse edge conditions that include built heritage and a range of residential heights (2 to 6 storeys). Use townscape, protected and local and view analysis to inform scale and massing. 'Potential for taller elements (up to 8 storeys) subject to justification'."

Principle i: The site is well located in terms of access to public open space with Pilrig Park, St Marks Park and Lethem park all located within a short walk. Any requirement to provide public open space on site is likely to have a detrimental impact on the viability and delivery of the site for housing.

Mark Ockendon (0419)

Place 11, requirement H: "Demonstrate pedestrian priority throughout, providing no or very limited private car parking apart from accessible parking spaces and vehicular access for servicing and deliveries." - remove, and replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

Liane Montgomery (0030)

It is indicated this proposal should be deleted.

Katie Soane (0260)

It is indicated that fewer/smaller/lower properties should be proposed or the proposal should be deleted.

## **H46: Bangor Road**

Living Streets Edinburgh Group (0486)

It should be made clear there is no scope to allow 'wiggle room' in the implementation of the statement in g by clarifying circumstances for very limited car parking.

SEPA (0012)

Amend Place policy to state the requirement for a flood risk assessment is requested in line with Appendix D but not mentioned in Place policy. The strategic FRA for the Water of Leith model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required. Site may be constrained due to flood risk and may not be suitable for residential development.

There may be flooding issues within/adjacent to this site which should be investigated further.

Mark Ockendon (0419)

Place 12, requirement F: "Demonstrate pedestrian priority throughout, providing no or very limited private car parking apart from accessible parking spaces and vehicular access for servicing and deliveries." - remove, and replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

Inverdunning (Hatton Mains) Ltd (0427)

Map 23 – replace H41, H43, H44, H45, H46, H47, H48 and H49 references with “Places 9-14”

Accept Place-based approach taken by City Plan 2030, but this should remain as a guide for certain areas rather than specifically linked to proposed allocations. In areas where proposed sites are only potential windfall opportunities, the Place Policies and Development Principles can be retained as development guidance.

Site should be considered as potential windfall only with no commitment to housing.

Simon Thomson (0248)

It is indicated that the proposal should be deleted

Ali Hall (0072)

It is indicated that the proposal should be deleted.

**H47: South Fort Street**

SEPA (0012)

This proposal requires a flood risk assessment (FRA).

The strategic FRA for the Water of Leith model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required.

There may be flooding issues within/adjacent to this site and these should be investigated further.

Living Streets Edinburgh Group (0486)

It should be made clear there is no scope to allow ‘wiggle room’ in the implementation of the statement in g by clarifying circumstances for very limited car parking.

Mark Ockendon (0419)

Place 13, requirement F: "Demonstrate pedestrian priority throughout, providing no or very limited private car parking apart from accessible parking spaces and vehicular access for servicing and deliveries." - remove, and replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

Inverdunning (Hatton Mains) Ltd (0427)

Map 23 – replace H41, H43, H44, H45, H46, H47, H48 and H49 references with “Places 9-14”

Accept Place-based approach taken by City Plan 2030, but this should remain as a guide for certain areas rather than specifically linked to proposed allocations. In areas where proposed sites are only potential windfall opportunities, the Place Policies and Development Principles can be retained as development guidance.

Site should be considered as potential windfall only with no commitment to housing.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

**H48: Stewartfield**

Rachel Ross (0784)

It is indicated this proposal should be deleted as the site should not be developed from a light industrial site to a housing-led mixed-use development.

Living Streets Edinburgh Group (0486)

It should be made clear there is no scope to allow ‘wiggle room’ in the implementation of the statement in g by clarifying circumstances for very limited car parking.

Mark Ockendon (0419)

Place 13, requirement F: "Demonstrate pedestrian priority throughout, providing no or very limited private car parking apart from accessible parking spaces and vehicular access for servicing and deliveries." - remove, and replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

SEPA (0012)

It is indicated that the Place policy should include the requirement for a flood risk assessment in line with the requirement in Appendix D. The strategic FRA for the Water of Leith model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required.

There may be flooding issues within/adjacent to this site which should be investigated further.

Inverdunning (Hatton Mains) Ltd (0427)

Map 23 – replace H41, H43, H44, H45, H46, H47, H48 and H49 references with “Places 9-14”

Accept Place-based approach taken by City Plan 2030, but this should remain as a guide for certain areas rather than specifically linked to proposed allocations. In areas where proposed sites are only potential windfall opportunities, the Place Policies and Development Principles can be retained as development guidance.

Site should be considered as potential windfall only with no commitment to housing.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

Gareth Hutchinson (0290)

It is indicated that City Plan should cancel permit parking proposals for the area.

David Williams (0643)

It is indicated this proposal should be deleted.

Jennifer Reaves (0299), Anne Meikle (0286), Sarah Farrell (0473)

It is indicated that the proposal should be deleted.

Liane Montgomery (0030)

It is indicated that the proposal should be deleted.

Gillian Rae (0571)

It is indicated that the proposal should be deleted.

Hew Dalrymple (0238)

It is indicated that the proposal should be deleted and/or the site should retain mixed use development allowing small business parks to remain.

Framework (Edinburgh) Limited (0743)

It is indicated the proposal should be deleted.

Katie Soane (0260)

It is indicated that fewer/smaller/lower properties should be proposed or that the proposal should be deleted.

Katrina Danson (0301)

It is indicated the proposal should be deleted.

**H49: Coruna Place**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

### **H50: Bonnington Road**

Christine Nurse (0323), Catherine Ness (0642)

It is indicated the proposal should be deleted. Instead there should be an effort to maintain and invest in the Bonnington estate and, rather than repurpose it as housing.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

Sarah Roberts (0630)

It is indicated the proposal should be deleted.

Richard Cherns (0476)

It is indicated the proposal should be deleted.

Forth District Salmon Fishery Board - Crown Estate Scotland (0346)

It is indicated that this proposal should be amended so as to take sufficient consideration of accessibility of potential salmon fishing interests and provide a sufficient buffer zone to protect the water habitat from contaminants.

SEPA (0012)

It is indicated that the proposal may not require a flood risk assessment (FRA). The form of flood risk and its sources should, however, be clarified either in Appendix D for this site or in this housing proposal.

### **H51: Broughton Road**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

SEPA (0012)

City Plan should reconsider whether a Flood Risk Assessment is needed for this site as presently City Plan states this is not needed however SEPA does not hold enough evidence to support this.

The strategic FRA for the Water of Leith model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required.

There may be flooding issues within/adjacent to this site which should be investigated further.

**H52: Iona Street**

SEPA (0012)

There may be flooding issues within the site and this should be investigated further.

**H53: Albert Street**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

Matthew Gason (0090)

It is indicated that the proposal should be deleted.

SEPA (0012)

There may be flooding issues within/adjacent to the site and this should be investigated further.

**H54: St. Clair Street**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

#### Simon Thomson (0248)

It is indicated that this proposal should be deleted as the sites are not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

#### SEPA (0012)

Flooding issues within/adjacent to this site should be investigated further.

It is indicated that the City Plan should consider the opportunity of this site to accommodate a strategic SUDS basin.

#### **H55: Seafield**

##### The Royal London Mutual Insurance Society Ltd (0149)

Object to the identification of their land holding at Seafield Way (Appendix 1) as being part of a 'major new development area' (map 1) and identified as an area for 'Housing Led Development' (map2). Have no intention of releasing the land for housing use over the Plan period and their land holding should not be considered for residential or urban area housing led mixed use.

Request removal of Royal London's land holding from 'major new development area' (map 1) and remove from area for 'Housing Led Development' (map2). Royal London's land holding should be identified as an 'employment centre' on map 1 and 'business and industry area' on map 2.

*[Outcomes - A city in which everyone lives in a home which they can afford]*

Remove Royal London's land holding at Seafield way from land designated a 'New housing led development' from map 7 (p27).

*[Proposals Map – NE]*

The proposals map identifies 'business and industry' areas. The areas should be extended to include Royal London's land holding at Seafield Way.

Remove provision for compulsory purchase from paragraphs 2.103 (p28) and 2.110 (p29).  
- CPOs entail lengthy and complex procedures. Further complicated when using it to acquire land used by operational businesses - where businesses are forced to close, the Council could be required to buy the whole businesses valued as a going concern - not just premises. As a publicly funded body the Council must have regard to obtaining best value for the money it does spend.

*[Outcomes - A city where everyone shares in its economic success]*

Map 10 page 36 - Identify Royal London's land holding at Seafield Way as land for business and industry. Refer to Appendix 1 for site boundary.

*[Place Policies -Place 15]*

Page 69: Remove Royal London's land holding at Seafield Way from Place 15.

Add new requirement in principle to Seafield Development Principles as follows, "design new housing to mitigate any significant adverse impacts on residential amenity from existing or new general industrial development"

[H55]

Part 4 Table 2 Page 161 - Amend number of housing units expected to be delivered from allocation due to removal of Royal London's land holding from Place 15 and related removal from maps 1,2 and 7.

Mark Ockendon (0419)

Place 15, requirement E, insert additional point: *"Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."*

David Thomson (0538)

It is indicated that this proposal should be deleted.

Scottish Water (0342)

It is indicated that City Plan should make clear that a site survey of the exact location of the assets and any mitigation protection measures identified would be highly advised before any land transactions take place and that, when planning new development in this area, odour risk, and proximity to Seafield WwTW (waste water treatment works) should be considered. This site is located approximately 50m from the boundary of Seafield WwTW. In addition to the proximity to the WwTW, there are a number of large strategic wastewater pipes intersecting this site that may require considerable measures to ensure they are protected from any impact of development.

Alastair Cameron (0145)

3.45 (p69): Amend the opening sentence as follows: The Council will establish a community-led body to prepare a place brief for the site.....

Add to final sentence .... and housing development should be low-rise with primacy given to providers of affordable homes, particularly those for affordable rent.

3.47 (p69): Add: the Seafield Development Principles will include design measures to link all development with the existing facilities on Portobello Promenade. The Principles will include small-scale business provision such as cafes, workshop and office space in addition to housing, health, education and community facilities. The underlying concept will be the '20-minute neighbourhood'.

Ursula Wright (0662)

It is indicated that this proposal should make provision for allotments.

Living Streets Edinburgh Group (0486)

It is indicated this proposal should be amended to make clear pedestrians have priority throughout and development designed accordingly and car parking must be limited with

contributions secured to enhance public transport and surrounding pedestrian infrastructure.

RSPB (0648)

Additional mitigation may be required such as screening and signage to reduce disturbance by dog walkers during winter.

Action Party (0250), Jennifer Elliot (0791), Anna Brand (0742), Gemma Sethsmith (0694), David Cooper (0735), Serge Marti (0745)

It is indicated that the City Plan should be amended so as to state:

1) Process the development at Seafield requires a stronger community steer:

- Place Brief: Establish a community-led body to prepare a Place Brief for the site. A Place Brief should have been developed in collaboration with the community to feed into the Seafield proposals in the City Plan.
- No development should take place until the Masterplan is produced
- No informal consultation between landowners/ developers and council/ planners should take place in parallel with the Place Brief or Master planning processes, or else it needs parallel input - or oversight - by all relevant community representatives.

2) Substance – Seafield requires a community-centred comprehensive holistic approach:

- Welcome a joined-up environmentally-sensitive, socially-inclusive community development at Seafield that creates a vibrant sister community.
- Oppose any process leading to a negative development

expect that a development that is responsive to the following 7 points:

- Housing that is climate resilient and responsive - inclusive and affordable new homes build to adequate thermal efficiency to allow for low/zero carbon heating.
- Transport: a design led approach.
- Community infrastructure: a new school and facilities centrally located, focussed on a neighbourhood centre and transportation hub.
- Green space: open community green spaces and recreational space
- Coast, nature and climate change: ensure net biodiversity gain
- Prom and beach: deliver a renewed and sustainable Seafield prom
- Integrated development: No development unless an overall Masterplan is approved by the wider community.

Specific modifications sought as follows:

3.46 Local communities and key stakeholders will be consulted through the development of the Place Brief. Once approved [INSERT: by the community and the council] the Place Brief will become non-statutory planning guidance. Proposals for any part of this site in advance of an approved Place Brief [INSERT: and Masterplan] will be considered as

premature in line with Policy Env 2. Proposals will also be assessed against the Seafield Development Principles and other relevant local plan policies, for example on matters such as design, accessibility, landscaping and biodiversity. [INSERT: Any consultations between landowners/ developers and council/ planners during the Place Brief or Masterplanning processes should be transparent or be accompanied by parallel input - or oversight - by all relevant community reps.]

#### Development principles

- a. [INSERT: An inclusive and affordable community-led] housing mixed use urban extension with a sense of community that can connect with neighbouring areas and the wider city. [INSERT: A holistic community development that only proceeds if it includes the whole site (both south and north of Seafield Road) and if the overall Masterplan is approved by the wider community.]
  - b. Appropriate mass, scale, height and layout of new development, having regard to views to it from the Firth of Forth, [INSERT: with taller buildings on the inner (south) side of Seafield Rd and lower by sea]
  - c. Ensure all homes are adequately served by play facilities and have access to open space in line with the Council's Open Space Strategy and proposal BGN57. [INSERT: Instead of mass building of identikit private or social housing, ensure each home is built to meet specific peoples' needs (in the form of co-housing, small scale housing cooperatives, or a community organisation like Action Porty owning the land and people only owning the building so homes retain their affordability) Ensure Passivhaus standards, or adequate thermal efficiency to ensure low/zero carbon heating e.g. using waste heat from adjoining water treatment works.]
  - e. Provision of sustainable travel infrastructure, including where possible use of existing rail infrastructure [INSERT: such as by safeguarding the railway track so Portobello/ Seafield can link with the tramline at Leith])
  - e/b. Edinburgh Promenade upgrade and safe connections and safe crossing of Seafield Road East. [INSERT: Change the character/ traffic speeds of Seafield Road, by narrowing and by providing numerous crossing points to ensure connectivity for walking/wheeling]
  - e/f. Active Travel connections through Harry Lauder Junction. New public transport route: Seafield Road [INSERT: connecting] to Leith [INSERT: and Portobello, e.g. Portobello to Leith buses.]
  - e/h. Provide or contribute towards education, and healthcare infrastructure and community facilities. [INSERT: Build a new school and facilities centrally located on a neighbourhood centre and transportation hub; including GP surgery, small workspaces and small retail spaces to compliment local business rather than compete with it.]
- [INSERT: e/f. Open community green spaces and recreational space that faces the sea at the heart of the community, linking to Prom and diverse habitats. Ensure net biodiversity gain with a living seaside. Sea defences at Seafield should not exacerbate storm impacts on Portobello Beach.]
- [INSERT: e/g. Deliver a renewed and sustainable Seafield prom, e.g. a lower prom could provide for enhanced human and ecological connectivity, and include picnic tables, space for ad hoc sports; and an upper prom could be school, nursery, with pathways into the community with workspaces, cafes, temporary buildings, and a public square at Seafield intersecting with the Prom.]

## Proposed Changes:

Place 15:- Planning permission will be granted for development within the boundary of Seafield, as defined on the Proposal Map, *provided it accords with other local plan policies and does not prejudice wider development objectives for the Seafield area.*

3.46 Local communities and key stakeholders will be consulted through the development of the Place Brief. Once approved the Place Brief will become non-statutory planning guidance. Proposals for any part of this site *must not prejudice wider development objectives for the Seafield area.* Proposals will also be assessed against the Seafield Development Principles and other relevant local plan policies, for example on matters such as design, accessibility, landscaping and biodiversity.

### Edinburgh Dog and Cat Home (0310)

Amend the boundary of site H55 (Seafield) to additionally include the EDCH site at Seafield Road East.

Amend H55 capacity to 950+ units

Amend third sentence of paragraph 3.46 (page 69) and amend to Table 2 H55 to: "Proposals for any part of this site in advance of an approved Place Brief will be considered as premature in line with Policy Env 2 *where it would compromise the comprehensive development of the Seafield development site.*"

Amend the Place 15 (Seafield) Development Principle (h) (page 69) to: "(h) Proposals will be expected to provide or contribute towards education, and healthcare infrastructure and community facilities including either upgrading the existing Edinburgh Dog and Cat Home or secure its relocation to a suitable new facility on an alternative site."

Add a principle in Place 16 that the current EDCH use should be retained either at its current site or elsewhere.

### Peter Allen (0336)

Future development at Seafield must provide education, and healthcare infrastructure and community facilities.

The community must lead on some of the housing development, so that the housing being provided is what the community actually want.

It is indicated that City plan should mention the sewage treatment works at Seafield.

### Anne Thomson (0551)

It is indicated there should be adequate parking for residents and beach-users, with an investment in a prom upgrade and leisure activity support required also.

Use of the railway should be considered. It could become a tram or express bus route.

NatureScot (0528)

Recommend that the requirements in principle of Place 15 are amended to include: "Proposals should demonstrate short-term resilience to coastal change and longer-term adaptation, avoiding the need for further coastal protection measures." . Recommend that the first requirement in principle is amended with the addition of: "A housing-led mixed use urban extension with a sense of community that connects with neighbouring areas and the wider city via multi-functional green blue networks and active travel routes."

Paragraph 3.52 (page 70) should be amended to: "The mitigation measures noted above would ensure development of the Seafield Industrial Estate would have no adverse effect on site integrity of the Firth of Forth SPA and the Outer Firth of Forth and St Andrews Bay Complex SPA"

Miller Homes (0256)

It is indicated that H55 should be deleted and alternative solutions to development at Place 15 – Seafield, should be considered including the inclusion of greenfield sites which have a lower potential for adverse impacts on European sites, including Riccarton Village.

Julie Robertson (0210)

It is indicated that this proposal should not involve removing existing businesses.

Arnold Clark Automobiles Ltd (0750)

It is indicated that City Plan should state that the Council undertake the studies in Appendix D in early course to inform the upcoming masterplanning exercise.

Portobello Amenity Society (0612), Stephen Ian Hawking (0469)

It is indicated that City Plan should require an imaginative enforceable Masterplan and Place Brief that is thoroughly consulted on and demonstrably has the support of the surrounding communities.

Suzanne McIntosh (0409)

City Plan should state that the following infrastructure required in relation to H55: a new primary school, an extension to the high school, a new medical surgery, good cycle infrastructure, public transport, the Edinburgh suburban rail line - a station at Seafield and a potential future tram extension could be planned for as part of this major expansion.

Oonagh O'Brien (0585)

Request the following changes:

- Add to the proposal for an inclusive and affordable community-led housing mixed with a sense of community that can connect with neighbouring areas and the wider city the concept of 'a holistic community development that only proceeds if it includes the whole site (both south and north of Seafield Road) and if the overall Masterplan is approved by the wider community.'

- Appropriate mass, scale, height and layout of new development, having regard to views to it from the Firth of Forth, with taller buildings on the inner (south) side of Seafield Rd and lower by sea
- Instead of mass building of identikit private or social housing, ensure each home is built to meet specific peoples' needs (in the form of co-housing, small scale housing cooperatives, or a community organisation like Action Porty owning the land and people only owning the building so homes retain their affordability)
- Deliver a SUDS solution to serve both the site and surrounding area in line with Proposal BGN9
- Safeguard the railway track so Portobello/ Seafield can link with the tramline at Leith to help expand sustainable travel infrastructure: improve active travel in the area in line with community responses submitted to this plan.

Diana Cairns (0452)

It is indicated that development design must be community-led.

Lawrence Marshall (0702)

It is essential that any tall buildings planned be placed at the southern edge of the available land for redevelopment.

Consideration should be given to relocating Seafield Road East to the south of the site to run alongside the railway line to Leith Docks.

Lothian Buses should be encouraged to look at the Edinburgh Coach and Truck Park off the Sir Harry Lauder Road as an alternative site for their Marine Depot.

The railway line to Leith has the potential to provide a green public transport link for the area. In particular, provision should be safeguarded in the area east and west of Bath Road to allow this line to link up with the tram line at the northern end of Constitution Street.

The NWH Group have their depot on Albert Road. An investigation should be launched into seeing how much of the traffic they generate can be moved by rail instead.

Inverdunning (Hatton Mains) Ltd (0427)

Site capacity should be reduced. A development brief for wider redevelopment can be provided but only part should form an allocation if supported by Lothian Buses.

SEPA (0012)

An FRA is required which assesses the coastal flood risk to the site.

Portobello Community Council (0206)

It should be clarified that any development in advance of full production of the Place Brief, FRA and erosion appraisal, development principles, masterplan should be considered premature.

### **H56: Sir Harry Lauder Road**

Portobello Community Council (0206)

The proposal must provide clarity to the proposed scale and preferred location of the class 4/ commercial.

Reference should also be made to the need to provide landscaped streetscape and active travel connectivity.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

SEPA (0012)

. An FRA which assesses the Figgate Burn is needed. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site which should be investigated further and it is recommended that contact is made with the flood prevention officer.

### **H57: Joppa Road**

Mary Burgess (0456), Beverley Burgess (0605), Kim McFarlane (0698),  
Oonagh O'Brien (0585), Morgan Smith (0788), John Gerard Holligan (0412),  
Bridget Campbell (0706), Corrie Fairweather-Mills (0527)

No modification specified however it is indicated that this proposal should be deleted or it's scale significantly reduced in terms of height and density.

Craig McIntyre (0709), Nadia McIntyre (0704)

No modification specified however it is indicated that this proposal should be deleted

Portobello Community Council (0206)

Development on this site should be carefully handled and guided by clear site requirements.

Additional reference should be added to reflect the need for built form to relate to the setting and scale of neighbouring buildings in the Conservation Area.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

SEPA (0012)

There may be flooding issues within/adjacent to the site which should be investigated further and it is recommended that contact is made with the flood prevention officer.

#### **H58: Eastfield**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal.

Simon Thomson (0248)

It is indicated that this proposal should be deleted.

Portobello Community Council (0206)

The development principles for the site should state that:

The set back from the Brunstane Burn must also state that public access should be facilitated in this safeguarded space through the provision of a path which connects from Eastfield/ Edinburgh Road to the coast and linking to the proposed Active Travel path ATSG21.

Existing trees on the roadside edge should be retained or reconfigured as a landscape frontage to be retained or reconfigured.

SEPA (0012)

The site should be considered for removal. The site will likely be constrained due to flood risk.

The FRA required for this proposal must assesses the risk from the Brunstane Burn, coastal flood risk, and the interaction between the two sources of flood risk.

The surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site and this should be investigated further.

#### **Summary of responses (including reasons) by planning authority:**

#### **Various North and East Proposed Sites**

Suzanne Bruce (0565), Howard Jones (0424)

The proposals in this area are not considered to result in overpopulating this area for the following reasons:

The cumulative effects of new housing proposals in relation to infrastructure capacity in relation to GP Practices are addressed in Issue 27, Education in Issue 29 and transport/associated pollution in Issue 31. The individual and cumulative impacts of proposals in this area would be acceptable with the required mitigation. Policy Inf 1 'Infrastructure Delivery' applies. Policies ENV 35 and 36 require no detrimental impact from a proposal in terms of flood risk, drainage and mitigation see Issue 16). There is no evidence that the proposals would have detrimental impacts in terms of tourism or students.

Open space provision (including publicly accessible greenspace) is monitored and analysed through the Council's Open Space Audit (CD067) and Open Space Strategy (CD066) respectively. **No modification proposed.**

#### **Place 4 - Edinburgh Waterfront**

##### SEPA (0012)

The Council considers the development management process is the most appropriate process for how flood risk can inform design and layout given proposals are only set out in high level terms in City Plan. The reference to Flood Risk Appraisals in relation to three sites is not significantly different to Flood Risk Assessment in meaning when read in context as this still makes clear flood risk needs to be considered in respect of informing the design and layout. **No modification proposed.**

##### RSPB (0648)

The final sentence of paragraph 3.24 states that the 'in-combination effect' of applications still needs to be considered as they come forward. **No modification proposed.**

##### LPBZ Commercial Ltd (0391).

The proposal does involve areas of non-residential use and so mixed-use regeneration is considered appropriate. This can apply where residential is the main or predominant use.

The car park element of t2 Ocean Drive is within the overall allocation. The Council does not agree this part of the site should be identified for a particular use on Map 15. Development of the site for a particular proposal can be considered through the development management process. The Council is satisfied the City Plan policies and proposals provide for assessment. Map 15 provides additional information but is only one part of the overall context and the development plan is to be read a whole.

The Council considers the employment uses policies and allocations, including re-provision on site in appropriate instances, with Place Policy 4 provides sufficient scope for accommodating commercial uses. This includes directing office provision to the Strategic Business Centre in this area. The Council does not accept it is necessary to expand the boundaries of this and that it is adequate as proposed to meet need and demand in this regard as set out in Issue 37 and Issue 2 addresses the requirement for offices as part of the Spatial Strategy. Issue 35 addressing Economy policies specifically. **No modification proposed.**

#### Forth Ports Limited (0496)

Paragraph 3.19 states that in order to provide a flexible context for renewable industry-related developments, this LDP does not set detailed layout or design principles. As such the Council does not agree that City Plan prejudices development of the docks in this respect.

Footpath and cycle connections indicated on maps 14 to 17 and referred to in development principles are indicative. They do not override issues of land ownership in respect of the Port Estate. It is not necessary to state this explicitly in the LDP given it is an established matter of law.

Criterion c is considered to remain appropriate as proposed given the circumstances for the safeguard remain applicable.

The modifications sought in relation to Britannia Quay and the Port of Leith Area with Potential for Change are addressed in Issue 37 – Economy Proposals. **No modification proposed.**

#### National Galleries of Scotland (0725)

It is noted that various caveats are suggested to the criterion under Place Policy 4. However, it is not considered that these are necessary to improve clarity and will be clear when applied to proposals coming forward. The split of criterion 'g' is not required as clarity is shown in the accompanying map.

Map 19 provides an illustration with labels to the different parts of the overall Granton area. This provides clarity on the uses and different forms of development that should come forward, including that 'The Link' area offers opportunities for cultural uses. As such no new criterion i) is needed as sought in the modification.

The Council notes that references to the 'National Collections Facility' and 'Art Works, Granton' terminology could be made clearer. Should the Reporter be so minded these could be amended to provide clarity.

#### Sapphire Land (0247)

City Plan should be read as whole. The Council considers that appropriate provision is already made – including in subject policies – to ensure there is an appropriate mix of housing types, densities and sizes, and supporting ancillary uses. **No modification proposed.**

#### Crosslane Co-Living SPV2 Limited (0687)

The Council does not agree this part of the site should be identified for a particular use on Map 15. Development of the site for a particular proposal can be considered through the development management process. The Council is satisfied the City Plan policies and proposals provide for assessment. Map 15 provides additional information but is only one part of the overall context and the development plan is to be read a whole. **No modification proposed.**

Network Rail (0071)

Land ownership and operational safety issues are subject to separate legislative considerations and are not matters for the development plan in respect of the exact location of the Waste Management /Combined Heat and Power Safeguard. See Issue 31 in relation to Proposal R1. **No modification proposed.**

Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), LPBZ Commercial Ltd (0391)

The Council acknowledges the lack of map keys in various maps is a technical error and should be corrected as a minor drafting/technical matter.

Union Property Services/VRS Ltd (0584)

The Council is content that the combination of Place Policy 4 and the subject policy framework in City Plan (including Policy Env 26 (Housing Density) addresses density potential. **No modification proposed.**

Living Streets Edinburgh Group (0486)

Modification of criterion g is not needed given the provision of criterion c of policy Env 26 which addresses this for any relevant development. **No modification proposed.**

Cockburn Association (0777)

The Council considers the maximising of development potential, in accordance with policies is reasonable and in line with the second stated Aim of City Plan on page 8.

The Council is content that proposal BGN 24 adequately address the broad scope for the Granton Waterfront Coastal Park. The small-scale class 1-4 uses, pavilion buildings and focal building are intended to help promote additional activity as part of the park rather than take patronage from existing businesses. **No modification proposed.**

Cockburn Association (0777), Dave Berry (0463)

Sea level rise is addressed in policy Env 34 (with reference to erosion) and Env 35 (with reference to flood risk) as relevant to this allocation and do not need duplication as development principles. **No modification proposed.**

HCPII Properties 101LP (0517)

The Plan must be read as a whole. As such the Council is content that an adequate balance is given between guiding development and providing flexibility in respect of the Central Leith Waterfront area. Issue 2 considers requirements for offices as part of the Spatial Strategy. Issue 35 addresses Economy policies including Econ 6 Hotel Development. **No modification proposed.**

SEPA (0012)

Policies Env 34, Env 35 and Env 36 set out how various issues relating to the water environment (including erosion, flood risk and surface water management) should be considered and how proposals should accommodate these in their layout and design. This includes consideration of culverted watercourses.

The integration of green blue infrastructure with active travel, 20 minute neighbourhoods, biodiversity, net zero and inclusivity are addressed in Issues 16, 2, 15, 13 and 11 respectively.

The framework for existing and proposed development is set out in Map 19. The intention is to provide separation of development from the shoreline where appropriate. The Council considers the extent of this shown is appropriate.

The Strategic Flood Risk Assessment (CD011). for Granton Harbour is to inform the development proposals at this location rather than more widely (Coastal Granton for example already having given consideration to flood risk). It may be appropriate for the scoping of the Harbour FRA to consider the surrounding area. **No modification proposed.**

Leith Harbour and Newhaven Community Council (0776), Hilary Hines (0265)

The merits of specific planning decisions are not material to the proposed plan. It sets the strategy, policies and allocations for future development.

Criterion c) of the Central Leith Waterfront allow for addressing any open space deficiency. How and where open space will be provided will relate to the nature and size of sites that come forward. Policies Env 31 and Env 32 set out how new open space in developments should be provided.

Place policies do not require to general additional levels of community support. The Plan Policies address the need for high quality development (see Issue 11: Design and Placemaking).

Matters regarding built heritage, air quality, amenity, scale of development, the effect on certain views from new development, and impact existing business are addressed in Part 3 of the plan. Flood risk is addressed in Policy Env 35, including how new development must be cognisant of existing development.

Policy Env 21 shall apply to any application that comes forward and protects the designated site Imperial Dock Loch which supports the Tern colony.

The Council considers that the principle of a waterside path is reasonable given uses existing and proposed for the Central Leith Waterfront area. Public footway exists along much of the shoreline already in this area. Detailed design and exact delivery of this route would be established in subsequent detailed proposals. **No modification proposed.**

Celia Mainland (0447)

The Council considers there is a significant level of provision made for green and open space in this Place Policy and consideration of policies Env 31 and 32 on new open space provision. Coastal Granton is a significant Green Blue Network proposal in this area.

The extension of Conservation Areas is a separate legislative process to the preparation of the local development plan. **No modification proposed.**

Henry Sandercock (0044), Celia Mainland (0447)

EW1a – Western Harbour: The proposal is a continuation from LDP 2016 (CD039). though it is acknowledged that the nature of the ponds on site have progressed in that time. Detailed assessment of the ecological and environmental merit of the ponds has not been undertaken. However, the Council recognises the ponds could comprise a feature of merit.

The diagrammatic maps featured in the Place Policy section (including map 14) are high level and so do not show the full extent of features to be retained and provided, including in relation to open space to be provided as noted in paragraph 3.154.

Any application coming forward would need to consider subject policies in addition to this Place Policy. This includes policies such as Env 3 'Development Design - Incorporating and Enhancing Existing and Potential Features', Env 6 'Green Blue Infrastructure', Env 21 'Protection of Biodiversity' and Env 37 'Designing-in Positive effects for Biodiversity' which require assessment and retention of existing features as part of new developments.

No modification proposed, however, should the Reporter be so minded a development principle could clarify the need for further assessment of the ponds.

Mark Ockendon (0419)

This is addressed through policies applicable to any proposed development, particularly in relation to design, density and building heights. **No modification proposed.**

NatureScot (0528)

Large parts of the area of Place Policy 4 have already been masterplanned and addressed through the Granton Waterfront Development Framework (CD081) and as such it would not be appropriate to repeat this. The Council considers it appropriate that future plans should be cognisant of existing Masterplans Policy Env 2 (Co-ordinated Development) will ensure the creation of a cohesive, connected place.

It is noted that the words "prior to consent" would add clarity to final mitigation measure following paragraph 3.24 (page 50) and similarly that reference to flood prevention should be either removed from the principle a) or further clarified, should the reporter be so minded.

No modification proposed in this regard, however, should the Reporter be so minded the addition to development principle (a) and amending the term 'significant effect' to read "no adverse effect on site integrity" would improve clarity.

Jayne Thurlow (0037)

**EW1a Leith Waterfront (Western Harbour):** The principle of the development of this greenspace is already established in the Adopted LDP. Properties in this area will be served by a park immediately to the south (BGN 44). Issues relating to any loss of light will

be addressed as part of detailed design. The impact on non-protected views and those from private properties are not material planning considerations. Construction impacts are matters not addressed in detail as part of the LDP process, with other processes in place to ensure construction impacts are not excessive in terms of amenity and disruption. **No modification proposed.**

Asda Stores Limited (0142)

Issue 38 'Retail and Leisure' considers this matter. **No modification proposed.**

SEPA (0012)

**EW1a-** Leith Western Harbour: Criterion g) requires a Flood Risk Assessment to be undertaken and that this should inform the design and layout of development proposals. Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Andrew John Parnell and Brigitta Marianne Sjoberg Parnell (0344)

EW2b – Central Development Area: ForthQuarter Park includes areas which are publicly accessible, however development Principle a) of the ForthQuarter Park recognises that Caroline Park House is a private residence. The proposal does not state that public access to the private grounds is to be introduced or sought.

The definition of open space in the Glossary does not imply public access and is in line with the definition set out in PAN 65 (Planning and Open Space) (CD122).

The Council is otherwise content that the extent of area shown as green open space meets the definition of open space.

No modification is proposed, however, should the Reporter consider it necessary to give greater clarity with the following amendments the Council would not have issue with these:

- removing the building referred to as Royston House from the open space area.
- Amending the proposals map to align with Map 19 as the Proposals map shows the proposal extending further east than it should.
- Amend development principles to clarify that the reference to Caroline Park House is inclusive of Royston House.

SEPA (0012)

EW1b Central Development Area: Criterion e) requires a Flood Risk Assessment to be undertaken.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance

(CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Hilary Hines (0265)

Criterion b) of the EW1c East of Salamander Place development principles will assist in addressing issues relating to any open space deficiency. How and where open space will be provided will depend on the nature and size of sites that come forward. Policies Env 31 and Env 32 relate to the provision of new open space in developments and ensure that open space proportionate to the size of developments coming forward should be delivered. **No modification proposed.**

SEPA (0012)

EW1c East of Salamander Place: Criterion e) requires a Flood Risk Assessment to be undertaken.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

SEPA (0012)

EW2a: Forth Quarter: Issues of surface water flooding within and adjacent to the site will require to be addressed as a result of Policy Env 36 (Designing for Surface Water).

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

SEPA (0012)

EW2b Central Development Area: Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Hilary Hines (0265)

EW2b Central Development Area: Open Space is required at the centre of this development area and ensures adequate provision. Density levels are appropriate to the surrounding area. **No modification proposed.**

Sapphire Land (0247)

The Council is required to provide proposed capacities at this stage. Policy Env 26 (Housing Density) states developments should deliver housing 'in line' with figures in Table 2. The Council considers this wording is appropriate. It may be there is some scope for variance from the specific figure of 1546 for **EW2c Granton Harbour**, however the extent of deviation from the housing figures set out in Table 2 is a matter of judgement for the decision maker determining subsequent planning application(s).. **No modification proposed.**

SEPA (0012)

**EW2c Granton Harbour:** Criterion g) requires a Flood Risk Assessment to be undertaken. The Council considers it is for the development management process to establish the scope and detailed matters for FRAs.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Biffa (0804)

EW2d: North Shore - Spatial Strategy considerations are set out in Issue 2.Issue 3 addresses the delivery of Spatial Strategy, including how it affects existing businesses. For this site the principle of a transition away from an industrial estate focus has been established through the approved master plan, as set out in the Adopted LDP (CD039). **No modification proposed.**

Hilary Hines (0265)

EW2d: North Shore is required to provide open space as part of the overall development. Map 20 shows areas expected to meet this need, although further areas of open space will be provided. The nature, size and location will depend on the nature and size of development sites that come forward. Policies Env 31 and Env 32 relate to the provision of new open space in developments and ensure that open space proportionate to the size of developments coming forward should be delivered.

The density of development proposed for EW2d: North Shore is considered reasonable and is cognisant of the Granton Harbour approved masterplan. **No modification proposed.**

SEPA (0012)

EW2d North Shore (referred to as West Shore within Place Policy 4): No modification is proposed, however, an amendment for clarity stating that a flood risk assessment is required for this site in line with the equivalent development principles for EW2d North Shore in the Adopted LDP (CD039) could be added for consistency should the Reporter be so minded.

The it is for the development management process to establish the scope and detailed matters for FRAs. Issues of surface water flooding within and adjacent to the site will require to be addressed as a result of Policy Env 36 (Designing for Surface Water).

### **H29: Silverlea**

#### SEPA (0012)

Based on the comments submitted (i.e. referring to the Brunstane Burn/Niddrie Burn) the Council believes this comment was meant to be made in relation to site HSG 29 rather than H29. As a result this comment is dealt with in Issue 8: Proposed Sites South-East Edinburgh.

### **H30: Ferry Road**

#### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2, with Issue 3 addressing its delivery, including the matter of the effect on existing business. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

#### The Salvation Army (0189)

Appendix D sets out the text sought in this representation already. **No modification proposed.**

It is noted that the following representation(s) were submitted in support of the proposal:

#### SEPA (0012)

SEPA agree with Proposed Plan Appendix D. No flood risk assessment (FRA) is required.

### **H31: Royal Victoria Hospital**

Ian McRae (0028), Jacqueline Christie (0023), Sheila Strathdee (0448),  
Christopher Fraser (0371), Elizabeth Morton (0772), Howard Jones (0424), Ian R N  
Stewart (0131)

The impact of this proposal alongside others in this plan has been through appraisals to consider the impact on key infrastructure, including Healthcare (CD016), Transport (CD014) and Education (CD015). A strategic appraisal of Flood risk (CD011), including surface water flood risk, has also been undertaken. The impacts are considered acceptable, subject to appropriate mitigation which City Plan makes provision for – particularly in Policy Inf 3 'Infrastructure Delivery and Developer Contributions'. Issues 27-31 consider infrastructure impacts and their assessment.

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan provides the appropriate framework for consideration of flood risk, addressed in Policies Env 35 'Reducing Flood Risk' and Env 36 'Designing for Surface Water'. **No modification proposed.**

Christopher Fraser (0371)

Assessment of the site's access to recreation (play facilities and open space) is provided in the Council's Adopted Open Space Strategy (CD066). It is noted here that, in addition to having to provide open space within the site, proposal BGN 36 requires the site to deliver play facilities to ensure adequate provision of this form of recreation as necessary. **No modification proposed.**

Craigleith/Blackhall Community Council (0403), Sheila Strathdee (0448), Victoria Hart (0191), Naomi Appleton (0271), Dr Liam Keegan (0389), Elizabeth Morton (0772), Howard Jones (0424), Ian R N Stewart (0131)

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan provides the appropriate framework for consideration of existing biodiversity and amenity which are addressed in Policies Env 21 'Protection of Biodiversity' and Env 33 'Amenity'. Various design policies are potentially applicable to issues of scale and visual impact of development, including Env 1 'Design Quality and Context', Env 25 'Layout Design' and 26 'Housing Density'. **No modification proposed.**

Naomi Appleton (0271), Dr Liam Keegan (0389)

Matters relating to increased driveways are more appropriately addressed in general terms rather than in relation to individual proposals. Issue 11: Design and Placemaking addresses this. **No modification proposed.**

Jacqueline Christie (0023), Ian McRae (0028), Susie Ross (0440), Sheila Strathdee (0448), Ian R N Stewart (0131)

The Council has considered different options for providing additional capacity needed in relation to the Flora Stevenson school and catchment. The provision of an annexe as part of H32 Crewe Road South is considered the most appropriate. Issue 29: Education considers education matters, including in relation to the matter of new Flora Stevenson and Gaelic school provision. **No modification proposed.**

Jacqueline Christie (0023), Sheila Strathdee (0448), Victoria Hart (0191), Ian R N Stewart (0131)

Proposal BGN 22 makes specific provision for how this proposal shall retain and provide blue green infrastructure as well as certain built features such as walls. Further information also provided on Map 21. The proposal is to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan in this regard provides the appropriate framework for consideration of existing biodiversity, addressed as part of Policy Env 21 'Protection of Biodiversity'. Policy Env 3 sets out policy requirements in respect of retention of existing

built and natural features. Policy Env 32 sets out requirements for communal open space and private gardens in housing developments. Policies Env 9 and Env 10 are relevant when considering Listed Buildings, in particular how/if they should be incorporated into the proposal, especially if this is not specified in the development principles themselves. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248), Ian R N Stewart (0131)

Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. The site is still considered as potentially available for development as set out in City Plan given it is only one of a number of options which are being considered for a Gaelic secondary school. It is considered important that good design principles inform the development of the site whichever uses are developed

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses delivery of the Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan **No modification proposed.**

Susan Burney (0360), Lesley Moyes (0703), Naomi Appleton (0271),  
Dr Liam Keegan (0389), Helen Mitchell (0484)

Development principle b) makes clear that the scale of retail and Class 2/3 uses is to be proportionate to the needs of future residents rather than seeking to provide for a wider area **No modification proposed.**

Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP (CD096) and draft NPF 4 (CD099) in this respect (see paragraph 46.)

The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance (CD047) sets out details on electric vehicle charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content with the wording 'expected to' is sufficiently clear in establishing the clear level of import for measure in question. **No modification proposed.**

Howard Jones (0424), Ian R N Stewart (0131)

It is for NHS Lothian to judge as to what and where there is a need for hospital provision in this area. The Council understands this site is not needed for such a purpose. **No modification proposed.**

SEPA (0012)

Issues of surface water flooding within and adjacent to the site will require to be addressed in terms of Policy Env 36 (Designing for Surface Water). Criterion g sets out how the surrounding context should be considered however the development management process has scope to consider further factors and matters or process raised in this representation. **No modification proposed.**

Elizabeth M Kungu (0063)

The Council considers the requirements of BGN 22 are clear and there is no indication in the proposal wording that these could be 'watered down' at a later stage. **No modification proposed.**

Ian R N Stewart (0131)

Bats are a protected species, and a bat survey would be required as part of any planning application. **No modification proposed.**

Iain R N Stewart (0131)

The Council acknowledges the site contains areas of greenery. This is not downplayed, but equally it does not preclude some development of the site provided the features of merit are sensitively addressed and retained. The development principles for the site, for example h, as well as Map 21 and BGN proposal 22 all recognise the value of greenspace on the site.

Many of the comments raised appear to be specifically about this site so it is not possible to apply them to H33/H34 as requested. Comments relating to flood risk and education are able to be understood in a wider context, however the Council's consideration and response would be the same for H33 and H34 as they are for this site.

Development principle g and the link to Craigleith Hill Crescent relate to an active travel link. The alternative access noted in representation to the west of the site is vehicular and joins Craigleith Road. It is positive for the site to have an additional access onto a different road and serving non-car traffic.

Policy Env 21 'Protection of Biodiversity' addresses protected species such as bats, with appendix D setting out that a Protected Species Survey is required for this site. The Council cannot comment further on what the potential presence of bats may mean without the relevant survey(s) being undertaken and having regard for the potential need for a licensing process to follow. **No modification proposed.**

**H32: Crewe Road South**

Police Scotland / Scottish Police Authority (0659)

Support for principle of development noted.

The amount of greenspace proposed is considered appropriate given its importance for a range of functions and particularly in its importance for setting.

On the 'appropriateness of the development areas proposed' and based on the modification sought, the Council considers the plan should not set out this level of detail, The height and design of built form should be informed by a townscape and visual impact assessment given the sensitivity of the area and role of the site within it as part of the planning application.

The Council has given careful consideration to the capacity of this site, including the extent of developable area, the visual sensitivity, and that part of the site is needed for the school annexe (see Issue 29: Education). Further work on environmental factors following the Choices for City Plan MIR stage led to the estimated capacity figure being reduced.

In a review of accessibility it was found that this site was more accessible by means other than private car compared to the Royal Victoria Hospital site. As a result the level of private parking provision is lower.

Should the Reporter see merit, amending the unlettered development principle (plan page 57) for an open river channel to make clear that proposals should be informed by flood-risk and surface water management assessment work would improve clarity.

Ian McRae (0028), Sheila Strathdee (0448), Deidrie Brock MP (0801), Jacqueline Christie (0023), Helen MacLeod (0364), Howard Jones (0424), Naomi Appleton (0271), Iain R N Stewart (0131), Susie Ross (0440)

The impacts of this proposal and others has been assessed through appraisals of impacts on infrastructure, including Healthcare (CD016), Transport (CD014) and Education (CD015). A Strategic Flood Risk Appraisal (CD011), including surface water flood risk, has been undertaken. The impacts are considered acceptable, subject to appropriate mitigation as provided for particularly in Policy Inf 3 'Infrastructure Delivery and Developer Contributions'. Issues 27-31 consider infrastructure impacts.

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provisions of the plan provides for consideration of flood risk through Policies Env 35 'Reducing Flood Risk' and Env 36 'Designing for Surface Water'. Issues of Biodiversity are addressed by Policy Env 21. Policy Env 3 sets out policy requirements for retention of existing built and natural features. Policy Env 32 sets out requirements for communal open space and private gardens in housing developments, including the quality and nature of space required. Policy Env 6 sets out expectations on the nature and standard of green infrastructure. Policies Env 9 and 11 consider the effect of new development in terms of visual impact on heritage assets, including in relation to the New Town World Heritage Site.

The Council has considered different options for providing additional capacity needed in relation to the Flora Stevenson school and catchment. The provision of an annexe as part

of H32 Crewe Road South is considered the most appropriate. Issue 29: Education considers education matters, including in relation to the matter of new Flora Stevenson and Gaelic school provision. **No modification proposed.**

Shiela Young (0251)

The Council is content that the development principles with Policy Env 35 (Reducing Flood Risk) addresses how the proposal should handle culverts and potential culverts on /adjacent to the site.

Development principles a) and d) address mixed use, with the school annexe addressed in criterion e). Healthcare needs are addressed above. **No modification proposed.**

Sheila Strathdee (0448), Helen MacLeod (0364), Iain R N Stewart (0131), Susie Ross (0440)

The Council has considered different options for providing additional capacity needed in relation to the Flora Stevenson school and catchment. The provision of an annexe as part of H32 Crewe Road South is considered the most appropriate. See Issue 29: Education for further information on this, including in relation to the matter of new Flora Stevenson and Gaelic school provision

Details in relation to nature/design of the school annexe and environs will be considered through the development management process. **No modification proposed.**

NHS Lothian (0596)

The Council considers further clarification unnecessary the Western General Hospital Place Brief (CD080) is made available on the Council's website. **No modification proposed.**

Susie Ross (0440)

It is for NHS Lothian to assess any need for medical facilities in this area. The Council understands this site is not needed for such a purpose. **No modification proposed.**

SEPA (0012)

The Council considers the Place policy and wording of Policy Env 35 addresses how culverts and potential culverts should be addressed.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP (CD096) and draft NPF 4 (CD099) in

this respect (see paragraph 46.) The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance (CD047) sets out details on electric vehicle charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal. **No modification proposed.**

Craigleith/Blackhall Community Council (0403)

The Council can only reasonably make requirements a developer can reasonably provide them. The proposed modification would not meet this test. **No modification proposed.**

Susie Ross (0440)

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provisions of the Plan provides for biodiversity as part of Policy Env 21 'Protection of Biodiversity'. Policies Env 35 and Env 36 set out the position in relation to surface water, including the combined sewer network. In terms of wastewater, Scottish Water has been consulted and has not objected to the site. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content with the wording 'expected to' is sufficiently clear in establishing the clear level of import for measure in question.

**No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248), Iain R N Stewart (0131)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Susan Burney (0360)

Criterion d does not specify that uses have to be shops. The most appropriate use for the site would be established as part of more detailed proposals. **No modification proposed.**

Cockburn Association (0777)

The development principles are to be read as part of the Plan as a whole, including policies relating to these issues. The Council is satisfied that the net provision made provides for tree retention in Policies Env 20 (Protection of Trees and Woodlands). Env 6

(Blue Green Infrastructure), Env 27 (Public Realm, New Planting and Landscape Design). In terms of existing hardstanding areas, the Council notes these are of little merit and could be put to more beneficial use. Again, the Plan should be read as a whole in this regard – with Map 21 also of relevance.

The Council considers that development principle k. already has the effect of ensuring a TVIA is undertaken prior an application as it states that this TVIA must inform the proposal. **No modification proposed.**

Elizabeth M Kungu (0063), Andrew Brown (0007)

The Council considers the requirements of BGN 20 are clear and there is no indication in the proposal wording that these could be ‘watered down’ at a later stage.

The Strategic Flood Risk Assessment (CD011) did consider this site in the context of flood risk in this area. It did not look at whether existing areas of development are at flood risk as these are not proposed to be developed in City Plan. In terms of impact of this development on neighbouring areas and properties Policy Env 35 is clear that developments (which would include this) should not have such an impact. **No modification proposed.**

Christopher Fraser (0371)

An assessment of the site’s access to recreation (play facilities and open space) is provided in the Council’s Adopted Open Space Strategy (CD066) and associated Open Space Audit (CD067). Notwithstanding this, Map 21 and proposal BGN 20 set out substantial levels of greenspace and blue and green infrastructure as part of this proposal. **No modification proposed.**

Elizabeth M Kungu (0063).

Policy Hou 2 addresses affordable housing requirements, see Issue 23

Policy Env 26 (Housing Density) sets out that developments should deliver housing in line with capacities set out in the Plan. Planning applications may be submitted with numbers that vary from these figures. If so it will be for the decision maker to assess this. **No modification proposed.**

Royal Mail Group (0501)

Whilst the Royal Mail Group may need their existing sites for current business requirements, those requirements may change over the life-time of the plan.

The Crewe Road South site encompasses a number of uses and requires coordinated planning. Inclusion of the Royal Mail’s site within this proposal ensures that retention or redevelopment of the site can be considered in a comprehensive manner.

The Agent of Change principle puts the onus on developers of new, noise-sensitive properties to effectively deal with potentially problematic noise. **No modification proposed.**

Iain R N Stewart (0131)

The proposal wording sets out the principle of residential led use on the site is acceptable. Planning permission still requires assessment against City Plan as a whole and other material considerations however.

Some of the uses mentioned in the representation such as recreational open space should be contained in the site. Other uses, such as allotments, may also be able to be accommodated however this is a matter of detailed design but there would be support in principle for some of these within the overall City Plan framework. The relocation of electricity substations and gas District Governor is also a detailed design matter, as is the form of the river channel which must ensure it is safe.

The Council acknowledges the site contains areas of greenery. This is not downplayed, but equally it does not preclude some development of the site provided the features of merit are sensitively addressed and retained. The development principles for the site, for example h, as well as Map 21 and BGN proposal 22 all recognise the value of greenspace on the site.

Development principle g and the link to Craigleith Hill Crescent relate to an active travel link. The alternative access noted in representation to the west of the site is vehicular and joins Craigleith Road. It is positive for the site to have an additional access onto a different road and serving non-car traffic.

Works to the culvert under Crewe Road South are not addressed as part of this Place Policy. Amongst other matters it is noted there is not the same scope to incorporate a daylighted watercourse as there is along the north of the site.

The creation of a "strong urban form" on the corner of Comely Bank Rd and Crewe Rd has had regard for the context of the area, including its townscape. Notwithstanding this, detailed appraisals shall be required to support any planning application and how these have been taken into account in the detailed design proposals for the site.

Policy Env 21 'Protection of Biodiversity' addresses protected species such as bats and curlews, with appendix D setting out that a Preliminary Ecological Appraisal may be required for this site. The Council cannot comment further on what the presence of these species may mean without the relevant survey(s) being undertaken and having regard for the potential need for a licensing process to follow. **No modification proposed.**

David Brownlee (0120), Antonio Alonzi (0270), Helen Mitchell (0484)

The representations above are supportive of the Proposal as proposed.

### **H33: Orchard Brae Avenue**

Elizabeth M Kungu (0063)

Policy Hou 2 addresses affordable housing requirements, see Issue 23.

Policy Env 26 (Housing Density) sets out that developments should deliver housing in line with capacities set out in the Plan. Planning applications may be submitted with numbers

that vary from these figures. If so it will be for the decision maker to assess this. **No modification proposed.**

Susanna Sharp (0638)

The development principles are to be read as part of the Plan as a whole. This includes policies relating to the protection and provision of trees, particularly Env 20 (Protection of Trees and Woodlands), Env 6 (Blue Green Infrastructure) and Env 27 (Public Realm, New Planting and Landscape Design). These policies address the issues raised without the need for additional site specific provisions. Impact on amenity of neighbouring properties is addressed in policy Env 33. Policy Env 30 relates to Building Heights.

The impact of this proposal alongside others in this plan has been assessed as part of a Transport Appraisal which found the impact of the proposals to be acceptable subject to appropriate mitigation. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process.

As this proposal and H34 are separate and may come forward from different developers and land interests then it is not possible to require formal linkage of drainage solutions however it would be good practice for consideration of water management to be cognisant of relevant sites in the surrounding area. **No modification proposed.**

### **H34: Orchard Brae**

Alasdair Grant (0089), Isabel Steel (0245)

The estimated capacity is based on an assessment of what may be appropriate for the site in its context. The first development principle for this site set out in Appendix D states that the heights must be lower than the existing building and layout/massing must be sympathetic to the surrounding urban form. **No modification proposed.**

Isabel Steel (0245)

It is for detailed applications to set out specific details of new buildings shall. City Plan policy Env 33 protects the amenity of existing homes and residents.

Work informing City Plan parking standards was undertaken to ensure the maximum parking standards set out were acceptable having accounted for levels of access to alternative travel in different parts of the City. **No modification proposed.**

Finance Development LLP (0688)

The Council is content that a height lower than the existing building is appropriate given that is substantially larger than the properties to the north and west. Replicating the existing built form would likely have detrimental impacts.

On office provision it the development principles are to be read with the Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan provides the appropriate framework for consideration of this proposal. Policy Econ 5 sets out how proposals to redevelop existing employment sites would re-provide a level of business and commercial floorspace. See Issue 35 on Economy Policies. **No modification proposed.**

Callum Melville (0155)

The design and layout of the site, including paths and how these link to the surrounding area, would be addressed as part of the planning application process. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process.

As this proposal and H34 are separate and may come forward from different developers and land interests then it is not possible to require formal linkage of drainage solutions however it would be good practice for consideration of water management to be cognisant of relevant sites in the surrounding area. **No modification proposed.**

**H35: Salamander Place**

Alison Winkler (0041)

The development principles for this proposal are to be read as part of the Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan provides the appropriate framework for consideration of this proposal. This includes Policy 33 (Amenity) which sets out requirements for proposals on matters such as impact on daylight on neighbouring properties and overlooking.

The impacts of this proposal and others has been assessed through appraisals of impacts on infrastructure, including Healthcare (CD016), Transport (CD014) and Education (CD015). A Strategic Flood Risk Appraisal (CD011), including surface water flood risk, has been undertaken. The impacts are considered acceptable, subject to appropriate mitigation as provided for particularly in Policy Inf 3 'Infrastructure Delivery and Developer Contributions'. Issues 27-31 consider infrastructure impacts.

Providing grants to home owners is not a City Plan matter. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing

housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Hilary Hines (0265)

The estimated capacity for this proposal is based on an assessment of what may be appropriate for the site which was cognisant of heights and densities in the surrounding area.

In terms of space for recreation the development principles are to be read as part of the Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan in this regard provides the appropriate framework for consideration of this proposal. Policies Env 6 and Env 32 are relevant. The third development principle of appendix D sets out requirements.

The Council's Open Space Strategy (CD066) provides an analysis of which areas are considered to be adequately served by play facilities. This site is within such an area and so there is no requirement for additional facilities to be provided. **No modification proposed.**

SEPA (0012)

Appendix D notes that a Flood Risk Assessment is required for the site. The Council considers the development management process can account for this. **No modification proposed.**

### **H36: North Fort Street**

Simon Thomson (0248)

The Council's position on Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. Appendix D for this site also notes the requirement for this site to provide a surface water management plan. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H37: Coburg Street**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable. **No modification proposed**

Emma Whifield (0031)

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan i provides the appropriate framework for consideration of this proposal. Policy Env 33 provides for the protection the amenity of neighbouring properties from new development. Policy Econ 5 sets out that proposals to redevelop existing employment sites require to re-provide a level of business and commercial floorspace. Design policies are applicable to issues of scale and visual impact of development, including Env 1 'Design Quality and Context; Env 25 'Layout Design' and 26 'Housing Density'. **No modification proposed.**

SEPA (0012)

A Flood Risk Assessment is required for this site the Council considers it is for the development management process to establish the scope and detailed matters to be taken into account in such FRAs.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

**H38: Commercial Street**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

SEPA (0012)

A Flood Risk Assessment is required for this site. The Council considers it is for the development management process to establish the scope and detailed matters to be taken into account in such FRAs.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

### **H39: Pitt Street**

Kenneth MacLean (0046)

The boundary for site H39 Pitt Street does not signal an intention to demolish any residential properties. However, should the Reporter be so minded clarification can be added to Appendix D site principles for clarity.

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

J. Smart & Co. (Contractors) PLC (0483)

The Council notes that J Smart & Co. have stated in representation that they have ownership interests (full or part) this site and are willing to engage positively to discuss their future development.

### **H40: Steads Place**

Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content that the wording 'expected to' is clear. **No modification proposed.**

Leith Central Community Council (0614)

Active Trave Proposal ATPR38 provides the safeguarding proposed insofar as it relates to this housing proposal. For active travel proposals see Issue 33. **No modification proposed.**

Mark Ockendon (0419)

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan provides the appropriate framework for consideration of this proposal. Design policies are potentially applicable to issues of scale and visual impact of development, including Env 1 'Design Quality and Context', Env 25 'Layout Design' and 26 'Housing Density'. **No modification proposed.**

Cockburn Association (0777)

The Council considers this Place Policy alongside the wider provisions of City Plan, including subject policies, as well as associated Edinburgh Design Guidance CD047 provides sufficient framework for this proposal as it stands. **No modification proposed.**

Cockburn Association (0777), Leith Central Community Council (0614)

The City Plan mapping and development principles for sites is based on the extent of Conservation Areas as designated presently. If/when Conservation Areas are extended however then the provisions of the City Plan relating to Conservation Areas (such as policies Env 13 and Env 14) would apply to development in those areas. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance CD077. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

**H41: Jane Street**

Shortbread House of Edinburgh Ltd (0619)

The allocation of site H41 is for a housing led mixed use development. It is not the intention that this site or similar sites within the plan would be solely residential. The plan allocates such sites as a means to address the consistent trend for sites in similar locations to change from previous commercial uses to residential without adequate mix of uses and facilities ensuring they are properly planned and coordinated.

The forced relocation or closure of existing business does not form part of the strategy of the plan and there is no intention to require the Shortbread House to leave the site.

The business already operates within a wider mix of uses including residential nearby, and it is not considered that development of the wider site would prohibit the continued operation of the business or expansion, subject to the coordinate and planning of uses.

For other businesses who wish to reallocate and where they are unable to be integrated into mixed use development, the plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses.

The diagram Map 22 accompanying Place Policy 8 is indicative noting that the proposed 'principal street' circles the Shortbread House site. It is not the intention to prevent access to the business or operations. Proposals coming forward for development will be required to show how they coordinate with existing uses at the planning application stage. **No modification proposed.**

Deidre Brock MP (0801), Leith Links Community Council (0617), Newbarns Brewery (0653), APS Group (Scotland) Ltd (0518), Ramsay Cornish Auctioneers Ltd. (0685), Paul Gibson (0559)

The plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2020 CD026 which assessed the potential for new residential development within the urban area. It provides a brownfield site in line with the aim of the plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the plan it is appropriate that this site is allocated for housing.

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan in this regard provides the appropriate framework for consideration of this proposal. It is noted that development principle b. sets out the requirement for re-provision of class 4 uses and this is supported by Policy Econ 5 which sets out the position for proposals which would redevelop existing employment sites and the re-provision of business and commercial floorspace, including for existing uses where appropriate.

In cases where full re-provision of employment use on site is not possible due to use type or physical characteristics, the plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses.

The impacts of this proposal and others has been assessed through appraisals of impacts on infrastructure, including Healthcare (CD016), Transport (CD014) and Education (CD015). A Strategic Flood Risk Appraisal (CD011), including surface water flood risk, has been undertaken. The impacts are considered acceptable, subject to appropriate mitigation as provided for particularly in Policy Inf 3 'Infrastructure Delivery and Developer Contributions'. Issues 27-31 consider infrastructure impacts.

**No modification proposed.**

Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP and draft NPF 4 in this respect (see paragraph 46.)

The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance CD047 sets out details on electric vehicle

charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal.

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan in this regard provides the appropriate framework for consideration of this proposal. City Plan's design policies are applicable to issues of the scale of visual development, particularly Env 1 'Design Quality and Context', Env 26 'Housing Density' and Env 30 'Building Heights'. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan.

The housing proposal reference on map 23 is appropriate as this reflects the reference in Housing Proposals in Table 2. There is no need to refer to Place policies in this map since the map is contained amongst the Place Policies in question anyway. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance CD077. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### Leith Central Community Council (0614)

The development principles for this proposal should be read with the Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by the Plan provides for consideration of this proposal. As stated in paragraph 3.154 Place Policy maps do not necessarily show the full extent of open space provision required for a development and they must be read in conjunction with open space policies (either Env 31 or Env 32) to ensure an appropriate level of space is provided. Policy Env 27 sets out minimum requirements for tree canopy coverage.

The disused railway line between St Mark's Park and Easter Road and further east is identified in City Plan as a Strategic Active Travel Project and Safeguard (ATSR 5). As such there is not a further need to safeguard this as a green network proposal in this plan. **No modification proposed.**

#### Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content with the wording 'expected to' is sufficiently clear in establishing the clear level of import for measure in question. **No modification proposed.**

J. Smart & Co. (Contractors) PLC (0483)

The Council notes that J Smart & Co. have stated in representation that they have ownership interests (full or part) in this site and are willing to engage positively to discuss their future development.

**H42: Leith Walk/Manderston Street**

SEPA (0012)

This site combines two sites referred to in the Strategic Flood Risk Assessment CD011 as Leith Walk (Depot) and Leith Walk/Manderston Street.

Policy Env 36 requires detailed applications to provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance CD077. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

**H43: West Bowling Green Street**

Water of Leith Conservation Trust (0392)

The routes on Place Policy maps are illustrated for a specific purpose noted in the map key. Other routes are not shown, however, this does not reduce their status.

Policy Env 29 Waterside Development sets out requirements for buffer zones that apply to various circumstances. As such a modification as proposed for buffer zones is not considered necessary. **No modification proposed.**

Leith Links Community Council (0617)

The plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2020 CD026 which assessed the potential for new residential development within the urban area. It provides a brownfield site in line with the aim of the plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the plan it is appropriate that this site is allocated for housing.

The development principles should be read as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by the Plan provides for consideration of this proposal. Policy Econ 5 sets out the position where proposals

would redevelop existing employment sites and the re-provision of business and commercial floorspace, including for existing uses where appropriate.

In cases where full re-provision of employment use on site is not possible, the plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. **No modification proposed.**

#### SEPA (0012)

The Council sees it is for the development management process to establish the scope and detailed matters to be taken into account in FRAs.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance CD077. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### Synergy Group Fitness (0806)

Policy Econ 5 sets out the position for proposals which would redevelop existing employment sites and the re-provision a level of business and commercial floorspace, including for existing uses where appropriate. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248), Synergy Group Fitness (0806)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan.

The housing proposal reference on map 23 is appropriate as this reflects the reference in Housing Proposals in Table 2. There is no need to refer to Place policies in this map since the map is contained amongst the Place Policies in question. **No modification proposed.**

#### Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content with the wording 'expected to' is sufficiently clear in establishing the clear level of import for measure in question. **No modification proposed.**

Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP (CD096) and draft NPF 4 (CD099) in this respect (see paragraph 46.) The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance (CD047) sets out details on electric vehicle charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal. **No modification proposed.**

Jodi Duffin (0264)

The matters raised relating to construction are not addressed as part of City Plan given there are more appropriate processes for controlling the impact of these such as through Development Management and Environmental Protection.

Policy 33 (Amenity) sets out requirements for proposals on amenity, including impact on daylight of neighbouring properties and overlooking. **No modification proposed.**

Kate Soane (0260)

The estimated capacity for this proposal is based on an assessment of what may be appropriate for the site which was cognisant of heights and densities in the surrounding area.

The plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2020 CD026 which assessed the potential for new residential development within the urban area. It provides a brownfield site in line with the aim of the plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the plan it is appropriate that this site is allocated for housing.

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan provides for consideration of this proposal. Policy Econ 5 sets out where proposals which would redevelop existing employment sites would re-provide business and commercial floorspace, including for existing uses where appropriate.

In cases where full re-provision of employment use on site is not possible, the plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. Issue 33 considers Active Travel Proposals. **No modification proposed.**

**H44: Newhaven Road 1**

Leith Central Community Council (0614)

The Council considers this proposal is sufficiently clearly marked. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance CD077. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan.

The housing proposal reference on map 23 is appropriate as this reflects the reference in Housing Proposals in Table 2. There is no need to refer to Place policies in this map since the map is contained amongst the Place Policies in question anyway. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content with the wording 'expected to' is sufficiently clear in establishing the clear level of import for measure in question. **No modification proposed.**

Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP (CD096) and draft NPF 4 (CD099) in this respect (see paragraph 46.) The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance (CD047) sets out details on electric vehicle charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal. **No modification proposed.**

Kate Soane (0260)

The estimated capacity for this proposal is based on an assessment of what may be appropriate for the site which was cognisant of heights and densities in the surrounding area.

The plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2020 CD026 which assessed the potential for new residential development within the urban area. It provides a brownfield site in line with the aim of the plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the plan it is appropriate that this site is allocated for housing.

The development principles for this proposal are to be read as part of the Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan for consideration of this proposal. Policy Econ 5 sets out where proposals to redevelop existing employment sites would re-provide business and commercial floorspace, including for existing uses where appropriate.

In cases where full re-provision of employment use on site is not possible, the plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. Issue 33 considers Active Travel Proposals. **No modification proposed.**

#### **H45: Newhaven Road 2**

##### SEPA (0012)

It is for the development management process to establish the scope and detailed matters for FRAs. Issues of surface water flooding within and adjacent to the site will require to be addressed as a result of Policy Env 36 (Designing for Surface Water). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

##### Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content with the wording 'expected to' is sufficiently clear in establishing the clear level of import for measure in question. **No modification proposed.**

##### Leith Central Community Council (0614), Liane Montgomery (0030)

The Council considers this proposal is sufficiently clearly marked.

The development principles are to be read as part of the Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan provides for consideration of this proposal. Policy 33 (Amenity) sets out requirements for proposals to meet on amenity matters including impact on daylight on neighbouring properties and overlooking. Policy Env 29 considers Waterside Development and makes provision for buffers which address issues, including overshadowing.

The impacts of this proposal and others has been assessed through appraisals of impacts on infrastructure, including Healthcare (CD016), Transport (CD014) and Education (CD015). A Strategic Flood Risk Appraisal (CD011), including surface water flood risk, has been undertaken. The impacts are considered acceptable, subject to appropriate mitigation as provided for particularly in Policy Inf 3 'Infrastructure Delivery and Developer Contributions'. Issues 27-31 consider infrastructure impacts. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248), Legal & General Property Partners (Industrial Fund) Limited and Legal & General Property Partners (Industrial) Nominees Limited (0736)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan

The housing proposal reference on map 23 is appropriate as this reflects the reference in Housing Proposals in Table 2. There is no need to refer to Place policies in this map since the map is contained amongst the Place Policies in question anyway. **No modification proposed.**

Kate Soane (0260), Legal & General Property Partners (Industrial Fund) Limited and Legal & General Property Partners (Industrial) Nominees Limited (0736)

The estimated capacity for this proposal is based on an assessment of what may be appropriate for the site which was cognisant of heights and densities in the surrounding area.

The plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2020 CD026 which assessed the potential for new residential development within the urban area. It provides a brownfield site in line with the aim of the plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the plan it is appropriate that this site is allocated for housing.

The development principles for this proposal are to be read as part of the Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan for consideration of this proposal. Policy Econ 5 sets out

where proposals to redevelop existing employment sites would re-provide business and commercial floorspace, including for existing uses where appropriate.

In cases where full re-provision of employment use on site is not possible, the plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the Spatial Strategy is set out in Issue 2, with Issue 3 addressing the delivery of Spatial Strategy, including the matter of the effect of the Plan on existing business uses within proposal sites in City Plan. See Issue 33 in relation to Active Travel Proposals. **No modification proposed.**

Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP CD096 and draft NPF 4 CD099 in this respect (see paragraph 46.)

The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance CD047 sets out details on electric vehicle charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal.

Legal & General Property Partners (Industrial Fund) Limited and Legal & General Property Partners (Industrial) Nominees Limited (0736)

The estimated capacity for this proposal is based on an assessment of what may be appropriate for the site which was cognisant of heights and densities in the surrounding area. Policy Env 26 (Housing Density) sets out that developments should deliver housing in line with capacities set out in the Plan. Planning applications may be submitted with numbers that vary from these figures. If so it will be for the decision maker to assess this.

Principles b and c relate to different uses and so the Council is content that these should be different principles. The Council is also content it is appropriate for them to set a certain level of proportionality in this instance given the understanding it has taken of the context.

No evidence has been provided on why the provision of open space on this site is held to excessively harm viability. The Plan's open space standards for this proposal do not vary significantly from those for other sites. Viability can be assessed as a material consideration at the planning application stage. **No modification proposed.**

#### **H46: Bangor Road**

SEPA (0012)

It is for the development management process to establish the scope and detailed matters for FRAs. Issues of surface water flooding within and adjacent to the site will require to be addressed as a result of Policy Env 36 (Designing for Surface Water). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content with the wording 'expected to' is sufficiently clear in establishing the clear level of import for measure in question. **No modification proposed.**

Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP (CD096) and draft NPF 4 (CD099) in this respect (see paragraph 46.) The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance (CD047) sets out details on electric vehicle charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2, with Issue 3 addressing the delivery of Spatial Strategy, including effect of the Plan on existing business uses within proposal sites in City Plan. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan.

The housing proposal reference on map 23 is appropriate as this reflects the reference in Housing Proposals in Table 2. There is no need to refer to Place policies in this map since the map is contained amongst the Place Policies in question anyway. **No modification proposed.**

Ali Hall (0072)

The development principles are to be read as part of the Plan as a whole. This includes Policy Env 33 (Amenity) which sets out requirements for proposals to meet in respect of matters such as impact on daylight on neighbouring properties and overlooking. **No modification proposed.**

J. Smart & Co. (Contractors) PLC (0483)

The Council notes that J Smart & Co. have stated in representation that they have ownership interests (full or part) this site and are willing to engage positively to discuss their future development. **No modification proposed.**

**H47: South Fort Street**

#### SEPA (0012)

It is for the development management process to establish the scope and detailed matters for FRAs. Issues of surface water flooding within and adjacent to the site will require to be addressed as a result of Policy Env 36 (Designing for Surface Water). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content with the wording 'expected to' is sufficiently clear in establishing the clear level of import for measure in question. **No modification proposed.**

#### Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP (CD096) and draft NPF 4 (CD099) in this respect (see paragraph 46.) The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance (CD047) sets out details on electric vehicle charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan.

The housing proposal reference on map 23 is appropriate as this reflects the reference in Housing Proposals in Table 2. There is no need to refer to Place policies in this map since the map is contained amongst the Place Policies in question anyway. **No modification proposed.**

#### **H48: Stewartfield**

Rachel Ross (0784), David Williams (0643), Jennifer Reaves (0299), Anne Meikle (0286), Sarah Farrell (0473), Gillian Rae (0571), Hew Dalrymple (0238), Framework (Edinburgh) Limited (0743)

The plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2020 CD026 which assessed the potential for new residential development within the urban area. It provides a brownfield site in line with the aim of the plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the plan it is appropriate that this site is allocated for housing.

The development principles for this proposal are to be read as part of the Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City provides for consideration of this proposal. Policy Econ 5 sets out where proposals to redevelop existing employment sites would re-provide business and commercial floorspace, including for existing uses where appropriate.

In cases where full reprovision of employment use on site is not possible, the plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. **No modification proposed.**

#### SEPA (0012)

It is for the development management process to establish the scope and detailed matters for FRAs. Issues of surface water flooding within and adjacent to the site will require to be addressed as a result of Policy Env 36 (Designing for Surface Water). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### Living Streets Edinburgh Group (0486)

The Council considers this proposal adequately establishes pedestrian priority in the movement hierarchy, with the reference to *limited* car parking being reasonable for this location.

The Council is content with the wording 'expected to' is sufficiently clear in establishing the clear level of import for measure in question. **No modification proposed.**

#### Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP (CD096) and draft NPF 4 (CD099) in this respect (see paragraph 46.) The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance (CD047) sets out details on electric vehicle charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan.

The housing proposal reference on map 23 is appropriate as this reflects the reference in Housing Proposals in Table 2. There is no need to refer to Place policies in this map since the map is contained amongst the Place Policies in question anyway. **No modification proposed.**

Gareth Hutchinson (0290)

It is not within the locus of City Plan to make provision for the cancellation of parking permits. This is addressed by a separate legislative regime to Planning. **No modification proposed.**

Jennifer Reaves (0299), Anne Meikle (0286), Sarah Farrell (0473), Liane Montgomery (0030), Katrina Danson (0301)

The development principles for this proposal are to be read as part of the Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan provides for consideration of this proposal. Policy Env 11 sets out that proposals should not have a detrimental impact on the setting of a Listed building. Policy 33 (Amenity) sets out requirements for proposals on matters such as impact on daylight on neighbouring properties and overlooking. Policy Env 20 makes provision for the Protection of Trees.

The impacts of this proposal and others has been assessed through appraisals of impacts on infrastructure, including Healthcare (CD016), Transport (CD014) and Education (CD015). A Strategic Flood Risk Appraisal (CD011), including surface water flood risk, has been undertaken. The impacts are considered acceptable, subject to appropriate mitigation as provided for particularly in Policy Inf 3 'Infrastructure Delivery and Developer Contributions'. Issues 27-31 consider infrastructure impacts. Scottish Water has been consulted and raised no objections to this proposal in terms of the sewer network. **No modification proposed.**

Liane Montgomery (0030), Gillian Rae (0571)

Issues relating to noise from building relate to construction aspects of a proposal and are more appropriately addressed by Environmental Health and Development Management processes. **No modification proposed.**

Gillian Rae (0571)

The proposal (including its design principles and capacity) is based on an assessment of what may be appropriate for the site which was cognisant of the character, heights and

densities in the surrounding area. The development principles are to be read as part of City Plan as a whole, including subject policies relating to these issues. The development principles are to be read as part of the Plan as a whole. This includes policies relating to the scale and visual impact of development, including Env 1 'Design Quality and Context', Env 25 'Layout Design' and 26 'Housing Density'. Policy 33 (Amenity) sets out requirements for proposals to meet on amenity, including impact on daylight on neighbouring properties and overlooking. Policy Env 6 addresses issues of green blue features and networks and the importance of retaining and linking to these where possible. Policy Env 20 considers the value of trees including the attributes noted in representation. Policy Env 7 makes provision for assessment of net carbon impact from redevelopment proposals.

Creating greater linkages between closed off areas such as cul-de-sacs is considered positive. Increased footfall may result from this, which can increase vitality and passive surveillance. An increased level of connection between closed off areas is, active travel and contributing to health, wellbeing and encouraging non-vehicular journeys with reductions in carbon emissions and other pollution to benefit air quality. **No modification proposed.**

Katrina Danson (0301)

The Council does not consider the proposal would result in a net loss of open space. The Plan sets out a framework which should achieve a net betterment in terms of open space for this site as set out in Map 23, the development principles for the site and the provisions of Policy Env 32. **No modification proposed.**

Kate Soane (0260)

The estimated capacity for this proposal is based on an assessment of what may be appropriate for the site which was cognisant of heights and densities in the surrounding area.

The plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2020 CD026 which assessed the potential for new residential development within the urban area. It provides a brownfield site in line with the aim of the plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the plan it is appropriate that this site is allocated for housing.

The development principles are to be read as part of the Plan as a whole. This includes policy Econ 5 sets out the position for proposals which would redevelop existing employment sites and the re-provision a level of business and commercial floorspace, including for existing uses where appropriate. See Issue 35 'Economy Policies'

In cases where full re-provision of employment use on site is not possible, the plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect

of the Plan on existing business uses. See Issue 33 in relation to Active Travel Proposals. **No modification proposed.**

J. Smart & Co. (Contractors) PLC (0483)

The Council notes that J Smart & Co. have stated in representation that they have ownership interests (full or part) this site and are willing to engage positively to discuss their future development. . **No modification proposed.**

**H49: Coruna Place**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites can come forward for development in the period of the plan.

The housing proposal reference on map 23 is appropriate as this reflects the reference in Housing Proposals in Table 2. There is no need to refer to Place policies in this map since the map is contained amongst the Place Policies in question anyway. **No modification proposed.**

**H50: Bonnington Road**

Christine Nurse (0323), Catherine Ness (0642), Sarah Roberts (0630),  
Richard Cherns (0476)

The plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2020 CD026 which assessed the potential for new residential development within the urban area. It provides a brownfield site in line with the aim of the plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the plan it is appropriate that this site is allocated for housing.

The development principles are to be read as part of the Plan as a whole. This includes policy Econ 5 sets out the position for proposals which would redevelop existing employment sites and the re-provision a level of business and commercial floorspace, including for existing uses where appropriate. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

**H53: Albert Street**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are capable of coming forward for development in the period of the plan. **No modification proposed.**

Matthew Gason (0090)

Matters relating to the property value and marketability of neighbouring properties are not material planning considerations.

Policy 33 (Amenity) sets out requirements for proposals to meet on matters such as impact on daylight on neighbouring properties and overlooking. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance CD077. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### **H54: St. Clair Street**

##### SEPA (0012)

The Strategic Flood Risk Assessment CD011 identifies this site as requiring a Flood Risk Assessment. There is no reference to a strategic SUDS solution for this site in the Strategic Appraisal. The Plan and Appendix D reflect this.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance CD077. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

##### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are capable of coming forward for development in the period of the plan. **No modification proposed.**

##### J. Smart & Co. (Contractors) PLC (0483)

The Council notes that J Smart & Co. have stated in representation that they have ownership interests (full or part) this site and are willing to engage positively to discuss their future development. **No modification proposed.**

#### **H55: Seafield**

##### The Royal London Mutual Insurance Society Ltd (0149), Manse (Seafield) LLP (0212), Inverdunning (Hatton Mains) Ltd (0427)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are capable of coming forward for development in the period of the plan.

The plan aims to deliver the land needed to meet Edinburgh's housing needs and to direct new development to, and maximise the use of, brownfield land rather than greenfield land. The site was identified in the Edinburgh Local Development Plan Housing Study 2020 CD026 which assessed the potential for new residential development within the urban area. It provides a brownfield site in line with the aim of the plan to maximise the use of brownfield land rather than greenfield land. Given the need for housing land and the strategy of the plan it is appropriate that this site is allocated for housing.

It is noted that development principle b. sets out the re-provision of class 4 uses and this is supported by policy Econ 5 which sets out the position for proposals which would redevelop existing employment sites and the re-provision a level of business and commercial floorspace, including for existing uses where appropriate. See Issue 35 regarding Economy Policies.

In cases where full re-provision of employment use on site is not possible, the plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the Spatial Strategy is set out in Issue 2, with Issue 3 addressing the delivery of Spatial Strategy, including the matter of the effect of the Plan on existing business uses within proposal sites in City Plan

The Council notes that proposal H55 for Seafield has an estimated capacity of 800 units. This capacity has been estimated in cognisance of a range of factors relating to the site which this capacity figure acknowledges as meaning housing delivery expectations for this site in the plan period are lower than may exist for other sites of a comparatively similar gross site area. **No modification proposed.**

David Thomson (0538), Alastair Cameron (0145), Anne Thomson (0551), Ursula Wright (0662), Action Porty (0250), Jennifer Elliot (0791), Anna Brand (0742), Gemma Sethsmith (0694), David Cooper (0735), Serge Marti (0745), Peter Allen (0336), Julie Robertson (0210), Portobello Amenity Society (0612), Suzanne McIntosh (0409), Oonagh O'Brien (0585), Diana Cairns (0452), Lawrence Marshall (0702), Stephen Ian Hawking (0469)

The impacts of this proposal and others has been assessed through appraisals of impacts on infrastructure, including Healthcare (CD016), Transport (CD014) and Education (CD015). A Strategic Flood Risk Appraisal (CD011), including surface water flood risk, has been undertaken. The impacts are considered acceptable, subject to appropriate mitigation as provided for particularly in Policy Inf 3 'Infrastructure Delivery and Developer Contributions'. Issues 27-31 consider infrastructure impacts.

The development principles are to be read as part of the Plan as a whole. City Plan's design policies are applicable to issues of the scale of visual development, particularly Env 1 'Design Quality and Context', Env 26 'Housing Density' and Env 30 'Building Heights'. Policy Env 32 sets out requirements for provision of open space within new development which is important as part of ensuring that new residents are not solely required to utilize existing amenity spaces. Policy Hou 3 makes provision for mixed communities. The requirement for a Place Brief for this site is part of ensuring an appropriate mix of land uses and so there is less need to be exacting in the specification of these in the development principles of the City Plan itself.

The Place Brief process involves consultation with local communities to ensure full consideration of input from this key stakeholder group to help shape the Brief and master planning. The further detail of this should be through that process and not in the Plan itself. The Glossary defines Place Brief as being informed by outcomes from community engagement so restatement of this is not necessary.

The Council as paragraph 3.46 states that proposals submitted in advance of the Place Brief shall be considered premature there is no need for a modification to state no development to take place until the Masterplan. It is for the Place Brief to establish how proposals are best illustrated. This may take the form of a masterplan however it does not benefit the Brief to state this definitively at this stage. It is unclear what is envisaged in considering that the Brief must be approved by 'the community'. Community engagement is a critical part of the process, though there is no formal mechanism for defining or seeking this - it is not precise as to what this would mean in real terms.

The modification seeking to set out controls over 'informal consultation between landowners/ developers and council/ planners' in parallel with the Place Brief or Master plan processes is considered excessive and unreasonable. The Council is in dialogue with stakeholders, including those from the community and landowners/ developers. The Council considers that discussion of development proposals should take be informed by the Place Brief process but there are both formal application and pre-application processes which the Council is required to consider even where such applications are premature to the outcome of a Place Brief. **No modification proposed.**

Manse (Seafield) LLP (0212), Arnold Clark Automobiles Ltd (0750),  
Inverdunning (Hatton Mains) Ltd (0427), The Royal London Mutual Insurance Society Ltd (0149),

The Council considers that the location, context, nature, constraints and opportunities of the site are sufficiently complex to require a Place Brief. The multiple existing ownerships and land uses are also significant factors in requiring a coordinated approach to development to avoid premature and piecemeal development that does not deliver key land uses and infrastructure as necessary to serve and unlock the site to maximise development potential. The Place Brief process includes engagement with land interests for all those reasons. A Place Brief shall be produced in good time such that it will be in place for the early part of the Plan period. **No modification proposed.**

Edinburgh Dog and Cat Home (0310)

It is acknowledged that the EDCH is a valuable asset to Edinburgh and the wider region. It is in part for these reasons that the site was not indicated for potential inclusion in the mapping for the Choices for City Plan Main Issues Report, though it is acknowledged that the site is within the indicative mapping of the Environmental Report (CD024) at the Main Issues Report stage, though not in the mapping in the Main Issues Report.

It is further noted as per the representation comments, that the facility is physically constrained and faces challenges in modification and that they consider that the reprovision of the EDCG elsewhere or as a modernised facility on site is needed. Inclusion within the H55 site could facilitate this.

The site is brownfield land and within the existing Urban Area with no protecting designation for the existing use. Therefore, redevelopment and change of use is supported by existing LDP policies in general principle, subject to technical considerations. The site's location, adjoining site H55 to the south and west with the promenade and shore to the north-east, makes for a logical addition to site H55. If the Reporter sees merit in recommending such a change, the Council considers that this could assist in achieving a comprehensive development through the Place Brief and the subsequent masterplanned approach to the H55 site as a whole. The Reporter may also see merit in considering the implications of inclusion on the H55 site capacity as stated in the Plan.

**No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council notes that this Place policy does not explicitly state the presumption in favour of pedestrian priority in the manner stated in other proposals. However, the site requires both a place brief and masterplan to come forward which will address issues of pedestrian priority. **No modification proposed.**

Mark Ockendon (0419)

The Council is content that the principle of pedestrian priority and limited private parking on-street is reasonable in this instance and in-line with the Aims, Outcomes and Strategy of City Plan – which in turn is in accord with SPP CD096 and draft NPF 4 CD099 in this respect (see paragraph 46.). The overall approach to integrated transport and electric vehicle charging are addressed in Issue 31. The Edinburgh Design Guidance CD047 sets out details on electric vehicle charging, and Policy Inf 7 requires that private parking provides electric vehicle charging provision. It is not necessary to state this requirement again in this proposal. **No modification proposed.**

Scottish Water (0342)

The location of assets relating to the waste water treatment plant should be identified as part of the development management and building standards processes. However, it is acknowledged that taking account of these in the Place Brief would ensure cohesive and coordinated planning and that an additional principle could be added for clarity, should the Reporter be so minded.

NatureScot (0528)

City Plan makes provision for the Council as planning authority to have the required decision making power over the approach taken to responding to coastal erosion, sea level rise and coastal flood risk. The Place Brief for the site which shall be informed by the flood risk and coastal erosion appraisal.

Miller Homes (0256)

As stated in paragraph 3.52 the Council does not consider the proposal would have an adverse impact on the integrity of a European site subject to mitigation. Paragraphs 3.50 and 3.51 incorporate mitigation measures set out on page 22 of the HRA. **No modification proposed.**

RSPB (0648)

City Plan sets out in paragraph 3.48 that there could be adverse impacts from both construction and operational phases. Para 3.50 provides some mitigation measures however further measures may be required and this would be considered further as part of an application, with Policy Env 21 (Protection of Biodiversity) setting out requirements in this regard to ensure mitigation (with this covering both construction and operational impacts).

Amendment of paragraph 3.52 to state that mitigation measures noted in paragraph 3.50 are not exhaustive would add clarity, if the Reporter is so minded.

#### SEPA (0012)

A Flood Risk Assessment is required for this site. It is for the development management process to establish the scope and detailed matters for FRAs. Issues of surface water flooding within and adjacent to the site will require to be addressed as a result of Policy Env 36 (Designing for Surface Water). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### Portobello Community Council (0206)

Paragraph 3.45 states the Flood risk and Erosion appraisal will inform the Place Brief. Paragraph 3.46 states development in advance of this Place Brief shall be considered premature. By implication this means applications submitted before the Flood Risk and Erosion Appraisal will also have been lodged before the Place Brief and therefore be premature. **No modification required.**

#### **H56: Sir Harry Lauder Road**

#### Portobello Community Council (0206)

The Council considers it appropriate for further details on the exact siting and scale of new commercial space within the site to be established through the planning application process with due regard to adjacent development and the surrounding context. The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by the Plan provides the for consideration of this proposal. Policy Econ 5 sets out where proposals to redevelop existing employment sites would re-provide business and commercial floorspace. Policies Env 25 and Env 27 as well as Env 6, and the Edinburgh Design Guidance CD047, will ensure the site appropriately addresses the adjacent development. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue

20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

#### SEPA (0012)

A Flood Risk Assessment is required for this site. It is for the development management process to establish the scope and detailed matters for FRAs. Issues of surface water flooding within and adjacent to the site will require to be addressed as a result of Policy Env 36 (Designing for Surface Water). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### Portobello Amenity Society (0612)

This representation supports the need for commercial space within the last part of the development covered by the North West Portobello Development Brief.

#### **H57: Joppa Road**

Mary Burgess (0456), Beverley Burgess (0605), Kim McFarlane (0698),  
Oonagh O'Brien (0585), Morgan Smith (0788), John Gerard Holligan (0412),  
Bridget Campbell (0706), Corrie Fairweather-Mills (0527)

The estimated capacity for this proposal is based on an assessment of what may be appropriate for the site which was cognisant of heights and densities in the surrounding area.

The impacts of this proposal and others has been assessed through appraisals of impacts on infrastructure, including Healthcare (CD016), Transport (CD014) and Education (CD015). A Strategic Flood Risk Appraisal (CD011), including surface water flood risk, has been undertaken. The impacts are considered acceptable, subject to appropriate mitigation as provided for particularly in Policy Inf 3 'Infrastructure Delivery and Developer Contributions'. Issues 27-31 consider infrastructure impacts.

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. This includes Policy 3 (Amenity) which sets out requirements for proposals to meet in respect of matters such as impact on daylight on neighbouring properties and overlooking. City Plan's design policies are applicable to issues of the scale of visual development, particularly Env 1 'Design Quality and Context', Env 26 'Housing Density' and Env 30 'Building Heights'.

Issues relating to noise from building relate to construction aspects of a proposal and are more appropriately addressed by Environmental Health and Development Management processes. **No modification proposed.**

#### Corrie Fairweather-Mills (0527)

Creating greater linkages between closed off areas such as cul-de-sacs is, on balance, considered to be a positive attribute. **No modification proposed.**

Craig McIntyre (0709), Nadia McIntyre (0704)

A strategic appraisal of Flood risk CD011, including surface water flood risk, has also been undertaken and considered that the site was at Low Flood risk.

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. This includes Policy 3 (Amenity) which sets out requirements for proposals to meet in respect of matters such as impact on daylight on neighbouring properties and overlooking. City Plan's design policies are applicable to issues of the scale of visual development, particularly Env 1 'Design Quality and Context', Env 26 'Housing Density' and Env 30 'Building Heights'.

The refusal of planning applications previously on this site does not preclude the consideration of this site for residential use as part of City Plan. The Aims and Strategy of the Plan and appraisal of merits of the site demonstrate potential in principle as a Housing proposal. **No modification proposed.**

#### Portobello Community Council (0206)

The Council understands the importance of the point made however it is considered that this is appropriately captured by policy Env 14: Conservation Areas – Development. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance CD077. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### Portobello Amenity Society (0612)

This representation fully supports the need for any future development to recognise the particular characteristics of the Portobello Conservation Area especially with regard to building height.

#### **H58: Eastfield**

#### Inverdunning (Hatton Mains) Ltd (0427), Simon Thomson (0248)

The Council's position on the Spatial Strategy is set out in Issue 2. Issue 3 addresses the delivery of Spatial Strategy, including the effect of the Plan on existing business uses. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

#### SEPA (0012)

The Council has had regard to the SFRA (CD011) and flood risk mapping, however it considers the height of the main part of this site above water level i.e. sources of flood risk means the Council is content this site can be developed despite their proximity.

It is for the development management process to establish the scope and detailed matters for FRAs. Issues of surface water flooding within and adjacent to the site will require to be addressed as a result of Policy Env 36 (Designing for Surface Water). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### Portobello Community Council (0206)

The development principles for this proposal are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council understands why has raised these matters however it is satisfied that the policies of City Plan would enable the development management process to deliver these. **No modification proposed**

#### Portobello Amenity Society (0612)

This representation supports the inclusion of paths and cycleways to provide easier connection to existing infrastructure at this point of the urban connection between Joppa and Musselburgh.

#### **Reporter's conclusions:**

#### **Reporter's recommendations:**

<b>Provision of the development plan to which the issue relates:</b>	This section of the plan sets out place policies and identifies housing proposals in West Edinburgh.
<b>Planning authority's summary of the representation(s):</b>	
<p><b>Place 16: West Edinburgh</b></p> <p><u>SAICA (0590)</u></p> <p>Further clarification is required on how the Council will co-ordinate a collaborative, multidisciplinary masterplan approach to development across these sites. Individual applications have already been advanced and in particular with regard to the subject H59 and H60 sites. Additional provision is proposed with regard to phasing to ensure that sites such as H59 can be delivered early in the plan period and are not unduly delayed on account of wider Place 16 complexities.</p> <p>Objects to:</p> <p>The identification of any primary school site requirement – indicative/potential or otherwise within H59: A dedicated school for the H59 SAICA and H60 Turnhouse Road allocations is not justified, as demonstrated by the submitted Education Assessment.</p> <p>The identification of a need for 5 primary schools to serve the West Edinburgh allocations (Place 16): It is calculated that likely only 3 new schools (and possibly even 2) would be required in the fullness of time to service the wider West Edinburgh (Place 16) development pipeline.</p> <p><u>SEPA (0012)</u></p> <p>We fully support Proposal BGN49 and we will work with the Council and other partners to deliver the best option. Section 3.61j needs to be clarified. "Designed as proposals allow to reroute the Gogar Burn". This could be taken to mean that if a proposal does not allow for it then the proposal will not be implemented.</p> <p>A flood risk assessment is required and a strategic approach to surface water management. We advise that as flood risk and surface water management are linked a strategic approach is needed to both.</p> <p>A detailed FRA which informs site design is required in order to ensure that there is no associated increase in flood risk out with the site and to ensure that there is no unacceptable flood risk for future uses of the site. This site could incorporate the Gogar Burn diversion scheme, which could have implications for the layout and design of the development. Should development go ahead without a wider understanding of the</p>	

catchment, there is a risk that the Gogar Burn realignment, which would deliver multiple benefits, may be jeopardised. Should the Gogar Burn not be realigned, this may affect the developable area as well. Multiple small drains and watercourses all require assessment. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

Ratho and District Community Council (0289)

The Blue Green network must take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone.

Infrastructure must be in place prior to the commencement of development and in particular improvements to the A8 and the Gogar Roundabout to meet the additional vehicular traffic.

Rosebery Estate (Bankhead) (0618)

Evidence is required to support the need for healthcare contributions

Robert Falcon (0640)

Aim 10: Delivering Edinburgh's key economic development needs should not include the West Edinburgh development - It is not acceptable to build on greenfield sites when adequate brownfield sites exist, in particular nearby at Maybury, Gyle and Redford Barracks, in addition to many other brownfield sites throughout the city. Business and office developments approved in principle in 2016 are clearly not required at the airport and therefore development on these sites should be cancelled altogether, rather than switched to housing.

West Craigs Limited (0472)

A specific placed based policy for Craigiehall within Proposed City Plan 2030 should be added.

Living Streets Edinburgh Group (0486)

There should be a clear reference to the transport hierarchy in the policy.

Mark Ockendon (0419)

Place 16, requirement I: append "and a clear view of the sky in keeping with Edinburgh's low-level building character".

Ryden LLP (0578)

Support the core principles and objectives of Place 16 West Edinburgh - Planning permission will be granted for development which will contribute towards the creation of new urban quarters in West Edinburgh (specifically H59, H60, H61, H62 and H63 on the Proposals Map), provided it accords with the West Edinburgh Development Principles and an approved masterplan approach to delivery, taking cognisance of all other development interests. Individual applications should not be delayed where they take account of wider

adjacencies. Further clarification is required on how the Council will co-ordinate a collaborative, multidisciplinary masterplan approach to development across these sites.

Contributions are required to deliver education provision to support the level of development outlined within West Edinburgh and a more detailed assessment on potential siting option is also required dependent upon timescales and phasing of delivery of individual sites.

#### Creos Property Limited (0253)

In principle, Creos are supportive of the Place Based Policies as they promote development on, and immediately adjacent to, the site in their ownership.

It is not currently clear how multiple Place Based Policies will apply to sites, and what Policy should take priority, therefore an explanatory note, or clarification on this point within the Proposed Plan, would be welcomed.

#### Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

In relation to West Edinburgh (Map 25), we note the divergence away from the expectations of NPF3 which designates the strategic airport enhancement as a national development. Due to the proposed shift in position, as signalled in draft NPF4, regarding this national development, we offer no proposed change in relation to this.

#### Shelborn Edinburgh Limited (0732)

Supportive in principle of the Proposed Place Policy, which encourages the development of West Edinburgh - Shelborn's interests at Edinburgh Park/ South Gyle sit adjacent to, and relate to, the significant growth proposed in West Edinburgh. The Edinburgh Park/ South Gyle area was not included within the boundary of the area that was covered by the West Edinburgh Strategic Design Framework, published in May 2010, and Shelborn would be grateful if the Council could clarify within the Proposed Plan how development proposals in Edinburgh Park/ South Gyle will also be required to adhere to the West Edinburgh Place Policy, if the area is already covered by the site specific Place Policy 19 and associated Development Principles.

#### Friends of Cammo (0387)

We agree that development in West Edinburgh (Place 16, page 71) should focus on the A8 and tram corridor, which is much better placed for transport links than any site north of Craigs Road

The large amounts of housing shown on page 162 as proposed will generate demand for access to large areas of greenspace for recreation, with Cammo Local Nature Reserve being the closest. Support the plan in Map 24 (page 73) that the only access crossing the railway line should be for public transport and active travel (bikes and pedestrians).

All of the housing proposals south of the railway, the proposals for housing at current industrial/commercial sites near Maybury and the current developments at Cammo Meadows and West Craigs will generate a large demand for active travel. We recommend

the development of more direct active travel routes to Cammo LNR than shown in the current plans, and other improvements to connections for active travel.

NatureScot (0528)

Support approach which will establish neighbourhood and place identity with higher densities of development and the creation of liveable neighbourhoods around public transport and active travel hubs, nodes and routes. Increased capacity of the path network in this area will be required to accommodate significant numbers of people.

West Edinburgh represents an opportunity to address strategic issues, particularly north-south green blue network connections that are currently weak and/or underdeveloped. Site is exposed, particularly in higher areas along and to the south of the tram line. Landform, planting and building form will be key factors in addressing exposure and making this a liveable place that is pleasant to spend time in and move through. Consideration should also be given to building height along the higher parts of the site – potential max height of 8 storeys may be dominant in views from existing areas and routes.

Cockburn Association (0777)

Require clarification of the mitigation measures which will address the negative environmental impacts identified in the Strategic Environmental Assessment Environmental Report.

Pawel Stankiewicz (0445)

A new paragraph should be added to say “Area up to 100 m from A8 is not used for housing” so as to not increase the number of people living in noise and pollution.

Hallam Land Management (0615), Tarmac (0244)

This section on West Edinburgh needs a complete review and clear justification before any decisions on a finalised plan is made. Supporting studies and resultant reports are required to justify the Council's recent change in approach to West Edinburgh proposals. The map on page 27 is misleading and the key needs rewording to align with policy/proposals.

There have been unacceptable changes in approach and philosophy for development in West Edinburgh since Choices report. The map on page 27 of the Proposed Plan, which identifies housing-led development, reflects in no way whatsoever the previously proposed map in the earlier Choices report, map 11. This reflects the inconsistency in approach and lack of joined up thinking between relevant stages in the Plan process. This change has not been supported or justified by additional supporting studies, nor has it been subject to proper consultation prior to being presented in the Proposed Plan.

Changes proposed for West Edinburgh by the Council do not accord to those proposals approved in NPF3, SDP and City Deal documentation, all of which promote a business-led approach to development. Seven strategic sites have been identified in the Strategic Development Plan as key areas of change and housing growth. West Edinburgh is not one of these agreed locations.

The number of housing units proposed in West Edinburgh conflicts with its overarching 'brownfield first' approach to housing land and the 'business led' approach for development of West Edinburgh. A statement in the Proposed Plan tries to simply justify this change in direction as a result of 'changes in the business and office market both pre and post Covid-19'. There is no supporting or background documentation provided by the Council to support this claim.

Neither the WETA or WETIP reports, on which the Council relies heavily within the Proposed Plan, assess or appraise the level of housing now being proposed.

Page 27 of the Proposed Plan provides a map of 'housing led' development sites. The key suggests most of these sites have been transposed from the LDP 2016 allocations. This is wholly inaccurate and misleading and needs to be clarified.

#### Crosswind Developments Ltd (0184)

CDL are supportive of a blended live-work community which will boost the local economy and help reduce car ownership and unnecessary travel.

As set out in the representation to Inf 1 Access to Community Facilities, CDL do seek an amendment to the wording of aim 1 of the City Plan 2030 Aims (p8) to include wheeling and cycling, as well as walking.

CDL are supportive of the brownfield first approach, in particular the inclusion of the Crosswind development site (H61), which is situated in a highly accessible location in West Edinburgh - adjacent to: Edinburgh International Airport; the A8; and, close to sustainable transport networks - mainline rail, bus networks, Edinburgh tram, and wider cycle and walking networks.

CDL are committed to achieving net-zero carbon within the H61 allocated site and are therefore supportive of aim 4 of the City Plan 2030 Aims highlighted on p8.

CDL are supportive of aim 5 of the City Plan 2030 Aims highlighted on p8, in general however this is qualified by detailed responses in other sections.

CDL wish to object to the blanket increase in the affordable housing requirement from 25 % to a minimum of 35 % as stated in aim 6 of the City Plan 2030 Aims. The currently approved SPP and the draft NPF4 advise of a 25 % affordable housing requirement. The draft NPF4 advises that "a higher contribution than this benchmark may be sought where justified by evidence of need". On this basis, an increase on 25 % would require justification and should be sought on a case by case basis, rather than as a blanket policy requirement.

CDL are supportive of the infrastructure first approach (Aim 8 of the City Plan 2030 Aims) and intend that the Crosswind site (allocated site H61) will be developed in this manner, however CDL do object to the level of the school infrastructure set out as required in West Edinburgh.

In terms of Aim 10 of the City Plan 2030 Aims, CDL object to the Strategic Business Centre area highlighted on the Proposals Map for West Edinburgh as it does not include

the CDL site and therefore does not support economic development including offices on that site. The CDL site is within the wider area that is identified as an Area of Economic Importance but there are no policies attributable to that designation and while Table 13 states that supporting uses will still include significant opportunities for business the policy position does not support this for the Crosswind site (H61).

In relation to the masterplan requirement for West Edinburgh, the policy provides no information on when, how and who will be involved in facilitating the creation of a masterplan, nor what the masterplan itself should comprise. There must be recognition that there is not an approved master plan for the West Edinburgh area. Concerned this will ultimately hinder development in the area coming forward in the short term. The Council can co-ordinate development to ensure the sites work together without the need for a full detailed master plan to which all parties must accord. A framework of connections would suffice to ensure joined up development. CDL have been working with the Airport and West Town Edinburgh to agree a Movement and Access Framework plan - this Movement and Access Plan should be recognised as the basis for co-ordinated development in West Edinburgh and means that a West Edinburgh Wide masterplan is not required giving the required level of detail to co-ordinate development between the neighbouring development sites while allowing each developer the opportunity to bring forward their own master planning proposals for consideration by the Council.

Generally supportive of the West Edinburgh Development Principles. However, it is concerning that none of these relate to Economic Development when this area is identified as important for such.

Support the recognition of H63 (Edinburgh 205) as a town centre, however this principle has omitted the designation of a local centre at site H61.

The Gogar Burn diversion, as set out in Map 24 and the proposals map, is yet to be evidenced as a viable route for a variety of reasons including land ownership and airport safety. Proposal BGN49 should be marked as 'indicative' on the map as the proposal has not yet been properly investigated.

Note the requirement for orbital bus routes and seek to highlight an inconsistency in the routing of the North South Orbital Bus Route. Seek the removal of the reference to the masterplan as transport connectivity can be completed on a site by site basis

Criterion m. should include the Airport Link Road and IBG Main Street which are WETA priorities to support development in the area and provide resilience for the existing road network.

Seek minor amendments to points 'n' and 'o' for consistency with the removal for the requirement for a masterplan

Map 24 (Page 73) includes one new primary school and a potential new high school within the Crosswind (H61) boundary. There is excessive school provision identified based upon Communities and Families calculation for CDLs current application.

In relation to Map 24:

Does not reflect or recognise 2 recent planning applications (20/03219/PPP and 21/00217/FUL). Each of these were accompanied by detailed justifications for new

proposed road alignments which were tested through TAs, EIAs, LVIA's and in terms of Design and Access Statements. These applications clearly represent the needs and development ambitions of the landowners (CDL and EAL) yet have not been adequately reflected on Map 24. CDL would like to see better alignment between these live proposals and the Proposed Plan. The map is not marked as indicative (others in the proposed plan are). This must be made clear so applications can deviate slightly from what is shown.

We wish to emphasise CDL's support for the identification of a town / local centre within the proposal site H61 as shown on Map 24. CDL wish to highlight that this is not however outlined on the Proposals Map and seek an amendment for its inclusion. CDL also wish to see an amendment to include this explicitly in Table 14 as a new town/local centre for site H61. There is no distinction between the town centre and local centre on Map 24, which is confusing as they are discussed separately elsewhere in the plan and should be marked separately for consistency. This is further complicated by Map 11, which notes a new local centre at a different location to the one shown on Map 24 and no town centre within H63 (IBG/ Edinburgh 205). We note the uncertainty around the town/local centre naming on Map 24. We seek confirmation as to whether it is proposed to be a town centre or a local centre within site H61. We note no clarification is provided in Table 14 'Network of Centres' as it just notes West Edinburgh as a "new centre". We suggest that, to be consistent with the Development Principles, H63 should have a town centre and site H61 a local centre.

The proposed primary school/education infrastructure are marked on in different locations between Map 24 and the proposals map.

The safeguard for river restoration route has not yet been evidenced as viable.

In relation to Map 25:

Identifies the whole of H61 for housing - the site is allocated for many purposes which include housing-led development and as area of economic and national importance. The shading of the whole area for housing is also fundamentally different to the designation shown on the main proposals map.

Does not clearly demonstrate the mixed-use nature of the site and appears to suggest the whole of the site should be deliverable for housing with ancillary uses. As per CDL's planning application (20/03219/PPP) their ambition is for a new digital quarter as part of a mixed-use development including 2500 new homes. To this end CDL would like Policy 16 to recognise the economic importance of this site and support that. CDL would like this site to be allocated for mixed use.

#### Edinburgh Airport Limited (0761)

It is considered that the requirement of a collaborative masterplan should be removed from Place Policy 16. Whilst working collaboratively with neighbouring developers, each development should be assessed on its own merits and its own masterplan/development proposals. Masterplan can be replaced by a co-ordinated Movement and Access Framework Plan.

Development principle j). should be deleted:

- Potential to increase bird strike risk.

- Any diversion or restoration of the Gogar Burn would need to be culverted and further mitigation would also be required.
- There is no effective way to manage or deter the risk created by new open water and so flight safety would be compromised.
- A proposed open channel Gogar Burn realignment to the eastern edge of the main runway would require significant earthworks to achieve and ground raising so levels would be created higher than the end of the runway. A channel with embankments to form a 5 m deep burn to flow into the River Almond would be required and this is not a very practical solution. A section of twin culverts is a more realistic engineering proposal for this area.
- Cost would be very high for little benefit over the existing situation given the continued need for culverts and channelization
- The existing Gogar Burn has over 15 surface water outfalls discharging into it from the airport, in addition to several others from City of Edinburgh Council roads and private buildings. The 20 km of surface water networks discharging to the burn, has had enormous infrastructure costs invested, and these cannot be diverted to the proposed new route due to gradient issues. Consequently, the existing burn and Gogar culvert would need to be retained as a surface water system discharging to the River Almond, should the upper section be diverted.

Note the requirement for orbital bus routes and seek to highlight an inconsistency in the routing of the North South Orbital Bus Route. Seek the removal of the reference to the masterplan as transport connectivity can be completed on a site by site basis.

Criterion m. should include the Airport Link Road and IBG Main Street which are WETA priorities to support development in the area and provide resilience for the existing road network.

Seek minor amendments to 'o' as outlined below for consistency with the removal for the requirement for a masterplan.

Several discrepancies between Map 24 (page 73) and the proposed Proposals Map in terms of various route alignments.

The new primary vehicle route on Map 24 is shown running directly through the Crosswind development site. This should be located on the eastern side, adjacent to the railway lines, to avoid running a Primary Road through the middle of the development site and a new local centre given the ambitions that this should be a car lite development. The only primary connection shown to the airport on Map 24 is when this road connects back onto Eastfield Road. This would not provide the needed resilience for traffic to and from the Airport and the wider area. an Airport Link Road as set out in the WETA Refresh 2016 (WETA 18) and in line with WE29 requires to be shown connecting to the Eastern Terminus. EAL propose that this is shown as an extension to the new primary route that we have requested is shown adjacent to the Railway line and that it should connect to the Airport Eastern Terminus via Eastfield Avenue.

Removal of the re-routing of the Gogar Burn / river restoration proposal. Map 24 shows safeguarding for river restoration for the proposed diversion of the Gogar Burn. It is entirely inappropriate to propose this running through the Airport's cargo area and along the edge of the runway and this route should be removed from the map. Edinburgh Airport

also object to the proposed diversion / river restoration of the Gogar Burn on the grounds of the potential to increase bird strike risk.

Remove the indicative location for a primary school identified within the airport's boundary.

The Association for the Protection of Rural Scotland (0334)

Supports the West Edinburgh Development Principles - a.) The topographical interest of Corstorphine Hill and the extensive woodland south of the A8 in the vicinity of the RBS HQ should also be reflected in the landscape design.

Archie Clark (0003)

The wide variety in size of local centres is not reflected in how they are described. Some have banks and/or Post Offices, others have no such facilities and is the objective not to make them within 10 minutes' walk of home?

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

3.54 "... Given changes in the business and office market both pre and post Covid-19 it is now considered appropriate to define a number of the parameters of development within this area as they inform a revised vision for West Edinburgh." Unused accommodation should be used before development is considered in West Edinburgh to prevent unnecessary urban sprawl. IBG, along with other approved developments will put pressure on to the road system adding to congestion at the Gogar roundabout. Green Belt development should be completely avoided as this will create problems on a wide variety of fronts – including loss of farmland, pollution, services provisions, drainage. As with the 'brownfield first' policy, unused accommodation should be used before development is considered in West Edinburgh in order to prevent unnecessary urban sprawl.

Para. 3.56 envisages that this area "will become a vibrant, high density, mixed use extension to the city with a focus on place making, sustainability, connectivity, biodiversity and a strong landscape framework" – The area will become over populated as people move out of town to living in a 'green field' development.

Map 25 – Sites are large and will require adequate facilities - a detailed fully-co-ordinated masterplan needs to be prepared by CEC to indicate the extent of shopping/ commercial/ administrative/ education/ workplace/ recreation facilities including full-sized football/rugby pitches in H63. Areas H59-H62 need to be incorporated so that residents are not encouraged to resort to their own transport. In total – a very large development that should be considered as a new town- complete with sufficient workplaces for the entire community.

Table 13 - Areas of Economic Importance: the proposals for West Edinburgh must be reviewed immediately after the 2022 Census, as this will inform and no doubt change the assessment of what additional housing will be required.

Developments proposed in areas H59-H63, coupled with the impact of LEZs and prohibitions on entering and parking in the centre of the city, will see the city centre hollowed out, with new greenfield development using up prime quality farmland. That goes against the issues raised at COP26 regarding climate change and is to be resisted.

Page 75, bullet I, refers to, “An iterative process with the use of TVIA...” with no explanation of what TVIA is (“Townscape and Visual Impact Assessment”?). Unclear descriptions like this require definition.

The huge developments proposed in areas H59-H63, coupled with the impact of LEZs and prohibitions on entering and parking in the centre of the city, will see the city centre hollowed out, with new greenfield development using up prime quality farmland. That goes against the issues raised at COP26 regarding climate change and is to be resisted.

#### Corstorphine Community Council (0799)

Residents concerned with in-progress and proposed developments to the west of the CCC boundary: New developments are likely to be detrimental to the existing community.

Issues raised generally relate to

- Increased traffic and congestion
- Pressure on local amenities and services such as healthcare and education
- Increased air pollution
- Reduced permeability for walking, wheeling and cycling, and road safety concerns.

Development principle q. A community that has a net zero carbon target. This is not explained in any detail - would like to see a clearer explanation of which elements of the West Edinburgh development will attempt to meet net zero carbon emissions, and how this will be measured.

Would like to see inclusion of accessibility standards within development principles so that West Edinburgh is genuinely inclusive and accessible to all. This would include elements like fully lit active travel routes, adequate disabled parking provisions and strict adherence to the Edinburgh Street Design Guidance.

As this development is sandwiched between two existing AQMAs (St Johns Road and Glasgow Road) design principles should include improvements of air quality so that any development and planning actively works to reduce air pollution impacts. Sites H59 - H63 in West Edinburgh are not required to submit air quality assessments. CCC would prefer all developments to include these assessments, especially in West Edinburgh.

#### Anna Goodwin (0302)

The wording of the strategy commonly uses ‘should’ when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say ‘must’.

#### Simon Thompson (0248)

A proportion of the sites in West Edinburgh may come forward in the next 10 years but this is not backed up by any detailed assessment or justification. Indeed, a large part of the West Edinburgh proposal is identified as an Area of Economic Importance as it was considered of national economic importance by the Scottish Government.

### Edinburgh World Heritage (0339)

The wording of bullet point 4 needs to be rephrased to reflect the importance of this area on the World Heritage Site and to ensure clarity that this is to be covered or enhanced (not simply 'the impact considered' which is unclear). Subject to the above change we support this section and look forward to engagement to advise on the developing masterplan/strategies.

### **H59: Land at Turnhouse Road (SAICA)**

#### SAICA (0590)

Confirms the availability and suitability of the subject brownfield site to deliver significant development early within the forthcoming plan period, providing explicit support for high density residential-led mixed use development (1,000+ units) via City Plan allocation H59.

Objects to:

- The identification of any primary school site requirement – indicative/potential or otherwise – within our client's landholding (H59) - a dedicated school for the H60 Turnhouse Road / H59 SAICA allocations is simply not justified, as demonstrated by the submitted Education Assessment.
- The identification of a need for 5 primary schools to serve the West Edinburgh allocations (Place 16). It is calculated that likely only 3 new primary schools (possibly 2) would be required to service the wider West Edinburgh (Place 16) development pipeline, which is markedly different from the 5 new schools currently identified as being required.

#### Ryden LLP (0578)

Density, scale, height and massing should be encouraged at key transport nodes and interchanges to provide the most sustainable use of land at these key locations.

The indicative Map 24 – West Edinburgh includes a number of other community uses. A potential Primary School location on Site H59 1 x 7 class on a site of 1 hectare would take approximately 16% of the available site and could impact on total unit numbers delivered and high density built from around an important transport hub. The proposed siting of a new Primary School should be reviewed further and a full comparative analysis undertaken based on education requirements as well as design principles for placemaking and most efficient patterns of use of land.

#### Genna Spears (0081)

Insufficient local infrastructure for additional housing.

### **H60: Turnhouse Road**

#### Cramond & Barnton Community Council (0243)

Proposals for housing-led development on this site should be reviewed. The industrial site contains a substantial number of viable commercial and service businesses which contribute to the City's economy, employment and local services. The potential impact on

these businesses of displacement, or other impacts of the designation of this site for housing-led development should be fully assessed prior to it being included within City Plan 2030.

Not confident that the Council will deliver travel infrastructure, education and other services to scales and timing fully compliant with 'infrastructure first' principles, or that traffic assessments and management measures, including actions to deter commuting and reduce car mileages, will adequately mitigate the impacts on communities neighbouring the A90 and A8 roads into the City from the impacts of traffic generated by all West Edinburgh developments and current and future traffic flows from West Lothian and Fife.

Mrs Patricia Stott (0349)

This is an operational industrial, commercial and service business site. Redevelopment for housing is likely to have an impact on these existing businesses, the employment they provide and their contribution to the City's economy. Displacement of such businesses would be contrary to the 20 minute neighbourhood principles.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owner's but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

Genna Spears (0081)

Insufficient local infrastructure for new housing.

**H61: Crosswinds**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Delete proposal H61 Crosswinds

H61 is identified in the Proposed LDP to deliver 2,500 homes by 2032. There is an application for Planning Permission in Principle for the site which is now subject to planning appeal. The Planning Statement that supports the PPP application confirms that:

Up to 2,500 new housing units are proposed for the site in a mix of 1, 2 and 3-bedroom apartments to be delivered over a 25-year programme. Phase 1 (years 1-6) is anticipated to deliver 358 new homes. The Planning Statement estimates that by 2032 approximately

1,000 units could be delivered (paragraph 7.95). That document was prepared in July 2020 and identifies significant infrastructure requirements as part of Phase 1. If approved by the Scottish Ministers in 2023, the lead in time to secure approval of matters specified in conditions and infrastructure consents would be 2025 at the earliest. It would therefore appear that Phase 1 may only complete around 358 homes by 2032.

NPF 3 identifies strategic airport enhancements as a National Development. Proposal H61 Crosswinds is located within the strategic airport enhancements boundary. NPF 3 clearly states that development at this location should be for the construction of buildings for business, general industrial or storage and distribution use requiring a near airport location where the gross floor space is or exceeds 10,000 square metres or the development is or exceeds 2 hectares in the area identified for associated business development. Other uses such as housing within the strategic airport enhancements boundary are not appropriate.

SESplan (2013) identifies that ...the Masterplan for Edinburgh Airport sets out a programme of future growth including the potential development of a second runway (paragraph 40). The Edinburgh Airport Masterplan 2016 – 2040 (November 2016) identifies Proposal H61 Crosswinds for supporting ancillary facilities shown Map 2 2025 Indicative Land Use.

Until such time as NPF 4 confirms the status of Proposal H61 Crosswinds as part of the strategic airport enhancements, National Development and the Edinburgh Airport Masterplan is revised, City Plan 2030 is required to accord with the requirements of NPF 3 and SESplan (2013).

#### Ratho and District Community Council (0289)

The new World Health Organisation recommendation for maximum noise level over areas where new development is proposed should be implemented.

The Blue Green network does not take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone.

#### Simon Thomson (0248)

Reduce site capacity: Sites in West Edinburgh collectively comprise over 11,000 units. This scale of development is not achievable in the plan period given the extensive infrastructure requirements set out in the plan for new town centre, schools and roads.

#### Inverdunning (Hatton Mains) Ltd (0427)

Amend unit numbers – not wholly deliverable within plan period. There is also currently a live planning appeal.

Allowing for planning (master planning), construction and infrastructure lead-in times, completions may be achievable by 2024/25. This would provide c.5 years for the sites to contribute and given the housing product would be high density flatted development, it would require developers to build and sell significant numbers of a similar product per annum. Could contribute 1,000 units each at most. Proposed phasing in the Design Statement supporting planning application ref.20/03219/PPP notes up to 358 residential

units in Phase 1 (Years 1-6) and a further 822 residential units in Phase 2 (Years 7-16). In this respect, 1000 units as a contribution to City Plan 2030 would still be generous.

Proposals illustrate high density 5-10 storey flatted development. The implementation of over 11,000 flats in the vicinity of the Airport/Gogar Roundabout will be in addition to 2,085 units (houses/flats) at the existing Maybury allocation HSG19 immediately to the north, 1,350 units (650 houses/700 flats) at the Garden District site immediately to the south (Section 75 now approved) and 1,737 units (flats) at the existing Edinburgh Park mixed-use site Del4. There are also a further 500 units proposed via a current application at West Craigs North and redevelopment of the Gyle Centre to include flatted development currently the subject to community consultation. The result is over 17,000 homes proposed which will feed into the Gogar Roundabout/Maybury junction.

#### Edinburgh Airport Noise Advisory Board (0691)

World Health Organisation "Environmental Noise Guidelines for the European Region" state that: "For average noise exposure, the Guideline Development Group, GDG, strongly recommends reducing noise levels produced by aircraft below 45 dB Lden, as aircraft noise above this level is associated with adverse health effects.

This being the case, EANAB consider that proposed residential development should not be supported within areas falling within the 45 dB Lden contour associated with Edinburgh airport which presently includes the majority of the proposed developmental areas between Edinburgh Airport and the A8 corridor.

Renfrewshire Council's Local Development Plan (2014) has a strong policy on aircraft noise: "Noise Applications for residential development under or in the vicinity of aircraft flight paths, where noise levels in excess of 57dB (year 2011 Actual Annual LAEQ contours) are experienced (see figure 2), will be refused due to the inability to create an appropriate level of residential amenity and to safeguard the future operation of Glasgow Airport. These noise levels will be reviewed periodically, in line with the Local Development Plan and will take into consideration the most up to date published noise contours". - We consider that City Plan should have a similarly worded noise policy (with a lower noise threshold corresponding to WHO guidelines) to prevent development in locations which would have detrimental impacts on health and amenity.

#### Genna Spears (0081)

Insufficient local infrastructure to support levels of additional housing.

#### Crosswinds Developments Ltd (0184)

Notwithstanding the current master plan for the site developed by CDL which shows a potential alignment for a diverted Gogar Burn and there is a current application awaiting determination by Scottish Ministers, it is CDL's view that this policy (Env 35) requirements when set alongside requirements for 20% open space, 35% affordable housing, housing densities of 65 units per Ha, etc would, when taken as a whole, potentially preclude the efficient development of this brownfield site.

#### West Craigs Limited (0472)

Support separate school provision at H61

## **H62: Land adjacent to Edinburgh Gateway**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Proposal was not identified as a housing led development in relation to Choice 12 in the MIR. As shown on Map 11 – Area 2 West Edinburgh: the site is identified as employment land. Choice 14 Delivering West Edinburgh identifies that the two potential changes being:

- Remove the safeguard in the existing plan for the Royal Highland Showground site to the south of the A8 at Norton Park and the site allocated for other uses.
- Allocate the Airport's contingency runway, the "crosswinds runway" for the development of alternative uses next to the Edinburgh Gateway interchange.

It therefore cannot be included in the Proposed LDP as a housing proposal as it has not been subject to public consultation at a formative stage in the process.

NPF 3 identifies strategic airport enhancements as a National Development. The proposal is located within the strategic airport enhancements boundary. NPF 3 clearly states that development at this location should be for the construction of buildings for business, general industrial or storage and distribution use requiring a near airport location where the gross floor space is or exceeds 10,000 square metres or the development is or exceeds 2 hectares in the area identified for associated business development. Other uses such as housing within the strategic airport enhancements boundary are not appropriate. Until such time as the NPF 4 does or does not identify Proposal H62 as part of the strategic airport enhancements National Development, City Plan 2030 is required to accord with the requirements of NPF 3.

### West Craigs Limited (0472)

Increase site capacity. Have undertaken a significant amount of preliminary technical work to inform ongoing pre-application discussions with CEC regarding our proposals for the site (pre app ref: 20/02601/PREAPP). This has included master planning, noise modelling, landscape assessment, and transportation assessment. This work to date indicates that the site would be capable of accommodating c. 500 units. Allocating the site for higher density development would be compliant with the overall principles of City Plan 2030, which seeks to locate high density development in highly accessible locations.

Considering potential land uses for the triangle site within H62 located immediately west of the Tram Depot. Given proximity to the Tram operations, it may be that residential development on this part of the site would be unfeasible on noise impact grounds. Some flexibility should be included within allocation H62 to be supportive of other uses.

The requirement for a Council-led masterplan should be removed from the text of Place 16 and replaced by a requirement for all development to demonstrate it would not jeopardise the development of any adjacent site. Recognise the importance of co-ordinated development within West Edinburgh but a significant amount of technical work has already been undertaken in respect of West Craigs' site at H62 and have demonstrated that the site can be delivered in the short term without jeopardising the development potential of any adjacent site.

Do not agree that it is appropriate to include H62 within the school provision area. H62 is located within close proximity to the proposed new Maybury Primary School, located to the north within the main West Craigs site. Connectivity between H62 and the school will be enhanced through the creation of a new active travel route over the railway line, via the pedestrian / cycle bridge consented under application 20/01148/AMC. Connectivity to Craigmount High School is also good and will be further improved by the new active travel route. Travel to both schools from H62 / West Craigs South can therefore be achieved in a safe and sustainable manner. It would therefore be appropriate to link any developer contributions for new school infrastructure arising from the development of H62 to Maybury Primary and Craigmount High.

#### Edinburgh Airport Noise Advisory Board (0691)

World Health Organisation "Environmental Noise Guidelines for the European Region" state that: "For average noise exposure, the Guideline Development Group, GDG, strongly recommends reducing noise levels produced by aircraft below 45 dB Lden, as aircraft noise above this level is associated with adverse health effects.

This being the case, EANAB consider that proposed residential development should not be supported within areas falling within the 45 dB Lden contour associated with Edinburgh airport which presently includes the majority of the proposed developmental areas between Edinburgh Airport and the A8 corridor.

Renfrewshire Council's Local Development Plan (2014) has a strong policy on aircraft noise: "Noise Applications for residential development under or in the vicinity of aircraft flight paths, where noise levels in excess of 57dB (year 2011 Actual Annual LAEQ contours) are experienced (see figure 2), will be refused due to the inability to create an appropriate level of residential amenity and to safeguard the future operation of Glasgow Airport. These noise levels will be reviewed periodically, in line with the Local Development Plan and will take into consideration the most up to date published noise contours". - We consider that City Plan should have a similarly worded noise policy (with a lower noise threshold corresponding to WHO guidelines) to prevent development in locations which would have detrimental impacts on health and amenity.

#### Crosswind Developments Ltd (0184)

Question the consultation approach to date on the removal of economic development as a priority from the sites formally known as IBG. This is a process point rather than a principle point and we are concerned that limited transparency of the process will undermine the outcomes noted in the plan. For example it is noted that this change of emphasis from economic development to housing led development is contrary to the current National Planning Framework (NPF3).

#### **H63:Edinburgh 205**

Murray Estates (0197), SEEDCo (0198), Persimmon Homes (0495), Taylor Wimpey (0200), BDW Trading (0350), Robertson Residential Group Limited (0490)

Object to aim 10 – 'delivering key economic land use needs through housing led mixed use development' – specifically reallocation of strategic business land at Edinburgh 205 to

housing. Do not consider that re-allocating approximately 400 active businesses and strategic employment sites for housing will deliver Edinburgh's key economic land use needs.

The re-allocation of strategic business sites at the International Business Gateway (Edinburgh 205) and Edinburgh's Bioquarter to housing (9,500 homes combined) was not even identified as a 'choice' at the Main Issues Report stage of the City Plan.

Murray Estates (0197), SEEDCo (0198), Persimmon Homes (0495), Taylor Wimpey (0200), BDW Trading (0350), Robertson Residential Group Limited (0490), Stewart Milne Homes (0118)

Re-allocating approximately 400 active businesses and strategic employment sites (including land at Edinburgh 205) for housing will not deliver the outcome 'A city where everyone shares in its economic success'.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Proposal was not identified as a housing led development in relation to Choice 12 in the MIR. As shown on Map 11 – Area 2 West Edinburgh: the site is identified as employment land. Choice 14 Delivering West Edinburgh identifies that the two potential changes being:

- Remove the safeguard in the existing plan for the Royal Highland Showground site to the south of the A8 at Norton Park and the site allocated for other uses.
- Allocate the Airport's contingency runway, the "crosswinds runway" for the development of alternative uses next to the Edinburgh Gateway interchange.

It therefore cannot be included in the Proposed LDP as a housing proposal as it has not been subject to public consultation at a formative stage in the process.

In accordance with SESplan policy 2, the Council is required to demonstrate that adopting the mixed use development strategy at strategic employment sites will not result in a net loss to the overall strategic land supply. Proposal is part of IBG which is required to maintain 85 hectares of strategic employment land. The Council has not demonstrated whether or not that supply of employment land will be maintained in the Proposed LDP.

NPF 3 identifies strategic airport enhancements as a National Development. The proposal is located within the strategic airport enhancements boundary. NPF 3 clearly states that development at this location should be for the construction of buildings for business, general industrial or storage and distribution use requiring a near airport location where the gross floor space is or exceeds 10,000 square metres or the development is or exceeds 2 hectares in the area identified for associated business development. Other uses such as housing within the strategic airport enhancements boundary are not appropriate. Until such time as the NPF 4 does or does not identify Proposal H62 as part of the strategic airport enhancements National Development, City Plan 2030 is required to accord with the requirements of NPF 3.

West Craigs Limited (0472)

Support separate school provision at H63

Ratho and District Community Council (0289)

The new World Health Organisation recommendation for maximum noise level over areas where new development is proposed should be implemented.

The Blue Green network does not take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone.

Stirling Developments Limited (0303)

7000 units on what appears to be a greenfield site that was not identified through the Choices document. The plan needs to offer flexibility to support effective greenfield sites should the supported brownfield sites fail to deliver. Sites like Calderwood, which was identified in Choices is further supported by the City Deal and NPF4. Effective sites like Calderwood should be supported within City Plan as Calderwood has the ability to deliver homes of all tenures in a 20 minute neighbourhood.

Inverdunning (Hatton Mains) Ltd (0427)

Amend unit numbers – not wholly deliverable within plan period. There is currently a live planning appeal.

Allowing for planning (master planning), construction and infrastructure lead-in times, completions may be achievable by 2024/25. This would provide c.5 years for the sites to contribute and given the housing product would be high density flatted development, it would require developers to build and sell significant numbers of a similar product per annum. Could contribute 1,000 units each at most.

Site is allocated for 7,000 units on a 72 hectare gross site (averaging 97dph across the whole site). The IBG1 site proposal provides for 211,511 m<sup>2</sup> of mixed-use space on a 36.7 hectare site (of which 43,576m<sup>2</sup> is for residential, equating to 396 flats at an average 110m<sup>2</sup>). Based upon a similar masterplan approach, this equates to 5,762 m<sup>2</sup> of floorspace per hectare. Whilst an approximate density guide, if applying this rate to H63, this would provide for 415,000 m<sup>2</sup> of floorspace. This equates to around 4,000 flats at an average of 100m<sup>2</sup>. This indicates that either the H63 site would require to be significantly higher density to achieve 7,000 units (notwithstanding the site is within an Area of Economic Importance and a significant amount of floorspace should be for commercial uses) or the number is incorrect.

The implementation of over 11,000 flats in the vicinity of the Airport/Gogar Roundabout will be in addition to 2,085 units (houses/flats) at the existing Maybury allocation HSG19 immediately to the north, 1,350 units (650 houses/700 flats) at the Garden District site immediately to the south (Section 75 now approved) and 1,737 units (flats) at the existing Edinburgh Park mixed-use site Del4. There are also a further 500 units proposed via a current application at West Craigs North and redevelopment of the Gyle Centre to include flatted development currently the subject to community consultation. The result is over 17,000 homes proposed which will feed into the Gogar Roundabout/Maybury junction.

Simon Thomson (0248)

Reduce site capacity: Sites in West Edinburgh collectively comprise over 11,000 units. This scale of development is not achievable in the plan period given the extensive infrastructure requirements set out in the plan for new town centre, schools and roads.

#### Edinburgh Airport Noise Advisory Board (0691)

World Health Organisation "Environmental Noise Guidelines for the European Region" state that: "For average noise exposure, the Guideline Development Group, GDG, strongly recommends reducing noise levels produced by aircraft below 45 dB Lden, as aircraft noise above this level is associated with adverse health effects.

This being the case, EANAB consider that proposed residential development should not be supported within areas falling within the 45 dB Lden contour associated with Edinburgh airport which presently includes the majority of the proposed developmental areas between Edinburgh Airport and the A8 corridor.

Renfrewshire Council's Local Development Plan (2014) has a strong policy on aircraft noise: "Noise Applications for residential development under or in the vicinity of aircraft flight paths, where noise levels in excess of 57dB (year 2011 Actual Annual LAEQ contours) are experienced (see figure 2), will be refused due to the inability to create an appropriate level of residential amenity and to safeguard the future operation of Glasgow Airport. These noise levels will be reviewed periodically, in line with the Local Development Plan and will take into consideration the most up to date published noise contours". - We consider that City Plan should have a similarly worded noise policy (with a lower noise threshold corresponding to WHO guidelines) to prevent development in locations which would have detrimental impacts on health and amenity.

#### SEEDCo (0198)

Proposal should be removed from the Plan until such time as it has undergone proper assessment and consultation: The Proposed City Plan departs from all of the housing delivery options identified in Choices. It does not allocate Area 1 or any of the other greenfield Areas identified in Options 2 and 3. Nor does it restrict the housing allocations to the brownfield sites identified in Option 1 of page 33 of Choices. Instead, Option 1 has been supplemented to allocate greenfield housing sites at the previously undeveloped employment allocations at the IBG (Edinburgh 205) and Bioquarter for housing. Therefore, neither of these proposals were subject to consultation at the MIR stage. We object to the process by which the decision has been taken by the Council to re-allocate these greenfield sites for predominantly residential development without consultation.

#### Corstorphine Community Council (0799)

Edinburgh 205 site seems to be an anomaly in the noise impact assessment requirement, in that all the others will require one but that site only 'may' require. CCC would prefer all strategic development sites to include impact assessments for noise.

#### West Town Edinburgh Ltd (0660)

Support noted.

## **Place 17: Edinburgh Airport**

### Edinburgh Airport Limited (0761)

Place 17 places emphasis on the development and enhancement of Edinburgh Airport within the operational boundary and in accordance with the approved masterplan - no airport boundary is shown on the proposed Proposals Map and if this is specifically referred to in Place Policy 17, an up to date boundary should be shown. Currently, the only boundary for the airport is 'Areas of Economic Importance' which also includes sites H61, H62 and H63 and therefore, cannot be identified as the airport boundary which will guide future development when land is included which is not in their ownership. It is also not clear whether this refers to the collaborative masterplan as identified in Place 16 (page 71) or the airport's internal masterplan. The requirement of a masterplan is considered restrictive in both scenarios and it is considered that this should be removed as a requirement from Place Policy 17.

Given the nature of the airport, it is not appropriate or possible to include the provision of open space as part of a new development within the operational boundary. A degree of flexibility is required to the policy to allow the requirement to be assessed on a case by case basis. - The wording should be amended.

The West Edinburgh Strategic Design Framework is significantly out of date and circumstances with both the Airport and West Edinburgh have changed since the WESDF. It is therefore should not be relied on as a consideration for Place 17.

### Lord Dalmeny (0475)

Place 17 confirms that the development and enhancement of Edinburgh Airport will be supported within the airport boundary defined on the Proposals Map and the approved, or subsequently approved, master plan.

Land in the ownership of Lord Dalmeny to the north of Lennymuir at Turnhouse is included within the current Edinburgh Airport Masterplan as being within the future airport boundary. However, the land is not included in the designation of Area of Economic Importance associated with Edinburgh Airport but is included within the 'Countryside' policy designation. This would be prejudicial to any future expansion ambitions for the airport at this location. This land should be removed from the Countryside designation and be incorporated into the specific policy provision that identifies Edinburgh Airport as an 'Area of Economic Importance'

### Mr Roger Thomas (0345)

Given the climate emergency and the green ambitions of Edinburgh Council, no airport expansion should be countenanced. Instead of meeting air passenger growth forecasts, the Council and Scottish Government should be pursuing policies which reduce the demand for flying by the facilitation of faster rail journeys to English destinations and throughout the Scottish mainland.

### Frances Guy (0589)

Remove all commitments to airport expansion - airport expansion is incompatible with reducing carbon emissions.

Robert Falcon (0640)

Safeguarding land for future airport expansion should be removed from the plan and rejected as a policy principle. Any increase in air travel should be rejected as it runs counter to the Council's stated environmental

SEPA (0012)

Would like more detail on this 'Place'. While Place 17 (Edinburgh Airport) is separate from Place 16 (Crosswinds) EMP4 combines them in one site. It should be clarified if they are separate sites or a combined site.

A detailed FRA which informs site design is required in order to ensure that there is no associated increase in flood risk outwith the site and to ensure that there is no unacceptable flood risk for future uses of the site. This site could incorporate the Gogar Burn diversion scheme, which could have implications for the layout and design of the development. Should development go ahead without a wider understanding of the catchment, there is a risk that the Gogar Burn realignment, which would deliver multiple benefits, may be jeopardised. Should the Gogar Burn not be realigned, this may affect the developable area as well. Multiple small drains and watercourses all require assessment. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer.

Cockburn Association (0777)

Not Supported subject to: Clarification of the mitigation measures which will address the negative environmental impacts identified in the Strategic Environmental Assessment Environmental Report.

L Gunstensen (0663)

Following a representation at the Main Issues Report (Choices) stage on the inclusion of a second runway at Edinburgh Airport in the Plan, the response of the Council was that "the proposed runway does not form part of the MIR/Proposed Plan". However, Proposed Plan policy Place 17 (page 76) includes the following text: "Land to the north of the existing airport boundary is safeguarded to provide a second main parallel runway, if required in the future, to meet air passenger growth forecasts...Proposals which would prejudice the long-term expansion of Edinburgh Airport will not be supported." In addition, the SEA Environmental Report (ER) assesses some, but not all, effects of the provisional second runway (page 68). If the second runway does not form part of the Proposed Plan, then it is unclear why it forms part of policy Place 17, it appears on the proposals map and there is (partial) discussions of the effects included in the ER. CEC have advised (verbally) that they make a distinction between a safeguard and a proposal. However, this is not clear anywhere in the Plan and clarification is required as to the level of support a 'safeguard' would give to an application for a runway, were one to come forward.

Strategic airport enhancements are no longer National Developments in the draft NPF4, so it appears support is likely to be removed at the national level. There is therefore no longer a current higher tier assessment, nor is there any lower level assessment (Edinburgh Airport's Masterplan is not subject to SEA), so it is essential that the development is properly assessed at the local plan stage.

Esme Clelland (0778)

The Scottish Government has declared a climate emergency and there is an urgent need to address emissions. As noted in the plan The Climate Change (Scotland) Act 2019 Act sets targets of 75% reduction in emissions by 2030 and net-zero emissions by 2045 - The safeguarding of the second runway should not be included in the plan.

Jamie Wallace (0167)

Becoming a sustainable and net zero city is one of the 3 key drivers / main areas for change in the City Plan 2030. The city has a very ambitious net zero by 2030 target. Therefore no expansion of the airport should be permitted unless it can be demonstrated that it will not undermine achievement of these outcomes.

Hallam Land Management (0615)

This policy was subject to a motion of dissent by the Green Party at the LDP meeting and therefore is not the settled view of the Council.

Place 17 is not aligned with the West Edinburgh Development Strategy or other Place Policies for West Edinburgh. It potentially prejudices the Council's wider aspirations for housing and economic growth in the West Edinburgh and A8 Newbridge Corridor. Land to the north of the airport for a second parallel runway is identified without rationale, justification or any travel forecasts that are relevant and up to date. The related safety zone of a second runway could seriously impact the operational and development potential of the Craigiehall site. Policy is initially predominantly concerned with land within the airport boundary. The northern runway proposal is not supported by any form of environmental assessment through SEA or Choices. A safeguarding policy has therefore not been prepared or consulted upon.

Strategic Environmental Assessment conducted on site options are unclear regarding noise issues. Hallam reserves the right to rebuttal through specialist advice if necessary, as part of the Examination.

Edinburgh Airport Noise Advisory Board (EANAB) (0720)

It is not clear whether the second runway at Edinburgh Airport (p.76) is actually supported by the Plan, or merely the land safeguarded. The additional noise impact of the second runway, on both existing and proposed residential areas, should be taken into account in the Environmental Report should the Plan support the development.

If the Plan is to support development of a second runway, it is important that the impacts on human health through noise pollution and residential amenity are properly assessed, even at the Plan stage.

It is likely that if air traffic at Edinburgh Airport were to increase to the extent that a second runway could be justified, this would be incompatible with the Government's intention that the aviation industry as a whole should be 'carbon neutral' by 2050.

RSPB (0648)

Do not support plans for a second parallel runway at Edinburgh airport that will enable an increase in flights to and from Edinburgh. This is not consistent with other climate change and sustainability policies within the City Plan 2030.

Anna Brand (0742)

Prioritising the development of an airport is at odds with a climate emergency.

Spokes Lothian (0545)

Spokes does not support expansion of airport capacity. In addition to that major and over-riding objection, the proposed second runway site would compromise the Newbridge / Kirkliston / Dalmeny cycle route whilst also increasing carbon emissions and unsustainable transport.

Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

**Place 18: Gogarburn**

NatWest (0477)

NatWest supports Place 18 RBS Gogarburn and welcomes the recognition of the importance of Gogarburn to Edinburgh's economy and financial sector. Welcomes the support Place 18 (and Table 13 – Areas of Special Economic Importance) provide to opportunities for further office and ancillary development within the boundary of the site.

SEPA (0012)

A detailed FRA which informs site design is required in order to ensure that there is no associated increase in flood risk outwith the site and to ensure that there is no unacceptable flood risk for future uses of the site. This site could incorporate the Gogar Burn diversion scheme, which could have implications for the layout and design of the development. Should development go ahead without a wider understanding of the catchment, there is a risk that the Gogar Burn realignment, which would deliver multiple benefits, may be jeopardised. Should the Gogar Burn not be realigned, this may affect the developable area as well. Multiple small drains and watercourses all require assessment. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer.

Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

**Place 19: Edinburgh Park/South Gyle.**

Mark Ockendon (0419)

It is significantly quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life), whilst recognising that we live in Scotland, which is windy and rainy. Modes of transport that are warm and protected from the elements will continue be required in this country.

We should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

Hallam Land Management (0615), Tarmac (0244)

The entire Edinburgh Park/South Gyle site was identified in Choices as a 'Strategic Office Location'. Now shown on Proposed Plan page 27 map as a 'Housing Led Development'. Choices made no reference to specific housing allocations within the South Gyle site. LDP 2016 made no mention of residential use in areas EP3 to EP5. LDP 2016 identified an opportunity for 450-700 units across the South Gyle site, the Proposed Plan has now increased this, without justification, to 1,737 units.

Redline Planning Services Ltd (0673)

The Proposed LDP sets out that the Council's vision is to change the character of this area over time from a business dominated environment with limited evening activity to a thriving mixed use and well integrated part of the city (paragraph 3.64). Place 17 establishes that planning permission will be granted for development which maintains the strategic employment role of the area and introduces a wider mix of uses. Various key requirements are set out to achieve this, including part c) which states that housing will be acceptable in principle "as a component of business-led mixed-use proposals". This requirement sits at odds with the vision to introduce a mix of uses to the area, and in particular in those locations which are already characterised by office development. In such locations, other uses (including housing) should not have to be a component of business proposals but should be able to stand on their own.

Tesco Personal Finance PLC has a 4.3 ha landholding at 2 South Gyle Crescent, Edinburgh. This is occupied by the headquarters of Tesco Personal Finance, associated parking and vacant land. The existing 10,167 sq.m office and 215 space car park was approved by the City of Edinburgh Council in May 2006 (ref. 05/02513/FUL). Permission was later approved for additional phases of office development on land around the Tesco

bank site. These were not however built out and have since lapsed. Tesco can confirm that they no longer have any intention of developing offices on this land, and that the parcels are surplus to their requirements. Tesco therefore propose to dispose of these sites and have entered into an agreement with a housebuilder (Barratt Homes) to take forward alternative residential development proposals.

The housebuilder has advanced their development proposals for the site and has undertaken pre-application consultation for the development of 300 new homes including affordable housing, retail, commercial space and a nursery. It is anticipated that a planning application for this development will be lodged in 2022.

#### BDW Trading (0350)

Object to the non-allocation of surplus land adjacent to Tesco Bank for housing-led development. Amend part c of Place 19. This amendment will not undermine the policy intent to retain the strategic business function of the South Gyle area but allows appropriate flexibility to deal with individual applications that in themselves do not comprise predominantly business uses.

Map 26 refers to "business-led redevelopment" in areas EP3 & EP4. The subject site is in area EP4. Recommend that EP4 is distinguished from EP3.

#### Pawel Stankiewicz (0445)

New paragraphs should be added :

- 1) "Area up to 100 m from Edinburgh bypass is not used for housing." To avoid people living in polluted areas.
- 2) "Tram stops and railway stations are focus points of footpaths coming to them diagonally across urban blocks in case of their (re)development." - In the case of square urban blocks, diagonal routes cut walking distance up to 30 %.

#### SEPA (0012)

The requirement for a flood risk assessment (FRA) is made in 3.65b and we support this. FRA required to assess risk from the Gogar Burn and Stank Burn and any tributaries that feed into these watercourses. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer. Nearby areas susceptible to both fluvial and surface water flooding. Surface water flooding reported regularly along South Gyle Broadway.

#### Living Streets Edinburgh Group (0486)

There is an opportunity to change the focus from private cars to people. Reference to enhancement of active travel is noted, but the Council should be more radical in capitalising on the excellent public transport infrastructure that exists by enhancing it, removing as much car parking as possible and making pedestrian movement the focus of future place making development of this area.

#### Ambassador Group (0683)

Support the identification of South Gyle (part b.) and commercial centres (part d.) as appropriate locations for office development.  
Requirement h.) / development principle c). increased permeability will be dependent on individual sites and applications coming forward.

Shelborn Edinburgh Limited (0732)

Support Place Policy 19, it encourages the ongoing development of the Edinburgh Park/ South Gyle area to create a thriving, mixed use and well integrated part of the city. The Edinburgh Park/ South Gyle area is a key employment site which is transitioning into a mixed use neighbourhood with increasing levels of residential use. Should update the map associated with the Development Principles to reflect the developments that have been consented, or are proposed, for the area.

Sherborn support the densification of the area by using undeveloped and under-used land. Given the highly accessible nature of the Edinburgh Park/ South Gyle area. Place 19 should be developed further to make reference to the fact that the area can support a higher density of development. The Council should support the redevelopment of sites in the area that are reaching the end of their operational life and becoming obsolete.

Parabola Edinburgh Limited (0723)

supportive of the Proposed Place Policy 19 as it encourages the ongoing development of the Edinburgh Park / South Gyle area to create a thriving, mixed use and well integrated part of the city.

Support the densification of the existing Park by using undeveloped and under-used land. Given the highly accessible nature of the Edinburgh Park / South Gyle area, Place 19 Policy should be further developed to make reference to the fact that this is an area of the city that can support a higher density of development.

Archie Clark (0003)

Page 77 Under Place 19, the Plan refers to “improved pedestrian and cycle links through the site and to provide .. connections with .. in the surrounding area including the potential to create a strategic pedestrian/cycle route linking Wester Hailes, Broomhouse and Sighthill to Edinburgh Gateway Station, as part of the wider West Edinburgh Active Travel Network (WEL)”– notwithstanding the desirability of this, what is the level of demand for this? Will this provision be matched by public transport?

Page 77 The Plan states, “Adoptable roads to be brought up to standard and an Internal CPZ...”, with no explanation of what CPZ is (Controlled Parking Zone?). Is this intended to provide income to the City?

Page 79 “EP2 is complete”– please show location of EP2 on the plan.

Corstorphine Community Council (0799)

Should include accessibility standards within development principles so that West Edinburgh is genuinely inclusive and accessible to all. This would include elements like

fully lit active travel routes, adequate disabled parking provisions and strict adherence to the Edinburgh Street Design Guidance.

Support the shift of Edinburgh Park to a more vibrant, mixed-use area, there is nothing in the way of healthcare and primary educational facilities designed for this development. While proposed housing is close to amenities such as Hermiston Gait and Edinburgh Park train station, CCC fails to see how this development meets the requirements for a 20 minute neighbourhood. There are no amenities such as doctors' surgeries, dentists or primary schools that are easily accessible from this area.

While the West Edinburgh development principles address sustainable transport extensively, the design principles for Edinburgh Park/South Gyle don't really mention public transport. None of the EP Development Principles include the proposed orbital bus provision - this should be included so that access to enhanced public transport is enshrined in the Principles.

#### Royal Mail Group Limited (0501)

The Royal Mail assets listed (including 21 South Gyle Crescent in Place 19) are all allocated for residential development. These properties are important assets for Royal Mail and there is no short, medium- or long-term interest or intention in relocating the Delivery Offices to an alternative location. The housing allocations proposed at each of these sites are therefore not considered to be deliverable and should be removed from the emerging Local Development Plan. Proposed housing would also not be compatible with Royal Mail operations in terms of potential noise and disturbance to residents.

#### Genna Spears (0081)

This extra housing without any extra local services being added is going to even more pressure on overloaded services. Insufficient capacity in Schools, GPs, Dentists.

#### Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

#### APAM / Bankfoot APAM (0355)

Support noted.

### **Place 20: Royal Highland Centre**

#### Creos Property Limited (0253)

In principle, Creos are supportive of the Place Based Policies as they promote development on, and immediately adjacent to, the site in their ownership.

It is not currently clear how multiple Place Based Policies will apply to sites, and what Policy should take priority, therefore an explanatory note, or clarification on this point within the Proposed Plan, would be welcomed.

The Royal Highland Centre Policy is potentially restrictive in terms of what proposals can come forward, as the Policy seeks to link development in the area to “the primary activity of the RHC”. Clarification on this requirement would be helpful, as it is inappropriate to restrict proposals on land that is not in the ownership of RHC. Creos would encourage the Council to reconsider the wording of this Policy, to ensure that development is not inhibited by its requirements and would suggest that this could be updated to state that proposals should support the primary activity of the RHC or that applicants in the area should engage with the RHC at an early stage of development projects to understand their interests.

Taylor Wimpey and Hallam Land Management Ltd (0603)

The safeguard for the possible relocation of the RHC should be removed from City Plan 2030: Under Choice 14 (B) in the Choices for City Plan 2030 document, the Council proposed to remove the safeguard on the site to allocate it for other uses “We want to remove the safeguard in the existing plan for the Royal Highland Showground site to the south of the A8 at Norton Park and the site allocated for other uses.”. The proposed plan retains the existing LDP allocation to safeguard the site despite the evidence showing that this is highly unlikely to be required. The reasons given in the supporting text is that it has been safeguarded “in accordance with National Planning Framework 3”. The Scottish Government has now published the Proposed National Planning Framework 4 (NPF4) which changes the national policy direction for the site. Proposed NPF4 is seeking to remove Airport Enhancements, including the Edinburgh Airport Expansion, from its list of National Developments. This would remove the national policy constraint requiring the land at Norton Park to be safeguarded for the potential relocation of the Royal Highland Centre.

There continues to be a need to provide new housing and other uses on a significant scale to serve the city and city region. The current safeguarding of land at Norton for the possible relocation of the RHC constrains a site with clear potential for a more intensive and practical use within the city. Removal of the safeguard provides the opportunity to deliver a sustainable residential-led mixed-use development which would help meet housing need and demand.

Housing proposals which come forward through Policy Hou 4 - Housing Land Supply must deliver optimal densities taking into account the site characteristics, location and surrounding area. - The Site at Norton Park benefits from being situated close to excellent existing and planned public transport infrastructure (including the tram extension from Ingliston and the surrounding area) which could deliver a high-density development. As shown in the Development Framework and Vision Document submitted with these representations, the site proposes an Urban Core which could support a range of high-density mixed uses including residential development.

Royal Highland & Agricultural Society of Scotland (0482)

Supports specific reference in West Edinburgh policy framework in Place 20 Royal Highland Centre but suggests that the detailed wording is amended to reflect a masterplan

approach to maintain longer term flexibility across the site and planning status based on current land uses and to define precise boundaries to include the Young Farmers field to the north of Fairview Road for completeness. This site lies between extant planning permissions for hotels and mixed uses and should form part of the wider showground masterplan approach to development.

This would also be consistent with the aims and terms of Policy Econ 6 – Hotel Development reference to ‘within the boundaries of the Royal Highland Centre’

The site is owned and utilised by RHASS and its omission is an anomaly.

The masterplan prepared in connection with the previous planning application provides the context for development but it remains unapproved. Reference within City Plan should therefore reflect that and provide the flexibility to promote a masterplan approach to development without having to re-engage with a formal planning application process sitewide where land uses are already well established.

RHASS supports the core approach of brownfield preferred allocations for housing and supporting restraint on further greenfield release. The site initially suggested as an alternative housing allocation at Norton Park is not supported and RHASS supports its removal.

Supports that the Land at Norton Park as shown on the Proposals Map is safeguarded for the future relocation of the RHC and its development as Scotland’s National Showground. The site of the Royal Highland Centre may be required for airport uses in the long term to meet air passenger growth forecasts.

#### SEPA (0012)

Uncertain that the principles for this Place are being clearly established. While it appears that the purpose of the Place is to protect the existing Royal Highland Centre, it appears, that should it be required, the airport will use it for expansion. This should be clarified or confirmed.

Reference is made to flood management and we agree that this needs to be a major consideration when considering any re-development of this site.

#### Mr Roger Thomas (0345)

p. 79: Place 20, Royal Highland Centre: "The policy also safeguards the site for the long-term expansion of Edinburgh Airport ...."

Given the climate emergency and the Council's green ambitions, the City Plan should not be catering for an expansion of Edinburgh Airport. This item should therefore be removed.

#### Anna Goodwin (0302)

The wording of the strategy commonly uses ‘should’ when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say ‘must’.

## **Place 21: Riccarton University Campus and Business Park**

### Heriot Watt University (0468)

Support proposed Policy Place 21 but suggests additional wording to reflect current campus developments and evolving estates strategy as part of the updated 2021 Masterplan Framework. The Masterplan provides strategic context for future investment and requires a flexible approach to its evolution. It is not required to establish land uses but is a tool for the university to capture and shape new development proposals across their estate. Surrounding land should remain allocated as green belt to protect the setting of the campus but also to allow for potential future long term expansion of sports and outdoor recreation facilities.

Specific wording and reference in Table 13 should clarify the chronology of masterplans with additional wording.

### Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

## **Place 22: Maybury**

### Mark Ockendon (0419)

It is significantly quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life), whilst recognising that we live in Scotland, which is windy and rainy! Modes of transport that are warm and protected from the elements will continue be required in this country.

We should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

### West Craigs Limited (0472)

While not a background document to the Proposed City Plan 2030, we consider the Housing Land Audit and Completions Programme 2021 is important in terms of setting out base rates of consented housing delivery in order to inform delivery throughout the City Plan 2030 period. With regards to HSG19 / West Craigs, the Programme's expected build out rates in the audit for Maybury Central (1,400 units – reference: 5246.2) is significantly lower than our own forecasts. We would request that the build out rates contained within the Housing Land Audit and Completions Programme 2021 are updated to reflect the existing position on the site.

### Rosebery Estate (Bankhead) (0618)

Place 22/HSG19 allocation has been subject to significant work and is now in the process of being developed out. Services have been installed with capacity for the anticipated numbers on the West Craigs and Rosebery Land. Neither the potential public transport proposal (Ref: WE12), nor the proposed allocation from which it arises (land adjacent to H61), were included in the Choices Consultation and this is a significant, unwelcome change to the plan which we have had no contact from the Council in respect of. The Council has not mentioned to the owner, or their agent, that they were considering imposing the landing point of a public transport corridor on to an allocated, recently serviced site with residential development in the process of being brought forward. This land is not available for the landing point of a potential public transport corridor and should be considered to have a landowner constraint and be removed as a viable option to be explored further at this stage. Under emerging Policy Env 2, this proposal may result in the refusal of consent for land adjacent to H61 as it would “compromise the effective development of adjacent ground”.

Support the continuation of the HSG19 site to the new LDP, but certain development principles should be deleted:

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

On page 80, Place 22, The introduction is not grammatical, “Planning permission will be granted for development within the boundary of Maybury as defined on the Proposals Map will be granted provided it accords with the Maybury and Development Principles and the approved, or subsequently approved, master plan.”

Archie Clark (0003)

LDP2016 HSG20 has disappeared from the map (Appendix 2b). A check needs to be made to ensure that other areas previously approved are included.

This site needs to be linked over the railway line to H61, H62 and H63 so that a more varied shopping experience can be obtained.

The proposed new footpath/cycle path appears to be inadequate, even though it may help to resolve the serious congestion that can be expected at the Gogar roundabout.

Living Streets Edinburgh Group (0486)

There is no reason why pedestrian priority and a largely car free development cannot be an underpinning principle. There is some reference to measures for pedestrians and active travel, but this is to counter the hazardous environment created by a car dominated development. Development should be expected to follow the same principles as proposed elsewhere in the city, designed accordingly and contributions secured to carry out the necessary enhancements to public transport, pedestrian and cycle infrastructure thereby reflecting the transport hierarchy. It is critical that the plan is consistent in reflecting Scottish Planning Policy and the National Transport Strategy throughout.

RSPB (0648)

Support text in section 3.68c, relating to the inclusion of a new 30m wide green network link is to be provided from new pedestrian/cycle bridge through the Maybury site to connect via Cammo Walk and Cammo Estate park to the north. This will provide a new, strategic, north-south green network link to the west of the city. No vehicular access should be taken through the green corridor.

Support sections 3.68j 'Provision of new woodland and grassland habitat (30m depth) to create a strong green belt boundary adjoining Craigs Road along the northern edge of the site.' And section 3.68k 'Provision of two new large greenspaces to meet the two-hectare green space standard as required by the Open Space Strategy. There is potential to create local green space on the high point of the site next to Maybury Road.'

#### Corstorphine Community Council (0799)

Item m junction improvements should also include reference to improvements for pedestrians and cyclists.

#### The Association for the Protection of Rural Scotland (0334)

APRS regrets the removal of this important countryside from the greenbelt in the ELDP of 2016. A clarification of its present/new status is required - is it now classified as Countryside, in which case green belt principles (or key elements) for development should still apply?

#### Maybury Development Principles

c.). The plan indicates landscaped areas in diagrammatic geometric shapes. To avoid misinterpretation, it is important to indicate such areas more accurately with 'naturalistic' shapes. Scattered small areas of trees, shrubs, green/blue open space throughout the area could substantially enhance the environment quality of the development.

d.). The proposal to improve the character of Turnhouse Road appears to be minimal and inadequate from the plan. There appears to be a dearth of street trees, small copses and green/blue areas scattered along its length. Will these deficiencies be addressed?

#### Pawel Stankiewicz (0445)

Paragraph f on page 80 should be: "Opportunity for higher density development within walking distance to tram halt and railway station within at least 1000 metres from the tram stop." - To increase the number of people living close to good public transport.

A paragraph should be added: "New footpath is provided running from pedestrian/ cycle bridge towards NNW." - In the case of square urban blocks, diagonal routes cut walking distance up to 30 %

#### SEPA (0012)

A flood risk assessment has been identified as principle for development of this Place, and we support this.

The realignment of the Gogar Burn was never proposed to go through this site. If the Gogar is to be re-routed through this site then that would require further work.

Cramond & Barnton Community Council (0243)

This development area should be omitted from Proposed City Plan as it is a legacy site from the previous LDP and a substantial proportion of the site is currently consented and under development.

Mrs Patricia Stott (0349)

This development area should be omitted from the proposed city plan as a substantial proportion of the site is already under development.

Genna Spears (0081)

Insufficient local infrastructure for additional housing.

Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

**Place 23: Builyeon Road**

Mark Ockendon (0419)

It is significantly quicker and easier to use a car for many journeys. Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life), whilst recognising that we live in Scotland, which is windy and rainy. Modes of transport that are warm and protected from the elements will continue be required in this country.

We should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience.

Archie Clark (0003)

Page 82, Place 23 Builyeon Road – This site (HSG32 and SCH10 in LDP2016), as shown in application 21/04019/AMC would produce a soul-less development of 840 houses, a primary school and limited workplaces. There is very little useable green space. With few onsite workplaces commuter and service traffic will be substantial. The latest designs have few 'community' facilities. Site will be affected by the noise of traffic on the Forth Bridge approach road requiring a 'substantial landscaped buffer' to "mitigate" (but not eliminate) it. There is no sense of 'community' in this scheme. Care should be taken in such

schemes to ensure such large settlements are treated like new towns and not tacked on to existing historic towns.

#### Queensferry & District Community Council (0568)

In 2015 a Placemaking exercise was carried out by CEC with the full support of QDCC. A final report was approved by the council on Thursday 19th May 2016.

The headline from this report is;

- The strategic objectives will be the subject of a consultation exercise with the community.
- Once these have been agreed they will be passed on to the new Locality Team and/or the relevant service area for taking forward. It may be that an action plan is developed around some of the topics. In the first instance, the draft objectives will be shared with the Queensferry Infrastructure Group to ensure that there is widespread awareness and support for the objectives.

The work hasn't been progressed and remains outstanding. This a serious omission from the City Plan and should be included as it will identify the necessary infrastructure that is needed across the town to cope with the additional population from the housing developments.

Education Infrastructure - a new 14 class primary school at Builyeon Road with additional 2 classrooms and dining hall extension at Echline Primary School and additional High School capacity for 274 pupils.

Queensferry is an expanding town and will attract many young families to locate to Queensferry. The plan makes no mention of nursery provision which will be necessary.

#### Living Streets Edinburgh Group (0486)

There is no reason why pedestrian priority and a largely car free development cannot be an underpinning principle. There is some reference to measures for pedestrians and active travel, but this is to counter the hazardous environment created by a car dominated development. Development should be expected to follow the same principles as proposed elsewhere in the city, designed accordingly, and contributions secured to carry out the necessary enhancements to public transport, pedestrian and cycle infrastructure thereby reflecting the transport hierarchy. It is critical that the plan is consistent in reflecting Scottish Planning Policy and the National Transport Strategy throughout.

#### Pawel Stankiewicz (0445)

A new paragraph should be added: "Area up to 100 m from A/M 90 8 is not used for housing." – to minimise the number of people living in noise and pollution.

#### Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

## **HSG4: West Newbridge**

### Ratho and District Community Council (0289)

The Blue Green network does not take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone

### Jansons Property (0733)

Object to the southern part of site 'HSG 4 – West Newbridge' being included as a housing allocation. The site has been carried over from the LDP and has yet to deliver any completions. The northern part of the site could remain as a smaller housing allocation adjacent to the established area of housing in Newbridge but the southern part of the site, located between industrial uses, means it has no reasonable prospect of being delivered for housing. Therefore, it is not effective or deliverable in accordance with paragraph 55 of the Planning Advice Note (PAN) 2/2010: Affordable Housing and Housing Land Audit.

Allocating the southern part of the site for industrial would represent a much more logical use. Proposed City Plan 2030 includes an area of land to the south-west of Newbridge (north of the M8) which has been brought within the urban area as an extension to the settlement's existing Business and Industry Area and the site would work well as an extension to this allocation.

## **HSG 5: Hillwood Road**

### Ratho and District Community Council (0289)

The new World Health Organisation recommendation for maximum noise level over areas where new development is proposed should be implemented.

## **HSG7: Edinburgh Zoo**

### Genna Spears (0081)

Insufficient local infrastructure for additional housing.

### Robin Knops (0494)

The land should not be used for housing but retained in its natural setting as a public amenity for physical and mental well-being. This retention of land will contribute to zero carbon capture and enhance the visitor and residents experience of Edinburgh's natural environment. The land can be used to improve access to and enlarge the open space of Corstorphine Hill.

### Peter Wilkinson (0493)

Object:

- Flood risk, including to lower lying properties on the east side of Kaimes Road.
- Destruction of badger setts. (Protection of Badgers Act 1992).

- Destruction of mature woodland and associated wildlife habitat.
- Increase in vehicular traffic with rise in air pollution. St. John's Road - Corstorphine already has poor air quality levels.

#### **H64: Land at Ferrymuir**

##### Queensferry & District Community Council (0568)

Good office accommodation which houses a NHS 24 call centre will have to be demolished to build 88 flats. The loss of these jobs would have a serious impact on the local economy. Loss would cause local people to travel outside of Queensferry for work. QDCC opposes this proposal as its at odds with the city plan for Net-Zero and LEZ's plans.

##### Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

##### Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owner's but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

#### **H65: Old Liston Road**

##### Robyn Mackay (0005)

Object on the basis of:

- Overlooking buildings that will be at the south of the development.
- Increased traffic that will impact the already congested Newbridge roundabout as well as Old Liston Road.
- Lack of access to the proposed development.
- No 2nd access road for emergency services due to the fact that Bridge Street is already developed.

#### **H66: St. Johns Road (A)**

##### Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owner's but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Duncan Graham (0651)

Proposal should be removed or scaled down:

The amount of housing proposed is excessive for the area and would damage the local environment. The planned areas are just outside the protected heritage area but should be seriously reconsidered. Too much traffic in the area made worse by additional housing - motorists will seek alternatives along quieter residential streets.

Concerns proposed density and the size of the buildings - will really change the light available to large parts of the area and change the skyline. Services (schools and healthcare) are already stretched in the area.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

Genna Spears (0081)

Insufficient local infrastructure to support additional housing.

**H67: St Johns Road (B)**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owner's but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Duncan Graham (0651)

Proposal should be removed or scaled down. Concerns proposed density and the size of the buildings - will really change the light available to large parts of the area and change the skyline. Services (schools and healthcare) are already stretched in the area.

Genna Spears (0081)

Insufficient local infrastructure to support additional housing.

Sheena Moffat (0366)

Concerns with the height and density of any proposed development. This will impinge on the properties situated at 41-59 Forrester Road. These properties would be faced with a loss of amenity relating to existing views towards the Pentland Hills.

There is an existing tree belt within the site which offers protection to the above properties from the traffic noise and pollution from St John's Road.

Will result in the loss of the existing six local businesses currently trading within the boundaries of the proposal.

Lynn Dorio (0622)

Family homes no higher than existing structures with gardens and off-street parking would be more appropriate in this area. Existing trees should remain.

Proposal will lead to loss of view of the Pentlands and potentially impact on privacy and light to neighbouring properties.

Anna Goodwin (0302)

Site includes useful services and a mix of use. Important for an area that is, elsewhere, dominated by hairdressers, food and drink outlets, beauty salons and charity shops.

Support Appendix D in that active frontages would be maintained on not only St. John's Road, but on St. Ninian's Road and St. Ninian's Drive.

Concerned that the addition of residential properties above the "retail or commercial space" proposed for the ground floor could preclude the ongoing use by certain types of businesses, such as repair shops or light industry, that currently provide the important mix of use.

Concerned about the height of any future development - views of the south of Edinburgh and the Pentland Hills may be lost. Should be limits imposed at this stage, so it is clear to potential developers from the outset.

#### **H68: Kirk Loan**

Genna Spears (0081)

Insufficient local infrastructure to support additional housing.

#### **H69: Corstorphine Road A.**

Gayle Green (0408), Fiona Robertson (0133), George Paver (0150), Mariel Roy (0417), ross Urquhart (0029), Mrs Sheena Craigen (0548), Peter Niccol (0296), Nigel Green (0050)

Proposal will lead to neighbouring properties being overshadowed, with a loss of light and privacy.

Gayle Green (0408), Fiona Robertson (0133), George Paver (0150), Mariel Roy (0417), Ben McCready (0515), ross Urquhart (0029), Kirsten Mackie (0529), Mrs Sheena Craigen (0548), Myself and my husband, Graham Wilson (0279), Dave Campbell (0492), Peter Niccol (0296), Sarah Adamson (0523), Nigel Green (0050)

Proposal will lead to the loss of well used/required footpath/right of way.

Fiona Robertson (0133), George Paver (0150), Ben McCready (0515), ross Urquhart (0029), Kirsten Mackie (0529), Mrs Sheena Craigen (0548), Dave Campbell (0492), Peter Niccol (0296)

Already lack of parking in the area. This would be made worse by new flats.

Gayle Green (0408), Allan Old (0394), Fiona Robertson (0133), George Paver (0150), Myself and my husband, Graham Wilson (0279), Nigel Green (0050)

Plans to build on this site have been rejected in the past and nothing has changed to warrant a change in this decision. Reasons for rejection include building line, listed building, right of way and need for access to a long cul-de-sac, privacy and light.

Fiona Robertson (0133), George Paver (0150)

There have already been issues where emergency vehicles would have been unable to access the end of the Grove (cul-de-sac).

Mariel Roy (0417), Kirsten Mackie (0529), Mrs Sheena Craigen (0548), Sarah Adamson (0523)

Proposal would increase traffic and congestion in the area.

Genna Spears (0081)

Insufficient local infrastructure to support additional housing.

Ross Urquhart (0029)

Proposals to densely populate small sites of this scale is not in keeping with the current architecture or residential footprint of Corstorphine village or the current building make up along Corstorphine road generally.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owner's but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

Duncan Graham (0651)

Proposal should be removed or scaled down. Concerns proposed density and the size of the buildings - will really change the light available to large parts of the area and change the skyline. Services (schools and healthcare) are already stretched in the area.

Sarah Adamson (0523)

The building is currently a car hire branch which is well placed close to a large hotel. The area is a wildlife corridor.

### **H70 Corstorphine Road B**

Mrs Sheena Craigen (0548)

- Adverse effect in terms of reduced light and privacy for numbers 42-52 Downie Grove due to being overlooked
- Loss of Right of Way lane to west of present Enterprise company premises;
- Adverse effect on Downie Grove of inevitable rise in traffic and parking.

Ross Urquhart (0029)

Proposals to densely populate small sites of this scale is not in keeping with the current architecture or residential footprint of Corstorphine village or the current building make up along Corstorphine road generally.

Proposal will:

- Add to already strained on transport infrastructure including lack of parking.
- Will further increase congestion
- Will lead to loss of well used footpath/right of way.

Duncan Graham (0651)

Proposal should be removed or scaled down. Concerns proposed density and the size of the buildings - will really change the light available to large parts of the area and change the skyline. Services (schools and healthcare) are already stretched in the area.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owner's but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

Genna Spears (0081)

Insufficient local infrastructure to support additional housing.

Susan Stewart (0567)

Several concerns regarding development:

- Noise relating to demolition
- Noise relating to construction
- Excess waste and rubbish and where this would be stored
- Hours of construction, notably but not limited to home working / older residents / vulnerable residents who are housebound
- Dust/waste landing on residents' cars
- Dust/waste marking residents' windows/entering the property
- Light blocking and impact on daylight
- Questions over area capacity for more parking
- Impact of the noise of any additional residents from new residential or commercial units

**Modifications sought by those submitting representations:**

**Place 16: West Edinburgh**

SAICA (0590)

Criterion (b) of the West Edinburgh Development Principles should be amended as follows "A mix of uses focused around the tram stops, with a particular focus within the land known as Edinburgh 205 (H63) as a town centre development with civic space, community facilities and commercial and leisure uses as the focal point of a new 20-minute neighbourhood. Being in immediate proximity to the Edinburgh Gateway transport interchange, and at the eastern edge of the Edinburgh's westwards settlement extension, the SAICA site should contribute a high-density development approach, acting as a landmark and visual focus.

No further modification specified but it is indicated that further clarification is required on how the Council will co-ordinate a collaborative, multidisciplinary masterplan approach to development across these sites. Additional provision is proposed with regard to phasing to ensure that sites such as H59 can be delivered early in the plan period and are not unduly delayed on account of wider Place 16 complexities.

It is also indicated that the identification of any primary school site requirement – indicative/potential or otherwise within H59 should be removed as well as the identification of a need for 5 primary schools to serve the West Edinburgh allocations (Place 16).

SEPA (0012)

Section 3.61j needs to be clarified. "Designed as proposals allow to reroute the Gogar Burn".

A flood risk assessment is required and a strategic approach to surface water management.

Rosebery Estate (Bankhead) (0618)

Evidence is required to support the need for healthcare contributions

Ratho and District Community Council (0289)

No modification specified but it is indicated that Infrastructure must be in place prior to the commencement of development and in particular improvements to the A8 and the Gogar Roundabout to meet the additional vehicular traffic. The Blue Green network must take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone.

Robert Falcon (0640)

No development permissions should be given to sites H61, H62 and H63. Delivering Edinburgh's key economic development needs should not include the West Edinburgh development - It is not acceptable to build on greenfield sites when adequate brownfield sites exist - in particular nearby at Maybury, Gyle and Redford Barracks, in addition to many other brownfield sites throughout the city.

West Craigs Limited (0472)

There should be a specific placed based policy for Craigiehall within Proposed City Plan 2030.

Living Streets Edinburgh Group (0486)

No modifications specified but it is indicated that there should be a clear reference to the transport hierarchy in the policy.

Mark Ockendon (0419)

Modify criterion (l) of the West Edinburgh Development Principles as follows: append "and a clear view of the sky in keeping with Edinburgh's low-level building character".

Modify criterion (n) of the West Edinburgh Development Principles as follows: "to minimise need for private car use and private vehicle ownership" - replace with "to integrate private car use with public transport facilities. Ensure support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

Ryden LLP (0578)

No modifications specified but it is indicated that individual applications should not be delayed where they take account of wider adjacencies. Further clarification is required on how the Council will co-ordinate a collaborative, multidisciplinary masterplan approach to development across these sites.

Contributions are required to deliver education provision to support the level of development outlined within West Edinburgh and a more detailed assessment on potential siting option is also required dependent upon timescales and phasing of delivery of individual sites.

Creos Property Limited (0253)

No modifications specified but it is indicated that it is not currently clear how multiple Place Based Policies will apply to sites, and what Policy should take priority, therefore an explanatory note, or clarification on this point within the Proposed Plan, would be welcomed.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

In relation to West Edinburgh (Map 25), we note the divergence away from the expectations of NPF3 which designates the strategic airport enhancement as a national development. Due to the proposed shift in position, as signalled in draft NPF4, regarding this national development, we offer no proposed change in relation to this.

Shelborn Edinburgh Limited (0732)

No modifications specified but it is indicated that the Council should clarify within the Proposed Plan how development proposals in Edinburgh Park/ South Gyle will also be required to adhere to the West Edinburgh Place Policy, if the area is already covered by the site specific Place Policy 19 and associated Development Principles.

Friends of Cammo (0387)

No modifications specified but it is indicated that that the only access crossing the railway line should be for public transport and active travel (bikes and pedestrians). Recommend the development of more direct active travel routes to Cammo LNR than shown in the current plans, and other improvements to connections for active travel.

NatureScot (0528)

Development Principle c) should be amended to include recent work on the green blue network and nature network: "Development which takes account of the West Edinburgh Landscape Framework, work on the city-wide green blue network and nature network as appropriate and considers how the site connects into and delivers the wider, strategic green network at West Edinburgh in creating a landscape structure and green network as a setting for development.."

No further modifications specified but it is indicated that increased capacity of the path network in this area will be required to accommodate significant numbers of people. Site is exposed, particularly in higher areas along and to the south of the tram line. Landform, planting and building form will be key factors in addressing exposure and making this a liveable place that is pleasant to spend time in and move through. Consideration should also be given to building height along the higher parts of the site – potential max height of 8 storeys may be dominant in views from existing areas and routes.

Cockburn Association (0777)

No modifications specified but it is indicated that clarification of the mitigation measures required which will address the negative environmental impacts identified in the Strategic Environmental Assessment Environmental Report.

Pawel Stankiewicz (0445)

A new paragraph should be added to the West Edinburgh Development Principles to say "Area up to 100 m from A8 is not used for housing" so as to not increase the number of people living in noise and pollution".

Hallam Land Management (0615), Tarmac (0244)

No modifications specified but it is indicated that this section on West Edinburgh needs a complete review and clear justification before any decisions on a finalised plan is made. Supporting studies and resultant reports are required to justify the Council's recent change in approach to West Edinburgh proposals. The key on map 27 needs rewording to align with policy/ proposals.

Crosswind Developments Ltd (0184)

Reword Place policy 16 to "Planning permission will be granted for development which will contribute towards the creation of new urban quarters in West Edinburgh (specifically H59, H60, H61, H62 and H63 on the Proposals Map), provided it accords with the West Edinburgh Development Principles. The Council will coordinate a collaborative, multidisciplinary approach to development across these sites via the pre application process. The Movement and Access Plan (Proposed Amendments to plan 24) provided in our submission will ensure that connections and access is enabled between different land ownerships and individual masterplans will be expected to ensure that the primary connections can be made."

Amend criterion (a) of the West Edinburgh Development Principles as follows: "Proposals should assist in creating a high density, sustainable, mixed use, urban extension to the city, compact in form with a sense of place and community attractive to residents, workers and visitors. As a result, West Edinburgh will embody many of the principles that help the City progress toward net zero."

Amend criterion (B) of the West Edinburgh Development Principles as follows: "A mix of uses focused around the tram stops, with a particular focus within the land known as Edinburgh 205 (H63) as a town centre development with civic space, community facilities and commercial and leisure uses as the focal point of a new 20-minute neighbourhood. This area will be further supported by the local centre within H61".

Proposal BGN49 should be marked as 'indicative' on the map. Development principle j should be removed.

Amend criterion (L) of the West Edinburgh Development Principles as follows: "To address and connect across land ownerships and to the wider City – physically, visually and socially, including with urban frontages to site edges where appropriate and with active travel and public transport infrastructure which enables movement around the area and to

the city. Active travel and public transport connectivity between the sites and to the north will be enabled by each development site as far as is reasonable and feasibly possible. Public transport options for orbital bus routes to north and south will be delivered either through improvements to public transport priority at the Gogar and Maybury roundabouts or through public transport access to the north. The Council will co-ordinate a joined-up approach in line with the Movement and Access Plan (Proposed Amendments to plan 24) submitted.

Amend criterion (m) of the West Edinburgh Development Principles as follows: "Road access which follows the principles of the WETA programme in providing a new Gogar Link Road, Airport Link Road and IBG Main Street and access from Eastfield Road will be supported. Planning applications should address the potential for local access from the south of the area to the A8 in conjunction with transport and traffic improvements on the A8."

Amend criterion (n) of the West Edinburgh Development Principles as follows: "Internal connectivity for active travel and public transport modes, including relationship with the Ingliston Park & Ride site and how that site might be relocated or redesigned for the better overall place making of the area. Planning applications should develop a design, parking strategy and parking standards approach to minimise need for private car use and private vehicle ownership. This and other demand management measures are an important element of relevant local, regional and national policies and will be critical in promoting sustainable travel behaviour in West Edinburgh area".

Amend criterion (O) of the West Edinburgh Development Principles as follows: "Planning applications should establish how a mix of uses, including vertical mix, is distributed across the area. The mix will include but not be limited to retail, professional services, food and drink, office and light industrial, industrial in appropriate locations away from residential use, assembly and leisure and community facilities/hubs as well as high and medium density residential with mixed tenure development as required by other plan policies".

Amend the wording of aim 1 of the City Plan 2030 Aims to include wheeling and cycling, as well as walking.

No further modifications specified but it is indicated that representee questions the consultation approach to date on the removal of economic development as a priority from the sites formally known as IBG. Map 24 should reflect or recognise 2 recent planning applications (20/03219/PPP and 21/00217/FUL). The map should be marked as indicative (others in the proposed plan are).

In relation to the masterplan requirement, the policy provides no information on when, how and who will be involved in facilitating the creation of a masterplan, nor what the masterplan itself should comprise. The Council can co-ordinate development to ensure the sites work together without the need for a full detailed master plan to which all parties must accord. There is excessive school provision identified based upon Communities and Families calculation for CDLs current application.

The identification of a town / local centre within the proposal site H61 should be outlined on the Proposals Map. Table 14 should also show this as a new town/local centre for site H61.

There should be a distinction between the town centre and local centre on Map 24. The location of the new local centre noted in Map 11 and map 24 should be clarified. H63 should have a town centre and site H61 a local centre.

The location of proposed primary school/education infrastructure marked on Map 24 and the proposals map should be clarified.

The shading of the area which identifies housing in Map 25 and the proposals map should be standardised.

CDL would like this site to be allocated for mixed use.

CDL are supportive of aim 5 (Climate change and mitigation) of the City Plan 2030 Aims highlighted on p8, in general, however this is qualified by detailed responses in other sections.

It is indicated that aim 6 of the City Plan 2030 Aims (Minimum 35% affordable housing contribution) should be amended, and that an increase on 25 % would require justification and should be sought on a case by case basis, rather than as a blanket policy requirement.

CDL object to level of new school infrastructure identified as being delivered on their land, allocated site H61. The number of new schools proposed to be located within the West Edinburgh area seems excessive given the likely mix of flats to be developed out. Communities and Families have previously agreed that site H61 will generate a total of 137 primary aged children and 62 Secondary aged children. These figures are significantly different from those contained in the Education Assessment which suggests that site H16 will generate 456 Non Denominational primary aged children. This is clearly not correct.

CDL object to the Strategic Business Centre area highlighted on the Proposals Map for West Edinburgh as it does not include the CDL site and therefore does not support economic development including offices on that site. The CDL site is within the wider area that is identified as an Area of Economic Importance but there are no policies attributable to that designation and while Table 13 states that supporting uses will still include significant opportunities for business the policy position does not support this for the Crosswind site (H61).

#### Edinburgh Airport Limited (0761)

Development principle j). should be deleted.

Reword Place policy 16 to "Planning permission will be granted for development which will contribute towards the creation of new urban quarters in West Edinburgh (specifically H59, H60, H61, H62 and H63 on the Proposals Map), provided it accords with the West Edinburgh Development Principles. The Council will coordinate a collaborative, multidisciplinary approach to development across these sites via the pre application process. The Movement and Access Plan (Proposed Amendments to plan 24) provided in our submission will ensure that connections and access is enabled between different land ownerships and individual masterplans will be expected to ensure that the primary connections can be made."

Amend criterion (L) of the West Edinburgh Development Principles as follows:

“To address and connect across land ownerships and to the wider City – physically, visually and socially, including with urban frontages to site edges where appropriate and with active travel and public transport infrastructure which enables movement around the area and to the city. Active travel and public transport connectivity between the sites and to the north will be enabled by each development site as far as is reasonable and feasibly possible. Public transport options for orbital bus routes to north and south will be delivered either through improvements to public transport priority at the Gogar and Maybury roundabouts or through public transport access to the north. The Council will co-ordinate a joined-up approach in line with the Movement and Access Plan.”

Amend criterion (M) of the West Edinburgh Development Principles as follows: “Road access which follows the principles of the WETA programme in providing a new Gogar Link Road, Airport Link Road and IBG Main Street and access from Eastfield Road will be supported. Planning applications should address the potential for local access from the south of the area to the A8 in conjunction with transport and traffic improvements on the A8.”

Amend criterion (N) of the West Edinburgh Development Principles as follows:

“Internal connectivity for active travel and public transport modes, including relationship with the Ingliston Park & Ride site and how that site might be relocated or redesigned for the better overall place making of the area. Planning applications should develop a design, parking strategy and parking standards approach to minimise need for private car use and private vehicle ownership. This and other demand management measures are an important element of relevant local, regional and national policies and will be critical in promoting sustainable travel behaviour in West Edinburgh area”.

Amend criterion (O) of the West Edinburgh Development Principles as follows:

“Planning applications should establish how a mix of uses, including vertical mix, is distributed across the area. The mix will include but not be limited to retail, professional services, food and drink, office and light industrial, industrial in appropriate locations away from residential use, assembly and leisure and community facilities/hubs as well as high and medium density residential with mixed tenure development as required by other plan policies”.

The errata and Map, Map 24, Map 1, Map 8 should be updated and aligned.

The new primary vehicle route on Map 24 should be located on the eastern side, adjacent to the railway lines, to avoid running a Primary Road through the middle of the development site and a new local centre given the ambitions that this should be a car lite development. An Airport Link Road as set out in the WETA Refresh 2016 (WETA 18) and in line with WE29 requires to be shown connecting to the Eastern Terminus. This should be shown as an extension to the new primary route that we have requested is shown adjacent to the Railway line and that it should connect to the Airport Eastern Terminus via Eastfield Avenue.

Remove the re-routing of the Gogar Burn / river restoration proposal.

Remove the indicative location for a primary school identified within the airport's boundary.

The Association for the Protection of Rural Scotland (0334)

No modification specified but it is indicated that the topographical interest of Corstorphine Hill and the extensive woodland south of the A8 in the vicinity of the RBS HQ should also be reflected in the landscape design.

Archie Clark (0003)

No modification specified but it is indicated that the wide variety in size of local centres is not reflected in how they are described. Some have banks and/or Post Offices, others have no such facilities and is the objective not to make them within 10 minutes' walk of home?

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

No modification specified but it is indicated that unused accommodation should be used before development is considered in West Edinburgh to prevent unnecessary urban sprawl. Green Belt development should be completely avoided as this will create problems on a wide variety of fronts – including loss of farmland, pollution, services provisions, drainage, etc. The area will become over populated as people move out of town from the to living in a 'green field' development.

Sites are large and will require adequate facilities - a detailed fully-co-ordinated masterplan needs to be prepared by CEC to indicate the extent of shopping/ commercial/ administrative/ education/ workplace/ recreation facilities including full-sized football/rugby pitches in H63. Areas H59-H62 need to be incorporated so that residents are not encouraged to resort to their own transport. In total – a very large development that should be considered as a NEW TOWN - complete with sufficient workplaces for the entire community.

Table 13 - Areas of Economic Importance: the proposals for West Edinburgh must be reviewed immediately after the 2022 Census, as this will inform and no doubt change the assessment of what additional housing will be required.

Page 75, bullet I, refers to, "An iterative process with the use of TVIA..." with no explanation of what TVIA is ("Townscape and Visual Impact Assessment"?). Unclear descriptions like this require definition.

Developments proposed in areas H59-H63, coupled with the impact of LEZs and prohibitions on entering and parking in the centre of the city, will see the city centre hollowed out, with new greenfield development using up prime quality farmland. That goes against the issues raised at COP26 regarding climate change and is to be resisted.

Corstorphine Community Council (0799)

No modification specified but it is indicated that development principle q should be explained in detail. Would like to see inclusion of accessibility standards within development principles so that West Edinburgh is genuinely inclusive and accessible to all.

As this development is sandwiched between two existing AQMAs (St Johns Road and Glasgow Road) design principles should include improvements of air quality so that any development and planning actively works to reduce air pollution impacts.

Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

Simon Thompson (0248)

No modification specified but it is indicated that a proportion of the sites in West Edinburgh may come forward in the next 10 years but this is not backed up by any detailed assessment or justification. Indeed a large part of the West Edinburgh proposal is identified as an Area of Economic Importance as was considered of national economic importance by the Scottish Government.

Edinburgh World Heritage (0339)

Bullet point 4 of the 'Requirements in Principle' (page 72) needs to be rephased to state "...agreed with the Council, that conserves or enhances key views, surrounding landscape...."

**H59: Land at Turnhouse Road (SAICA)**

SAICA (0590)

No modification specified but it is indicated that the identification of any primary school site requirement – indicative/potential or otherwise – within our client's landholding (H59) - a dedicated school for the H60 Turnhouse Road / H59 SAICA allocations should be removed as well as the identification of a need for 5 primary schools to serve the West Edinburgh allocations (Place 16).

Ryden LLP (0578)

No modification specified but it is indicated that density, scale, height and massing should be encouraged at key transport nodes and interchanges to provide the most sustainable use of land at these key locations.

The proposed siting of a new Primary School should be reviewed further and a full comparative analysis undertaken based on education requirements as well as design principles for placemaking and most efficient patterns of use of land.

Genna Spears (0081)

No modification specified but it is indicated that there is insufficient local infrastructure for additional housing

**H60: Turnhouse Road**

Cramond & Barnton Community Council (0243)

H60 Turnhouse Road should be removed from the plan until -

a. A full assessment has been undertaken of the potential economic and operational impacts on existing commercial, industrial and service businesses currently operating at this site.

b. Measures are identified for mitigating any detrimental impacts from displacing or otherwise affecting these businesses through implementation of proposed housing on this site.

Mrs Patricia Stott (0349)

No modification specified but it is indicated that redevelopment for housing is likely to have an impact on these existing businesses, the employment they provide and their contribution to the City's economy. Displacement of such businesses would be contrary to the 20 minute neighbourhood principles.

Inverdunning (Hatton Mains) Ltd (0427)

Remove H60 from the plan.

Simon Thomson (0248)

Remove H60 from the plan.

Genna Spears (0081)

No modification specified but it is indicated that there is insufficient local infrastructure for new housing.

### **H61: Crosswinds**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Delete proposal H61 Crosswinds

West Craigs Limited (0472)

No modification specified but it is indicated that the representee supports the separate school provision at H61

Ratho and District Community Council (0289)

No modification specified but it is indicated that the new World Health Organisation recommendation for maximum noise level over areas where new development is proposed should be implemented.

The Blue Green network does not take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone.

Simon Thomson (0248)

No modification specified but it is indicated that the site capacity should be amended significantly downwards and justification should be provided for delivery: This scale of development is not achievable in the plan period given the extensive infrastructure requirements set out in the plan for new town centre, schools and roads.

Inverdunning (Hatton Mains) Ltd (0427)

No modification specified but it is indicated that the unit numbers should be amended – not wholly deliverable within plan period. There is currently a live planning appeal.

Edinburgh Airport Noise Advisory Board (0691)

No modification specified but it is indicated that residential development should not be supported within areas falling within the 45 dB Lden contour associated with Edinburgh airport which presently includes the majority of the proposed developmental areas between Edinburgh Airport and the A8 corridor. City Plan should have a noise policy (with a noise threshold corresponding to WHO guidelines) to prevent development in locations which would have detrimental impacts on health and amenity.

Genna Spears (0081)

No modification specified but it is indicated that there is insufficient local infrastructure to support levels of additional housing.

Crosswinds Developments Ltd (0184)

No modification specified but it is indicated that policy (Env 35) requirements when set alongside requirements for 20% open space, 35% affordable housing, housing densities of 65 units per Ha, etc would, when taken as a whole, potentially preclude the efficient development of this brownfield site.

**H62: Land adjacent to Edinburgh Gateway**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

H62 should be removed from the plan.

West Craigs Limited (0472)

The requirement for a Council-led masterplan should be removed from the text of Place 16 and replaced by a requirement for all development to demonstrate it would not jeopardise the development of any adjacent site.

No further modification specified but it is indicated that allocating the site for higher density development would be compliant with the overall principles of City Plan 2030, which seeks to locate high density development in highly accessible locations. Given proximity to the Tram operations, it may be that residential development on this part of the site would be

unfeasible on noise impact grounds. Some flexibility should be included within allocation H62 to be supportive of other uses.

Do not agree that it is appropriate to include H62 within the school provision area. It would be appropriate to link any developer contributions for new school infrastructure arising from the development of H62 to Maybury Primary and Craigmount High.

Edinburgh Airport Noise Advisory Board (0691)

No modification specified but it is indicated that residential development should not be supported within areas falling within the 45 dB Lden contour associated with Edinburgh airport which presently includes the majority of the proposed developmental areas between Edinburgh Airport and the A8 corridor. City Plan should have a noise policy (with a noise threshold corresponding to WHO guidelines) to prevent development in locations which would have detrimental impacts on health and amenity.

Crosswind Developments Ltd (0184)

No modification specified but it is indicated that the representee questions the consultation approach to date on the removal of economic development as a priority from the sites formally known as IBG.

**H63: Edinburgh 205**

Murray Estates (0197), SEEDCo (0198), Persimmon Homes (0495), Taylor Wimpey (0200), BDW Trading (0350), Robertson Residential Group Limited (0490)

No modification specified but it is indicated that H63 should be removed from the plan.

Murray Estates (0197), SEEDCo (0198), Persimmon Homes (0495), Taylor Wimpey (0200), BDW Trading (0350), Robertson Residential Group Limited (0490), Stewart Milne Homes (0118)

No modification specified but it is indicated that re-allocating approximately 400 active businesses and strategic employment sites (including land at Edinburgh 205) for housing will not deliver the outcome 'A city where everyone shares in its economic success'.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Delete proposal H63: Edinburgh 205

West Craigs Limited (0472)

No modification specified but it is indicated that the representee supports separate school provision at H63.

Ratho and District Community Council (0289)

No modification specified but it is indicated that the new World Health Organisation recommendation for maximum noise level over areas where new development is proposed should be implemented.

The Blue Green network does not take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone.

Stirling Developments Limited (0303)

No modification specified but it is indicated that H63 proposes 7000 units on what appears to be a greenfield site that was not identified through the Choices document.

The plan needs to offer flexibility to support effective greenfield sites should the supported brownfield sites fail to deliver. Sites like Calderwood, which was identified in Choices is further supported by the City Deal and NPF4. Effective sites like Calderwood should be supported within City Plan as Calderwood has the ability to deliver homes of all tenures in a 20 minute neighbourhood.

Inverdunning (Hatton Mains) Ltd (0427)

No modification specified but it is indicated that the unit numbers should be amended – not wholly deliverable within plan period. There is currently a live planning appeal. Questions are raised regarding the density and unit calculations for the site.

Simon Thomson (0248)

No modification specified but it is indicated that the site capacity should be amended significantly downwards and justification should be provided for delivery: This scale of development is not achievable in the plan period given the extensive infrastructure requirements set out in the plan for new town centre, schools and roads.

Edinburgh Airport Noise Advisory Board (0691)

No modification specified but it is indicated that residential development should not be supported within areas falling within the 45 dB Lden contour associated with Edinburgh airport which presently includes the majority of the proposed developmental areas between Edinburgh Airport and the A8 corridor. City Plan should have a noise policy (with a noise threshold corresponding to WHO guidelines) to prevent development in locations which would have detrimental impacts on health and amenity.

SEEDCo (0198)

H63 should be removed from the plan.

Corstorphine Community Council (0799)

No modification specified but it is indicated that all strategic development sites to include impact assessments for noise.

West Town Edinburgh Ltd (0660)

Support noted.

## **Place 17: Edinburgh Airport**

### Edinburgh Airport Limited (0761)

The requirement of a masterplan should be removed as a requirement from Place Policy 17. An airport boundary should be shown on the proposed Proposals Map

The reference to the West Edinburgh Strategic Design Framework should be removed from para 3.62. The following wording is requested:

"The development and enhancement of Edinburgh Airport will be supported within the airport boundary defined on the Proposals Map this includes proposals for new active travel linkages and new connections to existing infrastructure to provide greater access and improve resilience. Proposals for ancillary services and facilities will only be permitted where it can be demonstrated that these have strong and direct functional and locational links with the airport and are compatible with the operational requirements of the airport. All development proposals within the airport boundary must accord with the West Edinburgh Development Principles, where applicable, and other relevant local development plan policies. Supporting information will be required to demonstrate how proposals will contribute to meeting the infrastructure requirements identified for West Edinburgh. Land to the north of the existing airport boundary is safeguarded to provide a second main parallel runway, if required in the future, to meet air passenger growth forecasts. Within this area, green belt policy will apply (policy Env 18) until such time as this land is required by the Airport. Proposals which would prejudice the long-term expansion of Edinburgh Airport will not be supported."

The following wording for para 3.62 is also requested:

"3.62 The purpose of this policy is to guide proposals at Edinburgh Airport. The policy covers proposals for airport and related uses that require planning permission (some airport proposals are 'permitted development' i.e., planning permission is not needed). Compliance with the other relevant plan policies will ensure airport proposals within the Airport's operational area that do not benefit from permitted development rights are acceptable in terms of scale and location, accessibility by public transport, pedestrians and cyclists, traffic generation and car parking and other environmental considerations."

The wording of Env 31 should be amended to: "Where appropriate, proposals containing new build development (except householder development and housing proposals covered by policy Env 32 below) shall include the provision of good quality, attractive, useable and where appropriate publicly accessible open space that forms at least 20% of the total site area."

### Lord Dalmeny (0475)

The land, in the ownership of Lord Dalmeny to the north of Lennymuir at Turnhouse, should be removed from the Countryside designation and be incorporated into the specific policy provision that identifies Edinburgh Airport as an 'Area of Economic Importance'

### Mr Roger Thomas (0345)

Remove sentences:

"Land to the north of the existing airport boundary is safeguarded to provide a second main parallel runway, if required in the future, to meet air passenger growth forecasts."  
"Proposals which would prejudice the long-term expansion of Edinburgh Airport will not be supported."

Frances Guy (0589)

Remove all commitments to airport expansion

Robert Falcon (0640)

Safeguarding land for future airport expansion should be removed from the plan and rejected as a policy principle.

SEPA (0012)

Would like more detail on this 'Place'. While Place 17 (Edinburgh Airport) is separate from Place 16 (Crosswinds) EMP4 combines them in one site. It should be clarified if they are separate sites or a combined site.

A detailed FRA which informs site design is required in order to ensure that there is no associated increase in flood risk out with the site and to ensure that there is no unacceptable flood risk for future uses of the site.

Cockburn Association (0777)

No modifications specified but it is indicated that clarification of the mitigation measures required which will address the negative environmental impacts identified in the Strategic Environmental Assessment Environmental Report.

L Gunstensen (0663)

The Proposed Plan should be modified:

1. So that reference to the second runway is removed from the Plan and Proposals Map, or
2. If it is to remain in the Plan but without giving express support to any potential application, it should be clarified that a 'safeguard' is different from a proposal and that any application would not be supported by the Plan, or
3. if the runway is to remain in the Plan and the Plan would provide any level of support to any application for a second runway then the SEA must be updated to consider the full range of significant environmental effects appropriate at the plan stage.

Esme Clelland (0778)

The safeguarding of the second runway should be removed from the plan.

Jamie Wallace (0167)

"Land to the north of the existing airport boundary is safeguarded to provide a second main parallel runway, if required in the future, to meet air passenger growth forecasts."

Should be changed to:

"Land to the north of the existing airport boundary will be safeguarded to provide a second main parallel runway, if required in the future to meet air passenger growth forecasts, and if it can be demonstrated that such growth will not jeopardise city, regional, or national net zero carbon reduction targets, in particular compliance with any carbon budgets for the aviation sector developed by the Scottish Government."

#### Hallam Land Management (0615)

No modifications specified but it is indicated that the Council should consult on and approve airport masterplan before including specific policy direction:

An agreed masterplan must inform this Place policy - Masterplan has not been proposed as part of the LDP or consulted upon during Choices. Place 17 is unprecise and unspecific in terms of future operations and ancillary land uses in relation to safeguarding land.

The notional safeguarded area for second runway should be removed.

Strategic Environmental Assessment conducted on site options are unclear regarding noise issues. Hallam reserves the right to rebuttal through specialist advice if necessary, as part of the Examination.

#### Edinburgh Airport Noise Advisory Board (EANAB) (0720)

No modifications specified but it is indicated that it should be made clear whether the second runway at Edinburgh Airport (p.76) is actually supported by the Plan, or merely the land safeguarded. The additional noise impact of the second runway, on both existing and proposed residential areas, should be taken into account in the Environmental Report should the Plan support the development.

#### RSPB (0648)

No modifications specified but it is indicated that the representee does not support plans for a second parallel runway at Edinburgh airport that will enable an increase in flights to and from Edinburgh. This is not consistent with other climate change and sustainability policies within the City Plan 2030.

#### Anna Brand (0742)

No modifications specified but it is indicated that prioritising the development of an airport is at odds with a climate emergency.

#### Spokes Lothian (0545)

No modifications specified but it is indicated that spokes does not support expansion of airport capacity. In addition to that major and over-riding objection, the proposed second runway site would compromise the Newbridge / Kirkliston / Dalmeny cycle route whilst also increasing carbon emissions and unsustainable transport.

#### Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

#### **Place 18: Gogarburn**

##### SEPA (0012)

A detailed FRA which informs site design is required in order to ensure that there is no associated increase in flood risk out with the site and to ensure that there is no unacceptable flood risk for future uses of the site. No further modification specified but it is indicated that this site could incorporate the Gogar Burn diversion scheme, which could have implications for the layout and design of the development. Should development go ahead without a wider understanding of the catchment, there is a risk that the Gogar Burn realignment, which would deliver multiple benefits, may be jeopardised. Should the Gogar Burn not be realigned, this may affect the developable area as well.

##### Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

##### NatWest (0477)

Support Noted.

#### **Place 19: Edinburgh Park/South Gyle.**

##### Mark Ockendon (0419)

New requirement: "Ensure support for low-carbon vehicles by providing electric vehicle charging points for new private housing, and on-street parking."

##### Hallam Land Management (0615), Tarmac (0244)

Alter page 27 map key which identifies this site as a 'Housing Led Development'. It is not a housing led development and this has not been previously suggested or assessed.

No further specific modification but it is indicated that justification is required for the increase of proposed housing units across site to the detriment of office and employment land.

##### Redline Planning Services Ltd (0673)

Amend Place based requirement c) on page 77 to read: "Housing as a component of business-led mixed-use proposals, unless it can be demonstrated that a housing-led mixed-use proposal is more appropriate."

Amend part c) of the development principles for the areas EP3-5 on page 79 of the Proposed LDP to say: "In EP4, commercial and mixed-use proposals (including residential-led proposals) will be supported. Where practicable, development should provide increased permeability, create a direct relationship with South Gyle Broadway and improve the pedestrian and cycling environment along South Gyle Crescent".

Request that the Tesco landholding at South Gyle is identified as a specific "housing-led mixed redevelopment" opportunity within parcel EP4 on map 26, page 78. and that this residential development opportunity on is reflected in Table 2 of Part 4 of the Proposed LDP, with an indicative capacity for c. 300 dwellings to be developed in accordance with the principles of Place 19. EP4 should also be separately identified in the associated key, distinct from EP3.

#### BDW Trading (0350)

Amend part c of Place 19 to: "housing as a component of business-led mixed-use proposals, unless it can be demonstrated that a housing-led mixed use proposal is more appropriate."

Amend Map 26 on page 78, to distinguish between EP3 and EP4, and add the following reference for EP4. "business or housing-led redevelopment"

#### Pawel Stankiewicz (0445)

New paragraphs should be added :

- 1) "Area up to 100 m from Edinburgh bypass is not used for housing." To avoid people living in polluted areas.
- 2) "Tram stops and railway stations are focus points of footpaths coming to them diagonally across urban blocks in case of their (re)development." - In the case of square urban blocks, diagonal routes cut walking distance up to 30 %.

#### SEPA (0012)

No modifications specified but it is indicated that the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further and it is recommended that contact is made with the flood prevention officer. Nearby areas susceptible to both fluvial and surface water flooding. Surface water flooding reported regularly along South Gyle Broadway.

#### Living Streets Edinburgh Group (0486)

No modification is specified but it is indicated that the Council should be more radical in capitalising on the excellent public transport infrastructure that exists by enhancing it, removing as much car parking as possible and making pedestrian movement the focus of future place making development of this area.

#### Ambassador Group (0683)

No modification is specified but it is indicated that increased permeability will be dependent on individual sites and applications coming forward.

#### Shelborn Edinburgh Limited (0732)

No modification is specified but it is indicated that the map associated with the Development Principles should be updated to reflect the developments that have been consented, or are proposed, for the area. Place 19 should be developed further to make reference to the fact that the area can support a higher density of development. The Council should support the redevelopment of sites in the area that are reaching the end of their operational life and becoming obsolete.

#### Parabola Edinburgh Limited (0723)

No modification is specified but it is indicated that given the highly accessible nature of the Edinburgh Park / South Gyle area, Place 19 Policy should be further developed to make reference to the fact that this is an area of the city that can support a higher density of development.

#### Archie Clark (0003)

The location of EP2 should be shown on the plan.

No further modification is specified but it is indicated that with regards to criterion (H) the level of demand for this should be shown and will this provision be matched by public transport? There should be an explanation of what a CPZ is and clarity on whether this is intended to provide income to the City.

#### Corstorphine Community Council (0799)

The Edinburgh Park Development Principles should include the proposed orbital bus provision.

No further modification is specified but it is indicated that the policy should include accessibility standards within development principles so that West Edinburgh is genuinely inclusive and accessible to all.

While proposed housing is close to amenities such as Hermiston Gait and Edinburgh Park train station, CCC fails to see how this development meets the requirements for a 20 minute neighbourhood. There are no amenities such as doctors' surgeries, dentists or primary schools that are easily accessible from this area. The design principles for Edinburgh Park/South Gyle don't really mention public transport.

#### Royal Mail Group Limited (0501)

The sites owned by Royal Mail should be re-allocated as Business and Industry Areas under Policy ECON4 of the plan.

If the Council see fit to retain any proposals for residential use on the land adjoining the properties set out in the representation (assuming the allocation pertaining to each site is removed), the relevant policies and the associated information set out in Appendix D of the Local Plan should make reference to Royal Mail's operations and should ensure that any necessary mitigation is provided by the applicant at the application stage to guarantee that there is no undue impact to Royal Mail.

Genna Spears (0081)

No modification is specified but it is indicated that this extra housing without any extra local services being added is going to even more pressure on overloaded services. Insufficient capacity in Schools, GPs, Dentists.

Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

APAM / Bankfoot APAM (0355)

Support noted.

**Place 20: Royal Highland Centre**

Creos Property Limited (0253)

No modification specified but it is indicated that it is not currently clear how multiple Place Based Policies will apply to sites, and what Policy should take priority, therefore an explanatory note, or clarification on this point within the Proposed Plan, would be welcomed. Creos would encourage the Council to reconsider the wording of this Policy, to ensure that development is not inhibited by its requirements and would suggest that this could be updated to state that proposals should support the primary activity of the RHC.

Taylor Wimpey and Hallam Land Management Ltd (0603)

The safeguard for the possible relocation of the RHC should be removed from City Plan 2030.

Royal Highland & Agricultural Society of Scotland (0482)

Amend wording to:

"The development and enhancement of the Royal Highland Centre (RHC) will be supported within the boundary defined on the Proposals Map, provided proposals accord with a strategic sitewide masterplan. Ancillary uses will only be permitted where it can be demonstrated that these are linked to the primary activities of the RHC".

Text in table 13 should be edited to include hotels (plural) in terms of uses defined by the masterplan principles and consistent with Policy ECON 6.

SEPA (0012)

No modification specified but it is indicated that SEPA are uncertain that the principles for this Place are being clearly established. While it appears that the purpose of the Place is to protect the existing Royal Highland Centre, it appears, that should it be required, the airport will use it for expansion. This should be clarified or confirmed.

Reference is made to flood management and we agree that this needs to be a major consideration when considering any re-development of this site.

Mr Roger Thomas (0345)

p. 79: Place 20, Royal Highland Centre: "The policy also safeguards the site for the long-term expansion of Edinburgh Airport ...."  
This item should therefore be removed.

Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

### **Place 21: Riccarton University Campus and Business Park**

Heriot Watt University (0468)

Suggested re-wording:

Place Policy 21: Development for the following purposes will be supported within the boundary of Riccarton University Campus and Business Park, provided proposals accord with the approved, or subsequently approved, masterplan and other relevant local development plan policies.

- Academic teaching and research.
- Uses .....complementary and/or ancillary..... to the University, including student residential accommodation, .....local convenience, food and drink, ..... sport and recreational facilities.
- Business uses, including the manufacture, research and development of products and processes, where a functional linkage with the University's academic activities can be demonstrated.

Specific wording and reference in Table 13 should clarify the chronology of masterplans with additional wording as follows....

A Masterplan was approved in January 2001....and updated in 2010 as a Framework for Development. A new Masterplan is due to be published by the University in 2022 to provide context for the next phase of campus wide investment.

Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

### **Place 22: Maybury**

Mark Ockendon (0419)

new requirement: "Ensure support for low-carbon vehicles by providing electric vehicle charging points for new private housing, and on-street parking."

#### West Craigs Limited (0472)

No modification specified but it is indicated that with regards to HSG19 / West Craigs, the Programme's expected build out rates in the audit for Maybury Central (1,400 units – reference: 5246.2) is significantly lower than our own forecasts. We would request that the build out rates contained within the Housing Land Audit and Completions Programme 2021 are updated to reflect the existing position on the site.

#### Rosebery Estate (Bankhead) (0618)

Delete the annotation on Maps 2 & 8, and all other references relating to the West Edinburgh Transport Improvements (WE12) in so far as they show a potential connection from the new addition to Place 16 adjacent to H61 linking over the railway into the Maybury (Place 22/HSG19) housing allocation being carried forward from the LDP.

Remove the new land allocation adjacent to H61 identified in Place 16 and its associated potential public transport link (WE1).

The following development principles should be deleted:

- "m) Address the transport infrastructure mitigation requirements at Maybury junction, Barnton junction and Craigs Road Junction and support delivery of the bus priority and interchange recommendations that emerge from the on-going West Edinburgh Transport Improvement Programme study." Transport Contribution Zone (Para 3.59) should only apply to those sites in Place 16/West Edinburgh allocated in this document, not sites being brought forward from the LDP which are in the process of being delivered.
- "(u). Provide or contribute towards healthcare infrastructure and community facilities" - Evidence is required to justify healthcare contributions.

#### Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

No modification specified but it is indicated that on page 80, Place 22, The introduction is not grammatical, "Planning permission will be granted for development within the boundary of Maybury as defined on the Proposals Map will be granted provided it accords with the Maybury and Development Principles and the approved, or subsequently approved, master plan."

#### Archie Clark (0003)

The site needs to be linked over the railway line to H61, H62 and H63 so that a more varied shopping experience can be obtained.

No further modification specified but it is indicated that LDP2016 HSG20 has disappeared from the map (Appendix 2b). A check needs to be made to ensure that other areas previously approved are included. The proposed new footpath/cycle path appears to be inadequate, even though it may help to resolve the serious congestion that can be expected at the Gogar roundabout.

Living Streets Edinburgh Group (0486)

No modification specified but it is indicated that it is critical that the plan is consistent in reflecting Scottish Planning Policy and the National Transport Strategy throughout.

RSPB (0648)

No modification specified but it is indicated that RSPB support sections 3.68j 'Provision of new woodland and grassland habitat (30m depth) to create a strong green belt boundary adjoining Craigs Road along the northern edge of the site.'

Corstorphine Community Council (0799)

Item m junction improvements should also include reference to improvements for pedestrians and cyclists.

The Association for the Protection of Rural Scotland (0334)

No modification is specified but it is indicated that a clarification of the sites present/new status is required - is it now classified as Countryside, in which case green belt principles (or key elements) for development should still apply?

The plan indicates landscaped areas in diagrammatic geometric shapes. To avoid misinterpretation, it is important to indicate such areas more accurately with 'naturalistic' shapes. Scattered small areas of trees, shrubs, green/blue open space throughout the area could substantially enhance the environment quality of the development. The proposal to improve the character of Turnhouse Road appears to be minimal and inadequate from the plan. There appears to be a dearth of street trees, small copses and green/blue areas scattered along its length. Will these deficiencies be addressed?

Pawel Stankiewicz (0445)

Criterion (f) of the Maybury Development Principles should be amended to: "Opportunity for higher density development within walking distance to tram halt and railway station within at least 1000 metres from the tram stop."

A paragraph should also be added: "New footpath is provided running from pedestrian/cycle bridge towards NNW." - In the case of square urban blocks, diagonal routes cut walking distance up to 30 %

SEPA (0012)

No modification is specified but it is indicated that the realignment of the Gogar Burn was never proposed to go through this site. If the Gogar is to be re-routed through this site then that would require further work.

Cramond & Barnton Community Council (0243)

Place 22 should be omitted from Proposed City Plan.

Mrs Patricia Stott (0349)

Place 22 should be omitted from Proposed City Plan.

Genna Spears (0081)

No modification is specified but it is indicated that there is insufficient local infrastructure for additional housing.

Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

**Place 23: Builyeon Road**

Mark Ockendon (0419)

new requirement: "Ensure support for low-carbon vehicles by providing electric vehicle charging points for new private housing, and on-street parking."

Archie Clark (0003)

No modification is specified but it is indicated that a Page 82, Place 23 Builyeon Road – This site (HSG32 and SCH10 in LDP2016), as shown in application 21/04019/AMC would produce a soul-less development of 840 houses, a primary school and limited workplaces. There is very little useable green space. With few onsite workplaces commuter and service traffic will be substantial.

Queensferry & District Community Council (0568)

Add in outcomes from the Queensferry Placemaking consultations report May 2016. The work and aims of a placemaking exercise hasn't been progressed and remains outstanding. This is a serious omission from the City Plan and should be included as it will identify the necessary infrastructure that is needed across the town to cope with the additional population from the housing developments. The plan makes no mention of nursery provision which will be necessary.

Living Streets Edinburgh Group (0486)

No modification is specified but it is indicated that it is critical that the plan is consistent in reflecting Scottish Planning Policy and the National Transport Strategy throughout.

Pawel Stankiewicz (0445)

A new paragraph should be added: "Area up to 100 m from A/M 90 8 is not used for housing." – to minimise the number of people living in noise and pollution.

Anna Goodwin (0302)

The wording of the strategy commonly uses 'should' when referring to assessments that need to take place and for requirements laid out in the development principles. There are times when this needs to be definitive and say 'must'.

#### **HSG4: West Newbridge**

##### Ratho and District Community Council (0289)

No modification is specified but it is indicated that the Blue Green network does not take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone.

##### Jansons Property (0733)

No modification is specified but it is indicated that the represented objects to the southern part of site 'HSG 4 – West Newbridge' being included as a housing allocation. Allocating the southern part of the site for industrial would represent a much more logical use. Proposed City Plan 2030 includes an area of land to the south-west of Newbridge (north of the M8) which has been brought within the urban area as an extension to the settlement's existing Business and Industry Area and the site would work well as an extension to this allocation.

#### **HSG 5: Hillwood Road**

##### Ratho and District Community Council (0289)

No modification is specified but it is indicated that the new World Health Organisation recommendation for maximum noise level over areas where new development is proposed should be implemented

#### **HSG7: Edinburgh Zoo**

##### Genna Spears (0081)

No modification is specified but it is indicated that there is insufficient local infrastructure for additional housing.

##### Robin Knops (0494)

No modification is specified but it is indicated that the land should not be used for housing but retained in its natural setting as a public amenity for physical and mental well-being.

##### Peter Wilkinson (0493)

No modification is specified but it is indicated that the representee objects to the site being included in the plan due to:

Flood risk, including to lower lying properties on the east side of Kaimes Road. Destruction of badger setts. (Protection of Badgers Act 1992 ). Destruction of mature woodland and associated wildlife habitat and increase in vehicular traffic with rise in air pollution. St. John's Road - Corstorphine already has poor air quality levels.

**H64: Land at Ferrymuir**

Queensferry & District Community Council (0568)

No modification is specified but it is indicated that the QDCC opposes this proposal as its at odds with the city plan for Net-Zero and LEZ's plans.

Simon Thomson (0248)

Remove H64 from the plan.

Inverdunning (Hatton Mains) Ltd (0427)

Remove H64 from the plan.

**H65: Old Liston Road**

Robyn Mackay (0005)

No modification specified but it is indicated that the representee objects to the inclusion of the site within the plan on the basis of: Overlooking buildings that will be at the south of the development. Increased traffic that will impact the already congested Newbridge roundabout as well as Old Liston Road. Lack of access to the proposed development. No 2nd access road for emergency services due to the fact that Bridge Street is already developed.

**H66: St. Johns Road (A)**

Duncan Graham (0651)

No modification specified but it is indicated that the proposal should be removed or scaled down.

Inverdunning (Hatton Mains) Ltd (0427)

Remove H66 from the plan.

Simon Thomson (0248)

Remove H66 from the plan.

Genna Spears (0081)

No modification specified but it is indicated that there is insufficient local infrastructure to support additional housing.

**H67: St Johns Road (B)**

Duncan Graham (0651)

No modification specified but it is indicated that the proposal should be removed or scaled down.

Inverdunning (Hatton Mains) Ltd (0427)

Remove H67 from the plan.

Genna Spears (0081)

No modification specified but it is indicated that there is insufficient local infrastructure to support additional housing.

Sheena Moffat (0366)

No modification specified but it is indicated that there are concerns with the height and density of any proposed development. This will impinge on the properties situated at 41-59 Forrester Road. There is an existing tree belt within the site which offers protection to the above properties from the traffic noise and pollution from St John's Road. Will result in the loss of the existing six local businesses currently trading within the boundaries of the proposal.

Lynn Dorio (0622)

No modification specified but it is indicated that the proposal will lead to loss of view of the Pentlands and potentially impact on privacy and light to neighbouring properties. Family homes no higher than existing structures with gardens and off street parking would be more appropriate in this area. Existing trees should remain.

Anna Goodwin (0302)

No modification specified but it is indicated that the addition of residential properties above the "retail or commercial space" proposed for the ground floor could preclude the ongoing use by certain types of businesses, such as repair shops or light industry, that currently provide the important mix of use. Concerned about the height of any future development - views of the south of Edinburgh and the Pentland Hills may be lost. Should be limits imposed at this stage, so it is clear to potential developers from the outset.

**H68:Kirk Loan**

Genna Spears (0081)

No modification specified but it is indicated that there is insufficient local infrastructure to support additional housing.

**H69: Corstorphine Road A.**

Gayle Green (0408), Fiona Robertson (0133), George Paver (0150), Mariel Roy (0417), Ross Urquhart (0029), Mrs Sheena Craigen (0548), Peter Niccol (0296), Nigel Green (0050)

No modification specified but it is indicated that H69 should be removed from the plan. The proposal will lead to neighbouring properties being overshadowed – loss of light and privacy.

Gayle Green (0408), Fiona Robertson (0133), George Paver (0150), Mariel Roy (0417), Ben McCready (0515), ross Urquhart (0029), Kirsten Mackie (0529), Mrs Sheena Craigen (0548), Myself and my husband, Graham Wilson (0279), Dave Campbell (0492), Peter Niccol (0296), Sarah Adamson (0523), Nigel Green (0050)

No modification specified but it is indicated that H69 should be removed from the plan. It will lead to the loss of well used/required footpath/right of way.

Fiona Robertson (0133), George Paver (0150), Ben McCready (0515), ross Urquhart (0029), Kirsten Mackie (0529), Mrs Sheena Craigen (0548), Dave Campbell (0492), Peter Niccol (0296)

No modification specified but it is indicated that H69 should be removed from the plan. There is already a lack of parking in the area – made worse by new flats

Gayle Green (0408), Allan Old (0394), Fiona Robertson (0133), George Paver (0150), Myself and my husband, Graham Wilson (0279), Nigel Green (0050)

No modification specified but it is indicated H69 should be removed from the plan. Plans to build on this site have been rejected in the past and nothing has changed to warrant a change in this decision. Reasons for rejection include building line, listed building, right of way and need for access to a long cul-de-sac, privacy and light.

Fiona Robertson (0133), George Paver (0150)

No modification specified but it is indicated that H69 should be removed from the plan. There have already been issues where emergency vehicles would have been unable to access the end of the Grove (cul-de-sac).

Mariel Roy (0417), Kirsten Mackie (0529), Mrs Sheena Craigen (0548), Sarah Adamson (0523)

No modification specified but it is indicated that H69 should be removed from the plan. The proposal would increase traffic and congestion in the area.

Genna Spears (0081)

No modification specified but it is indicated that there is insufficient local infrastructure to support additional housing.

Ross Urquhart (0029)

No modification specified but it is indicated that H69 should be removed from the plan, Proposals to densely populate small sites of this scale is not in keeping with the current architecture or residential footprint of Corstorphine village or the current building make up along Corstorphine road generally.

Inverdunning (Hatton Mains) Ltd (0427)

Remove H69 from the plan.

Simon Thomson (0248)

Remove H69 from the plan.

Duncan Graham (0651)

No modification specified but it is indicated that the proposal should be removed or scaled down.

Sarah Adamson (0523)

No modification specified but it is indicated that the building is currently a car hire branch which is well placed close to a large hotel. The area is a wildlife corridor.

**H70 Corstorphine Road B**

Mrs Sheena Craigen (0548)

No modification specified but it is indicated that the proposal will have an adverse effect in terms of reduced light and privacy for numbers 42-52 Downie Grove due to being overlooked. Loss of Right of Way lane to west of present Enterprise company premises. Adverse effect on Downie Grove of inevitable rise in traffic and parking.

Ross Urquhart (0029)

No modification specified but it is indicated that H70 should be removed from the plan. Proposals to densely populate small sites of this scale is not in keeping with the current architecture or residential footprint of Corstorphine village or the current building make up along Corstorphine road generally.

Duncan Graham (0651)

No modification specified but it is indicated that proposal should be removed or scaled down.

Inverdunning (Hatton Mains) Ltd (0427)

Remove H70 from the plan.

Simon Thomson (0248)

Remove H70 from the plan.

Genna Spears (0081)

No modification specified but it is indicated that there is insufficient local infrastructure to support additional housing.

Susan Stewart (0567)

No modification specified but it is indicated there are several concerns regarding development:

- Noise relating to demolition
- Noise relating to construction
- Excess waste and rubbish and where this would be stored
- Hours of construction, notably but not limited to home working / older residents / vulnerable residents who are housebound
- Dust/waste landing on residents' cars
- Dust/waste marking residents' windows/entering the property
- Light blocking and impact on daylight
- Questions over area capacity for more parking
- Impact of the noise of any additional residents from new residential or commercial units

**Summary of responses (including reasons) by planning authority:**

**Place 16: West Edinburgh**

SAICA (0590)

The wording of Place 16 makes it clear that a collaborative, multidisciplinary masterplan approach to development across these sites will be required. There will also be a requirement for a phasing plan. The Council continues to work with all stakeholders on this process. The West Edinburgh Landscape Framework (CD065) and West Edinburgh Strategic Design Framework (CD070) are being reviewed as part of the masterplan process. Infrastructure requirements will be set out in annual action programme updates. The Council considers the wording of the West Edinburgh Development Principles to be robust and will ensure that the aims of the strategy are delivered. The Council's position in relation to primary school requirements are set out in Issue 29: Education.

**No modification proposed.**

SEPA (0012)

The Council considers that the wording at the start of criterion j. of the Development Principles, not 3.61j as referred to, reasonably reflects the provisions of Proposal BGN49 Restoration of Gogar Burn, which includes for diversion with an indicative route shown on the proposals map.

On water management, Development Principles of the Proposed Plan requires that "A Flood Risk Assessment is required and should inform the development and design/layout of the site, as shall a strategic assessment of surface water management with a view to setting out a coordinated, strategic approach to surface water management for the whole site,". Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Ratho and District Community Council (0289)

The Council's position in relation to Blue Green Network Proposals is set out in detail in issue 18. The Council's position in relation to Transport Strategy is set out in detail in issue 31. **No modification proposed.**

Rosebery Estate (Bankhead) (0618)

The Council's position in relation to healthcare contributions is set out in detail in issue 27. **No modification proposed.**

Robert Falcon (0640)

The Council's position on the spatial strategy and delivery of the strategy is set out in detail in issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council's position on economy policies is set out in detail in issue 35: Economy policies. **No modification proposed.**

West Craigs Limited (0472)

The Council's position on suggested additional greenfield sites is set out in detail in issue 9: **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council wants to see all development prioritising walking, wheeling and cycling, demonstrating high public transport accessibility, restricting private car parking and encouraging shared transport through mobility hubs.

Criterion (g) of the West Edinburgh Development Principles state that a legible hierarchy of streets, routes and spaces designed for convenient, safe movement of pedestrians, cyclists and public transport that connects all parts of the brief area. Criteria (u)-(z) also highlight the requirements in principle of active and public transport within these sites. Paragraph 3.57 also makes it clear that the Council will coordinate a collaborative, multidisciplinary master plan approach to development across these sites. The plan reflects the aims of Scottish Planning Policy (CD096), draft NPF4 (CD099) and the National Transport Strategy 2 (CD110). The Council's position in relation to transport strategy is set out in detail in Issue 31: **No modification proposed.**

Mark Ockendon (0419)

The wording of Place 16 makes it clear that a collaborative, multidisciplinary masterplan approach to development across these sites will be required. This will assess and consider any potential visual impact of future proposals through review of the West Edinburgh Landscape Framework (CD065) and the West Edinburgh Strategic Design Framework (CD070) and this work is progressing. The Council considers the wording of the West Edinburgh Development Principles to be robust and will ensure that the aims of the strategy are delivered. The Council's position in relation to transport strategy is set out in detail in Issue 31. **No modification proposed.**

Ryden LLP (0578)

The wording of Place 16 makes it clear that a collaborative, multidisciplinary masterplan approach to development across these sites will be required. There will also be a requirement for a phasing plan. The Council continues to work with all stakeholders on this process. The West Edinburgh Landscape Framework (CD065) and West Edinburgh Strategic Design Framework (CD070) are being reviewed as part of the masterplan process. Infrastructure requirements will be set out in annual action programme updates. The Council considers the wording of the West Edinburgh Development Principles to be robust and will ensure that the aims of the strategy are delivered. The Council's position in relation to primary school requirements are set out in Issue 29: Education. **No modification proposed.**

Creos Property Limited (0253)

The wording of each of the place policies in the plan makes clear they relate to land within the individual boundaries shown on the proposals maps.

The wording of Place 16 makes it clear that a collaborative, multidisciplinary masterplan approach to development across these sites will be required. There will also be a requirement for a phasing plan. The Council continues to work with all stakeholders on this process. The West Edinburgh Landscape Framework (CD065) and West Edinburgh Strategic Design Framework (CD070) are being reviewed as part of the masterplan process. Infrastructure requirements will be set out in annual action programme updates. The Council's position in relation to the spatial strategy is set out in detail in the response to issue 3: Delivery of the Strategy. The Council considers the wording of the West Edinburgh Development Principles to be robust and will ensure that the aims of the strategy are delivered. **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)-

The position of the Scottish Government is noted. **No modification proposed.**

Shelborn Edinburgh Limited (0732)

The plan makes it clear that each of the defined places (16-23) within West Edinburgh will have their own policies and requirements. Place 19 covers Edinburgh Park/South Gyle and the plan states the Edinburgh Park/South Gyle Development Principles. Place 19 is not covered by the West Edinburgh Strategic Design Framework. Place 16 covers a specific area as described in the plan. As stated in criterion (a) of the West Edinburgh Development Principles the West Edinburgh Strategic Design Framework will be reviewed as part of the collaborative, multi-disciplinary, master plan process. **No modification proposed.**

Friends of Cammo (0387)

The plan contains a number of proposed active travel routes which are highlighted in table 8 and includes measures identified in the WETA 2016 Refresh (CD073). The future development of the active travel routes proposed will be established in conjunction with the Council's active Travel Programme (CD075) and the annually updated action programme for the plan. **No modification proposed.**

NatureScot (0528)

The Council is progressing a review of the West Edinburgh Landscape Framework (CD065) and West Edinburgh Strategic Design Framework (CD070) to further inform and guide proposals. This includes input from the key agencies, including NatureScot, through the Key Agency Group. The Council considers that the wording of Development Principle c. is appropriate, following on from Development Principle a. which refers to the review of the West Edinburgh Landscape Framework and West Edinburgh Strategic Design Framework. **No modification proposed.**

Cockburn Association (0777)

The Environmental Report (CD010) sets out mitigation measures, with positive environmental effects also to be seen for this area and more generally in the Blue Green Network Proposals contained in table 1.

**No modification proposed.**

Pawel Stankiewicz (0445)

City Plan (CD001) sets a framework for connectivity across the proposed allocations and development principles to inform design. The Council is progressing a review of the West Edinburgh Landscape Framework (CD065) and West Edinburgh Strategic Design Framework (CD070) to further inform and guide proposals in response to the development principles, including how development addresses the A8. **No modification proposed.**

Hallam Land Management (0615), Tarmac (0244)

The Council's position in relation to the revised vision for West Edinburgh is set out in detail in issue 39. **No modification proposed.**

Crosswind Developments Ltd (0184)

The Council's position in relation to the revised vision for West Edinburgh is set out in detail in issue 39.

The wording of place 16 makes it clear that a collaborative, multidisciplinary masterplan approach to development across these sites will be required. There will also be a requirement for a phasing plan. The Council continues to work with all stakeholders on this process. The West Edinburgh Landscape Framework (CD065) and West Edinburgh Strategic Design Framework (CD070) are being reviewed as part of the masterplan process. Infrastructure requirements will be set out in annual action programme updates. The Council's position on the spatial strategy is set out in detail in the response to Issue 2: The Spatial Strategy and Issue 3: Delivery of the Strategy. The Council considers the wording of the West Edinburgh Development Principles to be robust and will ensure that the aims of the strategy are delivered.

This approach to development, including new roads and active travel routes will ensure that this large, complex area, which has different developers and stakeholders, can be brought forward in a cohesive and planned way and that the plan's vision for West

Edinburgh to become a vibrant, high density, mixed use extension to the city with a focus on place-making, sustainability, connectivity biodiversity and a strong landscape framework, stated in paragraph 3.56 of the plan, can be delivered.

The Council's position in relation to the mapping of the indicative layout of proposed roads, active travel and public transport routes in west Edinburgh is set out in detail in the response to Issue 31: Transport Strategy.

The position of school proposals and whether areas are either local or town centres shown on the Proposals Map (CD004) and Map 24 are indicative so exact alignment and definition is not critical. As any local or town centres shown are currently indicative they should not be included in either table 11 or 14. There is a limit to the amount of detail that can shown within one area in the proposals map without it becoming unreadable. The local/town centres are indicated in map 24. Issue 29: Education addresses education provision.

The title of Map 25 is West Edinburgh housing sites. It accurately identifies areas H59-H63 as areas where it is proposed that there will be housing. It does not state that there will only be housing proposed within these sites. The legend provided is also clear and does not have to be the same as that used for other plans. Paragraph 3.56 of the plan states that the vision is for West Edinburgh to become a vibrant, high density, mixed use extension to the city with a focus on place making, sustainability, connectivity, biodiversity and a strong landscape framework.

Aim 1 of the City Plan 2030 Aims requires the creation of communities linked by better active travel. Active travel includes walking as well as walking and wheeling. The Council considers the wording of Aim 1 of the City Plan 2030 Aims to be robust.

The Councils position relative to sustainable design can be found in issue 13: Sustainable Design whilst the Councils position in relation to Blue Green Infrastructure, Water and Amenity can be found in issue 16.

Issues relating to the Gogar Burn realignment are addressed in issue 18: Blue Green Network Proposals.

The Council's position in relation to affordable housing can be found in issue 23: Affordable Housing.

The Councils position in relation to the highlighted Strategic Business Centre area is addressed in issue 35: Economy Policies. **No modification proposed.**

#### Edinburgh Airport Limited (0761)

The Council maintains that a collaborative, multidisciplinary, masterplan approach for development, including new roads and active travel routes will be vital to ensure that this large, complex area, which has different developers and stakeholders, can be brought forward in a cohesive and planned way and that the plan's vision for West Edinburgh to become a vibrant, high density, mixed use extension to the city with a focus on place-making, sustainability, connectivity biodiversity and a strong landscape framework, stated in paragraph 3.56 of the plan, can be delivered. The Council's position in relation to the mapping of the indicative layout of proposed roads, active travel and public transport

routes in west Edinburgh is set out in detail in the response to issue 31: Transport Strategy.

The position of school proposals shown on the Proposals Map and Map 24 is indicative so exact alignment is not critical. Issue 29: Education addresses education provision.

Issues relating to the Gogar Burn realignment are addressed in Issue 9: Blue Green Network Proposals. **No modification proposed.**

The Association for the Protection of Rural Scotland (0334)

The points raised are noted. Detailed issues are being considered through the review of the existing West Edinburgh Framework documents (CD065 & CD070). The plan provides for sufficient level of detail and for the review of these documents. **No modification proposed.**

Archie Clark (0003)

The current plans are indicative. The wording of Place 16 makes it clear that a collaborative, multidisciplinary masterplan approach to development across these sites will be required. This and the consideration of planning applications will ensure that suitable local centres with adequate provision are provided. **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The Council's position in relation to the revised vision for West Edinburgh is set out in detail in issue 39.

The Council's position in relation to the spatial strategy and delivery of the strategy is set out in detail in issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy.

The Council's position in relation to the potential transport impacts of West Edinburgh is set out in detail in the response to Issue 31: Transport Strategy.

The wording of Place 16 makes it clear that a collaborative, multidisciplinary masterplan approach to development across these sites will be required. **No modification proposed.**

The Council considers that the glossary is suitably thorough. No modification is proposed, however should the reporter be minded the glossary could be updated to include TVIA to provide more clarity.

Corstorphine Community Council (0799)

The development principles for proposals are to be read as part of City Plan as a whole, including subject policies relating to these issues. The Council is satisfied that the net provision made by City Plan provides for consideration of this proposal.

Net Zero is defined in the Plan Glossary (CD001). Policy Env 8 sets out how net zero will be achieved for new buildings.

Policy Env 7 addresses this requirement. Issue 13: Sustainable Design addresses both Env 7 and Env 8.

Policy Env 34 sets out requirements in relation to air quality amongst other matters. In the course of a planning application the Council can consult with appropriate consultees to establish if/when further work is needed to support an application and assess compliance with this policy. The Council's position in respect to the transport strategy is set out in issue 31. Active travel is addressed in issue 33. Healthcare and Education are addressed in Issues 27 and 29. **No modification proposed.**

Anna Goodwin (0302)

The Council considers the wording of place 16 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

Simon Thompson (0248)

The Council's position in relation to the revised vision for West Edinburgh is set out in detail in Issue 39. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council considers the wording of place 16 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. Policy Env 9 (World Heritage Sites) would be applicable in the assessment of any application that could harm the qualities of World Heritage Sites. The Council's position relative to the historic environment is covered in detail in Issue 14: Historic Environment Policies. Building heights and landscape considerations are covered in Issue 11: Design and Placemaking. **No modification proposed.**

## **H59: Land at Turnhouse Road (SAICA)**

SAICA (0590)

Issue 29: Education addresses education considerations. **No modification proposed.**

Ryden LLP (0578)

The wording of Place 16 makes it clear that a collaborative, multidisciplinary masterplan approach to development across these sites will be required. This will consider density, scale, height and massing. It will also refine how school infrastructure shall be provided across the area. Issue 29: Education addresses education matters. **No modification proposed.**

Genna Spears (0081)

Policy Inf 3 (Infrastructure Delivery and Developer Contributions) states that development will be supported where there is sufficient infrastructure capacity already available or can be delivered at the appropriate time, or where the development can deliver the infrastructure necessary to mitigate any negative impacts. This should be secured by legal agreement. Where, by nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions shall be sought. The Council's position in relation to infrastructure and contributions is set out in detail in Issues 27-30. **No modification proposed.**

#### **H60: Turnhouse Road**

##### Cramond & Barnton Community Council (0243)

The Council's position on the spatial strategy and delivery of the strategy is set out in detail in issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council's position on the potential transport impacts of West Edinburgh is set out in detail in the response to Issue 31: Transport Strategy. The Council's position in relation to the economy and commercial development is set out in detail in Issues 35 and 36. **No modification proposed.**

##### Mrs Patricia Stott (0349)

The Council's position on economy and commercial development is set out in detail in Issues 35 and 36. The Council's position in relation to the spatial strategy is set out in detail in the response to issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. **No modification proposed.**

##### Inverdunning (Hatton Mains) Ltd (0427)

The Council's position on the spatial strategy is set out in detail in the response to issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. Allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

##### Simon Thomson (0248)

The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development (CD055). The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to issue 3 Delivery of the Strategy. **No modification proposed.**

Genna Spears (0081)

Policy Inf 3 (Infrastructure Delivery and Developer Contributions) states that development will be supported where there is sufficient infrastructure capacity already available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts. This should be secured by legal agreement. Where, by nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions shall be sought. The Council's position in relation to infrastructure and contributions is set out in detail in issues 27-30. **No modification proposed.**

**H61: Crosswinds**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The Council's position in relation to the revised vision for West Edinburgh is set out in detail in Issue 39. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Ratho and District Community Council (0289)

Matters relating to noise arising from the airport have been addressed in Issue 11: Design and Placemaking policies.

Matters relating to airport safeguarding relative to Blue Green Infrastructure are addressed in Issue 16: Blue Green Infrastructure, Water and Amenity policies.

**No modification proposed.**

Simon Thomson (0248)

Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. The Council's position on transport strategy is covered in Issue 31. **No modification proposed.**

Edinburgh Airport Noise Advisory Board (0691)

Matters relating to noise arising from the airport are addressed in Issue 11: Design and Placemaking policies. **No modification proposed.**

Genna Spears (0081)

Policy Inf 3 (Infrastructure Delivery and Developer Contributions) states that development will be supported where there is sufficient infrastructure capacity already available or can

be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts. This should be secured by legal agreement. Where, by nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions shall be sought.

The Council's position in relation to infrastructure and contributions is set out in detail in issues 27-30. **No modification proposed.**

Crosswinds Developments Ltd (0184)

The Council's position on density is set out in detail in Issue 12: Density which states the position on the combination of policies on sites. Increased density is an important factor in achieving 20 minute neighbourhoods and communities which sustain local facilities and public transport whilst making the most efficient use of the limited space the city. It ensures sites are not under-developed. Increasing density can also enhance an area's character and lead to better placemaking, providing visual focal points. It is not considered that a development is inherently unachievable by being required to meet the necessities of sustainable development such as open space, meeting the needs of affordable housing provision and being built at an appropriate density. These factors should be considered as part of the acquisition, initial layout and eventual detailed design of a development. **No modification proposed.**

West Craigs Limited (0472)

Support separate school provision at H61  
Support Noted.

**H62: Land adjacent to Edinburgh Gateway**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The Council's position in relation to the revised vision for West Edinburgh is set out in detail in Issue 39. **No modification proposed.**

West Craigs Limited (0472)

The Council maintains that a collaborative, multidisciplinary, masterplan approach for development, including new roads and active travel routes will be vital to ensure that this large, complex area, which has different developers and stakeholders, can be brought forward in a cohesive and planned way and that the plan's vision for West Edinburgh to become a vibrant, high density, mixed use extension to the city with a focus on place-making, sustainability, connectivity biodiversity and a strong landscape framework, stated in paragraph 3.56 of the plan, can be delivered.

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020. (CD026) The capacities of sites in general is covered in Issue 20: Assessment of Housing Land Supply.

Issue 29: Education addresses education matters. **No modification proposed.**

Edinburgh Airport Noise Advisory Board (0691)

Matters relating to noise arising from the airport are addressed in Issue 11: Design and Placemaking policies. **No modification proposed.**

Crosswind Developments Ltd (0184)

The Council's position in relation to the revised vision for West Edinburgh is set out in detail in issue 39. **No modification proposed.**

**H63: Edinburgh 205**

Murray Estates (0197), SEEDCo (0198), Persimmon Homes (0495), Taylor Wimpey (0200), BDW Trading (0350), Robertson Residential Group Limited (0490)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the spatial strategy is set out in detail in the response to Issue 3 Delivery of the Strategy. The Council's position on the revised vision for West Edinburgh is set out in detail in Issue 39. **No modification proposed.**

Murray Estates (0197), SEEDCo (0198), Persimmon Homes (0495), Taylor Wimpey (0200), BDW Trading (0350), Robertson Residential Group Limited (0490), Stewart Milne Homes (0118)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the spatial strategy is set out in detail in the response to issue 3: Delivery of the Strategy. **No modification proposed.**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The Council's position on the revised vision for West Edinburgh is set out in detail in Issue 39. **No modification proposed.**

Ratho and District Community Council (0289)

Matters relating to noise arising from the airport are addressed in Issue 11: Design and Placemaking policies.

Matters relating to airport safeguarding relative to Blue Green Infrastructure are addressed in Issue 16: Blue Green Infrastructure, Water and Amenity policies.

**No modification proposed.**

Stirling Developments Limited (0303)

The Council's position on the revised vision for West Edinburgh is set out in detail in Issue 39. The Council's position on suggested additional greenfield sites is addressed in Issue 9: Suggested additional greenfield sites. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. The Council's position on the plans transport strategy can be found in Issue 31: Transport Strategy. **No modification proposed.**

Simon Thomson (0248)

Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Edinburgh Airport Noise Advisory Board (0691)

Matters relating to noise arising from the airport are addressed in Issue 11: Design and Placemaking policies. **No modification proposed.**

SEEDCo (0198)

The Council's position on the revised vision for West Edinburgh is set out in detail in Issue 39. **No modifications proposed.**

Corstorphine Community Council (0799)

Environmental Protection will be consulted in the assessment of any future application to establish what Noise Assessment is required. The Council is updating the West Edinburgh Strategic Design Framework and this will inform Noise Impact Assessment work. **No modification proposed.**

West Craigs Limited (0472)

Support separate school provision at H63  
Support noted.

**Place 17: Edinburgh Airport**

Edinburgh Airport Limited (0761)

The airport boundary is identified within the north west proposals map (CD004) as well as the online City Plan map. Place 17 makes it clear that the policy refers to the approved, or subsequently approved, master plan. The airport's internal masterplan was not approved by the Council. The Council maintains that a collaborative, multidisciplinary, masterplan approach for development, including new roads and active travel routes, will be vital to ensure that this large, complex area, which has different developers and stakeholders, can

be brought forward in a cohesive and planned way and that the plan's vision for West Edinburgh to become a vibrant, high density, mixed use extension to the city with a focus on place-making, sustainability, connectivity biodiversity and a strong landscape framework, stated in paragraph 3.56 of the plan, can be delivered. Criterion (a) of the West Edinburgh Development Principles states that the West Edinburgh Landscape Framework (CD065) and West Edinburgh Strategic Design Framework (CD070) will be reviewed. The Council considers the wording of the policy to be robust and will enable the aims of the strategy to be achieved. The Council's position in relation to policy Env 31 is set out in detail in Issue 17: Open Space Policies. **No modification proposed.**

Lord Dalmeny (0475)

This area of land remains undeveloped and retains a countryside designation in City Plan as it currently does in the adopted Edinburgh Local Development Plan. **No modifications proposed.**

Mr Roger Thomas (0345)

City Plan (CD001) features a number of safeguarding designations (such as the second airport runway) which are appropriate and commonly used measures for LDPs and Proposals Maps. Safeguards ensure that the potential future use and development of land is not prejudiced. **No modification proposed.**

Frances Guy (0589)

City Plan (CD001) features a number of safeguarding designations (such as the second airport runway) which are appropriate and commonly used measures for LDPs and Proposals Maps. Safeguards ensure that the potential future use and development of land is not prejudiced. **No modification proposed.**

Robert Falcon (0640)

City Plan (CD001) features a number of safeguarding designations (such as the second airport runway) which are appropriate and commonly used measures for LDPs and Proposals Maps. Safeguards ensure that the potential future use and development of land is not prejudiced. **No modifications proposed.**

SEPA (0012)

Place Policy 16 and Place Policy 17 relate to different areas. Emp 4 is a designation that covers both these areas. The Council considers it reasonable for this to be the case given these designations relate to different policy purposes.

The Council considers that the Development Principles c. j. and s. are relevant to the Gogar Burn and align sufficiently with the objective of the delivery of the Gogar Burn diversion.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance. Policy Env 35 addresses flood risk. It is an established practice to consult with

the Council's flood prevention officer through the planning application process. **No modification proposed.**

Cockburn Association (0777)

The Environmental Report (CD010) sets out the mitigation measures in question. The Council considers that these measures are clear as stated. **No modification proposed.**

L Gunstensen (0663)

City Plan (CD001) features a number of safeguarding designations (such as the second airport runway) which are appropriate and commonly used measures for LDPs and Proposals Maps. Safeguards ensure that the potential future use and development of land is not prejudiced.

The Council considers it sufficiently clear that proposals are distinct from safeguards and as such it is not necessary for City Plan to set this out further.

The safeguard is addressed in the Environmental Report since the safeguard (and Place Policy 17) are both part of the City Plan which the ER has to assess. It is not for the ER to assess a hypothetical proposal beyond this since this is not what is contained in City Plan. **No modification proposed.**

Esme Clelland (0778), Jamie Wallace (0167), RSPB (0648), Anna Brand (0742), Spokes Lothian (0545)

City Plan (CD001) features a number of safeguarding designations (such as the second airport runway) which are appropriate and commonly used measures for LDPs and Proposals Maps. Safeguards ensure that the potential future use and development of land is not prejudiced. **No modification proposed.**

Hallam Land Management (0615)

City Plan (CD001) was approved to go to the statutory Period of Representation by a decision of the Planning Committee on 29 September 2021. In terms of the Local Development Plan process it is therefore the settled view of the Council in the terms of Scottish Government Circular 6/2013 Development Planning. (CD116)

The safeguarding proposal remains as it does in the Adopted 2016 LDP (CD039) and was not a matter under review for City Plan. As such it did not feature as a 'main issue' in choices (CD022), nor as a matter requiring the same level of focus in the Environmental Report (CD024) as other measures in City Plan.

City Plan features a number of safeguarding designations (such as the second airport runway) which are appropriate and commonly used measures for LDPs and Proposals Maps. Safeguards ensure that the potential future use and development of land is not prejudiced.

The Council's position in terms of suggested additional greenfield sites is addressed in issue 9. The Council considers the wording of the policy to be robust and will enable the aims of the strategy to be achieved. **No modification proposed.**

Edinburgh Airport Noise Advisory Board (EANAB) (0720)

City Plan (CD001) features a number of safeguarding designations (such as the second airport runway) which are appropriate and commonly used measures for LDPs and Proposals Maps. Safeguards ensure that the potential future use and development of land is not prejudiced.

Matters relating to airport safeguarding relative to Blue Green Infrastructure are addressed in Issue 16: Blue Green Infrastructure, Water and Amenity policies.

Matters relating to noise arising from the airport have been addressed in Issue 11: Design and Placemaking policies. **No modification proposed.**

Anna Goodwin (0302)

The Council considers the wording of place 17 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

**Place 18: Gogarburn**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Anna Goodwin (0302)

The Council considers the wording of place 18 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

NatWest (0477)

Support Noted.

**Place 19: Edinburgh Park/South Gyle.**

Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Government's National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2, (CD111) which supports investment in public transport. The introduction of free public transport is out with the remit of the City Plan.

The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund. (CD0153)

The Council considers that the current wording of the plan and its policies are robust and will help deliver the aims of the strategy. **No modification proposed.**

Hallam Land Management (0615), Tarmac (0244)

Map 7 on page 27 identifies the site correctly as housing as part of a Strategic Business Centre (LDP 2016). The current adopted Edinburgh LDP (CD039) states that the vision for Edinburgh Park/ South Gyle is to create a thriving business and residential community. It also states in the vision, that there will be a more balanced mix of uses. Place 19 also advocates a range of mixed use proposals.

The Council's position in relation to the revised vision for Edinburgh Park/ South Gyle is set out in detail in issue 39. **No modification proposed.**

Redline Planning Services Ltd (0673)

Map 26 shows that there are areas within Edinburgh Park/ Gyle Centre which are indicated for business led redevelopment, areas of mixed use redevelopment and housing led mixed redevelopment. Map 26 also shows a range of proposed active and public transport proposals. The Council considers the wording of the criterion (c ) to be robust and it will enable the aims of the policy and the overall strategy to be delivered. The Council's position in relation to suggested other sites is set out in detail in Issue 10: Suggested other sites. **No modification proposed.**

BDW Trading (0350)

The Council's position on suggested additional sites is set out in detail in Issue 10. The Council considers the wording of criterion (c ) to be robust and will enable the aims of the policy and the overall strategy to be delivered. **No modification proposed.**

Pawel Stankiewicz (0445)

The current layout indicated in map 26 of the plan has been informed by the Transport Assessment which informed the Proposed Plan strategy. Environmental protection will be consulted on any development of this scale at the project level stage and will have to comply with Policy Env 34 (Pollution and Air, Water and Soil Quality). **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance. (CD077) Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The proposed active travel and public transport proposals indicated in map 26 have been informed by the Transport Appraisal (CD014) which informed the Proposed Plan strategy. The Council considers that these measures are extensive and will enable the strategy of the plan to be delivered. **No modification proposed.**

Ambassador Group (0683)

Support is noted.

Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. It is acknowledged that increased permeability is to an extent dependent on individual sites and applications coming forward. **No modification proposed.**

Shelborn Edinburgh Limited (0732)

The proposals map (CD004) clearly outlines the boundary of Edinburgh Park/South Gyle. The Council considers that map 26 is also suitably detailed and key provides the required level of information. The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). The capacities of sites in general are covered in Issue 20: Assessment of Housing Land Supply. **No modification proposed.**

Parabola Edinburgh Limited (0723)

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020. The capacities of sites in general are covered in Issue 20: Assessment of Housing Land Supply. **No modification proposed.**

Archie Clark (0003)

The proposed active travel and public transport proposals indicated in map 26 of the plan has been informed by the Transport Appraisal (CD014) which informed the Proposed Plan strategy. The Council considers that these measures are extensive and will enable the strategy of the plan to be delivered. The Council considers that map 26 is suitably detailed and key provides the required level of information. **No modification proposed.** The Council does not see it necessary to update the Glossary to include a definition of Controlled Parking Zones. No modification is proposed, however, should the reporter be so minded a definition of Controlled Parking Zones could be included in the glossary for additional clarity.

Corstorphine Community Council (0799)

Further details with regards to accessibility standards will be assessed at the project level stage and will have to comply with Edinburgh Design Guidance (CD047). Any future application will also have to comply with building standards legislation. Map 26 highlights the proposed active travel and public transport measures which have been informed by the Transport Assessment which informed the Proposed Plan strategy. Criterion (d) of the Gyle Centre states that housing development should provide, or contribute towards education infrastructure, healthcare and community facilities. **No modification proposed.**

Royal Mail Group Limited (0501)

Whilst the Royal Mail Group may need their existing sites for current business requirements, those requirements may change over the life-time of the plan. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. The site also currently falls within an area which has been allocated for business led redevelopment under the adopted LDP (CD039). City Plan (CD001) also has this site as being within an area defined as being for business led redevelopment.

The Agent of Change principle puts the onus on developers of new, noise-sensitive properties to effectively deal with potentially problematic noise. **No modification proposed.**

Genna Spears (0081)

Policy Inf 3 (Infrastructure Delivery and Developer Contributions) states that development will be supported where there is sufficient infrastructure capacity already available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts. This should be secured by legal agreement. Where, by nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions shall be sought.

The Council's position in relation to infrastructure and contributions is set out in detail in issues 27-30. **No modification proposed.**

Anna Goodwin (0302)

The Council considers the wording of place 19 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

APAM / Bankfoot APAM (0355)

Support noted.

**Place 20: Royal Highland Centre**

Creos Property Limited (0253)

The wording of each of the place policies in the plan makes it clear that they relate to land within the individual boundaries shown on the proposals maps.

The Council will continue to work with all stakeholders in the review of the Edinburgh Framework documents (CD065 & CD070) and masterplan and phasing work. Further details will be set out in future annually updated action programmes. Further details regarding the Areas of Economic Importance, one of which the RHC lies within, are provided in Table 13.

Place 20 states that the development and enhancement of the Royal Highland Centre (RHC) will be supported within the boundary defined on the proposals map, provided proposals accord with the approved or subsequently approved masterplan. Ancillary uses will only be permitted where it can be demonstrated that these are linked to the primary activities of the RHS. The plan explains that this policy guides proposals for the further

development and enhancement of the RHC on land to the north of the A8. The policy also safeguards the site for the long term expansion of Edinburgh Airport and in turn safeguards land at Norton Park to the south of the A8 of the long term relocation of the RHC, in accordance with NPF3 (CD097).

City Plan (CD001) features a number of safeguarding designations which are appropriate and commonly used measures for LDPs and Proposals Maps. These safeguards are also included within the current adopted LDP (CD039).

The Council considers the wording of the place based policies to be robust and will ensure that the aims of the strategy are delivered. **No modification proposed.**

#### Taylor Wimpey and Hallam Land Management Ltd (0603)

Place 20 states that the development and enhancement of the Royal Highland Centre (RHC) will be supported within the boundary defined on the proposals map, provided proposals accord with the approved or subsequently approved masterplan. Ancillary uses will only be permitted where it can be demonstrated that these are linked to the primary activities of the RHS. The plan explains that this policy guides proposals for the further development and enhancement of the RHC on land to the north of the A8. The policy also safeguards the site for the long term expansion of Edinburgh Airport and in turn safeguards land at Norton Park to the south of the A8 of the long term relocation of the RHC, in accordance with NPF3. (CD097)

City Plan (CD001) features a number of safeguarding designations which are appropriate and commonly used measures for LDPs and Proposals Maps. These safeguards are also included within the current adopted LDP (CD039).

The Council considers the wording of the place based policies to be robust and will ensure that the aims of the strategy are delivered. The Council's position in relation to suggested additional greenfield sites is set out in detail in the response to issue 9: Suggested additional greenfield sites. **No modification proposed.**

#### Royal Highland & Agricultural Society of Scotland (0482)

The boundary of the RHC is clearly defined on the proposals map and it does not include the field to the north of Fairview Road. The current adopted LDP (CD039) also does not include this field as part of the RHC.

The Council considers the wording of place policy 20 and table 13 to be robust and will ensure that the aims of the strategy are delivered. **No modification proposed.**

#### SEPA (0012)

The wording of the Place Policy is clear in supporting the development and enhancement of the Royal Highland Centre and also safeguards against development which would prejudice the use of this land for future airport expansion. The Council considers the two objectives can be accommodated together and are sufficiently clearly set out.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance

(CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Mr Roger Thomas (0345)

City Plan (CD001) features a number of safeguarding designations (such as the second airport runway) which are appropriate and commonly used measures for LDPs and Proposals Maps. Safeguards ensure that a potential future use and development of land is not prejudiced. **No modification proposed.**

Anna Goodwin (0302)

The Council considers the wording of place 20 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

### **Place 21: Riccarton University Campus and Business Park**

Heriot Watt University (0468)

The Council considers the wording of Place Policy 21 and Table 13 to be robust and will ensure that the aims of the strategy are delivered. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. **No modification proposed.**

Anna Goodwin (0302)

The Council considers the wording of place 21 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

### **Place 22: Maybury**

Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2, (CD111) which supports investment in public transport.

The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153).

The introduction of free public transport is out with the remit of the City Plan.

The Council considers that the current wording of the plan and its policies are robust and will help deliver the aims of the strategy. **No modification proposed.**

West Craigs Limited (0472)

Housing land audits are carried out annually, agreed with Homes for Scotland as the representative of housing developers (CD055). Updates for 2022 will be published in due course. **No modification proposed.**

Rosebery Estate (Bankhead) (0618)

The objection to WE12 is noted. WE12 is identified in the Plan (CD001) as a potential option. WE1 is currently being progressed in discussion with the redesign of Maybury Junction (R7). The Council considers that the criterion (m) should remain as it has been informed by the plan's Transport Appraisal (CD014) and is part of the ongoing West Edinburgh Transport Improvement Programme (WETIP) (CD072).

The Council's position on Transport contributions is addressed in Issue 30: Infrastructure Delivery- Transport. The Council's position on healthcare infrastructure is addressed in Issue 27: Infrastructure Delivery and Developer Contributions. The Council's position on the revised vision for West Edinburgh is set out in detail in Issue 39. **No modification proposed**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

The wording of the introduction of Place Policy 22 is grammatically correct. **No modification proposed.**

Archie Clark (0003)

The active travel and public transport proposals indicated in map 27 have been informed by the Transport Appraisal (CD014) which informed the Proposed Plan strategy. HSG 20 (Cammo) is no longer shown, as development on site has largely been completed. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council wants to see all development prioritising walking, wheeling and cycling, demonstrating high public transport accessibility, restricting private car parking and encouraging shared transport through mobility hubs.

The plan reflects the aims of Scottish Planning Policy (CD096), draft NPF4 (CD099) and the National Transport Strategy 2 (CD110). The Council's position in relation to transport strategy is set out in detail in Issue 31: Transport Strategy. **No modifications proposed.**

Corstorphine Community Council (0799)

The active travel and public transport proposals indicated in Map 27 have been informed by the Transport Appraisal (CD014) which informed the Proposed Plan strategy. Criterion (m) requires high quality pedestrian and cycle routes within the site and criterion (b) and (c) also refer to active travel improvements. **No modification proposed.**

The Association for the Protection of Rural Scotland (0334)

Place Policy 22 states that the housing site was allocated for development and removed from the greenbelt in the Edinburgh Local Development Plan (2016) (CD039). Map 27 is indicative. Paragraph 3.68 states that comprehensive master planning and phasing of development will be required, drawing upon place making and street design principles. **No modification proposed.**

Pawel Stankiewicz (0445)

The current layout indicated in map 27 of the plan has been informed by the Transport Appraisal (CD014) which informed the Proposed Plan strategy. **No modification proposed.**

SEPA (0012)

The Council agrees that it is not proposed for the Gogar Burn realignment to be routed through this site. City Plan does not indicate this. **No modification proposed.**

Cramond & Barnton Community Council (0243)

A significant level of work is still to be carried out within the site to produce housing completions. It is therefore valid that Place Policy 22 is included within the proposed plan to guide any revised proposals. **No modification proposed.**

Mrs Patricia Stott (0349)

A significant level of work is still to be carried out within the site to produce housing completions. It is therefore valid that Place Policy 22 is included within the proposed plan to guide any revised proposals. **No modification proposed.**

Genna Spears (0081)

Policy Inf 3 (Infrastructure Delivery and Developer Contributions) states that development will be supported where there is sufficient infrastructure capacity already available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts. This should be secured by legal agreement. Where, by nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions shall be sought.

The Council's position in relation to infrastructure and contributions is set out in detail in issues 27-30. **No modification proposed.**

Anna Goodwin (0302)

The Council considers the wording of place 22 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

RSPB (0648)

Support for text in section 3.68c noted.

## **Place 23: Builyeon Road**

### Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport. The introduction of free public transport is out with the remit of the City Plan.

The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153).

The Council considers that the current wording of the plan and its policies are robust and will help deliver the aims of the strategy. **No modification proposed.**

### Archie Clark (0003)

Place Policy 23 states that the housing site was allocated for development and removed from the greenbelt in the Edinburgh Local Development Plan (2016) (CD039). It has therefore already been subject to the Examination process. **No modification proposed.**

### Queensferry & District Community Council (0568)

Place Policy 23 states that the housing site was allocated for development and removed from the greenbelt in the Edinburgh Local Development Plan (2016) (CD039). It has therefore already been subject to the Examination process.

Criterion (a) of the Builyeon Road development principles is to address the education mitigation measures and transport mitigation measures. A masterplan has now been approved for the site (16/01797/PPP) (CD156) & (21/04019/AMC) (CD157). These matters will also be addressed at the project level stage. **No modification proposed.**

### Living Streets Edinburgh Group (0486)

The Council wants to see all development prioritising walking, wheeling and cycling, demonstrating high public transport accessibility, restricting private car parking and encouraging shared transport through mobility hubs.

The plan reflects the aims of Scottish Planning Policy (CD096), draft NPF4 (CD099) and the National Transport Strategy 2 (CD110). The Council's position on transport strategy is set out in detail in Issue 31: Transport Strategy. **No modification proposed.**

### Pawel Stankiewicz (0445)

Environmental Protection will be consulted on any development of this scale at the planning application stage and the development will have to comply with Policy Env 34 (Pollution and Air, Water and Soil Quality). **No modification proposed.**

Anna Goodwin (0302)

The Council considers the wording of place 23 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

#### **HSG4: West Newbridge**

Ratho and District Community Council (0289)

Matters relating to airport safeguarding relative to Blue Green Infrastructure are addressed in Issue 16: Blue Green Infrastructure, Water and Amenity policies.

**No modification proposed.**

Jansons Property (0733)

HSG 4 was allocated for housing development in the Edinburgh Local Development Plan (2016) (CD039). It has therefore already been subject to the Examination process. **No modification proposed.**

#### **HSG 5: Hillwood Road**

Ratho and District Community Council (0289)

HSG 4 was allocated for housing development in the Edinburgh Local Development Plan (2016) (SC039). It has therefore already been subject to the Examination process. Table 2 in the plan confirms that environmental concerns such as the proximity of the site to nearby sources of noise, including aircraft noise, must be addressed through a comprehensive masterplan for the whole site. **No modification proposed.**

#### **HSG7: Edinburgh Zoo**

Genna Spears (0081)

HSG 7 was allocated for housing development in the Edinburgh Local Development Plan (2016) (CD039). It has therefore already been subject to the examination process. **No modification proposed.**

Robin Knops (0494)

HSG 7 was allocated for housing development in the Edinburgh Local Development Plan (2016) (CD039). It has therefore already been subject to the examination process. **No modification proposed.**

Peter Wilkinson (0493)

HSG 7 was allocated for housing development in the Edinburgh Local Development Plan (2016) (CD039). It has therefore already been subject to the Examination process. Table 2 in the plan highlights that a flood risk assessment is required and should inform the development and layout of the site. **No modification proposed.**

#### **H64: Land at Ferrymuir**

##### Queensferry & District Community Council (0568)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. **No modification proposed.**

##### Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

##### Inverdunning (Hatton Mains) Ltd (0427)

Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

#### **H65: Old Liston Road**

##### Robyn Mackay (0005)

Table 2 of the plan states that development should accord with the development principles as set out in Appendix D (CD002). Appendix D sets out a variety of principles relating to design and amenity that any future development will have to accord with. All of these material considerations will also need to be considered at the planning application stage. **No modification proposed.**

#### **H66: St. Johns Road (A)**

##### Duncan Graham (0651)

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). The capacities of sites in general is covered in Issue 20: Assessment of Housing Land Supply. Table 2 of the plan states that development should accord with the development principles as set out in Appendix D (CD002). Appendix D

sets out a variety of principles relating to design and amenity that any future development will have to accord with. All of these material considerations will also need to be considered at the planning application stage. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position on the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is considered in the Council's response to Issue 20 Assessment of Housing Land Supply. **No modification proposed.**

Genna Spears (0081)

Policy Inf 3 (Infrastructure Delivery and Developer Contributions) states that development will be supported where there is sufficient infrastructure capacity already available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts. This should be secured by legal agreement. Where, by nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions shall be sought.

The Council's position on infrastructure and contributions is set out in detail in issues 27-30. **No modification proposed.**

**H67: St. Johns Road (B)**

Sheena Moffat (0366)

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). The capacities of sites in general is covered in Issue 20: Assessment of Housing Land Supply. Table 2 of the plan states that development should accord with the development principles as set out in Appendix D (CD002). Appendix D sets out a principles which relates to the provision of an active frontage. All of the material considerations listed will need to be considered at the planning application stage. **No modification proposed.**

Lynn Dorio (0622)

All of the material considerations listed will need to be considered at the planning application stage. **No modification proposed.**

Anna Goodwin (0302)

All of the material considerations listed will need to be considered at the planning application stage. **No modification proposed.**

Genna Spears (0081)

Policy Inf 3 (Infrastructure Delivery and Developer Contributions) states that development will be supported where there is sufficient infrastructure capacity already available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts. **Reporter's conclusions:**

**Reporter's recommendations:**

Issue 7	Proposed Sites: South West Edinburgh.	
Development plan reference:	Part 3: pages 84-92, part 4: Table 2 pages 162- 163.	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):		
<div><div><div>Anna Durlo (0039) Archie Clark (0003) Caledonian Packaging Ltd (0635) Chesser Engineering Ltd (0369) Chris Brown (0051) Cockburn Association (0777) Cordatus Property LP (0533) Defence Infrastructure Organisation (0124) Denise Hill (0637) Frederick Innes (0088) Gordon Miller (0520) Gym Juniors (0762) Hallam Land Management (0615) Inverdunning (Hatton Mains) Ltd (0427) Isabel Brown (0087)</div><div>Juniper Green &amp; Baberton Mains Community Council (0306) Living Streets Edinburgh Group (0486) Mark Ockendon (0419) Mr Archie Clark (0003) NatureScot (0528) Pawel Stankiewicz (0445) Richard Marsh (0165) Richard Parkinson (0422) Royal Mail Group Limited (0501) SEPA (0012) Simon Thomson (0248) Telereal Trillium (0540) Wester Hailes Land and Property Development Company (0064)</div></div></div>		
Provision of the development plan to which the issue relates:	This section of the plan sets out place policies and identifies housing proposals in South West Edinburgh.	
Planning authority's summary of the representation(s):		
<p><b><u>HSG31: Curriemuirend. (Place 24)</u></b></p> <p><u>Hallam Land Management (0615)</u></p> <p>Hallam objects to the place proposals for South-West and West Edinburgh.</p> <p>Balerno does not feature in any settlement or place policy despite being in South West Edinburgh. The whole South West Edinburgh section appears to cover South East and South West. It is confusing, inconsistent and incoherent. This section on South West Edinburgh needs a complete review and review of Balerno before any decisions on a finalised plan is made.</p> <p>Many of the sites identified for high density development are new allocations and will compete for limited infrastructural capacity. They are not preferable to alternative locations in South West Edinburgh.</p> <p>There has been a significant change in proposals by the Council when considering proposals for West and South-West Edinburgh.</p> <p><u>Juniper Green &amp; Barberton Main Community Council (0306), Archie Clark (0003)</u></p>		

Inappropriate site. Site is green space that is needed by local community. Site should be retained in its entirety as a public park and used for recreational purposes.

Gordon Miller (0520)

Inappropriate site. Site is green space that is needed by local community. Site should be retained in its entirety as a public park and used for recreational purposes. Curriemuirend Park is a Millennium Woodland supporting a wide variety of plant and animal life. The park should be retained in line with Edinburgh Council's own Biodiversity Action Plan. A survey against Edinburgh Council's notable Species List should be prioritised.

Pawel Stankiewicz (0445)

Shouldn't be developed to preserve the biodiversity of the semi-mature park also as an amenity for the surrounding area and to not increase the number of people living in noise and pollution from the Edinburgh bypass.

Living Streets Edinburgh Group (0486)

No objection to inclusion of site but pedestrian priority and a largely car free development should be an underpinning principle.

Anna Durlo (0039)

Support allotments but not new housing as this will remove part of green area, which is crucial for reducing noise and pollution from the bypass, the noise and pollution levels are already quite high. Reduce Wester Hailes Road to a single lane carriage which will increase traffic. Close a slip road, which will increase pollution from traffic on by-pass and Wester Hailes Road.

SEPA (0012)

No flood risk assessment (FRA) is required, but review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site -this should be investigated further.

Mark Ockendon (0419)

Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life). Should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights.

**H71: Gorgie Park Close**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owner's but an exercise carried out by Pegasus suggests

there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

Royal Mail Group Limited (0501)

The Royal Mail assets listed (including 3 Gorgie Park Road, EH14 1NL) are all allocated for residential development. These properties are important assets for Royal Mail and there is no short, medium- or long-term interest or intention in relocating the Delivery Offices to an alternative location. The housing allocations proposed at each of these sites are therefore not considered to be deliverable and should be removed from the emerging Local Development Plan. Proposed housing would also not be compatible with Royal Mail operations in terms of potential noise and disturbance to residents.

**H72: West Gorgie Park**

Chesser Engineering Ltd (0369)

Council have not provided information or support for businesses that would have to relocate. Suitable land for relocation (within City bypass) is not being provided. Site is being allocated but council have no plans to actively deliver it.

**H73: Gorgie Road (Caledonian Packaging)**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence.

Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

Caledonian Packaging Ltd (0635)

A red area has been marked and described as belonging to Caledonian Packaging. Whilst not particularly clear the area marked covers at least seven separate owners.

Frederick Innes (0088)

There are two areas incorrectly shown as part of the plan for reference H73. a washhouse which adjoins the building number 499 and a garden which is adjacent to the aforementioned washhouse and the building number 499. These are privately owned by habitations 499A and 501 jointly. The proposed plan is incorrect by including these two areas.

SEPA (0012)

A flood risk assessment (FRA) is requested in Proposed Plan Appendix D, and SEPA agrees this is necessary. A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required. Site will likely be constrained due to flood risk and may not be suitable for residential development. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site - this should be investigated further.

**H74: Craiglockhart Avenue.**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

Denise Hill (0637)

Development sympathetic to the canal side setting would be welcome – following concerns: Development should not exceed the two storey level of current commercial buildings on the site, and be designed to minimise overlooking into the gardens and windows of the properties on Craiglockhart Gardens directly backing onto the site, in order not to shadow and to preserve privacy of current residents. Development on the proposed

site must address the pressure on local sewerage/ drains and ideally facilitate a solution to the existing flooding issues. Parking in Craiglockhart Gardens and surrounding streets will be increasingly burdened as a result of developments adjacent on Craiglockhart Avenue and Slateford Road. Any new development must take parking requirements and impacts into account

Richard Parkinson (0422)

The proposed development must ensure consideration is given to: The impact of the development on drainage. The impact of the development on traffic. Safe pavements in the area.

SEPA (0012)

The site is elevated above the Water of Leith, and no flood risk assessment (FRA) is likely to be needed from this source of flooding. However, the site appears to be directly adjacent and below the Canal. Reference made to flooding in basements of Allan Park Drive and the source could be from the canal. Consideration should be given to the risk the canal poses and contact should be made with Scottish Canals, especially if surface water is to be discharged to the canal as suggested in the draft SFRA.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site - this should be investigated further.

#### **H75: Lanark Road**

Telereal Trillium (0540)

Welcomes the housing-led site designation under H75 for the TT site at Craiglockhart Avenue West, but objects to the naming as "Lanark Road". This is misleading. Requests the re-naming to Craiglockhart Avenue West site.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

SEPA (0012)

The site appears to be directly adjacent and below the Canal. Consideration should be given to the risk the canal poses and contact should be made with Scottish Canals. Site layout and design should take account of this risk. Consider including this source of

flooding within the Site assessment. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site – this should be investigated further.

### **H76: Peatville Gardens**

Isabel Brown (0087), Chris Brown (0051)

This development will overlook my property in Peatville Terrace and will overshadow my light in my bedroom, kitchen and conservatory and my garden. Privacy in my house and garden will be compromised and I will be subjected to noise from the development, the dust, and demolition of the kings knows pub. We will be subjected to noise from people parking cars, making noise in gardens.

Planning permission for development here has already been refused.

SEPA (0012)

The site appears to be directly adjacent and below the Canal. Consideration should be given to the risk the canal poses and contact should be made with Scottish Canals. Site layout and design should take account of this risk. Consider including this source of flooding within the Site assessment. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site – this should be investigated further.

### **H77: Gorgie Road (east) Place 25**

Mark Ockendon (0419)

Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life). Should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

Telereal Trillium (0540)

Welcome the housing-led site designation under H77 for Gorgie Road East. Request an amendment after para 3.72 to acknowledge the opportunity for brownfield sites such as this to be subject to a viability proving exercise.

SEPA (0012)

A flood risk assessment is not requested in Appendix D but we advise that one is needed. In section 3.72j reference is made to the Water of Leith flood extent and how it may cause surface water flooding. We advise that this is reworded to avoid confusion between fluvial (from the river) and surface water flooding.

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further.

Living Streets Edinburgh Group (0486)

Statement e of Place Policy 25 is supported but should be reinforced by clarifying circumstances for very limited car parking. Should also get contributions to pedestrian infrastructure as required around the site.

Inverdunning (Hatton Mains) Ltd (0427)

On map 29, references H71, H77 and H78 should be replaced with "Place 25". Support Place-based approach taken by City Plan 2030 but this should remain as a guide for certain areas rather than specifically linked to proposed allocations. Many proposed sites are potential windfall only with no commitment to housing.

**H78: Stevenson Road (A) Place 26**

Gym Juniors (0762)

Business employs between 15 - 20 people and provides leisure facilities to over 1,000 local families in West Edinburgh. - Any redevelopment of this area should include the provision of this type of amenity to the local community, as part of any plans.

Cordatus Property LP (0533)

Propose amendments to H78 allocation in terms of site capacity and density levels.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

#### SEPA (0012)

Flood risk assessment (FRA) is requested in Proposed Plan Appendix D, and SEPA agrees that this is necessary.

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required. Site will likely be heavily constrained due to flood risk and the council may wish to remove the allocation. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further.

#### Living Streets Edinburgh Group (0486)

Statement e of Place Policy 26 is supported but should be reinforced by clarifying circumstances for very limited car parking. Should also get contributions to pedestrian infrastructure as required around the site.

#### Mark Ockendon (0419)

Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life). Should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights.

#### **H79: Broomhouse Terrace, Place 27**

#### Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Section 3.74, bullet b. - "Create a record of any heritage asset identified for demolition." It is unclear if the creation of a record is intended to offer any protection to that heritage asset, or to facilitate its demolition.

Bullet d. refers to the creation of a mobility hub which should incorporate a bike/e-bike cycle hire point and car-share opportunities. These should be included at other mobility hubs too.

#### Living Streets Edinburgh Group (0486)

Statement g of Place Policy 27 is supported but should be reinforced by clarifying circumstances for very limited car parking. Should also get contributions to pedestrian infrastructure as required around the site.

#### SEPA (0012)

The strategic flood risk assessment indicated this would be the location for a strategic SUDS feature on-site but there is no information on such a proposal for Place 27. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within this site. This should be investigated further.

Mark Ockendon (0419)

Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life). Should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights.

**H80: Murrayburn Road, Place 28**

Living Streets Edinburgh Group (0486)

Statement f of Place policy 28 is supported but should be reinforced by clarifying circumstances for very limited car parking. Should also get contributions to pedestrian infrastructure as required around the site.

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

On page 89, Place 28 Murrayburn Road, no map is provided. It would help if a map was provided for each Place.

Page 90 Section 3.75 i. "Locate and design new greenspace and green-blue infrastructure to link to existing grlnf networks and natural habitats." - it is unclear what is intended by "grlnf".

Page 90, section 3.75 l. "Investigate Murray Burn culvert location/condition/capacity to see how/if development should account for this and incorporate it into the layout it as an opportunity" This appears incomplete.

Wester Hailes Land and Property Development Company (0064)

Disappointing Procedure in Notifying Tenants - WHLPD currently holds 125-year-long ground leases for Site H81 and part of site H80 yet we were not approached nor informed by the council regarding their proposals before our tenants were.

Site Suitability - Dumbryden Industrial Estate has a history of drainage issues which have required significant attention over the years.

Edinburgh Employment and Loss of Income – Site is home to a number of businesses. Proposal would lead to increased unemployment and increased poverty. Potential Loss of Childcare Provision - WHLPD currently lease a building in Wester Hailes to Smilechildcare on a community rent of £1 per annum. This would be put a t risk if WHLPD loses income from the industrial estates. Potential Impact on Religious Observance and Community Growth - WHLPD currently lease a building in Wester Hailes to the Redeemed Christian Church of God Open Heavens Edinburgh (RCCGOHE) on a community rent of £1 per annum. This would be put a t risk if WHLPD loses income from the industrial estates.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council only own part of the land. The Council have not been in touch with the other owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from

business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

#### SEPA (0012)

Sections 3.75 k and l need to be clarified. One suggests mitigation, which is difficult to achieve without a good understanding of the risk, and the other is requesting investigation into the location/condition/capacity of the Murray Burn culvert to inform layout. This policy needs to be recast with a strategic and holistic approach to take account of the challenges and opportunities of the site.

A flood risk assessment (FRA) is requested in Proposed Plan Appendix D, and SEPA agrees this is necessary and should assess the risk from the Murray Burn which is culverted beneath or adjacent to the site.

There is limited information available on the location and flood risk associated with the Murray Burn and the site may be heavily constrained due to flood risk and the council may wish to remove this allocation.

Due to the large number of allocations along the Murray Burn we would recommend the council take a holistic approach and determine the flood risk from this source to inform suitable development types and locations.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further

#### Mark Ockendon (0419)

Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life). Should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights.

#### **H81: Drumbryden Drive, Place 29**

##### Wester Hailes Land and Property Development Company (0064)

Disappointing Procedure in Notifying Tenants - WHLPD currently holds 125-year-long ground leases for Site H81 and part of site H80 yet we were not approached nor informed by the council regarding their proposals before our tenants were.

Site Suitability - e. Hailes Park Industrial Estate is situated upon a former landfill site - it was necessary to build on top of a methane membrane to prevent the release of harmful gases into the atmosphere. As a result, there is an inability to bore down so far into the grounds to prevent puncture.

Edinburgh Employment and Loss of Income – Site is home to a number of businesses. Proposal would lead to increased unemployment and increased poverty.

Potential Loss of Childcare Provision - WHLPD currently lease a building in Wester Hailes to Smilechildcare on a community rent of £1 per annum. This would be put at risk if WHLPD loses income from the industrial estates.

Potential Impact on Religious Observance and Community Growth - WHLPD currently lease a building in Wester Hailes to the Redeemed Christian Church of God Open Heavens Edinburgh (RCCGOHE) on a community rent of £1 per annum. This would be put at risk if WHLPD loses income from the industrial estates.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further.

Living Streets Edinburgh Group (0486)

Statement e (sic) of Place policy 29 is supported but should be reinforced by clarifying circumstances for very limited car parking. Should also get contributions to pedestrian infrastructure as required around the site.

Mark Ockendon (0419)

Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life). Should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights.

**H82: Murrayburn Gate**

SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further.

#### **H84: Calder Estate**

##### SEPA (0012)

Flood risk assessment (FRA) is requested in Proposed Plan Appendix D, and SEPA agrees this is necessary.

An FRA which assesses the risk from the Murray Burn, which is culverted beneath or adjacent to the site, is necessary. There is limited information available on the location and flood risk associated with the Murray Burn and the site may be constrained due to flood risk. Due to the large number of allocations along the Murray Burn we would recommend the council take a holistic approach and determine the flood risk from this source to inform suitable development types and locations. The draft SFRA mentioned connecting to the watercourse by building blue/green corridors however without a good understanding of the Murray Burn, this would not be achievable.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further.

#### **H85: Redford Barracks, place 30**

##### Defence Infrastructure Organisation (0124)

Welcomes the allocation of Redford Barracks for housing led mixed-use development and the significant contribution it would make toward delivering the city's spatial strategy around 20-minute walkable neighbourhoods and maximising the use of brownfield land. Welcomes the aspiration that development allocations will come forward as housing led, high density, mixed use neighbourhoods to provide homes, jobs and facilities around existing infrastructure.

As a result of necessary basing changes, the disposal of Redford Cavalry Barracks and Redford Infantry Barracks will both be delayed by four years from 2025 to 2029. The DIO supports the principle of Place 30 Redford Barracks but would like some amendments.

The DIO supports the identified capacity of site H85 as 800 units, although this is considered to be appropriate as 'a minimum'. Our own analysis of the site's potential and development opportunities identifies that it can deliver a significant element of new residential development provided in a mix of refurbished heritage buildings and new development plots. In doing so the site can deliver a variety of residential types and densities including opportunities for apartments, terraces, townhouses, suburban residential types as well as opportunities for other forms of residential types including affordable housing, housing for the elderly etc.

##### Richard Marsh (0165)

Development should be in keeping with historic nature of Colinton village and should not impede views of Arthur's Seat.

##### NatureScot (0528)

Generally support the requirements in principle for the Redford Barracks site, particularly the clear emphasis on the need for a master plan, which development must accord with.

Welcome the requirements of Development Principle i) but unclear on how this is to be achieved.

The Development Principles are currently weak on green blue network opportunities at this site. It will therefore be difficult to meet the requirements of Policy Env 3 Development Design and Policy Env 6 Green Blue Infrastructure.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of businesses would result in lack of jobs or further land needed to relocate businesses.

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Page 92 - Place 30 Redford Barracks - a map would be useful.

The statement in 3.75 f., "Retention of existing streets which are lined by the stables blocks plus other key routes through the site. The frontages to many of these streets need to be improved to make them more attractive." This needs to be carefully monitored to ensure it meets what should be the primary principle: "A development which respects the heritage of the site."

Concerning the continuation of section 3.75 b, to, "New uses for all listed buildings - and their settings - within and adjacent to the site must be an integral part of future development proposals. Any new buildings should have a positive relationship with existing listed buildings in terms of height." we would add "materials and appearance".

Archie Clark (0003)

A detailed map should be included as one stated development principle is: "Retention and enhancement of Redford recreation park to the southeast of the site and provision of a new community park (See proposal BGN 27) and play space in line with criterion (m) below." "The development shall provide new outdoor play facilities as necessary to ensure all homes in the site are adequately served Play facilities in line with the Play Access Standard set out in the Open Space Strategy (OSS). The new outdoor play facilities to be integrated into the site layout in a well overlooked and accessible location with a welcoming setting. These new facilities shall provide for a range of users, including those with disabilities..."

Living Streets Edinburgh Group (0486)

No objection to the site in principle, but there is only reference to active travel, not to pedestrian priority. This development should be no different from others, regardless of its location and mixed use status. Pedestrians must have priority throughout and development designed accordingly, likewise car parking must be limited and contributions secured to enhance public transport and surrounding pedestrian infrastructure.

#### SEPA (0012)

Support there being a flood risk assessment as stated in Appendix D. SEPA commented on this site as part of a Place Brief in July 2019 (SEPA Reference. PCS166169). We advised that the Braid Burn to the south and east of the site has previously overtopped its banks and flowed down Redford Road and nearby streets, before entering the Water of Leith. Although this should arguably occur less frequently with the construction of a Flood Protection Scheme. Since 2000, many streets in the area have been affected by flooding. Due to the large area identified as potentially vulnerable to surface water flooding, this would require careful consideration to ensure existing property and proposed property and infrastructure are not at increased risk of flooding. We would note that development may be constrained at this location. Although there may be an opportunity here to reduce surface water flooding to existing areas. As the standard of protection offered by the Braid Burn Flood Protection Scheme is unknown we would recommend an FRA is undertaken to inform development type and layout. The draft SFRA identifies that reported flooding should be considered in an FRA with opportunities for wider surface water interactions and the use of green infrastructure.

Note there is no reference to sustainable urban drainage systems (SUDS). Multi-functional blue green infrastructure should be employed onsite and connectivity to wider green-blue networks made in line with CEC Sustainable Rainwater Guidance. 'Natural flow paths of water must be identified at the visioning stage and inform design.

#### Inverdunning (Hatton Mains) Ltd (0427)

Site not available in plan period with disposal by MoD not until 2029.

#### Mark Ockendon (0419)

Rather than degrading people's quality of life (presumption against cars), focus on improving the alternatives (increase quality of life). Should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights.

#### Cockburn Association (0777)

Overall, we welcome the general principles for the repurposing of this site. However, all existing green spaces should be retained and enhanced for public and climate mitigation benefit and all existing trees should be protected as a matter of principle. We would also advocate the removal of large areas of hardstanding where not required and their return to green space. Substantial levels of new tree planting should form part of any development masterplan.

#### **Modifications sought by those submitting representations:**

### **HSG31: Curriemuirend. (Place 24)**

#### **Hallam Land Management (0615)**

No modification specified but it is indicated that Balerno should feature in settlement or place policies. This section on South West Edinburgh needs a complete review and review of Balerno before any decisions on a finalised plan is made. There has been a significant change in proposals by the Council when considering proposals for West and South-West Edinburgh.

#### **Juniper Green & Barberton Main Community Council (0306), Archie Clark (0003)**

No modification specified, however, it is indicated that Juniper Green and Baberton Mains Community Council herewith wishes to register itself as a key stakeholder regarding this site and requires involvement in any consultation regarding the development of a Place Brief for this site. Despite proposals being considered premature, section 3.71 continues with a list of "Curriemuirend Development Principles" which include references to "allotments", "active street frontage along Wester Hailes Road" and "reduce the width of Wester Hailes Road". The specific nature of these seems to conflict with the statement that they are premature. JG&BMCC submitted a detailed objection at LDP2016 stage that still applies: that the site should be retained in its entirety as a public park. We understand this site is registered in the 'housing account' books when it should be in the 'parks department' books. Correcting this anomaly would help ensure this valuable piece of greenspace was retained for recreational purposes.

#### **Gordon Miller (0520).**

Remove Curriemuirend Park from the selected boundary area for 'Place 24' and the actual area to be used for housing restricted to the street frontage on Wester Hailes Road.

#### **Pawel Stankiewicz (0445)**

The lead on page 84 instead of "Planning permission will be granted for development within the boundary of Curriemuriend..."it should be "Planning permission will not be granted for development within the boundary of Curriemuriend Park"

Paragraph c p. 84 should be struck off

Paragraph f p. 84 should be struck off

No other modification specified but it is indicated that development should create an active street frontage along Wester Hailes Road to not increase the number of people living in noise and pollution. Attractiveness and safeness is determined mainly by number of cars and their speed and not by road width.

#### **Living Streets Edinburgh Group (0486)**

No modification specified but it is indicated that regardless of what has been built in the past on nearby sites, development should be expected to follow the same principles as proposed elsewhere in the city, designed accordingly, and contributions secured to carry

out the necessary enhancements to public transport, pedestrian and cycle infrastructure thereby reflecting the transport hierarchy. If this is not made clear at the outset, we will see more of the same old unsatisfactory development which generates more traffic onto surrounding roads and priorities cars above people. It is critical that the plan is consistent in reflecting Scottish Planning Policy and the National Transport Strategy throughout.

Anna Durlo (0039)

No modifications specified but it is indicated that HSG 31 should be removed from the plan.

SEPA (0012)

No modification specified but it is indicated a review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site and this should be investigated further.

Mark Ockendon (0419)

Add a new requirement: "Ensure support for low-carbon vehicles by providing electric vehicle charging points for new private housing, and on-street parking."

### **H71: Gorgie Park Close**

Inverdunning (Hatton Mains) Ltd (0427) Simon Thomson (0248)

Delete H71 from the plan.

SEPA (0012)

No modification specified but it is indicated that a review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

Royal Mail Group Limited (0501)

The sites owned by Royal Mail should be re-allocated as Business and Industry Areas under Policy ECON4 of the plan.

If the Council see fit to retain any proposals for residential use on the land adjoining the properties set out in the representation (assuming the allocation pertaining to each site is removed), the relevant policies and the associated information set out in Appendix D of the Local Plan should make reference to Royal Mail's operations and should ensure that any necessary mitigation is provided by the applicant at the application stage to guarantee that there is no undue impact to Royal Mail.

### **H72: West Gorgie Park**

Chesser Engineering Ltd (0369)

No modification specified but it is indicated that it is incredibly useful having a business within the city and easily accessible. The allocated land for business relocation is in

Newbridge. Any reasonable individual would not claim this land is within the city. It is wholly unsuitable for our business and our employees.

### **H73: Gorgie Road (Caledonian Packaging)**

Inverdunning (Hatton Mains) Ltd (0427) Simon Thomson (0248)

Delete H73 from the plan.

Caledonian Packaging Ltd (0635)

No modification specified but it is indicated that a red area has been marked and described as belonging to Caledonian Packaging. Whilst not particularly clear the area marked covers at least seven separate owners.

Frederick Innes (0088)

H73 needs to be redrawn to exclude private areas owned by 499A and 501.

SEPA (0012)

No modification specified but it is indicated that a review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further.

### **H74: Craiglockhart Avenue.**

Inverdunning (Hatton Mains) Ltd (0427) Simon Thomson (0248)

Delete H74 from the plan.

Denise Hill (0637)

No modification specified but it is indicated that concerns relating to building heights, flooding and parking should be considered.

Richard Parkinson (0422)

No modification specified but it is indicated that concerns relating to drainage, traffic and safe pavements should be considered.

SEPA (0012)

No modification specified but it is indicated that consideration should be given to the risk the canal poses and contact should be made with Scottish Canals, especially if surface water is to be discharged to the canal as suggested in the draft SFRA. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

### **H75: Lanark Road**

Telereal Trillium (0540)

Requests the re-naming to Craiglockhart Avenue West site.

No other modification specified but indicates that these endorsements are subject to all the other representations made by TT on the need for opportunities for brownfield sites to present site viability evidence which could impinge on deliverability of the site

Inverdunning (Hatton Mains) Ltd (0427) Simon Thomson (0248)

Delete H75 from the plan.

SEPA (0012)

No modification specified but it is indicated that consideration should be given to the risk the canal poses and contact should be made with Scottish Canals. Site layout and design should take account of this risk. Consider including this source of flooding within the Site assessment. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

**H76: Peatville Gardens**

Isabel Brown (0087),

No modification specified but it is indicated that H76 should be removed from the plan due to overshadowing, privacy, noise and disruption concerns.

Chris Brown (0051)

No modification specified but it is indicated that H76 should be removed from the plan due to overshadowing, privacy, noise and disruption concerns as well as loss of jobs and community facilities.

SEPA (0012)

No modification specified but it is indicated that consideration should be given to the risk the canal poses and contact should be made with Scottish Canals. Site layout and design should take account of this risk. Consider including this source of flooding within the Site assessment. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

**H77: Gorgie Road (east) Place 25**

Mark Ockendon (0419)

Remove Place 25, Gorgie Road East Development Principle criterion (e). Replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street"

Simon Thomson (0248)

Delete H77 from the plan.

Telereal Trillium (0540)

Amendment after para 3.72 to acknowledge the opportunity for brownfield sites such as this to be subject to a viability proving exercise - to emphasise the need to fully investigate site constraints and viability issues and to allow a brown field site of this nature an opportunity to present site-specific viability issues and to negotiate with the planning authority on critical matters of infrastructure and services and contributions.

SEPA (0012)

The requirement for a flood risk assessment for the development should be included.

Gorgie Road East Development Principle criterion (J) should be reworded to avoid confusion between fluvial (from the river) and surface water flooding.

A strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further.

Living Streets Edinburgh Group (0486)

Gorgie Road East Development Principle criterion (e) should be reinforced by clarifying circumstances for very limited car parking and should ensure contributions towards pedestrian infrastructure is received.

Inverdunning (Hatton Mains) Ltd (0427)

On map 29, references H71, H77 and H78 should be replaced with "Place 25". No further modification specified but it is indicated that of the 95 sites allocated for housing, 54 sites are potential windfall only with no commitment to housing. Indeed, in response to enquiries directly with site owners, there was significant opposition to having to sell and relocate existing business. As such, the identified sites should be removed from specific references.

**H78: Stevenson Road (A) Place 26**

Gym Juniors (0762)

No modification specified but it is indicated that any redevelopment of this area should include the provision of this type of amenity to the local community, as part of any plans.

Cordatus Property LP (0533)

Part 4, table 2 (H78) the number of units should be amended from 290 to 350.

The description for part 4, table 2 (H78) should be amended to state "A density range of 125 to 200 units per hectare should be achieved"

The H78 (Stevenson Road((A) Development Principles should be amended as follows:

- The site is surrounded by existing residential development which predominantly ranges from 4 to 6 storeys, also containing the 8 storey Westfield Court and limited 2 storey housing (458-466 Gorgie Road)

Inverdunning (Hatton Mains) Ltd (0427) Simon Thomson (0248)

Delete H78 from the plan.

SEPA (0012)

No modification specified but it is indicated that a strategic FRA for the Water of Leith has been commissioned by CEC and the study includes this reach. The model should be requested from the council and used in conjunction with the Developer Pack to identify whether more site-specific detail is required. Site will likely be heavily constrained due to flood risk and the council may wish to remove the allocation. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to this site. This should be investigated further.

Living Streets Edinburgh Group (0486)

Stevenson Road (A) Development Principle criterion (e) should be reinforced by clarifying circumstances for very limited car parking and should ensure contributions towards pedestrian infrastructure is received.

Mark Ockendon (0419)

Remove Place 26, Stevenson Road (A) Development Principle criterion (e) Replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

**H79: Broomhouse Terrace, Place 27**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

No modification specified but it is indicated that criterion (b) of the Broomhouse Terrace Development Principles "Create a record of any heritage asset identified for demolition."

applies in many circumstances. It is also unclear if the creation of a record is intended to offer any protection to that heritage asset, or to facilitate its demolition.

Criterion (d) of the Broomhouse Terrace Development Principles refers to the creation of a mobility hub which should incorporate a bike/e-bike cycle hire point and car-share opportunities. These should apply to all hubs.

#### Living Streets Edinburgh Group (0486)

Broomhouse Terrace Development Principle criterion (g) should be reinforced by clarifying circumstances for very limited car parking and should ensure contributions towards pedestrian infrastructure is received.

#### SEPA (0012)

No modification specified but it is indicated that the strategic flood risk assessment indicated this would be the location for a strategic SUDS feature on-site but there is no information on such a proposal for Place 27.

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within this site. This should be investigated further.

#### Mark Ockendon (0419)

Remove Place 27, criterion (g) Replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

### **H80: Murrayburn Road, Place 28**

#### Living Streets Edinburgh Group (0486)

Murrayburn Road Development Principle criterion (f) should be reinforced by clarifying circumstances for very limited car parking and should ensure contributions towards pedestrian infrastructure is received.

#### Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

A map should be provided for each place, including place 28.

Criterion I of Murrayburn Road Development Principles should clarify what is intended by "grlnf" in, "Locate and design new greenspace and green-blue infrastructure to link to existing grlnf networks and natural habitats."

Criterion L of Murrayburn Road Development Principles. appears incomplete, "Investigate Murray Burn culvert location/condition/capacity to see how/if development should account for this and incorporate it into the layout it as an opportunity" The Council should advise on the suitability of the proposal.

#### Archie Clark (0003)

A map should be provided for each place, including place 28.

Criterion I of Murrayburn Road Development Principles should clarify what is intended by “grlnf” in, “Locate and design new greenspace and green-blue infrastructure to link to existing grlnf networks and natural habitats.”

Criterion L of Murrayburn Road Development Principles appears incomplete, “Investigate Murray Burn culvert location/condition/capacity to see how/if development should account for this and incorporate it into the layout it as an opportunity” The Council should advise on the suitability of the proposal.

Criterion F of Murrayburn Road Development Principles will lead to unnecessary congestion. Some off street parking should be encouraged.

Wester Hailes Land and Property Development Company (0064)

No modification specified but it is indicated that a part of H80, of which Wester Hailes Land and Property Development Company are tenants, should be removed from the plan.

Inverdunning (Hatton Mains) Ltd (0427)

No modification specified but it is indicated that unit numbers on H80 should be reduced as the size of H80 should be reduced to Council-owned land only.

Map 29 – reduce size of H80 to Council-owned land, add “Place 28” reference.

SEPA (0012)

No modification specified but it is indicated that Criterion K and L of Murrayburn Road Development Principles need to be clarified. One suggests mitigation, which is difficult to achieve without a good understanding of the risk, and the other is requesting investigation into the location/condition/capacity of the Murray Burn culvert to inform layout. This policy needs to be recast with a strategic and holistic approach to take account of the challenges and opportunities of the site.

There is limited information available on the location and flood risk associated with the Murray Burn and the site may be heavily constrained due to flood risk and the council may wish to remove this allocation.

Due to the large number of allocations along the Murray Burn we would recommend the council take a holistic approach and determine the flood risk from this source to inform suitable development types and locations. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further.

Mark Ockendon (0419)

Remove Place 28, criterion (f) Replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

### **H81: Drumbryden Drive, Place 29**

#### Wester Hailes Land and Property Development Company (0064)

No modification specified but it is indicated that H81, of which Wester Hailes Land and Property Development Company are tenants, should be removed from the plan.

#### Inverdunning (Hatton Mains) Ltd (0427)

Replace H81 reference on map 29 with "Place 29"

#### Simon Thomson (0248)

Remove H81 from the plan.

#### SEPA (0012)

No modification specified but it is indicated that the review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further.

#### Living Streets Edinburgh Group (0486)

Dumbryden Drive Development Principle criterion (f) should be reinforced by clarifying circumstances for very limited car parking and should ensure contributions towards pedestrian infrastructure is received.

#### Mark Ockendon (0419)

Remove Place 29, criterion (f) Replace with "Demonstrate integrated transport options, and support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

### **H82: Murrayburn Gate**

#### SEPA (0012)

No modification specified but it is indicated that a review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further.

### **H84: Calder Estate**

#### SEPA (0012)

No modification specified but it is indicated that there is limited information available on the location and flood risk associated with the Murray Burn and the site may be constrained due to flood risk. Due to the large number of allocations along the Murray Burn we would recommend the council take a holistic approach and determine the flood risk from this source to inform suitable development types and locations. The draft SFRA mentioned

connecting to the watercourse by building blue/green corridors however without a good understanding of the Murray Burn, this would not be achievable. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to the site. This should be investigated further.

### **H85: Redford Barracks, place 30**

#### Defence Infrastructure Organisation (0124)

The first sentence of policy H85, paragraph (3.77) should be amended to state:

“The Council, in collaboration with the DIO, will prepare a Place Brief for the site which will establish high level principles to inform future masterplanning and design processes.”

Criterion (a) of the Redford Barracks Development Principles should be amended to include information on the other uses which may be appropriate on the site along-side housing (hotel, care home, housing for the elderly/veterans, small scale retail/commercial, leisure etc.)

Criterion (b) of the Redford Barracks Development Principles should be amended to remove the word ‘all’ from the second sentence:

“A development which respects the heritage of the site. New uses for all listed buildings - and their settings- within and adjacent to the site must be an integral part of future development proposals. Any new buildings should have a positive relationship with existing listed buildings in terms of height.” - While the heritage assets create opportunities in terms of place-making and will act as focal points for new development, they also present significant challenges in terms of viability and re-use.

Criterion (g) of the Redford Barracks Development Principles should be amended to replace the term ‘active frontages’ with ‘natural surveillance’. - The location of active frontages should be decided at master planning stage and it is better for active frontages and other local centre type uses to be positioned at key nodal points in the development, not necessarily around the parade ground, to ensure that such uses are viable and appropriate.

#### Richard Marsh (0165)

No modifications specified but it is indicated that development should be in keeping with historic nature of Colinton village, should not impede views of Arthur’s Seat, that traffic is suitably addressed and that development must be net-zero with the opportunity that existing residents can connect to district energy if there is an opportunity.

#### NatureScot (0528)

Criterion (i) of the Redford Barracks development Principles should be amended to: “Maximisation of the views of the Pentland Hills, Craiglockhart Hill, and landmark buildings informed by landscape and visual impact assessment.”

An additional criterion should be added to the Redford Barracks development Principles which requires: “Use site layout and green-blue infrastructure to strengthen existing green

networks and natural habitats, including links between the Water of Leith corridor to Wester Craiglockhart Hill and the corridor of the

Simon Thomson (0248)

Place 30 should be removed from the plan.

Juniper Green & Baberton Mains Community Council (0306)

Criterion (b) of the Redford Barracks development Principles, "New uses for all listed buildings - and their settings - within and adjacent to the site must be an integral part of future development proposals. Any new buildings should have a positive relationship with existing listed buildings in terms of height." we would add "materials and appearance".

No further modifications are specified but it is indicated that the statement in Criterion (i) of the Redford Barracks development Principles which states "Retention of existing streets which are lined by the stables blocks plus other key routes through the site. The frontages to many of these streets needs to be improved to make them more attractive." needs to be carefully monitored to ensure it meets what should be the primary principle: "A development which respects the heritage of the site."

A map for Place 30, Redford Barracks would be useful.

Archie Clark (0003)

A detailed map of place 30 should be included.

Criterion (b) of the Redford Barracks development Principles, "New uses for all listed buildings - and their settings - within and adjacent to the site must be an integral part of future development proposals. Any new buildings should have a positive relationship with existing listed buildings in terms of height." "materials and appearance should be added".

No further modifications are specified but it is indicated that the statement in Criterion (i) of the Redford Barracks development Principles which states "Retention of existing streets which are lined by the stables blocks plus other key routes through the site. The frontages to many of these streets needs to be improved to make them more attractive." needs to be carefully monitored to ensure it meets what should be the primary principle: "A development which respects the heritage of the site."

Living Streets Edinburgh Group (0486)

No modification specified but it is indicated that pedestrians must have priority throughout and development designed accordingly, likewise car parking must be limited and contributions secured to enhance public transport and surrounding pedestrian infrastructure.

SEPA (0012)

No modification specified but it is indicated that due to the large area identified as potentially vulnerable to surface water flooding, this would require careful consideration to ensure existing property and proposed property and infrastructure are not at increased risk

of flooding. We would note that development may be constrained at this location. Although there may be an opportunity here to reduce surface water flooding to existing areas. As the standard of protection offered by the Braid Burn Flood Protection Scheme is unknown we would recommend an FRA is undertaken to inform development type and layout. The draft SFRA identifies that reported flooding should be considered in an FRA with opportunities for wider surface water interactions and the use of green infrastructure.

There is no reference to sustainable urban drainage systems (SUDS). Multi-functional blue green infrastructure should be employed onsite and connectivity to wider green-blue networks made in line with CEC Sustainable Rainwater Guidance. 'Natural flow paths of water must be identified at the visioning stage and inform design.

#### Inverdunning (Hatton Mains) Ltd (0427)

Place 30 should be removed from the plan.

#### Mark Ockendon (0419)

Add a criterion to the Redford Barracks Development Principles: "Ensure support for low-carbon vehicles by providing electric vehicle charging points for new private housing, and on-street parking."

#### Cockburn Association (0777)

No modification specified but it is indicated that all existing green spaces should be retained and enhanced for public and climate mitigation benefit and all existing trees should be protected as a matter of principle. Large areas of hardstanding should be removed where not required and their return to green space. Substantial levels of new tree planting should form part of any development masterplan.

### **Summary of responses (including reasons) by planning authority:**

#### **HSG31: Curriemuirend. (Place 24)**

##### Hallam Land Management (0615)

The Council's position on the delivery of the strategy is set out in Issue 3: Delivery of the Strategy. The Council's position on suggested additional greenfield sites can be found in Issue 9: Suggested additional greenfield sites. The Council's position in relation to the revised vision for West Edinburgh is set out in detail in issue 39.

The Council considers that the section of the plan covering South West Edinburgh is robust and will ensure the aims of the strategy are delivered. **No modification proposed.**

##### Juniper Green & Barberton Main Community Council (0306), Gordon Miller (0520), Archie Clark (0003)

Paragraph 3.70 of the plan states that this housing site was allocated for development in the Edinburgh Local Development Plan (2016) (CD039). The site has therefore already

been through an examination process and has been allocated for housing. The Council considers its assessment of sites to be consistent and robust.

The plan contains the Curriemuirend Development Principles, which are statutory principles that any future development should accord with. Paragraph 3.71 of the plan also states that the Council will prepare a Place Brief for the site. The Place Brief will establish high level principles to inform future master planning and design processes. Local Communities and key stakeholders will be consulted through the development of the Place Brief. However, once approved the Place Brief will become non statutory planning guidance. Paragraph 3.71 also makes it clear that proposals for any part of the site in advance of an approved Place Brief will be considered as premature, in line with policy Env 2.

It should further be noted that in October 2022 a Local Place Plan (“LPP”) covering the wider Wester Hailes area was submitted to the Council, in terms of Schedule 19 of the Town and Country Planning (Scotland) Act 1997 and the Town and Country Planning (Local Place Plans) (Scotland) Regulations 2021. The Council is actively considering whether the LPP has been validly made and requires to be registered. The Wester Hailes Community Trust and other local stakeholders prepared the LPP with assistance from the Scottish Government. The LPP proposes removal of the Curriemuirend allocation as set out in the adopted LDP and the Proposed City Plan. In the event the Council validates and registers the LPP, the Reporter may consider it to be an emerging material consideration over the course of the Examination.

Pawel Stankiewicz (0445)

Paragraph 3.70 of the plan states that this housing site was allocated for development in the Edinburgh Local Development Plan (2016) (CD039). The site has therefore already been through an examination process. The Council considers its assessment of sites to be consistent and robust. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The plan contains the Curriemuirend Development Principles, which are statutory principles that any future development should accord with. Several of these principles relate to active and public transport requirements. Paragraph 3.71 of the plan also states that the Council will prepare a Place Brief for the site. The Place Brief will establish high level principles to inform future master planning and design processes. Local Communities and key stakeholders will be consulted through the development of the Place Brief.

Any future planning application will also have to comply with the relevant infrastructure and transport policies as set out in the plan, which reflect SPP (CD096), draft NPF 4 (CD099) and the aims of the National Transport Strategy 2 (CD110). The Councils position in relation to infrastructure delivery- Transport is set out in detail in the response to issue 30. **No modification proposed.**

Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014)

to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport. The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153).

The Council considers that the current wording of Place Policy 24 is robust and will ensure the aims of the strategy are delivered. **No modification proposed.**

Anna Durlo (0039)

Paragraph 3.70 of the plan states that this housing site was allocated for development in the Edinburgh Local Development Plan (2016) (CD039). The site has therefore already been through an examination process. The Council considers its assessment of sites to be consistent and robust. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

**H71: Gorgie Park Close**

Inverdunning (Hatton Mains) Ltd (0427)

The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy.

The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

#### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### Royal Mail Group Limited (0501)

Whilst the Royal Mail Group may currently need their existing sites for current business requirements, those requirements may change over the life-time of the plan. By identifying this site for potential redevelopment for housing led mixed use development the plan is showing its support for future redevelopment of this site, in line with the principles set out in Appendix D (CD002). There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. (CD055) Appendix 1 to Issue 20 Housing Land Supply sets out notional programming for the site. This anticipates a site start in 2030. The methodology for programming of sites is set out in Issue 20 Assessment of Housing Land Supply. The Agent of Change principle puts the onus on developers of new, noise-sensitive properties to effectively deal with potentially problematic noise. **No modification proposed.**

#### **H72: West Gorgie Park**

##### Chesser Engineering Ltd (0369)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/Industry/Storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

#### **H73: Gorgie Road (Caledonian Packaging)**

##### Inverdunning (Hatton Mains) Ltd (0427)

The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

##### Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Caledonian Packaging Ltd (0635)

The comments are noted. This does not impact upon the suitability of the site to be included within the plan or make the details included within appendix D (CD002) inaccurate. **No modification proposed.**

Frederick Innes (0088)

The concerns are noted. It is unclear whether this area forms part of a private garden space, however, this area forms a small part of the overall site and this concern can be resolved through the development management process should development proposals come forward in the future. **No modification proposed.**

SEPA (0012)

Appendix D (CD002) sets out technical requirements for housing proposals. This notes that a flood risk assessment will be required for this site. The Strategic Flood Risk Assessment (September 2021) carried out for City Plan identifies that the site appears to be surrounded by the low likelihood fluvial flood outline. A flood risk assessment is required to confirm flood extents including access/egress. Surface water flood risk is shown to be adjacent to the site and this risk should be investigated.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process and to consult with SEPA if an FRA is required. It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

**H74: Craiglockhart Avenue.**

Inverdunning (Hatton Mains) Ltd (0427)

The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. (CD055) Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Denise Hill (0637)

The concerns raised are acknowledged. Table 2 of the plan states that the development should accord with the development principles set out in Appendix D (CD002). It is also noted that any future planning application will be assessed against the relevant policies within the plan in respect to design, protecting amenity, flooding and parking provision. **No modification proposed.**

Richard Parkinson (0422)

The concerns raised are acknowledged. Table 2 of the plan states that the development should accord with the development principles set out in Appendix D (CD002). It is also noted that any future planning application will be assessed against the relevant policies within the plan in respect to, flooding and parking provision. The Roads Authority will assess any future application on this site for housing development. **No modification proposed.**

SEPA (0012)

Appendix D (CD002) sets out technical requirements for housing proposals. This states that a flood risk assessment will not be required for this site. The Strategic Flood Risk Assessment (September 2021) (CD011) carried out for City Plan identifies that the risk of infrastructure failure should be considered at this site due to the close proximity of the Union Canal. Contact should be made with Scottish Canals. Surface water flood risk to be considered as part of the re- development, and any risk mitigated within the design proposals.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance. Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process and to consult with SEPA if an FRA is required. It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

**H75: Lanark Road**

Telereal Trillium (0540)

The Council considers the naming of the site to be appropriate and will help the reader to identify where the site is located along with the Proposals Map (CD006) and interactive

mapping system. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply (CD055) of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

SEPA (0012)

Appendix D (CD002) sets out technical requirements for housing proposals. This states that a flood risk assessment will not be required for this site. The Strategic Flood Risk Assessment (September 2021) (CD011) carried out for City Plan identifies that the risk of infrastructure failure should be considered at this site due to the close proximity of the Union Canal. Contact should be made with Scottish Canals

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process and to consult with SEPA if an FRA is required. It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

**H76: Peatville Gardens**

Isabel Brown (0087)

The concerns raised are acknowledged. Table 2 of the plan states that the development should accord with the development principles set out in Appendix D (CD002). Any future planning application will be assessed against the relevant policies within the plan with respect to protecting amenity.

Planning permission for the demolition of the existing Public House and construction of 10 townhouses and one detached dwellinghouse with associated gardens at 195 Kingsknowe Road North, was granted at Development Management Sub Committee under planning application 18/04268/FUL (CD141). Work has not yet commenced on site, it remains a valid allocation. **No modification proposed.**

Chris Brown (0051)

The concerns raised are acknowledged. Table 2 of the plan states that the development should accord with the development principles set out in Appendix D. It is also noted that any future planning application will be assessed against the relevant policies within the plan in respect to protecting amenity and other material considerations.

Planning permission for the demolition of the existing Public House and construction of 10 townhouses and one detached dwellinghouse with associated gardens at 195 Kingsknowe Road North, was granted at Development Management Sub Committee under planning application 18/04268/FUL (CD141). Work has not yet commenced on site, it remains a valid allocation. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process.

The majority of the site is more than 20 metres away from the canal and there is a row of long established houses between the canal and the site. Appendix D (CD002) sets out technical requirements for housing proposals. This states that a flood risk assessment will not be required for this site. This has been informed by the Strategic Flood Risk Assessment (SFRA) (September 2021) carried out for City Plan (CD011). It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

#### **H77: Gorgie Road (east) Place 25**

Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport. The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153).

The Council considers that the current wording of Place Policy 25 is robust and will ensure that the aims of the strategy are delivered. **No modification proposed.**

Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

#### Telereal Trillium (0540)

The Council acknowledges that each brownfield site is unique and can present its own challenges. Development plan policies should be considered by developers in their decisions on land options and acquisition. The planning application process allows for material considerations, including viability, to be considered on a case-by-case basis. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The wording of Place Policy 25 is suitably robust and will ensure that the aims of the strategy are delivered. **No modification proposed.**

#### SEPA (0012)

The Strategic Flood Risk Assessment (CD011) carried out for the plan did not identify a risk of fluvial flooding to the site. It did identify a medium risk of pluvial (Surface Water) flooding. As a result Appendix D (CD002) does not state a Flood Risk Assessment will be required. Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

The Council considers the wording of criterion (J) of the Gorgie Road East Development Principles to be robust. No modification is proposed, however, should the reporter be so minded then appendix D could be amended to say the site may need an FRA and criterion (J) could be amended to also include reference to potential fluvial flooding to provide more clarity.

#### Living Streets Edinburgh Group (0486)

The plan contains the Gorgie Road East Development Principles, which are statutory principles that any future development should accord with. Several of these principles relate to active and public transport requirements.

Any future planning application will also have to comply with the relevant infrastructure and transport policies as set out in the plan, which reflect SPP (CD096), draft NPF4 (CD099) and the aims of the National Transport Strategy 2 (CD110). The Council's position in relation to infrastructure delivery- Transport is set out in detail in the response to issue 30. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427)

The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development (CD055). Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. The Council considers that Map 29 rightly highlights the 3 separate proposed sites which are located within close proximity of each other. **No modification proposed.**

#### **H78: Stevenson Road (A) Place 26**

##### Gym Juniors (0762)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/Industry/Storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. **No modification proposed.**

##### Cordatus Property LP (0533)

The capacity has been calculated using the methodology set out in the Choices Housing Study 2020 (CD026). The capacities of sites in general is covered in Issue 20: Assessment of Housing Land Supply. A medium-high level of density was applied to the site in line with the methodology set out in the Choices 2020 Housing Study. This density applies to sites which can support a mixture of building and unit types, have good to medium public transport access and where parking would be generally lower than 100%. The actual capacity will be determined through the design process and planning application process. The development surrounding the site is predominantly 2-5 storeys as accurately described in criterion (d) of the Stevenson Road (A) Development Principles. **No modification proposed.**

##### Inverdunning (Hatton Mains) Ltd (0427)

The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development (CD055). Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

##### Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for

business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

#### SEPA (0012)

The Strategic Flood Risk Assessment (September 2021) (CD011) carried for the Plan concluded that the site was developable.

Appendix D (CD002) sets out technical requirements for housing proposals. This makes it clear that a flood risk assessment will be required for this site.

Policy Env 35 addresses flood risk. It makes it clear that planning permission will not be granted for development that would increase a flood risk elsewhere or within the site itself., including by failing to allow for the effect of future climate change or where the layout of development does not adopt the precautionary principle. Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

#### Living Streets Edinburgh Group (0486)

The plan contains the Stevenson Road (A) Development Principles, which are statutory principles that any future development should accord with. Several of these principles relate to active and public transport requirements.

Any future planning application will also have to comply with the relevant infrastructure and transport policies as set out in the plan, which reflect SPP (CD096), draft NPF4 (CD099) and the aims of the National Transport Strategy 2 (NTS2) (CD110). The Council's position in relation to infrastructure delivery- Transport is set out in detail in the response to Issue 30. **No modification proposed.**

#### Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by NTS2 (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport. The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153).

The Council considers that the current wording of Place Policy 26 is robust and will help deliver the aims of the strategy. **No modification proposed.**

#### **H79: Broomhouse Terrace, Place 27**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Criterion (b) of the Broomhouse Terrace Development Principles states that proposals will be expected to create a record of any heritage asset identified for demolition. These are buildings that are not listed. The record would not protect or facilitate the heritage asset. It would only ensure that a permanent record of it was recorded. The requirements of each mobility hub is unique to its own individual location. The requirements of mobility hubs are currently being assessed by the Council's active travel and 20 minute neighbour teams.

**No modification proposed.**

Living Streets Edinburgh Group (0486)

The plan contains the Broomhouse Terrace Development Principles, which are statutory principles that any future development should accord with. Several of these principles relate to active and public transport requirements.

Any future planning application will also have to comply with the relevant infrastructure and transport policies as set out in the plan, which reflect SPP (CD096), draft NPF4 (CD099) and the aims of the National Transport Strategy 2 (CD110). The Councils position in relation to infrastructure delivery- Transport is set out in detail in the response to Issue 30. **No modification proposed.**

SEPA (0012)

Policy Env 35 addresses flood risk. It states that proposals should not discharge surface water into the public sewer system to ensure they do not worsen sewer flooding. In exceptional circumstances, where no other option can be achieved, agreement for discharge into a public sewer must be agreed by Scottish Water and not increase flood risk, including from unsanitary foul waste from combined sewers. Policy Env 36 also states developers should collaborate with Scottish Water and the City of Edinburgh Council to fully explore and, wherever possible, replace existing surface water pipework (both on site and adjacent) by using SuDS onsite instead. The Council considers adding an additional criterion to place 27 in this regard would be unnecessary duplication. **No modification proposed.**

Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport. The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153).

The Council considers that the current wording of Place Policy 27 is robust and will ensure that the aims of the strategy are delivered. **No modification proposed.**

**H80: Murrayburn Road, Place 28**

#### Living Streets Edinburgh Group (0486)

The plan contains the Murrayburn Road Development Principles, which are statutory principles that any future development should accord with. Several of these principles relate to active and public transport requirements.

Any future planning application will also have to comply with the relevant infrastructure and transport policies as set out in the plan, which reflect SPP (CD096), draft NPF4 (CD099) and the aims of the National Transport Strategy 2 (CD110). The Council's position in relation to infrastructure delivery- Transport is set out in detail in the response to Issue 30. **No modification proposed.**

#### Juniper Green & Baberton Mains Community Council (0306)

The Council acknowledges that there is a technical error within criterion I. Instead of grinf, this should state "green". This will be amended as a minor drafting matter.

The Council acknowledges that there is a technical error within criterion L. The sentence should end after the word layout. This will be amended as a minor drafting matter.

The Council considers that the maps provided within the plan are adequate. As paragraph 3.3 of the plan explains the full list of housing proposals within City Plan (CD001) can be found in part 4, table 2 and where relevant, further technical requirements can be found in Appendix D (CD002). **No modifications proposed.**

#### Archie Clark (0003)

The Council acknowledges that there is a technical error within criterion I. Instead of grinf, this should state "green". This will be amended as a minor drafting matter.

The Council acknowledges that there is a technical error within criterion L. The sentence should end after the word layout. This will be amended as a minor drafting matter.

The Council considers that the maps provided within the plan are adequate. As paragraph 3.3 of the plan explains the full list of housing proposals within City Plan (CD001) can be found in part 4, table 2 and where relevant, further technical requirements can be found in Appendix D (CD002). The Council considers the wording of Criterion F to be robust and will help deliver the aims of the strategy. **No modification proposed.**

#### Wester Hailes Land and Property Development Company (0064)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/Industry/Storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy.

Appendix D (CD002) sets out technical requirements for housing proposals. This states that a flood risk assessment will be required for this site.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process and to consult with SEPA if an FRA is required. It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. H80 is not referenced on Map 29 but is shown in map 31. The Council considers that map 31 provided within the plan clearly shows the size of H80 and is suitably annotated. As paragraph 3.3 of the plan explains the full list of housing proposals within City Plan (CD001) can be found in part 4, table 2 and where relevant, further technical requirements can be found in Appendix D (CD002). **No modification proposed.**

SEPA (0012)

The Strategic Flood Risk Assessment (September 2021) (CD011) carried for the City Plan concluded that the site was developable only with a holistic flood risk assessment which confirms flood extents and opportunities to reduce flood risk within the area.

Appendix D (CD002) sets out technical requirements for housing proposals. This makes it clear that a flood risk assessment will be required for this site.

Criterion (k) of the Murrayburn Road Development Principles further emphasises that proposals will be expected to prepare a flood mitigation strategy based on a holistic assessment of flood risk to all parts of the site, including risk from the nearby culverted Murray Burn. Criterion (l) states that the Murray Burn culvert should also be investigated.

The Strategic Flood Risk Assessment has already identified and assessed the level of risk within the site to a degree. The plan makes it clear that project level works will be required to assess the site in greater detail in order to ensure that any development complies with policy Env 35.

Policy Env 35 addresses flood risk. It makes it clear that planning permission will not be granted for development that would increase a flood risk elsewhere or within the site itself., including by failing to allow for the effect of future climate change or where the layout of development does not adopt the precautionary principle. It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport. The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153).

The Council considers that the current wording of Place Policy 28 is robust and will ensure that the aims of the strategy are delivered. **No modification proposed.**

#### **H81: Drumbryden Drive, Place 29**

##### Wester Hailes Land and Property Development Company (0064)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/Industry/Storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy.

Policy Env 34 (Pollution and Air, Water and Soil Quality) states that development will not be supported that would be subject to and/or cause a significant adverse impact on health, amenity and the environment (including air/soil and water quality as well as ground stability, erosion and noise) unless any detrimental impacts are adequately addressed by design and layout (or by mitigation if a design/layout solution is not possible) and that these measures are appropriate for the development and context. It is standard practice that Environmental Protection would also be consulted on a development of this scale and they would identify any concerns in relation to ground contamination. It is therefore considered that the policies in the plan are sufficient to address any ground contamination risk. **No modification proposed.**

##### Inverdunning (Hatton Mains) Ltd (0427)

The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development (CD055). Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan.

H81 is not referenced on Map 29 but is shown in map 31. The Council considers that map 31 provided within the plan is suitably annotated. As paragraph 3.3 of the plan explains the full list of housing proposals within City Plan can be found in part 4, table 2 and where relevant, further technical requirements can be found in Appendix D (CD002). **No modification proposed.**

Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The plan contains the Dumbryden Drive Development Principles, which are statutory principles that any future development should accord with. Several of these principles relate to active and public transport requirements.

Any future planning application will also have to comply with the relevant infrastructure and transport policies as set out in the plan, which reflect SPP (CD096), draft NPF4 (CD099) and the aims of the National Transport Strategy 2 (CD110). The Council's position in relation to infrastructure delivery- Transport is set out in detail in the response to Issue 30. **No modification proposed.**

Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport. The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153).

The Council considers that the current wording of Place Policy 29 is robust and will ensure that the aims of the strategy are delivered. **No modification proposed.**

**H82: Murrayburn Gate**

SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed.**

#### **H84: Calder Estate**

##### SEPA (0012)

The Strategic Flood Risk Assessment (September 2021) (CD011) carried out for the City Plan concluded that the site could be recommended for inclusion. It stated that the site is located adjacent to the Murrayburn. SEPA request that a holistic approach to flood risk in this area is undertaken to understand the flood risk from the Murrayburn.

Table 2 of the plan establishes that development within the site should accord with the Development Principles set out in Appendix D (CD002).

Appendix D sets out technical requirements for housing proposals. This makes it clear that a flood risk assessment will be required for this site.

Policy Env 35 addresses flood risk. It makes it clear that planning permission will not be granted for development that would increase a flood risk elsewhere or within the site itself., including by failing to allow for the effect of future climate change or where the layout of development does not adopt the precautionary principle. It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

#### **H85: Redford Barracks, place 30**

##### Defence Infrastructure Organisation (0124)

Paragraph 3.77 of the plan states that the Council shall prepare a Place Brief for the site. It also states that local communities and key stakeholders will be consulted through the development of the Place Brief. The DIO is a key stakeholder and will be fully consulted through the development of the Place Brief.

Criterion (a) of the Redford Barracks Development Principles states that the requirements in principle will be for a housing led mixed use development. Further details of what these mixed uses will be will come forward during the required masterplan process and at project level.

The Council considers that the wording of criterion (b) and (g) of the Redford Barracks Development Principles is suitably robust and will help the plan achieve its aims. Any breach in the criteria would have to be justified at the planning application stage. **No modification proposed.**

##### Richard Marsh (0165)

Criterion (b) of the Redford Barracks Development Principles states that the requirements in principle will be for a development which respects the heritage of the site. New uses for

all listed buildings, and their settings within and adjacent to the site must be an integral part of future development proposals. Any new buildings should have a positive relationship with existing listed buildings in terms of height.

Criterion (i) of the Redford Barracks Development Principles states that the requirements in principle will be for maximisation of the views of the Pentland Hills, Craiglockhart Hill and landmark buildings. Any future planning application at the site will be assessed against the environment and design and infrastructure and transport policies contained within the plan. **No modification proposed.**

NatureScot (0528)

The Council considers that Criterion (i) of the Redford Barracks Development Principles is suitably robust. As paragraph 3.77 of the plan states the Council will prepare a Place Brief for the site. The Place Brief will establish high level principles to inform future master planning and design processes. Future master planning and design processes will be informed by landscape and visual impact assessments given the requirements of development principle (i).

The Council considers that there is no requirement for an additional criterion within the Redford Barracks Development Principles. As paragraph 3.77 of the plan states the Council will prepare a Place Brief for the site. The Place Brief will establish high level principles to inform future master planning and design processes. Any future planning application at the site will be assessed against the environment and design and infrastructure and transport policies contained within the plan. **No modification proposed.**

Simon Thomson (0248)

The Council considers the displacement of businesses is not as significant or extensive as implied in the representation. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306)

The Council considers that the maps provided within the plan are adequate. As paragraph 3.3 of the plan explains the full list of housing proposals within City Plan can be found in part 4, table 2 and where relevant, further technical requirements can be found in Appendix D (CD002). The Council considers the wording of the Redford Barracks Development Criteria to be suitably robust and will ensure the aims of the strategy are met. **No modification proposed.**

Archie Clark (0003)

The Council considers that the maps provided within the plan are adequate. As paragraph 3.3 of the plan explains the full list of housing proposals within City Plan can be found in

part 4, table 2 and where relevant, further technical requirements can be found in Appendix D (CD002). The Council considers the wording of the Redford Barracks Development Criteria to be suitably robust and will ensure the aims of the strategy are met. **No modification proposed.**

#### Living Streets Edinburgh Group (0486)

The plan contains the Redford Barracks Development Principles, which are statutory principles that any future development should accord with. Several of these principles relate to active and public transport requirements.

Any future planning application will also have to comply with the relevant infrastructure and transport policies as set out in the plan, which reflect SPP (CD096), draft NPF4 (CD099) and the aims of the National Transport Strategy 2 (CD110). The Council's position in relation to infrastructure delivery - Transport is set out in detail in the response to Issue 30. **No modification proposed.**

#### SEPA (0012)

The Strategic Flood Risk Assessment (September 2021) (CD011) carried for the Plan concluded that the site could be recommended for inclusion. It states that 40% of the site is within the low likelihood event, 0% within the Medium likelihood event. The flood risk assessment should confirm the risk and opportunities within the site to provide blue corridors and aim reducing flood risk from all sources with particular focus on surface water flooding.

Appendix D (CD002) sets out technical requirements for housing proposals. This makes it clear that a flood risk assessment will be required for this site.

Criterion (o) of the Redford Barracks Development Principles also states that a flood risk assessment is required and should inform the development and design/layout of the site, including opportunities to address surface water flooding and historic interactions between the Braid Burn and Water of Leith.

Paragraph 3.77 of the plan states the Council will prepare a Place Brief for the site. The Place Brief will establish high level principles to inform future master planning and design processes. Any future planning application at the site will be assessed against the environment and design and infrastructure and transport policies contained within the plan.

Policy Env 35 addresses flood risk. It makes it clear that planning permission will not be granted for development that would increase a flood risk elsewhere or within the site itself, including by failing to allow for the effect of future climate change or where the layout of development does not adopt the precautionary principle. Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Surface Water Management Plan Guidance (CD077).

It is therefore considered that the policies in the plan are sufficient to address any flooding risk. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427)

The Council's position in relation to the spatial strategy is set out in detail in the response to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable in the period of the plan. **No modification proposed.**

Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport. The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153).

The Council considers that the current wording of Place Policy 30 is robust and will help deliver the aims of the strategy. **No modification proposed.**

Cockburn Association (0777)

Paragraph 3.77 of the plan states that the Council shall prepare a Place Brief for the site. The place brief will establish high level principles to inform future master planning and design processes. Any future planning application at the site will also be assessed against the environment and design policies contained within the plan. **No modification proposed.**

**Reporter's conclusions:**

**Reporter's recommendations:**

Provision of the development plan to which the issue relates:	Housing sites allocated in Part 4 Table 2 to deliver the housing requirement in the period of the Plan.	
Planning authority's summary of the representation(s):		

## **HSG 17: Greendykes**

### SEPA (0012)

A flood risk assessment (FRA) is required to assess risk from the Niddrie Burn. This reach is part of the Niddrie Burn NFM study and should complement any Pentlands to Portobello environmental improvements projects. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site.

## **HSG 18: New Greendykes**

### SEPA (0012)

A flood risk assessment (FRA) is required to assess risk from the Niddrie Burn. This reach is part of the Niddrie Burn NFM study and should complement any Pentlands to Portobello environmental improvements projects. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site.

## **HSG 27: Newcraighall East**

### Newcraighall LLP (0466)

Supports the proposed carrying forward of the existing housing allocation at Newcraighall East (HSG 27) as a housing allocation but object to the number of units specified for the site as 154 units which is apparently based on the remaining homes to be built calculated from 2021 Housing Land Audit. Supports the continued allocation of current Local Development Plan sites with specific reference to Newcraighall East (HSG37) for up to 385 units.

Object to taking forward the approach of seeking developer contributions to healthcare infrastructure. The Infrastructure and Transport Policy Inf 3 Infrastructure Delivery and Developer Contributions should be amended by deleting 'c. primary healthcare infrastructure capacity – proposals to provide floorspace for the provision of new facilities or to extend existing facilities.'

Object to the specific reference in Place 32 Newcraighall stating that Newcraighall East is to, 'h. Provide or contribute towards education, and healthcare infrastructure and community facilities.' Healthcare infrastructure (such as GP services) is currently not an issue (either legally or financially) that can be addressed by the planning system. Any developer contributions must be imposed according to the tests set out in the relevant Scottish Government Circular.

Object to the Map 32 Newcraighall/Brunstane layout making provision for an extension of Newcraighall Primary School's grounds. Although this parcel of land was designated as being required for the extension of Newcraighall Primary School under the Section 75 Agreement for the previous development (10/03506/PPP) - and was due to be conveyed to the City of Edinburgh Council, the Council has confirmed that they now no longer require this land. Seek the amendment of the notation from Map 32 to remove reference to 'School grounds extension at Newcraighall'. Seeks the addition of this parcel of land for housing as part of HSG 27 Newcraighall East allocation.

Seeks the amendment of the green corridor notation on Map 32 for HSG 27 site by reducing its width. There has been discussion with Scottish Power Network (SPN) and this has determined that the stand-off area around the pylons will be less than the area identified on Map 32 for the green corridor. The rights for services and access have also been retained through the neighbouring Avant site demonstrating that development has been contemplated.

Living Streets Edinburgh Group (0486)

No objection to site in principle, but there is reference to active travel, and not to pedestrian priority. Development should be no different from others, regardless of its location. Pedestrians must have priority throughout with development designed accordingly, likewise car parking must be limited and contributions secured to enhance public transport and surrounding pedestrian infrastructure.

Newcraighall Heritage and Residents Association (0759)

Reference to road link to Newcraighall should make clear that the road junctions at the A1 and around Fort Kinnaird will also need upgrading to cope with the increase in use.

**HSG 29 Brunstane**

Dandara East Scotland (0757)

Dandara supports the continued allocation of HSG29 Brunstane and is committed to delivering houses at the site in this plan period.

SEPA (0012)

A flood risk assessment has been requested for Place 33 and we support this. This reach is part of the Niddrie Burn flood management study and should complement any Pentlands to Portobello environmental improvements projects. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site.

Living Streets Edinburgh Group (0486)

No objection to site in principle, but there is reference to active travel, and not to pedestrian priority. Development should be no different from others, regardless of its location. Pedestrians must have priority throughout with development designed accordingly, likewise car parking must be limited and contributions secured to enhance public transport and surrounding pedestrian infrastructure.

**HSG 30: Moredunvale Road**

Moredun multis and maisonettes residents association (0661), Clare Fallas (0377), Linda stark (0670), Nedelina Nikolov (0048), Richard Cook (0710), Jennifer Mernlees (0798), Rachel Lambe, Paulina Fornal (0166), Carlo Miccolis (0100), Akira Smallwood (0808), Robyn Kane (0091), Anna Francesca Schiraldi (0416)

The site includes vital green space. This space is used as by local residents for community use (as garden, a place to hold events, a safe space to walk dogs and for children to play.)

Bill Cook (0730)

The proposal to zone this community green space should be removed in its entirety. Not consistent with other parts of the plan:

- Introduction - City Plan 2030 recognises our city's "beautiful green environment"
- Introduction - notes the "poverty and health inequalities in our communities"
- Introduction - claims "we want our city to lead the way in responding to ..... the social inequalities felt by our residents"
- Introduction - about ensuring the residents "have a good place to live"
- Introduction - declares that the plan "protects places of value"
- Strategy Aim No.5 - instructs implementing environment policies to ".... protect our beautiful green setting .....physical and mental well-being"

Moredun Multis And Maisonettes Residents Association (0661)

Site should be removed as a proposal as it is a greenfield site – not brownfield

Carlo Miccolis (0100)

Should be considered for regeneration providing improved community facilities.

Dimitar Nikolov (0616)

Objects to building Council houses as High-rise

Paulina Fornal (0166)

Development will lead to increased traffic and congestion

Robyn Kane (0091)

Insufficient facilities in the area for increasing population (GPs, Schools, buses, chemists)

SEPA (0012)

A flood risk assessment has been requested, and we support this. This reach is part of the Niddrie Burn NFM study and should complement any Pentlands to Portobello environmental improvement projects. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site.

Living Streets Edinburgh Group (0486)

No objection to site in principle, but there is reference to active travel, and not to pedestrian priority. Development should be no different from others, regardless of its location. Pedestrians must have priority throughout with development designed

accordingly, likewise car parking must be limited and contributions secured to enhance public transport and surrounding pedestrian infrastructure.

#### **HSG 40: Edmonstone**

##### SEPA (0012)

Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site.

As this land lies over former mines and has a relatively high water table, we support the requirement to “ensure appropriate grouting and mine entry treatment works are carried out prior to commencement of development” in order to protect ground water. We would also advise careful pre-application discussions on water management at this site.

##### The Association for the Protection of Rural Scotland (0334)

Paragraph 3.85. APRS much regrets the removal of this important countryside from the greenbelt in the ELDP of 2016. A clarification of its present/new status is required e.g. is it now classified as Countryside.

##### Pawel Stankiewicz (0445)

At Place 36 add a paragraph to state that woodland on the west side will be preserved and enhanced and The Wisp/Old Dalkeith Road junction will be widened.

##### Living Streets Edinburgh Group (0486)

No objection to site in principle, but there is reference to active travel, and not to pedestrian priority. Development should be no different from others, regardless of its location. Pedestrians must have priority throughout with development designed accordingly, likewise car parking must be limited and contributions secured to enhance public transport and surrounding pedestrian infrastructure.

#### **H86: BioQuarter**

##### Edinburgh BioQuarter Partners (0478)

Object to BioQuarter being referred to as an ‘Employment Centre’ on Spatial Strategy Map. Vision is “to rapidly grow the site into a new vibrant neighbourhood of Edinburgh centred around a world-leading community of healthcare innovators. By developing at scale and pace we will accelerate solutions to global health challenges.” - To transition BioQuarter from a science park with pavilions and green landscape to a high density, urbanised new neighbourhood.

The Edinburgh BioQuarter will be an exemplar development encompassing many, if not all, of the Aims as articulated at paragraph 2.2 of the Proposed City Plan. A place-based approach has been adopted in the preparation of the masterplan and will involve the creation of high quality, high density, mixed use, walkable communities.

Welcome the use of place based policies.

Following MIR, the EBQ partners submitted text and accompanying diagrams which were considered to be appropriate for the relevant BioQuarter policy and this post-Choices document has been incorporated in a revised form to accommodate the place-based policies approach.

Consider that the allocation of BioQuarter should be included within an appropriate allocation to allow mixed use place-making at the BioQuarter to be delivered.

Consider the BioQuarter should be defined as one of the Major New Development Areas on Map 1.

The wording of Place 31 Policy should be amended. EBQ Partners prepared two diagrams (in post choices document and attached to rep) to support the detailed wording of the suggested allocation which should be included in Place 31. In addition, various amendments to the development principles are proposed.

BDW Trading (0350), Murray Estates (0197), SEEDCo (0198), Taylor Wimpey (0200), Persimmon Homes (0495), Robertson Residential Group Limited (0490)

Object to aim 10 – ‘delivering key economic land use needs through housing led mixed use development’ – specifically reallocation of strategic business land at BioQuarter to housing.

BDW Trading (0350), Murray Estates (0197), SEEDCo (0198), Taylor Wimpey (0200), Persimmon Homes (0495), Robertson Residential Group Limited (0490), CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), SEEDCo (0198), Hallam Land Management (0615)

The approach to reallocating strategic business land to housing was not consulted upon at MIR stage.

Robertson Residential Group Limited (0490), SEEDCo (0198), Taylor Wimpey (0200), Murray Estates (0197), BDW Trading (0350), Stewart Milne Homes (0118), Persimmon Homes (0495)

Re-allocating approximately 400 active businesses and strategic employment sites (including land at BioQuarter) for housing will not deliver the outcome ‘A city where everyone shares in its economic success’.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The BioQuarter - Outline Business Case was approved by Council prior to publication of proposed plan and identifies 400 new residential housing units and 200 affordable housing to be delivered between 2032 and 2037 - significantly less than that set out in the Proposed plan - 2,500 by 2032.

Inverdunning (Hatton Mains) Ltd (0427)

Amend Development Principles, 2nd para. "A mix of uses focused around the BioQuarter's role as a life sciences quarter, including around 2500 residential units (1,000 within City Plan 2030 period), community facilities, commercial and leisure to encourage evening and weekend activity." - capacity reference for the Edinburgh BioQuarter site requires to be reduced in terms of deliverability within the plan period.

Hallam Land Management (0615)

Object to the dilution and removal of employment land in this location and the introduction of 2500 residential uses. Object to the Development Principles associated with facilitating this development.

It is not a sustainable location and should not be considered in advance of appropriate greenfield allocations. The impact of this development cannot be satisfactorily accommodated and is essentially greenfield land in any case.

Gilmerton & Inch Community Council (0716)

Due to lack of local infrastructure, the location of the land makes development for housing difficult.

Simon Thomson (0248)

Capacity should be reduced – loss of employment land too great

Bo Adams (0363)

Environmental Proposal BGN51 – Play facilities and open space at BioQuarter is not bold enough. Should set standards and each new development should include such things as skate park, basketball court, table tennis etc. South of Edinburgh has no investment.

SEPA (0012)

A flood risk assessment (FRA) is requested for this Place, and we support this. The FRA should include consideration of capacity in the strategic SUDS already in place on the site of the Edinburgh BioQuarter. We support the inclusion of BGN46 and BGN51 as important elements of development of this Place.

The FRA should assess the risk from the Niddrie Burn and incorporates the works that have been done as part of the diversion channel and Magdalene Burn.

The Association for the Protection of Rural Scotland (0334)

Some of the emerging new buildings, in geometric forms, appear to uncomfortably dominate their immediate surrounding. Is the scale and height of these buildings excessive Can these uncomfortable effects be mitigated

Living Streets Edinburgh Group (0486)

No objection to site in principle, but there is reference to active travel, and not to pedestrian priority. Development should be no different from others, regardless of its location and mixed use status. It is well served by public transport and pedestrians must have priority throughout with development designed accordingly, likewise car parking must be limited and contributions secured to enhance public transport and surrounding pedestrian infrastructure.

University of Edinburgh (0464)

It is recognised that the BioQuarter has been given specific recognition through Policy Place 31: BioQuarter, however, the policy wording or supporting text does not make any specific reference to university activity being a key component of this area. The University already have a number of established and high profile facilities at the BioQuarter as noted in section 2.2 and are an active participant and key stakeholder in the future aspirations to further develop the location. This should be reflected with explicit reference to the importance of university participation as a key partner in the further development of the BioQuarter.

**H87: Duddingston Park South**

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with the owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

SEPA (0012)

A flood risk assessment (FRA) is requested in Proposed Plan Appendix D, and SEPA supports this request.

An FRA is needed which assesses the risk from the Niddrie/Brunstane Burn. Consideration should be given to any culverts/bridges might may exacerbate flood risk. As there is an increase in land-use vulnerability the site may be constrained due to flood risk. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues adjacent to this site.

**H88 Moredun Park Loan**

Linda Stark (0670)

Local services (Schools, GPs, Chemists) already strained by a lot of other new build in the area. Resource should go towards improving existing stock

Proposal would be over-looked by neighbouring high rises.

Iain Watt (0295), Edith Watt (0097), Scott Cockburn (0034), Bethany Cockburn (0036), David Lewendon (0699), Irene McQueenie (0045), Sandra Mills (0132), Sandra Mills (0132)

Proposal is a car park that is required by local residents. Loss will lead to increased traffic and congestion.

### **H89 Moredun Park View**

Linda stark (0670)

Local services (Schools, GPs, Chemists) already strained by a lot of other new build in the area. Resource should go towards improving existing stock.

Proposal would be over-looked by neighbouring high rises

Jennifer Mernlees (0798), Gilmerton & Inch Community Council (0716)

The site is a community centre that is used daily by local residents. The community centre is required and should be retained.

### **H90: Morrisons at Gilmerton Road**

Gilmerton & Inch Community Council (0716)

Development of the site will lead to increased congestion in the area if not planned carefully. Site would be better used as a medical centre.

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

### **H91: Liberton Hospital/Ellen's Glen Road**

Samantha Cameron (0240)

Development of the site will lead to increased flooding in Ellen's Glen.

Bruno Longmore (0455)

Ellen's Glen area is considered to be an area of significant interest both in terms of the historic residences and the natural woodland.

Ellen's Glen road is insufficiently wide to support any increase in traffic particularly marked at key bottlenecks - any increase in traffic use would endanger cyclists and be detrimental to local flora/fauna. Re-opening a residential road to large numbers of vehicles is contrary to Edinburgh Council's policy of reducing vehicle use within the city.

Liberton & District Community Council (0084)

Supports the development, but considers that the only vehicular access should be from Lasswade Road. The accesses shown in the Proposed Plan to Malbet Wynd and Ellen's Glen Road are considered unsuitable for vehicular traffic. Ellen's Glen Road could be closed over a considerable length as part of an active travel route. The access shown to Malbet Wynd is to an internal estate road which was not intended for through traffic. Ellen's Glen Road is extremely narrow and constrained by stone walls and embankments.

- Request the reference to vehicular access to Malbet Wynd and Ellen's Glen Road changed to Active Travel access only in sub section (c) of the Design Principles.

Would also like clarification of sub section (f) of the Design Principles.

Request change to sub-section (f ) of the Design Principles is to clarify what is meant by the reference to "retention or re-use of Liberton Hospital within any new development". This statement has led some residents to interpret this as referring to health facilities.

LDCC considers that it is essential that it is involved in the early stages of Master Planning and the development of Design Principles

SEPA (0012)

A flood risk assessment is required and consideration is to be given to flood storage. We support this and we support the inclusion of BGN34 as part of a city-wide strategic approach to avoiding flood risk and water management.

An FRA which assesses the risk from the Stenhouse Burn along the boundary of the site and may be partially culverted. Consideration should be given to any culverts/bridges which might exacerbate flood risk. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within the site. This should be investigated further.

James McKenna (0376)

Proposed density of development is too high – would be cramped for residents and cause loss of amenity for neighbouring residents.

Suzanne Baxter (0237)

The site of Liberton Hospital and the land surrounding is a wildlife haven.

Access is to be from Malbet Park which is already a busy thoroughfare, especially for children walking to Liberton High School.

The roads within the development cannot support further traffic.

James McKenna (0376)

Access through Malbet Wynd and Malbet Park not necessary. Would result in rat run. Access from Malbet Wynd and Malbet Park should be restricted to pedestrians and cycles.

Suzanne Baxter (0237), James McKenna (0376)

Insufficient local infrastructure (GPs, schools) to support proposed additional homes

Suzanne Baxter (0237)

Insufficient public transport to support additional housing. Roads are in poor repair and cannot cope with current volume of traffic, so how will it cope with additional homes.

Amy Pickering (0057)

Access through Malbet Wynd is not necessary. Increased vehicle traffic through Malbet Wynd would cause unnecessary frustration for current residents and decrease the attractiveness of the greenspaces present in the existing residential area.

Coral MacRury (0085)

Considers it would be a great pity to give all of this area over to housing.

Jim Henry (0096)

Brownfield part of site should be redeveloped. Undeveloped field should be considered for use as open space for recreational use. Access to Lasswade Road via Ellen's Glen Road and Malbet Park should be deleted. Proposed access to Ellen's Glen Road as shown on Map 33 is impractical, however, could be resolved by relocating the access to the south which is unimpeded by ground collapse.

Considers that Ellen's Glen Road is too narrow and unsuitably aligned to cope with levels of traffic from Lasswade Road via Ellen's Glen Road. Suggests that vehicular traffic should be one way from Lasswade Road to a revised access and that any traffic from the site into Malbet Park Estate should be restricted to that heading towards Lasswade Road.

Concerned that if the access as proposed on Map 33 is retained it would necessitate the re-opening of the section of Ellen's Glen Road between the proposed access and Gilmerton Road as consider this is suitable for additional traffic.

James Thin (0141), Francesca Migliorini (0502), Catherine Longmore (0508)

There should be no access from Ellen's Glen Road. All access should be direct from Lasswade Road. Ellen's Glen Road is a green active travel corridor and not suitable for through car traffic. Bollards should be kept in the same location.

Living Streets Edinburgh Group (0486)

No objection to site in principle, but there is reference to active travel, and not to pedestrian priority. Development should be no different from others, regardless of its location. Pedestrians must have priority throughout with development designed accordingly, likewise car parking must be limited and contributions secured to enhance public transport and surrounding pedestrian infrastructure.

**H92: Gilmerton Dykes Street**

Gilmerton & Inch Community Council (0716)

Areas is already dangerous from traffic. New housing will increase potential for accidents.

**H94: Old Dalkeith Road**

Tiger Developments Ltd (0602)

Supports site allocation for alternative use but other uses such as student housing should also be considered.

Gilmerton & Inch Community Council (0716)

Site is on 'Blue Light' Route. Additional housing could cause delays to ambulances (already problem though the places for people additions).

Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

SEPA (0012)

A flood risk assessment (FRA) is requested in Proposed Plan Appendix D, and SEPA agrees this is necessary.

There is uncertainty regarding the Braid Burn Flood Protection Scheme and its interaction with the Pow Burn. An FRA is required which assesses both the Braid Burn and the Pow Burn. Consideration should be given to any culverts/bridges which might exacerbate flood risk. As this area is identified for numerous development plots we would recommend the

council considers a holistic approach and undertake a wider FRA which will inform suitable development locations and land-use types. Review of the surface water 1 in 200 year flood map indicates that there may be flooding issues within/adjacent to the site. This should be investigated further.

### **H95: Peffermill Road**

#### **Grange/Prestonfield Community Council (0192)**

Planning consent at 64 Peffermill Road is 30 flats so correct number of units should be inserted.

#### Inverdunning (Hatton Mains) Ltd (0427)

Site should be considered as a windfall opportunity rather than a proposal. The Council have not been in touch with owners but an exercise carried out by Pegasus suggests there is opposition to releasing sites from business use. CPO has been indicated as a possible solution but the timescale for this would mean that the sites would not be deliverable in the plan period.

#### Simon Thomson (0248)

Sites not available for housing development as they are currently in business use. A proportion may come forward but the proposed number is not backed up by evidence. Combined result of loss of business businesses would result in lack of jobs or further land needed to relocate businesses.

#### SEPA (0012)

There is uncertainty regarding the Braid Burn Flood Protection Scheme and its interaction with the Pow Burn. An FRA is required which assesses both the Braid Burn and the Pow Burn. Consideration should be given to any culverts/bridges may exacerbate flood risk. As this area is potentially identified for numerous development plots we would recommend the council considers a holistic approach and undertake a wider FRA which will inform suitable development locations and land-use types.

### **Housing Development – non specific**

#### Robyn Kane (0091)

Object to additional housing in the locality as there is already pressure on healthcare services – made worse with closure of Liberton Hospital.

#### Bo Adams (0363)

No plans for development around Frogston Road East - a good place to develop this area into a green example with safe, wide, segregated active infrastructure links and high quality leisure & family infrastructure and good high school with sport facilities. The area needs to be looked at - no cycle lane with new Frogston Primary School - no way of getting to town actively and safely.

## **Modifications sought by those submitting representations:**

### **HSG 17: Greendykes**

#### SEPA (0012)

Modify Plan to require a flood risk assessment for the Niddrie Burn

### **HSG 18: New Greendykes**

#### SEPA (0012)

Modify Plan to require a flood risk assessment for the Niddrie Burn

### **HSG 27: Newcraighall East**

#### Newcraighall LLP (0466)

Modify the Plan as follows;

- Para.3.3 p.41 - section to be added for 'South East Edinburgh' sites to include Place 32 Newcraighall, as well as other sites located in South East Edinburgh (i.e. Places 31 to 36);
- Place 32 Newcraighall p.94 – amend 'Para.3.80 e. ...This greenspace should be fronted by new development add 'on both sides...';
- Place 32 Newcraighall p.94 – delete 'Para.3.80 f. Layout should make provision for an extension of Newcraighall Primary School's grounds' as no longer required.
- Place 32 Newcraighall p.94 – amend 'Para.3.80 h. Provide or contribute towards education [delete – and healthcare infrastructure] and community facilities.';
- Map 32 Newcraighall/Brunstane p.96 – add housing notation to the map;
- Map 32 Newcraighall/Brunstane p.96 – amend notation 'proposed school (2ha) at Brunstane' and delete 'school grounds extension at Newcraighall';
- Map 32 Newcraighall/Brunstane p.96 – delete 'S' notation on land identified for school grounds extension at Newcraighall and add housing notation as part of HSG 27 allocation; and
- Map 32 Newcraighall/Brunstane p.96 – amend by reducing width of green corridor notation at HSG 27.

#### Living Streets Edinburgh Group (0486)

Modification not specified.

#### Newcraighall Heritage and Residents Association (0759)

Reference to road link to Newcraighall should make clear that the road junctions at the A1 and around Fort Kinnaird will also need upgrading to cope with the increase in use.

At Place 36 add a paragraph to state “woodland on the west side will be preserved and enhanced” and “The Wisp/Old Dalkeith Road junction will be widened”.

Living Streets Edinburgh Group (0486)

Modification not specified.

## **H86: BioQuarter**

### Edinburgh BioQuarter Partners (0478)

Modify reference to BioQuarter on Spatial Strategy Map to define it as a Major New Development Area.

Modify plan to include the BioQuarter within an allocation.

Modify wording of Policy Place 31 as follows;

- Place 31 – Edinburgh BioQuarter: Planning permission will be granted for development within the boundary of Edinburgh BioQuarter as defined on the Proposals Map, provided it accords with the BioQuarter Development Principles (defined below and in Diagrams 1 and 2) and the approved, or subsequently approved, master plan.
- Paragraph 3.79 – A BioQuarter master plan will be prepared to support the future development of the Edinburgh BioQuarter for a development focused on health innovation-led mixed use development. This co-location of uses helps the development and city on its journey toward net-zero.

Modify Policy Place 31 to include the following diagrams;

- Diagram 1 illustrated the Development Principles which were proposed for the allocation and is reflective of the Development Principles (subject to suggested amended wording) included within the Place 31 policy. The Development Principles Diagram 1 would provide greater clarity and certainty in relation to these principles.
- Diagram 2, which confirmed Datum Heights across the proposed BioQuarter and, in particular, restricting those heights within the Sensitive Area, as already defined in the Edinburgh BioQuarter Supplementary Guidance (2013). The EBQ partners are concerned that the absence of the Development Principles and Datum Height diagrams will undermine confidence in the BioQuarter bidding process currently underway, and that these should be included within the City Plan to provide the necessary certainty for all partners in bringing forward BioQuarter over the Plan period. In addition, the wording of Place 31 should be amended to reflect the diagrams.

Modify the Place 31 Development Principles as follows;

- Principle B is largely supported with the following suggested amendments: “a mix of uses focused around the BioQuarter’s role as a life sciences quarter health innovation district, including at least 260,000sqm of health innovation uses, and in the region of 2,500 residential units, community facilities, commercial and leisure to encourage evening and weekend activity” – this more accurately reflects the BioQuarter Place Strategy and ensures that the mixed use development is led by health innovation uses.
- Principle C requires to be amended to reflect the heights considered appropriate in discussion with CEC Landscape. Change to “Development which respects the site’s location within the wider landscape setting of the city – the extent of

development and building heights shall be in accordance with Diagrams 1 and 2, managed to protect the landscape character and the visual connectivity of the Craigmillar and Edmonstone ridges". Any increase in building heights beyond those defined in Diagram 2 will be assessed through a landscape and visual impact assessment accompanying future planning applications.

- Principle F requires transport contributions and should reflect the contributions already made by the EBQ Partners in relation to the initial phases of the development, on foot of PPP 02/04372/OUT, 13/0548/FUL and 19/03063/FUL. Edinburgh BioQuarter paid a tram contribution of £749,192 and a Transportation Study Payment of £50,000, and Principle F should be amended to make reference to transport contributions which are necessary and proportionate, and deduct previous payments made by the BioQuarter Partners for the avoidance of doubt.
- Principles G and H relate to matters which are controlled by policy INF3 (Infrastructure Delivery and Developer Contributions) and the EBQ partners would suggest that this reference should either be made more explicit to the requirements as set out in that policy (and in particular to the requirements of Part 4, Table 11 as they relate to new primary school and healthcare facilities) or the reference should be deleted as it duplicates the requirements of policy INF3. Table 11 includes a requirement relating to Edinburgh BioQuarter at reference ED8, and refers to the need for a new 14-class primary school to serve the BioQuarter and Edmonstone sites in the form of a site of two hectares being required. The Place 31 policy refers to either a contribution or provision towards education, and greater clarity is required either in the Place 31 policy or under ED8 in Table 11 in terms of either the provision of a site or the developer contributions associated with individual residential units. The same comments apply in relation to healthcare facilities – Table 12 (Healthcare Infrastructure) states, "Development at the Edinburgh BioQuarter will require a new practice in this area" and references the fact that development pressure in the area has already resulted in a proposed practice which is unrelated to the BioQuarter proposal. It is important that the need for a new practice is justified specifically in relation to BioQuarter or in relation to wider residential allocations in the southeast area, and the EBQ partners would welcome further clarity on this issue.

BDW Trading (0350), Murray Estates (0197), SEEDCo (0198), Taylor Wimpey (0200), Persimmon Homes (0495), Robertson Residential Group Limited (0490)

Modification not specified but infers removing reference to Edinburgh BioQuarter in Aim 10.

BDW Trading (0350), Murray Estates (0197), SEEDCo (0198), Taylor Wimpey (0200), Persimmon Homes (0495), Robertson Residential Group Limited (0490), CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), SEEDCo (0198), Hallam Land Management (0615)

Modification not specified but infers removing reference to housing on existing allocated business sites.

Modify Plan to delete site.

### **Housing Development – non specific**

Robyn Kane (0091)

Modification not specified.

Bo Adams (0363)

Modify Plan to allocate land at Frogston Road East for housing.

### **Summary of responses (including reasons) by planning authority:**

#### **HSG 17: Greendykes**

SEPA (0012)

The site HSG 17 is a legacy housing site carried forward from the adopted LDP, parts of which under construction. Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

#### **HSG 18: New Greendykes**

SEPA (0012)

The site HSG 18 is a long standing legacy housing site carried forward from the adopted LDP that has planning permission, parts of which are under construction. Policy Env 36

requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

### **HSG 27: Newcraighall East**

#### Newcraighall LLP (0466)

The Council welcomes support for this housing allocation. The housing figure (154 units) for the site is based on the remaining number of units to be completed from the 2021 Housing Audit (CD055), which the Council considers was the most up to date source of information at the time the Plan was published. A more recent audit has also been completed and reported to Planning Committee on 2 November 2022 (CD180).

The Council considers that seeking developer contributions towards healthcare infrastructure is justified and the Council sets out its position in detail in its responses in Issue 27: Infrastructure Delivery and Developer Contributions. The Newcraighall site is within a health care contribution zone as shown in the Council's finalised Developer Contributions and Infrastructure Delivery Guidance (CD045), which is a material consideration when assessing planning applications. As a result, the Council does not agree that the reference to healthcare should be removed.

The Council acknowledges the intention to relocate children to a new primary school, however, due to the potential for unforeseen circumstances associated with school rolls the Council considers it prudent to retain the safeguard. The Council sets out in response to this matter in detail in Issue 29: Infrastructure Delivery – Education.

Map 32 is an indicative map and not to scale. As a result, the Council does not consider there is a need to narrow the width of the green corridor shown on the map. In addition, the map is clear that the greenspace is fronted by development on both sides and therefore this is implicit in the text in criterion e. **No modification proposed**

#### Living Streets Edinburgh Group (0486)

Design principles for footpaths and cycle routes are set out in the Edinburgh Design Guidance (CD047). The design and priority would be appropriately addressed through the planning application process on a site specific basis. Place 31 (g) requires that proposals contribute towards the specified transport infrastructure. This includes enhanced bus provision and active travel routes. Policy Inf 7 encourages private car parking free or low car parking developments. **No modification proposed**

#### Newcraighall Heritage and Residents Association (0759)

Policies in the plan address issues of transport infrastructure. Policy Inf 3 requires that there should be sufficient infrastructure capacity available or that it can be delivered at the appropriate time. Inf 4 addresses impacts and mitigation. It is not necessary to replicate these policies within Place 32. **No modification proposed**

### **HSG29 Brunstane**

### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

### Living Streets Edinburgh Group (0486)

Design principles for footpaths and cycle routes are set out in the Edinburgh Design Guidance (CD047). The design and priority would be appropriately addressed through the planning application process on a site specific basis. Place 31 (g) requires that proposals contribute towards the specified transport infrastructure. This includes enhanced bus provision and active travel routes. Policy Inf 7 encourages private car parking free or low car parking developments. **No modification proposed**

### **HSG 30: Moredunvale Road**

Moredun multis and maisonettes residents association (0661), Clare Fallas (0377), Linda stark (0670), Nedelina Nikolov (0048), Richard Cook (0710), Jennifer Mernlees (0798), Rachel Lambe, Paulina Fornal (0166), Carlo Miccolis (0100), Akira Smallwood (0808), Robyn Kane (0091), Anna Francesca Schiraldi (0416), Bill Cook (0730)

The site HSG 30 is a legacy housing site carried forward from the adopted LDP, which has been subject to examination. The Council intends to prepare a place brief for the site that will be subject to consultation with the community. The Plan sets out a series of development principles for the site in Policy Place 35. The Plan seeks to deliver open space improvements alongside housing development on approximately half the site. **No modification proposed**

### SEPA (0012)

Criterion i of Place Policy 35 requires a flood risk assessment to inform the development of this site.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

### Living Streets Edinburgh Group (0486)

Design principles for footpaths and cycle routes are set out in the Edinburgh Design Guidance (CD047). The design and priority would be appropriately addressed through the planning application process on a site specific basis. Place 31 (g) requires that proposals contribute towards the specified transport infrastructure. This includes enhanced bus provision and active travel routes. Policy Inf 7 encourages private car parking free or low car parking developments. **No modification proposed**

## **HSG 40: Edmonstone**

### SEPA (0012)

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

### Association for the Protection of Rural Scotland (0334)

The site is now part of the urban area but is still designated as a Special Landscape Area, a Local Nature Conservation Site and a Local Biodiversity Site which will inform the consideration of any development. **No modification proposed**

### Pawel Stankiewicz (0445)

Policy Env 20 protects trees and applies to all trees, including those outwith a tree protection order. It is not necessary to restate this at Place 36.

Place 36 (g) sets out the road mitigation measures. Proposals coming forward will be assessed against Policy Inf 4 which addresses impacts and mitigation. The detail of mitigation measures will be considered through the planning application process. **No modification proposed**

### Living Streets Edinburgh Group (0486)

Design principles for footpaths and cycle routes are set out in the Edinburgh Design Guidance (CD047). The design and priority would be appropriately addressed through the planning application process on a site specific basis. Place 31 (g) requires that proposals contribute towards the specified transport infrastructure. This includes enhanced bus provision and active travel routes. Policy Inf 7 encourages private car parking free or low car parking developments. **No modification proposed**

## **H86: BioQuarter**

### Edinburgh BioQuarter Partners (0478)

The Council considers referring to the BioQuarter as an 'employment centre' is justified. The Council sets out its response to this matter in detail in Issue 34: Economy Proposals.

The Plan has already allocated the BioQuarter as site H86 and the development principles set out in policy Place 31 make it clear it has been allocated for a mixed use development.

Map 1 of the Plan already identifies the site as a major new development area, as delineated by the site's red boundary outline.

The Council considers that the details of the proposals for the BioQuarter are still emerging in discussion with the BioQuarter partners. The Plan sets out high level

development principles in the Place policies to guide development proposals. These principles will be developed further, taken forward and more clearly defined in the BioQuarter master plan as referred to in paragraph 3.79. Therefore, the Council does not consider it necessary or justified to set out further detail in the development principles, and furthermore, introducing more specific details reduces the flexibility of the policy to accommodate subsequent changes to the proposals as they evolve as part of the master plan preparation process. **No modification proposed**

BDW Trading (0350), Murray Estates (0197), SEEDCo (0198), Taylor Wimpey (0200), Persimmon Homes (0495), Robertson Residential Group Limited (0490)

The alteration of the mix of uses at the Edinburgh BioQuarter is supported in principle by the Edinburgh BioQuarter partners as a means of achieving a broader mix of uses on the undeveloped parts of the site, to support existing and future life science research uses. It is entirely consistent with strategy of the Plan to support mixed use development on existing allocated or brownfield sites. **No modification proposed**

BDW Trading (0350), Murray Estates (0197), SEEDCo (0198), Taylor Wimpey (0200), Persimmon Homes (0495), Robertson Residential Group Limited (0490), CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), SEEDCo (0198), Hallam Land Management (0615)

The Council is of the view that Choices set out a sufficient consultation on options for development for the BioQuarter as identified through both the text and mapping of Choices, and also through the Housing Study (CD026) and Appendix D. In addition, responses to the Choices consultation included reference to the potential for the type of development set out in the Proposed Plan, demonstrating how people understood what was being proposed. As a result, the Council considers the proposals are reasonable and justified. The Council sets out its position in relation to these issues in detail in Issue 39 Consultation. **No modification proposed**

Robertson Residential Group Limited (0490), SEEDCo (0198), Taylor Wimpey (0200), Murray Estates (0197), BDW Trading (0350), Stewart Milne Homes

The Council considers the impact on business, including the Edinburgh BioQuarter is not as significant or extensive as alleged in the representations. The Council sets out its position in detail in its responses in Issue 3: Delivery of the Strategy. **No modification proposed**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The proposals for the Edinburgh BioQuarter have evolved since the outline business case was approved. Edinburgh BioQuarter Partners support the principle of a higher number of homes on the site to support the existing and future life science research. In addition, Policies Econ 2 Commercial Development and Env 26 Housing density support this approach. As a result, the Council considers the revised figure is justified. **No modification proposed**

Inverdunning (Hatton Mains) Ltd (0427)

The proposals for the BioQuarter have evolved since the outline business case was approved. Edinburgh BioQuarter Partners support the principle of a higher number of houses on the site to support the existing and future life science research. The purpose of the housing figure is to identify the quantity of housing that would be supported on the site, not for the purposes of programming what is likely to be delivered during the Plan period.

**No modification proposed**

Hallam Land Management (0615)

The alteration of the mix of uses at the Edinburgh BioQuarter is supported in principle by the Edinburgh BioQuarter partners, and is a means of achieving a broader mix of uses on the remaining undeveloped parts of the site to support existing and future life science research and is entirely consistent with strategy of the Plan to support mixed use development on existing allocated or brownfield sites. The Council considers the location of the BioQuarter to be sustainable as it is located on a major public transport corridor with good access to services. In addition, it is located adjacent to the safeguarded route for the tram extension. The site is an existing allocation and does not involve the allocation of a new greenfield site. **No modification proposed**

Gilmerton & Inch Community Council (0716)

Criterion f and g of Policy Place 31 set out the development principles with regard to infrastructure. These matters will be considered and resolved through the master plan and subsequent development management process. **No modification proposed**

Simon Thomson (0248)

The alteration of the mix of uses at the Edinburgh BioQuarter is supported in principle by the Edinburgh BioQuarter partners, and is a means of achieving a broader mix of uses on the remaining undeveloped parts of the site to support existing and future life science research and is entirely consistent with strategy of the Plan to support mixed use development on existing allocated or brownfield sites. **No modification proposed**

Bo Adams (0363)

The Plan sets out high level development principles in the Place policies to guide development proposals. These principles will be developed further, taken forward and more clearly defined in the BioQuarter master plan as referred to in paragraph 3.79. Therefore, the Council does not consider it necessary or justified to set out further detail in the development principles. **No modification proposed**

SEPA (0012)

Criterion i of Place Policy 31 requires a flood risk assessment to inform the development of this site.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

#### The Association for the Protection of Rural Scotland (0334)

Development principle c requires development to respect the sites location and building heights need to be managed to protect the landscape character. The preparation of the master plan will give the opportunity to strengthen and address this matter in further detail.

**No modification proposed**

#### Living Streets Edinburgh Group (0486)

Design principles for footpaths and cycle routes are set out in the Edinburgh Design Guidance (CD047). The design and priority would be appropriately addressed through the planning application process on a site specific basis. Place 31 (g) requires that proposals contribute towards the specified transport infrastructure. This includes enhanced bus provision and active travel routes. Policy Inf 7 encourages private car parking free or low car parking developments. **No modification proposed**

#### University of Edinburgh (0464)

The role of Policy Place 31 is to sets out a series of broad development principles to guide development within the BioQuarter. In paragraph 3.79 there is a commitment to prepare a master plan with regard to life science research and directly related commercial developments. The Council considers the role of the University could be more clearly articulated in the master plan.

#### **H87: Duddingston Park South**

#### Inverdunning (Hatton Mains) Ltd (0427), Simon Thompson (0248)

The Council's position on the spatial strategy is set out in detail in its responses to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have subsequently come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable. The plan continues to identify 483 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. **No modification proposed**

#### SEPA (0012)

Appendix D of the Plan requires a flood risk assessment to inform the development of this site.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

## **H88 Moredun Park Loan**

Linda Stark (0670)

The Council considers Policy Inf 3 Infrastructure Delivery and Developer Contributions requires development to deliver or contribute towards education, and healthcare infrastructure to mitigate the negative impacts of development and that this will address the issue. **No modification proposed**

The Council considers Policy Env 33 Amenity requires development to demonstrate that the amenity of occupiers will not be adversely affected by privacy or immediate outlook. This will be considered at the planning application stage. **No modification proposed**

Iain Watt (0295), Edith Watt (0097), Scott Cockburn (0034), Bethany Cockburn (0036), David Lewendon (0699), Irene McQueenie (0045), Sandra Mills (0132), Sandra Mills (0132)

A key objective of the Plan is to create a city where you do not need a car to move around and the Plan is seeking to support development where private car use is not required. As a result, the Council considers that the redevelopment of the car park for a small scale infill development is justified and will have the benefit of helping to create a more active frontage to Moredun Park Loan. With regard to parking associated with the new development, it will be required to meet the requirements of Policy Inf 8 Design of Car Parking. **No modification proposed**

## **H89 Moredun Park View**

Linda Stark (0670)

The Council considers Policy Inf 3 Infrastructure Delivery and Developer Contributions requires development to deliver or contribute towards education, and healthcare infrastructure to mitigate the negative impacts of development and that this will address this issue. **No modification proposed**

The Council considers Policy Env 33 Amenity requires development to demonstrate that the amenity of occupiers will not be adversely affected by privacy or immediate outlook. This will be considered at the planning application stage. **No modification proposed**

Jennifer Mernlees (0798), Gilmerton & Inch Community Council (0716)

A key aim (10) of the Plan's strategy is to deliver mixed use housing led development. The redevelopment of the site would provide the opportunity to provide a new community centre as part of the mixed development. The Council considers this is sufficiently clear, however, if the reporter is so minded, the Council would not have an issue if this is amended to identify re-provision of the community centre as a development principle in Appendix D of the Plan.

## **H90: Morrisons at Gilmerton Road**

Gilmerton & Inch Community Council (0716)

The Council considers Policy Inf 4 of Transport Infrastructure requires housing proposals to demonstrate that local transport impacts can be addressed where this is relevant and necessary to the proposal. **No modification proposed**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thompson (0248)

The Council's position on the spatial strategy is set out in detail in its responses to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable. The plan continues to provide 483 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. **No modification proposed**

### **H91: Liberton Hospital/Ellen's Glen Road**

Samantha Cameron (0240)

Policy Place 34 sets out development principles for this site. Principle m requires a flood risk assessment to inform the development and design/layout of the site. **No modification proposed**

Bruno Longmore (0455)

Policy Place 34 sets out development principles for this site. Principle d requires new development to be set back from the top of the bank of Stenhouse Burn, and therefore recognises this sensitive area. Principle c requires direct access to the site from Lasswade Road with Ellen's Glen Road and Malbet Wynd functioning as additional access points. In addition, Principle k requires development to provide or contribution towards active transport and principle l requires development to contribute towards public transport improvements which the Council considers is consistent with the Plan's aim of reducing private vehicle use/improving mode share. **No modification proposed**

Liberton & District Community Council (0084)

The Plan sets out high level development principles in the Place Policy 34 policies to guide development proposals. These principles will be developed further, taken forward and more clearly defined in the master plan as referred to in the policy text. Details with regard to access arrangements will emerge as part of the master plan and planning application processes. Reference to re-use of Liberton Hospital means the building, not its current health use. The Council will engage with communities/stakeholders when preparing master plans or development briefs. **No modification proposed**

SEPA (0012)

Policy Place 34 sets out development principles for this site. Principle m requires a flood risk assessment to inform the development of this site.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

James McKenna (0376)

Policy Place 34 sets out development principles for this site. Criterion a require the housing development to respect the landscape setting of the site, creating a sustainable place that can retain its special character. The Council considers this can be achieved through the provision of new connections and open spaces whilst still delivering the number of houses envisaged. As set out in the Council's responses in Issue 12: Density, the Council considers high density development can be delivered without compromising placemaking. **No modification proposed**

Suzanne Baxter (0237), James McKenna (0376), Amy Pickering (0057), Jim Henry (0096), Catherine Longmore (0508), James Thin (0141), Francesca Migliorini (0502)

Policy Place 34 sets out development principles for this site. Principle a requires the housing development to respect the landscape setting of the site, creating a sustainable place that can retain its special character. Principle c requires direct access to the site from Lasswade Road with Ellen's Glen Road and Malbet Wynd functioning as additional access points. These principles will be developed further, taken forward and more clearly defined in the master plan as referred to in the policy text. Details with regard to access arrangements will emerge as part of the master plan and planning application processes. **No modification proposed**

Suzanne Baxter (0237), James McKenna (0376)

Policy Place 34 sets out development principles for this site. Principle i requires development to provide or contribute towards education and health care infrastructure. Contributions will be taken in accord with Policy Inf 3 of the Plan. **No modification proposed**

Suzanne Baxter (0237)

Policy Place 34 sets out development principles for this site. Principle l requires development to contribute towards public transport improvements which the Council considers is consistent with the Plan's aim of reducing private vehicle use/improving mode share. **No modification proposed**

Coral MacRury (0085)

Policy Place 34 sets out development principles for this site. These include requirements for the provision of a new local greenspace and new outdoor play facilities alongside housing. **No modification proposed**

Living Streets Edinburgh Group (0486)

Design principles for footpaths and cycle routes are set out in the Edinburgh Design Guidance (CD047). The design and priority would be appropriately addressed through the planning application process on a site specific basis. Place 31 (g) requires that proposals contribute towards the specified transport infrastructure. This includes enhanced bus provision and active travel routes. Policy Inf 7 encourages private car parking free or low car parking developments. **No modification proposed**

## **H92: Gilmerton Dykes Street**

Gilmerton & Inch Community Council (0716)

The Plan sets out development principles for smaller sites in Appendix D. One of the principles is to provide pedestrian/cycle links and green/blue links connecting Gilmerton Dykes Street improving the connectivity to the quieter Kilngate Brae. In addition, issues such as road safety will be addressed through the planning application process. **No modification proposed**

## **H94: Old Dalkeith Road**

Tiger Developments Ltd (0602)

The Plan identifies sites for housing led mixed use development. There is no student housing requirement figure which the Plan has to provide for. Any proposals for student housing brought forward would need to be consistent with policies and proposals set out in the Plan, including Policy Hou 6 Student Accommodation. **No modification proposed**

Gilmerton & Inch Community Council (0716)

The Council considers the redevelopment of the brownfield site for housing is unlikely to have any negative implications for ambulance services using Old Dalkeith Road. **No modification proposed**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thompson (0248)

The Council's position on the spatial strategy is set out in detail in the responses to Issue 2 Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable. The plan continues to provide 436 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. **No modification proposed**

SEPA (0012)

Appendix D sets out technical requirements for housing proposals and requires a flood risk assessment for this site.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

#### **H95: Peffermill Road**

#### **Grange/Prestonfield Community Council (0192)**

64 Peffermill Road is not part of H95. **No modification proposed**

Inverdunning (Hatton Mains) Ltd (0427), Simon Thompson (0248)

The Council's position on the spatial strategy is set out in detail in the responses to Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. There is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development. Deliverability of sites is covered under Issue 20: Assessment of Housing Land Supply. All allocated sites are considered to be deliverable. The plan continues to provide 483 hectares of land for business/industry/storage use and has identified additional land for the relocation of businesses where they are unable to be integrated into mixed use development. **No modification proposed**

#### SEPA (0012)

Appendix D sets out technical requirements for housing proposals and requires a flood risk assessment for this site.

Policy Env 36 requires that detailed applications provide a surface water management plan and should comply with the Council's Flood Risk and Surface Water Management Plan Requirements Guidance (CD077). Policy Env 35 addresses flood risk. It is an established practice to consult with the Council's flood prevention officer through the planning application process. **No modification proposed**

#### **Housing Development – non specific**

Robyn Kane (0091)

Policy Inf 3 Infrastructure Delivery and Developer Contributions requires development proposals to mitigate the impacts of development on healthcare by delivering or contributing to primary healthcare capacity by providing new facilities or extending existing facilities. **No modification proposed**

Bo Adams (0363)

The land south of Frogston Road East is within the green belt. A key aim (Aim 2) of the Plan is to direct new development to and maximise the use of brownfield land rather than greenfield land. Where greenfield land has been identified for housing development it is in the context of delivering housing led mixed use development on sites previously identified

for development, but re-envisaging the allocated sites in terms of the mix and balance of use, i.e. West Edinburgh. The Council considers there is no need for additional greenfield land to be identified for development. The Council considers there is an adequate provision of housing land supply, that there is a range of types of sites identified e.g. large, small, brownfield and greenfield etc, that proposed densities can be achieved and allocated sites are considered deliverable in the period of the plan. The Council sets out its position in relation to these issues in detail in Issue 20: Assessment of Housing Land Supply. **No modification proposed**

<b>Provision of the development plan to which the issue relates:</b>	Proposals for development in Green Belt and Countryside policy area.			
<b>Planning authority's summary of the representation(s):</b>				
<p><b>Site: 1. Liberton Tower Mains</b></p> <p><u>Glenmorrison Group (0600)</u></p> <p>An additional site should be identified at Liberton Tower Mains as an appropriate housing site for elderly living and site removed from greenbelt. This would include appropriate wording to ensure the local environmental and design impacts of development are</p>				

acceptable.

Allocation of land at Liberton Tower Mains for provision of elderly care housing and inclusion of a policy within the City Plan Strategy would reflect the requirements in this regard by Scottish Ministers in the 2019 Planning Act.

The landholding at Liberton Tower Mains comprises an existing mixed-use complex of buildings (West Plot) and associated land (East Plot). The existing uses within the building complex include education, housing and business. However, there is no remaining element of the original farming use and its current designation within the green belt is at odds with stated green belt purposes. This was confirmed by the approval of a dwelling house by the Council's Local Review Body (ref: 19/04204/FUL).

## **Site 2. Bankhead Steading: Queensferry**

### Wight PDL (0078), Roseberry Estates (0618)

Land at Bankhead Steading, Queensferry should be removed from the Green Belt and identified for mixed business, nursery and tourism uses on Map 2, 5 and the Proposals Map.

The Plan proposes to displace a significant number of active businesses so their current sites can be repurposed for housing development. Policy Econ 2 Commercial Development gives those displaced businesses the additional headache of having to also ensure 50% of their new site is also used for housing development.

The Council has given no thought to how this programme of displacement and/or redevelopment will be delivered. Each and every site will need to be project managed by either a willing landowner, a willing home builder or the Council itself through the compulsory purchase process. It appears the Council has given no thought to which of those delivery methods will suit each of the sites it is expecting homes to be built on and/or businesses relocated to. If the existing businesses can't be re-provided for on their existing sites (which seems unlikely given the lack of detailed planning for this) then in all likelihood, this policy realises the Ryden report conclusion that existing businesses will have to relocate to areas outwith the city.

There doesn't seem to be anywhere in terms of a table to identify new Business Allocations, only Table 13 Areas of Economic Importance does this. Should one be produced, then an allocation should be incorporated for the Bankhead development or included in Table 13.

Case for this development is strong and are unclear why we have not been supported at this stage in the plan.

The Vision document demonstrates an attractive, permeable, place with character, interest and activity, taking in to account the constraints (Oil Pipeline etc.) and informal feedback from the Community Council.

There is an identified need for this development in this location that cannot be met elsewhere in the Settlement. This need can be met on a site which can be serviced in a location with infrastructure capacity for it. The site does have potential to accommodate

new development of the type proposed without major adverse effects on visual amenity, landscape character and designations, or the setting to Queensferry and associated Green Belt. The protected view of the bridges is erroneously mapped on Station Road where the view shown is impossible to achieve other than from Hawes Brae. The proposal will achieve many of the priority actions identified in the Forth Bridges Tourism Strategy and the site meets the tests of effectiveness and deliverability.

No regard has been had to the need for a nursery in the locality; the absence of any other site to meet the need in the settlement; and the continued residential creep at Ferrymuir. Whilst Builyeon Road is delivering some commercial development, this is a very different mix (Retail Food store, Drive-Thru Food and Drink and Petrol Filling-Station/Retail Kiosk/Carwash) and unlikely to address the issue we are responding to. If small and medium sized local companies cannot expand within the locality they relocate for larger premises and never return.

The LDP states (at 2.140) that City Plan 2030 will provide land for all types of businesses big and small whether they are office based or require industrial units but delivers little for Queensferry in this regard. For a plan that claims to be delivering homes next to where people live, it does a poor job of delivering jobs near to peoples' homes, particularly in a sustainable location with infrastructure capacity to accommodate it and limited impact where it is needed.

With the pressure on existing employment sites within the city resulting from the Council's brownfield only approach to housing land (many of the proposed sites are currently operational employment uses) we would have thought this proposal, in this location, particularly at this time, might be something the Council would have found favour with.

Queensferry is subject to a limited number of proposals in this plan. Of note, however, are; the ever-increasing residential development of Ferrymuir, which was originally an employment allocation in the Rural West Edinburgh Local Plan 2006; the pending application (Ref: 21/04755/FUL) to redevelop Scotstoun House to residential; and the inadequacy of the mixed-use element of Builyeon Road to meet the requirements of local businesses.

Consultants have undertaken a review of the availability of commercial property within South Queensferry and the surrounding area (3-5mile radius) capable of accommodating a Nursery (as well as more general commercial uses) which has been submitted in support of these representations. The report has concluded that there is nothing suitable available or likely to become available for a nursery or medium sized business to relocate/expand locally. Their experience indicates that we are promoting the correct range of uses, for which there is currently strong, and potentially improving, demand.

Consultants have been commissioned to undertake a review of the infrastructure in the locality which is submitted in support of these representations. This concludes that all of the utilities required for the proposed expansion would appear to be readily available and at reasonable cost such that servicing should not pose any constraint to the proposed development.

### **Site 3. Clerwood House**

The General Teaching Council for Scotland (0094)

Remove Clerwood House from the green belt. The site would remain as a Special Landscape Area, a Local Biodiversity Site, Local Nature Conservation Site, and as part of Corstorphine Hill defined Open Space. Each, on their own, and certainly together, will ensure the area is protected from inappropriate development. There is thus no need for the land to also remain as Green Belt.

#### **Site 4. Ransfield Farm Ratho**

##### Stewart Milne Homes (0118)

Allocate Ransfield Farm, Ratho as a housing proposal in the Plan.

Representations in respect to the Housing Land Requirement and Housing Supply demonstrate a massive shortfall in allocated and deliverable housing sites in Proposed City Plan. Therefore, it is therefore essential that additional land is allocated, on sustainably located greenfield sites as necessary.

A supporting document has been prepared which considers the main opportunities and constraints affecting the site and shows an appropriate scale and form of development reflecting the character of the area.

The proposals contained in the masterplan for the site meet key planning and design objectives, including the concept of a 20 minute neighbourhood. However, the proposals are indicative and could be amended appropriately at the detailed planning stage depending on the requirements of the planning authority.

Non-identification of the site for potential housing development at the Main Issues Report stage may be partly due to a number of incorrect assumptions and conclusions in the Site Assessment contained in the Choices for City Plan 2030 Housing Study. A particular constraint of the assessments undertaken by the Council is that the areas assessed were often larger or had different boundaries to the site being promoted for development. That means that the assessment conclusions are not necessarily applicable to the site in question.

The site forms part of a larger area (Sector 5: South of Ratho) that was assessed in the Housing Study for Choices for CP2030. Therefore, the assessment conclusions are not necessarily applicable to the site. A review of the site against the criteria in the Housing Study assessment has been supplied. Summary of site assessment comments are as follows;

- Site is not in an identified SDA but that does not preclude development.
- Site is walking distance of local conveniences and employment clusters
- Site is well located to active travel.
- Site is sustainable in terms of public transport
- City Mobility Plan identifies extension of tram which could provide step change in provision.
- School capacity could be provided.
- Site could improve accessibility to the green network

## **Site 5. Land at Freelands Road**

### BDW Trading (0678)

Additional site should be added at Freelands Road Ratho for housing development for 150-200 houses.

In terms of Development Principles we would expect the following to be required – Archaeology and Protected Species Assessment. The surveys submitted confirm Visual Amenity and Landscape and Visual Impact are acceptable; Negligible Impact on Air Quality and no risk of flooding.

Additional land is required to meet needs, and to provide diversity in the land supply delivering a range and choice of housing type tenure and location, as required.

Summary of key points;

- This site is within the control of a housebuilder, with a willing landowner, and is free of ownership constraints meeting the tests of effectiveness and deliverability.
- This site lies within an existing 20 minute neighbourhood with infrastructure capacity available. Its development would not only make the most of the existing 20 minute neighbourhood, but potentially enhance and improve it (a greater catchment of population, will support improved bus services, shops etc.).
- This site is in close proximity to a variety of non car modes of transport.
- The site will not result in the displacement of business.
- Land at Freelands Road, Ratho should be considered for an immediate allocation (150-200 homes). Further land is available for longer term development to the east should this be considered prudent in the case of failure of the land supply. These should be considered as separate entities and the fate of one, not dependant on the other.
- This land meets the tests of effectiveness set out in PAN2/2010 and is shown to be effective, deliverable and sustainable.

The site has been reassessed against the findings of the Choices of City Plan 2030 Housing Study. The site was part of a larger area assessed (Sector 5: Ratho Byres). Summary of site assessment comments are as follows;

- Site is adjacent to an SDA and identified in the West Edinburgh area of search in Choices for CP2030.
- Disagree with assessment of site's ability to support active travel.
- Disagree that Ratho is not particularly well served by public transport and infrastructure mitigation measures proposed.
- Education requirements can be addressed through developer contributions.
- As a result of CALA development being built at Ratho the character of the village has changed. Will be no adverse impact on the character/setting of conservation area.
- There will be a change to the setting of the settlement it will not be a significantly adverse impact.
- Development provides the opportunity to provide accessible green spaces on site, with associated landscaping and with connections to the canal itself.
- Site is not within an area of flood risk.

- There is a need for a review of the green belt and to only identify areas which deliver the aims of the greenbelt in the long term. Site does not make any significant contribution to the green belt objectives and allocation would not prejudice the overall aims of the greenbelt. Acknowledge lack of robust boundary exists, but it could be formed.
- Prime quality farm land is not an impediment to allocating the site.

## **Site 6. North of Ratho**

### Taylor Wimpey (0770)

The Plan's strategy is overly reliant on brownfield land in existing business/industrial use. The approach of meeting all of Edinburgh's housing need solely on brownfield land is unrealistic and high-risk. This approach will inevitably fail to address housing need and demand.

To enable a sufficient volume and range of homes to be built an alternative strategy should be adopted and must make provision for housing development on both greenfield and brownfield land i.e. a blended approach. North Ratho represents an appropriate candidate for green belt release and reallocation as a new housing proposal. North Ratho offers a sustainable settlement expansion opportunity in accordance with 20-minute neighbourhood principles, as set out in the City Mobility Plan. In support of Edinburgh's housing needs North Ratho can make an important contribution to the delivery of new homes, both market and affordable, and play a significant role in helping Edinburgh meet its housing targets during the City Plan period.

It is also important that a range and choice of sites is allocated to reflect the range in need and demand, including relatively small scale sites such as Baird Road, Ratho, which can provide private and affordable family homes without reliance on large scale infrastructure interventions, site remediation and site acquisition complexities, which inevitably slow down the delivery of very large or brownfield sites.

North Ratho benefits from an accessible location with all local services and facilities (inc. shops, primary school, library, community centre, medical centre) accessible via active travel or public transport in accordance with the principles of the '20 Minute Neighbourhood' concept and current guidance including Planning Advice Note 75 'Planning for Transport'. This is supported by the recently published City Mobility Plan.

North Ratho can be developed in a manner that maintains the identity, character and landscape setting of the settlement. Development will integrate sensitively with the surrounding landscape without the loss of landscape-scale land of value to the strategic green network.

North Ratho's allocation for housing within City Plan will allow it to be included within education capacity considerations and contribute towards a planned sustainable solution to education infrastructure across West Edinburgh. Community infrastructure capacity is not a barrier to development at North Ratho progressing development.

North Ratho represents an effective and deliverable site having been shown to be free of the seven specified constraints identified by Planning Advice Note 2/2010, namely

ownership, physical, contamination, deficit funding, marketability, infrastructure and land use.

The submitted North Ratho Development Framework presents a considered strategy which will allow development of the site to progress in a logical, sustainable and sensitive manner, consolidating the existing settlement pattern and affording Ratho an improved, robust and defensible Green Belt boundary.

Overall, North Ratho is ideally positioned to make a significant contribution towards City Plan 2030 meeting its housing targets helping to address housing need and demand during the City Plan period.

## **Site 7. Baird View, Ratho**

### Tarmac (0244)

It is acknowledged that the aim of the LDP is to promote and deliver mixed use communities in sustainable locations, and Tarmac shares this vision for Ratho. However, we are concerned that the spatial strategy through the housing land supply will not facilitate these sustainable objectives.

The densities identified within the allocated sites (Part 4 Table 2) are unlikely to be achieved and despite the generosity allowance this is likely to result in a shortfall of supply over the plan period.

If/when a housing land shortfall is identified the prospect of housing site in a greenfield location gaining consent is minimal. The restrictions imposed through Hou 4, together with other restrictions in policies such as Env 18, will make it nigh on impossible for a developer to present an unobjectionable proposal to the decision makers.

The Proposed Plan either needs to allocate acceptable greenfield housing sites, such a Baird view, or relax the policy restrictions to ensure greenfield sites have a legitimate chance of gaining consent.

Bairdview will increase potential patronage making existing supported services more viable.

A masterplan and background technical information demonstrating the site would be effective and deliverable has been submitted. The site is surplus to Tarmac's quarrying requirements.

If each of the Plan's aims remain in the LDP we have assessed these against the proposal using the evaluation matrix below. Tarmac suggest that these should be the key sustainability tests that are taken into consideration by the Reporter as these are derived directly from the LDP.

#### **LDP Objective and Response**

20 Minute Neighbourhoods and a place-based approach to mixed use walkable communities. -- The proposal potentially delivers a 20-minute walkable neighbourhood through a 'place-based' approach. The masterplan illustrates the creation of high quality, high density, mixed-use and walkable community, linked by better active travel and public

transport infrastructure, green and blue networks bringing community services closer to homes. It transforms the rhetoric into a feasible and viable proposition in this location.

Maximising the use of brownfield rather than greenfield land. -- Proposed development incorporates the vacant and derelict concrete batching works. The brownfield element of the site is approximately 35% of the gross development area. It delivers a sustainable and integrated new neighbourhood for West Edinburgh.

Setting Out Place Briefs and Local Place Plans -- The Proposed Masterplan for Bairdview sets out Place Policies and Development Principles. It also establishes a Place Brief to guide development and to integrate new services supporting Local Place Plans to maintain a sustainable community. As such it takes a wider view of development needs, infrastructure and services within Ratho.

Net Zero buildings and zero carbon infrastructure and technologies -- New buildings would be net-zero and more resilient to climate change. The plan would support the delivery of heat networks and energy infrastructure development, to assist the city's transition to net-zero. Some of this is clearly beyond the scope of development planning and falls within the gambit of Building Control Regulations. Where this is the case the LDP should be altered accordingly.

Implementing environmental policies to deal with climate change -- The proposals fully address climate change mitigation and adaptation through compliance with relevant policy and guidance. Indeed the Bairdview proposals offer significant environmental benefits for the Ratho community.

Delivering land to meet housing needs and 35% affordable housing -- The allocation is specifically intended to meet Edinburgh's housing needs over the next decade. It would deliver a minimum 35% affordable housing contribution in line with the new affordable housing policy proposed by the LDP. Unlike some other proposals Tarmac has taken the required quota into its viability calculations.

Protecting housing stock and the amenity of existing housing areas -- Development does not adversely affect the amenity of existing residential neighbourhoods in Ratho.

Infrastructure first approach – schools, healthcare, sustainable transport, energy and waste -- Adopting an 'infrastructure first' approach, directing new development to where there is existing infrastructure capacity. Tarmac has considered these issues. The Master Plan proposes new and expanded community infrastructure including schools, healthcare, sustainable transport, energy, and waste to support housing and mixed use proposals.

Consultative approach with communities -- A consultative approach has been taken with the local community and stakeholders to address future infrastructure, healthcare and education requirements within Ratho. The proposals seek a commensurate level of growth and balances this with new facilities and service improvements. (see supporting documents)

Delivering economic land use needs including local centres as part of a mixed-use housing led approach -- Development at Ratho would assist in delivering the West Edinburgh Strategy. It also makes provision for a Local Centre as part of housing-led mixed-use development. This approach supports existing and future employment land

allocations needed by a growing city rather than displacing these with housing and forcing employment into inaccessible and peripheral locations. Indeed, Tarmac finds the Council policy approach to employment land confusing and contradictory.

The matrix demonstrated excellent alignment with the aims and objectives of the Proposed LDP as well as close alignment with wider national and regional strategies including the West Edinburgh Strategy.

In terms of housing development, a key anchor underpinning sustainability is the Housing Needs and Demand Assessment (HNDA). The Proposed Plan has a lack of clarity over precisely what figures are being used and how these have been interpreted across different tenures. This in our view will constrain supply and will exacerbate externalities such as affordability.

The 20-minute neighbourhood concept has been subject of a scoping assessment by Public Health Scotland. This was not available at the Choices stage of the Plan.

The 20 minute neighbourhood approach taken by the City Council appears to have major deficiencies and ignores the potential for revitalising existing communities and regenerating parts of the city which are in need of regeneration and investment. Under the Proposed Plan Ratho will not share any investment over the Plan period.

### **Site 8. Craigiehall Estate**

Hallam Land (0615), Defence Infrastructure Organisation (0124), Defence Infrastructure Organisation (0665)

The brownfield nature of Craigiehall should be acknowledged within City Plan 2030, and the requirement to secure the future of the heritage and landscape assets across the site as part of a masterplanned approach. The Proposed City Plan 2030 must provide an appropriate policy context for the site to come forward and for its future to be secured.

The Craigiehall site is acknowledged by the Council, and by Government Reporters in previous LDP Examinations as being brownfield. The site is considered to represent a significant brownfield opportunity within the greenbelt.

The same reasoning continues to apply to the site, and the development of the site would support the overall strategy and aims of City Plan 2030.

The Craigiehall site represents a significant brownfield opportunity within the greenbelt. The development of the site will assist in facilitating the refurbishment of existing listed buildings across the site, and securing its landscape setting, which should be acknowledged in the emerging LDP.

Discussions with the Council around the future of Craigiehall acknowledge that a sustainable future for the site is required to facilitate the refurbishment of the listed buildings across the site and indeed its landscape setting. Notwithstanding discussions with the Council around the nature and extent of uses across the site, a policy context should be provided to recognise the exceptional circumstance of the site. Development proposals in that context can be considered on a case by case basis.

The current policy context, and fairly restrictive green belt policies in place, will inhibit the ability to secure a future use for the site and will in all likelihood impact upon the ability to protect and preserve the heritage and landscape asset contradicting national policy. The continued identification of Craigiehall in the Proposed Plan as falling solely within the green belt contradicts the Council's own strategy to maximise the use of brownfield land.

It would be reasonable that the brownfield nature of Craigiehall should be acknowledged within City Plan 2030, and the requirement to secure the future of the heritage and landscape assets across the site as part of a masterplanned approach. The Plan must provide an appropriate policy context for the site to come forward and for its future to be secured. In this scenario other existing designations would be retained. The site would continue to be identified as a Historic Garden / Designated Landscape, bounding the green belt, which would continue to support the wider green belt objectives in terms of protecting landscape setting. However the removal of the site from the green belt would provide a more positive planning policy position to secure a long term viable use for the vacant brownfield site, as well as ensure the preservation of the important heritage assets on the site.

In the event that the site is not removed from the green belt it is respectfully submitted that the Council should give significant consideration to formally recognise Craigiehall as a development site, with an associated place-based policy. The Council have provided development principles relating to other similar sites within the green belt, including Heriot Watt and RBS Gogarburn. A similar approach is advocated in the context of Craigiehall.

Craigiehall is identified within the Edinburgh Greenbelt notwithstanding that it clearly is a non-conforming area with established employment and housing uses. Considerable investment is required in the existing estate and it is clear that there is available infrastructure without constraint to allow a sustainable neighbourhood to be established.

Craigiehall is identified as being within the greenbelt where specific policy tests apply in accordance with SPP and SDP1. The Proposed Plan is using both countryside and green belt designations interchangeably to preclude development without focussing on the critical tests for sustainable development.

This outcome relates to the importance of the built and natural environment and the 20-minute neighbourhood. The masterplan for Craigiehall preserves these fundamental values as part of a new planned approach. The 20-minute neighbourhood concept has been subject of a scoping assessment by Public Health Scotland. This was not available at the Choices stage of the Plan.

Reference is made to aspirations in relation to amenities, services and a choice of housing and reference to sustainable growth place policies and sustainability assessments. However, the approach taken by the Council appears to have major deficiencies and ignores the potential for revitalising existing communities and regenerating parts of the city which are in need of future investment, such as Craigiehall.

The obvious implication is that restrictive and inflexible policies in relation to new development will restrict investment into the site. This ignores the potential of the area to accommodate sustainable development and utilise existing infrastructure, contrary to LDP objectives.

By virtue of its location on the edge of a Strategic Development area and the A90 public transport corridor, as well as its physical attributes, Craigiehall is a sustainable and accessible location. The location potentially provides a valuable attribute to the strategy for West Edinburgh as contained within the LDP.

Support for the development of Craigiehall is provided for within Scottish Planning Policy (SPP). SPP sets out planning should direct the right development to the right place, and Paragraph 40 promotes optimising the use of existing resources and considering the re-use or re-development of brownfield land before new development takes place on greenfield sites. It is considered that development at a unique site such as Craigiehall would create a high quality development which demonstrates the six qualities of successful places.

Whilst it is acknowledged that the Plan was published prior to the publication of the NPF4, the Draft NPF4 provides a useful policy update in the context of Craigiehall. It provides further support for the LDP's consideration of the site. It is expected that Plan will be updated to reflect the publication of Draft NPF4, and we would urge the Council to consider the wider implications across the whole plan.

Draft NPF4 Policy 30: Vacant and Derelict Land states:

"Local development plans should seek to reuse vacant and derelict land and redundant buildings as a priority including in proposals to creatively and sustainably repurpose buildings and structures."

Whilst the strategy and aims of Proposed City Plan 2030 are in accordance with Draft NPF4 Policy 30, the Council's approach to Craigiehall does not currently prioritise the reuse of vacant and derelict land or redundant buildings. The identification of Craigiehall does not support the creative and sustainable reuse of the existing site.

The arbitrary identification of Craigiehall as falling within the green belt does not reflect the reality on the ground, and furthermore is not in accordance with the strategy and aims of Proposed City Plan 2030, SPP or Draft NPF4. This adds further weight to the view that the site should be removed from the green belt and formally identified as a development opportunity, with associated place-based policy.

Consideration should be given to providing a policy context for sites such as Craigiehall to come forward and to not immediately conflict with the provisions of the development plan. Given the restrictive nature of the Council's green belt policy, an appropriate bespoke policy position should be established in respect of Craigiehall to allow for development proposals to come forward.

Craigiehall is within the current Airport Safeguarding Zone. Discussions on this matter were held with CEC at the Choices Stage where it was demonstrated that the proposals have been designed to integrate with airport uses. The proposals are designed not to prejudice long term expansion if this materialises. Regarding noise issues, these were discussed with the Council at Choices stage and the precedent of residential developments within the inner and outer noise zones, together with mitigation. Noise emissions on final approach from the east (Runway 24) already crosses Craigiehall and the Masterplan design reflects the prevailing noise contours.

Furthermore, there are inconsistencies of approach towards residential uses in this area, notably in relation to the Certificate of Lawfulness relating to 72 MoD housing stock for mainstream housing granted in 2020. This did not reference noise issues and concluded that a satisfactory residential environment can be created at Craigiehall.

In addition, and with regard to Choice 12, Hallam is concerned that there are procedural irregularities in terms of the Council's proposed brownfield strategy. These relate to SEA and Environmental Assessment of sites. Furthermore, this approach has not been subject to socio-economic assessment or Integrated Impact Assessment as is normal practice.

Issues such as risk and financial implications have also not been adequately considered, particularly in relation to CPO and the effect on programming and land release. These matters require to be integrated into the Action Plan.

### **Site 9. Craigcrook Road**

Cala Management (0180), Calex Group Ltd (0556)

Remove land off Craigcrook Road, Blackhall from the green belt. A retirement village is an appropriate future use for a site Craigcrook Road, Blackhall, Edinburgh. The site lies to the south east of Craigcrook Road, north west of Craigcrook Castle and due south of Hillpark Road, in an area of open space that is currently utilised as a paddock.

It is considered that via a landscape led development proposal for 8-10 acres that a suitable retirement village could be developed in this highly sustainable and accessible location. Via a carefully considered development proposal, a retirement village could be built which does not adversely impact on the setting of nearby Craigcrook Castle or detract from the landscape of Corstorphine Hill.

By undertaking a landscape led masterplan it is considered that low density development and the local nature conservation site can mutually co-exist.

The site at Craigcrook Road has the capacity to accommodate as a minimum some 35 detached, sensitively sited family homes with scope to accommodate up to 60 units.

The subject site comprises an area of parkland adjacent to the nearby Craigcrook Castle. The Castle grounds and Craigcrook Road form the eastern boundary and established residential development adjoins to the north. Woodland on Corstorphine Hill adjoins to the west and with a woodland edge to Ravelston Golf Course forming a boundary to the south. The study area rises from a low point of 55m on Craigcrook Road to a high point of 112m on the western boundary with Corstorphine Hill where the land continues to rise to the top of the hill. Object to the non-allocation of land at Craigcrook Road as a housing site and also to the retention of this site in the Edinburgh Green Belt.

The council has set a very ambitious housing land target which will necessitate annual housing completions never before achieved. This scale of housing development will not be delivered by the council alone or only by bringing forward brownfield (employment) land for conversion to housing. It will require a mix of sites (greenfield and brownfield) and scale of development which not only prioritises the affordable housing sector, but also

delivers a robust and balanced land supply, ensuring a variety and mix of housing by scale, tenure and market positioning.

Proposed development at Craigcrook Road can make a meaningful and important contribution to the proposed housing agenda set out in the Plan. It offers high quality housing of an appropriate scale for which there remains significant demand across the city.

Development at Craigcrook Road can make a unique and positive contribution to housing choice within the city, whilst also demonstrating that development can be accommodated within the landscape capacity of the site and its surrounds.

The proposal would not compromise the setting of Corstorphine Hill and can facilitate greater accessibility to it and its recreational benefits. Moreover, development would comply with national and local transport planning policies given its close proximity to existing amenities and public transport provision. Indeed, it is supporting by a key aim of the City Plan, that being to reduce the reliance on travel by car and promoting a healthier and more active city and communities.

The proposed development offers significant recreational benefits and enhancements to the green network. The site is not accessible to the public in its current state. Through the proposed development access will be promoted into Corstorphine Hill and its network of paths and cycle routes. The proposal will also deliver new open spaces, namely a formal park at the eastern boundary and an open space facility to secure the setting of Craigcrook Castle.

It is clear that the thrust of City Plan is to utilise land within the city and with access to existing facilities, services and infrastructure. Development at Craigcrook Road would support that agenda, being an urban site within an established residential area and with easy access by means other than the car, to local services and amenities and which can be delivered within the scope of existing infrastructure.

The council's site assessment does not specifically consider the site's inclusion within the Edinburgh Green Belt. It is CALA's opinion that removing the site from the green belt does not offend the principles which underpin that designation.

This submission seeks to justify the removal of the Craigcrook Road site from the Edinburgh Green Belt. If the site is removed from the green belt, the new boundaries are proposed in this submission. These are clear, well defined boundaries based on major features. There would also be scope to introduce additional planting within the Craigcrook site to further strengthen these boundaries.

The area of green belt covering Corstorphine Hill is an 'island' detached from that wider designation. The site at Craigcrook is located on the northern edge of this area. Its removal to accommodate sensitive low density residential development as proposed will not compromise the remainder of the green belt in this locality. The development of the site would have negligible impact on the character of Edinburgh and would not lead to coalescence. The site is an appropriate location for growth, bounded on three sides by settlement boundary and well located to public transport.

Against this background, it is clear that the site's removal from the green belt would not impact on its identity and character or the landscape setting, as evidenced through the Vision Document prepared by consultants. This is an urban site within an established residential area, as such it is an appropriate area to direct new housing development. Moreover, removing the site from the green belt and allowing small scale development as proposed, would enable public access to this local land resource which currently does not exist.

The proposals demonstrate these functions would not be compromised by the release of this land for the specific proposals set out. Long term defensible boundaries to the green belt would remain if the Craigcrook site is removed from it.

### **Site 10. Hermiston Park (East of Riccarton)**

#### Murray Estates (0197)

Object to the non inclusion of East of Riccarton site within the Green Belt and request allocated for housing development.

The majority of the Hermiston Park site was identified in Options 2 & 3 of Choices for City Plan 2030 as 'Area 4 - East of Riccarton', which is described and shown on pages 42 & 43 of Choices.

The Proposed City Plan departs from all of the housing delivery options identified in Choices. It does not allocate Area 4 or any of the other greenfield Areas identified in Options 2 and 3. Nor does it restrict the housing allocations to the brownfield sites identified in Option 1 of page 33 of Choices. Instead, broadly speaking, Option 1 has been supplemented to allocate greenfield housing sites at the previously undeveloped employment allocations at the IBG and Bioquarter for housing.

Therefore, neither of these proposals were subject to consultation or assessed at the MIR stage, and there is no explanation of why these sites have been allocated in preference to Hermiston Park, which is identified as largely suitable for development in the Main Issues Report.

The Masterplan Strategy for Hermiston Park, in its current form, has been developed over the past three years or so in detailed discussion with the Council and relevant stakeholders. Evolving development concepts have been presented to the Council and the feedback has integrated into the Strategy. The placemaking criteria and site requirements for the site identified on page 42 of Choices are the result of the cross-fertilisation of Murray Estates' proposals and the Council's input.

Support the content of Choices in respect to the site, albeit Area 4 – East of Riccarton should be extended northward to incorporate all of the land shown in the Hermiston Park Masterplan Strategy.

The Hermiston Park Masterplan identifies the following significant benefits:

- Over 4,000 new homes at an average density of 65 dwellings per hectare.
- more than 1,000 affordable homes.

- Putting new homes next to jobs.
- New sustainable transport connections that capitalise on the existing infrastructure with the potential to support the extension of the tram to the West of Hermiston.
- A new and important active travel route, by way of a 'Green Bridge', over the City Bypass
- Connect the City to the University.
- Connect the existing neighbourhoods, including Wester Hailes, to the economic and social opportunities on the City's western edge.
- Mixed use amenity in terms of employment, community, health and sports facilities.
- New schools with the opportunity for synergies with the University.
- Opportunities for complementary development to Heriot Watt's Research Park to stimulate Economic Potential.
- A vibrant, mixed use, place that will enhance the western edge of the city with low level impact on existing communities. Share the benefits of making a better, more attractive, place to facilitate Inclusive Growth.

The allocation of this site for housing would create a new urban extension to Edinburgh, linking the communities of west Edinburgh across the bypass to Heriot Watt University. Development of this site gives the Council an opportunity to increase the catchment area of Wester Hailes Education Centre which would increase the school roll considerably, improve learning opportunities and curriculum choice.

Public transport is to be provided through the site and the development can facilitate a public transport hub, including a tram/bus interchange. Connections through the site will focus on sustainable transport modes and connections to neighbouring developments and employment uses. Vehicular routes through the site will have bus priority measures and active travel routes. As well as the new Green Bridge over the City Bypass, there is also linkage via Westburn Avenue in the

South East corner of the site back to Wester Hailes, and the existing bus services to Baberton (33) could be extended.

The Hermiston Park area is within a single ownership and delivery of the site for development is fully in their control. This will ensure that there are no delays to delivering development in the short-term arising from land assembly issues.

Significant advance work has been undertaken to establish a multi-utility delivery strategy. There have been detailed discussions with Scottish Water and Scottish Water Horizons establishing that water supply and drainage infrastructure will be available to serve the development in the short-term by accessing the new A8 rising sewage main to Newbridge Waste Water Treatment Plant and the Marchbank Water main. There have also been negotiations with Scottish Energy Power Networks to address the prospect of removing the pylons and undergrounding the transmission cables that traverse the site.

A Flood Risk Assessment for the area has been undertaken, which confirms the extent of the Murray Burn flood plain, and has provided the basis for the Masterplan to locate development and green open space to avoid any flood risk.

## **Site 11. Ratho Station East**

### Murray Estates (0197)

Object to non-allocation of Ratho Station East site for housing development.

This site could be developed as a relatively small and sustainable extension to village.

Choice 12c of the LDP Main Issues Report (Choices) identified three options for “delivering homes in the most sustainable way”. Option 1 was for “Delivery by the Council and its partners within the Urban Area”. Option 2 was for “Delivery through market housing by releasing Greenfield land”. Option 3 was for a “A Blended Approach” which blended the first two options.

The Ratho Station East site is within, and at the eastern end of ‘Area 2 – West Edinburgh’, which was identified in Options 2 & 3 and described on pages 38 & 39 of Choices. Choices indicated that if the land was required to be allocated then its development could be supported.

Both the Housing Land Requirement and the housing land supply are significantly deficient, and additional housing land allocations are required.

The Plan departs from all of the housing delivery options identified in Choices. It does not allocate Area 2 or any of the other greenfield Areas identified in Options 2 and 3. Nor does it restrict the housing allocations to the brownfield sites identified in Option 1 of page 33 of Choices. Instead, broadly speaking, Option 1 has been supplemented to allocate greenfield housing sites at the previously undeveloped employment allocations at the IBG and Bioquarter for housing. Therefore, neither of these proposals were subject to consultation at the MIR stage.

The Ratho Station East site is capable of being developed independently of the wider Area 2 identified in Choices. Housing development here does not require large scale infrastructure interventions to support it and can therefore be developed immediately upon receiving planning permission and other necessary consents.

The Development Framework defines a development structure which is co-ordinated with the adjacent first phase and provides a spatial arrangement tailored to the site. This will create a coherent extension to Ratho Station, connected to local amenities within a 10 minute walk in line with the principles of a 20 minute neighbourhood.

Key features of the Development Framework are:

- The spatial arrangement provides an open network of legible streets and spaces which will create a framework for good quality homes.
- Vehicle access from the A8 is shared with the adjacent consented development.
- The open network of streets would allow the development to be connected to the adjacent development by paths or roads to ensure permeability.
- The development is co-ordinated with the reserved land for the future tram extension, and there is potential to locate a tram stop adjacent to the development.
- Green buffers are provided to the A8 and potential tram extension providing amenity, screening and enclosure to the development.
- Surface SUDS features are included as an integral part of the development.

- A green playspace is provided to create shared amenity space and a central focal point to the development.

Therefore, the Ratho Station East site should be identified as a housing proposal in City Plan and removed from the Green Belt accordingly.

## **Site 12. East of Milburn Tower**

### Murray Estates (0197)

Object to the non-allocation of the East of Millburn Tower site for housing led development, and accordingly the site should be included as a Housing Proposal.

The site is subject to a Notice of Intention to grant planning permission for residential development and other uses issued by the Scottish Ministers on 30th April 2020. This followed a call-in of the Council's decision to grant planning permission. Since then, there has been a lengthy period over which the Section 75 was prepared, and which is now completed and registered. At the time of writing, there has been a recently completed procedure by the Scottish Government, where it sought the views of interested parties on the content of the S75 and also upon the Plan itself.

Paragraph 2.59 of Plan states the following:

“City Plan defines green belt boundaries to meet these purposes, ensuring that growth requirements can be accommodated. The boundaries of the green belt shown on the Proposals Map are largely unchanged from previous local plans, with no new areas of green belt proposed for development in City Plan over those already set out in the Edinburgh Local Development Plan 2016, though amendment may need to be made if the Scottish Ministers grant planning permission in principle for the proposed development at Land East of Milburn Tower.”

We assume that planning permission will be granted for the development before the Council considers this representation, in which case they may choose to allocate the site and include it within the Urban Area of the Proposed Plan, adopting the necessary procedures to do so. Alternatively they may invite the Examination Reporter to recommend the necessary amendment to the Plan. Murray Estates would be content with either approach.

In the unlikely event that the application is refused by Scottish Ministers, and for the avoidance of doubt, Murray Estates would maintain their objection to the non-allocation of the site. Moreover, they reserve the right to make further submissions to the Proposed Plan to address the reasons for refusal.

The Reporter's Report on the call-in application, read alongside the Notice of Intention, explain the reasons for the intention to grant planning permission, including the conclusion that the proposals comprise sustainable development.

Therefore, the site should be allocated for housing-led, mixed-use development in City Plan, and removed from the Green Belt, to assist in meeting the large shortfall in the proposed plan's supply of housing relative to the Housing Land Requirement.

## **Site 13. The Drum and Drum (2)**

### SEEDCo (0198)

Drum object to the non-allocation of the Drum for housing-led development, and accordingly identify the site as a Housing Proposal.

The Drum site was identified in Choices for City Plan 2030 in Options 2 & 3 as part of 'Area 1 – South East Edinburgh', which is described and shown on pages 36 & 37 of Choices, and where it is noted that if additional housing land is required, then development here can be supported.

The Plan departs from all of the housing delivery options identified in Choices. It does not allocate Area 1 or any of the other greenfield Areas identified in Options 2 and 3. Nor does it restrict the housing allocations to the brownfield sites identified in Option 1 of page 33 of Choices. Instead, Option 1 has been supplemented to allocate greenfield housing sites at the previously undeveloped employment allocations at the IBG (Edinburgh 205) and Bioquarter for housing. Therefore, neither of these proposals were subject to consultation at the MIR stage. Object to the process by which the decision has been taken by the Council to re-allocate these greenfield sites for predominantly residential development without consultation, but not to include the Drum proposal which has been assessed as suitable for development and was identified at the consultation stage of the plan.

The Vision Document provides a detailed explanation of the opportunity for a new City District to be developed on the Drum site. It has evolved into its current form over a number of years, involving detailed and positive discussion with the Council's planning department, as well as liaison with transportation and education officers to achieve agreement on sustainable accessibility principles and that the development could be supported by existing and future school provision.

The principles for development identified on page 36 of Choices reflect those discussions and are addressed in the Vision for the Drum.

The principal components of the Vision:

- **Placemaking:** A core objective of the City Council is to create places of distinction and quality. Early design work has been to evolve a Masterplan that sets out to create a new city district; a place with a mix of uses and a mix of densities and types of homes. These homes sit amongst parks, places of work, community facilities, shops, cafes and restaurants, linked by high quality walking/cycling links and public realm, in the same way that existing City districts work. Intension is to create a place that is truly liveable, well connected and part of Edinburgh. It should be noted that this masterplan approach has been heavily influenced by the dialogue that has taken place with CEC. Importantly, both parties felt that the site's location, quality and scale warranted a fresh contextualised approach that was not dominated by standard housing methodologies. Great care was taken in considering what a City District would look like in this outer City location. The design approach, the mix of uses proposed, and the house type mix and density, are all a direct response to this contextual analysis.
- **Homes:** The Masterplan Vision has been developed in order to show the potential for approximately 3,500 homes through the creation of a number of attractive neighbourhoods with distinctive character to serve a range of needs, including a high proportion of affordable housing to meet the City Council's requirements. It should be

noted that this mixed-use masterplan was prepared in advance of the proposed policy requirement of 65 dwellings/hectare. Willing to review the density of the scheme in response to this proposed policy and, ultimately, can prepare a scheme which accords with the planning policies which are adopted.

- **Green Space:** Outwith the designed landscape of the Drum Estate, approximately 24 hectares will be provided as Green Space and comprise formal and informal parks as well as woodland, play areas, sports pitches and SuDS. Across the masterplan, and connecting the green spaces, will be a comprehensive network of walking and cycle paths.
- **Heritage:** The north of the area is distinguished by the Drum Designed landscape, which is to be left largely undeveloped and retained as Green Space. The area is now in need of enhancement in order to restore the important historic character and biodiversity.
- **Community Facilities:** Many would agree that some of the best parts of Edinburgh in which to live contain a vibrant mix of homes, shops, leisure facilities and community services. The Masterplan Vision proposes a new 'High Street' to be developed at relatively high density and creating the kind of character which one sees in other districts of the City e.g. Bruntsfield, Gorgie.
- **Schools:** A new School & Community Campus is proposed, accommodating nursery, primary and secondary schools at the heart of the new community. Further analysis and discussion with the City Council is required to establish if this is the right location for a secondary school in the context of rising school roles in the City as a whole and the various locational choices that might be made in the context of the emerging City Plan 2030.
- **Economic Development:** There is an identified shortfall of good quality and well-connected service industry accommodation in the City. It is therefore proposed to provide 7 hectares of land for the development of employment creating uses in an accessible location close to the City Bypass. In other representations we have made to City Plan we refer to the significant consequences of reallocating existing employment sites for housing. The Drum site therefore provides the opportunity for some re-provisioning for displaced businesses.
- **Sustainable Transport:** The Drum and Todhills area is located between the major thoroughfares of Gilmerton Road and the A7 Old Dalkeith Road, both of which have high frequency bus services linking the area with the City Centre and other key destinations. There is also the Shawfair Park & Ride nearby which provides a 15 minute bus service. It is also expected that new bus services will travel through the new community ensuring residents and visitors access to bus stops within a 5 minute walking distance. The area is relatively close to Shawfair Train Station, which will provide an additional mode of transport and there is an existing strategic cycle and walking corridor passing through the site which connects to the wider network serving south east Edinburgh. It is also proposed to provide a new Park & Ride facility off Gilmerton Road, one benefit of which will be to allow people coming from outside Edinburgh to leave their cars rather than going through the busy Gilmerton crossroad. The Draft City Mobility Plan and supporting Edinburgh Strategic Sustainable Transport Study identifies a number of strategic public transport interventions with the potential to extend the Edinburgh Tram along the south east corridor. The Drum site provides an opportunity for a segregated route for this extension through the site. The site lends itself to the creation of a 15/20 minute neighbourhood with its mix of uses and excellent local walking and cycling connections and also the proximity of other employment areas close by including the Shawfair Business Park and the BioQuarter.

## Drum (2)

Object to the non-allocation of Drum 2 site housing development and recommend it is allocated as housing proposal.

The site is located on Gilmerton Road to the West of the Drum Estate, and is outwith the Drum Designed Landscape.

A planning appeal for residential development on the site was refused in 2017 on marginal grounds, and this is addressed in detail below. A Design & Access Statement was prepared for the preceding planning application in 2015, and much of its content remains relevant today, albeit the surrounding area has become more urbanised as proposed developments noted in the DAS have been developed and work has begun to develop the planning permission granted for the adjacent Bernard Hunter site (permitted Masterplan attached), now known as Gilmerton Gateway.

The Drum 2 site was identified in Options 2 & 3 of Choices for City Plan 2030 as part of 'Area 1 – SouthEast Edinburgh', which is described and shown on pages 36 & 37 of Choices, and where it is noted that if additional housing land is required, then development here can be supported.

This is not the first time the site has been identified as suitable for housing. The Main Issues Report produced prior to the currently Adopted LDP identified the site (and named it 'Drum 2') as being a preferred housing allocation.

The Drum 2 site, by virtue of its separate accessibility and its physical and visual separation from the other parts of the Drum area, is capable of being developed independently of the Drum land to the south. Housing development here does not require large scale infrastructure interventions to support it and can therefore be developed immediately upon receiving planning permission and other necessary consents.

The site forms a single well-contained field separated from the wider agricultural landscape by the disused railway line.

The presence, of the busy A772 Gilmerton Road, the junction of Gilmerton Station Road and the industrial estate (now being redeveloped as Gilmerton Gateway, for a mix of commercial uses), to the south-west adds to the urban character of the area. The urbanisation of the wider area is of course quite intentional, following on from SESplan SDP's identification of South East Edinburgh as a Strategic Development Area, the development of which has been promoted by the LDP adopted in 2016.

The site is well served by the existing surrounding road network to the south-west. The A772 / Gilmerton Road provides access North into Edinburgh and South towards the A720 and Dalkeith. It also provides access to neighbouring shops and local amenities. Existing access to the site is from the A772 at the site's southern corner.

The site offers the potential to greatly improve the existing footpath and cycle network through the new neighbourhood, providing links to Gilmerton Road and existing paths within the Drum Estate. The former Millerhill to Loanhead railway line to the south-east of the site has been developed for a footpath and cycleway, which also has an urbanising

impact. This route will improve the connectivity and permeability of the area and serve to integrate the new development into the surrounding area.

The site is well placed to take advantage of surrounding local amenities. There are a number of shops, family pubs /restaurant and cafes located within a short walking distance to the application site. Gilmerton library, community centre and post office are all within a 10 minute walk of the application site. These facilities will be enhanced by the Gilmerton Gateway development, currently being developed. Gilmerton Primary School is less than a mile away.

The proposed design concept for development of the site is illustrated in Section 4.2 of the Design & Access Statement (DAS), and is based upon the following principles:

- Enhances existing woodland enclosure to the north-east and south-east of the site, forming a visual enclosure to the development;
- Fronts onto key routes, woodland and open space;
- Provides tree planting which forms a screen which minimises the visual impact of the development from the private drive into The Drum Estate;
- Creates good quality amenity space within the development;
- Integrates with the existing built environment by providing pedestrian links to Gilmerton Road and existing paths within the Drum Estate;
- Provides a mix of family homes close to local amenities and transport links.

An indicative residential layout is shown in the DAS. Existing enclosing landscape will be retained and enhanced to minimise the impact of the development and create a discreet new neighbourhood. The site has potential for generous open space with strong connections to the existing footpath and public transport networks. Connections to the new footpath and cycleway along the route of the old railway line to the east of the site will also be established.

As indicated above, the planning application and subsequent appeal were refused. The paragraphs 16-24 from the appeal decision were particularly relevant to this decision. It is recommended that the whole decision is read.

The issues are finely balanced. The Reporter concluded that the development of the site would not be out of keeping with the character of this part of Edinburgh and would not harm the setting of the Designed Landscape. However, he concluded that it would harm the landscape setting of south-east Edinburgh. Respectfully, we disagree with that conclusion, or at the very least would suggest that the degree of harm is not significant in the context of the balance of considerations in defining Green Belt boundaries and assessing landscape impact against the need to meet housing requirements. The Reporter accepted that the existence of the former railway line to the south of the site represented a defensible Green Belt boundary, and that this could be augmented by further planting. In our view this would ensure that the visual impact of new development would be acceptable. There is no disagreement that the site is very well related to local facilities and frequent public transport, and it clearly fulfils the concept of a 20-minute neighbourhood.

Furthermore, the immediately adjacent Gilmerton Gateway development of commercial uses, and which straddles the former railway, along with the creation of the

cycle/pedestrian ramp to access the former railway on the south of the railway, has in our opinion moved the urban area further south than the Drum 2 site.

The further urbanisation of the area since the appeal decision, supports the allocation of this site for residential development in City Plan. The issue of introducing additional landscaping to mitigate visual impact can be dealt with through the development management process.

#### **Site 14. South East Edinburgh**

##### T Klan (0307)

Allocate South East Edinburgh as a development site to take advantage of proposed transport improvements on Old Dalkeith Road.

Old Dalkeith Road is identified for a number of strategic transport improvements, including a tram route, operational benefits for public transport, and other active travel proposals. What is the point of all these investments if the Council is trying to have people live and work in the city centre?

Allocating South East Edinburgh as a housing led development zone will justify these significant transport improvements and associated costs.

Should expand this area to include the whole South East Edinburgh site as identified in Choices as Greenfield land releases will be needed within the plan period.

#### **Site 15. Almondhill, Kirkliston**

##### BDW Trading and Taylor Wimpey (0199)

Allocate Almondhill site for housing led uses.

The Almondhill site was identified in Choices for City Plan 2030 in Options 2 & 3 as part of 'Area 3 – Kirkliston', which is described and shown on pages 40 & 41 of Choices, and where it is noted that if additional housing land is required, then development here can be supported.

It should be noted that the Almondhill site is significantly smaller in scale than the overall area of land shown in Area 3 in Choices.

The Council's site assessment accompanying 'Choices' concluded that the area within which the Almondhill site falls is suitable for development and noted the following;

"The site should be considered as an urban extension of Kirkliston. Any development should have regard to improving Burnshot Road for active travel and public transport, upgrading the adjacent railway path as a suitable active travel route, the need for a new secondary school in Kirkliston and the lack of existing settlement boundary east of the existing urban area."

The following could be delivered as part of the development.

- There is a direct connection through the site to the railway path, which could be upgraded as part of the development.
- The secondary school has been included in the development framework. The Council has confirmed that a new secondary school will be required to serve Kirkliston regardless of additional allocations in City Plan. The potential for a new secondary school in Kirkliston has been frequently discussed at education committee and the option to locate a new secondary school in Kirkliston was consulted on in 2019 (see our separate objection to the non-allocation of a secondary school in Kirkliston).
- The landscape proposals in the development framework have been informed by a landscape visual impact analysis. No development has been proposed in the north-eastern part of the site which is the highest and most visually prominent. A generous landscape treatment for the eastern boundary of the site which could form the new settlement edge.
- The development framework accounts for the set-back required from the gas pipeline incorporating this area into an integrated open space and drainage strategy.
- Development will provide the opportunity for much improved transport routes in the area, providing links within and through the site at Almondhill, and supporting the improvement of transport facilities such as the upgrade to the railway path and supporting bus services.

It is notable that the Proposed City Plan departs from all of the housing delivery options identified in Choices.

Both the housing land requirement and the housing land supply requirement proposed in City Plan are significantly deficient, and additional housing land allocations are required.

The Vision document prepared provides a detailed explanation of the opportunity for a sustainable expansion of Kirkliston at Almondhill. The principles contained in Vision accords with the development requirements identified on page 40 of Choices.

The Almondhill site comprises 37 hectares north of Burnshot Road and would likely be the starting point for any development within Choices Area 3. Moreover, it provides a standalone opportunity for a comprehensive and sustainable community expansion. However, Taylor Wimpey & BDW Trading are able to deliver this site independently or work collaboratively with other landowners as part of a wider proposal if that is allocated in the LDP.

The key benefits set out in the Vision Document can be summarised as follows:

- Land within the site can be made available for an Education Campus, including secondary, primary and nursery schools of a size to be agreed with the Council. The Vision Document shows a potential location of the Education campus within the proposed development framework based on initial feedback from Education officers, but can be adjusted if required subject to further discussion to meet the needs of the Council.
- Provision of approximately 600 homes, depending on the density of development. A possible layout for the site has been considered, taking account of technical opportunities and constraints, landscape capacity and the existing character of Kirkliston. There are proposed zones of high, medium and low density housing, which take account of the Council's aspiration to achieve a minimum of 65 dwellings/hectare.

- The creation of a place that helps us live healthily and in harmony with the landscape; a place which caters for all stages of life – from starter family homes to downsizer homes; a place that appeals to flexible ways of living; and a place that creates community through built-in opportunities.
- Providing good proximity to services and public transport.
- Providing plentiful green open spaces.
- The creation of a place where it is a pleasure to walk or cycle, or for children to play on the street, or for people to bump into neighbours and stop for a chat.
- An opportunity for imaginative interventions related to electric vehicle charging provision and city car club usage.
- The development will make a significant contribution to the local economy, and also to the provision of community facilities and social infrastructure for the benefit of all.
- Within the proposed development we will take design inspiration from historic local settlements such as South Queensferry, Linlithgow and Kirkliston itself. The masterplan will be comprised of different character areas and spaces which will make Almondhill a rich and beautiful place to live. In doing so, our aim is to create an exemplary settlement expansion for Kirkliston, which will contribute positively to the existing settlement and the local landscape setting.

There are no technical constraints associated with the site which would prevent its development. A High Pressure Gas Pipeline runs across the site and has been accommodated within the proposed masterplan. Connection to utilities are available.

The opportunity should be taken to improve Kirkliston's potential as an exemplar 20 minute neighbourhood, this being one of the key aspirations of the plan, assisting in reducing the requirement to travel and thereby improving the existing environment.

The addition of a Secondary School in Kirkliston would go a long way towards achieving this, avoiding the need for pupils to travel long distances to other areas on a daily basis.

Kirkliston already has a number of facilities; a Primary School; nursery; leisure centre; pharmacy; doctors; convenience store; pub/restaurant etc. all of which are easily accessible by walking or wheeling. Moreover, these services would be augmented both through both provision of services and facilities on site, whilst also adding the support of more households from the development to make further services justifiable/viable in the area. New school provision is clearly already a priority.

The developers are keen to work with the council to develop proposals for this area, including incorporation of connections into surrounding cycle and pedestrian routes, linking into and providing green networks through the site and working with the council to deliver land for an education campus. They are also keen to be involved in the preparation of any place brief for the area and would be willing to work closely with any other landowners whose land may also be allocated for development in the area.

## **Site 15: Almondhill Kirkliston**

Sir Jack Stewart-Clark (0800)

The Council should take into account: 1) The need to protect the environment 2) Making certain there are sufficient educational places available at primary and secondary level,

accessible to Kirkliston residents 3) The need for additional housing in the west of Edinburgh.

It is important to preserve the beauty of the environment and specifically, make sure that Dundas Castle and its estate retains its natural beauty. I am also keen to obtain the funds to restore a number of derelict buildings. At present, we own land at Kirkliston which has been identified for education and housing in the Edinburgh Choices consultation document last year. The land is sandwiched between the north edge of Kirkliston housing estate and the new motorway and old railway.

Taylor Wimpey & Barratt Homes have submitted plans for a new high school and secondary school as well as housing. It is the purpose of this submission to ask the Council to look particularly at the educational needs of this area, as well as housing. Queensferry High School will run out of capacity in three years time. This is known from consultation with the Education authorities and discussions with the Headmaster. It is therefore paramount, that land should be identified to meet the educational needs of the area. If not, it will reach a crisis point. The area listed above at Kirkliston is by far and away, the most suitable for the building of these schools. It is accessible for all those with growing families in the relevant catchment areas and therefore, urge the Council to consider this submission favourably.

### **Site 16. East Kirkliston**

#### Miller Homes and Wheatland Farming Partnership (0592)

It is recommend Kirkliston East is allocated for 2,700 houses and mixed use development.

The site was identified within the Housing Study and Environmental Report prepared in support of the Choices for City Plan 2030. It also identified the site as forming part of a wider expansion of the settlement of Kirkliston.

The proposal is shown on the Illustrative Layout submitted in support of this representation. The proposal includes community and commercial development including the delivery of a mixed-use gateway at the southwestern corner of the site. This will include a wide range of commercial and community buildings such as community centres, retail and office space. A new school campus is also proposed, providing a new primary school, secondary school and nursery.

A supporting Site Assessment Review has been prepared to assist the consideration of the site and the proposal, taking into account the indicative proposal shown in Indicative Development Framework and the Development Framework Report. The Site Assessment Review demonstrates that there are no planning or environmental reasons why Kirkliston East should not be allocated for a housing and mixed use development in the emerging City Plan 2030.

The Council's Environmental Report sets out the Council's scoring for all sites proposed to be allocated for housing, including an allocation at Edinburgh 205. Based on the Council's own assessment of the proposed housing allocation at Edinburgh 205, it is unclear why the Council considers the site to be more suitable for housing development than other sites such as Kirkliston East.

A Site Effectiveness Statement has also been prepared in support of the allocation of the site at Kirkliston East for a housing and mixed-use development. The Site Effectiveness Statement demonstrates that Kirkliston East is an effective site in accord with the rests of PAN 2/2010 Affordable Housing and Housing Land Audits. The proposal can be delivered within the period of the emerging City Plan 2030 without external funding.

The development of the site for a housing and mixed-use development will also make a significant contribution of around 675 affordable homes based on 25% affordable housing provision.

The proposal also provides the opportunity to extend the tram network into Kirkliston, with an indicative location for a tram stop included as part of the proposal. The proposal also allows for the potential future expansion of the proposed tram route towards South Queensferry.

The proposal will also provide new road infrastructure including the potential realignment of Burnshot Road and a new loop road around the east of Kirkliston. These measures will improve road safety and provide relief from the existing traffic issues in Kirkliston by diverting traffic away from the centre of the settlement.

A review of the site at Kirkliston East against the Council's Greenfield Site Assessment as set out within the Housing Study prepared as part of the MIR has been undertaken. A review of the site against the Site Assessment as set out within the Environmental Report which supported the MIR has also been provided.

The assessments are set out within the Site Assessment Review submitted in support of this representation.

The proposal at Kirkliston East against the Council's Greenfield Site Assessment methodology has been undertaken. The Greenfield Site Assessment demonstrates that Kirkliston East is an appropriate site for a housing led development.

The Site Assessment produced against the Council's methodology for assessing sites as set out in Table 5 of the updated Environmental Report also demonstrates that the site scores favourably.

These assessments have been undertaken using the mitigation and improvements set out in the proposal in the supporting Illustrative Layout. A Development Framework Report has also been produced which explains the proposal for the site and confirms these sustainable measures.

Based on the findings of these revised assessments, the site Kirkliston East is a considered to be a sustainable development proposal. Page 6 of the Proposed LDP states that ...the future growth of our city must meet our ambitions to be a climate ready city where new homes are built to the highest emissions quality standards in resilient, connected neighbourhoods, in the right locations, with the right infrastructure.

The development of Kirkliston East will contribute to this objective.

This representation is also supported by an Education Infrastructure Note. The purpose of the Education Infrastructure Note is to provide an assessment of the education

infrastructure requirements arising from the impacts from new homes from the development of the site.

The proposal will deliver a new primary school to provide sufficient capacity to mitigate the impact of the proposal at Kirkliston East on the existing education infrastructure in Kirkliston. The proposal will also deliver serviced land for a new non-denominational secondary school to serve Kirkliston. This will address existing capacity pressures at Queensferry High School, and potentially other existing schools through re-zoning, whilst also providing local provision to Kirkliston.

The findings of the note are that education capacity is not an insurmountable barrier to the allocation of the site as part of the emerging City Plan 2030. The proposal can provide wider benefits to the existing community of Kirkliston by providing a new local secondary school and new primary school to alleviate existing constraints.

The developer is willing to make a proportionate financial contribution towards the cost of providing the necessary education as a result of the direct and cumulative impact of the development in accord with Circular 3/2012.

There are no planning or environmental reasons why Kirkliston East should not be allocated for housing in the emerging City Plan 2030.

### **Site 17. Muirwood Road**

#### Taylor Wimpey (0200)

Allocate site at Muirwood Road for housing development.

Our submissions in respect to the Housing Land Requirement and the supply of housing to meet that Requirement demonstrate a massive shortfall in allocated housing sites. It is therefore essential that additional land is allocated, on sustainably located greenfield sites as necessary. It is also important that a range and choice of sites is allocated to reflect the range in need and demand, including relatively small-scale sites such as Muirwood Road, which can provide private and affordable family homes without reliance on large scale infrastructure interventions, site remediation and site acquisition complexities, which inevitably slow down the delivery of very large or brownfield sites.

Therefore, are seeking the allocation of a site for housing at Muirwood Road, ranging from approximately 250 – 390 homes depending on density and whether or not a primary school is located on the site. A comprehensive design document has been prepared. This considers the main opportunities and constraints affecting the site and shows an appropriate scale and form of development reflecting the character of the area.

The non-identification of the site for potential housing development in Choices for City Plan 2030 may be partly due to a number of incorrect assumptions and conclusions in the Area Assessment contained in the Choices 2030 Housing Study. Also, it is notable that the area assessed by the Council – Baberton - is significantly larger than that the site being promoted for housing.

A review of the site against the criteria in the Housing Study assessment has been supplied. Summary of site assessment comments are as follows;

- The site is not within a SDA but that does not preclude development
- The site is within walking distance of local convenience services.
- Walking distance to employment clusters ignores alternative route via Donkey Lane.
- Access to cycle network analysis sits at odds with comments from Sustrans and information within Council's publications.
- Active travel comments at odds with comments from Sustrans and potential undermines possible funding of enhancements.
- The site is within easy walking distance of a 10 minute bus service and a mainline railway station.
- Unclear as to what the identified public transport intervention is.
- The Council is undertaking a comprehensive review of its school estate. It is possible to accommodate a new primary school on the site.
- Agree with the landscape conclusions and propose to underground the pylons.
- Agree that development can improve links to the green network. It has good access to water of Leith route and propose to put in pedestrian crossings and green landscape ribbon.
- Agree site has no flood risk.

### **Site 18. Curriemuir Vale**

#### Cala Management (0316)

Propose removing Currievale from the green belt and allocating it for housing development.

The current brownfield strategy is unrealistic and high-risk and will fail to address housing need and demand during the City Plan period. To enable a sufficient volume and range of homes to be built an alternative strategy must be adopted.

The alternative strategy must make provision for housing development on both greenfield and brownfield land i.e. a blended approach.

Proposed City Plan 2030's Spatial Strategy seeks to develop a network of 20-minute neighbourhoods and direct new development to, and maximise the use of, brownfield land rather than greenfield land.

The approach of meeting the vast majority of Edinburgh's housing need from brownfield land to be unrealistic and high-risk. Such an approach will inevitably fail to address housing need and demand during the City Plan period. It is not clear to what extent the Council can provide any certainty that the brownfield land being relied upon to deliver the City Plan 2030 strategy is either suitable or available for housing development. No evidence has been presented to indicate that the effectiveness and deliverability of these sites has been subject to a robust assessment. Fundamental information such as the willingness of owners to sell or redevelop their land, the timescales for this, or the suitability of individual sites for development (e.g. ground conditions, viability, abnormal costs) is apparently unknown. Many of the identified sites are in multi-ownership, further complicating land assembly. For these reasons many of the new housing proposals will

fail to meet the test of 'effectiveness' contained within PAN2/2010: Affordable Housing and Housing Land Audits.

At the Choices for City Plan stage of the 275 hectares of urban land identified as potentially suitable for housing-led development, only 11 hectares was vacant and ready for development and only 30 hectares benefitted from planning permission. The remainder of the land was in active alternative use – primarily business and industrial land in private ownership. There is no evidence or indication that this position has changed significantly in the intervening period. Scottish Planning Policy (2014) states at paragraph 119 "Local development plans in city regions should allocate a range of sites which are effective or expected to become effective in the plan period to meet the housing land requirement". Circular 6/2013 Development Planning prioritises 'deliverability' in the site selection process at each stage of Local Development Plan preparation. City Plan 2030's approach to site selection does not comply with either Scottish Planning Policy or Circular 6/2013.

Given the significant challenges and risks the Council's brownfield first approach present to the delivery of new homes during the City Plan period, CALA believes an alternative option must be pursued if Edinburgh's housing targets are to be met. This will necessitate development on both greenfield and brownfield land i.e. a blended approach. It is essential that additional land is allocated for residential development on appropriate and available greenfield land if a sufficient volume and range of homes are to be built in the City during the plan period.

The release of greenfield land for development can be identified and planned in a manner that supports the key aims of City Plan 2030 – including the aim of delivering a "network of 20-minute walkable neighbourhoods and embedding a 'place-based' approach to the creation of high quality, high density, mixed-use and walkable communities, linked by better active travel and public transport infrastructure, green and blue networks and bringing community services closer to homes".

Land at Currievale can achieve all of these aspirations and represents an appropriate candidate for green belt release and re-allocation for housing led development.

SESplan SDP Policy 7 makes provision for greenfield housing development proposals within or outwith identified Strategic Development Areas to be allocated in Local Development Plans or granted planning permission to maintain a five years' effective housing land supply, subject to satisfying a number of criterion. Development at Currievale can progress in accordance with SESplan SDP Policy 7 principles.

CALA has demonstrated the site is 'effective' and free of any infrastructure constraints. Given the availability of existing infrastructure, development at Currievale is in accordance with the City Plan's 'infrastructure first' approach for new developments, particularly evidenced by the close proximity of the Primary Sub Station which has capacity to support a sustainable development in this location unlike the vast majority of proposed allocations in City Plan.

Development at Currievale will be in keeping with the character of the settlement and will not undermine green belt objectives. SESplan SDP Policy 12 (Green Belts) defines the purpose of Edinburgh's green belt. Development at Currievale would maintain the identity and character of Currie, it would not result in coalescence. The site occupies a sustainable location at the settlement edge and its development will consolidate the settlement pattern

and allow a revised defensible greenbelt boundary defined by the railway line to be formed.

In terms of directing development to the “most appropriate locations”, the site could scarcely be better placed given its high level of accessibility to the pedestrian and cycle network, and public transport infrastructure. The submitted Transport Appraisal has highlighted that the site is within easy walking distance of local convenience services and clearly demonstrates how the Currievale site supports the 20-minute neighbourhood concept

Planning Advice Note (PAN) 75 ‘Planning for Transport’ states that ‘A maximum threshold of 1600m for walking is broadly in line with observed travel behaviour’ for accessibility to local facilities by walking and cycling’. All key local facilities are situated within 1,600m from the site.

Development at Currievale will maintain the landscape setting of Currie. The Edinburgh Green Belt Study (Stage 2) carried out to inform SESplan SDP identified the majority of the site as having landscape capacity to accommodate development. This included land to the north of Currie and east of Riccarton Mains Road. Since then, development has commenced at Newmills Road (HSG 37) and completed at Curriehill Road (HSG 36) and Riccarton Mains Road (HSG 35) providing further context for development.

As evidenced by the submitted Development Framework, development at Currievale will facilitate and provide opportunities for access to open space and the countryside – significantly enhancing the existing situation, where the site does not provide such access.

Currievale offers a sustainable settlement expansion opportunity in accordance with 20-minute neighbourhood principles. In support of Edinburgh’s housing needs Currievale can make an important contribution to the delivery of new homes, both market and affordable, and play a significant role in helping Edinburgh meet its housing targets during the City Plan period.

### **Site 19. Bankhead, Balerno**

Simon Thompson (Glenpark Homes) (0248)

Add new housing allocation at Bankhead, Balerno

There are a number of high-profile sites that have been allocated for housing which are very unlikely to be available for development in the foreseeable future (Seafield, Redford Barracks, Astley Ainslie Hospital) and others potentially have alternative plans (a new secondary school at the former Royal Victoria Hospital). From reviewing the proposed plans, it would also appear that a significant number of allocated housing sites are currently existing trading businesses including swathes of land in the Bonnington and Leith areas.

A broad review of the plan would indicate the Council’s strategy looks undeliverable in the timescales envisaged. It remains clear that Edinburgh will need to release additional land for housing to meet its objectives of meeting housing demand as the Capital City of Scotland. Previous representations set out the merits of two sites in my ownership at Glenbrook Road, Balerno and Bankhead, Balerno. These sites can be delivered in the City

Plan period and offer high quality housing opportunities of appropriate scale for Balerno. Previous proposals for 53 homes and 5 homes respectively would contribute to the housing supply targets and can be serviced by sustainable modes of transport being within easy walking distance of established bus routes into the City Centre and local facilities in Balerno.

Neither site would have significant landscape impacts given their contained nature by mature woodland and indeed, the site at Bankhead has been developed previously for a yard and barn and therefore should be considered brownfield. This particular site was assessed by a Reporter, in an appeal for potential glamping pods, who felt that its proximity to other dwellings made the site unsuitable for tourism use but he disagreed that development on this site should have been refused on landscape grounds which therefore makes housing on this derelict site as the only sensible option.

Given the level of housing need in Edinburgh there would appear to be no clear reason why either site should not come forward for housing in the short term. The full assessments undertaken previously are noted in supporting letters and I would ask for both sites to be allocated for housing in an amended City Plan 2030.

Having reviewed the proposed housing allocations, many of them are not deliverable to meet housing targets. The Strategy should encompass suitable, sustainable greenfield sites in addition to brownfield land to assist with meeting the affordable housing demand in full.

## **Site 20. Glenbrook Rd. Balerno**

Simon Thompson (Glenpark Homes) (0248)

Add new housing allocation at Glenbrook Road, Balerno

There are a number of high-profile sites that have been allocated for housing which are very unlikely to be available for development in the foreseeable future (Seafield, Redford Barracks, Astley Ainslie Hospital) and others potentially have alternative plans (a new secondary school at the former Royal Victoria Hospital). From reviewing the proposed plans, it would also appear that a significant number of allocated housing sites are currently existing trading businesses including swathes of land in the Bonnington and Leith areas.

A broad review of the plan would indicate the Council's strategy looks undeliverable in the timescales envisaged. It remains clear that Edinburgh will need to release additional land for housing to meet its objectives of meeting housing demand as the Capital City of Scotland. Previous representations set out the merits of two sites in my ownership at Glenbrook Road, Balerno and Bankhead, Balerno. These sites can be delivered in the City Plan period and offer high quality housing opportunities of appropriate scale for Balerno. Previous proposals for 53 homes and 5 homes respectively would contribute to the housing supply targets and can be serviced by sustainable modes of transport being within easy walking distance of established bus routes into the City Centre and local facilities in Balerno.

Neither site would have significant landscape impacts given their contained nature by mature woodland and indeed, the site at Bankhead has been developed previously for a

yard and barn and therefore should be considered brownfield. This particular site was assessed by a Reporter, in an appeal for potential glamping pods, who felt that its proximity to other dwellings made the site unsuitable for tourism use but he disagreed that development on this site should have been refused on landscape grounds which therefore makes housing on this derelict site as the only sensible option.

Given the level of housing need in Edinburgh there would appear to be no clear reason why either site should not come forward for housing in the short term. The full assessments undertaken previously are noted in supporting letters and I would ask for both sites to be allocated for housing in an amended City Plan 2030.

Having reviewed the proposed housing allocations, many of them are not deliverable to meet housing targets. The Strategy should encompass suitable, sustainable greenfield sites in addition to brownfield land to assist with meeting the affordable housing demand in full.

## **Site 21. Land at Goodtrees**

### Hallam Land (0615)

Land identified as part of this submission is located to the west of Balerno immediately adjacent to Cockburn Crescent where the opportunity for a new 20-minute neighbourhood can be integrated into the urban area. It is capable of accommodating mixed uses and being developed at a density suggested by the Council. At present the Proposed Plan does not make provision for improved facilities or services within Balerno, but these could be accrued from new greenfield development.

This land is being promoted as a housing development of approximately 300 family and affordable homes. This is an opportunity for the planned and logical expansion of Balerno at a scale that is commensurate with the location. The site has planning history and was subject to a PAN and public consultation in 2013 but considered to be premature at that time. It is currently identified as green belt.

Goodtrees Farm was promoted to the Council at the Choices stage of the LDP review. The Proposed Plan has chosen not to address matters regarding greenfield housing site releases. This will intensify competition for land and resultant values. Concerns are now re-enforced by the policy stance taken by the Council on proposed allocations as part of the spatial strategy now being adopted which forgoes a balanced or blended approach to future allocations.

Site has been assessed against the aims of the plan.

20 Minute Neighbourhoods and a place- based approach to mixed- use walkable communities:

- The proposal is in a sustainable and accessible location on the edge of Balerno with excellent linkages into local facilities and services which could be enhanced by mixed use development in association with housing.
- It potentially delivers a 20-minute walkable neighbourhood through a 'place-based' approach to the creation of high quality, high density, mixed-use and walkable community.

- A neighbourhood hub would bring community services closer to proposed dwellings at Goodtrees and would be linked by better active travel and public transport infrastructure.
- Maximising the use of brownfield rather than greenfield land ---
- Whilst no brownfield land is used the site makes the most effective use of an urban edge site with available infrastructure and services.
- It would allow planned and sustainable development to be integrated with the existing urban area making the best use of land and avoid less desirable developments elsewhere locally.
- Greenfield land take is minimal and the benefits outweigh the value of the countryside and greenbelt designation.

#### Setting Out Place Briefs and Local Place Plans:

- A place brief would be prepared for Goodtrees Farm in alignment with the Council's policies and urban design objectives.
- A Proposed Masterplan for Goodtrees as submitted at Choices stage sets out Place Policies and Development Principles. The Place Brief will guide development and to integrate new services to maintain a sustainable community.

#### Net Zero buildings and zero carbon infrastructure and technologies ---

- New buildings would be net-zero and more resilient to climate change. The Masterplan supports the delivery of an integrated heat network and energy infrastructure development, to assist the city's transition to net-zero.

#### Implementing environmental policies to deal with climate change ---

- The proposals fully address climate change mitigation and adaptation through a comprehensive Environmental Impact Assessment.
- Delivering land to meet housing needs and 35% affordable housing ---
- It is possible that approximately 115 affordable houses could be provided at Goodtrees Farm.
- It would deliver a minimum 35% affordable housing contribution in line with emerging policy in City Plan 2030.
- The allocation is specifically intended to meet Edinburgh's housing needs over the next decade as well as satisfy the ever-present requirement for new housing in Balerno.

#### Protecting housing stock and the amenity of existing housing areas ---

- Development would not adversely affect the amenity of existing residential neighbourhoods in the Cockburn Crescent area of Balerno.
- The existing infrastructure and road network would remain and be integrated into the Masterplan.

#### Infrastructure first approach – schools healthcare sustainable transport energy and waste -

- Available existing infrastructure exists in Balerno and the masterplan directs new development to existing available capacity.

- Furthermore the masterplan allows for new and expanded community infrastructure including educational contributions, healthcare, sustainable transport, energy, and waste.

Consultative approach with communities ---

- Extensive consultation is envisaged with the Community Council and other stakeholders in the area.
- This consultative approach will address future infrastructure healthcare and education requirements within the area balancing growth with new facilities and service improvements.

Delivering economic land use needs including local centres as part of a mixed-use housing led approach ---

- Land at Goodtrees Farm contains space for a small local centre supplementing existing provision in Balerno.
- The approach is part of housing-led mixed-use development and deliver policies which supports local facilities and services.

The matrix demonstrates excellent alignment with the aims and objectives of the Proposed LDP as well as close alignment with wider national and regional strategies including the West Edinburgh Strategy.

On this basis it is not clear why the LDP has not included the site as a sustainable and effective allocation.

The strategy should be amended to reflect a more balanced and sustainable mixed blended approach with a good share of greenfield release in accordance with the Choices Strategy. This is particularly important in locations such as Balerno which are subject to intense development pressures. Greater cognisance needs to be taken of housing demand and affordability together with effective delivery of the volume of land required in the city.

City Plan is not addressing housing requirements in Balerno and leaving the area open to unsustainable challenges to the land supply over the plan period. This is already occurring in other locations within the local area.

There is concern that the LDP is not conducive to future investment. It is disjointed and many of the policies are restrictive and inconsistent with the Plans' aims. There is also concern that the strategy is not deliverable and that the proposals will not be viable in economic development and housing terms.

The Proposed Plan should be amended in accordance with SPP and NPF3. There is concern that there is no supplementary guidance or equivalent in relation to best practice on 20-minute neighbourhoods and related policy objectives including Place Plans. Furthermore, there is no guidance on how local infrastructure and services can be improved in conjunction with development.

**Site 22. South of Cockburn Crescent**

Barratt David Wilson Homes (0677)

Given concerns as to the over-reliance of the Proposed Plan upon the identification of brownfield land and, concurrently, the need to bring further sustainable greenfield opportunities forward, this representation promotes a housing allocation for land directly adjacent to the southern edge of the Balerno urban area at Cockburn Crescent for inclusion within the proposed City Plan 2030.

This site is discussed in the attached document but, in summary the subjects are

- Adjacent to the existing urban area of Balerno;
- Accessible by active travel modes and not reliant upon car travel;
- are within a 20min walking distance to neighbourhood facilities, and
- it is effective and available capable of delivering up to 200no homes (private and affordable) within the Plan period,
- In the control of a committed landowner, with a track record of delivery in Edinburgh and in the ownership of a willing landowner.

**Site 23. Highfield**

Taylor Wimpey (0200)

Object to the non-allocation of land at Highfield for housing and accordingly recommend that it is included as a Housing Proposal and object to its inclusion within the greenbelt.

The Highfield site was identified in Choices for City Plan 2030 in Options 2 & 3 as part of 'Area 1 – South East Edinburgh', which is described and shown on pages 36 & 37 of Choices, and where it is noted that if additional housing land is required, then development here can be supported.

Both the housing land requirement and the housing land supply requirement proposed in City Plan are significantly deficient, and additional housing land allocations are required.

The Highfield site, by virtue of its separate accessibility and its physical and visual separation from the other parts of the Drum area, is capable of being developed independently of the Drum land to the south. Housing development here does not require large scale infrastructure interventions to support it and can therefore be developed immediately upon receiving planning permission and other necessary consents.

The Highfield site is approximately 6.7 hectares of mainly uncultivated grassland adjacent to the A7. The Council had in the past proposed that the site be used as a Park & Ride, but that was abandoned with the identification of the facility at Shawfair. As expanded upon in the Design & Access Statement, the proposed development can adopt the following principles:

- A principal access point onto Ferniehill Road.
- SUDS to the north-west of the site at the low-point of the site.
- Retention of trees wherever possible.

- The development area has been set some distance back from Old Dalkeith Road, with the existing landscape buffer retained.
- Retention of links to the green network
- A view corridor towards the City

The Highfield site is within the Assessment Area known as Drum North in the Choices Housing Study. A review of the site against the criteria in the Housing Study assessment has been supplied. Summary of site assessment comments are as follows;

- The site is within a SDA.
- The site is within walking distance of local convenience services.
- The site is within walking distance of employment clusters.
- The site does not have access to the cycle network but could be improved.
- The site can support active travel through improvements.
- The site is close to Dalkeith Road which has frequent bus services.
- Small scale nature of site means that major transport intervention not required before site is developed.
- There is likely to be secondary school capacity.
- Site is not within the Drum designed landscape is not part of the Drum estate and is well contained.
- There is no flood risk.
- Site is suitable for development

#### **Site 24. Frogston Road East**

##### BDW and Catchelraw Trust (0209)

Object to the non-allocation of Frogston Road East for housing, and accordingly recommend its inclusion as a Housing Proposal.

The Housing Land Requirement and the supply of housing to meet that requirement demonstrate a massive shortfall in allocated housing sites in the Proposed City Plan. Therefore, essential that additional land is allocated, on sustainably located greenfield sites as necessary. It is also important that a range and choice of sites is allocated to reflect the range in need and demand, including relatively small-scale sites such as Frogston Road East, which can provide private and affordable family homes without reliance on large scale infrastructure interventions, site remediation and site acquisition complexities, which inevitably slow down the delivery of very large or brownfield sites.

Therefore, seeking the allocation of a site for housing at Frogston Road East for up to 500 homes. A comprehensive design document has been prepared. This considers the main opportunities and constraints affecting the site and shows an appropriate scale and form of development reflecting the character of the area.

Technical documents have been prepared to compile a constraints and opportunities appraisal and have informed the resulting Development Framework for the site.

Also an area has been included for employment/local services into the Development Framework- employment is marked on the plan but it could also accommodate local

services. This would improve the range of services in the area contributing to the existing 20 minute neighbourhood credentials of the area.

A mobility hub could also be accommodated here which could include:

- Co-location of public transport and shared transport modes such as car club, bike/e-bike/ mobility scooter hire
- Travel information
- Safe and secure bike storage and parking
- Taxi pick up/drop off
- click and collect facilities and delivery lockers.

High standard EV charging provision can also be accommodated throughout the development.

It appears to us that the non-identification of the site for potential housing development in the Main Issues Report (Choices) may be partly due to a number of incorrect assumptions and conclusions in the Area Assessment contained in the Choices 2030 Housing Study. Also, it is notable that the area assessed by the Council in this case – “South of East Frogston Road” is significantly larger than that the site being promoted for housing.

A review of the site against the criteria in the Housing Study assessment has been supplied. Summary of site assessment comments are as follows;

- The site is within a SDA.
- This site has access to a shop and a number of shops at Gracemount, and planning to include shops and business uses within the site.
- This site is close to Broomhills Business Centre and Straiton retail park with a signal controlled crossing
- There is a proposed active travel route directly opposite the site which the development could help deliver.
- Public transport provision is good and potential for improvements to services.
- Site is within catchment of new Broomhills primary school.
- Landscape assessment shows site is broadly acceptable in landscape and visual terms and landscape proposals aim to enhance the countryside and rural environment and setting of city.
- Development will create opportunities to connect to the green strategic network.
- Development is not proposed within an area of flood risk, and will be set back.

Kim Denholm (0294)

Support the housing proposals. However, I remain very concerned that developers will exercise great pressure on Edinburgh Council to allow development along Frogston Road - both at Broomhills and at Mounthooly Loan. While I completely understand that Edinburgh Council has sought to protect these areas from further development, I strongly urge that steps are taken to guard against wildcat planning applications / appeals as developers and the Catchelraw Trust have made it very clear that they aim to progress their long term aims to build on both locations. This is unsustainable and would place an intolerable extra strain on an already struggling infrastructure. Should developers make an appeal that goes against the Plan's recommendations, the detrimental effect from

increased traffic pollution and subsequent poor air quality plus the harm to wildlife (of which there is a huge variety, including protected species such as bats and badgers) would be extreme.

While I also understand that CEC is not accepting petitions, I would like to make clear that I have an active petition against further development at Broomhills which currently stands at 1567 in the online version and approximately 250 paper signatures. This does give a very strong indication of the strength of feeling of both local residents and others who work and otherwise access the area.

#### Bo Adams (0363)

Support more development around Frogston road, nice developments with shops, restaurants, family infrastructure, active& leisure infrastructure, some pond, an outdoor heated swimming pool.

There is no mention of Kaimes area , south of Edinburgh. This place urgently needs some quality investment , Gracemount Square opposite Tesco express, could be turned into nice food quarter with a fountain and nice seating area, new swimming pool with few proper slides for families, perhaps outdoor heated pool around Frogston Road with the view to the Pentlands would be a good idea. Area needs a new high school around Frogston Road. Area has been left to neglect for ages, no quality of life at all here. If you are serious about 20 mins neighbourhoods you must invest here properly, it is the only area that hasn't seen investment in decades.

#### **Site 25. Alnwickhill Road**

##### MacTaggart and Mickel Homes (0312)

Remove the site from the green belt and allocate it for housing development. Site extends to over 8Ha, adjacent to Alnwickhill Road at Liberton, and is considered to be deliverable in the short term and is appropriate for allocation for residential development in the City Plan 2030.

The site comprises arable farmland and sits within the statutory Green Belt and a Special Landscape Area of Braids, Liberton and Mortonhall in the adopted LDP. Propose to develop 2.98ha of this land, which constitutes 35.6% of the total site area. The remaining 5.44ha of the site has potential to provide an enhanced area of open space through a series of measures, including structural planting and additional pathways which connect into the existing core path network.

The site is available now for the provision of a landscape-led and locally appropriate residential development, comprising a moderate number of new homes (100 units) within the city boundary of Edinburgh.

The site sits adjacent to the residential area of Liberton, with Blackford Hill and the Braid Hills lying further west. To the immediate east of the site beyond Alnwickhill Road lies the new residential development of Liberton Grange, on the site of the former Scottish Water landholding.

It is bounded to the east by Alnwickhill Road and is bounded by Tower Farm Riding

Stables and Braid Hills Golf Course to the west. To the north lies the well contained, Category 'A' listed building of special architectural or historic interest, Liberton House, set within wooded grounds. The site is bounded to the south by Stanedykehead. The site is well served by nearby Cameron Toll Shopping Centre and has regular bus services to the city centre located nearby.

The site's position within the existing city boundary and its moderate size allows for a short term 2-3 year deliverable residential site.

The Special Landscape Area and the low density development at Liberton can mutually co-exist. A small part of the site is proposed for development (2.98Ha) with the balance remaining as open space (5.44Ha). It is considered that the development will not adversely impact the aims or objectives of this policy of the City Plan.

## **Site 26. Calderwood**

Stirling Developments Ltd. (0303)

The inclusion of additional greenfield sites should be considered as part of a holistic plan for West Edinburgh. Within the 36 areas of the Place Policies section, 17 have a requirement for a master plan / place brief etc which suggests that they will not be able to come forward for development early in the plan period. CEC must therefore consider existing, effective sites that already have masterplans and briefs that can be extended. Calderwood is a good opportunity to deliver homes, of both tenures, early in the plan period.

There needs to be an ongoing, independent, rigorous review of the housing land supply throughout the plan period. Effective greenfield sites, such as Calderwood which is supported by the City Region Deal, are already delivering the key points of this policy and is capable of supporting City Plan 2030 early in the plan period, unlike many brownfield sites.

IBG – Plan allocates 7000 units on what appears to be a greenfield site that was not identified through the Choices document.

The plan needs to offer flexibility to support effective greenfield sites should the supported brownfield sites fail to deliver. Sites like Calderwood, which was identified in Choices is further supported by the City Deal and NPF4. Effective sites like Calderwood should be supported within City Plan as Calderwood has the ability to deliver homes of all tenures in a 20 minute neighbourhood with the requisite green blue infrastructure. Furthermore, Calderwood has a new exemplar primary school that already covers much of the allocation considered in the Choices document. With infrastructure already in place, the established Calderwood development can deliver units early in the plan period when brownfield sites are likely to struggle.

Approximately one third of sites proposed have less than a 50 unit capacity - too few to meaningfully support the plan. Brownfield sites are unlikely to deliver units until the end of the plan period, if at all. Cross referencing the housing sites in Table 2 with the Housing paper that supported the MIR suggests that very few of the new sites that are identified are noted as vacant.

The plan needs to allow flexibility for effective greenfield sites, like Calderwood to support the delivery of housing of all tenures.

Effective greenfield sites, like Calderwood, which was identified by CEC through their Choices document should be included in Plan.

#### Jupiter Artland (0257)

Support the exclusion of Area 5 Calderwood and the protection of Jupiter Artland and its countryside setting.

For the reasons as set out within the Committee Report to The City of Edinburgh Planning Committee on Wednesday 29th September 2021 the Council determined to exclude Area 5 Calderwood from the proposed City Plan 2030. Jupiter Artland welcomes and support this decision.

As detailed in the response to the Choices Paper in 2020 the landscape setting of the site remains of critical importance to the operation and function of the sculpture park. The allocation of the housing development in Area 5 would have adversely affected this landscape setting and impacted upon the potential for the sculpture park to draw investment and grow its cultural significance.

The exclusion of Calderwood will allow the business to revisit planned investment options and Jupiter Artland has received a wealth of support from artists and contributors as detailed within the supporting document. Jupiter Artland can now look towards the future with plans to introduce additional installations and facilities which will continue to improve and develop Jupiter Artland as cultural asset for the City of Edinburgh and Scotland.

Welcome the opportunity to respond to the Proposed Plan (consultation) and support the allocation of land at Jupiter Artland and its immediate surroundings as countryside. We would request that this position is noted and that we are kept informed of future stages in the Development Plan process.

#### **Site 27. North of West Craigs**

##### West Craigs Ltd. & Dunedin Canmore (0352)

The City Plan Spatial Strategy is overly reliant on brownfield land in existing business/industrial use. The strategy is unrealistic, high-risk and will fail to address housing need and demand during the City Plan period. To enable a sufficient volume and range of homes to be built an alternative strategy should be adopted and must make provision for housing development on both greenfield and brownfield land i.e. a blended approach. In support of this, land at West Craigs North represents an appropriate candidate for green belt release and re-allocation for housing led development.

The release of greenfield land for development can be identified and planned in a manner that would support the key aims of City Plan 2030 – including the aim of delivering a network of 20-minute walkable neighbourhoods and embedding a ‘place-based’ approach to the creation of high quality, high density, mixed-use and walkable communities, linked

by better active travel and public transport infrastructure, green and blue networks and bringing community services closer to homes.

West Craigs North can achieve all of these aspirations and represents an appropriate candidate for green belt release. West Craigs North offers a sustainable settlement expansion opportunity with the 20-minute neighbourhood principle at its heart. In support of Edinburgh's housing needs West Craigs North can make an important contribution to the delivery of new homes, both market and affordable, and play a significant role in helping Edinburgh meet its housing targets during the City Plan period.

West Craigs North is a gap site within the West Edinburgh Strategic Development Area – recognised as a sustainable location and a focus for the region's growth. The site's immediate surroundings are undergoing fundamental change as a result of strategic-scale residential development and associated infrastructure.

Development at West Craigs North will consolidate West Edinburgh's emerging settlement pattern without undermining the aims, objectives, purpose or integrity of the Green Belt at this location. West Craigs North will afford West Edinburgh an improved, robust and defensible Green Belt boundary defined by Cammo Estate to the north and Turnhouse Golf Club to the west of the site.

West Craigs North benefits from a highly accessible location: education, employment, commercial, retail, recreation and health facilities are all accessible via active travel or public transport in accordance with the principles of the '20 Minute Neighbourhood' concept and current guidance including Planning Advice Note 75 'Planning for Transport'.

West Craigs North represents an effective and deliverable site having been shown to be free of the seven specified constraints identified by Planning Advice Note 2/2010 Affordable Housing & Housing Land Audits.

Development at West Craigs North would meet the definition of 'sustainable development' when assessed against the thirteen principles of sustainable development identified by Scottish Planning Policy.

West Craigs North offers an opportunity to develop up to 500 homes, designed to integrate with and create a natural extension to the settlement. A choice and range of housing will be provided and, in partnership with Dunedin Canmore Housing Association, a commitment to the delivery of 50% on-site affordable provision has been made.

Overall, West Craigs North is ideally positioned to make a significant contribution towards City Plan 2030 meeting its housing targets and delivering the volume and range of homes required to address housing need and demand during the City Plan period.

West Craigs Ltd object to the inclusion of land at West Craigs North within the greenbelt, it is requested that the Proposals Map be amended to identify West Craigs North as a new housing proposal.

SESplan SDP Policy 7 makes provision for greenfield housing development proposals within or outwith identified Strategic Development Areas to be allocated in Local

Development Plans subject to satisfying a number of criterion. Development at West Craigs North can progress in accordance with SESplan SDP Policy 7 principles.

Development at West Craigs North will be in keeping with the character of the settlement and will not undermine green belt objectives.

West Craigs North makes no significant contribution to wider green belt objectives, as a result of existing and emerging development there is no longer a functioning green belt at this location.

Development at West Craigs North will consolidate West Edinburgh's emerging settlement pattern without undermining the aims, objectives, purpose or integrity of the Green Belt. The site's development will afford West Edinburgh an improved, robust and defensible Green Belt boundary defined by Cammo Estate to the north and Turnhouse Golf Club to the west of the site.

The site is 'effective' and free of any infrastructure constraints. Given the availability of existing infrastructure, development at West Craigs North is in accordance with the City Plan's 'infrastructure first' approach for new developments.

SESplan SDP Policy 12 (Green Belts) defines the purpose of Edinburgh's green belt. Development at West Craigs North would accord with the identity and character of the settlement, it would not result in coalescence. The site occupies a sustainable location at the settlement edge and its development will consolidate the settlement pattern and allow a revised defensible greenbelt boundary to be formed.

In terms of directing development to the "most appropriate locations", as above, the site represents a gap site at the heart of the West Edinburgh Strategic Development Area. The site could scarcely be better placed given its high level of accessibility to the pedestrian and cycle network, and public transport infrastructure. The submitted Accessibility Appraisal has highlighted that the site is within easy walking distance of local convenience services and clearly demonstrates how the Currievale site supports the 20-minute neighbourhood concept.

Planning Advice Note (PAN) 75 'Planning for Transport' states that 'A maximum threshold of 1600m for walking is broadly in line with observed travel behaviour' for accessibility to local facilities by walking and cycling'. All key local facilities are situated within 1,600m from the site.

Existing topography, established and emerging developments to the immediate north, east and south allied to the adoption of a sensitive design approach and appropriate mitigation measures will ensure development at West Craigs North will maintain the identity, character and landscape setting of the settlement.

At present the site contributes poorly in terms of providing access to open space and the countryside there is no formal access across the fields of the site and access is typically restricted to field boundaries.

As evidenced by the West Craigs North Masterplan development will provide a range of measures that will significantly enhance opportunities to access open space and the countryside, including the delivery of large areas of open space and local parks within the

site itself, and the creation of an extensive path network across the site including connections with the Cammo Walk Active Travel Route and beyond to the nearby Cammo Estate.

## **Site 28. Cammo Fields**

### Dunedin Canmore HA (0766)

The Cammo Fields site is an opportunity to provide a 100% affordable housing development which is deliverable now. The proposals integrate within a location where other housing development is being progressed, with the right infrastructure already in place to ensure it would be a resilient and connected place.

Proposal is for 100% affordable housing scheme on the site, with design layout and technical reporting at an advanced stage. The proposals are considered to respond positively to the key planning policy drivers in the emerging City Plan 2030, as well as other relevant material considerations including draft national planning policy. The accompanying design document supplements this planning representation.

The Cammo Fields site is located on the western edge of Edinburgh with access from the A902 Maybury Road which runs between Queensferry Road to the north and the A8 Glasgow Road to the south. Land to the east of the Maybury Road is predominantly residential in nature and land to the west is predominantly undeveloped as it forms part of the Green Belt. The site is bounded by Cammo Walk to the west and Maybury Road to the east. Pedestrian and cyclist access can be taken from Cammo Walk and vehicular access from Maybury Road.

The site is owned by the Scottish Government and is noted as having been surplus to their requirements for several years.

The site comprises an area of approximately 5 hectares and the site is roughly triangular. Scottish Government have noted that the site contains no significant landscape features of note, and there are no historic records of mineral workings or mining. The risk of contamination is negligible, and there are no infrastructure constraints. Water supply, drainage, education capacity, electricity and telecoms are all either available or can be made available.

The site is currently located within the green belt, however, it is also on the urban edge of the city, surrounded by other residential development.

West Edinburgh is the subject of significant development focus and change. The site is in proximity to several application sites for major residential-led development, most notably the designated HSG 20 site to the north (currently being developed by CALA and David Wilson Homes) and the HSG 19 site to the south (now reallocated in the City Plan) with infrastructure works underway and the development being carried out by Taylor Wimpey.

The Scottish Government previously submitted representations to the Main Issues Report stage and sought to promote the site for residential development.

The Scottish Ministers own the site and Scottish Government Estates support and have put into place an agreement in principle to transfer the land to Dunedin Canmore Housing

on the basis of a 100% affordable housing site. This is in recognising the need to release land to achieve the wider public policy goal of delivering more affordable housing.

The site is in a prime position to deliver much needed affordable housing now and can be delivered in a holistic way that provides improved access to the greenbelt for recreational purposes for all.

It is important to note that the approach set out in this representation is reflective, and indeed is supported, by the emerging Scottish Government position in National Planning Framework 4 which includes support for affordable housing where it is needed.

The opportunity at Cammo Fields very much reflects the 20-minute neighbourhood concept. The site is strategically placed adjacent to the existing Maybury Road and will be able to utilise existing transport, active travel, and infrastructure opportunities. It can connect into existing cycle networks and indeed provides the opportunity to create better linkages. The site is easily accessible to community facilities, both existing and proposed, and to green space and countryside on foot. The development of the site and associated connectivity can serve to act as a gateway into the wider countryside and recreation facilities to the west, including the Cammo Estate.

The Cammo Fields site to be supportive of the 'infrastructure first' this in that new development is directed to existing infrastructure. The proposals if for an exemplar development from a sustainability and urban design perspective. The architects are currently developing a sustainability strategy based on Passive House design standards to contribute positively to the goal of net zero for Edinburgh. By adopting a 'Designing Streets' approach to the design this will help create a high-quality urban neighbourhood. This directly supports the Council's aim to become net zero by 2030 and to be more resilient to climate change.

The site at Cammo Fields proposes to use an area of greenbelt which currently does not add value or actively contribute to the wider area. Does not consider that all development should be directed to brownfield land rather than greenfield, instead an opportunistic approach should be taken. A number of brownfield sites within the Plan have been allocated however are either heavily constrained or not available in the long term. The site at Cammo Fields, whilst currently in the greenbelt, is a small parcel of land that can be delivered now for the immediate supply of much needed affordable homes for the city. This provision meets CEC's aim of delivering land to meet Edinburgh's housing needs over the next decade.

The boundary of the green belt shown on the Proposals map remains largely unchanged from previous local plans. Taking into account the above purposes of the greenbelt, our client considers that the release of the small parcel of land at Cammo Fields can be seen positively as a new more logical boundary to be created.

Discussions with CEC Transportation resulted in a positive response to the proposed access route into the site from Maybury Road and the opportunity to form a new junction which will help Maybury Road become a more urban traffic road, rather than having the current feel of a continuation of the bypass.

The development would integrate well with the proposed new 'Green Corridor' Active Travel route at Cammo Walk where the intention is that this will be a fully lit and safe cycle

/ pedestrian route. There is a clear opportunity to link into this by ensuring walking and cycling are very much at the heart of the development at Cammo Fields. We note that a request for an EIA screening opinion (Ref: 21/02306/SCR) was submitted in November 2021 and that the active travel route is also proposed to be delivered within the live planning application for nearby West Craigs.

Whilst Cammo Fields is currently designated as green belt, the site in its current use does not contribute positively to the greenbelt environment and is not currently accessible for recreational use. It instead creates a physical barrier to pedestrians and cyclists trying to link in from the east through to the Cammo Estate in the west. The proposed development has the potential to remove this blockage and encourage pedestrian and cycle movements. This will open up access to the proposed new cycle route from Maybury (South Gyle) through to Cammo and beyond whilst also improving access to the high-quality recreational opportunities of Cammo Estate.

The site is not considered to be a good contributor to the green belt at present, and as identified within the LDP Proposals Map it is on the very edge of the urban area, and soon to be enclosed on most sides by development. The site could instead be considered to act more as a gateway to the Cammo Estate opening up better access to open space and recreation for the local community and acting as a community transition into the more valued and actively used areas of greenspace. A bespoke housing development focusing on landscape and recreation in this location would act as a much improved boundary to the greenbelt, and in doing so provide a more suitable frontage to Maybury Road in line with other developments.

The site could contribute to delivering an integrated community and appears to be a logical extension to other housing development within the area, and in doing so enhancing affordable housing delivery.

The CEC Housing Team are supportive of high quality, sustainable housing developments that deliver above policy levels of affordable housing. The Council's support for the delivery of affordable housing in Edinburgh is well-documented and the delivery of affordable homes is at the heart of the new LDP and a topical issue throughout the city. This is in response to the stark affordable housing need manifesting across Edinburgh.

Analysis of affordable lettings data for West Craigs and neighbouring Corstorphine / Murrayfield identifies this issue is particularly acute in these letting areas, where in the past year there was one social rent property advertised in East Craig and eight properties advertised in neighbouring Corstorphine / Saughtonhall. Affordable housing stock numbers are very low in both these wards, with 457 (or 5%) of the total East Craig stock being affordable and only 332 (or 3%) in total in Corstorphine / Saughtonhall.

The site at Cammo Fields provides the opportunity to establish an exemplar development, with a unique approach which would allow client control and design freedom, unlike other residential schemes where the affordable housing element is provided alongside other house builders. The site is deliverable with well advanced proposals and background technical information is available. With our client clearly keen to pursue, this is an important opportunity to deliver 100% affordable housing.

The developer is open to a discussion with the Council on the affordable tenures to be provided, with a mix of Social Rent, Mid-Market Rent and also Shared Equity being

delivered to assist with the purchase of affordable homes for those on low to moderate incomes. Affordability pressures across the city and particularly in the local area, means that home ownership is out of reach of the majority.

Edinburgh therefore needs more homes to meet housing need and support economic growth, and smaller opportunities such as at Cammo Fields can supplement this approach. The proposed mix and tenure will be bespoke to the local area, and will also provide specialist, or housing for older people, if local demand shows a need for this type of housing.

In 2017, the Council made a commitment to developing a programme to deliver at least 10,000 social and affordable homes over the next five years, with a plan to build 20,000 by 2027. The affordable housing supply target set out will meet the Council Commitment in full and acknowledges that affordable housing will continue to be delivered beyond 2027. It takes account of the constraints on delivery of affordable housing and the reliance on market housing to provide affordable housing.

The developer would look to work with one of the main car club providers in the area or directly to deliver a pool of cars that would allow customers to make the decision to live car free. The developer is proposing a lower number of parking spaces and an expansion of city car club spaces, with links to electric vehicle charging stations.

By having full control of the development of the site, the developer is proposing an exemplar development from a sustainability and urban design perspective. The architects are currently developing a sustainability strategy, including a significant reduction in carbon emissions from material selection, to contribute positively to the goal of net zero carbon for Edinburgh.

The developer is committed to maximising community benefits for their customers and communities through their procurement activities. The providers will include community benefit clauses in new house building contracts, to deliver wider social benefits in addition to the house building contract. These clauses can be used to provide local facilities, training opportunities, or spend money locally in other ways, in conjunction with the existing local community.

Within the Plan, Place 22 Maybury is designated as an area for development, and which lies in close proximity to the site at Cammo Fields.

This housing site was allocated for development and removed from the green belt in the Edinburgh Local Development Plan (2016). The allocation suggests that comprehensive master planning and phasing of development will be required drawing upon placemaking and street design principles to create distinctive and sustainable urban communities at the gateway to the City.

A new 30m wide green network link is to be provided from a new pedestrian / cycle bridge through the Maybury site to connect via Cammo Walk and Cammo Estate Park to the north. This will provide a new, strategic, north-south green network link to the west of the city. No vehicular access should be taken through the green corridor.

Policy Place 22 Maybury overlays the Cammo Fields site, and also includes the HSG 20 housing site which is currently under construction. The site at Cammo Fields would be a

logical addition for a bespoke affordable housing development, which could link in effectively with the proposed allocation at Maybury, including its new active travel route. The site at Cammo Fields can help to deliver a better gateway to the Cammo Estate.

Policy Env 18 Development in the Green Belt and Countryside states that within the Green Belt and Countryside shown on the Proposals Map, development must meet one of the given criteria and not detract from the rural environment or landscape of the surrounding area in terms of its quality, characteristics, and views.

The Cammo Fields site can be developed without compromising the landscape setting and indeed can support and enhance opportunities for countryside recreation. The Cammo Fields site, being on the boundary of the urban area, could form a logical release from the greenbelt. Other housing developments in the area have changed the nature of this greenbelt / urban edge boundary leaving the Cammo Fields site as a standalone triangular portion of land which is not contributing to the wider greenbelt designation. The site is bounded by the proposed active travel route of Cammo Walk and there are opportunities to strengthen this through development of our client's site.

There needs to be a greater focus on deliverability to ensure that housing needs are met within the City Plan 2030, particularly affordable housing provision. As evidenced throughout this representation, there is an acute need for homes across the city, and the affordable housing stock numbers are particularly low in both East Craig and Corstorphine / Saughtonhall wards. There is clearly unmet demand for product in West Edinburgh.

The proposed City Plan 2030 introduces an approach to housing policy in seeking to maximise the use of brownfield land rather than greenfield. It is recognised that many of the identified brownfield housing land opportunities are currently in active alternative use and with no immediate prospect of conversion to housing. To ensure deliverability, and to meet the expected housing requirements throughout the lifetime of the plan, there needs to be allowances for others site to come forward. Our client's site at Cammo Fields can deliver much needed affordable housing now.

## **Site 29. Land at Burdiehouse**

### Hallam Land (0457)

Allocate land at Burdiehouse for a housing site for c.11 units. Ultimately, as demonstrated through the responses to other sections of City Plan 2030, it is considered that if the Council continue to pursue a brownfield strategy without consideration of identifying additional greenfield sites for release, it could inhibit the delivery of market housing and could result in a potentially significant shortfall within the Plan period.

The site is deliverable / effective, with a developer who is committed to developing the site within the Plan period. In technical terms, there are no site constraints which are insurmountable and any remaining matters in relation to technical constraints can, and will, be addressed at a later stage where Hallam recognise the need to undertake additional surveys.

In summary:

- The site is considered to have potential to deliver on the 20-minute neighbourhood concept (advocated within NPF4) whilst also delivering new, high quality and energy

efficient homes in Edinburgh, providing a logical extension to Burdiehouse Phase 3 and completing development on the south eastern edge of Edinburgh. The site is located within a 20-minute walking distance (800m) of a large number of services including those associated with Straiton Retail Park (including a supermarket and a range of other retail stores), Frogston Primary School, South House Children & Young People's Centre and Valley Community Centre. In addition to the broad range of services accessible within 800m walking distance of the site, slightly further afield, Pentland Industrial Estate, Bilston Glen Industrial Estate, Eldin Industrial Estate and Edgefield Industrial Estate, all of which are less than a 10m bus ride to the south west of the site;

- A well designed and well-connected sustainable addition to Burdiehouse Phase 3 could be provided through the utilisation of high quality placemaking, design and delivery (as demonstrated through the Concept Masterplan. The allocation of this site for housing in the City Plan 2030 would introduce a new robust and well landscaped settlement edge to the south of the site and provide a large new area of informal open space. The allocation of this site in the City Plan 2030 would provide a logical extension to the existing development to the north and complete development on this site, which is recognised by CEC as suitable for development;
- The site can form a robust, defensible green belt boundary and has potential to introduce a substantial new area of open space to the north of the proposed development, which would link in with the green network, connect with the existing path network and provide an extension to the area of open space located in the south west corner of the Burdiehouse Phase 3 development under construction by Barratt Homes; and
- The proposed development would also improve the provision of accessible open space for both existing and new residents, as the current agricultural land would be replaced with a large new area of informal open space, comprising roughly two thirds of the overall site area.

Should the Council continue to pursue a brownfield only strategy, they risk a significant housing land shortfall within the Plan period. Changes would be required to identify further greenfield housing sites to supplement the brownfield land identified through the Plan.

Disagree with the omission of the site at Burdiehouse Road, Edinburgh, which is considered to be a sustainable and effective site, capable of delivery within the Plan period. The site is located within walking distance of a number of services including those associated with Straiton Retail Park (including a supermarket and a range of other retail stores), Frogston Primary School, South House Children & Young People's Centre and Valley Community Centre. The site is also well situated in terms of transportation access with Burdiehouse Village bus stops within 400m walking distance with a range of bus routes including an express bus to Edinburgh City Centre. The site has the potential to be served by a new rapid bus transit, tram and cycle route to enhance the existing public transport corridor and bus link. CEC has a vision for South East Edinburgh to be a sustainable mixed-use neighbourhood that combines residential, employment commercial and community uses which are easily accessible by public transport.

The site is therefore clearly accessible and in a location which offers a choice of sustainable active travel and public transport options to minimise the need for travel via unsustainable sources.

A greenfield site assessment was completed by CEC for the land east of Burdiehouse Road and there are no identified areas of flood risk within SEPAs indicative flood risk maps. It is recognised there will be some impact on the existing green infrastructure.

However, the site is currently inaccessible to the public so opportunities to improve open space, landscaping and/or green network infrastructure could facilitate increased connectivity to green / open space and help deliver green network enhancements within this area.

In this regard, it is considered this site is well placed to deliver a vibrant and sustainable new housing development which meets the 20-minute neighbourhood aspirations set out through NPF4, which are reflected in the aims of the Proposed LDP2 (Aim 2 pg. 8).

In terms of effectiveness, the site is available for development, and construction could therefore commence comfortably within the short term. Crucially, the site benefits from being the potential final phase (Phase 4) of the Burdiehouse housing project which could allow for development to be continued from the earlier (and adjacent) Burdiehouse phase to this phase without any significant constraints.

### **Site 30. Land at Burdiehouse Rd**

#### Azad Murdochy (0361)

The site at Burdiehouse can meet several of the City Plan 2030 Aims as prescribed in the Proposed Plan document namely;

#### **Aim 1**

The site can add further place making and neighbourhood complementary with the significant number of new homes recently constructed at Burdiehouse adjacent to this vacant site. When proposed as an integral part of the “20-minute walkable neighbourhood” concept, the vacant land can further enhance and improve the visual and residential amenity of the surrounding local area and provide a sense of place.

#### **Aim 2**

The vacant site is previously used, but has become overgrown through lack of development constrained by current planning policy. Therefore as a brownfield site, the proposal can respond to Aim 2 by helping to re-image the neighbourhood.

#### **Aim 4**

Any proposed new housing, such as for affordable or special needs, proposed for the vacant site, would be targeting net-zero in terms of operational emissions and use of building materials.

#### **Aim 6**

The proposal for the vacant land could be for affordable housing as outlined in the Choices consultation. It is therefore highly likely the site will contribute 100% of the housing to affordable needs, meeting and exceeding the Council’s progressive minimum 35% affordable housing target in the City Plan 2030.

#### **Aim 7**

The proposed vacant land use for affordable housing would provide a compatible land use to the surrounding residential area, and at the same time, significantly improve the visual and residential amenity through better place making rather than its current vacant condition.

#### Aim 8

There is new and recently commissioned infrastructure in the surrounding area into which the proposed development site can be connected meaning the site can match the “infrastructure first” approach aimed for by the Council.

As a proposed affordable housing site, the plans would encourage use and connectivity to this existing infrastructure by restricting car dependency or reducing car parking needs to encourage affordable living within the Plan’s Aim1 for a 20-minute walkable neighbourhood and Aim6 for a higher proportion of affordable housing provision in the location.

Object to the continued designation of the proposal site under Proposed Plan Env 21 (Protection of Biodiversity) as a Local Nature Conservation Site.

We recognise the proposal site is currently designated in the adopted Local Development Plan under Policy ENV15 (Sites of Local Importance). Historical development proposals for the vacant site were deemed to be constrained under Policy ENV18 (Open Space Protection) as a consequence. Therefore, current policy framework effectively means the planning authority views the subject site to be protected from development as it forms part of a wider Local Nature Conservation Site and is protected open space which allegedly contributes to amenity of the surrounding area.

The Proposed Plan continues to show the vacant land promoted as being designated a Local Conservation Site under Policy Env 21 Protection of Biodiversity. However, it is understood the proposed development of the vacant land can be supported by the new Policy Env 23 (Protection of Open Space Protection) where it allows development for exceptions criteria, along with Policy Hou 2 (Affordable Housing) where the proposal would provide a community benefit which would arguably over-ride the weight that could be attached to the relevance of Policy Env 21.

Policy Env 21 itself provides that development can be supported, under criteria c) which states it would make exception “For Local Nature Conservation Sites and Local Nature Reserves where adverse effects are adequately offset to maintain the integrity of the interests affected and the involvement of people.”

The shift in sentiment within the Proposed Policy Env 23, coupled with the above Proposed Plan Aims and key strategy targets for generating “20 minute walkable neighbourhoods” and to provide minimum 35% affordable housing suggests that the vacant land promoted in this submission can offer the Council a small, but significant contribution to the Proposed City Plan 2030 and aligns well with the emerging policy direction in which the Council prefers to take land use planning for the City.

The landowner warmly supports policy Env 23 wording and understands that were a proposal for affordable housing, for the vacant land promoted, then it is our view that it can be suitably demonstrated and justified that such a development would not be contrary to the new Policy. As such, the landowner supports this Policy.

Support Policy Env 21 (Protection of Biodiversity), noting that Criteria c) of the Policy provides for exceptions to any development of a Local Nature Conservation Site where the adverse effects are adequately offset. In the specific case here, this is a small and outlying corner of the wider Local Nature Conservation Site, which lies adjacent to an existing

'balancing pond' associated with nearby large-scale housing development and not in the larger identified green corridor associated with Burdiehouse Burn (which does provide the environment and circumstances for protection of a Local Nature Conservation Site). The proposal for affordable housing would on balance, not cause adverse effects on the small outlying corner of the Local Nature Conservation Site, and the proposal for affordable housing would itself offer a community benefit which City Plan 2030 is seeking to meet in its development strategy Aims to provide a significant increase in affordable housing provision in the plan period. The development can provide 100% of the needs on this site, which well exceeds the minimum 35% affordable housing contribution proposed in Proposed Plan Policy Hou 2.

It is recognised that the site is currently designated in the adopted LDP under Policy ENV15 (Sites of Local Importance). Historical development proposals for the vacant site were deemed to be constrained under Policy ENV18 (Open Space Protection) as a consequence. Therefore, current policy framework effectively means the planning authority views the subject site to be protected from development as it forms part of a wider Local Nature Conservation Site and is protected open space which allegedly contributes to amenity of the surrounding area.

The Proposals Map of the City Plan 2030 Proposed Plan continues to show the vacant land promoted as being designated a Local Conservation Site under Policy Env 21 Protection of Biodiversity. However, it is understood the proposed development of the vacant land can be supported by the new Policy Env 23 (Protection of Open Space Protection) where it allows development for exceptions criteria, along with Policy Hou 2 (Affordable Housing) where the proposal would provide a community benefit which would arguably over-ride the weight that could be attached to the relevance of Policy Env 21.

Policy Env 21 itself provides that development can be supported, under criteria c) which states it would make exception "For Local Nature Conservation Sites and Local Nature Reserves where adverse effects are adequately offset to maintain the integrity of the interests affected and the involvement of people."

Supports Proposed Plan Policy Env 23 noting that the Policy allows loss of open space where it can be demonstrated that there will be a local benefit proportionate to the scale of the development. The proposed affordable housing development of this vacant site will provide a local benefit that outweighs the protection of the small area of open space; particularly where the adjacent remaining open space proportionately provides a more cohesive and rational biodiversity area which will enhance the surroundings in all cases.

The vacant site could provide 100% affordable housing, thus exceeding the Council's ambitions, albeit from a modest sized site. Given the positive Policy Env 23 support for re-development of open space sites where the proposal can be justified against that policy's criteria, then the landowner supports Policy Hou 2, as it is recognised provision of more than 35% - such as the proposal for 100% affordable homes, would be "a development for a community purpose and would have an overriding benefit to the local community and public that outweighs the loss of open space" as read from Policy Env 23. The affordable housing would also need to meet the terms of other detailed criteria in Policy Env 23 along with other policies as relevant. However the principles within Policy Hou 2 and Policy Env 23 are satisfactory from the landowner's point of view.

It follows therefore, that subject to the proposed development of the vacant land for

affordable housing, it would meet Policy Env 23 and Policy Hou 2 along with the requirements as laid out in the City Plan 2030 Appendix D “Development Principles set out in Appendix D” to the City Plan.

Object to the continued designation of the proposal site under Proposed Plan Env 21 (Protection of Biodiversity) as a Local Nature Conservation Site.

### **Site 31. Hatton Village (Hatton Mains)**

#### Inverdunning (Hatton Mains) Ltd (0427)

Amend plan to identify new sustainable communities to include the proposed site at Hatton Village adjoining the A71 Strategic Active Travel Project. As noted by the Council in the Choices for City Plan (Main Issues Report) document, there are options for sustainable greenfield development. Whilst several of the options put forward as alternatives by the Council at that stage were not suitable in terms of scale and likely deliverability within the City Plan period, there are other options which have been put forward to the Council. The Inverdunning proposal for a new sustainable community at Hatton Village was outlined in representations to the Choices document which also provided an analysis of alternative greenfield locations at that time. There is need for the City Plan to incorporate suitable greenfield sites to allow for growth.

A summary of the case for Hatton Village and how it meets City Plan aspirations for 20 minute new neighbourhoods with strong public transport linkage is outlined in the supporting document.

Supporting Document has been prepared by Meinhardt in support of Hatton Village proposal. Key extracts are provided below.

The full representation, prepared by Pegasus Consultancy, sets out how Hatton Village, to the west of Edinburgh City Centre and accessed from the A71, will deliver a sustainable led community capable of meeting CEC housing targets and the ambition to create a more sustainable and fair city for all.

The proposed City Plan 2030 would act as CEC’s blueprint for the region over the next 10 years and seeks to meet and balance challenges around:

- sustaining environmental and climate health;
- accommodating anticipated population growth;
- affordable housing provision;
- delivery of sustainable communities;
- infrastructure provision, including community infrastructure;
- active and sustainable transport; and
- employment and economic land use needs.

Hatton Village has been designed with challenges in mind. The development adopts the 20-minute-neighbourhood approach emphasised within the proposed City Plan from the outset: Hatton Village will be a high quality, mixed use and mixed density, walkable community supported by active travel connections, public transport infrastructure, and diverse green and open spaces.

The development will incorporate a mix of dwelling types and include a significant portion of affordable housing. New residents will be provided the opportunity to easily travel to Edinburgh City Centre and other key destinations in a sustainable manner. Furthermore, Hatton Village's co-working facilities allow for a reduction in the need to travel by allowing residents a place to work, outside of their own home.

The development will also incorporate sport & recreation facilities, green space, a mobility hub and allotment garden space. A site has also been earmarked for possible health facilities and a primary school, delivered at year 5 of the anticipated 10-year development timeframe for Hatton Village. Figure 1 and Figure 2 identify the destinations accessible within 10 and 20-minutes walking and cycling distance. This is in line with the proposed CityPlans interpretation of the 20-minute-neighbourhood principle of a 20 minute round trip rather than 20 minutes each way.

Successful discussions have been held with Lothian Buses on maximising public transport uptake by future residents and enhanced bus services on the A71. The operator was supportive and very positive towards increasing the critical mass of passengers along this corridor to support their Lothian Country offering. Initial discussions have also been held with Dalmahoy Country Club around providing residents of Hatton Village and visitors to the country club with an EV shuttle service serving the airport and other West Edinburgh destinations.

A number of brownfield sites have been allocated in the proposed City Plan, particularly in West Edinburgh, which can be compared to the Hatton Village proposal.

Development of the Hatton Village site offers many traffic and transport benefits over competing sites identified within the proposed City Plan 2030. These include:

- Ability to move the critical mass and diffuse traffic impact across West Edinburgh.
- Connect to different employment, leisure and community areas, in particular, in West Lothian and in South East Edinburgh via orbital bus connections.
- Link in to and safeguard proposed Active Travel route on the A71.
- Strengthen existing public transport provision on the A71.

In addition, brownfield land with employment generating potential that benefits from proximity to the airport can be retained to respond to future needs. Residential development on the Hatton Village site would be in an area away from the airport with higher amenity, particularly with regard to setting, noise and congestion.

The Hatton Village proposals, for which a Transport Assessment was produced by AECOM in 2019, is shown to have very little impact on the A8 and Gogar Roundabout, where the transport interventions in the proposed CityPlan are focused. As such, there would be an opportunity to progress the site without such a reliance on the progression of significant offsite transport interventions.

The Hatton Village site is well suited to being progressed as a low car development, with a high sustainable travel mode share. This is exemplified by the accessibility of the site by public transport. Accessibility during the morning peak hour is for a typical 45-minute commute for both Hatton Village and for allocated brownfield sites in West Edinburgh. The central area of Edinburgh is covered within a 45-minute journey during the morning peak hour from both Hatton Village and West Edinburgh. However, from Hatton Village employment sites in West Lothian, including Livingston, are highly accessible. These areas are not accessible from the allocated West Edinburgh sites.

This connectivity and accessibility via public transport would only increase when future public transport improvements are implemented including enhanced services along the A71 delivered by Lothian Buses and subsidised by the Hatton Village developer, as well as improved orbital bus routes for Edinburgh.

The site proposed for Hatton Village is well aligned with the Transport Strategy outlined in the proposed City Plan and relevant policy documents:

- The developer's ambition is to create a sustainable community in line with vision for Edinburgh's future.
- This is supported by willingness to provide sustainable travel through potential funding of additional Lothian Bus Services following a promising initial consultation process with the operator. From these discussions it is understood there is currently a major 'viability issue' with delivering services in the A71/Ratho corridors and the proposed new village would 'plug' a gap in customer use between Edinburgh and Livingston and make existing and enhanced services significantly more viable in future.
- Alternatively or additionally, the provision of a shuttle bus connecting key locations such as Hermiston Gate Park and Ride, Dalmahoy Hotel and the airport to the site would also be considered.
- Development in this location would diffuse traffic away from Gogar Roundabout, Hermiston Gate and the A720 Edinburgh Bypass.
- Inclusion of a mobility hub, supporting bus transit, cycling, car sharing and electric vehicles, to support an increase in the proportion of trips people make by active and sustainable travel modes.
- The Homeworking Hub would support flexible working arrangements and allow less traffic to be on the road altogether, tying in with COVID-related / perceived new travel behaviours.
- The site accommodates a potential new primary school location, supporting fewer vehicle trips as pupils could walk or cycle to school.
- The A71 provides a suitable corridor for transit-oriented growth as described in Section

Furthermore, a series of uncertainties in relation to the proposed City Plan and its background supporting documents including the City Mobility Plan and accompanying Transport Assessment (prepared by Jacobs) have also been identified. These focus predominantly on uncertainties based on assumptions made to accommodate impacts on travel behaviours caused by the COVID-19 pandemic on the modelling work. In addition the reliance on brownfield sites within a planning scheme with a 10-year timeframe is also short-sighted, as discussed.

Based on the above, reconsideration to the allocation of the proposed site for Hatton Village in the City Plan 2030 is supported by transport and mobility grounds.

### **Site 32. New Liston Road, Kirkliston**

#### Robertson Residential Group (0537)

Request that site at New Liston Road, Kirkliston as a housing allocation with an indicative capacity of c.90 units.

As demonstrated through the responses to other sections of City Plan 2030, it is considered that if the Council continues to pursue a “brownfield only” strategy without consideration of identifying additional greenfield sites for release, it could inhibit the delivery of market housing and could result in a potentially significant shortfall within the Plan period.

The proposed site is deliverable / effective, with a developer - Robertson - who are fully committed to developing the site within the Plan period.

In technical terms, there are no site constraints which are insurmountable and any remaining matters in relation to technical constraints can, and will, be addressed at a later stage where Robertson recognise the need to undertake additional surveys.

In summary:

- The site can deliver on the 20-minute neighbourhood concept (advocated within draft NPF4) whilst also delivering new, high quality and energy efficient homes in Edinburgh, offering new and existing residents an increased choice of homes for those who want to live and work within the City. The site is located within a 20-minute walking distance (800m) of a large number of services including Kirkliston Primary School, Almond Group Medical Practice, Kirkliston Library, Main Street (which contains a community church, post office, pharmacy, convenience stores, veterinary practice, and a number of hot food takeaways). There are also a number of employment uses focused in the Newbridge area, which is c.600m to the south of the site. In addition to the broad range of employment accessible within 800m walking distance of the site, slightly further afield there are a range of employment options within 15m on public transport including RBS Headquarters at Gogarburn and Edinburgh Park;
- A well-designed and well-connected and sustainable southern extension to Kirkliston could be provided through the utilisation of high quality placemaking, design and delivery (as demonstrated through the Concept Masterplan). The allocation of this site for housing in the Plan would provide a robust and well-landscaped settlement edge with the M9 and the B800. The allocation of this site in the Plan would also, alongside the three proposed housing sites located to the north of Kirkliston, increase housing supply within this area;
- The site can offer a wide range of different housing types providing additional choice for people choosing to live and work in the west side of Edinburgh City;
- The site can form a robust, defensible green belt boundary (M9 motorway) and has potential to introduce a new, well landscaped proposal which retains large areas of open space which link in with the green network, wider path networks and introduces a comprehensive landscape framework to the site, as illustrated through the Concept Masterplan;
- The proposed development would also improve the provision of accessible open space for both existing and new residents, as the current agricultural land would be replaced with a variety of green spaces, which could include habitat-rich green space, green corridors providing linkages for wildlife and provision of play facilities (or contribution towards enhancing the existing play facilities located c. 20m to the north and east of the site beyond the River Almond); and

- The site is located within Kirkliston, a desirable location in a strong market area, with proven demand for family housing. It has a strong track record of housing delivery with the majority of the north part of the town being delivered over the past decade.

The site is considered to be a sustainable and effective site, capable of delivery within the Plan period. The site is located within walking distance of Kirkliston town centre. It also has good access to sustainable transport options with access to bus stops within Gateside Road and Milrig Cottages - which are both comfortable within 400m walking distance and provide regular bus services connecting the site to Edinburgh, Balerno and Livingston as well as Dunfermline, Arnothill and Queensferry.

The site does not fall within any heritage designations. The site is in close proximity to a number of services, employment and Kirkliston's town centre and presents a clear opportunity to deliver housing which conforms with the 20-minute neighbourhood principle. In addition, it will be situated within close proximity to an area designated by CEC as employment land - further strengthening the site's sustainability credentials and CEC's aspirations to create mixed use communities that can discourage trips by private car etc.

The site is therefore clearly accessible and in a location which offers a choice of sustainable active travel and public transport options to minimise the need for travel via unsustainable sources.

SEPA indicative flood maps show part of the site is at medium-high risk of flooding and therefore the design will provide suitable mitigation measures for this part of the site including avoiding housing within this area. It is recognised there will be some impact on the existing green infrastructure. However, the site is currently inaccessible to the public so opportunities to improve open space, landscaping and/or green network infrastructure can facilitate increased connectivity to green / open space and help deliver green network enhancements within this area.

In this regard, it is considered this site is well placed to deliver a vibrant and sustainable new housing development which meets the 20-minute neighbourhood aspirations set out through NPF4, and which are reflected in the aims of the Proposed LDP2 (Aim 2 pg. 8).

Following on from the responses presented to other sections of City Plan 2030, it is clear that should the Council continue to pursue a brownfield only strategy, it risks a significant housing land shortfall within the Plan period and therefore are not fulfilling their obligations with regards to the provision of an adequate supply of new homes across the CEC area. On this basis further greenfield housing sites to supplement the brownfield land identified through the Plan are required specifically New Liston Road housing allocation.

### **Site 33. Norton Park**

Taylor Wimpey and Hallam Land (0603)

The safeguard for the possible relocation of the RHC should be removed from City Plan 2030.

Within the supporting text of Place Policy 20 and on the proposals maps, the site at Norton Park has remained safeguarded for the potential relocation of the Royal Highland Centre.

Under Choice 14 (B) in the Choices for City Plan 2030 document, the Council proposed to remove the safeguard on the site to allocate it for other uses. The Council has chosen to retain the existing LDP allocation to safeguard the site despite the evidence showing that this is highly unlikely to be required, particularly within the context of the climate emergency and the shift to net zero carbon, and unnecessarily constrains a site which is capable of meet housing need and demand in a highly sustainable manner.

The reasons given in the supporting text is that it has been safeguarded in accordance with NPF3. This is also reflected in the Council's assessment of the Norton Park site which, whilst concluding it was suitable for development, stated "This land is still safeguarded for a potential relocation of the Royal Highland Showground and any allocation for development here would be on the condition of the removal of this constraint.". Since the Proposed Plan was published for consultation, the Scottish Government has published the draft NPF4 which changes the national policy direction for the site. NPF4 is seeking to remove Airport Enhancements, including the Edinburgh Airport Expansion, from its list of National Developments. As such, this would remove the national policy constraint requiring the land at Norton Park to be safeguarded for the potential relocation of the Royal Highland Centre. Therefore, it would be up to the Council to decide whether the site should continue to be safeguarded, constraining sustainable and inclusive growth in anticipation of growth in air travel, or be allocated for other more sustainable uses.

The original driver for the showground safeguard was the Edinburgh Airport Masterplan of 2006 which was prepared pursuant to the UK Government White Paper - Future of Air Transport 2003 which specified that the Aerodrome Safeguarding process should be used to protect land, outside existing airports, needed for future expansion against incompatible development in the intervening period. This drove the preparation of masterplans for all UK airports, including Edinburgh, which ultimately resulted in the identification of land for a second runway at Edinburgh Airport, its associated growth, and the need for the relocation of the showground. However, Edinburgh Airport Masterplan states 'this safeguarding is a long term precaution only, as we believe that the future growth of the airport can be sustained by the current main runway only'. What can be questioned is the need for the potential scale of the related land take to the south of the terminal complex given the substantial area of land now available to the airport within the Crosswind Ltd land holding, Crosswind Ltd being an off-shoot of Edinburgh Airport Ltd.

In the meantime, there continues to be a need to provide new housing and other uses on a significant scale to serve the city and city region. The current safeguarding of land at Norton for the possible relocation of the RHC constrains a site with clear potential for a more intensive and practical use within the city region. In 2019, The Royal Highland and Agricultural Society of Scotland (RHASS) invested £4.8m in an event facility on their current site to greatly enhance the venue in the years ahead; this could be interpreted as an apparent statement of intent by the RHASS to remain on their current site. It is, however, recognised that before the land can be released for development, the future of the RHC in its current location must be secured. Therefore, TW/HL support a strategy for growth which allows for future land use changes at both the airport, including Crosswind, and RHC, whilst maximising the strategic advantages that the land at Norton offers as a new and vibrant, inclusive and sustainable mixed use neighbourhood. Therefore, given the above, the safeguard for the possible relocation of the RHC should be removed from

City Plan 2030 to provide the opportunity to deliver a sustainable residential-led mixed-use development which would help meet housing need and demand.

TW/HL are supportive of development where it provides good quality, usable open space and private gardens to meet the needs of future residents. There are multiple studies which have shown that spending time in a private garden is linked to many health and well-being benefits. Benefits include an increase of physical exercise as well as improvements in perceived stress.

The evidence on the benefits open space/greenspace provision in developments can have on physical and mental health and well-being is also well documented. Access to greenspaces can improve sleep and reduce stress, increase happiness and reduce negative emotions. The significant health benefits greenspace can have on children's physical, mental and social development from infancy into adulthood has also been made clear in Unicef's Discussion Paper 'The Necessity of Urban Green Space for Children's Optimal Development'.

The site at Norton Park could offer a range of accommodation of varying house types which would provide private gardens and significant areas of greenspace. The site would be able to deliver a varied and dynamic green infrastructure network consisting of formal areas of public open space with opportunities for children's play and sport alongside more naturalistic landscapes which can accommodate other forms of active recreation. Urban parklands establish two of the green corridors through the site. These would consist of managed, contemporary, high quality areas of public open space support formal sport and play opportunities for all ages in an urbanised setting. There will also be a number of Neighbourhood parks which will provide future residents with local recreation opportunities and children's play facilities.

In addition to the more formal public open space, an informal linear park running along the perimeter of developed areas providing for active recreational activities such as walking, cycling, running and informal/ natural children's play as well as habitat creation is proposed.

Land at Norton was identified in Options 2 & 3 of Choices for City Plan 2030 as part of "West Edinburgh", which is described and shown on pages 50 of Choices, and where it is noted that if additional housing land is required, then development here can be supported.

Allocating the Norton Park site for residential-led mixed use development provides a key opportunity for a sustainable, accessible and inclusive development which will help meet housing need and demand. The site is located in the West Edinburgh SDA which, as set out in SDP1, is an internationally recognised area of economic importance.

In the Council's Housing Study, which was submitted as a background document to the Choices for City Plan 2030 consultation, the site at Norton Park was identified as being suitable for development. TW/HL agree with the conclusion that the site is suitable for development although, as noted in the Choices for City Plan consultation, they do not agree with the conclusions for a number of the specific assessment criteria, which should be amended.

The summary of the Council's housing assessment also notes that whilst the site is suitable for housing "This land is still safeguarded for a potential relocation of the Royal

Highland Showground and any allocation for development here would be on the condition of the removal of this constraint". As the Proposed NPF4 has removed reference to the site needing to be safeguarded for the potential relocation of the RHC and this would no longer be a national constraint. Therefore, we submit that the conclusions of the assessment should be amended to reflect this.

The development of Norton Park would support the creation of integrated mixed-use neighbourhoods that combine residential, employment, commercial and community uses with easy to access facilities and services. The site at Norton Park has good access to key public transport including frequent bus services on the A8 and the in-progress Edinburgh Gateway rail link. Above and beyond these existing strengths, the land at Norton Park provides an opportunity to become one of the most accessible locations for new development in West Edinburgh through the proposed tram extension or bus rapid transit (BRT) to Newbridge and potentially a new rail / tram interchange at Ratho Station.

The development would support the concept of '20-minute neighbourhoods' which are a key feature in the emerging NPF4. The delivery of an 'urban core' at the heart of the development would provide a range of services and facilities for residents as well as them having easy access to Edinburgh City Centre via public transport. This proximity to public transport is the key factor which should drive forward new development in Edinburgh and why the Land at Norton Park should be allocated in City Plan. That the site is not on 'brownfield land' does not mean that the site is unsustainable. There appears to be an idealistic view and misconception that all brownfield sites are inherently sustainable and greenfield sites are not. The Council must consider the sustainability credentials of sites holistically which includes infrastructure, greenspace/open space provision and accessibility.

The site is effective and deliverable in accordance with paragraph 55 of the Planning Advice Note (PAN) 2/2010: Affordable Housing and Housing Land Audit being free will be free of constraints satisfying the following seven criteria.

The Plan's housing strategy is not a viable strategy to meet housing need and demand, and there needs to be a combination of brownfield and greenfield sites identified within City Plan 2030 (i.e. an extended Option 3 of the Choices for City Plan). The Land at Norton Park would deliver a sustainable, well connected residential-led mixed use development following the principles set out in emerging national policy. The site is effective and deliverable and could contribute expeditiously to the housing land supply following allocation in City Plan.

Allocating the site at Norton Park for a residential-led mixed use development would support the concept of '20-minute neighbourhoods' which are a key feature in the emerging NPF4. To support the new residential community an urban centre including local services and shops, and a primary school would be delivered to be utilised by both new and existing residents. Furthermore, the current and proposed public transport (including either tram or BTR) would give residents easy access to Edinburgh City Centre. Infrastructure provision and proximity to public transport is the key factor which should drive forward new development in Edinburgh and why the Land at Norton Park should be allocated in City Plan. Just because the site is not on 'brownfield land' does not mean that the site is unsustainable. The Council must consider the sustainability credentials of sites holistically including in terms of their infrastructure provision and accessibility.

To help mitigate the effects of climate change, in accordance with the national and local aspirations for low carbon development, the proposed development at Norton would seek to mitigate carbon through a number of measures including:

An assessment of the embodied carbon of the buildings with the aim of reducing these where feasible.

- Reducing the energy demand and carbon emissions of new homes through fabric and energy efficiency measures,
- The use of low carbon or renewable heating systems; and
- The provision of features to create a low carbon lifestyle such as reducing the need to travel by providing the ability to walk or cycle to a wide range of services and facilities.

Norton Park is a site which is highly accessible, being well-served with existing public transport as well as being a location where the tram or BTR would serve as indicated in the City Transport Mobility Plan. If the site was allocated for housing, it would be fully supported by Policy Inf 5.

TW/HL are strongly supportive of the delivery of a tram or Bus Rapid Transit (BRT) through Norton towards Newbridge which would serve the development with even greater public transport than already exists.

Sustainable transport measures would encourage the introduction of a regular bus service operating through the Site and potentially a Bus Rapid Transit (BRT). Bus stops have been located at regular intervals along the primary and secondary roads to maximise the number of homes which could benefit from these public transport services. The Urban Core would also be close to good, high frequency public transport routes. The locations of the bus stops have ensured that 94% of the developed site is within a 400m walking distance of a bus stop.

The permeable and efficient road layout would also deliver a fully integrated street based pedestrian and cycle network. The proposed primary and secondary roads would allow for a pervasive and connected footpath and cycleway network, set back from the road behind green verges for safety and environmental quality. Shared surface raised tables interrupt the streets to mark nodal points, key junctions and crossing points. Larger lengths and areas of shared surface raised table are located around the neighbourhood parks and outside the primary school. These look to promote slow traffic speeds and give pedestrians and cyclists priority.

### **Site 34. Lennie Cottages**

#### Rosebery Estate (0618)

Remove Lennie Cottages site from Greenbelt and allocate for housing as a stand alone development. for a 0.2ha housing development with a total capacity of 20 homes and associated development principles (design and character with green belt boundary being formed).

Site required to meet needs, and to provide diversity in the land supply delivering a range and choice of housing type tenure and location, as required.

The land at Lennie Cottages has been promoted previously and considered by a Reporter (LDP-230-2 (Ref: 2480)). The Reporter in that case concluded:

“A smaller site at Lennie cottages is also proposed. However the proposed plan through table 4 only addresses the allocation of larger sites. I agree with the council that this smaller infill site would fall to be assessed as a planning application. The allocation of this site would in any event have required the proposed green belt to extend to the rear of the existing cottages. I consider that it is more appropriately retained along Craigs Road which provides a robust boundary to the HSG 19 allocation. Its inclusion as part of the larger HSG 19 site raises similar issues to that above given that optimal densities and site layout are yet to be confirmed through the master-planning process. Adding these sites at this time, given the anticipated programming of the larger site, would in my view do little if anything to contribute to any immediate shortfall in the housing land supply.”

Whilst we accept that when any site is taken out of the green belt a new boundary needs to be drawn. However, it is possible to (given the depth of the site) provide a green belt boundary within the design for the site, leaving only a short section following garden fences (which would seem logical if removing this site from the green belt). This would not be a strange or unusual boundary, any more so than the following;

Maybury (at junction with Maybury road - no defined lines)

Dalmeny (north edge follows rear fences)

Ratho (Hillview Cottages follows rear fences)

Juniper Green (Properties fronting Lanrak Rd West follows undefined line across field)

Currie (Nether Currie Crescent follows rear fences)

Balerno (Properties fronting Harlaw Road follows rear fences).

As a standalone allocation, it would not be bound by the HSG19 densities etc. and delivering in compliance with the principles in Appendix D would avoid an inappropriate proposal to fill this gap in the urban fabric.

The difficulty with the approach advocated by the Reporter and Council previously (i.e. the site should come through the Development Management system) is that, having promoted an application on a greenbelt site at Balerno for 45 units as a departure application against a proven shortfall through the development management process and had it considered at appeal (Ref: PPA-230-2177) particularly at this scale receiving the same conclusion “I find that the provision of an additional 45 houses would not make a significant enough contribution to the shortfall in the 5 year effective housing land supply” to justify granting consent.

Therefore, in a plan where the Council are allocating small sites (4 smallest allocations for 8 units each), this site should be removed from the Green Belt and allocated for housing (15-20 Units). We believe that the case for this development is stronger now than ever given the substantial change occurring in the area (which completely changes the context

of this parcel of land), and the immediately available nature of it (which requires an allocation in this plan to be enable it to be deliverable).

Through our, and others, representations elsewhere on the housing land supply we believe that there is a shortfall that requires additional immediately effective land to be allocated where there is infrastructure capacity to allow its delivery.

Whilst the report submitted in support of this proposal on this issue is from December 2011, the guidance and policy basis against which it was carried out has not changed significantly and the context within which the site lies changed dramatically and will only continue to do so. This site contributes little to the Green Belt objectives, or the overall setting of the city, providing little if any access to the countryside, and is required to meet the strategic objectives of the plan.

Kirkbank Ltd have been overseeing the installation of infrastructure by West Craigs, on behalf of the Partnership. This provides both capacity and connections for this site meaning that, should it be removed from the green belt and allocated for housing this could swiftly deliver.

Councils Housing Land Study assessment assesses the subject site (as part of a much wider area) as being;

- Within West Edinburgh SDA.
- Within 30 min walk to employment clusters, but in excess of 10 min walk to local convenience (however, neither of these assessments consider cycling or other modes of transport).
- Very well provided for in terms of public transport (bus, train and potentially tram).
- Within a SDP1 Green Network Opportunity Area, however, being a small site on the edge of the urban area, enclosed on three sides by development, with the wider Golf Course unaffected, this seems a minor loss.
- Not at risk of Flooding.

The Council's report analysing the 2011 Census, "Topic summary: Housing: dwelling type, tenure, rooms, overcrowding and under-occupancy" (February 2014) states that nearly two-thirds of the total households in the city live in flatted accommodation. This is very high, compared to other parts of Scotland. This Plan represents an opportunity to re-dress this balance, through an allocation of a variety of land for residential development.

### **Site 35. Lang Loan**

#### Miller Homes Ltd (0649)

Objects to the non-identification of land at South of Lang Loan as a Major new development area for housing led development for around 780 homes. The housing led proposal is shown on the Indicative Development Framework submitted in support of this representation.

The site was identified within the Housing Study and Environmental Report prepared in support of the Choices for City Plan 2030 Main Issues Report (MIR).

A supporting Site Assessment Review has been prepared taking into account the indicative proposal shown in Indicative Development Framework and the Development Framework Report. The Site Assessment Review demonstrates that there are no planning or environmental reasons why South of Lang Loan should not be allocated for housing in the emerging City Plan 2030.

A Site Effectiveness Statement has also been prepared in support of the allocation of the site at South of Lang Loan for a housing led development. The Site Effectiveness Statement demonstrates that South of Lang Loan is an effective site in accord with the rest of PAN 2/2010 Affordable Housing and Housing Land Audits. The proposal can be delivered within the period of the emerging City Plan 2030 without external funding.

The development of the site for a housing led development will also make a significant contribution of around 195 affordable homes based on 25% affordable housing provision.

The City Plan 2030 Proposed Local Development Plan (LDP) promotes a housing strategy based on all new housing allocations being located within the defined urban area on brownfield sites. This housing strategy is based on the Council's preferred Option (Option 1) that was set out in the Choices for City Plan 2030 Main Issues Report (MIR).

The Proposed LDP is supported by an updated Environmental Report which ...focuses on the environmental effects resulting from new policies and proposals in the Proposed Plan. The updated Environmental Report states that following the consultation period on the MIR ...all representations were considered and work on the Proposed Plan was progressed.

The Environmental Report has been updated from the Report presented at the MIR stage. The updated Environmental Report provides a summary of the changes made from the MIR to the Proposed Plan stage. This includes a summary of the 16 choices that were set out in the MIR including Choice 12: Building our new homes and infrastructure.

Choice 12 of the MIR had set out three options for the delivery of new homes within the city of Edinburgh authority area. The updated Environmental Report confirms that the Council has progressed with Option 1 of choice 12 of the MIR and states that ...the preferred approach has been taken forward... with ...no green belt release.

In dismissing all greenfield sites as viable options for residential development, the updated Environmental Report states that ...Greenfield sites are likely to have greater impacts and although some of this can be mitigated through the provision of new infrastructure the longer commuter distances means there is a potential risk of additional vehicle trips and associated impacts even with mitigation. The updated Environmental Report, therefore, only provides an assessment of all the policies and proposals set out within the Proposed LDP. The Council has not undertaken any updated assessments of greenfield sites promoted through the MIR process for housing led development. The updated Environmental Report, therefore, has failed to evidence that the Council has considered all representations made to the MIR.

A representation to the MIR process was submitted in support of a site at South of Lang Loan. The purpose of the representation was to demonstrate that the site at South of Lang Loan is suitable for residential and to support the Council's position (as set out in the MIR) that the site has housing led development potential. The representation raised several

concerns with the Council's preferred approach for housing development set out within the MIR.

The representation highlighted the limitations within the Council's Site Assessment methodology set out in the Environmental Report presented at the MIR stage. These limitations included the Council's methodology ignoring the benefits which would be delivered by the proposed development of a site. The Council's approach was only focused on the environmental and other characteristics of the site at present and not how a potential development can mitigate or avoid impacts on the site's intrinsic characteristics. The Council's approach should have been improved to assist its use as a validation tool for selecting a site for future development.

The Council's current rating system also failed to account for the beneficial impacts that the development of a site may deliver through mitigation or improvements. For example, the Council's Site Assessment did not consider a site's proposal and how it can address the requirements set by the Council in terms of its master planning principles.

The Council's rating system also did not allow a comparison to be made against other sites being considered for potential development. It was therefore unclear how the Council intended to confidently identify which sites should be brought forward for allocation within the emerging City Plan 2030.

Appendix 7 of the updated Environmental Report provides a summary of comments made on the Environmental Report presented at the MIR stage. Appendix 7 of the updated Environmental Report includes Council's response to the concerns raised as part of the MIR process.

The Council's response states that the purpose of the Environmental Report, "is to assess the significant environmental impacts of the choices and site options within the Main Issues Report." The Council's response states that this, "information will be used to inform the preparation of the Proposed Plan". The Council's response also states that the finalised Environmental Report, "will be updated to take cognisance of any further information available as part of the process of preparing the Proposed Plan".

The Council has not evidenced that it has updated the Environmental Report to take account of, "any further information available". The updated Environmental Report does not provide updated assessments of any of the greenfield sites identified at the MIR stage or take account of the information provided in support of the allocation of land at South of Lang Loan for a housing led development. The Council's updated Environmental Report simply dismisses the merits of all greenfield sites promoted as part of the MIR consultation process with no consideration of the benefits that can be delivered through the allocation of these sites.

Miller Homes has, therefore, prepared an updated Site Assessment Review for their land interest at South of Lang Loan to demonstrate the suitability of the site for a housing led development. The supporting Site Assessment Review concludes that the allocation of the site at South of Lang Loan will represent a sustainable development proposal. The assessment set out within Appendix 2 of the Site Assessment Review also demonstrates that the site scores well against the Council's rating system set out in Table 5 Methodology for Assessing Sites of the updated Environmental Report for the following reasons:

- The proposal set out in the DFR addresses all of the placemaking principles required by the Council and Scottish Ministers. The aims of the Proposed LDP including the creation of ...mixed-use and walkable communities, linked by better active travel and public transport infrastructure, green and blue networks have also been considered in the development of the proposal as shown in the Indicative Development framework (IDF).
- The proposal will deliver improved accessibility to public transport. The proposal will also provide links into the existing cycle network. This will encourage active travel both within and outwith the site.
- The development of the site will provide areas of accessible open space, greenspace and recreational provision. In total, the proposal may provide around 10 hectares of open space, of which 5.7 hectares is dedicated amenity space. The proposal will incorporate a SuDS strategy which will include the discharge of surface water at greenfield rates. This will prevent increased flooding as a result of climate change.

These findings set out in the Site Assessment Review demonstrate that South of Lang Loan can be considered as a sustainable location for future development, generating far reaching benefits for existing as well as new residents. This takes into account the benefits and the mitigation measures that will be delivered by a proposal on this site.

These measures include the safeguarding of land for a Mobility and Neighbourhood Hub which is a local and accessible place which brings together different modes alongside associated facilities, services and information to encourage more sustainable travel. This will support the Council's previous proposal (as set out in the MIR) for a proposed new Park & Ride facility along Lasswade Road within the south east corner of the site.

There are therefore no planning or environmental reasons why South of Lang Loan should not be allocated for housing in the emerging City Plan 2030. For the reasons set out above, the Council's Environmental Report should be updated to demonstrate that it has considered the merits of greenfield sites for housing development such as the site at South of Lang Loan. This should include consideration of the Site Assessment Review, Development Framework Report and Indicative Development Framework submitted by Miller Homes in support of the allocation of South of Lang Loan.

Based on the findings of these revised assessments, the site South of Lang Loan is a considered to be a sustainable development proposal. Page 6 of the Proposed LDP states that, "the future growth of our city must meet our ambitions to be a climate ready city where new homes are built to the highest emissions quality standards in resilient, connected neighbourhoods, in the right locations, with the right infrastructure."

The development of South of Lang Loan will contribute to this objective. The development of the site for a housing led development will also make a significant contribution of around 195 affordable homes based on 25% affordable housing provision.

This representation is also supported by an Education Infrastructure Note. The purpose of the Education Infrastructure Note is to provide an assessment of the education infrastructure requirements arising from the impacts from new homes from the

development of the site. The findings of the note are that education capacity is not a barrier to the allocation of further housing at this location. The impact of new pupils from the development of the site can be mitigated through the expansion of existing school infrastructure and new infrastructure on land already available to the Council.

The lack of education constraint in this area was highlighted by the Council's at the MIR stage through the identification of land in this area as suitable for greenfield housing development.

Miller Homes is willing to make a proportionate financial contribution towards the cost of providing the necessary education as a result of the direct and cumulative impact of the development in accord with Circular 3/2012.

There are no planning or environmental reasons why South of Lang Loan should not be allocated for housing in the emerging City Plan 2030.

### **Site 36. Land south of Murrayfield Hospital**

#### Spire Healthcare Ltd (0719)

Seek the allocation of under-utilised land at Murrayfield Hospital for residential development for housing for older people / specialist housing or a care home. Prepared to also support a more flexible allocation that could include market and affordable housing. It is considered that the site can support a three or four storey care home of c. 50-70 beds or a residential development of between 20-30 homes.

The site is free from any significant constraints that would threaten the effectiveness of the site or which could not be mitigated acceptably by the delivery of a high quality design solution.

Restricting development to the western part of the site and retaining the remainder as open space will preserve the setting, and views to and from, Beechwood House. It will also retain the sense of this open space continuing from the setting of Corstorphine Hill further to the east (and behind from long distance views) and preserve the core part of its existing green network value.

Development of an appropriate density can be suitably provided for on this flatter area of land at the western edge of the site, with a care home or residential block of c. 4 storeys remaining appropriate to the context of the adjacent Holiday Inn (which is circa 6-7 storeys in height), or with detached / semi-detached residential properties being provided.

The site is located within a 20-minute walking distance (800m) of Corstorphine Town Centre, which offers a full range of services and facilities. The site is also directly adjacent to strong public transport services which offer easy accessibility into the City Centre. As such, the proposed site can fully deliver on the 20-minute neighbourhood concept that is being advocated within the draft NPF4, with provision of high quality and energy efficient new homes or care home accommodation that can improve the choice of housing for older people and / or families within the City.

The proposal will enable the delivery of a well-connected and sustainable site to be developed to provide new residential development to help meet the City's needs, be it as a

care home, housing for the older people / specialist housing or a mixture of private and affordable market housing.

Spire request that that land to the south of Murrayfield Hospital is identified as within the Urban Area of Edinburgh (removed from the green belt) and be allocated for development on the western part of the site with the remainder preserved as open space.

The site is not considered to have any insurmountable physical or technical constraints to development, with a well designed development being capable to respect the landscape character of the area and preserve the setting of adjacent listed buildings. It is considered that issues highlighted within the site assessments undertaken for the background papers can be addressed and that they would not prevent development of the site for housing - be it a care home, a form of specialist housing or market housing - within the lifetime of City Plan 2030.

The site is located within a strong market location and Spire are confident that, allied with a lack of significant site constraints, the site can be delivered with an appropriate development partner, and without public funding, within five years of the adoption of City Plan 2030. As such, the site is considered to be effective and suitable to help deliver the Plan's housing land requirements on a sustainable, well connected site.

The development of this under-utilised greenfield site, which is well located in relation to the services of both Corstorphine Town Centre and the City as a whole, will help to deliver the Council's housing land requirements and reduce the City Plan 2030's over-reliance on brownfield sites. It can also assist in the much needed increased level of choice and delivery of specialist housing for older people.

The site is in a highly accessible location which has a choice of sustainable active travel and public transport options to minimise the need for travel via unsustainable sources.

### **Site 37. Land east of Winton Gardens**

#### Esk Property LLP (0726)

There are significant risks associated with the Council's proposed spatial strategy to deliver all new housing on brownfield sites. Consequently, to ensure a deliverable supply of housing land (including for care and retirement living type developments), the Council must consider the release of some land within the Green Belt. As a result, the site 'Land to the east of Winton Gardens, Edinburgh' should be removed from the Green Belt and allocated for an age restricted development comprising assisted living, retirement (over 55) accommodation and care facilities.

### **Site 38. Land at Baberton Road**

#### Stoddart Family (0749)

Object to non allocation of a 10.9ha site at Baberton for housing development. The site was included in the Main Issues Report as site a being considered for residentially-led development as part of a masterplanned area alongside the land to the north.

Edinburgh is the fastest growing city in Scotland and has a significant and beneficial economy that impacts not just east central Scotland, but throughout the nation. It is imperative that the City Plan has the ambition and purpose to sustain the continued economic growth forecast over the next decade and that this informs land use choices in the LDP.

In March 2020, Colliers lodged representations to the City of Edinburgh Council's Main Issues Report (MIR) – 'Choices for City Plan 2030' on behalf of the landowners.

Our clients were supportive of the Main Issues Report which outlined that the site could be considered suitable for development for a variety of uses, with residential use being the focus. However, it is noted that the Council have decided upon an alternative strategy which avoids the development of any greenfield land in the next plan period. This approach is not deliverable, in terms of the housing numbers required in the plan period, and ultimately will not deliver a sustainable plan.

The opening section of the City Plan 2030 provides a brief summary of the aims and objectives of the Local Development Plan. Our clients note the following comments: "Edinburgh is one of the best cities in the world in which to live, work and study."

Paragraph 1.1

"There is a demand for new homes and rising housing costs." Paragraph 1.1

"We are committed to eliminating poverty, ensuring residents have enough money to live on, have access to work, learning and training opportunities and have a good place to live. We are committed to building 20,000 affordable and low-cost homes over the next 10 years." Paragraph 1.4

"The future growth of our city must meet our ambitions to be a climate ready city where new homes are built to the highest emissions quality standards in resilient, connected neighbourhoods, in the right locations, with the right infrastructure." Paragraph 1.5

"A Local Development Plan protects places of value, sets out locations for new homes and businesses, and ensures essentials for a good quality of life are in place - such as public transport, active travel, schools, healthcare and green space." Paragraph 1.6

Our clients share the objectives that the City of Edinburgh Council have outlined in the introduction. It is widely recognised that Edinburgh is a leading place worldwide to live and work. The demand for new homes in an expanding city, with a rising population and as an attractive place to relocate, from throughout Scotland, the UK, Europe and globally is a planning challenge the City Plan requires to fully address. Ensuring a sufficient number of homes and full range of tenure provision is provided for to meet all housing requirements, and that all Edinburgh residents 'have a good place to live' (para 1.4) is the main challenge the City Plan requires to address and successfully reconcile. Developing new homes to the highest building standards in sustainable locations is a necessity for the City Plan alongside appropriate transport, educational, community and social facilities being available for all residents. The City of Edinburgh Council cannot shirk responsibility for planning for its population and providing living accommodation for those who need and want it.

### **Site 39. Edge of Edmonstone Estate**

Scottish Enterprise (0760)

Response relates to a 2.73-hectare (6.75 acre) site which is wholly owned by Scottish Enterprise (SE) and surplus to delivery of its core economic development objectives. Scottish Enterprise agrees that new development should connect to and deliver the city-wide, regional, and national green network. The allocation of the SE Edmonstone site for housing will provide the opportunity for improved green network links between the site to the emerging new community at Edmonstone, Greendykes and the BioQuarter. SE has discussed access to the site with CEC Transport and is satisfied that viable access options are achievable. By ensuring that future development on this site provides green network connections, the allocation of the SE Edmonstone Site for housing will aid in the delivery of Policy Env 6.

The purpose of the disposal of the site is to secure funds for reinvesting in economic development activity in Scotland, in line with the Scottish Government's objective of achieving inclusive and sustainable economic growth. Since the commencement of the marketing of the site in August 2019 there has been market uncertainty about the future development potential of the site, and SE considers that the inclusion of the site in the LDP will provide the necessary certainty to encourage committed offers for the site. The site has the potential to deliver up to 300 homes and in addition to the wider economic development benefits, the inclusion of the site for housing development will deliver affordable housing adjacent to BioQuarter, providing significant employment opportunities for future residents.

The proposed LDP states as a key objective: "the future growth of our city must meet our ambitions to be a climate ready city where new homes are built to the highest emissions quality standards in resilient....." (page 6). SE considers that this overarching objective of the proposed LDP as a whole, is consistent with the objectives of SE for the SE Edmonstone Site and the wider BioQuarter as a whole.

The SE Edmonstone Site is in a highly accessible location, close to existing infrastructure and amenity. High quality housing can be provided on the SE Edmonstone Site, which will complement the emerging new community at Edmonstone and Greendykes, in accordance with the aims and objectives of the proposed LDP.

The SE Edmonstone Site is located within an area which has experienced a substantial number of planning applications in recent years, predominantly for residential development, as a result of the pressure for new housing land to serve the south-east Edinburgh market. Progress with the Shawfair development located south-east of the Edmonstone Estate, in the vicinity of Danderhall, has been relatively slow since it received planning permission in 2014 and as a result, house builders have increasingly targeted the area north-west of the Wisp, including the Edmonstone Estate and land to the north in the vicinity of Greendykes.

A full schedule of planning permissions in the vicinity of the SE Edmonstone Site is included at Appendix 1 of the SE Edmonstone Supporting Document. The planning proposals can be considered under two broad headings for simplicity purposes: those relating to the Edmonstone Estate and those relating to Greendykes/the Wisp to the north-east of the Edmonstone Estate.

As a result of planning permission granted by Scottish Ministers at appeal in July 2015, the principle of residential development has been established across the Edmonstone

Estate, up to the south-eastern boundary of the SE Edmonstone Site. The extent of the planning approval is outlined in Figure 2 of the Supporting Document.

The planning permission (14/01057/PPP) makes no reference to a specific number of houses but it is accompanied by two indicative layout plans showing up to 368 houses at the site. The Ministers concluded that, given the significant shortfall in the effective five-year housing land supply in the Edinburgh area, and the fact that the development plan, at that time, was out of date, the proposal would meet key Scottish Planning Policy criteria for approving additional housing land supply that contributes to sustainable development. They considered that the cumulative environmental and infrastructure impact of the proposal would not be so significant to undermine the wider strategy of the (then) emerging Edinburgh Local Development Plan (LDP), and that any impact on local infrastructure including transport, education, affordable housing and drainage could be satisfactorily mitigated through the use of appropriate conditions. The Edinburgh Local Development Plan (LDP) was adopted after the appeal was decided, in November 2016.

The land to the south-west of the SE Edmonstone Site, still located within the Edmonstone Estate, and referred to as the "walled garden" and the "eight-acre field", has been a subject of planning permissions since 2008 when a care village was granted planning permission. More recently planning permission was granted at appeal for a residential development in March 2013 (12/01624/FUL) and amended in November 2014 (14/00578/FUL).

In essence therefore, the SE Edmonstone Site is to be bounded on its south-east and south-west boundaries by extensive housing developments. Whilst there is little progress with the implementation of the Edmonstone planning permissions, Miller Homes is nearing completion of its 54 unit 'Manor Wood' development at the 'eight acre field' site, including a new access to the site from the from Old Dalkeith Road as an alternative to the access to the site from the Wisp.

Turning to developments in the vicinity of Greendykes/the Wisp to the north-east of the SE Edmonstone Site, recent planning approvals are fewer in number, although there is no less developer interest in this area. Development within Greendykes is established by a previous allocation for residential development which was carried forward in the Edinburgh LDP.

Planning permission for an additional 72 houses was granted to Springfield Properties in May 2016 for a site on the eastern edge of the existing Greendykes allocation, adjacent to the Wisp, and the same developer submitted a proposal, in November 2016, for a more comprehensive housing development, including a primary school, on land stretching from the eastern edge of the existing Greendykes allocation south to include the SE Edmonstone Site (16/05417/PPP). Whilst submitted in principle, the indicative proposals for the site illustrated a primary school and affordable housing located within the SE Edmonstone Site, with a new access road provided to the site from the Wisp. A plan of a proposed location and layout is on Figure 4 of the Supporting Document – the application has been withdrawn.

Springfield Properties submitted a planning application in March 2019 (19/01481/FUL) for 505 residential dwellings, retail, open space and associated infrastructure as an extension of the Greendykes development into the South East Wedge Parkland. The application was refused at the Development Management Sub-Committee on 31 July 2019 for reasons

relating to conflict with Green Belt policy, loss of the Parkland and conflict with other LDP policies.

In addition to the Edmonstone Estate and Greendykes/Wisp areas of emerging residential development, the SE Edmonstone Site is, of course, bounded by the extended Bioquarter site and South-East Wedge Parkland. This is included in the adopted LDP and full details are provided in the Edinburgh Bioquarter and South-East Wedge Parkland non-statutory Supplementary Guidance (December 2013).

The adopted Edinburgh LDP reflects, to some extent, the planning history in the vicinity of the SE Edmonstone Site. The SE Edmonstone Site itself retains a Green Belt allocation in the adopted LDP where development is only supported where it meets certain criteria (Policy Env10). Development of the SE Edmonstone Site for residential purposes would not, of course, meet this policy requirement.

Unlike the position in relation to the SE Edmonstone Sites, the planning approvals at appeal for the Edmonstone Estate land to the south-east of the SE Edmonstone Site, and the planning permission for the Springfield Properties development adjacent to the Greendykes development at the Wisp, are both included as allocations in the adopted LDP (HSG40 and HSG41 respectively).

As a result of the decisions/allocations within the immediate context of the SE Edmonstone Site, continuing to define the site as part of the Green Belt fails to satisfy any of the strategic objectives for which Green Belt is defined. The urban edges of BioQuarter and HSG40 with the Parkland provide robust, defensible boundaries to the Green Belt over the long term, and the SE Edmonstone Site's northern boundary with the Parkland would logically continue this boundary, thereby maintaining the role of the Green Belt in this location. The loss of the SE Edmonstone Site from the Green Belt in this location would have no detrimental impact on the strategic role of the Green Belt in south-east Edinburgh.

It is clear from the review of recent planning history and up-to-date planning policy set out in the previous sections that there is an inconsistency between the allocation of the SE Edmonstone Site as Green Belt, where residential development is to be resisted, whilst surrounded on all sides by allocations or planning permissions for major employment or residential development. The only exception to this is to the north-east where the clear policy support for the retention of the South-East Wedge Parkland remains. SE has committed significant investment, alongside the Edinburgh and Lothians Greenspace Trust and CEC Parks and Leisure Department, in the development of Little France Park with green infrastructure which has important community benefits and delivers accessible active travel routes and creates a robust Green Belt edge (see Figure 7 of the Supporting Document).

Specifically in response to Choice 12C of Choices for City Plan 2030, SE would contend that the release of the SE Edmonstone Site would be consistent with the urban land release despite the Green Belt allocation, given the illogical nature of its continued inclusion within the Green Belt.

In conclusion, allocating the SE Edmonstone Site for housing as part of the emerging City Plan 2030, will aid in meeting the aims and objectives of Choices 9-12. Removing the

existing site allocation will have no discernible impact on the strategic role of the Green Belt and a housing allocation will logically continue the Little France Park boundary.

This site can contribute to the market and affordable housing targets on a priority strategic sustainable transport corridor and where disposal receipts will support further economic development investment. It is respectfully requested that the Green Belt allocation of the SE Edmonstone Site is removed as part of the City Plan 2030.

In relation to the SE Edmonstone Site, the Special Landscape Area designation extends significantly beyond the boundaries of the SE Edmonstone Site and include the walled garden and eight-acre field sites for which planning permission has been granted on a number of occasions as referred to throughout the SE Edmonstone Supporting Document. It is therefore considered that housing development at the SE Edmonstone site should be acceptable in relation to the Special Landscape Area.

SE agrees that development impacting Local Nature Conservation Sites should be permitted where adverse effects are adequately offset to maintain the integrity of the interests affected and the involvement of people. In relation to the SE Edmonstone Site, this approach has been considered acceptable by CEC and the DPEA by granting extensive residential development at adopted LDP legacy allocated housing site HSG 40 (Edmonstone). As such residential development at the SE Edmonstone Site should be acceptable subject to appropriate mitigation measures.

The site is located within Strategic Sustainable Transport Corridor 3 where transit-led solutions can help reduce carbon, promote equity, support healthier lifestyles and deliver sustainable economic growth. Given its proximity to existing and emerging residential and other development, the site is well suited for high density housing development and should be allocated as such.

Development should be directed to where there is existing infrastructure capacity, including education, healthcare, and sustainable transport links. In relation to the SE Edmonstone Site, this is located within Strategic Sustainable Transport Corridor 3 where transit-led solutions can help reduce carbon, promote equity, support healthier lifestyles and deliver sustainable economic growth. Increasing the residential density in this area, will also aid in delivering potential new infrastructure within the plan period. The allocation of this site for housing is therefore consistent with the aims of Policy Inf 1.

The proposed Plan has a clear objective of providing high quality housing in sustainable locations, protecting against the loss of homes to other uses, delivering affordable homes and the overall increased provision of housing in the city. The SE Edmonstone Site is in a highly accessible location, close to existing infrastructure and amenity. High quality housing can be provided on the SE Edmonstone Site, which will complement the emerging new community at Edmonstone and Greendykes, in accordance with the aims and objectives of the proposed LDP.

#### Planning Contexts

In addition to the Edmonstone Estate and Greendykes/Wisp areas of emerging residential development, the SE Edmonstone Site is, of course, bounded by the extended BioQuarter site and South-East Wedge Parkland. This is included in the adopted and proposed LDP, and full details are provided in the Edinburgh BioQuarter and South-East Wedge Parkland non-statutory Supplementary Guidance (December 2013).

The Guidance includes a series of Development Principles for the BioQuarter site referring to higher density development of up to 295,000 sqm of gross floor space of which 245,000 sqm would be in the life sciences sector together with 50,000 sqm of ancillary floor space which could include retail, professional services, food and drink, general business, hotel, housing, and student accommodation (Principles 2b, c and d of SG).

The BioQuarter partners are currently seeking a joint venture partner to assist in the realisation of the vision for the site, which has been allocated in the Proposed City Plan for health innovation-led mixed use development, including around 2,500 homes which will extend to the north-west boundary of the subject site.

The SE Edmonstone Site is also located within a Special Landscape Area and Local Nature Conservation Site and Policies Env11 and Env 15 respectively are relevant. These seek to resist development which would have a significant adverse impact on the special character or qualities of a Special Landscape Area, and on Local Nature Conservation Sites. Both of these designations extend significantly beyond the boundaries of the SE Edmonstone Site and include the walled garden and eight-acre field sites for which planning permission has been granted on a number of occasions (including by Scottish Ministers), as referred to above.

Unlike the position in relation to the SE Edmonstone Sites, the planning approvals at appeal for the Edmonstone Estate land to the south-east of the SE Edmonstone Site, and the planning permission for the Springfield Properties development adjacent to the Greendykes development at the Wisp, are both included as allocations in the adopted LDP (HSG40 and HSG41 respectively).

The adopted LDP is to be replaced by City Plan 2030 and the main issues report, 'Choices 2030', was published for consultation in early 2020. SE submitted a representation to CEC during the consultation period relating to the SE Edmonstone Site; however, this does not appear to have been incorporated into the proposed LDP. As such, many of the comments below reiterate those made in April 2020.

Following consideration of the planning history of the surrounding area, the current policy position, and the emerging City Plan 2030, the proposed residential allocation of the SE Edmonstone Site is acceptable for the following reasons:

- The proposed LDP has demonstrated the clear objective of CEC to provide more high-quality housing to meet demand in Edinburgh and address the issue of affordability. The SE Edmonstone Site is a logical housing opportunity given the planning history associated with the surrounding sites, as outlined above. There are no constraints applicable to the SE Edmonstone Site which are any less insurmountable than those applicable to the surrounding sites, all of which have been allocated for development. A geo-environmental desk study has confirmed that there are no constraints to development of the site in terms of ground conditions. SE has discussed access to the site with CEC Transport and is satisfied that viable access options are achievable.

The proposed LDP promotes CEC's preference for housing delivery in the urban area. The proposed LDP spatial strategy directs growth to brownfield sites within the urban area or in strategic expansion areas where there is good public transport, including tram. The SE Edmonstone Site is excluded from this consideration, despite SE being a public sector partner, and the previous requests by SE to have the site considered for inclusion as a housing allocation in the LDP (see submission of 24 October 2019 and 27 April 2020).

It is entirely appropriate, given the local sustainable transport links, existing infrastructure, and proximity to existing and emerging residential and other development, to conclude that the site should be included as an urban housing site allocation, consistent with the aims and objectives of the proposed LDP. The site is located within a Strategic Sustainable Transport Corridor where transit-led solutions can help reduce carbon, promote equity, support healthier lifestyles, and deliver sustainable economic growth.

As a result of the decisions/allocations within the immediate context of the SE Edmonstone Site, continuing to define the site as part of the Green Belt fails to satisfy any of the strategic objectives for which Green Belt is defined. Scottish Planning Policy (SPP) requires LDPs to establish “clearly identifiable visual boundary markers based on landscape features such as rivers, tree belts, railways or main roads”. The urban edges of BioQuarter and HSG40 with the Parkland provide robust, defensible boundaries to the Green Belt over the long term, and the SE Edmonstone Site’s northern boundary with the Parkland would logically continue this boundary, thereby maintaining the role of the Green Belt in this location. The loss of the SE Edmonstone Site from the Green Belt in this location would have no detrimental impact on the strategic role of the Green Belt in south-east Edinburgh.

It is clear from the review of recent planning history and up-to-date planning policy set out in the previous sections that there is an inconsistency between the allocation of the SE Edmonstone Site as Green Belt, where residential development is to be resisted, whilst surrounded on all sides by allocations or planning permissions for major employment or residential development. The only exception to this is to the north-east where the clear policy support for the retention of the South-East Wedge Parkland remains. SE has committed significant investment, alongside the Edinburgh and Lothians Greenspace Trust and CEC Parks and Leisure Department, in the development of Little France Park with green infrastructure which has important community benefits and delivers accessible active travel routes and creates a robust Green Belt edge (see Figure 7 above).

SE would contend that the release of the SE Edmonstone Site would be consistent with the urban land release despite the Green Belt allocation, given the illogical nature of its continued inclusion within the Green Belt.

#### **Site 40. Lanark Road West**

John Brady (0353)

Objection to the proposed allocation of land lying to the north of Lanark Road West, Balerno as part of the Green Belt. Objection specifically requests that the subject site and adjoining lands should be removed from the Green Belt with the subject site also being designated for housing purposes with an indicative capacity for c. 6 units. Representations, to this effect were also made to the Choices for City Plan 2030.

The subject site which measures 1.04 hectares is located at 572 Lanark Road West on the western side of Balerno approximately 12.8 km to the south west of Edinburgh City Centre. The site, which is relatively narrow and sloping has a general east/west orientation with a most favourable aspect. It is located between a dis-used quarry to the north and the A70 which runs along its southern and eastern boundaries. The site is accessed from a single point at its north eastern corner which leads to a single storey garage/shed. Parts of

the site have been the subject of engineering works given it a brownfield and partially unkempt appearance. A group of broadleaf trees marks the western edge of the site and are a prominent feature when viewed from the A70. A stone wall bounds the site to the north of Lanark Road West (A70).

The northern boundary of the site is formed predominantly by vertically boarded timber fencing beyond which is an abrupt edge overlooking the former quarry referred to above and a substantial dwelling of modern design (579 Lanark Road West). Beyond the western boundary and part of the southern boundary on the opposite side of Lanark Road West (A70) there exists a significant number of individually designed dwellings in generously sized plots giving this area an urban appearance albeit of low density. Part of the southern boundary (eastern part) beyond Lanark Road West comprises a woodland area. To the east of the site, again beyond the A70 is the Ravelrig Hill Housing Development. Ravelrig Hill can be accessed from the application site via an existing pedestrian path on the opposite side of Lanark Road West (A70) thus linking it with the established footpath network serving the settlement.

The site forms and has the characteristics of an 'infill site' sandwiched between development to the north, south, east and west and within the recognised limits of the urban area as defined by both the Balerno signage and 30 mph speed limit signs which can be found erected, some 125 metres to the west.

The indicative layout submitted separately outlines how the site could be developed for six bespoke contemporary and exemplary designed dwelling houses incorporating a mixture of single storey (with accommodation in roof spaces) and split level properties. All existing trees of significance would be retained and additional landscaping proposed to further integrate the dwellings within the site and enhance the character and appearance of both it and the wider area. It should be noted that the layout below formed the basis for a favourable recommendation towards the granting of planning permission in principle by the Council's Planning Department under the terms of Planning Application Reference Number 20/00302/PPP.

The zoning request is being promoted on the fundamental premise that the subject site and other existing residential development to the north, west and south should be considered as forming part of the Balerno Settlement envelope rather than the Green Belt as shown in the diagram submitted separately. Viewed within the context of the surrounding built development; speed limit zones; and the signage on the public road announcing the arrival of Balerno to those travelling from the west, the site exhibits the characteristics of an infill/gap site within an urban area which is appropriate for development rather than a site within the Green Belt which is inappropriate for development. In that regard the following points are also of significance:

- the site, in its present condition detracts from rather than contributes to the character of Balerno;
- the development of the site will not contribute to or lead to the coalescence of neighbouring towns;
- the site is located in a sustainable and popular location within the Edinburgh Housing Market;

- the redevelopment of the site will support the regeneration of the area within which it is located and make a positive contribution to the character, appearance and landscape setting for the settlement; and
- the site is not accessible to the general public and as such does not provide for access to open space and/or the countryside.

### **Site 41, Land south of Gilmerton Station Road**

#### MacTaggart and Mickel Homes (312)

Object and request the removal the site south of Gilmerton Station Road from the green belt and allocate for residential development.

In the adopted City of Edinburgh Council Local Development Plan 2016, M&M secured the greenfield, green belt housing land release at Gilmerton Station Road (HSG 24). At present this site is being developed for housing with Miller Homes, Barratt Homes and Persimmon Homes all currently developing their phases at this site. It will also provide 25% affordable housing, which is also being built out at present. Land is also set aside for a new primary school as part of this allocation.

The site under the control of M&M is the greenfield undeveloped agricultural land which extends to approximately 30Ha (75 acres) south of Gilmerton Station Road. There is also an industrial and scrapyards area (Bernard Hunter) that secured planning permission (19/02122/PPP) in November 2019 from CEC for Gilmerton Gateway, a retail, professional services, food/drink, business, industrial, hotel and leisure mixed use proposal.

The landholding under the control of M&M south of Gilmerton Station Road is available now, in the short term for the provision of a landscape-led and locally appropriate residential development within the city boundary of Edinburgh.

The site currently comprises arable farmland and sits within the statutory Green Belt. There are overhead power lines that traverse the site.

Mactaggart and Mickel would undertake a landscape led masterplan for the future development of this landholding, upon allocation. This work would provide a comprehensive appraisal of the site, its currently changing context and develop an initial conceptual framework, outlining the development footprint of the development and the means via which this can be provided to follow sound placemaking principles.

The site's position within the existing city boundary and based on M&M's experience locally at Gilmerton Station Road, it is considered that the allocation of the landholding to the south of Gilmerton Station Road, will allow development to come forward from year 3 from the adoption of the City Plan onwards. This site can deliver new residential homes from years 3-5 inclusive and from years 5-10 of the City Plan 2030. This will usefully supplement the housing land provision within the City, with a deliverable and effective site coming forward within the plan period.

It is acknowledged that a Protection of Biodiversity and the Local Nature Conservation Site that runs along the northern boundary and low density development can mutually co-exist. This can be worked into the Masterplan for the landholding at the outset and can form an attribute for the site.

## **Site 42. East Foxhall**

### Landowner of East Foxhall (0544)

Object to non allocation of site at East Foxhall for housing development. It is requested that this change is made, with an indicative capacity of 100 homes on the site.

The development of the Foxhall site for housing would meet with the 20-minute neighbourhood approach. The site is located a 600m walk from the allocated centre of Kirkliston. The centre comprises a number of local shops and services, alongside regular bus links to Edinburgh and West Lothian. There is also an extensive pathway network surrounding the site, which includes safe routes for pedestrians to reach the local centre and the services it provides. This connectivity will be improved by the pathway improvements and pathway creation required by the adjacent East Foxhall development site.

In order to assess the appropriateness of allocating a development site, the Council previously undertook within their Supporting Housing Study for Choices, an assessment of a variety of sites. This was completed without the benefit of site specific supporting technical assessments, a number of which were completed to support the representations made to Choices.

In regards to the sites taken forward as proposed allocations within City Plan, these have also been subject to an environmental assessment, however as the site of East Foxhall has not been identified as a proposed housing site no environmental assessment has been completed by the Council.

To help demonstrate the appropriateness of the site of East Foxhall, this assessment has been undertaken and is included in the attached submission, in a similar format to the assessment undertaken by the Council for proposed housing allocations.

As the assessment demonstrates, there is appropriate mitigation which can be delivered through appropriate wording for the allocation of the site as a housing site, or through the development management process. This would ensure that there would be no significant negative environmental effect on any of the criteria identified by the Councils Environmental Assessment.

In the Plan, the East Foxhall site is identified as green belt land out with the settlement boundary. The runway safeguard area crosses the south east corner of the site, however this area is not proposed to be developed.

We request that the green belt allocation should be removed from the East Foxhall site and for it to be included within the settlement boundary of Kirkliston. The whole site should then be allocated for residential development. The removal of the site from the green belt is justified if the site is to be allocated for residential development, as discussed further below.

During the examination of the current LDP, the adjacent Factory Field site was found by the Reporter to be a suitable development site and that it should be removed from the

green belt, included within the settlement boundary, but not fully allocated for residential development as it was considered this could be dealt with through the development management process.

Regarding the allocation of Factory Field as green belt, the reporter tested the site against Policy 12 of SESplan SDP, overall finding that the objectives of green belt would not be significantly undermined by housing development at Factory Field, nor would it affect the landscape setting of the city. We have therefore assessed the East Foxhall site against the criteria set out within Policy 12 of SESplan SDP, which is copied below for reference:

Taking each criteria in turn:

The purpose of criteria a) is to prevent coalescence between existing settlements. The development of the East Foxhall site would not significantly increase the settlement boundary to any other nearby settlement and therefore removing the site from the green belt and allocating it within the settlement boundary of Kirkliston is considered to comply with this criteria.

CEC have already recognised that East Foxhall could form a residential development site and therefore it is considered to be an appropriate location for development. As such, this criterion can be complied with.

The East Foxhall site is well contained visually, surrounded by high hedges and tree lined field boundaries. It forms part of the study area which is close to the centre of Kirkliston and as such would form a well-integrated and logical urban extension of the town. In accordance with the assessment the East Foxhall site is located to the northern part of the assessment area away from the setting of Foxhall House and gardens which will allow the setting to be protected. This therefore demonstrates compliance with criterion c).

At present the site is utilised as agricultural land and therefore has no easy access for the public. These proposals would introduce significant open space as part of the development, accessible to all. In addition, the site is well located to existing active travel networks, such as the National Cycle network, providing potential future residents good access to open space and the countryside of surrounding areas, complying with criteria d) of the policy.

Additionally, the Council have previously completed a Landscape and Visual Assessment of greenfield sites to support Choices, with area 29 (Conifox) under sector 5 covering the East Foxhall Site. The site is identified on this map as part of the submitted document.

East Foxhall has been assessed as lying within the Local Character Area 10 – Almond Farmland, where site 29 (Conifox) is assessed as having 'some scope to accommodate housing providing that the setting to Foxhall House, particularly its parkland and walled garden is protected'. Additionally, the assessment found that the site is 'close to the core of Kirkliston and is visually contained by woodland and high hedges'. This position is supported by our own technical assessments, which demonstrates the site is generally well contained by mature planting.

For these reasons, the site should be removed from the greenbelt and allocated as a housing site with an indicative capacity of 100 units.

#### **Site 43. Riccarton Village**

### Miller Homes (0256)

Green Belt should be removed at the site of Riccarton Village and it should be identified as a 'major new development site' for housing led development.

Riccarton Village can be masterplanned to support the principles of the 20-minute neighbourhood and is not limited in doing so by the existing urban fabric of the city. Instead, it can be planned to provide for the needs of new residents and existing communities alike.

Also, the future expansion and development proposed at Riccarton University Campus and Business Park could increase car usage without the interventions proposed at Riccarton Village i.e. the proposed new transport hub at Curriehill Station with electric bike hire, bus terminus and a 400-space park and ride with electric charging spaces. This intervention can help ensure that Riccarton University Campus and Business Park is developed in a sustainable and accessible way. Riccarton Village is an obvious choice for an allocation in the City Plan.

There remains a significant shortfall in the scale of new housing allocations required to meet the housing land requirements in full.

Section 14 of the Environmental Assessment (Scotland) Act 2005 requires the preparation of an environmental report that identifies the likely significant effects on the environment of implementing the plan or programme and reasonable alternatives to the plan or programme.

The Environmental Report dated January 2020, which was undertaken at the time of the Choices for City Plan 2030, considered choices for “building new homes and infrastructure”. The Council’s preferred choice was to have all new development delivered by the Council and its partners within the urban area to minimise Green Belt release. Two reasonable alternatives were also considered; the first was for market led Green Belt release and the second was for a blended approach where the Council delivered more land in the urban area and released some land from the Green Belt.

However, as highlighted in our response to the Choice for City Plan 2030, the Council failed to properly consider the reasonable alternatives because they did not take all relevant greenfield sites into consideration, including this site despite the Council being aware that it was being promoted for development and which has significant potential to deliver a new 20-minute neighbourhood. No rationale was provided within the Environmental Report as to why some greenfield sites were considered, and why some greenfield sites were not. As such, the Council preferred choice has not been properly tested against the reasonable alternatives.

Indeed, our own environmental assessment of this site demonstrated that it scored positively in creating opportunities for active travel and accessibility to public transport given the proximity to Curriehill Station and transport hub proposed within the development, offers opportunities for social interaction with direct connections to the adjacent university and the proposed village centre, can create defensible Green Belt boundaries, would create a logical extension to the existing settlement and that ultimately it was an obvious allocation in the City Plan.

The Environmental Report dated September 2021 is included in the evidence base of the City Plan. It identifies that the Council's preferred approach for building new homes and infrastructure is within the urban area, with no Green Belt release proposed. It goes on to say that since a decision has been taken not to include any new greenfield sites within the City Plan there is no assessment of these sites in the Environmental Report. However, the Council cannot conclude, as they have done, that their preferred approach is the most appropriate strategy for the City Plan since they have still failed to adequately consider the reasonable alternatives of market led Green Belt release and a blended approach. To rectify this procedural issue, the reasonable alternatives should be reconsidered which should include an assessment of all reasonable greenfield sites that have been put forward for development. Riccarton Village is a reasonable alternative on the basis that the site is available, eminently deliverable, now promoted by a major housebuilder, located adjacent to a major employment and educational hub of the city, adjacent to an existing train station, within an identified rapid transit corridor, and of a scale that significant levels of affordable housing, market housing, and a range of employment and community services would be provided generating significant economic, social and environmental benefits.

To aid this assessment the Council should refer to the earlier representations to the Choice for City Plan 2030 which provides an environmental assessment of this site. The Healthcare Appraisal, dated September 2021, identified capacity issues with healthcare provision arising from the proposals in the City Plan. Riccarton Village is of a scale where it would incorporate health facilities including medical practice, dental practice, and pharmacy in the village centre which will scaled appropriated to serve existing and future residents within the area and therefore not place any undue burden on existing facilities.

It is also noted that the SFRA does not exclude sites from the City Plan just because some parts of the site are at risk of flooding, and instead simply recommends that development is avoided in these areas and that flood risk assessments are provided for these sites. Indeed, whilst some parts of Riccarton Village are at risk from flooding, Flood risk is not a reason to exclude Riccarton Village as a housing proposal in the City Plan. This was demonstrated in the Flood Risk Technical Note that was provided with the representations submitted to the Choices for City Plan 2030, which concluded that the floodplain within the site is suitable for sports pitches, recreation areas and some types of parking (not directly associated with residential development). This resulted in the concept of Riccarton Parklands a substantial and significant greenspace network that is proposed within these parts of the site.

The Flood Risk Technical Note also identified the opportunities to increase flood storage along the Murray Burn flood corridor to reduce the risk of flooding downstream of the site and within Edinburgh. This would include the lowering of land adjacent to the Murray Burn upstream of the Curriehill Station to store flood waters.

The Council's Housing Study (January 2020) also identifies that the site can be developed while avoiding flood risk areas to mitigate major flood risk, and that opportunity exists to incorporate these areas within development as part of the strategic green network. All these comments have been taken onboard and have helped shaped the proposals for Riccarton Parklands. Furthermore, any future planning application(s) would be supported by appropriate surface water management plans demonstrating the proposed biodiverse sustainable drainage system proposed.

## **Site 44. Alnwickhill Road**

### Juniper Residential Ltd (0786)

The objection specifically requests that the site at Alnwickhill Road should be removed from the Green Belt and Special Landscape Area, as proposed, and be designated as a housing site.

The site is 3.35 hectares (8.28 acres) of unused agricultural land. The site benefits from its close proximity and ease of accessibility to a range of facilities and services conducive to a high standard of sustainable retirement living including regular bus services on Liberton Brae and Liberton Gardens to the east providing access to all parts of the City; to shopping facilities and post office on Liberton Gardens; and to a range of recreational pursuits including golf, bowling, walking and cycling opportunities as depicted in the diagram accompanying.

The objection specifically requests that the subject site should be removed from the Green Belt and Special Landscape Area as proposed in the Plan and be designated as a housing site suitable for the development of retirement properties, a minimum 35% of which will be developed in affordable tenures. A Concept Plan has been prepared outlining the possible distribution of various uses within the site, which if allocated, could be formulated into a development brief. Key points to note are as follows:

- Area to west of Alnwickhill Road to be developed for residential properties (retirement housing) as a natural infilling of the site and benefitting from the strong landscaped defensible boundary to the south.
- The establishment of an area of public open space stretching from Liberton House to Liberton Drive. The precise nature and design of that open space area would be subject to future public consultation but would have a strong community emphasis.
- The establishment of a 'community facility' within the site which would significantly improve the quality and diversity of the area and contribute to the 20 minute neighbourhood concept advocated at various points throughout the proposed plan.

The site at Liberton Drive/Alnwickhill Road is, as noted previously, located within the Edinburgh Green Belt. The site is also located within a Special Landscape Area (Braids, Liberton and Mortonhall).

The inner boundary of the Green Belt, as presently defined by post and wire fences along the frontage of the site next to Alnwickhill Road and Liberton Drive, is visually weak in character and does not, in our opinion, provide a strong defensible boundary to the city nor enhance, in any way, its visual setting. The weakness referred to is exacerbated by the presence and No. 68 Alnwickhill Road which protrudes into the site with a strong visual presence. The outer boundaries of the subject site, noting in particular the strong strategic landscaping belt to the south combined with the buildings and trees/landscaping existing along the north western boundaries result in a defensible enclosure and an entirely natural location for development when viewed from both Alnwickhill Road and Liberton Drive. The redundant set aside agricultural land detracts further from the rural character of the area and results in a space offering little active or visual benefit to the area. The allocation of the site for a housing development would, in contrast, provide an opportunity to create a

meaningful and purposeful area of open space/community facility which would bring wider benefits to the entire area contributing, in the process, to the concept of the 20 minute neighbourhood.

Planning Advice Note 2/1010 on 'Affordable Housing and Housing Land Audits' was published by the Scottish Government in August 2010. According to Paragraph 55 of the circular a site needs to be free from the following types of constraints to be considered effective for housing development:

Ownership – the subject site being promoted for development is controlled by our client Cruden Homes/Juniper Residential - a nationally recognised house builder.

Physical – There are no constraints of a physical nature that would preclude the economic development of the site for residential purposes of the nature proposed.

Contamination – The site is redundant unkempt agricultural land and as such it has not been rendered unsuitable for the provision of marketable housing from the perspective of contamination.

Deficit Funding – The proposed development is economically viable without the assistance of any public funding.

Marketability – Our client's analysis of market conditions suggests that the proposed development is highly marketable due to the acute shortage of opportunities for housing and particularly retirement housing in Edinburgh.

Infrastructure - All infrastructure required to enable the proposed development to proceed is either in place or can be provided by our client.

Land use – It has been demonstrated within this statement that housing development is an entirely appropriate use for the subject site.

In view of the considerations outlined in this paragraph there are clearly no constraints on the subject site which would prevent its immediate development for housing.

The subject site has been promoted for allocation on a number of occasions previously. Whilst all previous attempts have been unsuccessful it is important to note and to give due weight to the fact that the site has been favourably considered by Scottish Government Reporters for release in earlier local plan reviews albeit at a time when such decisions/recommendations were not binding on the Council. Key points to note:

- The Reporter at the 2003 South East Edinburgh Local Plan (SEELP) Inquiry found and recommended that the site should be released from the Green Belt concluding that the existing green belt – the fence-line along Liberton Drive and Alnwickhill Road boundary was not particularly strong. In contrast, he concluded that the boundaries to the south and west, including the tree planting and Liberton House could form strong and defensible green belt boundaries.
- A similar view about the south and west boundaries of the site was also taken by the Reporter at the 1991 SEELP Inquiry. At that time there was a stone wall along the roadside edge of the site. It was concluded that this provided a good green belt

boundary, but it was also considered that tree planting to the west and south would satisfactorily contain the development and create defensible new green belt boundaries.

- The Edinburgh Green Belt Boundary Study of 1999 also identified the existing green belt boundary around the site as being weak. The report advised that where existing boundaries were found to be weak they should either be strengthened, for example through planting or be relocated to a new defensible line by extending or cutting back to a new defensible line.
- With regard to 'landscape setting', the Reporter at the 2003 Inquiry concluded that the allocation of this site would not affect the continuous green belt around the city. Whilst he concluded that development on the site would be visible from various locations on the higher ground to the south of the site, such as the Braid Hills and Stanedyehead it would be substantially screened by the woodland along the southern and western boundaries of the site. He further concluded that the greatest impact would be on views from Liberton Drive and Alnwickhill Road, where houses on the site would be visible in the foreground and most of the view to the attractive countryside beyond. However he considered that view to be, very much restricted by the woodland along the southern boundary of the site and would become more restricted over time as these trees grow.
- The Reporter at the 2003 Inquiry also concluded that the tree belt and the trees in the grounds of Liberton House would provide a backdrop to enable the landscape to absorb low rise family housing, that such development would not significantly adversely affect long range views and could, with appropriate additional landscaping, further strengthen the southern boundary of the site while at the same time having only minimal impact on the landscape setting of this part of the city.
- The Reporter to the 2003 SEELP Inquiry concluded that the area of the green belt to the west of Liberton House to be essentially urban in character and clearly not in keeping with the rest of the AGLV (Area of Great Landscape Value). He pointed out that Circular 2/1962 makes clear that an area proposed for an AGLV has to be considered in context and highlighted that the Liberton Drive site is more or less cut off from the remainder of the AGLV and cannot be said to form an integral part of a rugged hill landscape, as described in the EGBBS (Edinburgh Green Belt Boundary Study). He concluded that the site should be removed from the AGLV and that the boundaries of the AGLV should be redrawn to exclude the site adjacent commercial areas.
- The Council itself proposed housing development on the site in the Finalised Draft SEELP 1986. The Local Plan included a Development Brief for the proposed housing development, which included a brief description and indicative layout. The text specifically referred to landscape measures to be carried out along the western boundary to contain the development and "safeguard the setting of Liberton House."

The urban structure of the site, as presently existing, when viewed in conjunction with existing development to the west of the site, is ill defined. That is a view that has clearly been shared by a number of Reporters and also Planning Officials in the past.

Appropriately designed development including the provision of a strong edge along Liberton Drive, would simplify the landscape character of the area and would remove some of the visual confusion currently experienced when driving along Liberton Drive. Established views to the hills are already partly lost as a result of the landscape change that has occurred over the last 20-30 years, particularly the maturing of the woodland belt and the trees in the grounds of Liberton House, and will eventually be lost even without the development. Appropriately designed development on the site, would, in our opinion, as it has done so in the opinion of others before, provide a stronger urban edge and a

clearer more understandable transition from the urban to rural landscape. The site, in its unused and untidy condition, is not considered to be a locally important landscape feature worthy of protection and does not justify its inclusion within the Braids, Liberton and Mortonhall Special Landscape Area.

The following considerations add support for the identification/zoning of the lands for retirement housing purposes in the emerging local development plan:

- The population of Edinburgh is ageing with substantial increases in the retirement and over 75 age groups forecast. The emerging local development plan must address the demographic imperative of an ageing population and an existing housing stock that is ill equipped to deal with its needs.
- There are a number of benefits associated with the provision of housing for the elderly on the site.
- It will contribute to housing supply in the local housing market by providing desirable downsizing options for elderly residents thus addressing issues associated with under occupation and the freeing up of family homes for younger people in need of them.
- It will provide the area with which the site is located with a further beneficial community facility and in the process contribute to the concept of the 20 minute neighbourhood.
- Occupiers of sheltered housing developments report huge health benefits: including improvements to their quality of life generally; fewer visits to health professionals; and quicker recovery times following hospital stays.
- A higher quality of life for residents and their families.
- Greater security and convenience, and reduced feelings of isolation and vulnerability.
- Environmentally better than traditional housing, with reduced energy use, including less travel.
- Sustains local shopping and other services, helping to sustain local communities.
- Most residents have family and friends in the locality. Older people form an important part of the core of most communities with the Liberton Area being no exception.
- Whilst adapting housing or new build (mainstream) to Housing for Varying Needs provides specialized accommodation - this does not address the issue of isolation and loneliness which contribute greatly to adverse health in older people. Retirement living is managed and provides communal facilities that encourage a sense of community within the development.
- The site at Liberton Drive is suitably located for the provision of elderly housing in that it benefits from easy access to a range of facilities and services including public transport provision with bus routes existing along Liberton Brae and Liberton Gardens to the east.
- The development of the site for retirement accommodation places no burden whatsoever on the Council's education infrastructure.
- Given the extensive landscaping belt existing along the southern boundary of the site, combined with existing topographical considerations and proposed additional planting; the site can be visually contained, appear as part of the urban area and in the process contribute to the landscape setting of the city.
- The site, in itself, does not act as a buffer preventing the coalescence of Edinburgh with any other built up area and if removed from the Green Belt and designated for residential purposes (retirement accommodation) does not lead to the erosion or loss of a significant area of open space contributing to the purposes of green belt designation.

- The site is capable of accommodating a residential development of the nature proposed without adverse impact on the setting of Liberton House which can be protected and preserved with appropriate planting and landscaping proposals.
- The site has been favourably considered for development as part of the processes associated with earlier local plan reviews with Reporters suggesting that its release (on two occasions in the past) would contribute to rather than detract from the character and appearance of the landscape.
- The site is effective, free from constraints and immediately capable of beneficial development.

#### **Site 45. Land East of Mounthooley Loan**

##### Catchilraw Trust (0137)

There is an over reliance on non-deliverable/constrained brownfield sites that will lead to under-delivery of required quantum of new homes. There should be a blend of greenfield and brownfield sites to ensure a continual five year supply of a range of house types.

This lack of supply will ensure the lack of affordable housing delivery and further unsustainable house price inflation for open market homes.

In proposing development at Mounthooley Loan, there is an opportunity to develop land in accordance with the key policy themes throughout the document; sustainable, brownfield, accessible and affordable. The site is capable of providing a relatively low density development also identifying opportunities to reinforce a long-term landscape strategy for the area.

The Council's wider housing and landscape character assessments have taken a broad-brush approach missing key site characteristics that highlight a site for future appropriate development (in this instance, the brownfield element on the southern part of the site), making incorrect assumptions and subsequently discounting the site from future consideration as part of the City Plan process. Access could be taken from Frogston Road West although it is more likely that any future development would utilise existing accesses off Mounthooley Loan. The site benefits from good access to local public transport routes, benefitting from frequent bus services linking the site to the City Centre, Airport and Royal Infirmary etc.

To the east are further fields, leading to Mortonhall House, the Mortonhall Caravan Park (with associated year-round convenience shop) and Klondyke Garden Centre as well as the Mortonhall Cemetery and Crematorium. The site sits within the Edinburgh Green Belt, the Mortonhall Designed Landscape, and is designated a Special Landscape Area and Local Nature Reserve. Each of these designations covers a much wider area than this site alone and we challenge the appropriateness of these designations in the context of the site and its surroundings. It is not uncommon for allocation/designation boundaries to be established without individual site characteristics being taken into account.

The most southerly site consists of a former MOD camp (the disturbance can clearly be seen from the aerial images provided), with several areas of hardstanding and derelict buildings still evident on-site. This brownfield legacy and significant enclosure from surrounding uses (especially to the north and south) limits the role it can play as part of

the green belt, designed landscape and other designations, whilst simultaneously highlighting its development potential within the wider suburban context and meeting many of the Council's wider aims and objectives around brownfield development etc.

Such is the legacy of the military camp that the site cannot be used for arable or livestock farming. Its role either as a countryside use or contribution to the wider green belt is therefore limited.

The site is an effective and appropriate residential development site with no physical, technical or legal constraints to prevent short-term development; it would form an eastward extension of the existing, popular and marketable residential areas to the north of Frogston Road West (including the modern development on the site of the former Princess Margaret Rose Hospital).

Due to the existing boundary landscaping, the site has very limited visual impact on its surroundings. Distant views from the east and south (Edinburgh City By-Pass and Pentland Hills) are sufficiently distant as to be insignificant as part of a much wider panorama and the existing landscaping prevents views into and out of the site from the south (the main visual receptor direction).

Fundamental to the success of the Proposed Plan is the ability to identify appropriate and deliverable (effective) housing land. The City Plan has taken a strong line in allocating only brownfield development sites and there are huge question marks over the deliverability and effectiveness of the housing allocations. Many of the collocated sites have complex site characteristics as well as a range of ownership without confirmation of their availability for development.

Mounthooly Loan represents a part-brownfield site free of many of the constraints seen elsewhere. It passes many of the policy tests yet has been consistently ignored throughout this and previous LDP processes.

A failing of many Local Plans and Local Development Plans has been the translation of housing allocations on a map to actual development and the delivery of new homes to meet significant outstanding and pent up demand. The Proposed Plan will exacerbate the existing situation, will stifle development, increase pressure on land supply and affordability and will not see the delivery of the desired level of affordable housing (and despite the increased requirement from 25% to 35% of developments of 12 units or more). The plan does not allow for a range of development sites including a limited but much needed release of a number of greenfield sites that are effective, deliverable and require far less investment in infrastructure to ensure their short-term delivery. These sites will also create attractive places to live. Whilst larger sites will undoubtedly be required, the complexities of site assembly and delivery will inevitably mean that they will stretch over a longer time period, spanning Local Development Plan cycles. They will provide only a proportion (and quite possibly none) of the identified capacity. The Council should allow far greater flexibility to act as a catalyst and enable the market to recover/flourish as fast and as creatively as possible. By allocating further land for smallscale (and in this case high quality) development it creates a situation whereby the likelihood of the development being completed within the initial 5 year cycle is greatly increased, creating certainty around housing supply issue. The overarching aims of the LDP seek to grow the City's economy, provide more and better quality homes and to protect and improve our

environment for future generations. Each of these aims will be facilitated by allocating the site at Mounthooly Loan for housing.

The current and proposed Green Belt boundary is drawn tightly around Edinburgh's existing built environment. This prevents flexibility in both the implementation of the Green Belt policy and in the ability of existing developed areas to grow organically into appropriate neighbouring areas to meet increasing housing demand without the explicit need for major new allocations. In the case of the site at Mounthooly Loan, the Green Belt boundary has been established in such a way as to take no consideration of the context of the sites' characteristics and surroundings. The site is well screened from its surroundings, has different characteristics to the adjoining green belt areas, and has been previously developed. Once developed sympathetically, it would create a logical defensible boundary in this part of Edinburgh. Adjacent land to the south, north and east immediately takes on a more rural characteristic (despite being well within the Edinburgh City By-Pass) and links well with similar land to the South of Frogston Road West. There is no risk of coalescence if this site is removed from the green belt and it does not play a role in protecting or enhancing the "*quality, character, landscape setting or identity of the City*" (or neighbouring towns). The site plays no part in managing the long term shape of the settlement.

By relaxing the Green Belt Boundary at this location, it would help direct high quality development to a site that will sit comfortably in the context of adjacent residential surroundings whilst having no detrimental impact on the remaining green belt. In seeking the removal of this site from the Edinburgh Green Belt we are strongly advocating that the most appropriate use for this site is for residential development. Subject to the relevant planning permissions, The Trust in partnership with CALA, is seeking to develop this site in early course and certainly within the 5 year land supply cycle.

The site is well screened and though covered by a number of restrictive landscape designations, the site does not fulfil the objectives of these allocations being easily separated from surrounding land (through existing landscaping and brownfield characteristics). It would form an obvious and high quality eastern extension of the existing urban area, itself a modern high quality development (former Princess Margaret Rose Hospital) and does not fulfil the key functions of a green belt site.

The site would offer the Council a high quality and attractive alternative to a number of large allocations elsewhere across the City, the deliverability of which must be called into doubt due to infrastructure costs, site complexities and uncertainty over availability/willingness of landowners to sell develop. There will also be increasing problem associated with the displacement of existing businesses whose land has been identified for residential development (and not through their promotion for a change in land use).

Kim Denholm (0294)

Support the Plan's housing proposals. However, I remain very concerned that developers will exercise great pressure on Edinburgh Council to allow development along Frogston Road - both at Broomhills and at Mounthooly Loan. While I completely understand that Edinburgh Council has sought to protect these areas from further development, I strongly urge that steps are taken to guard against wildcat planning applications / appeals as developers and the Catchelraw Trust have made it very clear that they aim to progress their long term aims to build on both locations. This is unsustainable and would place an

intolerable extra strain on an already struggling infrastructure. Should developers make an appeal that goes against the Plan's recommendations, the detrimental effect from increased traffic pollution and subsequent poor air quality plus the harm to wildlife (of which there is a huge variety, including protected species such as bats and badgers) would be extreme.

While I also understand that CEC is not accepting petitions, I would like to make clear that I have an active petition against further development at Broomhills which currently stands at 1567 in the online version and approximately 250 paper signatures. This does give a very strong indication of the strength of feeling of both local residents and others who work and otherwise access the area.

#### **Site 46: West of Burdiehouse Road**

Gordon Henderson (0164)

The land at West of Burdiehouse Road should be removed from the Green Belt and shown as suitable for housing development.

The land in question lies on the western side of Burdiehouse Road directly opposite the new Barratt Homes development (The Limes). The land comprises an area of self-seeded trees and bushes that extends to just over 0.5 hectares. It is a linear area of land that is about c. 200 metres long and c. 35 metres wide, at its central point. The land is bounded by Burdiehouse Road to the east and by Old Burdiehouse Road to the west and north. The top third of the land is within the city boundary, with the remaining two thirds shown as Green Belt.

The land has no landscape or biodiversity designations; it is not within any defined floodplain. There are no heritage sites either within the land or close by. Access to the site is via Old Burdiehouse Road, which joins Burdiehouse Road immediately to the north of the land.

As it is proposed that the land is potentially identified for housing, then a key issue is whether it is 'effective'.

Planning Advice Note (PAN) 2/2010, 'Affordable Housing and Housing Land Audits', details seven criteria by which to assess how land can be considered as 'effective'. The seven criteria are assessed below.

- Ownership – The land is owned in its entirety by landowners who wish to see it developed.
- Physical - There are no significant aspect or ground stability issues known for this land. Access can be provided from Old Burdiehouse Road. Flooding is not an issue and drainage is capable of being resolved.
- Contamination – There are no known contamination issues on the land.
- Deficit funding – The site can be developed without the involvement of the public purse.
- Marketability – The Barratt Homes site opposite has proved successful and there is every reason to expect apartments on this site to sell well.
- Infrastructure - There are no known deficiencies in infrastructure provision for the site.
- Land use – Housing is the best use for this land.

The reason that apartments are likely to be preferred is because these can be designed in such a way as to mitigate the noise impact from Burdiehouse Road. This is partly why

Barratt Homes have built apartments fronting Burdiehouse Road themselves rather than houses.

The apartments opposite are c. 10 metres from Burdiehouse Road at their closest, are about 10 metres deep in plan form, and four storeys in height. A similar block could be built on this site whilst still complying with open space and car parking requirements. This would provide between 16 and 20 flats depending upon their size.

As for the Green Belt, this small area of land plays no particularly role in protecting the character of the city nor in preventing its coalescence with Straiton south of the A720. A new defensible boundary will instead become Old Burdiehouse Road.

With the new Barratt Homes housing on the eastern side of Burdiehouse Road already extending to the end of this site on the western side, there would appear no reason for not allowing this site to also be developed.

For those reasons, the land shown on the attached marked up version of the LDP Proposals Map can be removed from the Green Belt and shown as suitable for housing development.

#### **Site 47: Gogar Mount**

##### NatWest 0477

NatWest considers that there is scope to assess further its land to the south of RBS Gogarburn HQ and at Gogar Mount House for inclusion in City Plan 2030 as a housing-led mixed use development. The identification of this land for housing-led mixed use development will ensure a more balanced spatial strategy in the plan and help the Council deliver its required housing targets.

The character of West Edinburgh is expected to continue changing dramatically over the course of the City Plan period (to 2032) and beyond. Land immediately to the north of the A8 has already been removed from the green belt for mixed use development and in the proposed plan, the Council is proposing this area is developed to create new 'urban quarters' with a focus on housing-led, high density, mixed use development. The vision for West Edinburgh, as stated at para 3.56 of the proposed plan, is to become a vibrant, high density, mixed use extension to the city with a focus on place making, sustainability, connectivity, biodiversity and a strong landscape framework. Indeed, across West Edinburgh, the proposed plan allocates land for a significant number of new homes across Edinburgh 205 (7,000 units), now referred to as West Town; Crosswinds (2,500 units); land adjacent to Edinburgh gateway (250 units); land at Turnhouse SAICA (1,000 units); and Turnhouse Rd (200 units).

NatWest supports this changing character for West Edinburgh and welcomes the proposals for further infrastructure to support these developments including enhanced transport, cycle and pedestrian links which will help to ensure its existing headquarters remains accessible.

To the east of NatWest's Gogarburn, the proposed plan also acknowledges (at para 2.59) that changes are likely to be required to the green belt if Scottish Ministers grant planning permission in principle for the proposed development of land East of Milburn Tower. Ministers have resolved to grant planning permission in principle for this development,

subject to agreeing the S75. Accordingly, the proposed plan makes provision for a number of new measures to serve development at land East of Milburn Tower, including provision for a new primary school, and new bus and active travel routes.

Additionally, land to the west of RBS Gogarburn and referred to as 'Norton Park' was also assessed by the council as suitable for housing development in their earlier Choices document and identified as a potential site to be released from the green belt. While not carried into the proposed plan, it further emphasises the potential of West Edinburgh to accommodate further development and the changing character of this part of the city.

Indeed, West Edinburgh continues to be at the forefront of development planning for the city and Draft NPF4 recognises the importance of West Edinburgh stating:

"A strategy for West Edinburgh is emerging which guides a wide range of uses to create a sustainable extension to the city, with added benefit from associated improvements to the quality of place of existing communities. Proposals focus on locating development on and around existing transport corridors and work is ongoing to improve accessibility including the Edinburgh tram extension."

The principle of growth within the city's 'Strategic Development Areas' through green belt releases has therefore already been established at West Edinburgh and it is in this context of a changing West Edinburgh and the area becoming a new mixed use extension to the city, that we believe it is appropriate timing and the opportunity for the same approach to be taken to NatWest's land at Gogarburn. Accordingly, we request that the Gogarburn headquarters and land to the south of the Gogarburn headquarters and at Gogar Mount, shown on the attached plan, should be released from the green belt.

Land in NatWest's ownership to the south of its Gogarburn Headquarters and at Gogar Mount provides an opportunity to create a new sustainable mixed-use development and a high-quality place, and in doing so, make a significant contribution towards the Council's housing land requirements.

The identification of this land for new housing-led mixed used development would accord fully with City-Plan's infrastructure-first approach. The land is uniquely situated to be served by existing public transport infrastructure, including the Edinburgh Tram, and has good cycle links, providing easy access to the rest of the city. The site will also benefit from enhanced new bus corridors and active travel routes proposed to serve and support proposed development at West Edinburgh and potential development at land east of Milburn Tower, as referenced in the proposed plan.

Development of this land could include a mix of business related uses, a mix of residential types (including hotel and care home), together with other ancillary and community uses. In doing so, the site has the potential to deliver a high quality mixed use and walkable community which would support City Plan's planned vision of 20-minute neighbourhoods. This approach was recently reinforced by draft NPF4 (November 2021) which makes it clear that delivering housing land requirements should be consistent with the principles of 20-minute neighbourhoods and maximise the benefits of existing infrastructure. As well as offering the potential to deliver a mixed-use development itself, the site would be easily accessible to existing employment opportunities at Gogarburn, the Gyle and the Airport, existing retail and leisure facilities at the Gyle, and would also benefit from being in close proximity to mixed uses proposed at West Edinburgh.

Map 24 West Edinburgh under Place 16 (p.73) of the proposed plan demonstrates clearly that NatWest's RBS Headquarters and adjoining land to the south could integrate well with the wider West Edinburgh Proposals and also potential development at East of Milburn Tower, through both existing and proposed connections (vehicular and active travel routes). Promoting housing development at Gogarburn, adjacent to NatWest's office complex and adjacent to proposed development at West Edinburgh would deliver an integrated approach to housing, business and ancillary development and in doing so, deliver benefits in terms of quality of place and sustainable development objectives.

In our view, the land in question could also be sensitively developed without affecting the wider landscape setting of the city. Views to the site from the wider landscape are predominantly contained by intact woodland belts and development of the site would not impact upon views experienced by road users on the A8 and City bypass, both key approaches to the city, due to existing tree screening. The southern boundary of the A8 at Gogar Mount, the golf course, Gogarburn and Gogarbank are particularly well screened by existing tree planting.

While the site is more visible from roads to the south, these roads do not constitute key approaches and are more minor in nature. The terrain of the site also helps to conceal large parts of the site from such locations.

Views to parts of the site from the train line are screened by existing tree belts, and further tree planting could also help in this regard. The nature of the surrounding area is also likely to change by the potential development of land east of Milburn Tower which will also change the site's landscape context and how the site is viewed and experienced.

While it is considered that land to the South of Gogarburn could be promoted to start to bring forward new housing development before 2032, if the Council is not minded to include land within NatWest's ownership as a housing led development in the period of the Plan, we would encourage the Council to at least identify it as a long-term site. This approach is in line with Policy 9 of draft NPF4 which proposes that development plans should set out a deliverable housing land pipeline for the Housing Land Requirement based on short, medium and long-term sites which can be supported by the infrastructure requirements of the spatial strategy. Draft NPF4 specifically outlines that "locations that may be suitable for new homes beyond the plan period can also be identified. Where sites in the deliverable housing land pipeline do not progress to delivery as programmed and alternative delivery mechanisms are not possible, longer term deliverable sites should be brought forward."

Such an approach would further help to address our concerns regarding the deliverability of some housing proposals allocated in the proposed plan.

#### **Site 48: Peffermill**

##### University of Edinburgh (0464)

The Pleasance is a focus for the University's dry sports facilities, however increased demand has led to capacity issues. This has led to the need to explore the approach to additional investment in dry sports facilities at Peffermill as a key component of the Peffermill Sports Village.

The Peffermill Sports Village will be a beacon of the University's approach to health and wellbeing. It will provide a critical boost to the city's efforts to encourage and engage local citizens in health generating activities, and with a reach far greater than University staff and students. The proposed new development would also meet the aims of the 20 minute neighbourhood by providing a mix of uses that can benefit both University staff and students and the wider city, including the local community.

University of Edinburgh has proposals to upgrade the existing facilities at Peffermill, which currently provides areas of open space, that are accessible to the users of Peffermill. As part of these proposals the University of Edinburgh will provide increased accessibility to the site, which will include the local community, and not just the users of Peffermill.

New proposals for the sports village at Peffermill would also allow further public access into and through the site for all with the addition of new access points, walking and exercise routes into and around the site which will be available to site residents, users of the facilities and by the wider community.

The University of Edinburgh consider that if a proposed redevelopment of an outdoor sports facility involves the possible loss of some of the open space, this should be considered in the context of the gains that the new proposal will bring to the sports provision, and other communal open space. If there is the ability to rationalise and improve the sporting facility, and open space provision (in quality, rather than quantity), this should be supported by the City of Edinburgh Council.

The University of Edinburgh has a number of sites that provide high profile, excellent outdoor sports facilities, that are accessible to the University's students, along with the local community and national sports bodies. The University of Edinburgh is in support of the principle to maintain outdoor sports facilities and for example has proposals to upgrade the existing facilities at Peffermill. As part of these proposals the University of Edinburgh will maintain the majority of the site for sports provision, including making best use of the proposed new build elements to rationalise the sports facilities buildings.

New proposals for the sports village at Peffermill would also allow further public access into and through the site for all with the addition of new access points and walking and exercise routes into and around the site which will be available to site residents, users of the facilities and by the wider community.

The University recognise and support the importance of greenbelt to the spatial strategy of the city and to protect and support the unique qualities of the city and its landscape and scenic qualities. This support is, however, predicated on a need to maintain a degree of flexibility and in recognition of the need to assess site and location specific circumstances, and in the context of boundaries and designations that have existed for a considerable period and without detailed assessment to reflect the changing nature of the city.

In respect of the University estate the greenbelt designation is relevant to consider in the context of Peffermill and King's Buildings area.

Part 1 of the LDP sets out the purpose of the green belt. It is noted that Edinburgh's green belt plays an important role in directing the planned growth of the city and supporting regeneration.

It is noted that the green belt boundary is largely unchanged from previous local plans. The University of Edinburgh have concerns that the green belt has remained largely unchanged and consider that there should be scope for a review to be undertaken to ascertain if all allocated areas continue to meet the purpose outlined above, and importantly positively contribute to the stated purpose. It is understood that the last Green Belt report was undertaken in 2008. The review process should be undertaken at the earliest opportunity, and in the intervening period, the proposed plan should make provision for site specific assessments to be given weight and to inform policy and decision making.

Land at Peffermill sports campus is designated as Green Belt. According to the Green belt report (2008), the case for the special landscape qualities in the area was because of the proximity of the Craigmillar Castle setting. It is noted that the analysis provided in the 2008 green belt report did not refer to any of the intrinsic qualities of the Peffermill playing fields themselves.

The University of Edinburgh consider that areas of the Peffermill site do not contribute to role and purpose of the green belt. These areas are either already degraded through historic and current use, and / or have presented maintenance and intensity issues on a site gradient that impairs high quality sporting fixtures. Development of these areas would not create or contribute to coalescence and would be able to provide improved access to the areas of green belt that are protecting and giving access to open space. The University of Edinburgh question the need for areas of the green belt that are underused and no longer fit for purpose.

Peffermill is a key asset to the University and a vibrant campus location which is noted as a key focus for investment and enhancement of facilities. It is already a thriving location for sports, health and wellbeing, however, the current greenbelt designation presents a threat to the ability to maximise the benefits and potential of this location.

The plan should include measures which can allow challenge to the validity of maintaining the green belt designation, and to identify areas where selected development or enhancement of facilities may be appropriate, especially where this offers wider benefits in terms of wider environmental benefits and greenbelt enhancement, placemaking, health and wellbeing and community access and use.

It is submitted that a balanced view of the current green belt allocation in areas needs to take into account other needs, such as the provision of outstanding sports facilities, which in turn, are significantly important to the population's health and wellbeing.

Wider environmental objectives such as biodiversity, and the contributions to the city's green and blue network would exist if the particular area of land could be redeveloped.

#### **Site 49: Wisp**

##### Springfield Properties (0239)

Springfield Properties PLC is promoting a site of the south east of Edinburgh, identified as Wisp 4, for residential purposes.

In essence Springfield Properties is promoting the site to align the following aims and policy objectives within the emerging City Plan 2030:-

- Much needed homes
- Of which 25% are much needed affordable houses
- Provision of much needed local facilities serving the ever growing community within the wider Milligan Drive locale
- Investment to bring vacant land back into productive use
- Local jobs created including apprenticeships over the period of the development
- Funding towards the formation of the Little France Park through the South East Wedge/Little France Park Developers Contribution Zone
- Increase the East/West Connectivity through the addition of Springfield gifted land
- Houses near major employment, the Hospital, Bioquarter and the Medi-Park presenting an opportunity to provide accessible homes within walking/cycling distance of these large employment generating uses.
- The site is proven to be effective and deliverable, as per the requirements of PAN 2/2010, with Springfield committed to the delivery of this effective site which in turn will contribute to the housing land requirement for the City of Edinburgh.
- Residential development at this site would provide a wide range of economic benefits for the surrounding area both during its construction and occupation phases.
- Plan is fully reliant on sites that will prove challenging, if not impossible, to deliver during the plan period.
- The landscape character and quality of the site is greatly influenced by the cumulative impact of the planned developments at Greendykes and the BioQuarter. This will change from neglected open farmland to dense urban development.
- The proposed development will be part of this process of change. It will increase the urban edge of the city and this will be noticeable due to its location on rising ground.

A full justification and assessment of the potential landscape impact of the site is set out in a supporting document.

#### **Site 50: Lochend**

##### Aviagen (0365)

Aviagen would like the Proposals Map altered to remove the land they own on Lochend Road from the Countryside, as shown in red in the supporting statement so that it can be used for any use that is compatible with the location of this site under the Edinburgh Airport flight path, where development is anyway constrained by other policy and guidance.

#### **Modifications sought by those submitting representations:**

##### **Site: 1. Liberton Tower Mains**

##### Glenmorrison Group (0600)

Modify Plan to remove Liberton Tower Mains from the greenbelt and allocate site for housing for older people.

## **Site 2. Bankhead Steading: Queensferry**

Wight PDL (0078), Roseberry Estates (0618)

Modify plan to remove Bankhead Steading from the Green Belt and identified site for mixed business, nursery and tourism uses.

## **Site 3. Clerwood House**

The General Teaching Council for Scotland (0094)

Modify plan to remove Clerwood House from the green belt.

## **Site 4. Ransfield Farm Ratho**

Stewart Milne Homes (0118)

Modify plan to allocate Ransfield Farm site for housing development

## **Site 5. Land at Freelands Road**

BDW Trading (0678)

Modify plan to allocate land at Freelands Road for housing development

## **Site 6. North of Ratho**

Taylor Wimpey (0770)

Modify plan to remove North of Ratho from the green belt and allocate the site for housing development.

## **Site 7. Baird View, Ratho**

Tarmac (0244)

Modify plan to allocate Baird View for housing development.

## **Site 8. Craigiehall Estate**

Hallam Land (0615), Defence Infrastructure Organisation (0124), Defence Infrastructure Organisation (0665)

Modify Plan to remove Craigiehall site from the green belt and allocate the site for redevelopment.

Modify Plan add a specific placed based policy for Craigiehall within Proposed City Plan 2030 with the following criteria:

- Preparation of a masterplan.
- A development which respects the heritage of the site and provides a sustainable long term use for the listed buildings on site.
- Retention and enhancement of existing landscaping framework to protect the character of and setting of the Inventory Garden and Designed Landscape.
- Use site layout and green-blue infrastructure to connect to and enhance surrounding green networks and natural habitats.
- Interpretation of the site's military history within the new development.
- Removal of the security fence around the site.
- Provide or contribute towards education, and healthcare infrastructure and community facilities as might be appropriate.

### **Site 9. Craigcrook Road**

Cala Management (0180) / Calex Group Ltd (0556)

Modify Plan to remove Craigcrook Road from the green belt and allocate the site for housing.

### **Site 10. Hermiston Park (East of Riccarton)**

Murray Estates (0197)

Modify Plan to remove Hermiston Park from the green belt and allocate the site for housing.

### **Site 11. Ratho Station East**

Murray Estates (0197)

Modify Plan to allocate site for housing development.

### **Site 12. East of Milburn Tower**

Murray Estates (0197)

Modify Plan to allocate site for housing development.

### **Site 13. The Drum and Drum(2)**

SEEDCo (0198)

Modify Plan to allocate the Drum for housing development.

Modify Plan to allocate the Drum (2) for housing development.

### **Site 14. South East Edinburgh**

T Klan (0307)

Modify Plan to allocate South East Edinburgh for housing development.

**Site 15. Almondhill Kirkliston**

BDW Trading and Taylor Wimpey (0199)

Modify Plan to allocate Almondhill for housing led uses.

Sir Jack Stewart-Clark (0800)

No specific modification identified.

**Site 16. East Kirkliston**

Miller Homes and Wheatland Farming Partnership (0592)

Modify Plan to allocate Kirkliston East for 2,700 houses and mixed use development.

**Site 17. Muirwood Rd**

Taylor Wimpey (0200)

Modify Plan to allocate site at Muirwood Road for housing development and remove it from the green belt.

**Site 18. Curriemuir Vale**

Cala Management (0316)

Modify plan to remove Currievale from the green belt and allocating it for housing development.

**Site 19. Bankhead, Balerno**

Simon Thompson (Glenpark Homes) (0248)

Modify Plan to add new housing allocations at Bankhead, Balerno

**Site 20. Glenbrook Rd. Balerno**

Simon Thompson (Glenpark Homes) (0248)

Modify Plan to add new housing allocation at Glenbrook Road, Balerno

**Site 21. Land at Goodtrees**

Hallam Land (0615)

Modify Plan to allocate new site at Goodtrees for housing development.

**Site 22. South of Cockburn Crescent**

Barratt David Wilson Homes (0677)

Modify Plan to allocate new site south of Cockburn Crescent for housing development.

**Site 23. Highfield**

Taylor Wimpey (0200)

Modify plan to allocate new site at Highfield for housing development and remove from green belt.

**Site 24. Frogston Road East**

BDW and Catchelraw Trust (0209), Bo Adams (0363)

Modify plan to allocate new site at Frogston Road East for housing development.

**Site 25. Alnwickhill Road**

MacTaggart and Mickel Homes (0312)

Modify plan to allocate new site at Alnwick Road for housing development.

**Site 26. Calderwood**

West Craigs Ltd. & Dunedin Canmore (0352)

Modify Plan to allocate new site at North of West Craigs for housing development and remove it from the green belt.

**Site 28. Cammo Fields**

Dunedin Canmore HA (0766)

Modify Plan to allocate Cammo Fields site for 100% affordable housing.

**Site 29. Land at Burdiehouse**

Hallam Land (0457)

Modify Plan to allocate land at Burdiehouse for housing development.

**Site 30. Land at Burdiehouse Rd**

Azad Murdochy (0361)

Modify Plan to remove designation of the site under Policy Env 21 as a Local Nature Conservation Site and allocate site for affordable housing.

**Site 31. Hatton Village (Hatton Mains)**

Inverdunning (Hatton Mains) Ltd (0427)

Modify Plan to allocate land at Hatton Village for housing development.

**Site 32. New Liston Road, Kirkliston**

Robertson Residential Group (0537)

Modify Plan to allocate land at New Liston Road for housing development.

**Site 33. Norton Park**

Taylor Wimpey and Hallam Land (0603)

Modify Plan to allocate land at Norton Park for housing development.

**Site 34. Lennie Cottages**

Roseberry Estate (0618)

Modify Plan to remove Lennie Cottages site from Greenbelt and allocate for housing as a stand alone development.

**Site 35. Lang Loan**

Miller Homes Ltd (0649)

Modify Plan to allocate land at Lang Loan for housing development and remove the site from the green belt.

**Site 36. Land south of Murrayfield Hospital**

Spire Healthcare Ltd (0719)

Modify Plan Seek to allocate land at Murrayfield Hospital for residential development for housing for older people / specialist housing or a care home.

**Site 37. Land east of Winton Gardens**

Esk Property LLP (0726)

Modify Plan to allocate land east of Winton Gardens for an age restricted development comprising assisted living, retirement (over 55) accommodation and care facilities.

**Site 38. Land at Baberton Road**

Stoddart Family (0749)

Modify Plan to allocate land at Baberton Road for housing development.

**Site 39. Edge of Edmonstone Estate**

Scottish Enterprise (0760)

Modify Plan to allocate land at Edmonstone Estate for housing development and remove the site from the green belt.

**Site 40. Lanark Road West**

John Brady (0353)

Modify Plan to remove land at Lanark Road West from the green belt and allocate the site for housing development.

**Site 41, Land south of Gilmerton Station Road**

MacTaggart and Mickel Homes (312)

Modify Plan to remove land south of Gilmerton Station Road from the green belt and allocate the site for housing development.

**Site 42. East Foxhall**

Landowner of East Foxhall (0544)

Modify the Plan to remove land at East Foxhall from the green belt and allocate the site for housing development.

**Site 43. Riccarton Village**

Miller Homes (0256)

Modify the Plan to remove land at Riccarton Village from the green belt and allocate the site for housing led development.

**Site 44. Alnwickhill Road**

Juniper Residential Ltd (0786)

Modify the Plan to remove the land at Alnwickhill Road from the green belt and allocate the site for housing suitable for retirement properties.

**Site 45. Land East of Mounthooley Loan**

Catchilraw Trust (0137)

Modify the Plan to remove the land East of Mounthooley Loan from the green belt and allocate the site housing development.

**Site 46: West of Burdiehouse Road**

Gordon Henderson (0164)

Modify the Plan to remove the land at West of Burdiehouse Road from the Green Belt and allocate the site for housing development.

**Site 47: Gogar Mount**

NatWest 0477

Modify the Plan to remove land south of Gogarbank from the green belt and allocate the site for housing led mixed use development.

**Site 48: Peffermill**

University of Edinburgh 0464

Modify the Plan to support proposals for a new sports village at Peffermill and remove the area from the green belt.

**Site 49: Wisp**

Springfield Properties 0239

Modify the Plan to allocate the site at the Wisp for housing development.

**Site 50: Lochend**

Aviagen (0365)

Modify the Plan to remove the site from the countryside.

**Summary of responses (including reasons) by planning authority:**

**Housing Position Statement**

A key aim (Aim 2) of the Plan is to direct new development to, and maximise the use of brownfield land rather than greenfield land. Where greenfield land has been identified for housing development it is in the context of delivering housing led mixed use development on sites previously identified for development, re-envisioning the allocated sites in terms of the mix and balance of uses, i.e. West Edinburgh. The Council considers there is no need for additional greenfield land to be identified for development. The Council considers there is an adequate provision of housing land supply, that there is a range of types of sites identified e.g. large, small, brownfield and greenfield etc, that proposed densities can be achieved and allocated sites are considered deliverable in the period of the plan. The Council sets out its position in relation to these issues in detail in Issue 20: Assessment of Housing Land Supply, and Issue 12: Density.

The Council is of the view that Choices set out a sufficient consultation on options for development of West Edinburgh as identified through both the text and mapping of Choices and also through the Housing Study (CD026) and Appendix D. In addition, responses to the Choices consultation included reference to the potential for the type of development set out in the Proposed Plan, demonstrating how people understood what was being proposed. As a result, the Council considers the proposals as reasonable and justified. The Council sets out its position in relation to these issues in detail in Issue 39: Consultation.

The City Plan Housing Study (CD026) prepared by the Council was used to inform the preparation of Choices for City Plan 2030 (CD022). An assessment of all greenfield land was undertaken to assess which land had development potential while still contributing to the SDP1 spatial strategy, minimising the effect on landscape character and making best use of existing infrastructure. The methodology (Part 2b, Figure 1, p3) was prepared to allow sites to be assessed in a consistent manner and to enable sites to be subject to comparative analysis. The results of this work allowed the Council to identify its preferred greenfield sites, should some be required to meet housing requirements. However, the Council considered the most sustainable option was its preferred approach at the MIR stage, that new allocations to support the housing land supply should be directed to brownfield rather than greenfield sites. As noted above and considered in Issues 19 and 20, the Plan identifies sufficient sites to meet its housing target and land requirement. As a result, none of the greenfield locations analysed were identified in the Proposed Plan.

### **Site: 1. Liberton Tower Mains**

#### Glenmorrison Group (0600)

The proposed Liberton Tower Mains site is within the Edinburgh Green Belt and a Special Landscape Area.

The Liberton Tower Mains site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology and the results are on p47. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 2, within the West of Liberton Brae area. The Housing Study found that this area had poor access to the wider cycle network, and is unlikely to be improved, that the site has limited support for public transport, that there was no scope for development because of its visual prominence in the landscape and its importance for the setting of the Braid Hills and the city, which is characterised by open arable farmland that is highly visible from Holyrood Park and other elevated viewpoints. This area also forms an important part of a wider green network. It contains features of biodiversity value e.g. hedge, trees, habitat mosaic on the urban edge, and should be retained as part of a larger open space and greenbelt zone with biodiversity value.

The representation site forms a small part of the overall assessment area. The introduction of urban development would impact on the contribution this farmstead and its rural setting make to green belt objectives. The site sits apart from the dense urban edge of Liberton and lacks features readily able to provide an alternative green belt boundary.

The Council's position on elderly care housing is addressed in its response in Issue 26 Student Accommodation. The Council does not agree that there is a need to identify housing for older people on the Liberton Tower Mains site.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 2. Bankhead Steading: Queensferry**

Wight PDL (0078), Roseberry Estates (0618)

The proposed Bankhead Steading site is within the Edinburgh Green Belt.

The Council considers the loss of employment land as a result of the Plan's strategy is not as significant or extensive as alleged in the representations. The Council considers it has provided sufficient land to accommodate the needs of any businesses having to relocate. The Council has identified land for displaced businesses within Business and Industrial land which is covered by Policy Econ 4. Therefore, Policy Econ 2 does not apply. The Council's position on these matters is set out in detail in its responses in Issue 2: Spatial Strategy and Issue 3: Delivery of the Strategy. As a result, the Council does not consider there is a need to identify the greenfield site at Bankhead Steading for a business allocation.

The Bankhead Steading site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology and the results are on p284. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 6, within the East of Dalmeny area. The area is not within walking distance of local convenience clusters. The area does not have access to the wider cycle network and is not considered to support active travel overall. It also does not support travel by public transport and therefore is likely to encourage car based trips contrary to outcome of the Plan where you don't need to own a car to move around. Finally, the study concludes that there is no scope for development in this area due to its importance for the setting of south Queensferry.

Development would impact adversely on the character of the farmland of scenic quality, contributing to the landscape setting and separate identities of South Queensferry and Dalmeny village.

It would breach Queensferry's wooded eastern edge and lacks features readily able to provide an alternative green belt boundary.

As a result, the council does not consider there is justification for the allocation of this site for a mixed business uses development. **No modification proposed.**

### **Site 3. Clerwood House**

The General Teaching Council for Scotland (0094)

Clerwood House is within the green belt, a special landscape area, a local biodiversity site, a local nature conservation site and part of Corstorphine Hill open space.

The site is within the Sector 7 Corstorphine Hill assessment area (p341) which stated, “No scope is identified for development in this area due to its landform, distinctive woodland and remnant parkland forming a key part of the setting and skyline of Edinburgh, valuable greenspace, Special Landscape Area and Local Nature Reserve.” The representation site forms a small part of the overall assessment area, however, through its mature trees and open lawns, the grounds of Clerwood House contribute to Green Belt objectives by maintaining Corstorphine Hill’s character as a visually prominent wooded ridge providing a landscape setting within the city.

As this site is a Local Nature Conservation Site and adjacent to Corstorphine Hill Local Nature Reserve it is an important component of the wider ecological site, with mature trees and woodland edge mosaic habitats which connect and extend the main woodland area.

As a result, the Council does not consider there is justification for removing this site from the green belt. **No modification proposed.**

#### **Site 4. Ransfield Farm Ratho**

Stewart Milne Homes (0118)

The Ransfield Farm site is within the greenbelt and is adjacent to a Local Biodiversity site (Union Canal).

The Ransfield Farm site at Ratho was not identified as a preferred location in the Council’s Housing study as it did not score well under the assessment methodology, the results are on p186. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 5, within the South of Ratho area. The Housing Study found the area was not within walking distance of employment clusters and that whilst there could be access to the wider cycle network, it is impeded by the Union Canal cycle path; that route is considered to be at capacity. It is unlikely to be improved as capacity cannot be increased here due to it being a canal tow path and a scheduled monument, and no other suitable cycle route interventions have been identified which could serve the site; therefore it concluded that the cycle network is unlikely to be improved by an identified intervention. Public transport provision was also considered poor and that intervention within the plan period was not considered deliverable. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don’t need to own a car to move around.

The site forms a small part of greenfield sector 5. Whilst some scope for development was identified to the south of existing housing, development of the site would impact on the settlement’s open setting to the east and southward views from the Union Canal and towpath.

Woodland at Ratho Park Golf Course could form an alternative green belt boundary to the east, however, woodland planting would be required to provide a new and firm edge to settlement to the south.

As a result, the council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 5. Land at Freelands Road**

### BDW Trading (0678)

The site at Freelands Road is within the Green Belt and is adjacent to a Local Biodiversity site (Union Canal).

The Freeland Road site at Ratho was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology and the results are on p182. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 5, within the Ratho Byres area. The Housing Study found the area was not within walking distance to local convenience services and that whilst there could be access to the wider cycle network, it is impeded by the Union Canal cycle path; that route is considered to be at capacity. It is unlikely to be improved as capacity cannot be increased here due to it being a canal tow path and a scheduled monument, and no other suitable cycle route interventions have been identified which could serve the site; it concluded that the cycle network is unlikely to be improved by an identified intervention. Public transport provision was also considered poor and that intervention within the plan period was not considered deliverable. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. Finally, the area is considered to have no scope for development due to the openness of the landscape limiting the opportunity to create a new firm settlement boundary.

The introduction of development would impact on the rural setting to the northeast of Ratho and the Union Canal from which scenic northward views can be enjoyed.

The existing green belt boundary is robust, formed by thick planting and a steep banking (made ground/former landfill site). Aside from the Canal to the south, the site lacks features readily able to provide an alternative green belt boundary to the north and east.

As a result, the council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 6. North of Ratho**

#### Taylor Wimpey (0770)

The site North of Ratho is within the Edinburgh Green Belt.

The North of Ratho site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology and the results are on p249. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 5, within the Norton Mains area. The Housing Study found the area was within walking distance to employment clusters but access was impeded by a poor walking environment, that although the area does have access to the wider cycle network access is impeded by the Union Canal path which is at capacity and unlikely to be improved due to it being a canal tow path and a scheduled monument. Public transport provision was also considered poor and that intervention within the plan period was not considered deliverable. Therefore, it is likely to encourage car based trips contrary to outcome of the Plan where you don't need to own a car to move around. Finally, the area is considered to have no scope for development as any development would be visually

prominent in long views from the M8, more open sections of the Union Canal and parts of Ratho, and would conflict with the linear settlement pattern of Ratho.

The site undulates to the west and whilst the highpoint could be retained as open space, the additional height of development elsewhere on site would remain prominent.

Aside from the M8 to the north, the landscape to the east is open and lacks features readily able to provide an alternative green belt boundary.

As a result, the council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 7. Baird View, Ratho**

#### Tarmac (0244)

The site Baird View is within the countryside policy area, and part of the site is within a special landscape area.

The Baird View site at Ratho was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology and the results are on p184. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 5, within the Arbor Lodge area. The Housing Study found the area was not within walking distance to employment clusters and unlikely to be improved, that although the site does have access to the wider cycle network access is impeded by the Union Canal path which is at capacity and unlikely to be improved due to it being a canal tow path and a scheduled monument. Public transport provision was also considered poor and that identified intervention would not support travel by public transport. Therefore, it is likely to encourage car based trips contrary to outcome of the Plan where you don't need to own a car to move around. Finally, the area has some limited scope for development on the northern part of the area where it is more visually discrete, despite some conflict with the linear settlement pattern of Ratho. But the remainder of the area, incorporating the ridge and south-facing slopes are an important well-wooded component of the settlement of Ratho. Any development in these locations would impact adversely on the character of hills and ridges which enclose and contribute to the visually prominent setting of Ratho as viewed from its historic core and the Union Canal.

As a result, the council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 8. Craigiehall Estate**

#### Hallam Land (0615), Defence Infrastructure Organisation (0124), Defence Infrastructure Organisation (0665)

The site at Craigiehall is an established use within the green belt, a historic garden/designed landscape, part of the site is within the airport public safety zone, and part of the site is within an area of importance for flood management. The site was formerly used by the MOD.

The Craigiehall Estate site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology; the results are on p268. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 6, within the Craigiehall area. The Housing Study found the area was not within walking distance of local convenience services, apart from Craigiehall Farm shop which cannot provide an appropriate level of amenity, this is unlikely to be improved and the site is also not within walking distance of employment clusters and that is unlikely to be improved. The study found that the area had partial access to the cycle network but would not support active travel overall. Public transport provision was also considered poor and identified interventions would not support travel by public transport. Therefore, it is likely to encourage car based trips contrary to outcome of the Plan where you don't need to own a car to move around. Finally, no scope was identified for major development in this area due to its contribution to the setting and character of North-West Edinburgh, with its highly visible location as seen from the A90, Craigie Hill and the B9080 and any development breaching the robust settlement boundary formed by the River Almond valley. The study noted the existing MOD housing on the site and considered there may be some limited scope for low density housing to replace the existing MOD buildings only. Any limited development would need to be accompanied by restoration of the designed landscape, including the parkland, trees and woodlands.

Craigiehall contributes to the range of policy landscapes providing a high-quality landscape setting to the northwest of Edinburgh. Extensive development in this location would breach the robust settlement boundary provided by the River Almond.

The Council recognises the previous use of the site by the MOD and considers there is some scope for a modest development to replace or reuse the existing low density housing, however, it does not consider there is scope for a major housing development due to the lack of accessibility to active travel and public transport which is likely to result in increased car based travel contrary to the objectives of the plan.

Part of the site is within the airport public safety zone. This in combination with noise issues associated with the airport, means that it is likely to be difficult to achieve a satisfactory layout and adequate levels of amenity for future residents.

As a result, the council does not consider there is justification for the allocation of this site for housing development nor for an associated place policy.

The Council has prepared an Environmental Report that carries out a strategic environmental assessment of the plan and its strategy. The Council has not received any significant criticism of the assessment approach adopted or the findings of the report by the consultation authorities (Nature Scot, Historic Environment Scotland, and Scottish Environment Protection Agency).

The Council Commissioned Ryden to prepare the Edinburgh Commercial Needs Study: Mixed Use Delivery report (CD036) to update the 2018 Commercial Needs Study: Industrial Property Market report (CD035) and to consider the impacts of Option 1 of Choices for City Plan 2030. Option 1 was to deliver all development within the urban area. The Council considers the findings of the report helpful for its purpose of understanding the overall implications of the Plan's development strategy in terms of its impact on employment land. The Council's view is that the approach and policies set out in the Plan seek to minimise the loss of employment uses and is expected to have positive benefits overall compared to

the existing policy position set out in the adopted LDP. The impacts of the specific developments on employment land will be considered at the time of proposals coming forward. In addition, the Council considers that the use of CPO powers is unlikely to be required. The Council sets out its position in detail on these matters in its responses in Issue 3: Delivery of the Strategy. **No modification proposed.**

### **Site 9. Craigmock Road**

Cala Management (0180), Calex Group Ltd (0556)

The site at Craigmock Road is within the green belt, a special landscape area, a local nature conservation site, a local biodiversity site and an area of open space.

The Craigmock Road site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology; the results are on p331. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 7, within the Craigmock Road area. The Housing Study found the area did not have access to the wider cycle network and this was unlikely to be improved. Public transport provision was also considered poor and that identified intervention would not support travel by public transport. Therefore, it is likely to encourage car based trips contrary to outcome of the Plan where you don't need to own a car to move around. Finally, no scope was identified for development in this area due to its distinctive parkland character which features mature trees covered by a TPO, its contribution to the scenic parkland character of Corstorphine Hill, its contribution to views to and from Corstorphine Hill, steeply sloping topography and its designation as an SLA.

This site is a Local Nature Conservation Site and adjacent to Corstorphine Hill Local Nature Reserve. It is an important component of the wider ecological site, with mature trees and woodland edge mosaic habitats which connect and extend the main woodland area. This type of parkland grazing habitat is uncommon in Edinburgh and of biodiversity value.

Whilst the proposal includes green space provision and path access to Corstorphine Hill, to enable development, the steeply sloping ground is likely to require substantial building platforms and retaining walls, which may be visually intrusive and impact on tree protection.

As a result, the council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 10. Hermiston Park (East of Riccarton)**

Murray Estates (0197)

The site at Hermiston Park is within the green belt, there is a scheduled ancient monument, an area of importance for flood management, and there is a local biodiversity site within the development (Union Canal). In addition, part of the site is within a designated conservation area.

The Hermiston Park site covers a large area. It is within Sector 5 of the Housing Study. The majority of the site is within East of Riccarton area and a small part is within South of

M8 area. The East of Riccarton area was identified as a preferred site in the study if greenfield housing sites were required. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

The small part of the site that is within South of M8 did not score well under the assessment methodology; the results are on p163. Although the assessment area covers a larger area than proposed for development, the Council considers the findings are still relevant to all parts of the area. Although the area does have access to the wider cycle network access this is impeded by the Union Canal path which is considered to be at capacity, which is unlikely to be improved because it is a canal tow path and scheduled monument. Public transport provision was also considered poor and identified intervention would not support travel by public transport. With regard to landscape, the study identified scope for development within the East of Riccarton area. Whilst the area is visually prominent, it is influenced by the urban edge and other infrastructure and is of less rural character. Development would breach the robust boundary of the City Bypass, which could limit integration with the existing urban area, though Riccarton campus and Baberton Golf Course could provide the basis of a green belt boundary, strengthened by planting and wider landscape mitigation. Undergrounding of overhead lines would be required. In the area South of M8, no scope for development was identified due to its more strongly rural character of open rolling farmland which forms a setting for the Union Canal and contributes to the setting of Hermiston Conservation Area and 19<sup>th</sup> century villas set in wooded grounds. The area lacks robust features to the west to provide an alternative green belt boundary.

In the northeast of the area, the Union Canal runs in a dip in this location which limits views out from the water and towpath. Limited scope exists for small clusters of housing reflecting the character of existing settlement or on brownfield land.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 11. Ratho Station East**

#### Murray Estates (0197)

The site at Ratho Station East is within the green belt, and part of an area safeguarded for the potential relocation of the Royal Highland Centre.

The site is within sector 1 of the Housing Study and is part of the West Edinburgh area which was identified as a preferred greenfield site in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan. Strategic enhancement of Edinburgh Airport, which includes safeguarding this site for the possible relocation of the showground, is a national development identified in NPF3. While draft NPF4 does not continue the national development designation, until the approval of NPF4 it is considered appropriate that the site is safeguarded for the possible relocation of the Royal Highland Centre.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 12. East of Milburn Tower**

#### Murray Estates (0197)

The site at East of Milburn Tower is within the green belt. Within the site is an area of importance for flood control, a special landscape area and a local nature conservation site.

At the time the Plan was published the Scottish Ministers had yet to approve an application for planning permission in principle for the site. The Council took a decision not to formally allocate the site in the Plan, and retain it within the green belt, unless the proposal was approved. However, it should be noted that the site was factored into the housing land requirement calculation. The proposal has now been granted permission and should the Reporter consider it appropriate the Council would have no issue with identifying the site within the Plan in Table 2 and on the Proposals Map.

### **Site 13. The Drum and Drum (2)**

#### SEEDCo (0198)

The Drum site and its inclusive Drum (2) site are within the green belt. Part of the Drum site, including the Drum (2) site are within a special landscape area. Within the larger Drum site is also a Historic Garden/Designed Landscape, a Local Biodiversity Site and a Local Nature Conservation Site.

The site is within sector 2 of the Housing study and comprises the Drum North and Drum South areas which were identified as preferred sites in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of these sites for housing development. **No modification proposed.**

### **Site 14. South East Edinburgh**

#### T Klan (0307)

The South East Edinburgh site is within the Green Belt. Within the site is a Special Landscape Area, a Historic Garden/Designed Landscape, a Local Biodiversity Site and a Local Nature Conservation Site.

The site is within sector 2 of the Housing study and comprises the South East Edinburgh area which was identified as preferred site in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 15. Almondhill, Kirkliston**

BDW Trading and Taylor Wimpey (0199)

The Almondhill site at Kirkliston is within the Green Belt. Within the site is a Local Nature Conservation Site and a Local Biodiversity Site.

The site is within sector 6 of the Housing study and comprises the Kirkliston area which was identified as preferred site in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 16. East Kirkliston**

Miller Homes and Wheatland Farming Partnership (0592)

The East Kirkliston site is within the Green Belt. Within the site is a Local Nature Conservation Site and a Local Biodiversity Site.

The site is within sector 6 of the Housing study and comprises the Kirkliston area which was identified as preferred site in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 17. Muirwood Road**

Taylor Wimpey (0200)

The Muirwood Road site at Currie is within the Green Belt.

The site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology; the results are on p168. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 5, within the Baberton area. The Housing Study found the area is within walking distance of employment clusters but access is impeded by the poor walking environment along Riccarton Mains Road. The area has access to the wider cycle network but that is impeded by the Water of Leith path which is poorly overlooked, unlit and unsuited to

everyday journeys. In addition, upgrading the route without significant impact on the ecology of the area is considered unlikely and highly challenging. Public transport provision was also considered poor and identified intervention would not support travel by public transport. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. The Housing study methodology allows a comparative analysis of sites. The public transport accessibility level (ptal) analysis in the study takes account of number of services and frequency of those services. As a result, although the site has a 10 minute bus service at present, it does not necessarily means it scores well under ptal and therefore the number of public transport services available to the site is limited. The analysis is not implying there is no access to public transport, but it demonstrates that public transport accessibility is poor compared to other parts of the city. With regard to the rail station, it is located 2km from the centre of the site and therefore not considered very accessible in terms of walking distance. The study found there was some scope for development in this area due to it being visually contained, with existing housing and woodland providing opportunity to form robust new settlement edges but that overhead power lines form a constraint to development here. Overall, the study concluded the area was not suitable for development due to poor public transport accessibility.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 18. Curriemuir Vale**

#### Cala Management (0316)

The Curriemuir Vale site at Currie is within the Green Belt.

The site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 5, and covers three areas of analysis; Currievale, Weavers Knowe and East of Riccarton Mains Road. The results are on p170/1, p180/1, p247/8 . The Currievale area covers the majority of the site. The Housing Study found this area is within walking distance of employment clusters but access is impeded by the poor walking environment along Curriehill Road, and that the area has access to the wider cycle network but access is impeded by the Water of Leith path which is poorly overlooked, unlit and unsuited to everyday journeys. In addition, upgrading the route without significant impact on the ecology of the area is considered unlikely and highly challenging. Public transport provision was also considered poor and that identified intervention would not support travel by public transport. It should be noted that train services are included within the analysis. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. The Housing Study concluded that the area was not suitable for development due to its poor public transport accessibility. The Housing Study concluded that the Weavers Knowe area also had poor public transport accessibility, and it also considered there was no scope for development as it was likely to require the removal of the mature trees present on the site, adversely affecting this key part of the landscape setting. Finally, with regard to the East of Riccarton Mains Road area the Study similarly concluded the site had poor public transport accessibility.

The three greenfield assessment areas have distinct landscape and visual characteristics.

Some scope for development was identified at Currievale, being visually contained and forming a robust boundary to development to the north against the rail line, however, overhead power lines would constrain development.

No scope for development was identified at Weaver's Knowe, due to development requiring removal of existing mature trees forming the landscape setting to the Murray Burn.

Scope for development was identified at East of Riccarton Mains Road with screen planting on the low hill to the south of the site, however, overhead powerlines would constrain development.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 19. Bankhead, Balerno**

Simon Thompson (Glenpark Homes) (0248)

The Bankhead site is within the green belt and Pentlands Special Landscape Area. It comprises former agricultural land and buildings.

The Bankhead site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p148. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 4, within the Bankhead House area. The Housing Study found this area not to be within walking distance of local convenience services or employment clusters. It was found to have poor access to the wider cycle network and public transport and was unlikely to be improved. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. The area was also considered to have no scope for development due to its importance for the setting of Balerno and the Pentland Hills and position to the west of the robust settlement boundary formed by mature woodland along Cockburn Crescent. As a result, the Housing Study concluded that the area was not suitable for development. Although the site comprises a series of existing agricultural buildings and open space the Council does not consider this justification for supporting housing development on this site.

The site forms a small part of the greenfield assessment area. To avoid impacts in order not to detract from the wider landscape character and scenic quality of the area, only a limited extension to the existing converted steading of corresponding scale, height and form would be appropriate.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 20. Glenbrook Road, Balerno**

Simon Thompson (Glenpark Homes) (0248)

The Glenbrook Road site is within the green belt and Pentlands Special Landscape Area.

The site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p148. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 4, within the Bankhead House area. The Housing Study found this area not to be within walking distance of local convenience services or employment clusters. It was found to have poor access to the wider cycle network and public transport and this was unlikely to be improved. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. The area was also considered to have no scope for development due to its importance for the setting of Balerno and the Pentland Hills and position to the west of the robust settlement boundary formed by mature woodland along Cockburn Crescent. As a result, the Housing Study concluded that the area was not suitable for development.

The site forms a smaller part of the greenfield assessment area but contributes to the rural setting of Balerno and the Pentland Hills. Woodland enclosure exists to the south and west, however, the site lacks features readily able to provide an alternative green belt boundary to the north and would require additional woodland planting.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 21. Land at Goodtrees**

##### Hallam Land (0615)

The Goodtrees site is within the green belt and Pentlands Special Landscape Area.

The site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p130. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 4, within the Goodtrees Farm area. The Housing Study found this area not to be within walking distance of local convenience services or employment clusters. It was found to have poor access to the wider cycle network and public transport and this was unlikely to be improved. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. The area was also considered to have no scope for development due to its importance for the setting of Balerno and the adverse effect on the views toward the Pentland Hills and position to the west of the robust settlement boundary formed by mature woodland along Cockburn Crescent. As a result, the Housing Study concluded that the area was not suitable for development.

Development on this site would be distant from the core of Balerno and aside from mature woodland to its south, the site lacks features to its west readily able to provide an alternative green belt boundary.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 22. South of Cockburn Crescent**

Barratt David Wilson Homes (0677)

The South of Cockburn Crescent site is within the Green Belt and Pentlands Special Landscape Area.

The South of Cockburn Crescent site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology, the results are on p138. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 4, within the Marchbank House area. The Housing Study found this area was not within walking distance of employment clusters and unlikely to be improved. It also has poor access to the wider cycle network and public transport services and this was unlikely to be improved. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around.

Limited scope for development was identified in the northern part of the Marchbank House area, relating to the two fields within the representation site and associated with existing unscreened housing at Cockburn Crescent. Existing shelterbelts and field boundary trees give the opportunity to form new robust settlement boundaries. The Study concluded that the area was not suitable for development due to its poor accessibility.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

**Site 23. Highfield**

Taylor Wimpey (0200)

The Highfield site is within the Green Belt and the Drum Special Landscape Area.

The site is within sector 2 of the Housing study and forms part of the South East area which was identified as preferred site in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

**Site 24. Frogston Road East**

BDW and Catchelraw Trust (0209), Bo Adams (0363)

The Frogston Road East site is within the Green Belt, and part of the site is within an area of importance for flood management.

The Frogston Road East site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p51. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 2, within the South of Frogston Road East area. The Housing

Study found this area was not within walking distance to local convenience services or employment clusters and was this unlikely to be improved. The study also found this area did not have access to the wider cycle network and this was unlikely to be improved. The Study considered that there was no scope for development on this area due to its strong contribution to the setting of the city, visually prominent location and being beyond the firm settlement boundary formed by Frogston Road East.

The site forms a smaller part of the assessment area but its open rolling farmland contributes to the city's landscape setting and is highly visible from the By-pass, Frogston Road and Pentland Hills.

The proposal would breach firm green belt boundaries to the north and east. The site's west edge is open, lacks features readily able to provide an alternative green belt boundary and high voltage powerlines present a physical constraint. The Study concluded that the area was not suitable for development due to its present use, landscape character and contribution to the green network.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 25. Alnwickhill Road**

##### MacTaggart and Mickel Homes (0312)

The Alnwickhill Road site is in the Green Belt and a Special Landscape Area.

The Alnwickhill Road site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p49. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 2, within the South of Liberton Drive area. The Housing Study found this area did not have good access to the wider cycle network and this was unlikely to be improved. The study found the area had no scope for development due to its visual prominence and importance for the setting of the Braid Hills and the city and was of value to the strategic green network.

The site forms a small part of the assessment area, to its southeast, however, development in this location would impact upon the rural character of the Braid Hills and would be visually prominent in views from Holyrood Park and other elevated vantage points.

Whilst maturing woodland lies to north of the site, new structural planting would be required to the west, which lacks features readily able to provide an alternative green belt boundary to contain views from the Braid Hills.

The existing green belt boundaries and their open nature permit visual appreciation of the city's landscape setting. In combination with Site 44, allocation of the site would weaken the integrity of the green belt in this location.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

## Site 26. Calderwood

### Stirling Developments Ltd. (0303)

The Calderwood site is within the countryside policy area.

The site is within sector 5 of the Housing study and comprises the Overshiel, Bonnington and Linwater areas and was identified as preferred site in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

## Site 27. North of West Craigs

### West Craigs Ltd. & Dunedin Canmore (0352)

The North of West Craigs site is within the green belt and part of the site is within a Historic Garden/Design Landscape and Special Landscape Area.

The site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p23. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 1, within the Cammo Southern Parkland area. The Housing Study found this area is not within walking distance to local convenience services and that this is unlikely to be provided for, and the site has poor access to the wider cycle network, which is unlikely to be improved so would not support active travel overall. It also has poor access to public transport, this is unlikely to be improved and therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. Finally, the study considered there is no scope for development as the area is prominent in views from Cammo, Barnton and from the A8 and A902 and is an important undeveloped backdrop to the allocated developments at Maybury and Cammo.

Due to the site's knolly landform, development in this location would require visually intrusive ground modification. It would also affect the setting of the Cammo Inventory Site, including the outlying features of the category B Listed stone dyke at the top of Mausley Hill, roundel of trees and Cammo Water Tower.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

## Site 28. Cammo Fields

### Dunedin Canmore HA (0766)

The Cammo Fields site is within the green belt.

The site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p23. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 1, within the Cammo Southern Parkland area. The Housing Study found this area is not within walking distance to local convenience services and that this is unlikely to be provided for, and the site has poor access to the wider cycle network, which is unlikely to be improved so would not support active travel overall. It also has poor access to public transport, which is unlikely to be improved and therefore is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. Finally, the study considered there is no scope for development as the area is prominent in views from Cammo, Banrton and from the A8 and A902 and is an important undeveloped backdrop to the allocated developments at Maybury and Cammo.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 29. Land at Burdiehouse**

#### Hallam Land (0457)

The land at Burdiehouse is within the green belt.

The site is within sector 2 of the Housing study and form part of the South East area which was identified as preferred site in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate provision of housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 30. Land at Burdiehouse Rd**

#### Azad Murdochy (0361)

The land at Burdiehouse Road is within a Local Nature Conservation Site and a Local Biodiversity Site (Burdiehouse Burn Valley).

The site was not included the greenfield assessment. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan.

This small site lies to the north of new housing at Burdiehouse on the east side of Burdiehouse Road and to the south of the Burdiehouse Burn valley and its associated area of importance for flood control. It is bounded by stone field boundary walls and includes tall ruderal and scrub vegetation. To its north a local view has been retained from Burdiehouse Road to the category B Listed Limekilns.

Whilst the site includes a frontage to Burdiehouse Road, very limited scope exists for a form of development that would both address a key approach to the city, integrate with

built form to the south and open space to the east, and respect views to the Limekilns to the north.

This site is within a Local Nature Conservation Site and adjacent to Burdiehouse Burn Valley Park Local Nature Reserve. The site forms an important component on the edge of the wider site. It contains features of biodiversity value including trees and habitat mosaic and should be retained as part of the larger LNCS and LNR large open space and greenbelt zone with biodiversity value.

Due to its low-lying nature and proximity to existing SUDs and Burdiehouse Burn, it was identified as part of a local open space proposal contributing to the Green Network as part of LDP housing site allocation HSG 22.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 31. Hatton Village (Hatton Mains)**

#### Inverdunning (Hatton Mains) Ltd (0427)

The land at Hatton Village is within the green belt.

The site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology; the results are on p214. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 5, within the Easter Hatton Mains area. The Housing Study found the area is not within walking distance of local convenience services or employment clusters and this is not likely to be improved. In addition, the area has poor accessibility to public transport which is unlikely to be improved. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. Finally, the Study found there was no scope for development due to the strong rural character and open landscape of this area which would be significantly affected by development which would be visible from the surrounding area including Ratho, Dalmahoy Road, the Ratho Hills and A71. The western part of the site forms part of the highly visible Ratho Hills ridge.

The site is promoted as a new settlement remote from Ratho and whilst existing woodland provides containment to the east, the site lacks features other than field boundaries to form an alternative green belt boundary.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 32. New Liston Road, Kirkliston**

#### Robertson Residential Group (0537)

The land at New Liston Road Kirkliston is within the countryside policy area and part of the site is within an area of importance for flood management.

The site was not included the greenfield assessment. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan.

The site lies north of the B800, east of the M9 which runs on a raised embankment and to the south of housing and open space at Kirkliston. The existing settlement to the north is edged by woodland and the Niddry Burn, a tributary of the River Almond. A more minor watercourse also runs east-west across the site. The site comprises gently rolling farmland, crossed by electricity poles and bounded by post and wire fence to the south. A scout hut lies to its north close to the Niddry Burn. The southern edge of the site subject to an Area of Importance for Flood Control and its western edge is influenced by traffic, an overhead gantry and noise from the nearby motorway. To its south within the Kirkliston Conservation Area, lie detached properties, including the Breastmill, Breastmill House and Maitland Bridge, which crosses the River Almond to the south. The site is not visually prominent in the wider landscape due to the screening effect of the existing settlement and M9 embankment, however, the site features in local views on the approach to Kirkliston from the west on the B800 and in glimpsed elevated views from the M9 with some screening by trees to the south. The B800 is part of the River Almond Core Path Route.

Whilst the site is not visually prominent from the wider area, it provides an open, rural setting to Kirkliston and its Conservation Area to the southwest. Any development would breach the robust settlement boundary formed by the wooded course of the Niddry Burn. Flood constraints could limit integration with the existing built up area.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 33. Norton Park**

#### Taylor Wimpey and Hallam Land (0603)

The Norton Park site is within the green belt and safeguarded for the potential relocation of the Royal Highland Centre.

The site is within sector 1 of the Housing study and forms part of the West Edinburgh area which was identified in the study. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Strategic enhancement of Edinburgh Airport, which includes safeguarding this site for the possible relocation of the showground, is a national development identified in NPF3. While draft NPF4 does not continue the national development designation, until the approval of NPF4 it is considered appropriate that the site is safeguarded for the possible relocation of the Royal Highland Centre.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 34. Lennie Cottages**

#### Roseberry Estate (0618)

The Lennie Cottages site is within the green belt.

The site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p21. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 1, within the Turnhouse Golf Course area. The Housing Study found the area is not within walking distance to local convenience services and this is unlikely to be improved. The area does not have access to the wider cycle network and this is unlikely to be improved. In addition, the area has poor accessibility to public transport which is unlikely to be improved. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. Finally, the Study found the area has no scope for development due to its prominence in views across the River Almond valley and from the A8 and its provision of an important undeveloped backdrop to the allocated developments at Maybury and Cammo.

The Council acknowledges that the site forms a small part of the overall greenfield assessment area and scale of development proposed is unlikely to affect wider views or the integrity of the Green Belt boundary along Craigs Road and Lennie Hill.

Nevertheless, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 35. Lang Loan**

Miller Homes Ltd (0649)

The Land Loan site is within the green belt.

The site is within sector 2 of the Housing study and form part of the South East area which was identified as a preferred site in the study. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

With regard to the Environmental Report (CD010) the Council is required to carry out a strategic environmental assessment of the Proposed Plan in accord with the requirements of the Environmental Assessment (Scotland) Act 2005 (CD146). The purpose of the assessment is to identify the significant environmental effects of the Plan and to identify mitigation to seek to offset any impacts that cannot be avoided. As a result, it comprises an assessment of the content of the Plan as published. As the Council took a decision not to include additional new greenfield sites for housing led development within the Plan, such as Lang Loan, there is no requirement to assess them or re-evaluate the assessments set out in the draft Environmental Report.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 36. Land south of Murrayfield Hospital**

Spire Healthcare Ltd (0719)

The site is within the green belt, a special landscape area and an area of open space.

The site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology; the results are on p327. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 7, within the Murrayfield Hospital area. The Housing Study found the area is not within walking distance of employment clusters and this is unlikely to improve. In addition, the study found that the attractive parkland character, mature woodland which coalesces in more distant views and the steeply sloping topography of the site restricts development. It also considered the site to be of value for the strategic green network due to lying within an area identified as a green network opportunity and the site is largely designated as public open space associated with the hospital.

The site relates to the south and west of the assessment area, where development would impact on the parkland setting of and outward views from the category A Listed Beechwood House. Development in this location and the site access road proposed to its south are likely to impact on tree boundaries which maintain the wooded character of and views to Corstorphine Hill. The study concluded the site was not suitable for development.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 37. Land east of Winton Gardens**

#### Esk Property LLP (0726)

Land east of Winton Gardens is in the green belt, a designated conservation area (Norton Mains) and a special landscape area.

The site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p97. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 3, within the Morton Mains area. The Housing Study found the area is not within walking distance of local convenience services or employment clusters and this is unlikely to improve. The area also does not have access to the wider cycle network and is not likely to support active travel overall. In addition, the Study considered the area had no scope for development due to its visually prominent location which forms a robust edge to urban development and the area may be considered of value for the strategic green network due to lying within an area identified as a green network opportunity. The study concluded the site was not suitable for development.

The site forms a smaller part of the assessment area but conforms to its characteristics and qualities. The site lacks robust alternative green belt boundary and would require substantial planting. Overhead lines may pose a constraint to the southeast.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 38. Land at Baberton Road**

#### Stoddart Family (0749)

The land at Baberton Road is within the green belt.

The site is within sector 5 of the Housing Study and forms part of the East of Riccarton area which was identified as preferred site in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 39. Edge of Edmonstone Estate**

#### Scottish Enterprise (0760)

The site is within the green belt, a special landscape area, a local nature conservation site and a local biodiversity site.

The site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology; the results are on p59. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 2, within the South East Wedge Parkland area. The Housing Study found the area was within walking distance of local convenience services and employment clusters and had partial access to the wider cycle network. Although the site was considered not to support travel by public transport, it was considered to partially support travel in terms of an identified major intervention (tram safeguard TR8 and South Orbital Bus route PT9). In addition, the area as a whole was considered not to have scope for development due to the importance for the setting of the urban area and strong visual links with other hills and greenspaces, including the Braid Hills, Holyrood Park and Craigmillar Castle Park. As a result, the Study concluded the area was not suitable for development.

Due to the sloping topography, any development of the site would be highly intrusive. The Edmonstone ridge is one of the semi-natural hill landscapes that punctuate the urban area and form the southern backdrop to the city and would be adversely affected by development in this location. The area is also considered of value for the strategic green network.

This site is within a Local Nature Conservation Site (LNCS) and forms an important component on the edge of the wider site. It contains features of biodiversity value including trees, woodland edge and habitat mosaic. It is adjacent to areas within the LNCS which are on the Ancient Woodland Inventory and should be retained as part of the larger LNCS open space and greenbelt zone with biodiversity value.

The Council recognises there has been considerable change in this area. In addition, it recognises that the Housing Study results look at the South East Wedge Parkway area as a whole, rather than just the edge of Edmonstone Estate area. The Council acknowledges that the whole of the proposed site is within 10 minutes walk of a bus stop on a public transport corridor (Dalkeith Road), which scores well for public transport accessibility with frequent services.

Overall, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 40. Lanark Road West**

John Brady (0353)

The Lanark Road West site is within the green belt.

The site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology; the results are on p142. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 5, within the Dalmahoy Hill and Ravelrig Hill area. The Housing Study found the area was not within walking distance of local convenience services or employment clusters nor was this likely to be improved. The area has access to the wider cycle network via a quarry road but access is impeded by the Water of Leith path which is poor and upgrading is considered unlikely without an impact on the ecology of the area. The area also has poor access to public transport and is unlikely to be improved. Finally, the area was considered to have no scope for development due to the prominence of these hills and the physical constraints associated with developing steep slopes.

The site forms a small part of the wider South of Dalmahoy assessment area, adjacent the South of Ravelrig area.

Despite more recent tree removals, only very limited scope for small scale development, set back from the road exists due to the site's elevated and visually prominent corner location on the settlement edge. Dense development would be contrary to the settlement pattern along the valley of the Water of Leith and impact on its rural character.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 41, Land south of Gilmerton Station Road**

MacTaggart and Mickel Homes (312)

The land south of Gilmerton Station Road is within the green belt.

The site is within sector 2 of the Housing Study and form part of the South East area which was identified as a preferred site in the study. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 42. East Foxhall**

Landowner of East Foxhall (0544)

The site at East Foxhall is within the green belt, part of the site is within the safeguard for a potential additional runway at Edinburgh airport and the edge of the site is in an area of importance for flood management.

The site is within sector 6 of the Housing Study and comprises the Kirkliston area which was identified as preferred site in the study should greenfield housing sites be needed. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan. Therefore, the Council took a decision not to allocate this site in the Plan.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 43. Riccarton Village**

#### Miller Homes (0256)

The Riccarton Village site is within the green belt. There is also an area of importance for flood management within the site.

The site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology; the results are on p165. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 5, within the South of Riccarton area. The Housing Study found the area was not within walking distance of local convenience services and this is unlikely to be provided for. The site has access to the wider cycle network but is impeded by the Water of Leith path, upgrading would be difficult without a significant impact on the ecology of the area. The area also does not have good accessibility to public transport. Therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. The Study concluded the site was not suitable for development due to its poor transport accessibility. The site was considered to have some scope for development being visually contained with woodland and landform providing a basis for new settlement boundaries. No scope for development was found in that part of the site to the north of Long Dalmahoy Road, which would impact upon the more rural valley landscape. Overhead powerlines to the south and flood risk in the southeast pose constraints to development but is considered of value for the strategic green network.

With regard to the Environmental Report the Council is required to carry out a strategic environmental assessment of the Plan in accord with the requirements of the Environmental Assessment (Scotland) Act 2005 (CD146). The purpose of the assessment is to identify the significant environmental effects of the Plan and to identify mitigation to seek to offset any impacts that cannot be avoided. As a result, it comprises an assessment of the content of the Plan as published. As the Council took a decision at the Main Issues Report stage to only include its preferred new greenfield sites for housing led development within the Choices for City Plan 2030, such as East of Riccarton, there was no requirement to include an assessment of other greenfield sites in the draft Environmental Report (CD024).

The Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 44. Alnwickhill Road**

##### Juniper Residential Ltd (0786)

The site at Alnwickhill Road is within the green belt, and a special landscape area.

The Alnwickhill Road site was not identified as a preferred location in the Council's Housing Study as it did not score well under the assessment methodology; the results are on p49. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 2, within the South of Liberton Drive area. The Housing Study found this area did not have access to the wider cycle network and this was unlikely to be improved. The Study found the area had no scope for development due to its visual prominence and importance for the setting of the Braid Hills and the city and was of value to the strategic green network.

The site forms a small part of the assessment area, to its northeast, however, development in this location would impact upon the rural character of the Braid Hills and would be visually prominent in views from Holyrood Park and other elevated vantage points.

The existing green belt boundaries and their open nature permit visual appreciation of the city's landscape setting from the urban edge. In combination with Site 25, allocation of the site would weaken the integrity of the green belt in this location.

This site forms an important part of a wider green network. It contains features of biodiversity value, particularly the boundary wooded strip and trees, and habitat mosaic on the urban edge, and should be retained as part of a larger open space and greenbelt zone with biodiversity value.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 45. Land East of Mounthooley Loan**

##### Catchilraw Trust (0137)

The site is within the green belt, a special landscape area, a local nature conservation site and a local biodiversity site.

The Alnwickhill Road site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p99. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 3, within the Mortonhall area. The Housing Study found this area was not within walking distance of local convenience services and this was unlikely to improve. The area does not have access to the wider cycle network and this is unlikely to improve and would not support active travel overall. The site also does not support travel by public transport and therefore, it is likely to encourage car based trips contrary to the outcome of the Plan that you don't need to own a car to move around. Finally, the study concluded the area had no scope for development due to its designation as a special landscape area and its value to the strategic green network.

The site relates to the assessment area's west edge adjacent Mounthooley Loan and Frogston Road. Development in this location would impact adversely on the character of sloping, wooded farmland comprising the policies of Mortonhall House, which provide a robust edge to the urban area and are prominent in views from the Pentland Hills.

The site contributes to the unbroken landscape scale green network stretching from Midlothian to Blackford Hill.

This site is within the Braid Hills and Mortonhall Local Nature Conservation Site and forms an important component of the wider site. It is part of a complex habitat mosaic containing features of biodiversity value e.g. trees and a mosaic of woodland edge and other habitat. It is bounded to the north and west by areas on the Ancient Woodland Inventory and should be retained as part of the larger LNCS open space and greenbelt zone with biodiversity value.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 46: West of Burdiehouse Road**

Gordon Henderson (0164)

The site is within the green belt.

The site was not included the greenfield assessment. However, for the reasons set out in the Council's housing position statement above it considers there is an adequate housing land supply and allocated sites are considered deliverable in the period of the plan.

The site comprises a strip of maturing woodland to the southeast of Burdiehouse Square, situated between Old Burdiehouse Road and the dual carriageway at Burdiehouse Road (A701).

It is visually prominent on the approach to and from the city on the A701. The tree cover contributes to the local townscape and screens a large electricity distribution site to the west. Overhead power lines cross the site to the south.

The site has no scope for development. Whilst roadside development exists to the north, any development would require extensive tree removal would impact on the setting of the city from a key arterial route. The site narrows and becomes more constrained to the south, where overhead lines would also limit development.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 47: Gogar Mount**

NatWest 0477

The site is within the green belt, a special landscape area, and part of the site is within an area of importance for flood management.

The Gogar Mount site was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology, the results are on p49. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 1, mostly within the SASA area. The Housing Study found the area was not within walking distance of local convenience services and this was unlikely to improve. The area does not have access to the wider cycle network and this is unlikely to improve. The area does not support travel by public transport but does have limited support for travel based on an identified transport intervention (Tram safeguard to Newbridge TR10 and orbital bus route West Edinburgh A8 corridor PT4). Finally, in terms of landscape the study considered the site had no scope for development due to significant adverse effect on the largely rural character of the area, and the statutory work undertaken by SASA, despite the limited visibility of the area and potential for robust new settlement boundaries.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

#### **Site 48: Peffermill**

##### University of Edinburgh (0464)

The site is within the green belt, and area of open space, and part of the site is within a special landscape area.

The Peffermill site was not identified as a preferred location in the Council's Housing Study as it did not score particularly well under the assessment methodology, the results are on p87. The site is in greenfield sector 2, within Peffermill Playing fields area. The Housing Study found the area had access to local convenience services and employment clusters. It also had partial access to public transport although it had scope for improvement. However, the study found the site had no scope for development due to the number of landscape constraints on the site as well as the risk of flooding. In addition, the study considered the site was of value to the strategic green network, due to lying within an area identified as a green network opportunity in Edinburgh itself.

The Council acknowledges that the site is currently used for recreation as playing fields by the University and that some intensification of use, including development, could be supported, particularly given its detached nature from the wider green network, subject to an appropriate design response to respect the landscape importance of the site. No modification proposed, however, should the Reporter be so minded the status of the site may be reconsidered for specific university uses.

#### **Site 49: Wisp**

##### Springfield Properties (0239)

The site is within the green belt, a Green Blue Network Proposal (BGN46 South East Wedge Parkland) and an active travel proposal (ATPR25) passes through the site.

The Wisp site was not identified as a preferred location in the Council's Housing study as it did not score particularly well under the assessment methodology and the results are on p59. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 12, within South East Wedge Parkland area. The Housing Study found

the area was within walking distance of local convenience services and employment clusters, and although it did not have access to the wider cycle network it could be improved. With regard to public transport it did not support travel by public transport but there was limited scope based on an identified major intervention.

The key reason why the site was not supported was because of the importance of the landscape for the setting of the urban area and strong visual links with other hills and green spaces. Due to topography any development would be highly visually intrusive. In addition, the area was considered of value for the strategic green network due to lying within an area identified as a green network opportunity in Edinburgh itself. The South East Wedge Parkland has recently been designated open space and contributes to the unbroken landscape scale multi-functional green network stretching from Midlothian to Holyrood Park.

As a result, the Council does not consider there is justification for the allocation of this site for housing development. **No modification proposed.**

### **Site 50: Lochend**

#### Aviagen (0365)

The site was not included the greenfield assessment.

The site is within the countryside policy area and within the airport public safety zone. The site comprises a relatively small triangular parcel of scrub vegetation and occasional trees, field boundary planting, and woodland to the west along the Core Path 10, Newbridge to Queensferry and Kirkliston. It sits between the M9 to the west, Aviagen premises to the south and single storey cottages on Lochend Road to east adjacent Edinburgh Airport. A sewage works and Hallyards Woods Local Biodiversity Site lie further to the north.

The site is not particularly visually prominent being situated on flat, relatively low-lying land bordering farmland in the lower Almond basin and the airport's open runways, with the flight path having a strong bearing on noise and visual impact. Planting on adjacent slip road also limits views from main road network. In landscape terms, some scope for development may exist, however, due to its location within an airport public safety zone the Council does not support identifying the site as being within the built up area and in turn encouraging the use of the site for development. **No modification proposed.**

#### **Reporter's conclusions:**

#### **Reporter's recommendations:**

### **106-114 Dundas St (Centrum House).**

#### New Town Dundas Street Residents (0795)

A planning application for this site was refused by the Council. Any future planning application for this site should be required to reflect the Planning Committee's views, as set out in the DMSC meeting on 8 September 2021.

### **Highfield Gilmerton**

#### Nigel Baillie (0093)

The Spatial Strategy map shows that the greenbelt is maintained along Ferniehill Road where it meets The Old Dalkeith Road. The area known as Highfield Gilmerton should remain greenbelt land. It is adjacent to the Drum Woods which is a conservation area with protected species present. It should not be developed as neighbouring greenfield sites have been destroyed through overdevelopment. The South East Edinburgh Green belt has, lost 205 of 713 hectares from Burdiehouse to Brunstane to recent development. Allowing development on this Highfield area would go against policies 3 Nature Crisis and 32 Natural Places, Natural Planning Framework 4

### **Land between Cramond Road North and Cramond Road South**

#### Gavin Sears (0405)

I would like to support and ensure clarity that the spatial strategy is clear that the land between Cramond Road North and Cramond Road South previously designated for a sports development remains as greenbelt.

### **Torphin Road**

#### Judith McLean (0794)

Planning permission should not be granted for any kind of housing development on the car park. This car park is part of the Pentland Regional Park and there is support in the local community for it to be bought back by the Council / Regional Park under a compulsory purchase order. It could then be used for parking for easy access to the Pentland Hills.

Should be classed as Greenbelt and not brownfield land.

### **Russel Road**

#### Russell Road Edinburgh Ltd (0739)

The site is currently proposed as 'Urban Area' in the context of the Proposed Plan. In light of the opportunity presented to deliver a regeneration approach for the site, and surrounding context it is recommended that the Russell Road area is identified as a Place Policy with suitable guidance on the approach to delivering a residential led opportunity included within the finalised plan. The site presents an opportunity to bring forward

regeneration of the wider area through a combined and coordinated vision to maximise value and regeneration benefits to this area of the city. The subject site presents an opportunity for housing led mixed use development.

The site and its surrounds are currently characterised by a mix of industrial and trade uses. Circumstances are changing in relation to a number of these ownerships, which is positive in the context of a potential approach to bring forward a coordinated redevelopment of the wider site. It is noted that discussions are ongoing with landowners.

The site is in a prime position, being one of the last key brownfield opportunities in close proximity to the city centre, and with the changing nature of elements of the surrounding environment and land uses, presents an opportunity to look at the wider site. The current configuration and mix of uses on the site can be viewed as a missed opportunity in terms of the connectivity between Roseburn and Gorgie / Dalry, and the opportunity to introduce more active uses could significantly improve the quality of environment, connectivity and safety and security of pedestrian and cycle routes through the area.

The subject site lies in close proximity to the existing greenspaces of Murieston Crescent and Roseburn Park. The site is in a pivotal location with opportunity to better connect the neighbourhood centres of Roseburn and Gorgie. The aspirations for the site provide an opportunity to link into the proposed Roseburn / Fountainbridge green network linkage, with the Russell Road site sitting directly on a new cycle link planned to connect the nearby Roseburn and Union Canal Paths which will integrate it with the wider cycle network. The proposed site could easily and effectively link into existing active travel routes providing good connectivity into the rest of the City.

CEC want City Plan 2030 to direct development to where there is existing infrastructure capacity. The subject site and wider area are conveniently located within existing infrastructure, including education, healthcare and sustainable transport connections.

### **New Mart Road, Chesser**

Watkin Jones Group / New Mart Road Limited (0593), Watkin Jones Group (0516)

The site is currently considered as a 'Commercial Centre' in the adopted LDP, and in the proposed City Plan this has been amended to a local centre in Table 14. Submit that New Mart Road should be considered as a Place within the Proposed Plan, and appropriate guidance provided to maximise the opportunity of this location as a genuine mixed use opportunity in a key node of the city with excellent accessibility and connectivity.

WJG are progressing discussions with the Council on a residential led BTR and student accommodation development at New Mart Road, and a formal planning application is to be lodged in January / February 2022. The current approach being progressed by WJG in seeking a residential led regeneration of the New Mart site is directly as a result of the current operations at World of Football and World of Bowling no longer being viable as an ongoing business.

City Plan 2030 introduces an ambitious approach to housing policy in seeking to maximise the use of brownfield land rather than greenfield. The WJG support this aim, however caution that the approach needs to be deliverable, and to meet the expected housing requirements throughout the lifetime of the plan. It is recognised that many of the identified

brownfield housing land opportunities are currently in active alternative use and with no immediate prospect of conversion to housing. WJG wish to highlight that the site at New Mart can be considered to be a valuable future brownfield opportunity which can directly contribute to the evidence base in the City Plan.

## **Glenogle Road**

### Abrdn (0425)

The Glenogle Road site should be identified as a housing proposal. The site occupies a key urban location in the Inverleith area of Edinburgh. It is bounded to the north by the Water of Leith, to the east by Brandon Terrace comprising residential tenements with commercial uses at ground floor, to the west is predominantly residential areas including the Glenogle Park Colonies and to the south, the site is bounded by Glenogle Road itself.

The Glenogle site extends to approximately 0.65 hectares and is currently used by Abrdn as a data centre with limited ancillary office space and associated car parking. The facility is scheduled to become redundant and surplus to requirements in approximately 5 years.

Using the Council's assessment matrix from Choices the sites development potential has been assessed:

#### *Active Travel:*

Does the site support travel by foot to identified convenience services? **Yes**

The site is well located for access to grocery shopping, being within 5-10 minutes walk of both the Tesco and Lidl supermarkets supplemented by the availability of local convenience shops.

Does the site support travel by foot to identified employment clusters? **Yes** - The site is well located for access to identified employment clusters and is adjacent to a number of existing employment sites, including substantial office buildings at Tanfield, Brandon St and Henderson Row. While notably the site lies within 1,000 metres of George Street, at the heart of the city centre and the various employment opportunities this provides.

Does the site have access to the wider cycle network? **Yes:** - The site has convenient access to both the Quiet Routes and National Cycle networks.

#### *Public Transport*

Does the site support travel by public transport? **Yes:-** The site benefits from being located close to bus stops on Brandon Terrace, Inverleith Terrace and Canonmills which are served by a number of bus routes providing a frequent and convenient service. The Edinburgh Tram line and other city centre transport facilities including the Bus Station and Waverley railway station are also within walking and cycling distance.

#### *Community Infrastructure*

Does the site have sufficient primary school infrastructure to accommodate the development without further intervention? **Partially:-** The Council's Education appraisal which supports City Plan 2030 identifies that Stockbridge primary school has a capacity of 294 pupils and a baseline peak of 251 before development proposals. Pupils generated by developed in the LDP 2016 and City Plan 2030 are expected to increase primary school pupils to 300, based on projected school role projections. The education appraisal also

advises that the Council is considering a catchment change to Stockbridge primary school to address development proposals in the area. However, the Background Monitoring Statement which supported Choices for City Plan 2030 and shows the projected capacities at Edinburgh's schools in 2032 shows that Stockbridge Primary has a projected capacity at 2032 of up to 100 and St Mary's Roman Catholic Primary School has a projected capacity of 101-200 spaces. On the basis of the above, a further review of school provision is required, but it is considered that any primary school capacity issues could be mitigated through appropriate intervention, including contributions from residential development to enable the release of the site for development.

Does the site have sufficient secondary school infrastructure capacity to accommodate the development without further intervention? **Partially:-** The site falls within the Broughton High School Catchment which is currently operating at above capacity. However the Council's education appraisals identifies that additional pupils from new housing development could make a contribution towards increasing its capacity.

#### *Flood Risk*

Would development of the site avoid identified areas of 'medium-high flood risk' (fluvial) or areas of importance for flood management? **Yes:** - Council's strategic flood risk assessment identified the site as one which may be subject to flood risk from fluvial and surface water and that a flood risk assessment would be required to support development in this area. Ramboll has prepared a floodrisk assessment of the site. The findings of the floodrisk assessment concludes that the site is located in an area of low flood risk from all sources:

- Fluvial/Tidal – the site is in an area of Low likelihood of fluvial flooding. Adjacent to the site is the Water of Leith whereby a High risk of flooding is associated. However, this is not shown to have an effect within the site boundary.
- Surface Water – a risk of surface water ponding is shown on the southern site boundary, this occurs in an area of low topography and mitigation measures including the development of a new drainage strategy for the proposed development are in place to mitigate any impacts from surface water or sewer flooding.
- Sewer Flooding – similar to surface water, there is a risk that sewer surcharge and flooding could lead to overland flow on the southern site boundary, although no information regarding the capacity of the existing public system was available.
- Groundwater – considered to be a Low based on a review of groundwater levels and site topography.
- Reservoirs, Canal and Other Artificial Sources – considered to be Low based on no potential sources being located within vicinity of the. The SEPA flood map also identifies that the site is at low risk of fluvial flooding.

#### **Tesco – Davidsons Mains**

Redline Planning Services Ltd (Tesco) (0673)

Tesco request that their store and car park at Davidson Mains (shown in document RLP02) is identified as a development opportunity in the LDP. This should include the specific allocation of the site for housing on the LDP proposals map, and the inclusion of

the site within table 2 of Part 4 of the Proposed LDP as capable of accommodating c.100 units.

The Tesco store and car park is located within the Davidson Mains Local Centre Planning permission ref. 20/01410/PPP was resolved to be granted for the development of 36 flats in October 2020 on land including part of the Tesco car park site to the rear of the store. In resolving to approve planning permission, Members of the City of Edinburgh Council Planning Committee found that these proposals “would not undermine the function of the centre” and that the “the proposed residential use would create homes immediately adjacent to the local centre, which could mutually benefit both residents of the development and Local Centre itself through additional footfall and vitality.” Tesco maintain their ambitions to undertake a high density, residential led mixed use development on their land at Davidson Mains. This will build on the principles established as part of the consideration of application ref. 20/01410/PPP and will involve a flatted development above a continued retail offer.

### **Tesco – Broughton Road**

#### Redline Planning Services Ltd (Tesco) (0673)

Tesco request that the opportunity to deliver a high-density residential development above their existing Broughton Road store and car park is incorporated into the Proposed LDP. This should include the specific allocation of the site for housing on the LDP proposals map, and the inclusion of the site within table 2 of Part 4 of the Proposed LDP.

Tesco are also in discussions with operators about the potential for a flatted/PRS/student housing development above their store at Broughton Road (i.e. a vertical extension occupying the air rights over the store) and have engaged in discussions with officers at the City of Edinburgh Council about the potential use, form, scale and design of this development. Tesco firmly believe that this intensification of uses on their Broughton Road site will underpin the Proposed LDP key policy driver a sustainable and net zero city. This form of development represents the efficient use of land, will help maintain viability of services within the local centre, encourages effective provision of public transport and help to deliver “A city in which everyone lives in a house which they can afford” (as set out on pages 26-29 of the Proposed LDP).

### **Tesco – Corstorphine**

#### Redline Planning Services Ltd (Tesco) (0673)

Tesco request that their committed residential development on land at their Corstorphine store (show in document RLP01) is reflected as an allocation on the LDP proposals map and within table 2 of Part 4 of the Proposed LDP as a site capable of accommodating 24 units.

### **Tesco - South Gyle**

#### Redline Planning Services Ltd (Tesco) (0673)

Tesco request identifying the Tesco landholding at South Gyle as a specific housing led mixed redevelopment opportunity within EP4 of Place 19 Edinburgh Park/South Gyle.

Tesco Personal Finance PLC has a 4.3 ha landholding at 2 South Gyle Crescent, Edinburgh. This is occupied by the headquarters of Tesco Personal Finance, associated parking and vacant land. The existing office and 215 car park was approved in May 2006 (ref. 05/02513/FUL).

Permission was later approved for additional phases of office development on land around the Tesco Bank site. These were not however built out, and have since lapsed. Tesco can confirm that they no longer have any intention of developing offices on this land, and that the parcels are surplus to their requirements.

The housebuilder has advanced their development proposals for the site, and has undertaken pre-application consultation for the development of 300 new homes including affordable housing, retail, commercial space and a nursery. A component part of these proposals is the relocation of the existing car park adjacent to the Tesco bank premises, so that it does not bisect the residential development site. A site plan and copy of the indicative development layout has been supplied.

The CP 2030 identifies that the site forms part of the Edinburgh Park/South Gyle area of West Edinburgh. The Proposed LDP sets out that the Council's vision is to change the character of this area over time from a business dominated environment with limited evening activity to a thriving mixed use and well integrated part of the city (paragraph 3.64).

Place based policy 19 sets out specific land use planning considerations relevant to Edinburgh Park/South Gyle. This policy establishes that planning permission will be granted for development which maintains the strategic employment role of the area, and introduces a wider mix of uses. Various key requirements are set out to achieve this, including part c) which states that housing will be acceptable in principle "as a component of business-led mixed-use proposals". This requirement sits at odds with the vision to introduce a mix of uses to the area, and in particular in those locations which are already characterised by office development. In such locations, we do not consider that other uses (including housing) should have to be a component of business proposals, but instead that they should be able to stand on their own.

Therefore, request that this specific requirement is amended, to allow some flexibility in the policy wording to allow residential-led mixed-use proposals to come forward in these situations.

The Proposed LDP also sets out a series of development opportunities (EP1-EP5) shown on map 26. The landholding is located in area EP4 on map 26 of the Proposed LDP, and is identified as a 'Business led redevelopment' opportunity. Tesco object to this generic land allocation, and instead request that their surplus landholding at South Gyle is identified as a specific 'housing-led mixed redevelopment' opportunity within parcel EP4 (which should also be separately identified in the associated key, distinct from EP3). This allocation will more closely reflect the Council's vision to introduce a mix of uses in a location which is already characterised by office development, while also meeting Tesco's ambitions to dispose of the site to accommodate a residential-led mixed use development in an area. This form of development will also comply with overarching development requirements.

The development principles for the areas EP3-5 are summarised on page 79 of the Proposed LDP. Separate consideration should be given to areas EP3 and EP4. Specific allowance should also be made for the inclusion of residential-mixed use development proposals to come forward within are EP4, and we therefore request that this criterion is reworded.

This residential development opportunity should be is reflected in Table 2 of Part 4 of the Proposed LDP. Tesco are aware that separate representations have been made by others highlighting that there is a significant shortfall of allocated housing land to meet requirements. The identification of Tesco's land at South Gyle for housing development will therefore provide CEC with the necessary flexibility to allow housing-led development in this suitable and sustainable brownfield location.

#### BDW Trading (0350)

Object to Policy Place 19 Edinburgh Park/South Gyle and to the non-allocation of surplus land adjacent to Tesco Bank for housing-led development.

We acknowledge and support City Plan's approach to encouraging mixed-use and housing development in the South Gyle area, but we consider that a more tailored approach is required in respect to BDW Trading's interest in Tesco Bank's surplus land.

BDW Trading has submitted a Proposal of Application Notice and undertaken pre-application consultation for housing-led use on the land in question.

It should be noted that the consultation did not result in any objections to the principle of redeveloping for housing although, as one would expect, some questions and concerns were raised regarding possible traffic impacts and the scale of the development.

BDW Trading have had a number of pre-application meetings with the Council to discuss the content of a detailed planning application, based on the layout presented at the public consultation. There is general support for a residential-led development, accommodating some business and commercial uses as proposed at consultation. There is also support for the relocation of the Tesco Bank carpark, the current location of which is not conducive to a coherent development of the surplus land.

BDW are now refining and developing the detail of the proposals prior to submission of the planning application early in 2022.

If that application is granted prior to City Plan's Examination, we anticipate that this representation can be withdrawn.

Support the City Plan Spatial Strategy Map 2, which refers to 'Housing in a Strategic Business Centre'. However, do not consider the precise wording of Policy Place 19 on page 77 adequately reflects or supports the specific proposal which BDW and Tesco Bank are bringing forward.

This amendment will not undermine the policy intent to retain the strategic business function of the South Gyle area, but allows appropriate flexibility to deal with individual applications that in themselves do not comprise predominantly business uses.

Moreover, we note that Proposed City Plan Map 26 refers to “business-led redevelopment” in areas EP3 & EP4. The subject site is in area EP4. We therefore recommend that EP4 is distinguished from EP3 through modification.

It should also be noted that BDW Trading has made a separate representation to Proposed City Plan, explaining that there is a very significant shortfall of allocated housing land to meet requirements.

In our view the proposals for the Tesco Bank surplus land are sufficiently advanced and supported to merit specific allocation in City Plan as a Housing Proposal in Table 2. Part 4. Approximately 300 homes can be accommodated on the site and a specific Housing Proposal can then be identified in the Plan’s housing supply and count numerically to the reduction in the shortfall in allocated housing sites that we have identified.

We recommend that the boundary of this additional housing proposal reflects that shown in the consultation presentation boards, but excluding the existing Tesco bank and relocated car park, as this area will remain in business uses.

## **Lothianburn**

### Hillend Leisure Ltd (0080)

Hillend Leisure Ltd object to the non-inclusion of their site at Lothianburn regarding the proposed Pentland Trail Centre. It is requested that the site is identified on the proposals map with an appropriate allocation boundary or designation regarding the proposals for a new recreational outdoor leisure activity centre and associated uses. This could be similar to that of the adjacent Midlothian Sports Centre at Hillend, which has a specific allocation of VIS3 Midlothian Snowsports Centre within the Midlothian Local Development Plan.

## **Land at the Wisp**

### E&A Partnerships Ltd and Niddrie Development Company Ltd (0753)

The site (Land at The Wisp) should be included within Table 2 as a residential development allocation.

The site is being promoted as a sustainable residential development on a brownfield site within Edinburgh’s urban area. The allocation of this site for residential development would accord with the principles of sustainable development as set out in Scottish Planning Policy, whilst assisting City of Edinburgh Council in meeting the principles as set out in the Proposed City Plan 2030.

The site is capable of accommodating a significant residential development which will restore this vacant brownfield site to active use, remove an eye-sore site which poses a potential safety risk to members of the public, assist the Council in meeting their housing land requirements in the City, and facilitate transportation improvements which will benefit the wider area.

A Development Framework Report ('DFR') for the site has been prepared which sets out broad development parameters:

- Depending on the final mix of housing types, layout and tenures, the site could accommodate between 175 and 400 residential units.
- Creation of a new vehicular route through the site, following the alignment of proposed Road Improvement Proposal R2 - West of Fort Kinnaird Road to The Wisp.
- Safeguarding an active travel route through the site, following the alignment of proposed active travel safeguard ATSG25 – Wisp / Fort Kinnaird Link.
- Areas of open space, creation of SUDS pond and tree planting.
- Pedestrian paths located throughout the site and linking with surrounding areas, to encourage a porous development and pedestrian permeability.
- Facilitating the development of a brownfield site within a highly sustainable location in the urban area, embracing the principles of a 20-minute neighbourhood, and bringing a long-term vacant site back into beneficial use.

ECS Transport have prepared an Accessibility Assessment which demonstrates the excellent accessibility of the site by all modes of transport including pedestrians, cyclists, public transport users, and private car users. The Accessibility Assessment models a 20-minute walking isochrone from the site, which demonstrates the sustainability of the site and how it conforms with 20-minute neighbourhood principles. Specifically – retail, commercial, education, leisure and public transport opportunities are all located within a 20-minute walk of the site.

An initial assessment of ground conditions on site has been undertaken including 22 intrusive trial pits. These investigations identify the requirement for land remediation before the site can be redeveloped for residential uses. Invasive species are present on site which will require to be managed through an appropriate programme of works. An indicative Engineering Strategy for the site has been prepared which explains how the environmental constraints could be mitigated as part of any redevelopment.

We have also assessed the site's suitability for development using the 'effectiveness' methodology of Planning Advice Note 2/2010, as well as the Council's own 'Urban Area Site Assessment' methodology. Both assessment indicate the site is an excellent candidate for residential development and should therefore be included as an allocation in City Plan 2030.

### **Three Bridges Business Park**

#### Aisby Enterprises (0479)

Requested that the proposed Three Bridges Business Park is identified as an Area of Economic Importance on the North West Proposals Map and included as a new Place – Based Policy.

Representations were submitted in respect of the site to the Choices for City Plan 2030 Main Issues Report Consultation in April 2020 (MIR Site Ref:50). At that point the proposals were for a mixed use residential-led development. Since then Savills has been appointed to review the opportunity from a commercial perspective and have reworked the

original concept to provide a more readily implementable employment development. An Indicative Development Proposal (IDP) has been prepared. These proposals seek to promote the 'Three Bridges' site as a key strategic employment site that can create well in excess of 750 jobs as part of the Council's new City Plan 2030. Given that the site offers an excellent opportunity to provide new distribution, commercial and industrial development which can bring new employment opportunities to the surrounding area there has been significant interest from developers in taking forward these proposals, subject to securing an allocation in the forthcoming LDP. Given the highly visible nature of the eastern part of Site B, the proposed uses would be as follows:

- Drive-thru (food and coffee)
- Petrol Filling Station to include electric vehicle charging
- Hotel
- Small terrace of retail units
- Car showrooms

Given the proximity to Edinburgh, combined with such good motorway access, the western area of Site B would be attractive for industrial and distribution uses (approximately 400,000 sq ft). Research reviewing the rising demand for warehouse distribution spaces shows that demand for this type of floor space is only likely to rise as the number of households living in the region grows. The British Property Federation's What Warehousing Where? report (2019) states that every new home requires an additional 69 sq ft of warehouse space to support the distribution needs of that household. City of Edinburgh Council informed the Scottish Government in May 2021 it considers a total of 48,125 homes will need delivered over the next 10 years, which equates to 4,812 homes a year. This suggests the city requires 332,028 sq ft additional warehouse distribution space each year to accommodate that household growth or 3.32 million sq ft over the next decade.

Based on existing housing allocations within the adopted Edinburgh Local Development Plan, there will be nearly 1500 new homes being built on the western edge of South Queensferry over the next decade. These developments alone equate to the need for 103,500 sq ft of distribution space. There is insufficient employment land in South Queensferry to support these new homes, meaning that most residents will likely drive into Edinburgh or elsewhere for employment.

The Three Bridges Business Park is well located to not only serve the nearby new homes in South Queensferry but the strategic location close to Edinburgh and combined with such good motorway access, mean it could readily serve the whole of the Lothians and southern Fife.

## **Wester Hailes**

### AEW (0524)

Generally support key policy aims and objectives and suggest minor modification to wording to maintain longer term flexibility based on a regeneration framework and masterplan for delivering residential led mixed use development at Westside Plaza, Wester Hailes.

Support the primary principles of brownfield allocations for housing and supporting restraint on further greenfield release.

A specific and additional Place Based Policy is promoted and should be considered to encourage a wider regeneration framework for a new Town centre for Wester Hailes based on the existing Westside Plaza and extending across Murrayburn Road to the Union Canal.

This should embrace a similar policy response to the Gyle Shopping Centre and should recognise the local place based initiatives across the wider Wester Hailes area and the potential redevelopment opportunities to re-imagine Westside Plaza as a new town centre and to encourage housing-led redevelopment opportunities.

The policy should aim to promote a higher density of development around a key transport node as part of a central and accessible area serving the wider community to contribute towards realising the long-term vision for regeneration for the wider Wester Hailes area and to act as a key commercial focus.

Key policy initiatives should be consistent with emerging themes in NPF 4 including:

- Renewed emphasis on opportunities for redeveloping brownfield, vacant and derelict land and buildings can be used. It is also recognised that brownfield sites can alternatively make contributions to restoring biodiversity.
- Renewed support of a place based approach to design, and support for the 20-minute neighbourhood, in which basic needs should be within a 20-minute journey of the home.
- A renewed emphasis on creating sustainable places that are liveable, productive and distinctive.
- An update of the Scottish Government's six qualities of successful places (designed for lifelong health and wellbeing; safe and pleasant; well-connected and easy to move around; distinctive; sustainable (including support of net zero); and adaptable).
- An emphasis on the need for blue and green infrastructure with local development plans required to identify and protect blue and green infrastructure, including provision for new or improved access to play and outdoor sports opportunities.
- Reducing the need for unsustainable travel, in that local development plans must prioritise allocations to areas that can be accessed by public transport or active travel. Strong emphasis that developments which encourage reliance on the private car should not be supported.

Westside Plaza Shopping Centre is one of a number of core community facilities and the main commercial centre for Wester Hailes. It is located adjacent to the Wester Hailes Railway Station and is a 1960s covered mall that is accessible by a variety of modes of transport with good pedestrian links to the surrounding area, a bus terminus, railway station and extensive car parking.

It lies to the south of the Union Canal that provides an active green corridor west and east.

The council has an important role to play both in terms of adjacent land ownership and in directing future development via a positive policy context.

Recent engagement and discussion with City of Edinburgh Council has explored the potential for a regeneration strategy and vision and this should now be referenced as part of that core Place based policy in City Plan. Representations were not made at Main Issues Report stage as discussion with City of Edinburgh Council had not started at that time. Since then there has been significant momentum as part of the wider placemaking and community based planning initiatives but there is no local policy hook to encourage a more joined up approach to regeneration.

This should be recognised in the evolution of a specific place based policy promoted through City Plan 2030.

The existing Proposals Map simply defines the extent of the centre and does not reflect the wider regeneration projects within Wester Hailes. The Neighbourhood Plan, other masterplan initiatives and community partnership projects should inform a more cohesive and positive response to the Wester Hailes Local Centre to provide a positive framework and policy response for regeneration.

A specific and additional Place Based Policy is promoted and should be considered to encourage a wider regeneration framework for a new Town centre for Wester Hailes based on the existing Westside Plaza and extending across Murrayburn Road to the Union Canal.

This should embrace a similar policy response to the Gyle Shopping Centre and should recognise the local place based initiatives across the wider Wester Hailes area and the potential redevelopment opportunities to re-imagine Westside Plaza as a new town centre and to encourage housing-led redevelopment opportunities.

### **Former Clydesdale/Clelands Garage, Davidsons's Mains**

The Davidson's Mains and Silverknowes Association (0454)

Former Clydesdale/Clelands garage site in Davidsons's Mains should be identified as a development site as it has implications for the planning of schools.

### **Modifications sought by those submitting representations:**

The Friends of Midmar Paddock, Edinburgh (0121), Dr Christopher Masters (0061), Roger Vander Steen (0175), Andrew Gray (0388), Lorraine Peterson (0226), Ian Rankin (0235), Caroline Ecans (0398), Dr Christopher Masters (0061), Nicholas Hepworth (0052), Mrs Katherine Claire Taylor (0010), Norman Angus (0233), Jane Dudman(0563), Scott Gibson (0652), Judith Webber (0104), Malcolm MacLachlan (0322), Jay Chimo (0674), Peter Fantes (0319), Graeme Parry (0230), Richard Maguire (0119), Gordon Mackenzie (0234), Derek Mitchell (0171), Anne Wellman (0229), George W S Heatley (0009), Donald R.

MacLeod (0525), David Price (0224), Catherine Riddle (0236), Alistair Cant (0397), Alex Inglis (0330), Jan Hulme (0420), Arnold Myers (0758), Robert Cochran (0227), Gordon Rintoul (0288), Michael Davies (0554), Luke Robertson (0114), Sarah Muirhead (0329), Serena Smith (0201), Russell Gray (0444), Michael Struthers (0606) Michael Adrian Hall (261), Malcolm McGechan (0202), Ally Williamson (0381), Donald Macaulay (0188), Sean Walker (0116), Ben Gillett (0324), Peter Fantes (0319), Ian Ross (0423), Kathryn Poolman (0574), Michael Poolman (0572), John Gee (0325), Christopher J Inchley (0102), Elizabeth Clapham (0038), Prof D N Bateman (0004), Mrs Daphne Torrie (0449) Fiona MacLeod (0505)

No modification specified.

Margaret Meiklejohn (0040), William Brotherston (0754), Neil Ross (0610), Patricia Willder (0205)

Modify Spatial Strategy Map (Map 1) to show Midmar Paddock as a dedicated green space not to be built on.

Fiona Riddoch (0070)

Modify Spatial Strategy Map (Map 1) to show Midmar Paddock as part of the Blackford and Hermitage green belt.

Goff Cantley (0032), Fiona MacLeod (0505)

No modification specified.

### **Braid Hills**

The Friends of Midmar Paddock, Edinburgh (0121), Ian Rankin (0235)

Modify paragraph 1.7 to state Braid Hills is a place where development should not happen.

### **106-114 Dundas St (Centrum House)**

New Town Dundas Street Residents (0795)

No modification specified.

### **Highfield Gilmerton**

Nigel Baillie (0093)

No modification specified.

### **Land between Cramond Road North and Cramond Road South**

Gavin Sears (0405)

No modification specified.

### **Torphin Road in Colinton**

Judith McLean (0794)

No modification specified.

### **Russel Road**

Russell Road Edinburgh Ltd (0739)

Modify the Plan to include a Place policy for the Russell Road site for housing led mixed use development.

### **New Mart Road, Chesser**

Watkin Jones Group / New Mart Road Limited (0593), Watkin Jones Group (0516)

Modify the Plan to include a Place policy for the New Mart Road site for mixed use development.

### **Glenogle Road**

Abrdn (0425)

Modify the Plan to allocate the Genogle site as a housing proposal with the following changes;

- Map 2 Spatial Strategy (Technical) (p.10) should be amended to identify Abrdn's site at Glenogle Road as a new housing led development.
- The Proposals map should be amended to identify Abrdn's site at Glenogle Road as a housing proposal.
- Part 4 Table 2 – Housing Proposals should be amended to include Abrdn's site at Glenogle Road as a housing proposal.

### **Tesco – Davidsons Mains**

Redline Planning Services Ltd (0673)

Modify the Plan to identify the site at Davidson Mains as a development opportunity and include allocation in Table 2 of Part 4 as capable of accommodating c.100 units.

### **Tesco – Broughton Road**

Redline Planning Services Ltd (0673)

Modify the Plan to identify the opportunity for high density residential development above the existing Broughton Road store and car park.

### **Tesco – Corstorphine**

Redline Planning Services Ltd (Tesco) (0673)

Modify the Plan to identify the site at Corstorphine as a development opportunity and include allocation in Table 2 of Part 4 as capable of accommodating 24 units.

### **Tesco - South Gyle**

#### Redline Planning Services Ltd (Tesco) (0673)

Modify Plan to identify the Tesco landholding at South Gyle within Table 2 of Part 4 for c.400 as a specific housing led mixed redevelopment opportunity and by making the following changes;

- Amend Place based requirement c) on page 77 to read: "Housing as a component of business-led mixed-use proposals, unless it can be demonstrated that a housing-led mixed-use proposal is more appropriate."
- Identify the Tesco landholding at South Gyle as a specific "housing-led mixed redevelopment" opportunity within parcel EP4 on map 26, page 78. EP4 should also be separately identified in the associated key, distinct from EP3.
- Reword the criterion to say: "In EP4, commercial and mixed-use proposals (including residential-led proposals) will be supported. Where practicable, development should provide increased permeability, create a direct relationship with South Gyle Broadway and improve the pedestrian and cycling environment along South Gyle Crescent".

#### BDW Trading (0350)

Modify Place 19 to state; "housing as a component of business-led mixed-use proposals, **UNLESS IT CAN BE DEMONSTRATED THAT A HOUSING-LED MIXED USE PROPOSAL IS MORE APPROPRIATE.**"

Modify Place 19 so that EP4 is distinguished from EP3, and the following reference made to EP4:

- "BUSINESS OR HOUSING-LED REDEVELOPMENT"

We would emphasise that we support the principles which are identified for sites EP3-5 on page 79, and in turn this is consistent with the amendments we are recommending above i.e.

a. proposals should incorporate a mix of business and residential uses and create an element of active commercial frontage onto South Gyle Broadway.

b. a mixed-use development provides the opportunity to create new pedestrian and cycle routes through the site.

c. in EP 3 and EP 4, commercial and mixed-use proposals will be supported. Where practicable, development should provide increased permeability, create a direct relationship with South Gyle Broadway and improve the pedestrian and cycling environment along South Gyle Crescent.

d. EP5 should remain in predominantly business and industrial use. Where opportunities arise, consideration should be given to improving accessibility for pedestrians and cyclists.

### **Lothianburn**

#### Hillend Leisure Ltd (0080)

Modify the Plan to identify the Pentland Trail Centre with an appropriate allocation boundary.

### **Land at the Wisp**

#### E&A Partnerships Ltd & Niddrie Development Company Ltd (0753)

Modify the Plan to identify the site at the Wisp for a residential development allocation in Table 2.

### **Three Bridges Business Park**

#### Aisby Enterprises (0479)

Modify the Plan to identify the proposed Three Bridges Business Park as an Area of Economic Importance and include a new Place based policy as follows;

Place 24 – Three Bridges Business Park, South Queensferry

Business, industrial and storage and distribution uses (Classes 4,5 and 6) along with ancillary development will be supported within the boundary shown on the Proposals Map provided proposals are compatible with the function of the site, and accord with other relevant local development plan policies.

This policy supports the future development of this site for economic development purposes, in recognition of its ideal strategic position for road access to the whole of Scotland.. Proposals will also be assessed against other relevant local plan policies, for example on matters such as design, accessibility, landscaping and biodiversity.

### **Wester Hailes**

#### AEW (0524)

Modify Plan to include a place policy for Wester Hailes Westside Plaza. It should state that planning permission will be granted for development within the boundary of Westside Plaza (extended to the north to the canal) on the Proposal Map, for development which:

- maintains its role as a key commercial and retail centre serving the wider community;
- encourages housing led redevelopment opportunities of all tenures and introduces a wider mix of uses.

The requirements in principle will be for:

- a) comprehensively designed proposals which maximise the development potential of the area
- b) development for different forms of housing as part of mixed-use proposals,
- c) provision of, or contribution towards education, healthcare and community infrastructure,
- d) the creation of a new urban quarter adjacent to Wester Hailes railway Station
- e) a flexible review of the existing open space allocations of previously 'left over' land with limited amenity value at present.
- f) improved pedestrian and cycle links through the area to provide strong, safe connections with services as part of the wider West Edinburgh Active Travel Network (WEL)
- g) refocusing public transport interchange to better integrate with the railway station, shopping centre and to reduce physical barriers to movement
- h) Enhance cycle parking

### **Former Clydesdale/Clelands Garage, Davidsons's Mains**

The Davidson's Mains and Silverknowes Association (0454)

Identify former Clydesdale/Clelands garage site in Davidsons's Mains as a development site.

### **Summary of responses (including reasons) by planning authority:**

#### **Non-Allocated Sites or not Housing Proposals**

#### **Midmar Paddock**

The Friends of Midmar Paddock, Edinburgh (0121), Dr Christopher Masters (0061), Roger Vander Steen (0175), Andrew Gray (0388), Lorraine Peterson (0226), Ian Rankin (0235), Caroline Ecans (0398), Dr Christopher Masters (0061), Nicholas Hepworth (0052), Mrs Katherine Claire Taylor (0010), Norman Angus (0233), Jane Dudman(0563), Scott Gibson (0652), Judith Webber (0104), Malcolm MacLachlan (0322), Jay Chimo (0674), Peter Fantes (0319), Graeme Parry (0230), Richard Maguire (0119), Gordon Mackenzie (0234), Derek Mitchell (0171), Anne Wellman (0229), George W S Heatley (0009), Donald R. MacLeod (0525), David Price (0224), Catherine Riddle (0236), Alistair Cant (0397), Alex Inglis (0330), Jan Hulme (0420), Arnold Myers (0758), Robert Cochran (0227), Gordon Rintoul (0288), michael davies (0554), Luke Robertson (0114), Sarah Muirhead (0329), Serena Smith (0201), Russell Gray (0444), Michael Struthers (0606) Michael Adrian Hall (261), Malcolm McGechan (0202), Ally Williamson (0381), Donald Macaulay (0188), Sean Walker (0116), Ben Gillett (0324), Peter Fantes (0319), Ian Ross (0423), Kathryn Poolman (0574), Michael Poolman (0572), John Gee (0325), Christopher J Inchley (0102), Elizabeth Clapham (0038), Prof D N Bateman (0004), Mrs Daphne Torrie (0449) Rona Ferguson (0006), Goff Cantley (0032), Fiona MacLeod (0505)

Midmar Paddock is a small site in the Braid Hills. It forms part of the Edinburgh green belt and is designated as a special landscape area (Braids, Liberton, Morthall), a local biodiversity site, a local nature conservation site and an area of open space. The site has not been allocated for development in the Plan and no representations supporting development of the site have been received. The site continues to be protected within the plan. **No modification proposed.**

Margaret Meiklejohn (0040), William Brotherston (0754), Neil Ross (0610), Patricia Willder (0205)

Midmar Paddock is already identified as an area of open space. **No modification proposed.**

Fiona Riddoch (0070)

Midmar Paddock is a small site in the Braid Hills. The purpose of Map 1 Spatial Strategy is to present the Plan's strategy at a high level through the use of an illustrative and conceptual map. The Council considers it would be inconsistent and inappropriate to highlight one small site on the spatial strategy map. **No modification proposed.**

Goff Cantley (0032), Fiona MacLeod (0505)

Midmar Paddock is already identified as an area of open space. **No modification proposed.**

## **Braid Hills**

The Friends of Midmar Paddock, Edinburgh (0121), Ian Rankin (0235)

Paragraph 1.7 forms part of the introduction to the Plan and sets out the purpose and content of the Plan. It would be inconsistent and inappropriate to refer specifically to the Braid Hills in this paragraph. **No modification proposed.**

New Town Dundas Street Residents (0795).

The Council notes the point raised. **No modification proposed.**

## **Highfield Gilmerton**

Nigel Baillie (0093)

The Highfield site is within the Edinburgh Green Belt and a special landscape area. The site has not been allocated for development in the Plan although representations supporting development of the site have been received (Taylor Wimpey 200). The Council does not agree with representations that the site should be allocated for development. **No modification proposed.**

## **Land between Cramond Road North and Cramond Road South**

Gavin Sears (0405)

The site is to the North of Cramond Road North, is designated as an area of open space and has been identified as a Green Blue Network Proposal (BGN26). The area has not been allocated for development in the Plan and no representations supporting development of the site have been received. **No modification proposed.**

### **Torphin Road in Colinton.**

Judith McLean (0794)

The site is within the Edinburgh Green Belt, the Pentland Hills Regional Park, an area of open space and special landscape area. The area has not been allocated for development in the Plan and no representations supporting development of the site have been received. **No modification proposed.**

### **Russel Road**

Russell Road Edinburgh Ltd (0739)

The Russell Road site is located on the southeast of corner of the industrial estate. It is within the Edinburgh built up area and therefore the relevant policies apply. The site was assessed in the Housing Study (CD026) as a potential housing led development allocation. The site scored well in the study, however, at that time the Council decided that it should be retained in business use. Proposals for mixed use housing development could still be promoted through the planning application process as the site is within the Urban Area. Key considerations would be to address the impacts with wider uses on the industrial estate, and to achieve an adequate residential amenity particularly in the context of the adjacent railway lines and the western approach road. **No modification proposed.**

### **New Mart Road, Chesser**

Watkin Jones Group / New Mart Road Limited (0593), Watkin Jones Group (0516)

The New Mart Road site is located within the Chesser Avenue local centre in the Plan, which remains unchanged from its allocation in the adopted LDP. Site is in use for leisure purposes. The Council did not assess the site in the Housing Study (CD026) as it was an active leisure use within a local centre at the time. Therefore, the site was not considered for allocation. As the Council does not propose allocating the site there is no need to prepare a Place Policy. Proposals for mixed use housing development could still be promoted through the planning application process against relevant policies as the site is within the built up area, however, the Council does not support a formal allocation of the site. **No modification proposed.**

### **Glenogle Road**

Abrdn (0425)

The site is currently in office use. It is located in the urban area next to the Water of Leith. The site was assessed by the Council, however, the Council took a decision not to formally allocate the site within the plan following consideration of the findings of the Strategic Flood Risk Assessment (CD011) as it identified the site at risk of fluvial and surface water flooding. Proposals for mixed use housing development could still be promoted through

the planning application process and considered against relevant Plan policies as the site is within the built up area, however, the Council does not support the formal allocation of the site for the reasons set out. **No modification proposed.**

### **Tesco – Davidsons Mains**

Redline Planning Services Ltd (Tesco) (0673)

The site is currently the location of an existing supermarket, is located within the urban area and is part of a local centre. The site was not assessed by the Council in the Housing Study (CD026) as the site was in active use as a supermarket. The Council considers proposals for housing development above the retail unit should be promoted through the planning application process and considered against relevant Plan policies as the site is within the built up area, however, the Council does not support the formal allocation of the site. **No modification proposed.**

### **Tesco – Broughton Road**

Redline Planning Services Ltd (Tesco) (0673)

The site is currently an existing supermarket, located within the urban area. The site was not assessed by the Council in the Housing Study (CD026) as it was in active use as a supermarket. The Council considers proposals for housing development above the retail unit should be promoted through the planning application process and considered against relevant Plan policies as the site is within the built up area, however, the Council does not support the formal allocation of the site. **No modification proposed.**

### **Tesco Corstorphine**

Redline Planning Services Ltd (Tesco) (0673)

The site is to the west of Meadow Place Road was formerly a car park. It is adjacent to a police station and a retail unit. The site has been granted planning permission for housing and work has begun on site. As a result the Council considers the formal allocation of the site unnecessary. **No modification proposed.**

### **Tesco - South Gyle**

Redline Planning Services Ltd (Tesco) (0673), BDW Trading (0350)

Edinburgh Park is identified as a Strategic Business Centre (SBC) in the Plan. Place Policy 19 supports development which maintains the strategic role of the area and supports a wider mix of uses. The Policy sets out a series of development principles to guide development of the SBC as a whole. Principle b states that development for office and other business uses should be part of mixed-use proposals. In addition, principle c states that housing is supported as part of business led-mixed use development proposals. The office is within area EP4. The policy sets out specific development principles to cover the EP3-5 areas. Criterion a states that proposals should incorporate a mix of business and residential uses and create an element of active commercial frontage onto South Gyle Broadway. The Council considers that the Plan is supportive of residential development as part of business led-mixed use development. Such an approach reflects the

importance of Edinburgh Park as a Strategic Business Centre, where development should maintain its strategic role. Therefore the Council considers that it is unnecessary to allocate the site for housing. As a result, the Council does not accept the proposed changes to the development principles. The Council does not accept there is a shortfall in the housing land supply and sets out its position in detail in its responses in Issue 19: Housing Supply Target and Land Requirements and Issue 20: Assessment of the Housing Land Supply. **No modification proposed.**

### **Lothianburn**

#### Hillend Leisure Ltd (0080)

The site is within the Edinburgh green belt, the Pentland Hills Regional Park, an area of open space and a special landscape area. Part of the site is with a conservation area (Swanson)

The Council does not consider there is a need to identify the Pentland Trail Centre as a proposal in the plan and sets out its position in detail in Issue 18 - Blue Green Network Proposals. **No modification proposed.**

### **Land at the Wisp**

#### E&A Partnerships Ltd & Niddrie Development Company Ltd (0753)

This site is within the urban area. It was historically a colliery spoil heap. The Council did consider this site, however, it reached a decision that there may be particularly high costs of remediation on this site and therefore it was dropped from consideration. This decision was influenced by the fact that two recent applications for pre application advice related to this site were withdrawn before an opinion could be finalised. In addition, there was a previous application (CD175) where the Council were minded to grant consent (03/02034/FUL for 284 units) which approved the principle of housing but the legal agreement required was never concluded. The planning committee report states there is serious concern that the decontamination of the land may not ultimately prove satisfactory. Committee were asked to approve the principle of housing subject to a suspensive condition requiring full satisfaction of Environmental Protection before construction takes place. The report also suggests that given the critical nature of the site decontamination, it is suggested that the conclusion of engineering reports and works on site should be presented back to Committee.

The Council considers proposals for housing development should be promoted through the planning application process and considered against relevant Plan policies as the site is within the built up area, however, the Council does not support the formal allocation of the site for the reasons set out. **No modification proposed.**

### **Three Bridges Business Park**

#### Aisby Enterprises (0479)

The site is split into two areas, north and south of the A904. The site to the north (site A) is within the Countryside policy area. The site to the south (site B) is partly in the Edinburgh Green Belt and partly within the countryside policy area.

The Council considers there is a plentiful supply of land for employment purposes identified in the Plan, and an extension (40.3ha) to the West of Newbridge Industrial Estate has been identified to accommodate businesses having to relocate as a result of the development of brownfield sites. The Council has set out its position in detail in its responses in Issue 3: Delivery of the Strategy.

A Housing Study (CD026) prepared by the Council was prepared to inform the preparation of Choices for City Plan 2030 (CD022). An assessment of all greenfield land was undertaken to assess which land had development potential while still contributing to the SDP1 spatial strategy, minimising the effect on landscape character and making best use of existing infrastructure. The methodology (Part 2b, Figure 1, p 3) was prepared to allow sites to be assessed in a consistent manner and to enable sites to be subject to comparative analysis. The results of this work allowed the Council to identify its preferred greenfield sites should any be required. However, the Council considered the most sustainable option was its preferred approach at the MIR stage, that new allocations to support the housing land supply should be directed to brownfield rather than greenfield sites. Although the study was prepared for the purposes of identifying sites for housing, it still provides useful information to assess the suitability of sites at Queensferry for commercial purposes.

Site A was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology and the results are on p303. The Council considers its assessment of sites to be consistent and robust. The site is in greenfield sector 6, within the East of Headrig Road area. The Housing Study found the area was not within walking distance of local convenience services or employment clusters, did not have access to the wider cycle network and was unlikely to improve and did not support travel by public transport. The study considered the area had no scope for development due to it being beyond the robust settlement boundary formed by the approach road to the Queensferry Crossing and the effect of development encroaching on what appears to be open and well managed countryside.

Site B was not identified as a preferred location in the Council's Housing study as it did not score well under the assessment methodology; the results are on p305. The site is also in greenfield sector 6, within the West of Dundas House area. The Housing Study found the area was not within walking distance of local convenience services or employment clusters, did not have access to the wider cycle network and was unlikely to improve, and did not support travel by public transport. The study considered the area had no scope for development due to the effect any development would have on the strong rural and secluded character of this area, conflicting with the existing local settlement pattern.

Although the proposed sites have good access to the motorway network they are very rural in nature and the Council does not consider these sites to be a sustainable location where it would support new employment land. In addition, the Council considers there is sufficient employment land across the Edinburgh area to meet the city's requirements. As a result, for the reasons set out above the Council does not support the allocation of these sites. **No modification proposed.**

**Wester Hailes**

#### AEW (0524)

Although the Plan does identify a housing led mixed use development next to Wester Hailes local centre (H82) it is an isolated development. The Council has commissioned masterplanning for regeneration in the wider area and the community has been preparing a local place plan. As a result the Council does not consider it would be appropriate to allocate this site and prepare a place based policy at this time. Policy within the plan is supportive of office development in Policy Econ 3 in designated centres, including local centres. In addition, Policy Econ2 is supportive of housing within proposed commercial developments if the site is larger than 0.25ha. Therefore, proposals for mixed use development, including residential, could be considered in principle as being consistent with the requirements of the plan. The Council considers there is no requirement for this specific proposal to be included within the plan as its not required in order to deliver the development plan strategy and that the proposal could be promoted through a planning application and be considered against the existing provisions of the Plan. **No modification proposed.**

#### **Former Clydesdale/Clelands Garage, Davidsons's Mains**

##### The Davidson's Mains and Silverknowes Association (0454)

The site is within the Davidsons Mains Local Centre. Policy Re 5 supports retail development in this location. Non- retail development may be permitted if it does not have a detrimental impact on the function of the centre. The Council considers proposals for housing development in this location should be promoted through the planning application process and considered against relevant Plan policies. The Council does not support the formal allocation of the site due to its location within a local centre. **No modification proposed.**

#### **Reporter's conclusions:**

#### **Reporter's recommendations:**

Provision of the development plan to which the issue relates:	These policies set out criteria to be considered in the design of new development	
Planning authority's summary of the representation(s):		

## **Env 1 - Design Quality and Context**

Wright PDL (0078), Stirling Developments Limited (0303), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

It is stated design should draw upon positive characteristics of the surrounding area, however this conflicts with the density requirements of this Plan, particularly in suburban/urban edge areas.

Living Streets Edinburgh Group (0486)

The policy should be amended.

Edinburgh World Heritage (0339)

The policy should be amended to protect and enhance the Outstanding Universal Value of the World Heritage sites and the many benefits this brings. To also be helpfully clear that understanding and reinforcing positive local characteristics is important to achieving good design.

## **Env 2 - Co-ordinated Development**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

No consideration of developments in progress and previously approved developments that are yet to be commenced. Only by incorporating all of these can a true and full picture be formed.

The Royal London Mutual Insurance Society Ltd (0149)

Paragraph 3.86 should be modified.

Wright PDL (0078), Homes for Scotland (0404), Stirling Developments Limited (0303), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

It is indicated the extent to which Briefs are required under this policy is excessive and Briefs should be focused on large scale strategic sites. Statutory pre-application consultation is already required for major developments and detailed design policies are already included in the plan. Community engagement can also serve to raise expectations about what is deliverable in practice.

The policy should make clear it is essential that developers and landowners are involved in the creation of design briefs since the financial viability of an allocation is dependent on the type, design, and marketability of new homes - if a site is not financially viable then it is not deliverable.

There also needs to be a willingness to work with the grain of existing land ownerships as much as possible to avoid complications and delay given problems that arise from linking development to land outwith the control of the developer.

Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350)

It lacks clarity and is not clear in what circumstances the following text would apply:

*“where the Council considers that such a master plan, strategy, guidance or Brief is needed as part of, or prior to, the submission of any planning application”*

It appears to give the Council the power to apply the policy as it sees fit, rather than outlining precisely where the policy would apply so that there is certainty for would be developers if it would be applied to their site or not.

Stewart Milne Homes (0118), Crosswind Developments Ltd (0184), Taylor Wimpey (0200), Edinburgh Airport Limited (0761)

This policy is likely to create excessive uncertainty and disproportionately delay development, particularly due to criterion b.

If a collaborative masterplan is required involving multiple land owners/interests, there is no certainty that this will be achieved and this could therefore stymie development.

17 of the 36 Place Policy locations require a Place Brief prepared by the Council and/or an approved master plan. The Council has had issues in the past with bringing forward guidance and development briefs in a timely fashion. This will require a very significant amount of staff resource and it is not clear how all of these can be progressed without significant delay to delivery. It is therefore not clear that development in advance of such documents should be refused on this basis alone.

New Town & Broughton Community Council (0254)

Recent experience of piecemeal proposals for the Beaverhall area has shown it would have been helpful if a Place Brief had been prepared by the Council, consulted on and agreed with local residents prior to the many applications for the area. Failing to do this could result in uncoordinated developments in the area to the detriment of current residents and businesses.

The above approach is preferable, certainly as a first step, to the unclear statements within the footnotes to this policy regarding the Council using its powers of compulsory purchase to assemble a site for (re)-development.

Cockburn Association (0777)

The policy should be amended.

Melford Developments Ltd (0308), Edinburgh Dog and Cat Home (0310)

The policy wording seeks to prevent development which “may” compromise comprehensive development. This is considered unclear and an unreasonably high test. As worded, this policy could prevent any planning applications coming forward for proposals, however small.

For example it would discourage Edinburgh Dog and Cat Home (EDCH) bringing forward proposals to upgrade its existing facility at Seafield Road East in situ (whether it is within or outwith the Housing Proposal H55 area) given the need for the Seafield Place Brief to be approved first.

The proposed policy Env 2 is considered unreasonably restrictive on EDCH and could prevent development that would benefit the wider community. It should be amended so that EDCH can be confident of bringing forward proposals to upgrade its site in a manner where it would not hinder the wider Seafield development (Housing Proposal H55).

LPBZ Commercial Ltd (0391)

There is no definition of “effective development” and therefore the potential approval or rejection of planning applications is open to the interpretation of the wording of this policy and that it would be extremely difficult to ensure compliance as part of a planning application. There are no examples given or criteria provided as to when it would be considered that a development would “compromise” the comprehensive development and regeneration of a wider area.

The threat of compulsory purchase adds further to these concerns as it appears that if land is not developed for a use which is considered acceptable to the council, it could be at risk of being compulsory purchased.

This policy is at odds to Scottish Planning Policy which states Local Development Plans should “support existing business sectors, taking account of whether they are expanding or contracting and, where possible, identify and plan for new or emerging sectors likely to locate in their area”. Policy ENV2 restricts any flexibility in terms of allowing an existing business to expand if that development is not considered by the council to ensure the effective development.

CALA Management Ltd (0465), Hallam Land Management (0599) (0615), Miller Homes Limited (0649)

The policy should be amended. It should allow an applicant to demonstrate how its proposal fits in with the overall development of the surrounding area.

This more flexible approach still allows the Council to help facilitate the comprehensive approach to redevelopment and regeneration which it is seeking.

This change in wording also helps an applicant submit the relevant details in its submission, avoiding the risk of delay in determination and possibly the need to avoid imposing a specific condition.

Forth Ports Limited (0496)

Object to the use of Compulsory Purchase Order Powers (CPO) to deliver the Council's brownfield housing delivery strategy. The potential for their use in relation to the Port of Leith, which is wholly owned and controlled by FP, would have serious and permanent implications for the Port. We explain below why the use of CPO would be inappropriate in relation to the Port of Leith.

Forth Ports Ltd is a port infrastructure organisation and will continue to operate as such, utilising its land holdings for port related uses, unless it considers any land within its ownership is no longer required for operational use.

### **Env 3 – Development Design – Incorporating and Enhancing Existing and Potential Features**

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

It is unreasonable to expect developments to enhance features that are in the surrounding area and not on the site itself or within the control of the applicant. Surrounding area is too broad a term and could lead to unreasonable expectations. The supporting text does not relate to features off site.

NatureScot (0528)

The policy requirement that permission will be granted where “it is demonstrated that existing characteristics and features worthy of retention on the site...” is too subjective

National Grid (0805)

The increasing pressure for development is leading to more development sites being brought forward through the planning process on land that is crossed by National Grid infrastructure. National Grid advocates the high standards of design and sustainable development forms promoted through national planning policy and understands that contemporary planning and urban design agenda require a creative approach to new development around high voltage overhead lines, underground gas transmission pipelines, and other National Grid assets.

Edinburgh World Heritage (0339)

3.88 should be amended to more explicitly refer to the historic environment

### **Env 4 - Development Design – Impact on Setting**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

Homes for Scotland members already design developments according to the setting of the site, including through identifying an appropriate density.

These are matters to be assessed on a site-by-site basis. The Policy wording does not allow for sufficient flexibility to consider specific site circumstances. Green and blue infrastructure for example can be difficult to deliver on smaller and brownfield sites.

It is unclear how policy Env 4 can be reconciled with the stated density requirements.

Tarmac (0244), AREAA (0358), CALA Management Ltd (0465), Hallam Land Management (0599) (0615), Miller Homes Limited (0649)

Requiring a ‘positive impact’, as the wording currently proposes makes compliance too

restrictive and subjective. The standard environmental, landscape and heritage assessment practice is the minimum requirement should be a neutral impact, or no detrimental impact. Alternatively an impact could be accepted where sufficient mitigation is proposed.

Even Env 11 (Listed Building – Setting) has more balanced language than Env 4 i.e. avoiding detrimental. The implication is that development within and affecting an area of 1960's flatted properties would be held to a higher impact assessment standard than those within the grounds of an A-Listed building.

Where an impact is positive is subjective and potentially impossible to achieve in certain circumstances.

This is particularly important in the context of achieving the most efficient use of the city extent by maximising the development potential of land within.

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

Object to Policy ENV4 on the basis that it sets unreasonable expectations on the developer and implies that the developer is responsible for land outside of their ownership

Elgin Haymarket Limited (0292)

This policy should be amended.

Stirling Developments Limited (0303)

The policy should allow for more flexibility and allow for site-by-site basis of the considerations, particularly in terms of green blue infrastructure which can be difficult to deliver on smaller and brownfield sites.

Does this policy takes priority over Env 26 (Housing Density) since these policies will often not be able to be reconciled.

Melford Developments Ltd (0308)

Presently the policy is imprecise, value laden and subjective.

AREAA (0358)

Policy should be amended.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

This policy requires an applicant to demonstrate a positive impact however it does not define a magnitude of effect or impact to be justified, nor the information required relating to the degree of impact. It is unclear how a developer will be able to demonstrate that its development will have a positive impact) on an existing view. It is also unclear how the Council would determine this.

Cordatus Property LP (0533), Nuveen Real Estate (0564) (0734), SAICA (0590), CBRE Global Investors (0644)

Policy Env 4 / Paragraph 3.90 should be modified.

Edinburgh Word Heritage (0339)

The policy should be modified to protect and enhance the Outstanding Universal Value of the World Heritage sites and the many benefits this brings Also to clarify that development not only needs to have a positive impact (which can be loosely interpreted), but should reinforce what is positive about its context specifically.

### **Env 5 Alterations, Extensions and Domestic Outbuildings**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The policy should be amended as it is unclear how monitoring and measurement will take place in relation to green and blue infrastructure.

Suzie Ross (0440)

The proposed policy guidelines are too subjective and allow decision maker's too much discretion.

Scottish Wildlife Trust Lothian group (0560)

The policy should be modified.

Cockburn Association (0777)

This policy should address private car parking as it damages character and affects streetscape

Edinburgh World Heritage (0339)

The policy should be modified.

### **Env 25 – Layout Design**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

This policy should make clear which policy areas will the planning officer give precedence to when determining a planning application, particularly given the objectives of this policy as compared to the density aspirations of this Plan? For example in relation to Env 26 versus Env 27 versus Env 30 versus Env 31 versus Env 32.

Mark Ockendon (0419)

The policy should recognise that car transport is necessary given the Scottish climate whilst still promoting alternatives.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

With regard to criterion b. there will be many examples where direct connections are not possible due to lack of control over adjacent land ownership. There are examples around the periphery of the City where the requirement to define defensible Green Belt inner boundaries has led to the creation of tree belts. These greenspaces have now been transferred to third parties and are not in the control of an applicant. This inhibits simple direct path and road connections on the outer edge of the City as the City grows.

With regard to criterion g., all public views by their nature will be attractive but do not require to be preserved. New development can create an alternative and equally attractive public view. The Council has defined a series of views which it wishes to retain for different reasons across the City. These are defined in the Council's Edinburgh Design Guidance (January 2020). These are the important views which need to be taken into account and safeguarded to protect the amenity of the City.

The policy should replace 'wherever' for 'where' to reflect the past history of creating defensible Green Belt inner boundaries on the City urban edge rather than permeable edges to facilitate connecting communities arising from the future growth of the City.

Living Streets Edinburgh Group (0486)

Modify this policy.

Corstorphine Community Council (0799)

This policy does not address 20 minute neighbourhoods or the need for lighting and overlooking.

Edinburgh Word Heritage (0339)

Modify this policy.

## **Env 27 - Public Realm, New Planting and Landscape Design**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

This policy does not address the increasing number of untidy and excessively high telecoms masts, sometimes duplicating masts in close proximity, as masts that do not have adequate regard to the environment can ruin the appearance of a place.

Edinburgh Airport Limited (0761)

This policy does not have sufficiently flexibility to apply variable standards in areas where it is important to minimise bird strike risk with aircraft in areas around the airport.

Edinburgh World Heritage (0339)

This policy should be amended.

## **Env 28 – Urban Edge Development**

### Tarmac (0244), Hallam Land Management (0615)

This policy should be modified.

The objective of this policy is appropriately covered by other policies.

Paragraph 3.148 suggests the policy is to protect green belt boundaries and objectives. However, the Proposed Plan policy has now removed any reference to the objectives of green belt area.

### The Association for the Protection of Rural Scotland (0334)

Make an addition to this policy.

### CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

This proposal conflicts with SESplan Policy 7: Maintaining a five year housing supply and SESplan Policy 12: Green Belts. None of these strategic policies require the LDP to conserve and enhance the landscape setting and special character of the City as set out in criterion a. of Policy Env 28. The requirement is to maintain the identity, character and landscape setting of the City not to conserve or enhance it. The SDP policies makes no reference at all to the City having a special character over and above any other settlement in the region and 'special' should be deleted.

Providing opportunities for access to the surrounding countryside is promoted by SESplan Policy 12 criterion d. This however is not the same as promoting access to the countryside if possible (criterion b. of Policy Env 28). It is proposed that appropriate is deleted and replace with possible to reflect that it is an opportunity and not a requirement.

Criterion c. requires a range of landscape and environmental improvements to strengthen the green belt boundary and contribute to other measures. Again, this requirement is not in accord with SESplan which has no policy directive to strengthen the green belt boundary in Edinburgh. SPP (2014) provides the policy direction to the Council about defining the inner boundary of the green belt. It is not about strengthening the boundary but about setting the boundary where visual boundary markers are defined by landscape features. Accordingly, criterion c. requires to be modified to accord with SPP (2014).

Defensibility of the green belt boundary is much more about selecting the appropriate landscape features to define the boundary rather than trying to strengthen boundaries defined by hedges and field enclosures or even the rear fences of back gardens.

### Crosswind Developments Ltd (0184)

The Crosswind site is not on the urban edge. Proposal H61 is clearly infill development and is bound by development at Edinburgh Airport, the Fife Rail Line and consented residential development at West Craigs beyond, Edinburgh Gateway Station, the Tram

Deport and the buildings of Castle Gogar and its surrounds. It does not border the Green Belt and this policy is not therefore relevant.

## **Env 29 – Waterside Development**

### LPBZ Commercial Ltd (0391)

This policy is too onerous and wide ranging. There are many bodies of water such as Albert Dock where recreational use would not be safe, practical or appropriate given the heavily industrial and operational uses to the north.

### NatureScot (0528)

There is a need for the plan to be more explicit on the actions required if climate change impacts on existing and new development are to be minimised. A key role for policies relating to flooding and the coast will be to require adaptation planning in our approach to development alongside the water environment.

Evidence from Dynamic Coast (CD135) shows that we will be facing some very challenging issues in future regarding flooding and coastal change. The importance of adaptation of communities and infrastructure is an essential matter for City Plan 2030 to consider and plan for.

An additional requirement is needed to emphasise the importance of assessing and designing in coastal change (e.g. coastal flooding and erosion) as part of good placemaking. The majority of Edinburgh's shoreline is engineered and protected but proposals must nevertheless be futureproofed in the shorter-term and designed for resilience and to minimise risk and costs for future residents and communities.

### Leith Central Community Council (0614)

This policy should be modified.

### Edinburgh Airport Limited (0761)

The airport's operational boundary follows the River Almond. Given the operational nature of the airport, it is not possible to undertake the requirements set out in Criteria A and B and flexibility is required to the policy to ensure certain developments are exempt from the requirements.

### Water of Leith Conservation Trust (0392)

Where in the Plan is the policy requirement for a 20m buffer along the water of Leith.

### Crown Estate Scotland (The Forth District Salmon Fishery Board) (0346)

The Forth District Salmon Fishery Board is tasked with the management of the salmon fishing assets within the Forth District forming part of The Scottish Crown Estate under Crown Estate Scotland's pilot delegation scheme.

In particular, we want to ensure that access to the riverbanks and thereby important salmon fishing interests are adequately provided for in the relevant Development Plan policies along with the ability for those interests to be freely enjoyed by those in whom the rights are legally vested. In receiving policy recognition, the fishing interests will then form a material consideration in the determination of planning applications in due course.

Crosswind Developments Ltd (0184)

The supporting text of Policy Env29 refers to the buffer zones to be provided along the water's edge to provide space for habitat creation as well as allowing fluvial and coastal processes to occur, including accounting for climate change and erosion (Page 115). With regards to Proposal BGN49 (Gogar Burn), the requirement for a buffer zone is contained within Part 4, Table 1 (Environment Proposals) of the plan and the supporting text should therefore reference this table to guide the reader accordingly.

**Env 30 - Building Heights**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), Stirling Developments Limited (0303)

This policy conflicts with density requirements and it is not clear which takes precedence.

Crosswind Developments Ltd (0184)

Building to prevailing building heights may not be possible in light of the requirements of the Plan, such as the required density of 65 units to the hectare for housing developments, 20 % of the site to be useable open space etc.

The requirement for enhancement puts an unreasonable request upon the developer so a degree of flexibility is needed.

Consideration must also be given to airport safeguarding matters.

Melford Developments Ltd (0308)

This policy is not workable in a brownfield only context. Building heights will be inextricably linked to other policy requirements relating to density, open space, parking and amenity requirements. To have a viable brownfield development will likely mean taller buildings. Without a relaxation of this policy the brownfield only approach to house building will fail. This approach needs to be honest about the proposed urbanisation, densification and intensification of uses within the urban area.

Pawel Stankiewicz (0445)

This policy should be modified.

Cordatus Property LP (0533), Nuveen Real Estate (0564) (0734), SAICA (0590), CBRE Global Investors (0644)

The policy needs to have greater account for variable site and proposal circumstances.

Aviva Life and Pensions UK Limited (0598)

Be ambitious and flexible with this policy.

Leith Central Community Council (0614)

The concept of a development which enhances the skyline is too vague.

There is too much emphasis on the views of the city looking at itself.

Edinburgh World Heritage (0339)

To appropriately protect the Outstanding Universal Value of the World Heritage Site, which is very sensitive to any increase in height and change of roofscape. The term 'landmark' (as per the current plan) correctly implies that increased height will be the exception to the rule. The representor does not support the proposed replacement term 'development' as this does not have the same effect. There potentially serious harmful impact of the policy wording on the protection of the World Heritage Site's Outstanding Universal Value.

Changes to paragraph 3.150 are needed to appropriately address the high importance and numerous ways in which the management of height is important to the appropriate conservation of the World Heritage Site, and other heritage assets.

### **Env 38 - Shopfronts**

Southside Community Council (0781)

Inappropriate shopfront alterations can have a negative impact in all areas.

Edinburgh World Heritage (0339)

Edinburgh World Heritage's Conservation Funding Programme which can (in advice and financial terms) support the conservation, repair and selective restoration of historic shop fronts.

### **New proposed policy: Design standard uplift**

Suzanne McIntosh (0409)

draft City Plan policies do not go far enough in requiring 'lifting' the standard of design.

### **New proposed policy: Aircraft Noise**

Edinburgh Airport Noise Advisory Board (0691)

In line with World Health Organisation "ENVIRONMENTAL NOISE GUIDELINES for the European Region", the Edinburgh Airport Noise Advisory Board (EANAB) consider that residential development should not be supported within areas falling within the 45 dB Lden contour associated with Edinburgh airport. This includes the majority of the proposed

developmental areas between Edinburgh Airport and the A8 corridor. Development in such locations which would have detrimental impact on health and amenity. Using noise insulation within any new housing does not ensure that people can use their private/communal outdoor spaces safely.

### **General comment on all environment policies**

#### Tarmac (0244)

The first statement made in the first sentence of many Env policies is incorrect as it states planning permission will be granted if proposals comply however proposals will likely need to comply with a number of policies before it is granted. As proposed this would create confusion and risk of challenge.

The Environmental Policies are restrictive and inflexible with a general presumption against any development that is not specifically identified in the Plan. This provides a barrier to any strategy, whether it be brownfield or greenfield, and does not allow any flexibility on the urban edge.

Many policies are overly complex, detailed and negative. Requirements in relation to density and open space are too prescriptive. They duplicate information within the Edinburgh Design Guidance and could be removed to aid clarity and conciseness.

### **Modifications sought by those submitting representations:**

#### **Env 1 - Design Quality and Context**

#### Wright PDL (0078), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

The requirement to reflect the characteristics of the surrounding area should be relaxed and/or the density aspirations of the Proposed Plan should be relaxed.

#### Stirling Developments Limited (0303)

It should be clarified if this policy takes precedence over Env 26 (Housing Density)

#### Peter Allen (0336)

Define what Council means by "a vibrant and successful place" and in whose opinion as well as how will this be measured?

#### Homes for Scotland (0404)

Policy needs to be updated to account for a potential conflict with the density requirements of this Plan, particularly in suburban/urban edge areas, given that Env 1 requires proposals to draw upon positive characteristics of an existing area.

#### Living Streets Edinburgh Group (0486)

Modify policy to read as follows:

*"Planning permission will be supported by this policy where it is demonstrated that the proposal will create or contribute towards a vibrant, successful place including adherence to and delivery of the transport hierarchy in Scottish Planning Policy and the National Transport Strategy. Design should be based on an overall design concept that draws upon positive characteristics of the surrounding area. Planning permission will not be granted for poor quality or inappropriate design or for proposals that would be damaging to the character or appearance of the area around it, particularly where this has a special importance or for proposals which do not contribute to delivery of the Transport Hierarchy."*

Edinburgh World Heritage (0339)

Amend the policy wording to read as follows:

*"...overall design concept developed from an understanding of and complementary to positive characteristics and values of the surrounding area...where this has special importance such as the Old and New Towns of Edinburgh World Heritage site and sites and settings of other heritage assets."*

**Env 2 - Co-ordinated Development**

Archie Clark (0003)

Developers should be required to submit adequate plans for development of land in their ownership in the vicinity of the proposal with their first submission.

The Royal London Mutual Insurance Society Ltd (0149)

Remove provision for compulsory purchase at paragraph 3.86. Delete sentence "In some cases, it may be necessary for the Council to use its powers of compulsory purchase to assemble a site for development and enable a satisfactory outcome to be achieved."

Wright PDL (0078), Homes for Scotland (0404), Stirling Developments Limited (0303), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

It is indicated the extent to which Briefs are required under this policy is excessive and Briefs should be focused on large scale strategic sites.

The policy should make clear it is essential that developers and landowners are involved in the creation of design briefs.

There also needs to be a willingness to work with the grain of existing land ownerships as much as possible to avoid complications and delay.

Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350)

Delete the proposed City Plan policy wording and use the LDP 2016 policy wording for Env 2.

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

Revert to the adopted Policy Des 2 (Co-ordinated Development) which is positively worded and overall, more proportionate

New Town & Broughton Community Council (0254).

This policy should be amended to not just 'encourage' but 'require' conformity by rewording to:

*"The Council requires a comprehensive approach to redevelopment and regeneration wherever possible, and the preparation of development frameworks, master plans, Development Briefs or Place Briefs to identify the full design potential for creating successful places."*

Cockburn Association (0777)

Amend paragraph 3.86 to read:

*3.86 The Council requires a comprehensive approach to redevelopment and regeneration wherever possible, and the preparation of development frameworks, master plans, Development Briefs or Place Briefs to identify the full design potential for creating successful places. Piecemeal development is less likely to lead to the creation of well-defined and cohesive networks of streets and spaces. In some cases, it may be necessary for the Council to use its powers of compulsory purchase to assemble a site for development and enable a satisfactory outcome to be achieved.*

Juniper Green & Baberton Mains Community Council (0306)

This policy should be amended to state that it takes into consideration current developments in process and previously approved developments yet to be commenced. Only by incorporating all of these can a true and full picture be formed.

Edinburgh Dog and Cat Home (0310)

Amend Policy Env 2 (Co-ordinated Development) (page 101) to:

*"Planning permission will not be granted for development which would compromise:  
(a) the effective development of adjacent land, or  
(b) the comprehensive development and regeneration of a wider area (i) provided for in a master plan, strategy, Supplementary Guidance, development principles, Site Brief or Place Brief approved by the Council, or (ii) in advance of approval of any such document."*

Melford Developments Ltd (0308)

The policy wording seeks to prevent development which "may" compromise comprehensive development. This is considered unclear and an unreasonably high test. Use of the word "would" is more appropriate. Amend Policy Env 2 (Co-ordinated Development) (page 101) to:

*"Planning permission will not be granted for development which would compromise:  
(a) the effective development of adjacent land, or*

*(b) the comprehensive development and regeneration of a wider area (i) provided for in a master plan, strategy, Supplementary Guidance, development principles, Site Brief or Place Brief approved by the Council, or (ii) in advance of approval of any such document."*

LPBZ Commercial Ltd (0391)

"Effective development" must be defined.

Overall the whole policy requires to be reworded to be more precise and less restrictive.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Amend policy to read as follows (new additions underlined):

*Planning permission will only be granted for development which can demonstrate that:*

- a. It does not compromise the effective development of adjacent land, or*
- b. It accords with the comprehensive development... ‘*

Forth Ports Limited (0496)

Page 101, paragraph 3.86

Delete the last sentence of the paragraph which reads, "*Piecemeal development is less likely to lead to the creation of well-defined and cohesive networks of streets and spaces. In some cases, it may be necessary for the Council to use its powers of compulsory purchase to assemble a site for development and enable a satisfactory outcome to be achieved.*"

Remove provision for Compulsory Purchase at Policy HOU1 (para 3.176) and in Section 2 – Strategy

Page 28, 2.103 - delete sentence 4 which reads, "...The Council has also acknowledged that use of compulsory purchase powers to facilitate development may be needed."

Page 29, 2.110 - delete the following text from the second sentence, "... and the use of compulsory purchase powers where necessary."

Page 121, paragraph 3.176 - delete

Page 121, paragraph 3.176

Delete the last sentence of the paragraph which reads, "*On sites in private ownership the Council will, where necessary, intervene to ensure that land comes forward utilising compulsory purchase powers if required.*"

Hallam Land Management (0615)

- Add another clause after (a) 'the restoration and development of vacant, derelict or brownfield land,' to ensure that vacant or derelict land is considered in locations where development is likely to be promoted.
- Add another clause after (a) 'the effective and productive use of available infrastructure

and its capacity,' to ensure that existing infrastructure is not compromised by uncoordinated development.

Cockburn Association (0777)

Amend supporting text to read as follows:

*“3.86 The Council requires a comprehensive approach to redevelopment and regeneration wherever possible, and the preparation of development frameworks, master plans, Development Briefs or Place Briefs to identify the full design potential for creating successful places. Piecemeal development is less likely to lead to the creation of well-defined and cohesive networks of streets and spaces. In some cases, it may be necessary for the Council to use its powers of compulsory purchase to assemble a site for development and enable a satisfactory outcome to be achieved.”*

**Env 3 – Development Design – Incorporating and Enhancing Existing and Potential Features**

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

The policy text (Page 101) should be amended as follows:

*“Planning permission will be granted for development where it is demonstrated that existing characteristics and features worthy of retention on the site have been identified, incorporated, enhanced and linked to through its design”.*

NatureScot (0528)

Recommend that the requirement that permission will be granted where “it is demonstrated that existing characteristics and features worthy of retention on the site...” is amended to “it is demonstrated through assessment that existing characteristics and features worthy of retention on the site...” so as to make a clearer link to a requirement that identification, incorporation, enhancement and linking to through design should be supported by assessment would help with this ambiguity.

National Grid (0805)

To ensure that Design Policy is consistent with national policy we would request the inclusion of a policy strand along the lines of the following is incorporated into Policy Env3 (or alternative): *“x. taking a comprehensive and co-ordinated approach to development including respecting existing site constraints including utilities situated within sites.”*

Edinburgh World Heritage (0339)

3.88 should be amended to more explicitly refer to the historic environment as follows:

*“...features including existing/historic buildings and other built structures, monuments, historic features, spaces and public realm materials, archaeology, trees...”*

These changes are needed to clearly reflect the importance and contribution of the historic environment to Edinburgh, and the special interest of some of its key features.

The following text should be added to 3.87 or introduced as a new paragraph:

*“To address the circumstances that a site does not have the opportunity for a Place Brief to be produced, the council will agree a standard methodology for taking those sites through the pre-application process to ensure consistency and continuity in the supporting information required and assessment criteria.”*

This change is needed as there are some gaps in relation to when a Place Brief is not produced as it is suggested the above wording would address this.

#### **Env 4 - Development Design – Impact on Setting**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

It is indicated that this policy should allow more flexibility for proposals to make their own judgement on a site-by-site basis.

This policy should be modified to make it clear which design policies will carry most weight: is it this policy's requirement for appropriate height, form, scale, proportions, space between buildings, or is the council's blanket high-density requirement?

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

Seek an amendment (page 102), as set out below.

*“Planning permission will be granted for development where it is demonstrated that it will not have an unacceptably negative impact on its surroundings, including the quality of character of the wider townscape and landscape, green blue networks, and impact on existing views, having regard to:*

- a. height, form and roofscape pattern*
- b. scale and proportions, including the spaces between buildings*
- c. position of buildings and other features on and around the site*
- d. materials and detailing*

*3.90. Where the surrounding development is fragmented or of poor quality, development proposals should, where possible and appropriate, help repair the urban fabric, establish model forms of development and generate coherence and distinctiveness – a sense of place. The siting and design of development should also be guided by views within the wider landscape and an understanding of local landscape character, including important topographical features, for example prominent ridges, valleys and patterns of vegetation”.*

Tarmac (0244), Hallam Land Management (0615)

Proposals also need to be assessed on a case-by-case basis.

- Alter wording of policy to “Planning permission will be supported by this policy...” as planning permission will not necessarily be granted if proposals comply with Env 4 as implied by the present wording so rewording is needed to avoid confusion or challenge.
- Alter wording of policy to “...it will not have a detrimental impact on its surroundings...”

Elgin Haymarket Limited (0292)

Ask that this policy states that: *“Impact on setting, and subsequent density, should be guided by Townscape and Visual Impact Assessment”.*

Stirling Developments Limited (0303)

It is indicated that the policy should be amended provide more flexibility and allow for site-by-site basis of the considerations, particularly in terms of green blue infrastructure which can be difficult to deliver on smaller and brownfield sites.

It should be clarified whether this policy takes priority over Env 26 (Housing Density).

Melford Developments Ltd (0308)

Clearer guidance is required in relation to impact on surroundings, character of the wider townscape and cross reference to the Edinburgh Design Guidance.

AREAA (0358)

Reword opening sentence of Policy ENV 4 (P102) to read “Planning permission will be granted for development where it is demonstrated that it will not result in an unacceptable adverse impact and, where possible, will have a positive impact on its surroundings...”

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The change in wording below seeks to require an applicant to demonstrate through assessments that there are no significant adverse impacts. Importantly, this aligns the assessment to that endorsed through the methodologies adopted in terms of environmental impact assessments, achieves a much greater control over development and allows established methodologies to be adopted. It also allows both the Council and an applicant to refer to an established body of case law about significant adverse impacts relating to townscape and landscape character. This case law has been set by the requirement in SESplan Policy 7 a. to demonstrate that greenbelt housing land releases need to be in accord with local townscape and landscape character.

Amend policy to read as follows:

*Planning permission will not be granted for development where it is demonstrated that it will have a significant adverse impact on its surroundings, including the quality of character of the wider townscape and landscape, green blue networks, and impact on existing views, having regard to:*

- a. height, form and roofscape pattern*
- b. scale and proportions, including the spaces between buildings*
- c. position of buildings and other features on and around the site*

*d. materials and detailing*

Cordatus Property LP (0533), Nuveen Real Estate (0564) (0734), SAICA (0590), CBRE Global Investors (0644)

Policy Env 4 / Paragraph 3.90 should recognise – in line with Paragraph 3.142 – that increasing density and building heights can also enhance an area's character and lead to better placemaking, particularly where there is limited historic character and where visual focal points may enhance otherwise featureless or fragmented townscapes.

Edinburgh Word Heritage (0339)

Policy phrasing needs to be amended as follows:

*“...will have a positive impact on its surroundings and reinforce and contribute to existing positive characteristics – including the quality and character of the wider townscape and landscape, the historic environment and values, green blue networks...”*

This change is needed to protect and enhance the Outstanding Universal Value of the World Heritage sites and the many benefits this brings. Also to clarify that development not only needs to have a positive impact (which can be loosely interpreted), but should reinforce what is positive about its context specifically.

**Env 5 Alterations, Extensions and Domestic Outbuildings**

Archie Clark (0003)

Clarity is needed on how monitoring and measurement will take place in relation to the supporting paragraph requirement that “...all proposals should seek to achieve a net enhancement to the City's green and blue network through sustainable use of gardens and roofscapes.”

Correct the incomplete line that reads “For extensions and outbuildings, it is additionally required that proposals:....”

Juniper Green & Baberton Mains Community Council (0306)

Section 3.90 d. is incomplete, it reads “d. For extensions and outbuildings, it is additionally required that proposals:”

It is also indicated that details should be provided on how green and blue infrastructure requirements will be monitored and measured.

Suzie Ross (0440)

It is indicated that the policy needs to introduce measurable requirements against which to determine planning applications. This is especially needed in relation to issues such as amenity, flooding alleviation, biodiversity and climate change where precise percentages can be developed should be clearly articulated in policy.

Scottish Wildlife Trust Lothian group (0560)

Modify the policy to make clear enhancements to green/blue infrastructure including trees, biodiverse vegetation and habitat, should offer the distinction that these enhancements should offer ecological coherence such as that achieved through the use of native species.

Cockburn Association (0777)

This policy should include an explicit indication against the development of front gardens for private car parking on the grounds that it damages character and affects streetscape.

Edinburgh World Heritage (0339)

3.91 should be amended to read:

*“...a proposal on the appearance and character of the existing building and streetscape generally must be protect and.. enhance the character and streetscape in historic areas and there should be no...”*

3.92 should be amended to read:

*“Where it is not detrimental to the character of a historic area, roofscapes should...”*

We advise that 3.91 be amended to read:

*“...of existing properties across the City, but it should not be at the expense of losing existing garden and green spaces at ground level across the city.”*

These changes are needed to appropriately conserve Edinburgh’s Outstanding Universal value as a World Heritage Site, including its outstanding existing historic green spaces.

**Env 25 - Layout Design**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

This policy should make clear which policy areas will the planning officer give precedence to when determining a planning application.

It is indicated that the policy should be amended to ensure the design approaches of the respective planning and roads departments are aligned.

Mark Ockendon (0419)

Replace point (c) to read:

*"the layout will encourage an integrated transport approach including walking, wheeling, cycling, public transport, taxis, and car. Emissions reductions will be supported through provision of electric vehicle charging to encourage the shift away from fossil-fuel based modes of transport."*

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Modify the policy to read as follows:

*Proposals will be supported by this policy (so far as applicable to the scale and nature of development proposed) where:*

*a. a comprehensive and integrated approach has been taken to the retention, design, layout and orientation of buildings, streets, footpaths, cycle paths, public and private open spaces, services, plant equipment, and green/blue networks (including SUDS features, landscape and tree planting, biodiversity connectivity and habitat),*

*b. new streets and active travel routes within developments are direct and connected with adjoining networks where possible to ensure ease of access to local centres and public transport,*

*c. the layout will encourage walking/wheeling and cycling to reduce emissions and address the climate emergency, cater for the requirements of public transport if required and in corporate design features which encourage slower driving, actively reduce the space and priority given over to private vehicles, and minimise potential conflict between pedestrians, cyclists and motorised traffic,*

*d. car and cycle parking areas and pedestrian and cycle paths are overlooked by surrounding properties,*

*e. safe and convenient access and movement in and around the development will be promoted, having regard especially to the needs of people with limited mobility or special needs,*

*f. attractive public open spaces, focal points, SUDS features biodiversity habitat, play and education opportunities are provided and connected with the appropriate features and green blue network in the surrounding area, and*

*g. it is designed to create and retain public views of the City as defined in Edinburgh Design Guidance as well as through the development and from it.*

Living Streets Edinburgh Group (0486)

Modify the policy to read as follows:

*Proposals will be supported by this policy (so far as applicable to the scale and nature of development proposed) where:*

*" Insert a new a. they adhere to and contribute to delivery of the transport hierarchy in Scottish Planning Policy and the National Transport Strategy*

*b. new streets have pedestrian priority and pedestrian and cycle routes within developments are direct and connected with adjoining networks wherever possible to ensure ease of access to local centres and public transport,*

*c. the layout will deliver and prioritise walking/wheeling and cycling to reduce emissions and address the climate emergency, cater for the requirements of public transport if required and incorporate design features which only accommodate driving as a last resort, actively remove the space and priority given over to private vehicles, and remove potential conflict between pedestrians, cyclists and motorised traffic,*

*e. safe and convenient access and movement in and around the development will be required, having regard especially to the needs of people with limited mobility or special needs*

*3.141 The layout of development must enhance community safety and urban vitality and be based on direct and convenient connections on foot/wheel and by cycle. Where new road space is required as an integral and necessary part of new development, layouts must prioritise walking/wheeling and cycling, and not accommodate greater car use or cause or add to congestion in the surrounding area."*

#### Corstorphine Community Council (0799)

This proposal should be amended to include reference to 20 minute neighbourhoods.

Item d's parking areas and cycle/footpath connections should be "well lit", as well as being overlooked by surrounding properties.

#### Edinburgh World Heritage (0339)

Add a new bullet at second-to-last position to read:

*"The layout of the site is not detrimental to the existing urban design of an historic area. It should reinforce and enhance, where possible, the existing street pattern and hierarchies. The balance and hierarchy of spaces within the site should complement and enhance the character of a conservation area."*

This is needed to appropriately protect and enhance the Outstanding Universal Value of the Old and New Towns of Edinburgh World Heritage Site. The layout of any historic area is a major feature of its character. This should be retained protected and where possible new development should reinforce the pattern and hierarchy of the streetscape.

### **Env 27 – Public Realm, New Planting and Landscape Design**

#### Archie Clark (0003)

This should include reference to the increasing number of untidy and excessively high telecoms masts, sometimes duplicating masts in close proximity (e.g. at Lanark Road near the canal). Reference should be made to 'PAN 62 Radio Telecommunications' and CEC's 'Communications Infrastructure 2018'. Masts that do not have adequate regard to the environment can ruin the appearance of a place. Equipment must be designed for the location and provide a unified appearance instead of the prevailing miscellany of different boxes provided by different companies. All redundant equipment should be removed. Where possible, equipment should not intrude on to footways. Refer also to Inf21 Telecommunications.

The bullets contain a statement: “a tree canopy coverage of appropriate species shall be achieved in line with Council guidance\*”. The enhancement and explanation implied by this asterisk is not provided in the following text however.

Juniper Green & Baberton Mains Community Council (0306)

Criterion b) should address the increasing number of telecoms masts, sometimes duplicating masts in close proximity, as masts that do not have adequate regard to the environment can ruin the appearance of a place.

It should be stated that equipment must be designed for the location and provide a unified appearance instead of the prevailing miscellany of different boxes provided by different companies. All redundant equipment should be removed. Where possible, equipment should not intrude on to footways.

Reference should be made to PAN 62 Radio Telecommunications and CEC’s Communications Infrastructure 2018.

Section 3.142 c. contains a statement, “*a tree canopy coverage of appropriate species shall be achieved in line with Council guidance\**”. However the enhancement and explanation implied by this asterisk is not provided in the text following.

Edinburgh Airport Limited (0761)

Criterion C should be amended to be worded as follows:

*“c. where appropriate a tree canopy coverage of appropriate species shall be achieved in line with Council guidance\*, as well as hedge, shrub and wildflower planting to provide a setting for buildings, boundaries and roadsides and create a robust landscape structure,”*

Edinburgh World Heritage (0339)

Bullet one revised to read:

“...interest or importance – conserving and where possible enhancing positive and historic integrity, authenticity, values and character.”

Bullet two revised to read:

*“...over different phases of a development. New poles, signage, road markings, guard rails, waste bins and other street furniture should be kept to a minimum where appropriate to avoid clutter in the streetscape, particularly in conservation areas.”*

Amend bullet three to read:

*“...and create a robust landscape structure. In historic areas the historic character should be understood, conserved and enhanced in the new planting and landscaping design.”*

Add a new bullet between current bullets two and three to read:

*“New landscaping with conservation areas reinforce the character of the area and is an opportunity to reflect the local layout, and typical species of planting and enhance the historic built environment.”*

Add a new bullet to read:

*“Streetlighting, architectural and landscape lighting should be designed and specified to complement the new development and surrounding area. In historic areas it should reflect the historic character of the area, enhancing and interpreting the built heritage in an appropriate manner according to the Streetlighting Strategy.”*

The above changes are needed to appropriately protect and enhance the Outstanding Universal Value of the Old and New Towns of Edinburgh World Heritage Site. They are also needed to make clear what ‘appropriate’ means for Edinburgh’s many historic (including undesignated) historic spaces – including for example response to heritage interest of local areas, the importance of lighting design and avoiding streetscape ‘clutter’

The additional reference to public art is welcomed (where its addition is sensitive to the historic values – see point above). It is noted there is positive opportunity to better represent Edinburgh’s diverse history more inclusively through such public art.

## **Env 28 – Urban Edge Development**

Tarmac (0244), Mr T Klan (0307), Hallam Land Management (0615)

Delete policy as paragraph 3.14 suggests the policy is to protect green belt boundaries and objectives however Policy Env 18 provides this protection.

Alternatively re-word to give positive encouragement where development contributes to sustainability objectives *or* reword to make clear what sites would be considered as ‘urban edge’. It would also need to be clarified when a development proposal would qualify as being in this zone. For example, would a site need to be wholly within the ‘urban area’ but adjoining the ‘Countryside’ or ‘Green Belt’ boundary? Or would it just need to be in close proximity? Or, does it mean sites that sit just outside but adjoining the ‘urban area’?

The Association for the Protection of Rural Scotland (0334)

Amend policy to make an addition: Cumulative adverse landscape effects caused by cumulative impacts of pylons; communication masts, etc which must be avoided. This should be cognisant of cumulative impacts of wind turbines which can arise even over long distances given the ever increasing height of turbines.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Amend policy wording to read as follows:

*Planning permission will only be granted for development on sites at the green belt boundary where it:*

- a. maintains the landscape setting and character of the city*
- b. promotes access to the surrounding countryside if possible*
- c. includes landscape and environmental improvements that help establish clearly identifiable visual boundary markers based on landscape features such as rivers, tree belts, railways or main roads*

Crosswind Developments Ltd (0184)

It is indicated that the Crosswind site (H61) should not be considered urban edge development as indicated on the proposals map.

**Env 29 - Waterside Development**

LPBZ Commercial Ltd (0391)

This policy refer to specific bodies of water where recreational uses would be appropriate and well used.

NatureScot (0528)

Policy Env 29 part c) (page 115) should be amended as follows: *"design in climate change resilience and adaptation, including through maintaining and enhancing the green blue network, particularly the water environment and its nature conversation and landscape interest (inclusive of its margins and river valley) including incorporating an adaptation buffer zone\* along waterfronts and edges"*

Leith Central Community Council (0614)

Better define recreational use and avoid risk of potential harm to natural habitats arising from it.

Edinburgh Airport Limited (0761)

Amend policy wording to read as follows:

*"Development on sites on the coastal edge or adjoining a watercourse, including the union canal, (except where these are within the boundary of the Airport) will only be supported where the proposals:*

- a. provide an attractive frontage to the adjacent water's edge and have had regard for character of the existing local area,*
- b. where appropriate maintain, provide or improve public access to and along the water's edge,*
- c. maintain and enhance the green blue network, particularly the water environment and its nature conservation and landscape interest (inclusive of its margins and river valley) including incorporating a buffer zone\* along the water's edge,*
- d. promote the recreational use of the water."*

Water of Leith Conservation Trust (0392)

It is indicated that it should be made more apparent where one can find the policy requirement for a 20m buffer along the Water of Leith.

Crown Estate Scotland (The Forth District Salmon Fishery Board) (0346)

Within our delegated powers vested by Crown Estate Scotland we wish to seek assurances that suitable access to rivers i.e. The Niddry Burn and Gogar Burn with salmon fishing interests are considered and duly receive recognition as part of the current Local Development Plan process.

Crosswind Developments Ltd (0184)

Modify the supporting text of this policy to read:

“\*The width of the buffer zone noted in criterion c) should be proportionate to the nature and size of the adjacent water environment. Further details are set out in the Green Blue network section of the Edinburgh Design Guidance. Buffer zones (as set out in Part 4, Table 1, Environment Proposals) should provide space for habitat creation as well as allowing fluvial and coastal processes to occur, including accounting for climate change and erosion. This buffer zone should be clear of new or existing development unless needed for food defence or of historic merit”.

**Env 30 – Building heights**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767),

It is indicated this policy needs to be amended to aligned with the density requirements and/or clarity should be provided on which policy takes precedence in instances where the two policies contradict each other.

Crosswind Developments Ltd (0184)

This amendment (page 115) is set out below:

*“Development which rises above the building height prevailing generally in the surrounding area will only be supported by this policy where each of the following criteria are met:*

- a. development should not adversely impact the skyline and surrounding townscape and should be justified by the proposed use;...”*

Stirling Developments Limited (0303)

This policy should make clear heights should be cognisant of existing structures not notional density aspirations given this policy could come into conflict with policy Env 26 (Housing Density) so it needs to be made clear which policy takes priority.

Melford Developments Ltd (0308)

Relax policy wording by amending wording to use phrases such as 'where appropriate' or 'where justified'.

Pawel Stankiewicz (0445)

1) In the lead section of Env 30 Building Heights Representation point a should be *"a development is to be created that is not significantly detrimental to the skyline and surrounding townscape and is justified by the proposed use"* since higher buildings make the possible high density of dwellings and some open spaces as recognised elsewhere in the Plan.

2) Point b should be deleted as it is too vague, hence discretionary. Most of the landmarks would get no permission with such policy.

3) There is no great value in roofscape reflecting valleys and hills, or making an illusion of them, in the areas otherwise not worthy of protecting so paragraph 3.150 on page 116 should be:

*"In addition, the height of new buildings may need to be suppressed where necessary so that the city's topography and valley features continue to be reflected in roofscape of the World Heritage Sites as well as Conservation Areas and Listed Buildings."*

4) Paragraph 3.152 on page 116 should be deleted since vague and discretionary regulations should be very limited, with no ammunition given to those fundamentally opposed to development in their area and architects need to be given more freedom as this will create variable but more interesting results.

Cordatus Property LP (0533), Nuveen Real Estate (0564) (0734), SAICA (0590), CBRE Global Investors (0644)

There should be additional acknowledgement of the varying sensitivities of different parts of the city; greater recognition that building heights can also enhance an area's character and lead to better placemaking, particularly where there is limited historic character and where visual focal points may enhance otherwise featureless townscapes (as accepted at paragraph 3.142); and, distinction made between wholly alien standalone buildings and developments which increase building heights in the area in a coordinated, considered and justifiable way to deliver a distinctive, cohesive sense of place (as accepted at paragraph 3.90).

Aviva Life and Pensions UK Limited (0598)

Allow greater heights where appropriate and also introduce a reference to the Haymarket area within the scope of the policy where higher density, and taller development, and in areas outwith key heritage designations, will be considered acceptable within the city centre.

Leith Central Community Council (0614)

The policy should explicitly require new developments to match prevailing/neighbouring height/density without recourse to "tricks" like set back top floors.

The concept of a development which enhances the skyline is too vague and needs more material conditions.

The policy needs more emphasis views from directly affected neighbours or local residents.

It should be demonstrated that developments which rise above the prevailing building height do not increase local air pollution by impeding local air flow.

Excess height should be matched by commensurate increases in quality public green amenity space, new vistas and increases in social infrastructure (for example libraries and retail).

#### Edinburgh World Heritage (0339)

Amend policy wording point 'a' to read:

*"A landmark is to be created that enhances the skyline and surrounding townscape and is justified by the proposed use."*

3.150 should be amended to read:

*"...so that the city's topography, characteristic urban design of 'primary' and 'secondary' streets, historic landmarks and valley features continue to be reflected in roofscapes. This policy will play a highly important role in protecting the World Heritage Sites, Conservation Areas, Listed Buildings and the setting of all heritage assets. "*

#### **Env 38 - Shopfronts**

##### Southside Community Council (0781)

This policy should be re-worded from the vague "particular care will be taken with ...." to - for example - "inappropriate shopfront alterations will not be approved in ...".

##### Edinburgh World Heritage (0339)

No modification stated but it is indicated that, if appropriate, reference could be made to Edinburgh World Heritage's Conservation Funding Programme which can (in advice and financial terms) support the conservation, repair and selective restoration of historic shop fronts.

#### **New proposed policy: Design standard uplift**

##### Suzanne McIntosh (0409)

It is indicated that a new policy should be created requiring a percentage of the site to be 'lifted' in terms of design for sites allocated as the draft City Plan policies do not go far enough in this regard.

#### **New proposed policy: Aircraft Noise**

### Edinburgh Airport Noise Advisory Board (0691)

Create a new policy relating to aircraft noise, which prevents new residential development that would experience excessive noise levels arising from aircraft. This policy should be based on a modified version of that in Renfrewshire Council's Local Development Plan (2014). The Renfrewshire policy reads:

*"Noise Applications for residential development under or in the vicinity of aircraft flight paths, where noise levels in excess of 57dB (year 2011 Actual Annual LAEQ contours) are experienced (see figure 2), will be refused due to the inability to create an appropriate level of residential amenity and to safeguard the future operation of Glasgow Airport. These noise levels will be reviewed periodically, in line with the Local Development Plan and will take into consideration the most up to date published noise contours".*

City Plan should have a similarly worded noise policy (with a lower noise threshold corresponding to WHO guidelines) to prevent development in locations which would have detrimental impacts on health and amenity.

### **General comment on all environment policies**

#### Tarmac (0244)

Where policies use the introductory phrase of "*Planning permission will be granted for development where...*" then this should be reworded to "*Planning permission will be supported by this policy where...*" or "*Development will only be permitted where...*".

It is also indicated Env policies should overall be made less detailed and more flexible.

### **Summary of responses (including reasons) by planning authority:**

#### **Env 1 – Design Quality and Context**

Wright PDL (0078), Stirling Developments Limited (0303), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), Homes for Scotland (0404)

The Council does not consider there to be a conflict between this policy and density aspirations in the Plan/ Policy 26. Drawing upon positive characteristics of the surrounding area whilst achieving appropriate density are not mutually incompatible. There is addressed further in Issue 12: Density.

It is for the decision maker to determine which policies are applicable to a given proposal and the balance of these in the determination of an application. It is not the role of an LDP to set an order of precedence since this may vary depending on the material circumstances of the case. **No modification proposed.**

#### Peter Allen (0336)

The Council considers the term "a vibrant and successful place" to be sufficiently clear. The Council's Edinburgh Design Guidance provide further information on successful placemaking. **No modification proposed.**

### Living Streets Edinburgh Group (0486)

The Council considers that this policy's requirement for successful placemaking adequately addresses this when read in conjunction with other policies in this Plan and the Edinburgh Design Guidance, particularly Section 4 'Designing Streets: Edinburgh Street Design Guidance. **No modification proposed.**

### Edinburgh World Heritage (0339)

This policy should be read in conjunction with other policies in the Plan, which includes Env 9 which relates to World Heritage Sites. As such it is not necessary to refer to the matters raised in an additional capacity in Env 1. **No modification proposed.**

The following representations support the policy as proposed:

Liberton & District Community Council (0084), Grange/Prestonfield Community Council (0192), Scottish Wildlife Trust Lothian group (0560), Leith Harbour and Newhaven Community Council (0776), Cockburn Association (0777)

## **Env 2 – Co-ordinated Development**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

A policy cannot set out every type of application (consented or otherwise), or every existing building or development type which may form a context for new development. It may at times be appropriate to consider unbuilt development, however, the scale of such development may not be materially significant. It is appropriate for the decision maker to judge what scale and types of proposal are relevant. It is noted that this policy is largely similar to that in the LDP 2016 and there has not been a need to include further details on application/development types in this time. **No modification proposed**

Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350), Crosswind Developments Ltd (0184), Taylor Wimpey (0200), Edinburgh Airport Limited (0761), Melford Developments Ltd (0308), Edinburgh Dog and Cat Home (0310), LPBZ Commercial Ltd (0391), CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Wright PDL (0078), Homes for Scotland (0404), Stirling Developments Limited (0303), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

Policies cannot set out every circumstance in which they will apply given the wide range of different sites and types of proposal that may come forward. It is for the decision maker to consider what policies to apply and what weight to give them. The Council has identified where it considers a master plan, strategy, guidance or brief may be required for an area. However, sites not previously considered may come forward which due to factors such as their complexity, scale or location, require coordinated planning.

The requirements identified in the Plan are good placemaking practice for many larger developments including those in multiple ownerships. As such the Council considers it unlikely that criterion b) will cause great levels of uncertainty or disproportionate delay. The Council agrees that it will often be large scale sites where such coordinated planning

is necessary, however, it is not agreed these are necessarily the *only* situations where this may apply.

Multiple landownership can be a challenge to delivering successful places. Policy should not prevent development happening but should require in certain cases, that coordination of development be part of the process.

Individual applications or statutory pre-applications may not be able to undertake full appraisal of a site's context. For example, issues around shared infrastructure or coordination of important non-residential uses may not be addressed in isolation. Where community engagement is part of forward planning, the Council does not accept this has to necessarily serve as an exercise in unreasonable inflation of expectations. If the process is undertaken correctly and from an early stage in proceedings it can provide clarity for all.

The Council is progressing Place Briefs (or equivalent) for a number of sites and the Place Policy Development Principles set out the basis for many others. Place Briefs or Development Frameworks exist already for some sites already, the Council can programme work in line with the likely phasing of sites and this will be kept under review.

The Council agrees it is beneficial for all parties if landowners and prospective developers are involved in the forward planning process. This is ongoing for a number of major sites and will continue. **No modification proposed**

#### LPBZ Commercial Ltd (0391)

The term 'effective development of adjacent land' is considered sufficient to allow a judgement to be made about whether this policy would apply in relation to criterion a). It is not possible to be specific beyond this because there may be a variety of reasons why a proposal has this effect including incompatible land uses or excessive scale.

Criterion b) and the term comprehensive redevelopment are considered sufficiently clear in policy terms. It is not possible example every possible circumstance. The supporting text covers this further though not exhaustively but is clear that piecemeal development is less likely to create well defined and cohesive networks of streets and spaces, exemplifying the type of factor needing consideration in responding to the policy. **No modification proposed**

#### CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Individual proposals will be appropriate in many cases and these can be addressed by other policies including Env 3. The policy would not prevent applicants amending proposals post-submission to respond to emerging information, so does not inherently conflict with criteria a and b. The Council would consider the material circumstances of any conflict appropriately on a case-by-case basis. **No modification proposed.**

#### Hallam Land Management (0615)

The first suggested new criteria is considered to be covered by proposed criterion a. since it would fall within the overall definition of 'adjacent land'.

The second is considered adequately addressed by criterion b) given that the comprehensive redevelopment regeneration of the wider area is already inclusive of infrastructure as a consideration. Policy Inf 3: Infrastructure Delivery and Developer Contributions also applies and ensures development must be accompanied by requisite infrastructure where necessary. **No modification proposed.**

Melford Developments Ltd (0308), Edinburgh Dog and Cat Home (0310), LPBZ Commercial Ltd (0391), Forth Ports Limited (0496), The Royal London Mutual Insurance Society Ltd (0149)

The Council considers that the few and brief references in the Plan to potential use of CPO powers if necessary is appropriate, given they are legislative provisions for issues of public interest and might be required to assist with coordinated delivery.

Sentence in supporting paragraph 3.86 reading: "*Piecemeal development is less likely to lead to the creation of well-defined and cohesive networks of streets and spaces*" should be retained. This sets out the logic for the policy and an example of why it might be applied. **No modification proposed.**

Cockburn Association (0777), New Town & Broughton Community Council (0254)

The Council considers that the wording as proposed reflects that a comprehensive approach to development will be supported but that development frameworks, master plans, Development Briefs or Place Briefs will not always be required. The policy text allows for this. **No modification proposed.**

Edinburgh World Heritage (0339)

The Old and New Towns of Edinburgh World Heritage site and sites and settings of other heritage assets do not need to be cited as examples of special importance as this is already evident and stated elsewhere in para 2.47. The Council considers that the policy wording of drawing upon positive characteristics of the surrounding area sufficiently addresses the need to first understand and identify these characteristics and complement them. **No modification proposed.**

The following representations support the policy as proposed:

Liberton & District Community Council (0084), Grange/Prestonfield Community Council (0192), Elgin Haymarket Limited (0292), Scottish Wildlife Trust Lothian group (0560), Leith Harbour and Newhaven Community Council (0776)

### **Env 3 - Development Design – Incorporating and Enhancing Existing and Potential Features**

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

The Council considers that the Policy read in the round is clear in referencing on and off-site features as needing to be addressed through design in terms of identification, incorporation, enhancement. Incorporation will be expected for on-site features. However aspects such as open space or civic space, important public views or settings of heritage

assets off-site may need consideration of orientation, frontages, scale etc. **No modification proposed.**

#### National Grid (0805)

The Council considers that due diligence by developers requires their understanding of utilities and any protecting designations, as well as providing for servicing the site. **No modification proposed**

#### NatureScot (0528)

No modification proposed, however, should the Reporter be so minded the Council has no issue for the purposes of clarity in a modification stating that 'assessment' is an important, initial part of the process of identifying features of merit. This would then make it easier for decision makers and others involved in reviewing proposals to see how all features on - site and adjacent have been considered and then addressed in the proposal.

#### Edinburgh World Heritage (0339)

The Council does not see a need to add the term 'historic feature' to the Policy wording. The Council does not consider it necessary to explicitly refer to each type of historic feature referred to in the proposed modification to paragraph 3.88.

The Council cannot agree a process with applicants for pre-application engagement which sets out expectations for the Council which are beyond its powers. The Council cannot require pre-application engagement. **No modification proposed.**

The following representations support the policy as proposed:

SEPA (0012), Liberton & District Community Council (0084), Grange/Prestonfield Community Council (0192), Scottish Wildlife Trust Lothian group (0560), RSPB (0648), Leith Harbour and Newhaven Community Council (0776)

### **Env 4 – Development Design – Impact on Setting**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), Stirling Developments Limited (0303)

The Council considers this policy is worded to apply to a range of site circumstances. The policy does not state that a certain level or type of green and blue infrastructure has to be delivered in all cases, instead the policy is emphasising the importance of the proposal having a positive effect in respect of its context.

Issues around the compatibility of density with issues of townscape setting and other issues in this policy are addressed further in Issue 12: Density.

It is not for individual policies to set out their weight relative to other policies. This is a matter for the decision maker if they consider there is a level of conflict between different policies. **No modification proposed.**

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761), Tarmac (0244), AREAA (0358), CALA Management Ltd (0465), Hallam Land Management (0599) (0615), Miller Homes Limited (0649), Melford Developments Ltd (0308)

Although the threshold of positive impact sets a higher bar for proposals, the Council considers it appropriate for proposals to demonstrate a positive impact given this policy addresses important issues of setting. The emphasis reflects that of the equivalent existing LDP policy Des 4 in this regard and the Council does not consider any material considerations have changed the merit of that approach. The strategy of the Plan has an emphasis on urban redevelopment where such an emphasis is even more important.

Assessing a positive impact is no more subjective than assessing a negative impact and allows for just as much precision and control. A positive impact does not need to set a magnitude of effect as basic judgement is whether the proposal has a net positive effect. It is considered achievable in many instances given the context of the majority of sites expected to come forward in the plan period. There is not considered to be conflict between the spatial strategy and delivering the aims and outcomes of the Plan. These are not just 'maximising the development potential' of land as set out in the representations.
