Representations note minimum requirements for environmental, landscape and heritage in terms of assessments in other contexts. City Plan is permitted to have different thresholds of acceptability given it relates to a specific geographic context. NPF 4 CD099 will succeed the Strategic Development Plan CD087 and SPP CD096. However, SPP sets out in paragraph 36 in respect of Placemaking is that 'Planning's purpose is to create better places.'. Draft NPF 4 Policy 6 (c) states that proposals should incorporate the six qualities of a successful places so that the development '...contributes positively to the character of the area...'

Demonstrating a positive impact to a decision maker is in principle the same for any threshold, for example. preservation or enhancement. The issue is not the threshold itself but how well proposals are designed to be respond to setting. **No modification proposed.**

Melford Developments Ltd (0308)

The Council considers the policy text is sufficiently clear in setting the attributes that need to be considered, however, should the Reporter consider the amendment has merit the Council would not have issue with additional reference to the Edinburgh Design Guidance CD047 in the supporting text. **No modification proposed**

Elgin Haymarket Limited (0292)

In some instances a "Townscape and Visual Impact Assessment" will be required to support an application, however this may not be necessary in every case where this policy applies. **No modification proposed.**

Cordatus Property LP (0533), Nuveen Real Estate (0564) (0734), SAICA (0590), CBRE Global Investors (0644)

The impact of density on townscape and placemaking is addressed in Issue 12: Density. The modification proposed is already in the supporting text for Policy Env 26, which the

Council considers the appropriate place, rather than supporting Policy Env 4. Plan policies require to be read as a whole. **No modification proposed**

Edinburgh Word Heritage (0339)

The Council considers that the existing policy allows for proposals to have a positive impact by reinforcing existing (positive) attributes of an area, without precluding that a positive impact may be achieved in some situations where alternative approaches may be beneficial.

The existing wording is also able to be applied to a historic context so explicitly stating this is unnecessary. **No modification proposed**

The following representations support the policy as proposed:

Liberton & District Community Council (0084), Grange/Prestonfield Community Council (0192), NatureScot (0528), Scottish Wildlife Trust Lothian group (0560), RSPB (0648), Leith Harbour and Newhaven Community Council (0776)

**Env 5 – Alterations, Extensions and Domestic Outbuildings**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Criterion d) ends with a colon so as to lead the reader onto looking at the two further criteria below (e and f).

Applications shall set out their blue green elements of their proposals (such as green roofs) as part of proposals so that these can be assessed as part of the application. The Council accepts that permitted development rights allow for future change for this in some circumstances. However, this is true of many development elements from householder scale to larger schemes. The key matter is the delivery of the green blue elements as part of the overall proposal as it is more likely the infrastructure and benefits of this will remain thereafter than if the measures were not incorporated. **No modification proposed.**

Suzie Ross (0440)

It is considered appropriate that a range of green and blue infrastructure options are available to applicants as different proposal types will be much more suited to different proposal types and design solutions. **No modification proposed.**

Suzie Ross (0440), Scottish Wildlife Trust Lothian group (0560)

The level of detail being sought for measuring policy requirements is more appropriate for guidance than policy. The Council regularly reviews its applicable guidance (including guidance for Householders) to ensure it is fit for purpose for new policies once adopted. **No modification proposed.**

Cockburn Association (0777)

The matter of how and when driveways are permitted is presently addressed as a more detailed guidance applied alongside LDP policy. Permitted development rights also exist

for driveways in some circumstances. The Council is content that these should continue to set the framework for driveways rather than updating LDP policy itself. **No modification proposed.**

Edinburgh Word Heritage (0339)

The Council considers that the wording as proposed allows for heritage to be considered in addition to situations with less direct heritage sensitivity.

The proposed modification to paragraph 3.93 appears to re-iterate the point that is already being made in the final sentence i.e. greenspace is important to retain and enhance even at a small scale given the cumulative impact. **No modification proposed.**

The following representations support the policy as proposed:

Liberton & District Community Council (0084), Grange/Prestonfield Community Council (0192), RSPB (0648)

**Env 25 - Layout Design**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Criterion b clearly states ‘...wherever possible...’ in respect of connecting to adjoining networks, this addresses concerns around what is deliverable for applicants in terms of connecting to neighbouring land.

The Council does not consider changing ‘wherever’ to ‘where’ (as requested) would have a significantly different meaning.

Not all views are equally attractive and as such criterion g is worded to make clear certain views are important to account for in design and layout terms. **No modification proposed.**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

It is not clear where the representations consider this policy misaligns with roads department approaches. The Council considers there is alignment in this respect.

It is not for an LDP to give an order of precedence to different policies. It is for the decision maker to give weight to policies with regard to the circumstances of the proposal. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council considers the proposed policy accords with the transport hierarchy set out in SPP CD096 and the National Transport Strategy CD110. In particular criterion c) specifically states layouts should prioritise walking/wheeling and cycling. **No modification proposed.**

#### Corstorphine Community Council (0799)

This policy needs to be read with other policies of the plan, including Inf 1 'Access to Community Facilities'; the Council is content the combined effect of this policy and others would deliver the first stated aim of City Plan to encourage 20 minute neighbourhoods. Many of the criteria in Env 25 are important to delivering this by promoting walking, wheeling and cycling.

Issues relating to security are addressed in adopted LDP CD039 policy Des 5 'Development Design Amenity'. The equivalent policy in the Plan is Env 33 'Amenity'. The City Plan version of this policy does not address the points previously covered in criteria c to e of the Adopted Plan policy Des 5 as City Plan policy Env 25 'Layout Design' is the more appropriate place for these criteria. For example, criterion a) of Env 25 details how features should be integrated into the layout of a development in a similar manner to criterion e) of Des 5.

It is not considered necessary to add 'well lit' to criterion d. Criterion e requires the development to be safe. It is for detailed design proposals to include elements of lighting appropriate to the situation. **No modification proposed.**

#### Mark Ockendon (0419)

This policy does not preclude car transport, however the Council considers this policy is appropriate in considering private, car based travel is a lesser priority in the design and layout of developments. This is in line with the principle of reducing car dependency as set out in the six qualities of a successful place promoted by draft NPF4 CD099, with the third quality stating the need to reduce car dependency and promote walking, wheeling and active travel. It also accords with the Sustainable Transport Hierarchy set out in the National Transport Strategy (2020) CD110. More generally it accords with City Plan's strategy of creating 20 minute neighbourhoods, pleasant places and reducing carbon emissions. **No modification proposed.**

#### Edinburgh World Heritage (0339)

The role of this policy is primarily to consider the layout of new development itself, with some specific criteria also concerned with how developments connect to the surrounding area. Other policies, such as Env 3, exist to consider how/if a proposal has incorporated the relevant attributes of a surrounding area. Policy Env 14 is relevant to Conservation Areas. **No modification proposed.**

The following representations support the policy as proposed:

SEPA (0012), Grange/Prestonfield Community Council (0192),  
Stirling Developments Limited (0303)

### **Env 27 – Public Realm, New Planting and Landscape Design**

#### Edinburgh Airport Limited (0761)

Criterion c already provides scope for variable application of tree canopy coverage given the reference to guidance which will set out levels required. No modification proposed. **No**

**modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The Council acknowledges the asterisk at the end of the words ‘...Council guidance’ in criterion c is a technical error as there is no corresponding paragraph with asterisk and so this asterisk should be deleted as a minor drafting/technical matter.

Inf 21 addresses issues around telecommunications equipment as such is not considered necessary to be addressed here in Policy Env 27.

Edinburgh World Heritage (0339)

The Council considers the criterion a. requirement for design and materials to be appropriate to the special interest and importance of an area already covers this sufficiently.

The Council considers likewise for criterion b. since there is a ‘catch-all’ reference to ‘other features’ as proposed.

Criterion b) applies to Conservation Areas as well as other areas. It is already set out in Policy Env 14. For this same reason the Council does not consider the new bullet point proposed in the representation between criteria b) and c) is necessary.

The Council will be updating its guidance on criterion c and will be cognisant of historic character this does not need to be stated here.

Env 27 does not make provision for lighting, however it is considered to be one of a range of matters that contributes to the overall quality of a place as required under Env 25.

It is noted that the design of lighting and street furniture should complement the surroundings particularly where it has a special character. However, this is a detailed element of design which is already captured in the Edinburgh Design Guidance CD047 and relevant Conservation area appraisals. **No modification proposed.**

The following representations support the policy as proposed:

SEPA (0012), Grange/Prestonfield Community Council (0192), HUB Residential (0582), Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazledene House Limited (0695), Parabola Edinburgh Limited (0723)

**Env 28 - Urban Edge Development**

Tarmac (0244), Hallam Land Management (0615), Mr T Klan (0307)

This policy continues to provide for unique design and layout considerations for development proposals at the urban edge in the same manner as Policy Des 9 – Urban Edge in the adopted LDP CD039. It is not meant for assessing the principles of development.

City Plan has not deleted the explanation of the objectives of the Green Belt. These are

set out in paragraph 2.58 (page 20) in Part 2.

The Council considers it clear where this proposal applies in spatial terms. It can apply to developments at the boundary either side of it. Further detail is not considered necessary. It is for the decision maker to consider the use and weight of this policy in relation to the scale and nature of proposals.

SPP CD096 paragraph 49 states that ‘... the development plan may designate a green belt around a city or town to support the spatial strategy by:... [inter alia] ... protecting and enhancing the character, landscape setting and identify of the settlement...’ The Council considers the policy accords with this objective. It would completely undermine this objective and a key purpose of the Plan in setting a green belt boundary if the Council then had a policy wording (Env 28) which meant developments failed to protect and enhance the character, landscape setting and identify of the settlement.

The Council agrees that defensibility of the green belt boundary is about selecting the appropriate landscape features to define the boundary but disagrees that other matters are not also important in this regard; even when they are less significant in scale. **No modification proposed.**

The Association for the Protection of Rural Scotland (0334)

The Council considers that criterion already addresses this issue and that cumulative impact can be taken into account as part of this. **No modification proposed.**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The Council does not consider that the policy conflicts with SDP CD087 policy 7 or 12. These SDP CD087 policies are not about the detailed design of development or development within Edinburgh’s Urban Area and as such are not relevant. It is further noted that the SDP CD087 policies in question will soon be superseded by that of NPF4 CD099.

Policy Env 28 is about development occurring within the Urban Area of the city at the green belt edge. It is not about the status of the green belt. The policy remains largely unchanged from policy Des 9 Urban Edge Development of the LDP 2016 CD039. **No modification proposed.**

Crosswind Developments Ltd (0184)

Env 28 is noted on the proposals map as being a ‘map wide’ policy. This means it is for the decision maker to determine if it is applicable to an application; not that it necessarily applies to everywhere in the Edinburgh area. There is no need to remove H61 specifically. **No modification proposed.**

The following representations support the policy as proposed:

SEPA (0012), Wright PDL (0078), Grange/Prestonfield Community Council (0192), Stirling Developments Limited (0303), Homes for Scotland (0404)

## Env 29 - Waterside Development

### LPBZ Commercial Ltd (0391)

Promoting the recreational use of water does not *have* to involve water sports or even deep water swimming in water bodies. Criterion d is to encourage the use of the waterside and water's edge for leisure purposes so as to maximise the additional opportunity water bodies present over and above normal civic and greenspaces. **No modification proposed.**

### Leith Central Community Council (0614)

The Council considers it appropriate to keep the term recreational use of water as relatively open in terms of what it may cover given the nature of what could be acceptable and should be encouraged will vary depending on circumstances. This includes, for example, accepting the fact that water sports for example could have a detrimental effect on nature in certain aquatic environs. Given other policies such as Env 21 'Protection of Biodiversity' it is considered that the applicable policies for informing and assessing proposals is an appropriate to ensure suitable development in relation to the water environment. **No modification proposed.**

### NatureScot (0528)

The Council agrees that there are significant challenges faced in respect of flooding and coastal change. As demonstrated by Dynamic Coast CD135 these challenges will likely grow in magnitude in future years. The Council continues to use its range of powers across services to consider and deliver appropriate actions. No modification proposed as the Council considers City Plan's policies support this however should, should the Reporter be so minded the Council has no issue so that instead criterion c is amended to read as follows:

*: "design in climate change resilience and adaptation and ensuring this involves the maintenance and enhancement of the green blue network, particularly the water environment and its nature conversation and landscape interest (inclusive of its margins and river valley) including incorporating an adaptation buffer zone\* along waterfronts and edges"*

The Council proposes this to make it clear in *all* instances that proposals should ensure the green and blue network is maintained and enhanced, including the adaptation buffer zone.

### Edinburgh Airport Limited (0761)

As with any policy, the decision maker would consider the extent it is applicable to the proposal and site circumstances. As such it would not expect the bank opposite to a development site to be altered if this was not part of the proposal or within the applicant's ownership. **No modification proposed.**

### Water of Leith Conservation Trust (0392)

The Council considers the requirement for a buffer zone along water bodies to be

appropriately located in the Waterside Development policy. **No modification proposed.**

Crown Estate Scotland (The Forth District Salmon Fishery Board) (0346)

Issues relating to rights of access are not within the locus of the Planning process. **No modification proposed.**

Crosswind Developments Ltd (0184)

Env 29 will apply to many developments without a corresponding BGN proposal identified in table 1. Most the proposals in Table 1 also do not set out water course buffer zones. As such, inserting a cross reference between this policy and table 1 would therefore be of limited benefit. **No modification proposed.**

The following representations support the policy as proposed:

SEPA (0012), Grange/Prestonfield Community Council (0192), RSPB (0648)

### **Env 30 - Building Heights**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), Stirling Developments Limited (0303)

The Council considers this policy is aligned with other policies in the City Plan, including Env 26 'Housing Density', whilst also addressing the issue of existing building heights. The issue of density requirements and compatibility with other matters such as townscape is addressed in Issue 12: Density. **No modification proposed.**

Crosswind Developments Ltd (0184), Melford Developments Ltd (0308)

The policy does not require development always accord with existing building heights, it is largely focused on setting where exceptions may be acceptable.

Where a non-allocated site would come forward for housing in the urban area Policy Env 26 'Housing Density' states that 'development must achieve an appropriate density having regard to....characteristics of the surrounding townscape, where this positively contributes to the character of the surrounding area'.

Capacities estimated for sites account for key requirements of the Plan including regard for what may be acceptable in the context of prevailing building heights in the surrounding area. Windfall urban area sites would be considered in the same way. Further matters regarding density and compatibility with existing townscape and context are addressed in Issue 12: Density.

The requirement for enhancement is particularly relevant if proposals would exceed prevailing heights and therefore have a greater visual impact. SPP CD096 paragraph 36. States that 'Planning's purpose is to create *better* places.' and draft NPF4 CD099 Policy 6 c) states that developments should contribute '...positively to the character and quality of the area...'. Env 30 reflects this. Policy Inf 15 'Edinburgh Airport Public Safety Zones' addresses issues relating to airport safeguarding and it is not necessary to duplicate this

in Policy Env 30. **No modification proposed.**

Pawel Stankiewicz (0445)

The modification proposed for criterion a. would permit detrimental impact from developments exceeding the prevailing height of an area. The Council considers this inappropriate, given potential for harm from cumulative impacts.

Criterion b. is considered appropriate in allowing a range of factors to be assessed in decisions on building design in context. Urban design and townscape impacts require careful consideration in the overall context, including viewpoints as this provides for.

The Council disagrees with the point on criterion c. The City has a unique character defined in part by the topography it is built on. If the perception of this underlying topography is lost then so too is identity and character of the City. Page 72 of draft NPF 4 CD099 and Paragraph 41 of SPP CD096 note that distinctiveness is one of the six qualities of a successful place which Planning should support. To the effect paragraph 41 states that 'This is development that complements local features, for example landscapes, topography, ecology, skylines, spaces and scales, streets and building forms and materials to create places with a sense of identity.'

, There are no regulations referred to in paragraph 3.152 however the Council considers this paragraph makes relevant points should be retained. **No modification proposed.**

Cordatus Property LP (0533), Nuveen Real Estate (0564) (0734), SAICA (0590), CBRE Global Investors (0644), Aviva Life and Pensions UK Limited (0598)

Criterion b. directly addresses ensuring proposals are appropriate to their context and varying sensitivities of different parts of the city, with criterion c. also accounting for heritage considerations. On giving weight to the positive effect a proposal may have on an area, this is adequately addressed by criterion a. **No modification proposed.**

Aviva Life and Pensions UK Limited (0598)

Subject policies do not make provision for specific locations. The Policy as proposed can be adequately applied to the specific circumstances at Haymarket. **No modification proposed.**

Leith Central Community Council (0614)

Design including the setting back top floors would be assessed each case by the decision maker. The Council considers the policy is clear as to when it should be applied i.e. where a proposal would rise above the prevailing building height of the area.

Consideration of enhancement of the skyline is dependent on the consideration the individual case and it is not practical to specify conditions on this as they might work for one context but not others.

Private views are not a material consideration, however, public views at a local level should be considered. Criterion b. of the policy can be used to assess this, with paragraph 3.152 making this clearer than the equivalent adopted LDP policy Des 11.

Air pollution as a result of any building is addressed in Policy Env 34 'Pollution and Air, Water and Soil Quality'. See Issue 16: Blue Green Infrastructure, Water and Environment Policies also.

The requirements for developments to provide public green amenity space, new vistas and additional social infrastructure are primarily addressed in policies Env 31 and 32 (see Issue 17), Env 25 (this issue) and Inf 1 (Issue 28) respectively. It is not appropriate to duplicate these requirements here and make them proportionate to building height. These policies are addressed in Issues 17 (Open Space policies), 11 (Design and Placemaking and 28 (Infrastructure Delivery - Community Facilities) respectively. **No modification proposed.**

#### Edinburgh World Heritage (0339)

Many proposals will accord with the prevailing building height, especially where this impacts on heritage, however the Council does not agree that where a proposal is higher than it's surrounding it should be a 'landmark'. Landmarks are designed to stand out. The Council considers that whilst all new buildings should have a positive impact, it is not always desirable for a new building, especially in a built heritage setting, to be designed to stand out.

The final sentence of paragraph 3.150 notes the importance of prevailing building heights especially in the context of the setting World Heritage Sites, Conservation Areas and Listed Buildings. It does not, however, state that this is only relevance of this policy. **No modification proposed.**

The following representations support the policy as proposed:

Grange/Prestonfield Community Council (0192), Leith Harbour and Newhaven Community Council (0776)

#### **Env 38 - Shopfronts**

##### Southside Community Council (0781)

The first sentence of this policy makes clear the threshold for compliance with the policy. The second (the part objected to) is not used to assess proposals but identifies examples of proposal types which are at greater risk of causing conflict with the policy threshold. The Council does not consider the wording is vague, nor that it implies inappropriate shopfronts in certain circumstances. **No modification proposed.**

##### Edinburgh World Heritage (0339)

Although the potential support from this funding source is positive, the role of City Plan is to set out the strategy, allocations and policies for future developments. The Council and Planning Service have other more appropriate routes with which to promote the fund. In that context the Council considers the reference to its design guidance is appropriate. **No modification proposed.**

**New proposed policy: Design standard uplift**

Suzanne McIntosh (0409)

The Plan's design policies include reference to where positive impacts are required, rather than just avoiding an excessively harmful effect e.g. criterion g of Policy Env 25 'Layout Design' requires that proposals 'create and retain attractive public views of the site', Policy Env 1 'Design Quality and Context' supports proposals 'where it is demonstrated that the proposal will create or contribute towards a vibrant, successful place.' Consequently the Council considers the proposed policies are sufficiently positive as proposed. **No modification proposed.**

**New proposed policy: Aircraft Noise**

Edinburgh Airport Noise Advisory Board (0691)

Policies Env 33 'Amenity' and Env 34 'Pollution, and Air, Water and Soil Quality' already set out that the amenity impact on future occupiers must not have an unacceptably adverse impact arising from noise. This is inclusive of scenarios where it new development itself would be subject to the impact. As such a new policy relating to aircraft noise is not considered necessary. **No modification proposed.**

Noise impact of aircraft adjacent to sites at West Edinburgh is addressed further in Issue 11: Design and Placemaking.

**General comment on all environment policies**

Tarmac (0244)

The Council notes that some policies are worded to the effect of stating that planning permission will be granted if proposals comply with the policy in question. This applies to the following policies: Env 3, Env 4, Env 5, Env 8 and Env 12. It is established policy language and the Council is not aware of any such misinterpretation occurring as it is sufficiently clear and established that planning applications are required to comply with more than just these or similar policies.

No modification proposed, however, should the Reporter be so minded the Council has no issue for the purposes of consistency in a modification that would have change the wording from stating '...planning permission will be granted...' (or similar) to '...proposals will be supported by this policy ...'

The following representations support the policy as proposed:

Grange/Prestonfield Community Council (0192)

**Reporter's conclusions:**

**Reporter's recommendations:**

Issue 12	Density	
Development plan reference:	Policy Env 26 Housing Density, City Plan Aim 1	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):		
<div>Ambassador Group (0683)</div> <div>Archie Clark (0003)</div> <div>Barratt David Wilson Homes (0677)</div> <div>BDW Trading (0350)</div> <div>CALA Management Ltd (0465)</div> <div>CBRE Global Investors (0644)</div> <div>Cordatus Property LP (0533)</div> <div>Crosslane Co-Living SPV 2 Limited (0687)</div> <div>Crosswind Developments Ltd (0184)</div> <div>Dandara East Scotland (0757)</div> <div>Grange/Prestonfield Community Council (0192)</div> <div>Hallam Land Management (0457)</div> <div>Hallam Land Management (0599) (0615)</div> <div>Hazledene House Limited (0695)</div> <div>Homes for Scotland (0404)</div> <div>HUB Residential (0582)</div> <div>Inverdunning (Hatton Mains) Ltd (0427)</div> <div>James Forbes (0647)</div> <div>Juniper Green &amp; Baberton Mains Community Council (0306)</div> <div>Landowner of East Foxhall (0544)</div> <div>Leith Central Community Council (0614)</div> <div>Living Streets Edinburgh Group (0486)</div> <div>Melford Developments Ltd (0308)</div> <div>Miller Homes Limited (0649)</div> <div>Nuveen Real Estate (0564) (0734)</div> <div>Robertson Residential Group (0537)</div> <div>SAICA (0590)</div> <div>Simon Thomson (0248)</div> <div>Southside Community Council (0781)</div> <div>Steve Loomes (0767)</div> <div>Stewart Milne Homes (0118)</div> <div>Stirling Developments Limited (0303)</div> <div>Tarmac (0244)</div> <div>Taylor Wimpey (0200),</div> <div>Taylor Wimpey and Hallam Land Management Ltd (0603)</div> <div>The Association for the Protection of Rural Scotland (0334)</div> <div>Watkin Jones Group (0516)</div> <div>Wirght PDL (0078)</div>		
Provision of the development plan to which the issue relates:	Policy Env 26 Housing Density, City Plan Aim 1, Table 2 Housing Proposals and the combination of environment and design policies and site development principles within the plan.	
Planning authority's summary of the representation(s):		
Clarification needed on Env 26		
<u>Wirght PDL (0078), Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)</u>		
Density is inappropriately defined. Developers would not typically include Open Space within the definition of a developable area as City Plan does. This means that the Council's definition of 65dph is actually 75dph for a developer exacerbating high density challenges.		

Archie Clark (0003), Wirght PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), Juniper Green & Baberton Mains Community Council (0306),

The policy does not set an upper limit to density, which is unhelpful.

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306), Southside Community Council (0781)

The Plan requiring high density for greenfield sites coming forward in Hou 4 implies support for these sites.

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306), Southside Community Council (0781), Tarmac (0244)

Table 2 does not set out density requirements.

Leith Central Community Council (0614)

It is unclear if Appendix D part of City Plan. If it is not then it would be undemocratic for this to be altered by the Council by itself following adoption of the Plan.

### **Status of Env 26 relative to other policies**

Wirght PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

It is not clear whether this policy takes precedence over other environmental and design policies. This is a problem given the potential for conflict between Env 26 and these other policies.

### **Additional issues that should be addressed by Env 26**

Living Streets Edinburgh Group (0486)

This policy does not fully address other issues which are relevant to density, namely: the residential environment, living conditions and pedestrian priority.

### **Viability**

Crosswind Developments Ltd (0184), Hallam Land Management (0457), Robertson Residential Group (0537),

The extra cost of higher densities undermines viability and the delivery of other aspirations of this plan that also have additional cost such as net zero and to encourage more creative design freedom where this is appropriate.

### **High density compatibility with surrounding area, including built heritage, built form, building heights, urban edge, landscape and rural character**

Wirght PDL (0078), Stewart Milne Homes (0118), Crosswind Developments Ltd (0184),

Taylor Wimpey (0200), Tarmac (0244), Simon Thomson (0248), Stirling Developments Limited (0303), BDW Trading (0350), Homes for Scotland (0404), CALA Management Ltd (0465), Inverdunning (Hatton Mains) Ltd (0427), Hallam Land Management (0457) (0599) (0615), Robertson Residential Group (0537), Landowner of East Foxhall (0544), Taylor Wimpey and Hallam Land Management Ltd (0603), James Forbes (0647), Miller Homes Limited (0649), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), The Association for the Protection of Rural Scotland (0334), Melford Developments Ltd (0308), Ambassador Group (0683), HUB Residential (0582), Crosslane Co-Living SPV 2 Limited (0687), Hazledene House Limited (0695)

No scope for site and space specific considerations and local context. It cannot simply be assumed that higher density equates to better design, mix and place making in all scenarios. This undermines the achievement of other policies in the Plan, in particular the more balanced design policies such as Env 4 and Env 6.

The proposed plan provides no evidence that this density will be deliverable on the proposed brownfield housing sites.

Density at urban edge in particular should not be high given the generally low existing density of these areas and the rural context of the green belt edge where high density would have a detrimental impact on the character of natural and rural landscapes. This includes sites which come forward under Policy Hou 4 which are needed to remedy any identified shortfall in the Council's housing land supply

The densities assumed for allocated sites appear arbitrary and not physically justified. These have not been tested by the development industry.

### **Policy does not sufficiently promote density**

Watkin Jones Group (0516), Southside Community Council (0781), Cordatus Property LP (0533), Nuveen Real Estate (0564) (0734), SAICA (0590), CBRE Global Investors (0644)

The densities stated in the revised policy are not particularly dense and do not make efficient use of limited space. 100 dwellings per hectare is similar in density to a Victorian 4-storey perimeter block in Marchmont. This is not a particularly dense minimum for high-density urban areas. Densities should be maximised but also informed by the surrounding context to utilise limited urban development sites across the city and, where appropriate, should look to increase building heights and densities.

### **High density impact on housing mix**

Wirght PDL (0078), Stewart Milne Homes (0118), Taylor Wimpey (0200), Tarmac (0244), BDW Trading (0350), Homes for Scotland (0404), Hallam Land Management (0457), Robertson Residential Group (0537), Landowner of East Foxhall (0544), Taylor Wimpey and Hallam Land Management Ltd (0603), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

Meeting the inflexible requirements of this policy would rule out the types of homes that are under-represented in Edinburgh's current housing stock and that are seeing such a surge in demand at present, particularly housing for families and/or an ageing population. There is conflict here with paragraph 15 of SPP, which states the need to provide choice

over where to live and style of home. The net effect will be families leaving the city to access appropriate homes.

The shortcomings of the density requirements are clear in analysis provided by EMA submitted with this representation which demonstrates that getting close to the 65dph threshold based on net developable area would significantly limit the house types which could be provided. To reach this density a 50/50 split of 4 storey flats and 2 storey housing would be required and 2/3 of the housing would need to be terraced

House builders are clear it is no simple process to fundamentally change standard house types in the short term. The townhouses, colonies, tenements/flats that would need to come to the fore to achieve this density requirement are not a major part of the current mix of new homes.

Env 26 contradicts Hou 3 (particularly part b) given it will limit housing mix which is required as part of Hou 3. Restricting the range of housing types delivered by development is also an important point in relation to a 10 year LDP – where the local market in certain areas has the potential to change considerably within this timeframe.

### **High density compatibility with amenity, open space/green blue infrastructure**

Wright PDL (0078), Stewart Milne Homes (0118), Taylor Wimpey (0200), Tarmac (0244), BDW Trading (0350), Homes for Scotland (0404), Hallam Land Management (0457), Taylor Wimpey and Hallam Land Management Ltd (0603), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), Crosswind Developments Ltd (0184)

Adverse impact on amenity and air quality as well as lack of space to fit in blue green infrastructure and open space. Even where these extra requirements such as amenity standards can be accommodated within higher density developments then delivering them comes at a higher cost.

Policy Env 32 Useable Communal Open Space and Private Gardens in Housing Development which state “a minimum of 20% of total site area should be useable open space and/or private gardens” could pose problematic for design, viability and deliverability.

### **Impact on infrastructure, open space and services**

Wright PDL (0078), Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

High density puts a greater strain on services and infrastructure.

Archie Clark (0003), Leith Central Community Council (0614), Juniper Green & Baberton Mains Community Council (0306), The Association for the Protection of Rural Scotland (0334)

Increases in population density need to ensure open space is protected and provided as well as being able to be accessible within walking distance (including the length of

stairwells in flats). This is especially relevant for already dense areas like Leith should be accompanied by a mandatory percentage increase in publicly accessible quality green spaces (as well as other infrastructure, police, electricity, water, surface water).

#### **Modifications sought by those submitting representations:**

##### Archie Clark (0003)

It is indicated that there should be a maximum limit for densities given the inability for developments to accommodate key features such as open space once such a limit is exceeded.

Also indicated that Table 2 should show the density of development as this will help identify the scale of the facilities needed to support developments.

Amend paragraph 2.109 to state that the Council 'reserves the right to raise density levels where appropriate across the existing built environment to 65-100 or 175 dwellings per hectare'. This avoids implying green belt and countryside developments may be permitted if they are dense enough.

##### Wirght PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

Indicated that the policy should be amended to remove the blanket requirement for all homes delivered through Policy Hou 4 (which could be either greenfield or brownfield) to be at densities of at least 65 dwellings per hectare.

The wording to be changed to "On other sites where the principle of housing is acceptable, development must seek to achieve an appropriate density having regard to:", to enable more flexibility in the decision-making process.

##### Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350)

The final paragraph of the policy should be amended as follows, additions are in capitals, deletions are not shown as the Council's proforma does not allow struck through text.

Housing proposals which come forward through Policy Hou 4 - Housing Land Supply must deliver *optimal densities taking into account the site characteristics, location and surrounding area*.

If a minimum threshold is maintained, and we would not support this the definition of developable area should be exclusive of open space.

##### Tarmac (0244)

- Assess on a site by site basis in conjunction with En26 Layout Design.
- Present actual predicted/required density per hectare for each allocated site in Part 4 Table 2.
- The requirement to deliver 65+ dwellings per hectare on sites that come forward through Hou 4 should be removed. The wording 'appropriate density' should suffice.

Simon Thomson (0248), Stirling Developments Limited (0303), Homes for Scotland (0404), Landowner of East Foxhall (0544), James Forbes (0647), Ambassador Group (0683)

It is indicated that the reference to 65dph should be deleted and replaced with a reference to the need for density to be suitable for the site context.

Taylor Wimpey and Hallam Land Management Ltd (0603)

For housing sites coming forward under Hou 4 then the requirement to 65dph should be replaced with a reference to the need for density to be suitable for the site characteristics, location and surrounding area.

Juniper Green & Baberton Mains Community Council (0306)

It is indicated that parts of the Plan which set out a density requirement of at least 65 dph in countryside / Green Belt locations should be amended so that it is clear this does not imply support for development in these locations. For example section 2.109, page 29.

Melford Developments Ltd (0308)

It is indicated that this policy should be deleted or amended so as to address the fact it is imprecise and it is unclear in practice, relating to an appropriate density. All housing proposals in Table 2 should be reviewed to be appropriate to the physical circumstances of the site and surrounding area.

Inverdunning (Hatton Mains) Ltd (0427)

Delete third paragraph.

Hallam Land Management (0457), Robertson Residential Group (0537)

Request that the section which imposes a minimum limit on the density of greenfield development brought forward through Policy Hou 4 should be removed, so that the policy reads:

*'Sites identified to deliver housing in this Plan should provide density and dwelling numbers in line with that set out for the relevant site in Part 4, Table 2. On other sites where the principle of housing is acceptable, development must achieve an appropriate density having regard to:*

- a) the characteristics of the site and those of the surrounding townscape, where this positively contributes to the character of the area*
- b) the need to create an attractive residential environment and safeguard living conditions within the development*
- c) the accessibility of the site to public transport, in particular recognising the role of transport corridors; and*
- d) the need to encourage and support the provision of local facilities necessary to high quality walkable neighbourhoods.'*

CALA Management Ltd (0465), Hallam Land Management (0599) (0615), Miller Homes

#### Limited (0649)

The purpose of Policy HOU 4 is to allow additional sites to come forward (within the green belt or countryside) when a shortfall in the Council's housing land supply is identified. These sites are not conducive to the densities proposed by the Council which are more suited to brownfield sites within the existing urban area. This is due in part to the larger areas of open space associated with such development, which reduce the net developable area.

The current wording of Policy ENV 26 places an unnecessary and unjustified restriction on housing sites within the green belt or countryside being brought forward to remedy any identified shortfall in the Council's housing land supply.

Amend policy to read as follows:

*Sites identified to deliver housing in this Plan should provide density and dwelling numbers in line with that set out for the relevant site in Part 4, Table 2.*

*On other sites where the principle of housing is acceptable, development must achieve an appropriate density having regard to:*

*a. the characteristics of the site and those of the surrounding townscape, where this positively contributes to the character of the area*

*b. the need to create an attractive residential environment and safeguard living conditions within the development*

*c. the accessibility of the site to public transport, in particular recognising the role of transport corridors; and*

*d. the need to encourage and support the provision of local facilities necessary to high quality walkable neighbourhoods.*

*Housing proposals which come forward through Policy Hou 4 - Housing Land Supply must deliver a density which is demonstrated to be appropriate for its surrounding context.*

#### Living Streets Edinburgh Group (0486)

Modify criterion b. to read as follows:

*"b. the need to create an attractive residential environment with pedestrian priority and safeguard living conditions within the development"*

#### Watkin Jones Group (0516)

It is indicated that the level of density required in policy Hou 4 should be increased.

HUB Residential (0582), Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazledene House Limited (0695)

General support for higher densities on appropriate, well-connected sites however this

must be considered on a site-by-site basis in relation to the site's characteristics and considered holistically with other planning considerations such as urban form, historic character, building typologies, prevailing sunlight and daylight levels, green infrastructure and amenity space.

Southside Community Council (0781)

This policy must be clearer that it applies to speculative proposals.

The wording 'appropriate density' should be replaced with a more definitive requirement for higher density development.

Archie Clark (0003), Wirght PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

The policy should provide clarity on what high density means and what is the upper limit for density.

Wirght PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

Clarity should be provided on what takes precedence where there is a conflict between density and other issues such as open space?

Request further evidence that all the requirements for housing development have been considered jointly and proven to be reasonable and viable.

Crosswind Developments Ltd (0184)

Seek an amendment to Policy Env 26 Housing Density (Page 114) as set out below:

*"Housing proposals which come forward through Policy Hou 4 - Housing Land should aim for a density of dwellings of at least 65 dwellings per hectare as averaged across the overall site's residential developable area (this should be inclusive of open space but excluding other non-residential uses). Where this is not achievable a reasoned justification should be provided".*

Juniper Green & Baberton Mains Community Council (0306)

Housing proposals in Table 2 should set out density requirements

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Amend policy to read as follows:

*Sites identified to deliver housing in this Plan should provide density and dwelling numbers in line with that set out for the relevant site in Part 4, Table 2.*

*On other sites where the principle of housing is acceptable, development must achieve an appropriate density having regard to:*

*a. the characteristics of the site and those of the surrounding townscape, where this positively contributes to the character of the area*

*b. the need to create an attractive residential environment and safeguard living conditions within the development*

*c. the accessibility of the site to public transport, in particular recognising the role of transport corridors; and*

*d. the need to encourage and support the provision of local facilities necessary to high quality walkable neighbourhoods.*

*Housing proposals which come forward through Policy Hou 4 - Housing Land Supply must deliver a density which is demonstrated to be appropriate for its surrounding context.*

Leith Central Community Council (0614)

Clarity should be provided on whether the Development Principles set out in Appendix D are actually parts of the final document or are they at risk of being amended without public scrutiny.

Increases in population density for already dense areas like Leith should be accompanied by a mandatory percentage increase in publicly accessible quality green spaces (as well as other infrastructure, police, electricity, water, surface water).

Juniper Green & Baberton Mains Community Council (0306).

It is indicated that there should be an upper limit for density to make clear that it does not prevent new developments from meeting open space accessibility requirements.

Cordatus Property LP (0533), Nuveen Real Estate (0564) (0734), SAICA (0590), CBRE Global Investors (0644)

In line with supporting paragraph 3.124, the actual policy text should give greater positive weight to the fact that increasing density and building heights can also enhance an area's character and lead to better placemaking, particularly where there is limited historic character and where visual focal points may enhance otherwise featureless townscapes.

The Association for the Protection of Rural Scotland (0334)

Density at urban edge in particular should not be high given the generally low density of these areas and the rural context of the green belt edge.

**Summary of responses (including reasons) by planning authority:**

The following representations support Policy 26 'Housing Density' as it is proposed:

Grange/Prestonfield Community Council (0192), Parabola Edinburgh Limited (0723)

**Clarification needed on Env 26**

Wright PDL (0078), Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

The policy states that allocated development should be in line with the capacities stated in Table 2 (Housing Proposals) of the Plan and other sites must achieve an appropriate density relative to other factors. The Edinburgh Design Guidance CD047 provides further information on how density is calculated. This includes how to calculate the density of mixed use developments. Page 32 notes that discretion will be used when calculating the density of mixed use developments. **No modification proposed.**

Archie Clark (0003), Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), Juniper Green & Baberton Mains Community Council (0306),

The Council does not agree there should be an upper limit on density. The design policies of the Plan allow a judgement about any limit on a case-by-base basis, with Env 30 (Building Heights), Env 1 (Design Quality and Context), Env 4 (Development Design – Impact on Setting) as well as Env 26 (Housing Density) itself. **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306), Southside Community Council (0781)

The Council considers there is sufficient clarity over the meaning of density in the context of this policy. The Council does not agree with concerns that there is an implied support for green belt/countryside sites in the Plan; density considerations would only come into play if such sites were required in respect of the housing land supply shortfall. The proposals map, site allocations and subject policies makes clear where housing development is considered suitable in the Plan. **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306), Southside Community Council (0781), Tarmac (0244)

The Council considers table 2 does not need to state density levels since it already has estimated capacity levels which is the more important information. Providing this in table 2 is not necessary. Density levels can be extrapolated if desired. **No modification proposed.**

Leith Central Community Council (0614)

The Council considers it clear as it stands that Appendix D is part of City Plan. **No modification proposed.**

### **Status of Env 26 relative to other policies**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

The Council does not agree this policy needs to specify what priority it has relative to other policies. The weighting of different policies of the Plan is for the decision maker to

consider in each case. **No modification proposed.**

**High density compatibility with surrounding area, including built heritage, built form, building heights, urban edge, landscape and rural character**

Wright PDL (0078), Stewart Milne Homes (0118), Crosswind Developments Ltd (0184), Taylor Wimpey (0200), Tarmac (0244), Simon Thomson (0248), Stirling Developments Limited (0303), BDW Trading (0350), Homes for Scotland (0404), CALA Management Ltd (0465), Inverdunning (Hatton Mains) Ltd (0427), Hallam Land Management (0457) (0599) (0615), Robertson Residential Group (0537), Landowner of East Foxhall (0544), Taylor Wimpey and Hallam Land Management Ltd (0603), James Forbes (0647), Miller Homes Limited (0649), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), The Association for the Protection of Rural Scotland (0334), Melford Developments Ltd (0308), Ambassador Group (0683), HUB Residential (0582), Crosslane Co-Living SPV 2 Limited (0687), Hazledene House Limited (0695)

Policy Env 26 is to be read with other environment and design policies of the Plan. This means due consideration of context is required as part of any development design. If applicable to the site circumstances, this may mean having regard to building heights as well as an urban edge context.

The Council disagrees with concerns around the requirement of 65 dwelling per hectare if sites need to come forward to mitigate a significant housing land shortfall. If sites were to be required under Policy Hou 4 they would be expected to be of a size that a net density figure of 65 dwelling per hectare in order to make the most efficient use of land, achieve 20 minute neighbourhoods and build sustainable communities which support local facilities and public transport. Irrespective of density, a proposal would still need to demonstrate acceptable townscape and landscape outcomes. A competent design process and skilled designers can achieve this.

Where housing proposals have a capacity stated, this has included consideration of the surrounding area, including the density appropriate to the site context, including building heights. **No modification proposed.**

**Additional issues that should be addressed by Env 26**

Living Streets Edinburgh Group (0486)

The Council does not consider this proposal needs to specify matters relating to the residential environment, living conditions and pedestrian priority as these are addressed in other City Plan policies such as Env 25 'Layout Design'. **No modification proposed.**

**Viability**

Crosswind Developments Ltd (0184), Hallam Land Management (0457), Robertson Residential Group (0537).

The Council has not been presented with evidence that higher density developments reduce viability. They are not considered to introduce inherently prohibitive costs that cause viability issues. The need for medium and higher densities is well documented in the plan and should be factored into the development and design of sites. **No**

**modification proposed.**

### **Insufficient in promoting density**

Watkin Jones Group (0516), Southside Community Council (0781), Cordatus Property LP (0533), Nuveen Real Estate (0564) (0734), SAICA (0590), CBRE Global Investors (0644)

The Council considers the policy already makes clear that high densities are supported where these would be appropriate to the context and this would support densities above the level of 100dph, where suitable. **No modification proposed.**

### **High density impact on housing mix**

Wright PDL (0078), Stewart Milne Homes (0118), Taylor Wimpey (0200), Tarmac (0244), BDW Trading (0350), Homes for Scotland (0404), Hallam Land Management (0457), Robertson Residential Group (0537), Landowner of East Foxhall (0544), Taylor Wimpey and Hallam Land Management Ltd (0603), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

Evidence has been submitted illustrating the effect of density at 65 dwellings per hectare on housing mix, showing a mix of 4 storey flats alongside mainly two storey terraced style units. The Council welcomes an approach which achieves a mix of housing types at higher densities including terraced properties and flats and considers there is further scope for flexibility in mix than as indicated in the representee's supporting document. Flats, colonies, four in a block, terraces, mews houses and townhouses can all be incorporated to increase densities. Colony flats are an example of a popular Edinburgh house type that is compatible with the need for family homes in line with draft NPF4 CD099 Policy 9 (f) and SPP CD096 requirements for a range and choice of homes.

The Council accepts such a mix may represent a change in standard house types provided by some house builders, however there are no practicable reasons why generally higher density housing mixes cannot be provided. Most developers already provide flats, colonies and terraced houses in their offering and have demonstrated that appropriate and viable housing types are deliverable. **No modification proposed.**

### **High density compatibility with amenity, open space/green blue infrastructure**

Wright PDL (0078), Stewart Milne Homes (0118), Taylor Wimpey (0200), Tarmac (0244), BDW Trading (0350), Homes for Scotland (0404), Hallam Land Management (0457) (0615), Taylor Wimpey and Hallam Land Management Ltd (0603), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), Crosswind Developments Ltd (0184), Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306), Crosswind Developments Ltd (0184)

The Council disagrees that increased density is incompatible with other policy requirements and aims of the plan. Increased density is an important factor in achieving 20 minute neighbourhoods and communities which sustain local facilities and public transport, whilst making the most efficient of the limited space the city. It ensures sites are not under-developed. Increasing density can also enhance an area's character and lead to better placemaking, providing visual focal points. It is not considered that a development is inherently unachievable by being required to meet the necessities of sustainable

development such as open space, meeting the needs of affordable housing provision and being built at an appropriate density. These factors should be considered as part of the acquisition, initial layout and eventual detailed design of a development

Appendix 1 of the Housing Study supporting Choices for City Plan CD026 provides illustrations of how green blue infrastructure and greenspace/open space can be provided at different density scales. Walking distances to open space can be provided at high densities. The Council's Open Space Strategy CD066 illustrates this with Figures 4 and 8 showing which areas of the city have walkable access to Large and Local standard spaces respectively – with high density parts of the city being as well served as many lower density parts.

The Council has not been presented with evidence that higher density developments reduce viability. They are not considered to introduce inherently prohibitive costs that cause viability issues. The density of an allocated site and the requirements of policy Env 26 should be factored into the initial planning and development of the site. **No modification proposed.**

#### **Impact on infrastructure, open space and services**

Wright PDL (0078), Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767)

The Council has undertaken strategic assessment of the impact of the proposal on a range of key infrastructure types such as transport CD014, education CD015 and Healthcare CD016. This has taken account of the allocations and developments proposed, including density to ensure impacts on existing infrastructure can be sufficiently mitigated. Issue 27: Infrastructure Delivery and Developer Contributions addresses this. For non-allocated sites coming forward at higher densities, relevant Plan policies will apply so as to ensure relevant infrastructure impacts can be mitigated if the proposal is otherwise appropriate. Policy Inf 3 'Infrastructure Delivery' is particularly relevant. The Council considers that density can support better local services and amenities by providing a necessary critical mass of population. **No modification proposed.**

Leith Central Community Council (0614), Juniper Green & Baberton Mains Community Council (0306), The Association for the Protection of Rural Scotland (0334)

The Council considers the provisions of the Plan are sufficient to ensure appropriate access to open space, including when new developments are proposed. 17: Open Space Policies consider open space provision in further detail. An upper limit on density is not necessary to ensure that these policies are still applicable. **No modification proposed.**

#### **Reporter's conclusions:**

#### **Reporter's recommendations:**

Provision of the development plan to which the issue relates:	These policies set out criteria to be considered in the design of new development and protection of the historic environment.	
Planning authority's summary of the representation(s):		
Env 7 – Sustainable Developments		
<u>Elgin Haymarket Limited (0292), Wright PDL (0078), Barratt David Wilson Homes (0677), Wright PDL (0078), Taylor Wimpey (0200), BDW Trading (0350), Homes for Scotland (0404), Steve Loomes (0767)</u>		

The final paragraph of this overly complex policy is fundamental to the delivery of the City Plan Aims and Spatial Strategy, which rely exclusively on existing sites within the urban area to deliver the City's substantial planned growth over the next ten years. These sites are rarely vacant.

Greenfield sites by comparison do not involve the loss and redevelopment of embodied carbon.

The policy is insufficiently clear and precise however and means open-ended interpretation will cause delays to the delivery of employment, housing and other land uses. Particular clarity is needed on what carbon assessments should entail.

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Does the Council have the expertise in 'Planning' to assess this?

Archie Clark (0003),

Is the requirement for carbon assessment appears not duplicating Building Regulations and therefore not necessary?

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The National Planning Framework 3 vision for a low carbon place is one with a more energy efficient built environment and Scottish Planning Policy paragraph 157 is clear LDPs should support development that delivers energy efficiency. Taking this further the draft NPF4 Policy 2 'Climate Emergency' is clear that all development should be designed to minimise emissions and identifies the situations where emissions evidence is needed.

Policy ENV7 Sustainable developments does not currently clearly require sustainability statements for new development to demonstrate low or net zero in use emissions and the whole life carbon footprint requirement only applies to replacement buildings.

Andrew Heald (0566), Leith Central Community Council (0614), Cockburn Association (0777), Leith Harbour and Newhaven Community Council (0776)

These proposals do not adequately address the issue of embodied carbon in construction. Up to 50% of the whole life carbon emissions of a new building is embodied carbon.

It is unacceptable that the policy provides exceptions to the sustainability requirements it sets out such as where a replacement building provides additional floorspace and/or dwellings compared to the existing building."

Submitted carbon assessments and sustainability statements should have to be certified and assessed by independent, qualified professionals to ensure they are reliable and thorough.

Crosswind Developments Ltd (0184), CALA Management Ltd (0465), Hallam Land Management (0615), Miller Homes Limited (0649), Barratt David Wilson Homes (0677)

The policy as worded simply refers to detailed proposals without defining the level of detail in the application.

This policy could potentially be attributed to Planning Permission in Principle applications. This requested level of detail will hinder the Planning Permission in Principle process, ultimately making the purpose of this type of application redundant.

Cramond & Barnton Community Council (0243), Mrs Patricia Stott (0349), Jean Morley (0461)

This policy does not address the fact that home working (full-/part-time) has become a common element of the lifestyle of many employed people and should be encouraged as part of climate change mitigation measures (e.g reduced commuting requirements) and to help achieve 20 minute neighbourhoods.

Kyle Worgan (0272)

This section does not adequately address biodiversity.

University of Edinburgh (0464)

City Plan must progress a managed approach to ensure that realistic and stretched targets and objectives are set that reflect the wider operation and journey that the University has committed. In particular so as to reach net zero by 2040, with associated work including its Climate Strategy, Energy Masterplan and the work of the Department for Social Responsibility and Sustainability (SRS). In this context, this may justify non-compliance in certain cases against this policy in terms. As technologies improve and associated affordability and viability becomes more acceptable it is hoped that these situations will become rarer.

CALA Management Ltd (0465), Miller Homes Limited (0649), Hallam Land Management (0615) Barratt David Wilson Homes (0677)

The Council has not defined what information is required to be submitted by an applicant in the required Sustainability Statement.

Defence Infrastructure Organisation (0124), University of Edinburgh (0464), Watkin Jones Group (0516)

This policy must make allowance for the specific challenges of incorporating mitigation measures when converting listed buildings, including how these impact on heritage significance but in relation to viability considerations. This is especially so in situations relating to the estate of the University of Edinburgh or on sites such as Redford Barracks which have a significant number of listed buildings, many of which are large in scale. This should be reflected in the wording "incorporate all reasonably practicable measures".

Living Streets Edinburgh Group (0486)

This policy should be modified.

Andrew Heald (0566)

Any new building built using concrete and/or steel is NOT sustainable – these are finite resources. The current policy undermines Edinburgh's Net Zero 2030 commitments and leave the Council open to accusation of false carbon accounting.

Other cities are addressing embodied Carbon in their plans and for example mandating timber. Amsterdam has mandated that 20 per cent of all new housing projects in the Dutch capital must be constructed with wood or other biobased materials from 2025. Hackney declared a presumption in favour of using sustainable timber in all new build projects.

#### CoMoUK (0728)

Amend the policy to include a commitment to shared transport that would enshrine a 'whole-development' approach to decarbonisation.

#### Edinburgh Napier University (0731)

This policy does not have references to the partnership working to ensure the effective delivery of policy aims. As well as the 2030 Climate Strategy as this is a significant document for all development in the city that already promotes collaborative ways of working to address the climate emergency.

There should be greater emphasis importance of 'adaptation' and 'resilience' within the scope of the policies.

Build-in the ability to update policies in future so they can be influenced, adapted and updated as necessary, as and when new opportunities arise in respect of environmental sustainability, as well as in relation to new legislation coming forward and changes in national expectations.

Development proposals should also be required to demonstrate how they have made a significant attempt to move away from private car reliance and have promoted public transport usage.

'Biodiversity' should be included within the scope of the Policies and that wildlife habitats and water attenuation should not just be referenced in respect of green roofs.

#### Edinburgh Airport Limited (0761)

The policy should be reworded requiring developments to address the criterion where achievable and possible, to allow development to be assessed for the required measures on a case by case basis, so as to provide more flexibility.

#### Edinburgh World Heritage (0339)

Demolishing existing buildings and constructing new ones will generate significant amount of carbon emissions before starting to contribute to the city's carbon emissions reductions. The re-use of existing buildings is inherently sustainable and should be the default, particularly in Edinburgh which has an exceptionally high number of historic buildings that should be protected. Traditional buildings are specific due to their design, construction

techniques and materials, therefore they require the adequate carbon emission calculation methodologies to be accurate.

To address a significant risk of negatively impacting the character, Outstanding Universal Value and designated status of the Old and New Town World Heritage Site as a result of development pressures. It will be important to consider how a decision will be made if comparative assessment fails.

## **Env 8 – Sustainable Buildings**

Archie Clark (0003), Wright PDL (0078), Summix Capital Limited (0747), Barratt David Wilson Homes (0677), Taylor Wimpey (0200), BDW Trading (0350), Homes for Scotland (0404), S Harrison Developments Limited (0460), HUB Residential (0582), Ambassador Group (0683), Hazledene House Limited (0695), Steve Loomes (0767), Stewart Milne Homes (0118).

Do not support the Council's decision to depart from national Building Standards. New homes are now 75% more efficient than they were in 1990. Further reductions in carbon dioxide will be required when building standards are updated in 2021, with further planned changes again in 2024 preventing the installation of gas boilers. Home builders are committed to keeping pace with national changes to building standards.

Duplicating Building Standards requirements risks creating conflict, delay and uncertainty and creating deliverability and viability issues.

At a national level this change also encourages economies of scale and efficiency than a patchwork of different locally set requirements.

No evidence has been provided to demonstrate that the higher standards in this policy can be achieved in practical and financial terms, including in areas such as Edinburgh.

Lack of engagement with the home building industry to determine the extent to which these requirements are deliverable and viable.

No evidence of any research on the existing grid capacity and impacts, including account for the effect of the high-density strategy, current network demand, nor what upgrades would be required to facilitate the requirements of this policy, particularly in areas where a significant volume of new high-density development is proposed such as North-East Edinburgh.

As the applicant is often not going to be the party constructing the building, this policy seems to be being directed at the wrong party. Providing a 'statement' of intent followed by a planning condition is not the same thing as providing a detailed design and thus difficult to impose.

University of Edinburgh (0464)

The long term viability of living roofs is not yet proven. These pose operational and maintenance challenges adding to the annual cost of maintaining buildings.

The University has a number of highly serviced buildings such as research institutes and laboratories which are extremely challenging to deliver as net Carbon Zero. From an initial

review achieving Platinum Standards would have added at least a further 10-15% of cost to each Capital Project. Strict application of this policy in all cases could hinder growth, investment and the positive contribution that the university makes to the city and surrounding economy.

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761), Summix Capital Limited (0747)

Certain requirements are not achievable or appropriate in all circumstances, often due to site circumstances, and therefore are overly restrictive to development. For example, requirements such as green roofs to provide wildlife habitat and water attenuation are not a feasible option for development at the airport due to aviation safety. The airport could not necessarily support green roofs on development sites at West Edinburgh and Maybury due to these safeguarding issues.

Grange/Prestonfield Community Council (0192)

The difference in requirements for Major and Local development should be removed so all development as defined in 3.99 must meet Parts A *and* B of the present S1 form and beyond.

John Bremner (0282)

This policy only *encourages* Passivhaus but does not *require* it. Passivhaus standards have already been met in 2021 by local authority housing in Agar Grove, Camden, UK (216 new council homes, 37 homes at Camden Living Rent). This is needed now to ensure all new development in Edinburgh meets net zero and to ensure affordability for people living in new developments in Edinburgh to heat and power their homes without damaging the environment.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Barratt David Wilson Homes (0677)

Not all new buildings, especially those needing to adopt traditional design in terms of materials and detailing, should meet net zero greenhouse emissions.

Edinburgh Napier University (0731)

This policy does not have references to the partnership working to ensure the effective delivery of policy aims. As well as the 2030 Climate Strategy as this is a significant document for all development in the city that already promotes collaborative ways of working to address the climate emergency.

There should be greater emphasis importance of 'adaptation' and 'resilience' within the scope of the policies.

Build-in the ability to update policies in future so they can be influenced, adapted and updated as necessary, as and when new opportunities arise in respect of environmental sustainability, as well as in relation to new legislation coming forward and changes in national expectations.

Development proposals should also be required to demonstrate how they have made a significant attempt to move away from private car reliance and have promoted public transport usage.

'Biodiversity' should be included within the scope of the Policies and that wildlife habitats and water attenuation should not just be referenced in respect of green roofs.

Edinburgh Airport Limited (0761)

The policy should be reworded requiring developments to address the criterion where achievable and possible, to allow development to be assessed for the required measures on a case by case basis, so as to provide more flexibility.

Leith Central Community Council (0614)

How are these plans being enforced once Planning is granted? Will notices be issued if these roofs are not properly maintained? Can the developer be held responsible for the maintenance?

**Existing Buildings**

Archie Clark (0003), Prof D N Bateman (0004), Homes for Scotland (0404)

City Plan 2030 does not address current building stock. The great majority of Edinburgh buildings will not undertake any sustainability improvements. Even new estates being currently built, especially private ones, are not at a standard required to meet environmental zero carbon targets set in this policy document. Why wait til 2030? This should be done now.

**Use of key terms**

Archie Clark (0003)

An emergency is something that arises suddenly and is dealt with in a short timescale whereas 'Climate Change' has been happening for centuries but currently has been speeding up, and looks like continuing to accelerate over the next century when its 'emergence' will have been long established.

Text is hard to read and contains buzz words that seem to have no contextual reference – e.g. "The development creates an attractive, biodiverse sustainable drainage system".

**Modifications sought by those submitting representations:**

**Env 7 – Sustainable Development**

Elgin Haymarket Limited (0292)

Paragraph 3.98: needs to provide quantifiable metrics that enables the development industry to make informed decisions based on defined targets, for example CIBSE Guide / LETI Climate Emergency Design Guide / RIBA 2030 Climate Challenge Targets, to make sure the metrics are consistent across all development proposals.

The policy and supporting text should acknowledge that, in many instances an existing building will be replaced by one or more buildings and be mixed-use, resulting in a disproportionate comparative carbon assessment. Weighting must also be given to the benefits of increased densification of city centre brownfield sites and reductions in travel emissions with sites close to public/active transport. It should also be acknowledged that not all buildings are suitable for retrofit.

Archie Clark (0003)

It is indicated the requirement for carbon assessments should be deleted if it is already required by Building Standards.

Juniper Green & Baberton Mains Community Council (0306)

The means of measurement should be explained for quantifying benefit of new buildings/floorspace in addition to carbon emissions. For example, if the new proposal doubled office capacity but the footprint increased by a lesser amount, then that would be advantageous.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The text on ENV 7 could be strengthened so that sustainability statements make low emissions/net zero is a criterion for new buildings in terms of their 'in use' emissions. It is also indicated that a whole life emissions assessment could also be considered for new buildings (whether replacing existing buildings or not).

Leith Central Community Council (0614), Andrew Heald (0566), Cockburn Association (0777)

It is indicated that the policy should remove the potential for redevelopment proposals to permitted if factors such as additional floorspace are considered to outweigh a net negative carbon footprint.

Submitted carbon assessments and sustainability statements should have to be certified and assessed by independent, qualified professionals to ensure they are reliable and thorough.

Andrew Heald (0566)

It is indicated that the policy should make clearer provision for embodied carbon in its carbon assessments and close the exemption for proposals to have a negative net carbon footprint if they provide other benefits such as additional floorspace compared to an existing building.

City Plan must set an annual carbon budget, with the carbon footprint of new construction measured and recorded. Developers should be taxed on the embodied carbon in their development and the funds raised used in the management of green infrastructure in the city.

Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350), Homes for Scotland (0404),

The section of the policy setting out additional matters to address in the Sustainability Statement should be deleted. This deals with matters relating to detailed specification for the fabric and construction of buildings, which are more appropriately considered through Building Standards

CALA Management Ltd (0465), Hallam Land Management (0599) (0615), Miller Homes Limited (0649), Barratt David Wilson Homes (0677),

This policy should define the type of planning application which will require the submission of a Sustainability Statement, and that this set out that this is only required for detailed proposals.

The detail required in a Sustainability Statement should be defined to assist all applicants understand the assessments required, including information on what is needed in terms of future adaption and long-life construction. This should be done through the use of supplementary guidance such as the Edinburgh Design Guidance rather. This avoids matters being out of date during the lifetime of the adopted LDP. It also adds a further consultation process for the benefit of the public, applicants and the Council.

The amended policy should read as follows:

*All detailed proposals submitted as either applications for Planning Permission or Approval of Matters Specified in Conditions involving the construction or change of use of one or more buildings\* must incorporate all reasonably practicable measures to address the climate emergency and contribute to sustainable living, with this being demonstrated through a Sustainability Statement which addresses the following:*

*a. how the proposal integrates measures to both mitigate and futureproof the building against the effects of the climate emergency, particularly with regard to the increased frequency and severity of extreme temperature and storm/ rainfall/flooding events as well as sea level rise and erosion, and*

*b. how the proposal encourages all forms of active travel (including complying with Edinburgh's Street Guidance and associated Factsheets) and shall be accessible by those of all ages and levels of mobility, including those with disabilities.*

*The detailed information to be submitted in this Sustainability Statement will be defined through supplementary guidance.*

*In addition to the above, the Sustainability Statement must also address the matters set out below:*

*For developments involving new buildings the statement shall set out how the development has been designed to be of long-life construction and to allow future adaptation for different uses as well as utilising construction materials that have low or negative embodied greenhouse gas emissions and are local and/or sustainably sourced and/or recycled and capable of re-use at the end of a building's life cycle as far as reasonably practicable*

*For change of use proposals, the statement must address how the proposal has considered and integrated measures to increase resilience to future climate change and minimise greenhouse gas emissions such as built fabric efficiency improvement and Low and Zero Carbon Generating Technology.*

*For proposals involving the replacement of existing buildings\* proposals should be accompanied by a carbon assessment setting out the 'whole-life' carbon footprint of the proposed development compared to the option of re-using the existing building to accommodate the proposed use\*\*. Where this comparative assessment fails to show an overall lower carbon footprint then it must be set out why the developer considers the proposal justified, for example because the new development provides additional floorspace and/or dwellings compared to the existing building*

Defence Infrastructure Organisation (0124), University of Edinburgh (0464),  
Watkin Jones Group (0516)

This policy must make allowance for the specific challenges of incorporating mitigation measures when converting listed buildings.

Propose this policy assesses proposals on a case-by-case basis and that sustainability statements can be a way of presenting the best case position for each application. This allows balancing of improved standards and performance, against specific building or servicing requirements, for example for specialist laboratory space, which may dictate that maximum improvements are not achievable.

Crosswind Developments Ltd (0184)

Amend policy to define "detailed proposals" as referenced in the very first sentence of Policy Env 7 Sustainable Developments. This amendment should be included under paragraph 3.98 (Page 103) above the \* the term building to read:

*“Detailed proposals refer to full planning applications. Applications for Planning Permission in Principle will be subject to the use of conditions to ensure matters of sustainability are addressed upon submission of full details.”*

Cramond & Barnton Community Council (0243), Mrs Patricia Stott (0349),  
Jean Morley (0461)

The policy should encourage all family housing of 12 units and more (or all major housing developments) to comprise a specified proportion of homes with integral or attached office space and/or the provision of shared use workspaces.

Kyle Worgan (0272)

Amend criteria a-c to read as follows:

*a. how the proposal integrates measures to both mitigate and futureproof the building against the effects of the climate emergency, particularly with regard to the increased frequency and severity of extreme temperature and storm/rainfall/flooding events as well as sea level rise and erosion, and*

*b. how the proposal incorporates biodiversity within open and built spaces. Biophilic design allows nature and greenery in urban landscapes, where air pollution, health and wellbeing can benefit from features like rooftop gardens, beehives, nest boxes and green walls.*

*c. how the proposal encourages all forms of active travel (including complying with Edinburgh's Street Guidance and associated Factsheets) and shall be accessible by those of all ages and levels of mobility, including those with disabilities.*

Jean Morley (0461)

Indicates that this policy should seek to create hub environments for older communities, have e-charging points, and ensure new build garages are built to a width that can accommodate both modern cars and bicycles

Living Streets Edinburgh Group (0486)

Support if revised as follows:

*"b. how the proposal encourages, incorporates and delivers all forms of active travel (including complying with Edinburgh's Street Guidance and associated Factsheets) in accordance with the order of priority as set out in the transport hierarchy in Scottish Planning Policy and the National Transport Strategy and shall be accessible by those of all ages and levels of mobility, including those with disabilities. "*

Andrew Heald (0566), Leith Harbour and Newhaven Community Council (0776)

It is indicated that the policy should require the greater use of sustainable materials in construction such as timber as an alternative to materials such as concrete. New developments should ensure heating and energy infrastructure is non-gas for all new developments

CoMoUK (0728)

Amend the policy to include a commitment to shared transport.

Edinburgh Napier University (0731)

It is indicated that Policies Env 7 and Policy Env 8 should be updated to include the following:

References to the partnership working to ensure the effective delivery of policy aims.

The importance of 'adaptation' and 'resilience' within the scope of the policies.

Build-in the ability to update policies in future so they can be influenced, adapted and updated .

Development proposals should also be required to demonstrate how they have made a significant attempt to move away from private car reliance and have promoted public transport usage.

'Biodiversity' should be included within the scope of the Policies and that wildlife habitats and water attenuation should not just be referenced in respect of green roofs.

Edinburgh Airport Limited (0761) Proposed wording is as follows:

*"Where achievable and possible detailed proposals involving the construction or change of use of one or more buildings\* must incorporate reasonably practicable measures to address the climate emergency and contribute to sustainable living, with this being demonstrated through a Sustainability Statement which addresses the following:"*

Edinburgh World Heritage (0339)

First paragraph (p103) to be amended as follows:

*"...change of use of one or more buildings or significant redevelopments of existing sites must incorporate..."*

This change is needed to appropriately cover relevant notable-scale site redevelopments which do not constitute a change in use. Such redevelopments may increase existing issues in terms of the impact of climate change/GHG emissions. This proposal can significantly improve the management of climate change risks/increase the reduction of GHG emissions.

Requirements of Sustainability Statement (p103) advised to be amended as follows:

*"For change of use...integrated measures to increase resilience to future climate change (including increased drainage capacity)...Generating Technology. This should demonstrate that this is the most effective and sensitive method of intervention – taking into consideration historic value and available guidance."*

And;

*"For proposals involving the replacement of existing buildings...option of re-using the existing building to accommodate the proposed use. Such proposals should be exceptional and proposals should always prioritise their re-use as the default option, particularly when they are buildings of heritage or townscape value. In these instances, proposals should include an assessment of the heritage significance, contribution to townscape and a carbon assessment based on a robust methodology approved by Historic Environment Scotland...dwellings compared to the existing building. Such proposals would be assessed on their own merits on a case-by-case basis, particularly in the Old and New Towns of Edinburgh World Heritage Site where they should be exceptional and based on robust evidence and rationale."*

This change is needed to ensure that change of use proposals appropriately and effectively respond to the technology and conservation of historic buildings. Also to ensure that drainage is understood as a key issue facing the city.

## **Env 8 – Sustainable Buildings**

Archie Clark (0003), Barratt David Wilson Homes (0677), Wright PDL (0078), Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350),

Homes for Scotland (0404), S Harrison Developments Limited (0460), Ambassador Group (0683), Hazledene House Limited (0695), Steve Loomes (0767), HUB Residential (0582),

It is indicated that this policy should not address carbon emissions reduction.

University of Edinburgh (0464)

The policy should be flexible in terms of green roofs and carbon standards so as to allow large scale key stakeholders in the city such as the University to not have to make the case for relaxations if these are not appropriate for the particular proposal in terms of the site, its location, and its use.

Watkin Jones Group (0516)

The policy should be amended to be flexible so that allowance is made for proposals where it is not possible, feasible or viable to achieve the stated standards.

Summix Capital Limited (0747)

It is indicated that this policy should be deleted or at least apply on a case by case basis

Grange/Prestonfield Community Council (0192)

It is indicated that City Plan should be modified to make clear both Major and Local development must meet Parts A *and* B of the present S1 form and beyond.

Crosswind Developments Ltd (0184)

It must be made clear that this policy will only apply to detailed planning applications. This needs to be made explicit in the supporting text so the policy is not applied wrongly to Planning Permissions in Principle applications. Proposed word changes (Page 104):

*"It is important that new buildings are as sustainable as they can be and play their part in addressing the Climate Emergency. Detailed applications that include new buildings\* will be supported where it has been demonstrated that:*

*a. it has achieved, predominantly through ultra-high fabric energy efficiency, a 'net zero' level of operational greenhouse gas emissions\*\**

*b. surface water run off and water attenuation have been considered where appropriate, green roofs will be supported alongside other measures that would achieve the desired outcomes.*

*c. provision is made for facilities for the separate collection of dry recyclable waste and food waste.*

*The ability to achieve net zero greenhouse gas emissions in line with the requirements above should be evidenced by a statement submitted with applicable applications. It is not the City Council's intention to render development unviable so where concerns arise these must be raised and justified to the satisfaction of the Council. Thereafter compliance will be ensured by attaching a condition to all planning permissions to which this policy applies".*

The supporting text for the policy also needs to state that certain developments (due to their location) will never be able to accommodate green roofs but other water attenuation features would be possible, water butts for example.

John Bremner (0282)

This policy must require proposals meet Passivhaus standard, with no loopholes.

Elgin Haymarket Limited (0292)

This policy should factor in the whole life carbon impact, including the embodied carbon, in relation to the adoption of ultra-high fabric performance and renewable/ low zero carbon measures being promoted (for example a PV array can result in increased embodied carbon in construction which does not payback in terms of the operational carbon it saves).

Additional text is also needed to benchmark/quantify ultra-high fabric energy efficiency in design and construction. This is particularly important should the optimal approach not be achievable.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Barratt David Wilson Homes (0677)

To align with policy Env 7, account for built form/heritage, and make it clear there are no further information requirements, amend the policy text to read as follows:

*It is important that new buildings must be sustainable and play their part in addressing the Climate Emergency. Development that includes new buildings\* will be supported where it has been demonstrated that:*

*a. it has achieved, predominantly through ultra-high fabric energy efficiency, a 'net zero' level of operational greenhouse gas emissions\*\**

*b. where appropriate, green roofs have been provided where new roofs are of a pitch capable of supporting these and that these roofs provide wildlife habitat and water attenuation.*

*c. provision is made for facilities for the separate collection of dry recyclable waste and food waste.*

*The ability to achieve net zero greenhouse gas emissions in line with the requirements above should be evidenced by a Sustainability statement submitted with applications for Planning Permission and Approval of Matters Specified in Conditions. Thereafter this will be ensured by attaching a condition to all planning permissions to which this policy applies.*

*Where new buildings are in particular areas such as a conservation area or are within the setting of listed buildings, the requirement to achieve net zero greenhouse emissions will be exempt.*

Leith Central Community Council (0614)

It is indicated that the policy should be amended to require green roofs proposals to come with a maintenance plan as part of the Planning application.

#### Edinburgh Napier University (0731)

It is indicated that Policies Env 7 and Policy Env 8 should be updated to include the following:

References to the partnership working to ensure the effective delivery of policy aims; as well as the 2030 Climate Strategy as this is a significant document for all development in the city that already promotes collaborative ways of working to address the climate emergency.

The importance of 'adaptation' and 'resilience' within the scope of the policies.

Build-in the ability to update policies in future so they can be influenced, adapted and updated as necessary, as and when new opportunities arise in respect of environmental sustainability, as well as in relation to new legislation coming forward and changes in national expectations.

Development proposals should also be required to demonstrate how they have made a significant attempt to move away from private car reliance and have promoted public transport usage.

'Biodiversity' should be included within the scope of the Policies and that wildlife habitats and water attenuation should not just be referenced in respect of green roofs.

#### Edinburgh Airport Limited (0761)

A number of the requirements may not be achievable across all developments, particularly due to the operational requirements of the airport. Therefore, a disclaimer for these requirements where appropriate should be included in the policy so that it reads as follow:

*"It is important that new buildings are sustainable and play their part in addressing the Climate Emergency. Development that includes new buildings\* will be supported where it has been demonstrated that:*

*a. where appropriate it has achieved, predominantly through ultra-high fabric energy efficiency, a 'net zero' level of operational greenhouse gas emissions\*\**

*b. where appropriate and where this would not impact on airport safeguarding, green roofs have been provided where new roofs are of a pitch capable of supporting these and that these roofs provide wildlife habitat and water attenuation.*

*c. provision is made for facilities for the separate collection of dry recyclable waste and food waste.*

*The ability to achieve net zero greenhouse gas emissions in line with the requirements above should be evidenced by a statement submitted with applicable applications. Thereafter this will be ensured by attaching a condition to all planning permissions to which this policy applies."*

### Cockburn Association (0777)

Provide clearer linkages between this policy and other policies within the plan which support and promote environment, social and economic sustainability.

### **Existing Buildings**

#### Archie Clark (0003), Prof D N Bateman (0004), Juniper Green & Baberton Mains Community Council (0306), Homes for Scotland (0404)

It is indicated that City Plan 2030 should have a policy that addresses improvements for existing building stock.

#### Prof D N Bateman (0004)

Policy should set out how insulation to support heat pumps is to be installed in the current housing stock in areas designated as architecturally or environmentally valuable in heritage terms.

### **Minimum space standards**

#### Cockburn Association (0777)

New policy should be introduced minimum spatial standards and increased outdoor space for well-being and active family environments

### **Glossary associated with this policy**

#### Leith Harbour and Newhaven Community Council (0776)

Ensure use of term greenspace and green roofs and plants are not Astro-turf/plastic.

### **Introduction, Aims and Outcomes**

#### Edinburgh World Heritage (0339)

Amend aim 4 to read:

*“Requiring all new building to have very low embodied carbon and be net-zero...”*

This is needed to appropriately reflect that embodied carbon is of high importance to net-zero alongside operational emissions. It will be critical to ensure alignment of priorities between the City Plan 2030, the future World Heritage Site Management Plan, and the draft 2030 Climate Strategy and its subsequent policies.

2.88 (page 26) could be enhanced by replacing the words ‘energy efficient’ with ‘resilient to the effects of climate change’ as drainage capacity will also be a key consideration.

#### Cockburn Association (0777)

The narrative around growth and operational carbon requirements needs to expand to include embedded carbon and wider sustainability issues.

## Use of Key Terms

### Archie Clark (0003)

References to Climate Emergency should be replaced by references to Climate Change.

It is indicated that terms such as “attractive, biodiverse sustainable drainage system” should be replaced and/or deleted.

‘Sustainable Development’: The definition needs to be revised so that it includes reference to the 13 Principles included in the Scottish Land Use Strategy (‘Getting the best from our land’), especially Principle C which reads: *‘Where land is highly suitable for a primary use (for example food production, flood management, water catchment management and carbon storage) this value should be recognised in decision-making.’*

## Summary of responses (including reasons) by planning authority:

### Env 7 – Sustainable Developments

Elgin Haymarket Limited (0292), Wright PDL (0078), Barratt David Wilson Homes (0677), Wright PDL (0078), Taylor Wimpey (0200), BDW Trading (0350), Homes for Scotland (0404), Steve Loomes (0767)

It has been stated that the requirement for Carbon Assessments is incompatible with the Spatial Strategy as it will preclude brownfield redevelopment and that greater weight needs to be given to other merits of the proposal. The Council disagrees with this for three reasons. Firstly, it is possible some rebuilding proposals could achieve a net positive carbon footprint. Secondly, it may be that some proposals can be delivered without needing to fully demolish existing buildings (e.g. changes of use or simply be proposals that do not contain buildings such as active travel proposals). Finally, Env 7 is clear that carbon assessments for redevelopments will be considered alongside other material considerations, which will allow consideration of how a new proposal may be important for delivery of the spatial strategy. **No modification proposed.**

Leith Central Community Council (0614), Andrew Heald (0566), Cockburn Association (0777)

Some responses are concerned that the weight and consideration that can be given to other matters as part of Env 7 to justify a net negative carbon impact will undermine the importance of carbon assessments. The Council disagrees and notes that a balanced judgement needs to be made in such circumstances. It is well established that decisions on planning application and interpretation of policies will often require balancing of competing considerations, however, the benefit of carbon assessments in this context is that they inform an assessment of the net carbon impact of a proposal that can aid in such a decision. Carbon assessments will also require developers to give greater consideration to achieving best practice in reducing the whole-life carbon footprint of their proposals. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306), Leith Central Community Council (0614), Archie Clark (0003),

It is stated that further detail is needed on what will be included in carbon assessments, how they are to be undertaken and by whom, as well as how the merits of other aspects of proposals are quantified such as new floor space. The Council considers that Env 7 provides the appropriate level of high-level information on this issue and that it is the role of guidance to set out further details on the methodology to be used for further specifics (e.g. use of established tools and databases to ensure consistent and reliable carbon counting). This also addresses the concern raised over consistency and robustness in carbon assessment submissions. The Council is content it shall be able to assess the information submitted as it is possible for net carbon footprint to be expressed summarily in the form of simple figure(s) in a manner decision makers can understand i.e. the whole life CO2 emissions expressed in terms of weight (TCO2e or KgCO2e). Assessments can provide breakdowns of projected emissions for different parts of a development which may be more complex. However, Carbon Assessments are not necessarily any more prohibitively technical than various other supporting documents that Planning Authorities deal with in connection to planning applications. **No modification proposed.**

Archie Clark (0003), Stewart Milne Homes (0118), Homes for Scotland (0404), Taylor Wimpey (0200), BDW Trading (0350),

It is raised that this is a matter for Building Standards rather than Planning however carbon assessments factoring in construction emissions and embodied carbon are not undertaken as part of the Building Standards process in the way that Env 7 sets out. The Council therefore considers this policy is important in delivering Planning objectives relating to reducing the carbon footprint of new development. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003), Stewart Milne Homes (0118),

The Council is content it shall be able to assess the information submitted. **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The Council acknowledges that the approved and adopted NPF 4 will be a material consideration for the Reporter through the Examination. The Council considers that the policy as worded is appropriate. Policy Env 8 already sets out that operational emissions from the building must be net zero, but associated emissions from travel from a building can be projected also and this is what Env 7 addresses. Such whole life assessments should demonstrate that the proposal has achieved the lowest emissions possible. This will include meeting established best practice standards that the Council shall set out in respect of particular aspects of their lifecycle (for example in relation to sourcing of construction materials). Such benchmarking and best practice is an established approach, for example with RIBA CD134 already setting out standards on minimum emissions that should be associated with different components of the construction process. **No modification proposed.**

Andrew Heald (0566)

Introducing a tax on excess carbon emissions arising from development goes beyond locus of what LDPs can do. **No modification proposed.**

Crosswind Developments Ltd (0184), CALA Management Ltd (0465), Hallam Land Management (0599) (0615), Miller Homes Limited (0649), Barratt David Wilson Homes (0677)

Representations seek the policy to be clearer on which applications this policy applies to. The Council considers that the reference to detailed applications is sufficient as it evidently applies to full applications and/or applications for certain matters specified in conditions following on from a grant of planning permission in principle.

Representations also state that City Plan should set out further details on the nature of information needed in sustainability statements in this policy. Some state this should be in the Policy itself, whilst others state it should be set out in Supplementary Guidance. The Council considers Policy Env 7 sets out the key principles in terms of information required. It also intends to bring forward guidance to expand on specific elements. **No modification proposed.**

Defence Infrastructure Organisation (0124), University of Edinburgh (0464), Watkin Jones Group (0516), Edinburgh Airport Limited (0761)

The Council does not agree that the policy should be worded to be applied more flexibly to certain types of proposals, applicants and sites e.g. for Listed Building cases; and that all proposals should be assessed on a case-by-case basis. The Council does not agree the policy should state this since it is for the decision maker to consider and give weight to each material consideration. It is not necessary for every planning policy to reiterate this. **No modification proposed.**

Cramond & Barnton Community Council (0243), Mrs Patricia Stott (0349), Jean Morley (0461), Living Streets Edinburgh Group (0486), CoMoUK (0728)

The Council considers that Policy Env 7 does make provision for flexible use of space in developments, however it would not be enforceable to require spaces within individual planning units such as homes to be used for specific such as multifunctional spaces and home working/workspaces. The Council agrees that 'adaptation' and 'resilience' are important. Including for hub environments for older community, active/shared travel measures, e-charging points and parking for modern cars and bikes within residential developments are addressed in other policies, for example, Inf 1 'Access to Community Facilities'. The Council considers this is provided for to the extent that planning policies can reasonably do so. **No modification proposed.**

Kyle Worgan (0272), Edinburgh Napier University (0731)

The Council notes that the policy does not require to address biodiversity here as this is already addressed in policy Env 37 'Designing-in Positive Effects for Biodiversity'. **No modification proposed.**

Andrew Heald (0566), Leith Harbour and Newhaven Community Council (0776)

The Council considers setting limits on the use of certain materials is unnecessary since the policy already addresses the issue of the sustainability of construction materials. It is not necessary to specifically state new developments shall not utilise gas since Policy Env 8 already requires new buildings to be net zero. **No modification proposed.**

University of Edinburgh (0464), Watkins Jones Group (0516)

The Council disagrees that the effect of this policy would make proposals unviable, either individually or when considered alongside other policy requirements of the Plan. Different combinations of policies apply to different proposals. It is for the decision maker to consider all material considerations for each planning application. **No modification proposed.**

Edinburgh Napier University (0731)

The Council is supportive of partnership working, however, LDPs and their policies are made through a statutory process and cannot under the current legislation be updated outwith this process. This also means the Council cannot 'build-in' the ability to modify proposals at its own discretion in future.

Criterion b) of Env 7 does make provision for encouraging Active Travel. Public transport is a matter which has been considered of sites for inclusion in the Plan rather than something for individual proposals to address.

Whilst adaptation and resilience are key themes relevant to a wide range of proposal types, The Council considers it more concise, useable and effective to set out requirements in a single policy. **No modification proposed.**

Edinburgh World Heritage (0339)

The modification seeking to include redevelopments in the first line of the policy text is unnecessary since this policy text already refers to '*... the construction or change of use of...*'.

The modification seeking reference to increased drainage capacity in the fifth paragraph is unnecessary as this is adequately addressed by the reference to measures to increase resilience. Similarly, the other modification sought to the same paragraph is already adequately covered by a sustainability statement being required to set out how measures were considered. In this context 'considered' should be reasonably understood as including addressing efficacy of the measure and appropriateness to the context.

The proposed modification relating to redevelopments is not agreed as this would effectively give a tilted balance to a judgement on the principle of redevelopment, which the Council does not see as appropriate. The modification making reference to heritage considerations is considered to be adequately addressed in other applicable policies, for example Env 13. **No modification proposed.**

The following representations are supportive of the policy as proposed:

SEPA (0012), Grange/Prestonfield Community Council (0192), Mrs Patricia Stott (0349).

Scottish Wildlife Trust Lothian group (0560), NHS Lothian (0596), Tiger Developments Ltd (0602), Lady Road Investment S.A.R.L. (0625), West Town Edinburgh Ltd (0660), Crosslane Co-Living SPV 2 Limited (0687), Parabola Edinburgh Limited (0723), Southside Community Council (0781)

## **Env 8 – Sustainable Buildings**

Archie Clark (0003), Wright PDL (0078), Summix Capital Limited (0747), Barratt David Wilson Homes (0677), Taylor Wimpey (0200), BDW Trading (0350), Homes for Scotland (0404), S Harrison Developments Limited (0460), Ambassador Group (0683), Hazledene House Limited (0695), Steve Loomes (0767), University of Edinburgh (0464)

The Council disagrees that the requirement for net zero in this policy is unnecessary due to carbon emissions reductions are addressed in Building Standards. The forthcoming changes to Building Standards will not bring new buildings to the standard of full net zero and so this policy is needed to ensure net zero standards.

The Council also disagrees with several elements of the statements that the policy will create conflict, delay, uncertainty, deliverability and viability issues; with greater economies of scale and efficiency if the transition to net zero is rolled out evenly across Scotland. Firstly, it is established that developments should be appropriately tailored to locational context in terms of planning requirements and other spatially specific factors. Secondly, the terms of this policy are clear: it requires net zero. It does not conflict with Building Standards as net zero homes can still attain Building Warrants. The Council recognised that many stakeholders in the construction industry would need to update processes and there would be a level of cost involved. However, the Council does not believe this will render most developments unviable and notes that the Council itself is already moving towards net zero residential and non-residential developments. There are representations which support the policy requirements, including among the development industry (e.g. Tiger Developments Ltd (0602)) which indicate the policy is positive and achievable.

The Council considers there has not been a lack of engagement with the construction and home building industry to determine the extent to which these requirements are deliverable and viable. The policy has been clearly set out in the Main Issues Report CD022 and the Proposed Plan as well as the Council's Draft Climate Strategy CD064. The principles are also being considered more widely, including through the NPF4 consultation stages.

The Council accepts that some new buildings may move to electrical sources of heating and that this has implications for existing grid capacity. The policy encourages the majority of carbon emissions to be reduced through built fabric efficiency to lower energy demand for heating. The plan also promotes heat networks as a heat source to reduce the grid capacity needed for heating purposes. Grid capacity considerations are a focus for Scottish Power in conjunction with the Scottish Government and local authorities. The Council disagrees that the requirement that a 'statement' of intent followed by a planning condition is unworkable as an approach. Given that those implementing the permission may be different from those making the planning application. Planning permissions routinely approve an initial level of detail with conditions requiring more detailed specifications. This is in line with that principle. **No modification proposed.**

Leith Central Community Council (0614)

On retention and maintenance of living roofs the Council would need to treat each case on its own merits. This is not a new matter for planning to address however, with landscaping and living roofs being the subject of planning applications for a considerable time. **No modification proposed.**

University of Edinburgh (0464), Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761), CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Barratt David Wilson Homes (0677), Watkin Jones Group (0516)

The Council does not agree that some new buildings should not be required to meet the full extent standards in this policy, such as those needing to adopt traditional design in terms of materials and detailing or with certain stakeholder requirements. Each application is considered on its own merits, and it is for the decision maker to give weight to the material considerations of the case, including built heritage. **No modification proposed.**

John Bremner (0282)

The Council considers that making the policy stronger in certain ways, for example, requiring Passivhaus standard rather than encouraging it would limit the options a developer had to achieve net zero. For example, net zero heat sources such certain types of heat networks may allow non-Passivhaus dwellings to achieve net zero. **No modification proposed.**

Grange/Prestonfield Community Council (0192), Elgin Haymarket Limited (0292)

The Council does not agree with the request to quantify and benchmark the reference to ultra-high efficiency as the optimal approach to achieving net zero may vary for each proposal.

It is acknowledged that renewable/ low zero carbon measures such as solar panels have an embodied carbon cast as with other construction materials. The S1 form will be updated through due process, with potential to include information on benchmarking standards on matters such as embodied emissions for construction materials.

The Council is still content that solar panels qualify as low and zero carbon technology (LZCT).

The intention of this policy is to provide some flexibility in how new buildings achieve net zero, so it is considered better not to set a target for ultra-high fabric efficiency that must be met in all instances given the level of requirement for this may vary depending on other factors that contribute to achieving of net zero.

Build-in the ability to update policies in future so they can be influenced, adapted and updated as necessary,

Development proposals should also be required to demonstrate how they have made a significant attempt to move away from private car reliance and have promoted public transport usage. **No modification proposed.**

Edinburgh Napier University (0731)

The Council is supportive of partnership working, however, LDPs and their policies are made through a statutory process and cannot under the current legislation be updated outwith this process

Criterion b) of Env 7 makes provision for encouraging Active Travel already. Public transport is a matter which has been considered of sites for inclusion in the Plan rather than something for individual proposals to address.

Whilst adaptation and resilience are key themes relevant to a wide range of proposal types, The Council considers it more concise, useable and effective to set out requirements in a single policy.

The Council notes that the policy does not require to address biodiversity here as this is already addressed in policy Env 37 'Designing-in Positive Effects for Biodiversity'. **No modification proposed.**

University of Edinburgh (0464), Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

In response to concerns about the long-term viability of living roofs and the operational, financial and maintenance challenges of them, the Council notes they are capable of long-term maintenance at a reasonable cost provided an appropriate management plan is in place and adhered to. It is noted that the airport has raised specific issues regarding safety and living roofs however these would be addressed with reference to specific proposals and planning applications rather than tailoring this city-wide subject policy given that the solution to such issues may be more nuanced depending on the specific proposal context. **No modification proposed.**

Leith Central Community Council (0614)

The supporting text for Policy Env 27 addresses the need for landscaping and maintenance arrangements and this policy is covered as part of Issue 11: Design and Placemaking. **No modification proposed.**

Cockburn Association (0777)

In terms of clarification of the linkages between this policy and others the Council notes that page 40 sets out the overall structure of this policy section, with the Design and Environment policies grouped together for ease of reference given the overlap between these. Within this section however there are also sub-headings e.g., Existing Natural Environment Policies, which can help understand links between policies. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council agrees that measures such as green roofs as referred to in criterion b) require assessment of their context, including in respect of built heritage. Criterion b) is prefixed with the wording 'Where appropriate' to address this.

The supporting text for this policy also sets out that the Council will bring forward guidance to address how green roofs are considered in respect of built heritage amongst other issues.

Aside from criterion b) the Council does not consider the other provisions of this policy need caveats on built heritage given the other Plan policies on heritage designations and assets. **No modification proposed.**

The following representations are supportive of the policy as proposed:

SEPA (0012), Richard Marsh (0165), Scottish Wildlife Trust Lothian group (0560), NHS Lothian (0596), Aviva Life and Pensions UK Limited (0598), Tiger Developments Ltd (0602), Lady Road Investment S.A.R.L. (0625), RSPB (0648), Parabola Edinburgh Limited (0723),

### **Existing Buildings**

Archie Clark (0003), Prof D N Bateman (0004), Juniper Green & Baberton Mains Community Council (0306), Homes for Scotland (0404)

Issues relating to the existing building stock are important to the City's aim to reach net zero by 2030. Plan policies can address this in some instances where development is proposed to a building, The considerations of existing building stock and retrofitting requirements are not planning policy matters and are addressed in the Council's draft 2030 Climate Strategy. **No modification proposed.**

Crosswind Developments Ltd (0184)

On the suggestion that it be made clear that this policy will only apply to detailed planning applications the Council agrees that many aspects of this policy relate to detailed matters that could not be assessed at the stage of applications for planning permission in principle (PPP). However, the policy wording would still be required to ensure appropriate condition(s) are attached to a PPP to ensure the matters were addressed in subsequent detailed applications. **No modification proposed.**

### **Minimum space standards policy**

Cockburn Association (0777)

City Plan has policies relating to minimum open space standards (Env 31 and Env 32), with Hou 3 addressing the need for a range of house types and sizes. This is supported by the Edinburgh Design Guidance. **No modification proposed.**

### **Glossary associated with this policy**

Leith Harbour and Newhaven Community Council (0776)

This representation sought to ensure use of term greenspace and green roofs and plants are not Astro-turf/plastic. This is a detailed design matter, and it is considered sufficiently clear that artificial materials are not a green space or green roof. **No modification**

**proposed.**

## **Introduction, Aims and Outcomes**

Edinburgh World Heritage (0339), Cockburn Association (0777)

Expanding reference to carbon assessments in the Aims as proposed is not in line with Policy Env 7 as currently proposed in the Plan, as embodied carbon is considered in respect of redevelopments but not *all* new builds. As such Aim 4 should be left as proposed.

The Council considers climate resilience and energy efficiency to be two related but distinct matters. As such it does not agree that a reference to resilience should replace the reference to energy efficiency.

The Council is satisfied that overall embedded carbon and wider sustainability issues are adequately addressed in the Introduction and Aims. **No modification proposed.**

## **Use of Key Terms**

Archie Clark (0003)

The use of the term Climate Emergency is appropriate as it reflects the urgency of actions required to address it.

The Council considers the terms used in the example to be sufficiently clear in their meaning, however the glossary of City Plan provides definitions of biodiversity and sustainable urban drainage to provide further clarification if required.

The Council does agree with expanding the definition of Sustainable Development as proposed as this would make it overly long and complex and dilute how directly applicable it could be to such a wide range of contexts – with that being a key matter for such a term such as this. **No modification proposed.**

## **Reporter's conclusions:**

## **Reporter's recommendations:**

<b>Issue 14</b>	<b>Historic Environment policies</b>			
<b>Development plan reference:</b>	Policies Env 9 to Env 17	<b>Reporter:</b>		
<b>Body or person(s) submitting a representation raising the issue (including reference number):</b>				
<table border="0"> <tr> <td> Anna Brand (0742)  Archie Clark (0003)  AREAA (0358)  Cockburn Association (0777)  Cramond &amp; Barnton Community Council (0243)  Crosswind Developments Ltd (0184)  Edinburgh World Heritage (0339)  Grange/Prestonfield Community Council (0192)  Hallam Land Management (0615) </td> <td> James Forbes (0647)  Juniper Green &amp; Baberton Mains Community Council (0306)  Leith Harbour and Newhaven Community Council (0776)  Melford Developments Ltd (0308)  Neil Ross (0610)  RSPB (0648)  SEPA (0012),  West End Community Council (0692) </td> </tr> </table>			Anna Brand (0742) Archie Clark (0003) AREAA (0358) Cockburn Association (0777) Cramond & Barnton Community Council (0243) Crosswind Developments Ltd (0184) Edinburgh World Heritage (0339) Grange/Prestonfield Community Council (0192) Hallam Land Management (0615)	James Forbes (0647) Juniper Green & Baberton Mains Community Council (0306) Leith Harbour and Newhaven Community Council (0776) Melford Developments Ltd (0308) Neil Ross (0610) RSPB (0648) SEPA (0012), West End Community Council (0692)
Anna Brand (0742) Archie Clark (0003) AREAA (0358) Cockburn Association (0777) Cramond & Barnton Community Council (0243) Crosswind Developments Ltd (0184) Edinburgh World Heritage (0339) Grange/Prestonfield Community Council (0192) Hallam Land Management (0615)	James Forbes (0647) Juniper Green & Baberton Mains Community Council (0306) Leith Harbour and Newhaven Community Council (0776) Melford Developments Ltd (0308) Neil Ross (0610) RSPB (0648) SEPA (0012), West End Community Council (0692)			
<b>Provision of the development plan to which the issue relates:</b>	Policies relating primarily to the Historic Environment and heritage designations and strategy			
<b>Planning authority's summary of the representation(s):</b>				
<p><b>Introduction and general comments on historic environment policies</b></p> <p><u>Edinburgh World Heritage (0339)</u></p> <p>There is inadequate reference to historic environment protection legislation, policies and strategies. It should also acknowledge the nuanced challenge for heritage posed by new requirements for green blue Infrastructure, climate change adaptation, energy efficiency and renewable/low carbon heat generation technologies. The Plan needs to better address the bespoke manner that these must be addressed for the historic environment – particularly within the ONTE World Heritage Site.</p> <p>As with any positive change management in the historic environment, this should be informed by the following outline process:</p> <ol style="list-style-type: none"> <li>1) Understand the Outstanding Universal Values and/or special interest affected through the early production of a Heritage Assessment or equivalent document</li> <li>2) Consider a range of options that are relevant to the World Heritage Sites context</li> <li>3) Assess and refine options with a core criteria being the extent to which Outstanding Universal Values and/or special interest is conserved or enhanced</li> </ol> <p><b>Env 9 - World Heritage Sites</b></p> <p><u>Edinburgh World Heritage (0339)</u></p> <p>This policy and supporting text does not fully address the following:</p>				

- Impact on intangible cultural heritage (for example; communities and traditions which are highly important to culture as well sustainable physical conservation)
- Proactive support is as important to sustaining World Heritage Sites as avoiding harm
- The key contributing features beyond buildings to include 'spaces and features'
- The reference to setting is not wholly appropriate

The World Heritage Site policy has moved from ENV 1 in the adopted LDP to ENV 9 in City Plan. It should be moved back upward to a similar numbering position in order to reflect the hierarchy of legislative protection and policy – international, national, local etc.

Greater clarity is needed in various parts of this policy and supporting text.

This policy does not have an adequately tailored approach to the climate emergency solutions which is cognisant of the unique characteristics of the Outstanding Universal value of the Old and New Towns of Edinburgh World Heritage Site. The cumulative and detrimental impact of interventions such as green roofs needs to be carefully considered.

## **Env 10 – Listed Buildings Demolition**

### Edinburgh World Heritage (0339)

Bullet three needs to balance a loss of heritage (a loss of public benefit) against a weighing of other public benefits

Bullet four is too open-ended and would potentially result in unjustified loss out of step with legislation and policy.

### Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The conditions allowing demolition cause concern.

The justification criterion 'c' is especially subjective, especially given the reference to 'significant' benefits.

### Melford Developments Ltd (0308)

This policy needs to differentiate between type and/or category of listed building, or where there is partial listing.

CEC should make publicly available online the specifics of each listing, in particular the specific physical elements that are covered by each listing, as required by HES.

### Cockburn Association (0777)

When demolition takes place then the re-use of materials should be required.

## **Env 12 – Listed Buildings - Alterations and Extensions**

Anna Brand (0742)

This policy does not adequately address the issue of energy efficiency and the transition to net zero.

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The policy should be modified.

Cockburn Association (0777)

Propose an additional statement suggesting that subdivision of listed buildings will only be permitted if it does not affect its historic significance and layout.

Subdivision of properties returning to housing from other uses should only be permitted in circumstances where the building has already been subdivided or in circumstances where previous alterations mitigate against retention of the existing floor plans or arrangements.

### **Env 13 – Conservation Areas – Demolition of Buildings**

Melford Developments Ltd (0308)

Object to policy as the Conservation Area Character Assessments have not been updated as part of the LDP. Many Conservation Areas have had significant change since their CACAs have been developed.

The presumption in favour of retention is contrary to sustainable buildings policies within the LDP. Many old buildings in CAs are particularly unsustainable.

Cockburn Association (0777)

This policy is now weaker as it no longer applies the stronger level of protection afforded by policy on Listed Building Demolition. This added clarity to the policy and grounds the assessment in national policy.

### **Env 14 - Conservation Areas – Development**

Edinburgh World Heritage (0339)

The policy must better protect against development that changes the way the historic streetscape can be read by understanding the site and context.

It also does not fully promote well-planned sites and well-designed use of appropriate materials can be used to reinforce the historic character, hierarchy and street patterns.

Historic public realm surfaces are important contributors to the historic character of an area. The way in which materials are used, planting style and type are also a characteristic to be preserved in an historic area.

Neil Ross (0610), Anna Brand (0742)

This policy does not adequately address the issue of energy efficiency and the transition to net zero, particularly in respect of replacement of windows and the incorporation of double or triple glazing.

James Forbes (0647)

This policy does not adequately protect of Conservation Areas from gradual erosion of their essential character as a result of one bad development serving as precedent for others.

West End Community Council (0692)

There is too little protection of Conservation Areas (and their surrounds) from development with little or regard for the historic context. There is a particular problem with modernist development that seeks to actively contrast with the heritage. This is evidenced in various recent developments being permitted which have been unsympathetic.

AREAA (0358)

In the context of a spatial strategy it is inevitable that the existing built fabric will be subject to greater pressure for change, including land within or near conservation areas. Due regard must be given both to protecting and enhancing conservation areas and to realising the overall spatial strategy.

Where conflict between these two aims arises, there needs to be balance so that adverse impact is mitigated and/or compensated. If the loss or impact upon of a feature within a conservation area can be offset through other improvements, or on planning balance the loss or impact is outweighed by other benefits, then the policy should be suitably flexible to respond to those scenarios

**Env 15 – Historic Gardens and Designed Landscapes**

Crosswind Developments Ltd (0184), AREAA (0358)

This policy is overly restrictive in its current form.

The policy is not sufficiently precise in relation to ‘non-designated sites’. No list of these is provided, nor is any definition given.

Edinburgh World Heritage (0339)

This policy does not appropriately protect and enhance the Outstanding Universal of the Old and New Towns of Edinburgh World Heritage Site.

The terminology relating to designated landscapes is not streamlined and wording needs to be clarified, for example not all elements of current ‘character’ will be positive.

Graveyards are important historic sites that are at risk of being overlooked as they are places with layers of considerable heritage interest worthy of conservation.

Reference could also be made to Edinburgh World Heritage's "Care and Conservation of Shared Georgian Gardens".

#### Hallam Land Management (0615)

The proposed policy does not promote and recognise the restoration of historic and designated landscapes as part of complementary development proposals.

### **Env 17 - Development of Sites of Archaeological Significance**

#### Cramond & Barnton Community Council (0243)

The policy does not make adequate provision to prevent speculative developer excavating archaeological investigation trenches prior to seeking planning consent, especially when this ground is not reinstated. It is indicated this taken place already and without discouragement there is a risk of this occurring across various potential development sites around the City.

### **Proposal map Heritage designations**

#### Crosswind Developments Ltd (0184)

Various heritage designations (Env 9, Env 10, Env 12, Env 14) stated as relating to Crosswinds site however these are not applicable.

### **Modifications sought by those submitting representations:**

#### **Introduction and general comments on historic environment policies**

#### Edinburgh World Heritage (0339)

Add a dedicated aim for the historic environment as follows:

*"Actively conserving and enhancing Edinburgh's World Heritage Sites and wide range of heritage assets for the cultural, social, environmental and economic benefits they bring."*

This is needed as the World Heritage Site and historic environment generally are vitally important to Edinburgh – as a fundamental cultural asset, as well as a vital economic contributor of great wellbeing and social benefit. It does not look after itself, and requires carefully integrated policies and proactive action to maintain and protect this irreplaceable asset. The conservation and enhancement of the historic environment must therefore be a key aim of the Plan.

Page 11/12 add reference to and proportionate description of:

- The Planning (Listed Buildings and Conservation Areas) (Scotland) Act 1997 and other relevant historic environment legislation
- The Historic Environment Policy for Scotland (Historic Environment Scotland)

Page 13 add reference to and proportionate description of:

## The Old and New Towns of Edinburgh World Heritage Site Management Plan

Add an additional bullet to 2.62 as follows:

- Protecting the intrinsic heritage values and assets of green and blue network of the Old and New Towns of Edinburgh World Heritage Site and other designated heritage assets

### Env 9 – World Heritage Sites

#### Edinburgh World Heritage (0339)

Suggested rephrasing of policy and supporting text as follows:

“Development which would harm the qualities which justified the inscription of the Old and New Towns of Edinburgh and/or the Forth Bridge as World Heritage Sites or would have a detrimental impact on a Site’s setting or intangible cultural heritage will not be permitted. Opportunities to proactively support or enhance these qualities should be demonstrably sought.”

“This policy requires development to respect, protect and where possible enhance the Outstanding Universal Value of each World Heritage Site and its setting. The Statement of Outstanding Universal Value for World Heritage Sites provides the summary for why a Site is considered to be of international importance and should be used to establish a baseline for assessing development.”

“This policy also requires the protection of key characteristics of buildings, public realm, green infrastructure and features which contribute to Outstanding Universal Value. Community resilience and engagement should also be supported as an important contributor to both tangible and intangible cultural heritage. Setting may include sites in the immediate vicinity and viewpoints identified in the key views study as well as other views to and from the World Heritage Sites that make a positive contribution to their value, understanding or appreciation.”

“The Management Plans for the Forth Bridge and Old and New Towns of Edinburgh World Heritage Sites should be used as an active tool in developing proposals; as should Historic Environment Scotland’s Managing Change Guidance on World Heritage.”

Add a new paragraph as follows:

“A specific approach, sympathetic to the character of the Old and New Towns of Edinburgh World Heritage Site, must be implemented when considering additional green blue network infrastructure, interventions in the public realm or in buildings to facilitate the transition to net zero, cut GHG emissions or to adapt to the impact of climate change. Solutions that may be valid in other parts of the city may not be appropriate in the context of the World Heritage Site, and specific solutions may be required. Each proposal should be informed after having followed a process of understanding the heritage significance of the targeted area supported by appropriate research and run a Heritage Impact Assessment to mitigate any impact on the Outstanding Universal Value of the World Heritage Site. Proposals will be reviewed on their own merits on a case-by-case basis.

This also applies to the general setting of Edinburgh, including the Green Belt, Firth of Forth and Pentland Hills, when considering new development such as wind turbines or any renewable/low carbon heat generation technologies that could have a detrimental impact on the views from the World Heritage Site.”

Leith Harbour and Newhaven Community Council (0776)

The protection afforded by this policy should apply to all Listed Buildings and Conservation Area.

Cockburn Association (0777)

The Management Plans for the Forth Bridge and the Old and New Towns of Edinburgh World Heritage Site must be referred to for further supporting information; as should Historic Environment Scotland Managing Change Guidance on World Heritage.

**Env 10 – Listed Buildings - Demolition**

Edinburgh World Heritage (0339)

Bullet three requires amendment as follows:

- “...the demolition of the building is essential to delivering public benefits which outweigh the irreversible loss of heritage and demonstrably could not otherwise be achieved.”

Bullet four requires removal and replacement with the following text:

- “The building is demonstrably incapable of viable use or repurposing, including seeking grant funding and appropriate marketing.”

We advise that 3.110 is amended to read:

“...Applications to demolish listed buildings or other buildings of heritage or streetscape value will be refused unless...”

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

No specific modifications stated however it is indicated that the criteria potentially justifying demolition should be strengthened to reduce scope for demolition.

Criterion ‘c’ should provide clarity around what level of community or economic benefit would be considered significant.

Melford Developments Ltd (0308)

This policy needs to differentiate between type and/or category of listed building, or where there is partial listing.

Cockburn Association (0777)

The policy should state that when demolition takes place then the re-use of materials should be required.

## **Env 12 – Listed Buildings Alterations and Extensions**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

“And” should be added to the first bullet point requirement to emphasise that *all* three conditions must be met.

Anna Brand (0742)

Greater allowance should be afforded to alterations where these would contribute to the transition to net zero and energy efficiency.

Cockburn Association (0777)

Propose an additional statement suggesting that subdivision of listed buildings will only be permitted if it does not affect its historic significance and layout.

## **Env 13 – Conservation Areas – Demolition of Buildings**

Melford Developments Ltd (0308)

This policy should be less restrictive on development.

Cockburn Association (0777)

The current LDP policy should be retained.

## **Env 14 - Conservation Areas – Development**

Edinburgh World Heritage (0339)

Amend bullet two to read:

*“...preserve trees, hedges, boundary walls, railings, paving, setts and other features...”*

Amend bullet three to read:

*“...design and utilises matching or complimentary materials and planting in a manner appropriate to the specific character of the local historic environment...”*

AREAA (0358)

Amend policy ENV 14 (P107) to include additional sentence after criteria a – c, reading:

*“Where any of the features and qualities referenced above would be affected by proposed development any adverse impact will require to be mitigated either through other positive impacts arising from the development or the development proposals meeting an identified need which would offset the loss or adverse impact.”*

Anna Brand (0742)

Greater allowance should be afforded to alterations where these would contribute to the transition to net zero and energy efficiency.

Neil Ross (0610)

Some flexibility must be introduced into Part C of Env 14 to allow the use of modern materials that are equivalent in appearance to the original and therefore comply with Part A to preserve or enhance the special character and appearance of the conservation area.

James Forbes (0647)

The original Character Appraisal, which defines why a CA was established in the first place, should be the guide, not some degraded version. This means sticking more strictly to the requirement that any development "preserves or enhances the special character" of the Conservation Area.

West End Community Council (0692)

There should be an acknowledged border zone around every conservation area, in which all development must respect and not impair the nature and character of such conservation area.

There needs to be given to a definition of "quality" and its arbiters. The same goes for "development principles".

The policy should give local residents a veto.

**Env 15 – Historic Gardens and Designed Landscapes**

Edinburgh World Heritage (0339)

Amend main policy wording to read:

*"Development will only be permitted where there is no detrimental impact on the special interest and historic character...Designed Landscapes as well as non-designated sites. This includes historic graveyards and burial grounds. There must be no adverse...and always be minimised. Care should be taken to understand the historic interest and management of historic gardens and their planting style. Restoration..."*

Add new paragraph after 3.121 (or alternatively in ENV 16):

*Historic graveyards and burial grounds and their settings should be protected and enhanced where possible by development of adjacent sites. The significance of the graveyard should be understood before planning any development. Development within a graveyard should only be undertaken in accordance with a Conservation Management Plan and should recognise and preserve the burial ground's unique character and cultural landscape.*

Crosswind Developments Ltd (0184), AREAA (0358)

Amend policy wording to read as follows:

*“Development will only be permitted where there is no significant detrimental impact on the character of a site recorded in the Inventory of Gardens and Designed Landscapes as well as non-designated sites. There must be no significant adverse effects upon their setting or upon component features which contribute to their value. Elsewhere, adverse effects on historic landscape character and features should be avoided wherever possible, and always be minimised. Restoration and enhancement of these historic landscapes is actively encouraged”.*

The representations also indicate that a definition and/or list should be provided on what constitutes a ‘non-designated site’

Hallam Land Management (0615)

Add at the last policy sentence ‘...*Restoration and enhancement of these historic landscapes is actively encouraged as part of a comprehensive planning proposal*’

## **Env 17 – Development of Sites of Archaeological Significance**

Cramond & Barnton Community Council (0243)

This policy should include an additional element requiring developers/ landowners to reinstate land disturbed by archaeological survey excavations within a fixed period, unless a planning application is under consideration, or consent has been granted for development

## **Proposal map heritage designations**

Crosswind Developments Ltd (0184)

Remove various heritage designations (Env 9, Env 10, Env 12, Env 14) stated as relating to Crosswinds site

## **Summary of responses (including reasons) by planning authority:**

### **Introduction and general comments on historic environment policies**

Edinburgh World Heritage (0339)

As existing features, it is the designations and relevant policies which deliver protection and enhancement of the World Heritage Sites and historic environment given the importance of detail in this regard. By comparison, the aims section is primarily higher level objective setting.

The Council considers that paragraph 2.48 addresses the Old and New Towns of Edinburgh World Heritage Site Management Plan CD133. No modification necessary, however, should the Reporter see merit in additional clarity the Council would not object to the additional references suggested.

The Council considers that these are considerations which arise where such developments are pursued and of its statutory duty to ensure developments preserve or enhance the relevant heritage assets and designations. It would not be appropriate to include policy or related wording which undermines that duty. It is for the decision maker to consider the effects of development on heritage assets in that context.

The process for considering such change as set out in the representation is very specific and methodological, with its essence captured in the higher level Plan text. As such it is considered more appropriate for guidance to address rather than Strategy text.

It is considered the change proposed following paragraph 2.62 is covered in more general terms already by bullet point five that follows that paragraph.

## **Env 9 - World Heritage Sites**

### Edinburgh World Heritage (0339)

The Council recognises there is a connection between communities and built heritage however planning can only address issues relating to the development of land.

Proactive support is indeed important to World Heritage Sites however subject policies such as this one are needed in order to assess applications for development and need to be worded for this purpose.

The Council is not clear why the representor feels the reference to setting is not wholly appropriate. The proposed policy text from the representor appears to retain the reference to setting.

This policy was numerically first in historic environment policies section of the adopted LDP CD039, however these historic environment policies have been combined into a consolidated environment policies section. Although this means the policy is no longer the first numerically, this has no bearing on its weight or status relative to other policies.

The Council is content with the policy and supporting text as proposed so no modification is proposed, however, should the Reporter be so minded the Council has no issue with a modification proposed to the final supporting text paragraph highlight the role the Management Plans to be used as a tool for developing proposals.

The paragraph proposed regarding green and blue infrastructure is not considered necessary as the Council intends to bring forward guidance which addresses this issue.

### Leith Harbour and Newhaven Community Council (0776)

The World Heritage Sites (WHS) have a greater status and sensitivity than Conservation Areas so it is considered appropriate that Policy Env 9 sets out more specific requirements. Listed Buildings within the Site can be assessed under both policy designations where applicable. Outwith the WHS it would not be appropriate to use its policy provisions in listed building cases. This could undermine the particular purpose of the WHS designation. **No modification proposed.**

### Cockburn Association (0777)

These documents are referred to in paragraph 3.106. **No modification proposed.**

The following representations have been made in support of the policy as proposed:

Grange/Prestonfield Community Council (0192)

### **Env 10 - Listed Buildings - Demolition**

Edinburgh World Heritage (0339)

This policy has been formulated in line with appropriate Historic Environment Scotland guidance on 'Managing Change in the Historic Environment: Demolition of Listed Buildings' CD131. The third bullet point in Env 10 reflects the weight to be given to economic growth or wider community as set out in page 8 of the guidance.

The guidance provides further detail however, it does not set out a reference to the loss of heritage. The Council considers the overall purpose of a policy presumption against demolition is to capture that these buildings have significant heritage value.

Criterion d) is acceptable as it stands given that the supporting text makes cross reference to guidance providing adequate detail on what measures are needed to demonstrate compliance.

The Council is satisfied with the content of this supporting text paragraph (marked with an asterisk) and so no modification is proposed however should the Reporter be so minded the Council has no issue for the purposes of clarity in a modification so that it becomes a numbered paragraph instead of being specifically linked to the fourth bullet point via the asterisk.

The Council does not agree with the proposed amendment to paragraph 3.110. The purpose of this policy is to apply to listed buildings; not buildings with heritage/streetscape value.

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The Council is content that criterion c. is not too subjective given that the cross reference to the managing change guidance above gives the threshold for compliance with the criterion. **No modification proposed.**

Melford Developments Ltd (0308)

The Council understands there may be greater value in A Listed buildings, compared to lesser designations however the principle of demolishing any listed building still has potentially significant impact and needs to be fully justified. Policy has been worded as intended to apply to all listed buildings. Where part of a site is listed the decision maker can apply the policy accordingly being aware of the material considerations of the case.

Information on each listing is publicly available through Historic Environment Scotland. Legislation is clear on the entirety of a Listed Building being protected CD107. It would be

incorrect of the Council to give the impression that it is only the features noted in the Listing description as being listed. **No modification proposed.**

Cockburn Association (0777)

The re-use of materials for all buildings demolished is encouraged, with this covering Listed Buildings also. This is addressed in Policy Env 7 and discussed further in Issue 13: Sustainable Design. **No modification proposed.**

The following representations have been made in support of the policy as proposed:

Grange/Prestonfield Community Council (0192)

**Env 11 - Listed Buildings - Setting**

The following representations have been made in support of the policy as proposed:

Grange/Prestonfield Community Council (0192), AREAA (0358), Cockburn Association (0777)

**Env 12 – Listed Buildings – Alterations and Extensions**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The Council is content that the policy as proposed with ‘and’ at the end of the penultimate bullet point makes clear that all the preceding bullet points needs to be met to ensure compliance. **No modification proposed.**

Anna Brand (0742)

This policy itself is principally about assessing impact on the listed buildings. If the decision maker wishes to afford positive weight to a proposal due to its contribution toward energy efficiency or other matters then they can set this out in their decision-making process as part of their overall, balanced assessment. For proposals of a scale relating to the construction or change of use of one or more building then such positive weighting can be directly considered as part of Policy Env 7 – Sustainable Developments (see Issue 13: Sustainable Design). **No modification proposed.**

Cockburn Association (0777)

The Council does not consider it necessary to make provision for how this specific type of proposal would be considered as the policy provides an adequate framework a decision maker’s consideration. **No modification proposed.**

The following representations have been made in support of the policy as proposed:

SEPA (0012), Grange/Prestonfield Community Council (0192)

**Env 13 – Conservation Areas – Demolition of Buildings**

Cockburn Association (0777)

The update to this policy to move away from the demolition criteria relating to Listed Buildings reflects the corresponding evolution in approach set out by Historic Environment Scotland in its 'Interim Guidance on the Designation of Conservation Areas and Conservation Area Consent.' CD132. **No modification proposed.**

Melford Developments Ltd (0308)

Conservation Area Character Assessments are reviewed on an ongoing basis. The Council still considers these Appraisals remain fit for purpose as assessment of the core character of each area.

The presumption in favour of retention is not inherently contrary to Policy Env 8. Env 8 sets out requirements relating to new buildings. It does not set out that new buildings will always be a more sustainable option than retention. **No modification proposed.**

The following representations have been made in support of the policy as proposed:

Grange/Prestonfield Community Council (0192)

**Env 14 - Conservation Areas – Development**

Edinburgh World Heritage (0339)

The Council is content that the wording of the policy achieves the overall effect sought in representation, with the decision maker able to apply their judgement on what the specific local character is in the context in question. **No modification proposed.**

AREAA (0358)

The approach that adverse impact can be accepted if it is mitigated would undermine the aims of the policy for preserving the character of Conservation Areas. The Council is not persuaded that mitigation of adverse impact is a successful approach for built heritage. It could be held to undermine the Council's statutory duty to preserve or enhance a Conservation Area. **No modification proposed.**

Neil Ross (0610), Anna Brand (0742)

This policy itself is for assessing impact on a Conservation Area. It is for a decision maker to give weight the relevant policies including energy efficiency or other relevant matters as part of their assessment. For proposals of a scale relating to the construction or change of use of one or more building then such positive weighting can be directly considered as part of Policy Env 7 – Sustainable Developments (see Issue 13: Sustainable Design). **No modification proposed.**

James Forbes (0647)

Paragraph 3.119 includes for the need to refer to the relevant Character Appraisal and how this has informed proposals. This should ensure more faithful adherence to the unique qualities of the area rather than more generic qualities or detrimental aspects within the area. **No modification proposed.**

#### West End Community Council (0692)

Some points raised relate to interpretation of current LDP policy rather than the proposed Plan policy. That is not for the Schedule 4 process to address.

The policy does permit consideration of proposals outwith conservation areas. The policy refers to where proposals may affect its setting.

It is not for LDP policy to provide a veto to residents. That would require new legislation

The assessment of quality is for the decision maker on any given application. An assessment will reflect the material considerations of the case.

Development principles relate to the matters which should be considered when formulating a development proposal. **No modification proposed.**

The following representations have been made in support of the policy as proposed:

Grange/Prestonfield Community Council (0192), RSPB (0648),  
Cockburn Association (0777)

#### **Env 15 - Historic Gardens and Designed Landscapes**

Crosswind Developments Ltd (0184), AREAA (0358)

This policy is appropriate to manage development proposals that may affect any historic garden, designed landscape or more general historic landscape feature, including those not formally designated. It is for the decision maker to assess what may be considered historic as not all of value have inventory status. The Council considers it appropriate to recognise the value that landscapes, natural and man-made, can make to an area's character and heritage. The policy as proposed reflects this and is not considered too restrictive in light of this objective. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council is content that the wording of Env 15 achieves the overall objectives for Historic Gardens and Designed Landscapes. No modification is therefore proposed, however, should the Reporter these merit in the representation adding the word 'special' prior to interest and historic character this could add clarity and consistency with accepted terminology.

The additional reference to graveyards and burial grounds is adequately covered by the policy itself. The same view is taken on the final sentence the representation proposes to add to the policy text itself and the reference to the document titled "Care and Conservation of Shared Georgian Gardens. **No modification proposed.**

Hallam Land Management (0615)

Proposals that would restore and enhance historic landscapes would be compliant with the policy therefore the addition is not required. It is for a decision maker to afford give weight to policies in assessing a proposal. **No modification proposed.**

The following representations have been made in support of the policy as proposed:

Grange/Prestonfield Community Council (0192), SEPA (0012), Cockburn Association (0777)

#### **Env 16 - Protection of Important Archaeological remains and the historic environment**

The following representations have been made in support of the policy as proposed:

Grange/Prestonfield Community Council (0192), Cockburn Association (0777)

#### **Env 17 - Development of Sites of Archaeological Significance**

Cramond & Barnton Community Council (0243)

City Plan cannot introduce control over when excavation requires consent (and by association that reinstatement should take place) as this is instead set out by legislation. In particular the Town and Country Planning Act CD101 (in respect of the 'Meaning of development'). In certain circumstances Scheduled Monument Consent may also apply. **No modification proposed.**

The following representations have been made in support of the policy as proposed:

Grange/Prestonfield Community Council (0192)

#### **Proposals Map Heritage designations**

Crosswind Developments Ltd (0184)

These designations are not specific to the Crosswinds site but are shown in the proposals map as potentially applying to locations across the Council area given the potential for development to affect their setting. It is for the decision maker to assess whether the policy applies in each case. **No modification proposed.**

#### **Reporter's conclusions:**

--

#### **Reporter's recommendations:**

<b>Provision of the development plan to which the issue relates:</b>	Policies relating primarily to the protection of the existing Natural Environment			
<b>Planning authority's summary of the representation(s):</b>				
<p><b>Env 18: Development in the Green Belt and Countryside</b></p> <p><u>Archie Clark (0003), Juniper Green and Baberton Mains Community Council (0306), Scottish Government - Planning and Architecture Division - Development Plans Team (0309)</u></p> <p>This policy takes no account of the importance of land for food production. The need for food security is increasing need for food security and soil fertility is diminishing.</p>				

This policy takes no account of the amenity value to the community.

Development of brownfield land should be encouraged more strongly.

This policy and plan does not address the requirements of SPP para. 80 which sets out that development should not be permitted except where essential and in a limited range of circumstances. Draft NPF4 policy no Rural places 31 (h) provides proposed circumstances for when development may be supported on such land.

The plan area does include some peri urban/accessible rural areas, which could include Prime agricultural land or land of lesser quality that is locally important. This should be considered and included as relevant in the plan.

Cramond & Barnton Community Council (0243)

There is no policy promoting food growing. Encouragement of provision for, and development of, allotments and other community food growing spaces is an essential element to achieve sustainability, net zero (e.g. reduction in food miles) and community health objectives.

Wright PDL (0078), Tarmac (0244), Mr T Klan (0307), Hallam Land Management (0615), Stirling Developments Limited (0303), Homes for Scotland (0404), Dandara East Scotland (0757), Barratt David Wilson Homes (0677), Steve Loomes (0767)

Green Belt and Countryside are different designations that serve different purposes. This is recognised in their distinct glossary definitions. They should not be treated the same in policy terms under Env 18.

The green belt should have a primary objective of preventing unplanned large scale urban sprawl and /or coalescence of settlements. This was what they were originally introduced to do in the UK.

Applying the same level of protection to both green belt and Countryside areas restricts opportunities for residential sites to come forward in the event of a housing land shortfall.

This policy is contrary to SDP1 and SPP, including para 49 which sets out specific reasons for designating green belt.

Env 18 acts as a deliberate blocker to any greenfield development.

The Green Belt already contains many established uses that do not conform with policy and guidance tests for new development. This demonstrates a need to revise policy.

Existing uses can be intensified without any benefit to the area and community.

The overly restrictive policy Env 18 adversely affects the appearance and ability to access the Green Belt.

Stirling Developments Limited (0303)

Subjective language around views is unclear.

Stewart Milne Homes (0118), Taylor Wimpey (0200), Stirling Developments Limited (0303), BDW Trading (0350), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

The policy does not include the needed provision that permits sustainable housing development in the event that there is shortfall in five-year effective housing land supply.

Hillside Leisure Ltd (0080)

The policy fails to provide sufficient allowance for proposals which help improve human health and wellbeing, particularly through improving access to countryside recreation.

This is needed to align with para 52 of SPP, action 3 of draft NPF4 and the Plan's own outcome supporting physical and mental health as well as Env 6 to improve green and blue networks.

The Pentland Trail Centre is an example of a proposal which the policy does not adequately support. This is despite it delivering the above objectives with particular reference to long-distance walking and cycling routes and opportunity further improve these links from the city to the Pentland Hills. Further comments and modifications sought in relation to this proposal are addressed in 'Issue 18: Blue Green Network Proposals.'

Grange/Prestonfield Community Council (0192)

The proposed policy is the same as equivalent policies in previous LDPs which have failed. They have permitted degradation of Green Belt land and encouraged industrial style intensification of agricultural etc uses and sports facilities, which have an adverse environmental impact and have not increased public access to these areas, which should be attractive to work and live in and visit.

Cala Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0469)

This policy intention requiring an applicant to demonstrate the proposal does not 'detract' from the rural environment or landscape, does not define a magnitude of effect or impact to be justified. It therefore fails to guide an applicant on the information required about the degree of impact arising.

There are established impact assessment techniques particular for landscape character with a clearly defined the assessment methodology which this policy should allow to be used.

The policy should allow the Council and an applicant to refer to an established body of case law about significant adverse impacts relating to townscape and landscape character. This case law has been set by the requirement in SESplan Policy 7 a. to demonstrate that greenbelt housing land releases need to be in accord with local townscape and landscape character.

NatureScot (0528)

The policy should better align with draft NPF4 and provide a clearer role in the delivery of the Spatial Strategy.

#### Esk Property LLP (0726)

Locating age-restricted social care and retirement type uses within an urban fringe location is essential to the successful creation and operation of this type of development. Amenity space, allotment gardens and immediate access to the countryside can all be readily achieved.

Age-restricted housing operators generally seek sites which will facilitate low-density (predominantly one and some two storey) development. Alternative sites, appropriate for higher density housing developments, mean that developers of such facilities are priced out of the land market and there is a resultant inability to compete on mainstream housing sites and deliver suitable facilities.

The principles of 20-minute neighbourhoods will also dictate that there will be parts of the city where there is an identified need for social care/ housing for older people that cannot be met on brownfield sites.

### **Env 20 – Protection of Trees and Woodlands**

#### Crosswind Development Ltd (0184), Edinburgh Airport Limited (0761)

This policy is unreasonable. It sets a presumption against development that will impact on any tree i.e. this will apply to trees located outside conservation areas and trees that are not protected by Tree Preservation Orders, so will include trees with no arboricultural value.

#### Melford Development Ltd (0308), AREAA (0358)

Any application which involved the felling of a tree, even if offering significant environmental benefits overall, would be contrary to this policy.

Object as this policy is wholly based on arboricultural grounds and ignores other material policy considerations. It reduces viability and delivery of development sites and has the potential to sterilise many urban sites and undermine the overall strategy of the Plan.

This policy makes no provision need and demand for development compared to be balanced against social and environmental benefits.

There is inadequate provision for off-site compensatory planning and/or other mitigation to off-set carbon impact, ecological and social loss from trees on site.

#### Hillend Leisure Ltd (0080)

The wording of the policy is ambiguous and is not supported by the accompanying text within City Plan, particularly in relation to what would comprise 'good arboricultural reasons' and how a Tree Survey would be deemed to be competent.

#### AREAA (0358)

This policy should be modified.

James Forbes (0647)

A replacement tree has, for ten years or more, much lower carbon capture capacity than a mature tree. The policy requirements around replacement trees does not fully acknowledge this.

The Woodland Trust (0774)

This policy should be strengthened.

Trees can also have cultural value and this is not reflected in the policy.

For ancient woodlands and ancient and veteran trees a presumption against any development is not enough. Ancient woodlands and ancient and veteran trees are invaluable and irreplaceable. Average carbon stocks per hectare in Scotland's ancient woodlands are 31% higher than the average for all woodland types. As such any loss is contradictory to both national and Edinburgh's own ambitions to become net zero by 2030. They are also some of the most biodiverse habitats in the UK supporting a vast array of species. As such, they will be essential to tackling the intertwined climate and nature emergencies.

Where trees are retained and/or at-risk root protection areas (RPA) should always be used. For ancient and veteran trees, where a more precautionary approach is warranted, RPA distances should be greater than the standard buffers stated in BS 5837:2012.

Edinburgh World Heritage (0339)

The policy should be modified.

Leith Central Community Council (0614)

Existing trees should be protected by default and the practice of felling trees and plant new ones in exchange should be revisited in terms of environmental impacts.

A requirement for precise tree specification with an associated minimum age and size and for the specification of the ground condition where each tree is to be planted.

Craigleith-Blackhall Community Council (0403), Neil Watt (0439), Richard Graveling (0135)

These comments also apply to Env 21.

Question the main policy support being policies Env 23 and 24 as shown on the Proposals Map.

Open Space site at Junction of Craigcrook Road and Queensferry Road. As with Hillhouse Road Woods in north-east proposal map area, policy Env 24 has little relevance to the site at the Craigcrook Road/Queensferry Road junction. The maintenance of the remaining

trees is important and policy Env 20 is far more relevant. Again, the Plan should be adjusted to reflect the local circumstances.

Both this site and Hillhouse Road Woods (north-east proposals map area) form part of the wider tree cover along Queensferry Road (including Corstorphine Hill and Davidson's Mains Park) and both sites are important not only aesthetically in providing an impressive entrance to Edinburgh but also in reducing traffic pollution. The continued long term protection of both sites is therefore important including tree cover.

Hillhouse Road Woods (Queensferry Road) opposite Blackhall Library have been identified as a tree covered site on Ordnance Survey maps since 1852. The trees are mature, should be continued to be protected and the site is critically important for biodiversity. The trees are mature safeguarded by a tree preservation order and with no public access means that the site is also important for biodiversity, albeit not recognised formally by the City Council. While there is a passing reference to policies Env 20 - Protection of Trees and Woodlands and Env 21 -Protection of Biodiversity, these policies are significantly more important for the continued safeguarding of Hillhouse Road Woods than policy Env 24 and this should be recognised in the City Plan 2030.

Past experience with regard to this site has shown that developers will seek to expose loopholes, arguing that open space which is not accessible to the public has little status or value. Likewise to apply a policy that has little reference to the site could enable developers to exploit the irrelevance of policy Env 24. It is notable that a previous developer's aspiration for a care home development on the Hillhouse Road Wood site was dismissed in a planning appeal in 2019 by a Scottish Government Reporter (Planning appeal reference: PPA-230-2250). There has been no change in circumstances since 2019 to overturn that decision in order to justify the clearance of many of the trees on the site and permit development to meet developer's wishes. Tree protection and biodiversity should continue to underpin the continued protection of the open space on this site, with more prominent links to policies Env 20 and 21. (see also comments below on other Queensferry Road sites)

Although the North of Corstorphine Hill zone has protection from numerous designations some more specific targeted planning is called for, by expanding the Special Protection Area or having a similar designation to cover the area.

## **Env 21 – Protection of Biodiversity**

Archie Clark (0003)

Criterion e. has four asterisks indicating a footnote however there is currently no such footnote.

Richard Doake (0436)

Env21 c does little to protect against significant and potentially inappropriate change of use of areas within Local Nature Reserves and Local Nature Conservation Sites

21c is overly vague about allowing "adequate offset" of adverse impacts of any proposed development within Local Nature Reserves and Local Nature Conservation Sites. It is not clear what this may mean and does not impose any restriction on types of development

which may be detrimental to the natural environment, contrary to the areas designations.

William Mason (0438)

At a time of a Biodiversity crisis, it is unacceptable for a plan to state that designated sites (i.e. items a, b, c of the list) can be developed if there are overriding reasons of public interest. Edinburgh Council has a responsibility to steward such areas for future generations.

Dr Tim Duffy (0503)

NPF4 policies came out after this draft of City Plan 'went to press' but these should be copied across in the next version of this plan.

James Forbes (0647)

No specific provision is made to protect small islands of privately owned biodiverse sites that aren't designated for nature conservation or protected species. NPF4 (policy 3) does a better job of this.

Edinburgh Airport Limited (0761), Crosswind Development Ltd (0184).

This policy should be modified.

Due to airport safeguarding, it is not always possible to carry out certain biodiversity requirements or enhancements and therefore, should not be a requirement for all development. This should be assessed on a case by case basis and required where appropriate and possible. The Civil Aviation Authority provided guidance on the risks associated with wildlife around aerodromes and this should be a consideration. The Airport are notified of developments within 13km to ensure Airport Safeguarding.

**Env 22 – Pentlands Hills Regional Park**

The Association for the Protection of Rural Scotland (0334)

Concerns about the capacity of the Park to accommodate visitors which need to be addressed. These include:

- Path erosion by walkers and off road cyclists; creation of ad hoc multiple paths to facilitate access
- Destruction of ground flora by foot/tyre pressure
- Is good camping guidance being followed?
- Should guidance for the safe and enjoyable/responsible use of the Park be reviewed with perhaps greater publicity for the Scottish Outdoor Access Code?

It is indicated that the policy does not fully address these issues, although overall the policy is supported.

**Modifications sought by those submitting representations:**

## **Env 18 - Development in the Green Belt and Countryside**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Replace para. 3.126 is replaced with the following;

*“Proposals for development in the green belt and Countryside will not be considered unless they are for a short-term (5 years) or of a reversible nature to ensure that prime quality agricultural land, or land of lesser quality that is locally important retains its capacity for food production in support of national goals for food security. Proposals will only be permitted in the countryside where they are a brownfield development or on land that is of LCA Class 4.1 or higher classification. These must take account of principle C in Scottish Land Use Strategy (‘Getting the best from our land’) which states: ‘Where land is highly suitable for a primary use (for example food production, flood management, water catchment management and carbon storage) this value should be recognised in decision-making.’*

*“Any development must not detract from the landscape and/or rural environment of the area in terms of quality, characteristics and views.”*

Scottish Government - Planning and Architecture Division - Development Plans Team (0309), Cramond & Barnton Community Council (0243)

City Plan should be modified to introduce new policy on food growing.

Wright PDL (0078), Tarmac (0244), Mr T Klan (0307), Hallam Land Management (0615), Stirling Homes Limited (0303), Homes for Scotland (0404), Dandara East Scotland (0757), Barratt David Wilson Homes (0677), Steve Loomes (0767)

‘Countryside’ and ‘Green Belt’ should be separated out to each have their own dedicated policies. These should not be as universally restrictive on development, particularly residential.

A clause should be added noting the opportunity to remediate, restore and redevelop the many vacant and derelict brownfield sites in the green belt.

Update proposals map to clearly differentiate between Green Belt and Countryside.

Update proposed plan text, including para. 2.61, to set out different objectives for Green Belt and Countryside.

It is indicated that less subjective language is used in respect of views.

Hillside Leisure Ltd (0080)

An additional criteria should be included within the policy to allow:

*“Appropriate built development to support viable, or make viable, countryside leisure and recreational proposals”.*

Grange/Prestonfield Community Council (0192)

No modification specified however it is stated this should be reviewed and altered. It is indicated that policy should be more restrictive in terms of uses that have adverse environmental impact such as industrial style intensification of agricultural uses and sports facilities.

Stewart Milne Homes (0118), Taylor Wimpey (0200), Stirling Developments Limited (0303), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767), BDW Trading (0350),

The policy should include a provision that permits sustainable housing development in the event that there is shortfall in five-year effective housing land supply.

Cala Management Ltd (0465), Hallam Land Management (0599) (0615) Miller Homes Limited (0649)

Amend policy wording to read as follows:

*Within the Green Belt and Countryside shown on the Proposals Map, development must meet one of the following criteria and must not have a significant adverse impact on the rural environment or landscape of the surrounding area in terms of its quality, characteristics and views:*

*a. For the purposes of agriculture, woodland and forestry, horticulture or countryside recreation, or where a countryside location is essential and provided any buildings, structures or hard standing areas are of a scale and quality of design appropriate to the use, or*

*b. For the change of use of an existing building, provided the building is of architectural merit or a valuable element in the landscape and is worthy of retention. Buildings should be of domestic scale, substantially intact and structurally capable of conversion, or.*

*c. For development relating to an existing use or building(s) such as an extension to a site or building, ancillary development or intensification of the use\*, provided the proposal is appropriate in type in terms of the existing use, of an appropriate scale, of high-quality design and acceptable in terms of traffic impact, or.*

*d. For the replacement of an existing building with a new building in the same use provided:*

- the existing building is not listed or of architectural / historic merit,*
- the existing building is of poor-quality design and structural condition,*
- the existing building is of domestic scale, has a lawful use and is not a temporary structure, and*
- the new building is of a similar or smaller size to the existing one, lies within the curtilage of the existing building and is of high design quality.*

NatureScot (0528)

Recommend that policy Env 18 is also amended:

*“Within the Green Belt and Countryside shown on the Proposals Map, development must meet one of the following criteria. It must also not detract from the rural environment or landscape and should contribute to climate change resilience, provide access to green networks and support nature networks.”*

#### Esk Property LLP (0726)

Definition of 'essential countryside location' should be broadened to include reference to specialist housing and elderly accommodation. This would relate to age restricted developments comprising assisted living, retirement (over 55) accommodation and care facilities.

To ensure this policy is only applicable to certain sites, a qualification could be added which requires the applicant to demonstrate there are insufficient similar age-restricted housing facilities in the surrounding area which can meet local demand.

#### **Env 20 – Protection of Trees and Woodlands**

#### Crosswind Development Ltd (0184), Edinburgh Airport Limited (0761)

The Council's policy in the extant LDP (Policy Env 12 – Trees) is sufficient and should be carried forward into City Plan 2030, with representation 0184 additionally nothing the policy title be updated to include the word “Woodlands”.

#### Melford Development Ltd (0308)

No specific wording is set out however it is stated that an overall relaxation in policy wording is sought, in particular accounting for viability and allowance for offsetting carbon across the city to compensate for loss on site.

#### Hillend Leisure Ltd (0080)

Further detail should be provided as to what would comprise 'good arboricultural reasons' and how a Tree Survey would be deemed to be competent.

#### AREAA (0358)

Reword Policy ENV 20 (p110) to read:

*“There is a presumption against development that risks having a damaging impact on any tree, groups of trees or woodland unless:*

- the Council accepts this is necessary for good arboricultural reasons; or*
- the loss of the tree or group of trees can be mitigated through compensatory planting or other ecological enhancements.*

*Such instances will take cognisance of the value of the tree(s) in terms of amenity, health benefits, biodiversity, townscape and landscape character, local amenity or climate change adaptation and mitigation.”*

#### James Forbes (0647)

There should be a more stringent and enforced requirement for replacement of trees removed for arboricultural (or any) reasons, whether or not as part of a development

proposal.

Any developer removing a mature tree should, in addition to appropriate replacement on site, be required to contribute the cost of sourcing and planting ten additional trees (per tree removed) elsewhere in the city, as part of the Million Tree City drive.

#### The Woodland Trust (0774)

No development should be approved that will result in the loss or an adverse impact on ancient woodlands and ancient and veteran trees or their ecological condition and this should be explicitly stated in the City Plan 2030 policies.

As ancient woodlands and veteran trees are irreplaceable the policy should not give the impression that the loss of this type of woodland can never be compensated for.

The policy should state that an RPA used for Ancient Woodlands and Veteran Trees should be a minimum of 15 times the diameter of the tree trunk or 5 metres beyond the canopy, whichever is the greater.

The cultural value of trees should this should be written into the policy alongside other considerations.

The mitigation hierarchy should always be employed, and all efforts must be made to avoid and minimise damage to trees before any mitigation is considered. This should be explicitly stated in the text.

#### Edinburgh World Heritage (0339)

Add new paragraph to read as follows:

*“The positioning and contribution of trees to designed landscapes, the setting of listed buildings and the character of conservation areas and the character of parks and gardens in historic areas should be understood so that decisions on tree retention, removal or addition of new trees of appropriate species can be well informed and the character of the historic environment conserved and protected.”*

This change is needed to appropriately protect and enhance the Outstanding Universal Value of the Old and New Towns of Edinburgh World Heritage Site. To recognise the importance of trees as design features in planned historic streetscapes and landscapes, which each locality having a different landscaping style including the presence or otherwise of trees, placement and species.

#### Leith Central Community Council (0614)

It is indicated existing trees should be protected by default.

A requirement for precise tree specification with an associated minimum age and size and for the specification of the ground condition where each tree is to be planted.

#### Craigleith-Blackhall Community Council (0403), Neil Watt (0439), Richard Graveling (0135)

Hillhouse Road Woods (Queensferry Road) opposite Blackhall Library should be recognised as being critically important for biodiversity and its woodland. The same applies to Open Space site at Junction of Craigcrook Road and Queensferry Road

There should be more prominent links between this policy, Env 20 and Env 23.

Modify the Plan to introduce a Special Protection Area or similar designation to cover North of Corstorphine Hill zone.

## **Env 21 – Protection of Biodiversity**

Archie Clark (0003)

It is indicated that there needs to be a supporting text paragraph created expands upon criterion e.

Crosswind Development Ltd (0184), Edinburgh Airport Limited (0761)

Amend the supporting text (page 111) for this policy as follows:

*“3.132 In addition to safeguarding existing features, proposals should enhance biodiversity value, which should be demonstrated by complying with policy Env 37 (Designing in positive effects for Biodiversity) and the mitigation hierarchy in that policy as well as according with Edinburgh Design Guidance.”*

Richard Doake (0436)

The policy should require that any development should relate in some way to nature conservation.

William Mason (0438)

Alter the wording to say that *'all sites with statutory designations for their biodiversity will be preserved for the benefit of future generations and no development within them or in their vicinity that could affect their viability will be considered'*.

NatureScot (0528)

Recommend that the final sentence of paragraph 3.133 (page 111) is amended to:  
*“Development that would have an adverse effect on site integrity on any of these internationally important areas will only be approved in exceptional circumstances and where imperative reasons of overriding public interest can be demonstrated.”*

Dr Tim Duffy (0503)

NPF4 should be copied across in the next version of this plan.

James Forbes (0647)

Language from NPF4 (policy 3) should be used to protect small islands of privately owned

biodiverse sites that are not designated for nature conservation or protected species.

Craigleith-Blackhall Community Council (0403), Neil Watt (0439), Richard Graveling (0135)

Hillhouse Road Woods (Queensferry Road) opposite Blackhall Library should be recognised as being critically important for biodiversity and its woodland. The same applies to Open Space site at Junction of Craigcrook Road and Queensferry Road

There should be more prominent links between this policy, Env 20 and Env 23.

Modify the Plan to introduce a Special Protection Area or similar designation to cover North of Corstorphine Hill zone.

## **Env 22 – Pentlands Hills Regional Park**

The Association for the Protection of Rural Scotland (0334)

Amend criterion a) to insert ‘..safe and...’ prior to the word ‘peaceful’

It is also indicated that the policy text should address concerns around: the impact of high volumes of visitors like path erosion by walkers; creation of ad hoc multiple paths, destruction of ground flora, negative impacts from camping and general safe/responsible practice by users of the park.

### **Summary of responses (including reasons) by planning authority:**

## **Env 18 - Development in the Green Belt and Countryside**

Archie Clark (0003), Juniper Green and Baberton Mains Community Council (0306), Scottish Government - Planning and Architecture Division - Development Plans Team (0309), Cramond & Barnton Community Council (0243).

Rural land typically has a different nature of amenity value than dedicated areas of open space as more typically found in urban areas. The Council considers the amenity value of this land in a rural context is adequately captured by the policy’s last part of the first paragraph that proposals *should not detract from the rural environment*, including in terms of its quality.

The Council recognises the value of land in terms of food production, especially in relation to prime agricultural land.

The Council notes the representations (0003 and 0306) seeking a complete prohibition of development on any land classed as grades 1, 2, 3.1 and 3.2. This is considered too onerous and out of alignment with SPP CD096 and draft NPF 4 CD099.

In terms of SPP CD096 para. 80 and Draft NPF 4 CD099 Policy 31 (h), the Council notes that representation 0309 has stated that policy text should be created setting out the position in respect of agricultural land as set out in SPP para. 80.

The Council considers that the circumstances in which development is permitted under NPF4 CD099 and SPP CD096 are similar to those in Env 18 in relation to what development is potentially considered acceptable. For example, the first bullet points of SPP and NPF 4 fall within the terms criterion a) of Env 18 and the second bullet points of SPP and NPF4 are comparable to criterion c) of Env 18. It is acknowledged there are some difference, however, the Council considers that Env 18 would not permit development that is significantly different to that permitted by SPP para. 80 and Draft NPF 4 Policy 31 (h). Where Env 18 does make provisions for some additional forms of development, e.g. criterion (b) relating to changes of use, these typically involve little or no additional loss of undeveloped land. As a result the Council does not believe a dedicated new section of policy is merited.

The Plan does have proposals for food growing (see BGN 4 to BGN 7, Issue 18 'Green Blue Network Proposals'). The Council considers that the Plan's policies allow for such proposals coming forward. This includes as part of development sites where there is a minimum proportion of the site which is expected to comprise open space (which can include growing areas). **No modification proposed.**

Wright PDL (0078), Tarmac (0244), Mr T Klan (0307), Hallam Land Management (0615), Stirling Developments Limited (0303), Homes for Scotland (0404), Dandara East Scotland (0757), Barratt David Wilson Homes (0677), Steve Loomes (0767)

The Council agrees that Green Belt and Countryside are different terms, however they are grouped in the same policy as the Council considers the policy provisions should apply to both designations, as many of the key principles underpinning to them are the same.

This would not restrict opportunities for residential sites to come forward in the event of a housing land shortfall. Policy Hou 4 would apply in such circumstance.

The Council considers the policy aligns with SPP CD096, draft NPF 4 CD099, and the SDP. The Council notes that the policy is the same as the existing LDP, which was Examined under the same SDP CD087 and SPP in effect today (although over 5 years have now passed since the SDP was adopted).

The Council agrees that the proposed policy is designed to place different restrictions on development than exist for the urban area, however, this is not 'block' development but instead direct it to more appropriate locations outwith the designated countryside and Green Belt. The existence of historic, existing uses that do not conform to the current policy is not the key issue at hand – it is about the appropriateness of the policy for guiding new development. The Council considers the policy as proposed correct.

The proposals map does differentiate between Green Belt and Countryside so the change by the representation here is not clear. If it is sought that the legend of the proposals map labelling should refer to different subject policies for countryside and green belt then this is already addressed above. The Council maintains this position in relation to the change requested to Strategy text in paragraph 2.61 where the representor wishes paragraph 2.61 to set out different objectives for Green Belt and Countryside.

The Council does not consider that the policy needs to make provision for the remediation or restoration of brownfield land since these would not require planning permission in their

own right, unless associated with development. The Council does not support making provision redevelopment of brownfield land in this policy. Such development should be considered as an exceptional circumstance based on the merits of such a case. **No modification proposed.**

Stewart Milne Homes (0118), Taylor Wimpey (0200), Stirling Developments Limited (0303), BDW Trading (0350), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

Policy Hou 4 sets out the position in the event of a shortfall relating to housing land supply. It does not need to be duplicated in this policy. **No modification proposed.**

Wright PDL (0078), Tarmac (0244), Mr T Klan (0307), Hallam Land Management (0615), Stirling Developments Limited (0303), Homes for Scotland (0404), Dandara East Scotland (0757), Barratt David Wilson Homes (0677), Steve Loomes (0767), Stewart Milne Homes (0118), Taylor Wimpey (0200),

The language around views is considered clear and appropriate for LDP policy. The Council's 'Guidance on development in the Countryside and Green Belt' (2019) CD052 provides further information on this. **No modification proposed.**

Hillside Leisure Ltd (0080)

Criterion a) of the proposed policy relates to proposals which are for the purposes of 'countryside recreation'. This is considered sufficient for assessing support, or otherwise, of the type of proposal raised in this representation. **No modification proposed**

Grange/Prestonfield Community Council (0192)

The Council considers the proposed policy does make provision against adverse environmental impact. Not all developments are required to demonstrate they will improve access to the countryside, however, this is considered appropriate since is more important for certain types of proposal than others. Consideration of the merits of the policy should not be based on individual decisions on previous applications. **No modification proposed.**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0469)

The wording is clear in setting out that there is not an acceptable 'partial' level of detriment which is supported by this policy and the Council considers this an appropriate threshold to set for the landscape impact of proposals in the green belt and countryside. The Council's policy is not changing in this regard from its existing LDP. **No modification proposed.**

NatureScot (0528)

City Plan has other policies ensuring development promotes green networks and is resilient to climate change (see Env 6 and 7 respectively as particular examples) and so no modification proposed. If the Reporter sees merit in the modification however then Council has no issue in a modification as set out in this representation. However, it is

important that existing wording concerning the quality, characteristics and views of the surrounding area is retained.

#### Esk Property LLP (0726)

The Council does not consider age-restricted social care and retirement type uses as necessitating a countryside or green belt location, or even that this is always preferable given the importance of having walkable neighbourhoods and public transport links in the proximity in many cases. **No modification proposed.**

The following representations were received in support of this policy as proposed:

John Martin (0008), SEPA (0012), The Association for the Protection of Rural Scotland (0334), George Kelsey (0386), Richard Doake (0436), Scottish Wildlife Trust Lothian Group (0560), Kathryn Poolman (0574)

#### **Env 19 - Special Landscape Areas**

The following representations were received in support of this policy as proposed:

Grange/Prestonfield Community Council (0192), The Association for the Protection of Rural Scotland (0334), George Kelsey (0386), Scottish Wildlife Trust Lothian Group (0560), Kathryn Poolman (0574)

#### **Env 20 – Protection of Trees and Woodland**

Melford Development Ltd (0308), Crosswind Development Ltd (0184), Edinburgh Airport Limited (0761)

The Council is generally content with robust requirements of this policy in line the principle of resisting the loss of trees of merit unless for specific reasons. .

Some concern about the strength of this policy is because it has been interpreted as requiring tree works to be necessary for arboricultural reasons *prior* to assessing the value of a tree/woodland values. This is not the intention for the policy. The Council considers the arboricultural reasons for works to be one factor to be considered *alongside* to the value of the tree(s)/woodland as part of a single, overall and holistic judgement.

No modification proposed in this regard, however, should the Reporter be so minded the Council has no issue for the purposes of clarity in a modification which changed the present wording from ‘..and also accounting for..’. to instead read ‘..whilst also accounting for...’.

Notwithstanding this, the Council agrees the first paragraph makes it clear that proposals should generally be avoiding harm to trees/woodlands on, or adjacent, to development sites. This is the reason for the general presumption against such harm.

It is for the decision maker to weigh all relevant material considerations and policies in assessing a proposal the Council considers it reasonable that this policy should be clear in its presumption against harm to or loss of trees of value without justification. **No modification proposed.**

Hillend Leisure Ltd (0080)

The Council considers the terms 'competent tree survey' and 'good arboricultural reasons' as sufficient for the purposes of this policy. The give a high-level policy descriptor of what is required whilst leaving adequate scope for guidance to advise on further detail. Edinburgh has guidance on protected trees which has been updated in 2022 and which will be reviewed regularly to ensure it is fit for purpose, including making sure it sets out requisite detail on new policy in an appropriate timescale. **No modification proposed.**

AREAA (0358)

The modification would have the effect of saying all tree loss could be justified through compensatory planting or other ecological enhancement. The Council fundamentally disagrees with this as it does not take account of particularly valuable trees or groups of trees, or the timescale for ne planting to have a similar value, including for carbon sequestration. **No modification proposed.**

James Forbes (0647)

The policy accounts for a tree/woodland's value in terms of climate change mitigation. This allows for consideration that some trees and woodlands will have greater value than others.

Matters regarding enforcement are not addressed here, however, the Council considers the wording allows the policy to be enforceable.

The Council does not consider the level of contributions proposed to off-set tree loss is proportionate and therefore would not meet the necessary legal tests for contributions. **No modification proposed.**

The Woodland Trust (0774)

This policy does recognise the value of trees in terms of townscape character. Accordingly, no modification is proposed, however, should the Reporter see merit in recognising 'culture' as a distinct value in its own right then the Council has no issue for the purposes of clarity in a modification adding 'cultural' to the list of values a tree(s) may have in the final sentence of the first paragraph of this policy.

The Council appreciates the value of ancient woodlands and ancient and veteran trees. This is accounted for in the proposed policy as part of the various factors that are listed as being of relevance in the consideration of the value of trees and woodland.

The Council does not believe an unequivocal statement preventing any works to ancient woodlands and ancient and veteran trees is appropriate given these may actually benefit from some works in certain circumstances for arboricultural reasons.

The Council considers that the methodology to root protection (as accepted through established British Standard guidance) is appropriate to avoid risk of harm, including to ancient woodland and veteran trees.

The Council considers the policy does follow the principles of the mitigation hierarchy given it is clear that mitigation for the loss of trees will only be considered following demonstration the loss of trees is appropriate. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council agrees that trees have a significant role in complementing a range of built heritage assets. The wording of the policy as proposed requires acknowledgement of the value of trees in terms of their value in a 'townscape' context, with 'landscape character' also noted. Historic Environment is considered to be adequately covered between these two terms. **No modification proposed.**

Leith Central Community Council (0614)

The Council does not agree that policy itself should be a 'standard' precise tree specification for replacement planting as the optimal specification could vary depending on the circumstances (for example space available to plant the tree(s) in question.) The development management process is the more appropriate juncture to establish particular details where specific circumstances can be taken into account.

The Council considers this policy does set out that the default situation is the retention of existing trees rather than simply accepting the principle of replacement from the outset. **No modification proposed.**

Neil Watt (0439), Craigmyle-Blackhall Community Council (0403), Richard Graveling (0135)

Env 20 applies to all trees of merit. The Plan's Proposals Map does not map protected trees, – including trees that are TPO'd. Env 21 protects non-designated sites as well as those with formal designations.

Policies Env 21, 20 and 23 are all contained in the Natural Environment policy section together. Further cross reference is not considered necessary.

The Council considers the existing designations that cover North of Corstorphine Hill and the proposed policies in the Plan are sufficient to protect the various habitats and species. **No modification proposed.**

The following representations were received in support of this policy as proposed:

SEPA (0012), Grange/Prestonfield Community Council (0192), The Association for the Protection of Rural Scotland (0334), George Kelsey (0386), NatureScot (0528), Scottish Wildlife Trust Lothian Group (0560), Kathryn Poolman (0574), James Forbes (0647), RSPB (0648); Leith Harbour and Newhaven Community Council (0776)

**Env 21 – Protection of Biodiversity**

Archie Clark (0003)

This was a typographic matter with an earlier published edition of the Plan and has since been remedied in due process. **No modification proposed.**

Edinburgh Airport Limited (0761), Crosswind Development Ltd (0184).

If an applicant considers the policy is not relevant to their proposal this can be part of their case. The Council considers it is not for policy to make exceptions where specific material considerations will be assessed. for the suggested approach would preclude potential for enhancement and/or mitigation which could avoid a safeguarding conflict. **No modification proposed.**

Richard Doake (0436)

The Council considers the meaning of 'offset' to be clear when read in context of the full development principle, including that it must relate to the integrity of the interests of the affected LNCS and LNR. **No modification proposed.**

William Mason (0438)

The Council considers it reasonable for matters of overriding public interest to be a material consideration in addition to the ecological matters raised in this policy.

This policy is required to account for the varying statutory and locational context of the sites in question and the fact that the nature and need for the development in question may be a material factor worth consideration. **No modification proposed.**

NatureScot (0528)

Although the Council considers the wording of 3.133 generally expresses the overall emphasis required, should the Reporter see merit in the representation the Council has no issue in a modification as specified.

Dr Tim Duffy (0503), James Forbes (0647)

The first sentence of this policy (and corresponding footnote with a single asterisk) address non-statutory habitat features, which can include those of a small scale as set out in the supporting footnote. **No modification proposed.**

Neil Watt (0439), Craigleith-Blackhall Community Council (0403), Richard Graveling (0135)

Env 20 applies to all trees of merit. The Plan's Proposals Map does not map protected trees, – including trees that are TPO'd. Env 21 protects non-designated sites as well as those with formal designations.

Policies Env 21, 20 and 23 are all contained in the Natural Environment policy section together. Further cross reference is not considered necessary.

The Council considers the existing designations that cover North of Corstorphine Hill and the proposed policies in the Plan are sufficient to protect the various habitats and species. **No modification proposed.**

The following representations were received in support of this policy as proposed:

Grange/Prestonfield Community Council (0192), The Association for the Protection of Rural Scotland (0334), George Kelsey (0386), Scottish Wildlife Trust Lothian Group (0560), Kathryn Poolman (0574), James Forbes (0647), RSPB (0648)

## **Env 22 – Pentland Hills Regional Park**

The Association for the Protection of Rural Scotland (0334)

The Council does not consider it would be appropriate for the Plan to be the means to manage the volume of visitors to the park. If the objective was agreed on grounds of preserving the character of the park then this would require non-planning actions to secure it.

The Council considers the main objectives relating to the park are addressed in the policy.  
**No modification proposed.**

The following representations were received in support of this policy as proposed:

Grange/Prestonfield Community Council (0192), George Kelsey (0386), Scottish Wildlife Trust Lothian Group (0560); Kathryn Poolman (0574), Friends of the Pentland Hills (0787)

### **Reporter's conclusions:**

### **Reporter's recommendations:**

Provision of the development plan to which the issue relates:	Policies relating primarily to Blue Green Infrastructure (Env 6, Env 36 and Env 37), Amenity (Env 33), Flood Risk (Env 35) and Pollution and Air, Water and Soil Quality (34)	
Planning authority's summary of the representation(s):		
<b>Natural Environment Strategy</b>		
<u>Leith Central Community Council (0614)</u>		
City Plan should be more specific about how it is helping the City reaching the target of 730000 trees.		
City Plan should also use a stronger word than encourage for new tree planting and it should be made mandatory in some instances		
Existing trees should be protected by default and the practice of felling trees and plant new ones in exchange should be revisited in terms of environmental impacts.		

A requirement for precise tree specification with an associated minimum age and size and for the specification of the ground condition where each tree is to be planted.

Helen MacLeod (0364)

The City needs more natural spaces should be planted to support wildlife.

## **Env 6: Green Blue Infrastructure**

Wright PDL (0078), Homes for Scotland (0404), HUB Residential (0582), Barratt David Wilson Homes (0677); Ambassador Group (0683); Crosslane Co-Living SPV 2 Limited (0687); Hazledene House Limited (0695); Steve Loomes (0767)

Green and blue infrastructure (such as biodiversity, increased vegetation and deculverting watercourses) take up space and is difficult to deliver on smaller, brownfield sites and considering the density aspirations of the Plan.

City Plan policies should not misalign with relevant Scottish Water guidelines, nor national building standards regulations.

Crosswind Developments Limited (0184)

Object to criterion A of Policy Env 6. The policy has a blanket assumption in favour of deculverting which may not always be appropriate. It should be considered on a site-by-site basis to establish if it is viable. Flexibility should be provided within the policy.

This policy will lead to the sterilisation of much land that could otherwise support development by requiring a buffer of up to 80m wide. As a result appropriate compensation mechanisms should be put in place to compensate landowners.

0761 (Edinburgh Airport Limited)

The policy should be amended.

Ratho and District Community Council (0289)

The policy does not take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

This policy create entail extra work and if resourcing is not available then it wil not be possible to adequately assess compliance.

How the Council will ensure full compliance with the 'catch-all' requirements in paragraph 3.95?

AREAA (0358)

Insufficient nuance as to offer flexibility in particular circumstances. Areas of the green network may for example be of particularly low quality, neither useable accessible nor of any measurable biodiversity value. In certain circumstances there will be situations where “green” sites offer development potential and their development could contribute to wider enhancement objectives nearby/elsewhere and/or the delivery of development in line with identified need.

NatureScot (0528)

As currently written the applicability clause precedes the requirement of tailoring measures to the scale and nature of development. The draft National Planning Framework 4 is clear that developments of different scales should protect, enhance and expand green blue infrastructure and networks.

Wildlife Trust Lothian Group (0560)

Increasing habitat connectivity, through the development of ecological networks, is often seen as the principal mechanism for ensuring healthy ecosystems, increasing natural sustainability through greater species diversity. These also offer protection against the effects climate change. However, this can be achieved to full effect when the connectivity, parks, woodland, street trees and blue/green roofs, are an extension to the existing habitat, through the use of native species. It is of important to mitigate against the spread invasive species or of samples that would introduce and cause disease outbreaks in the local flora and fauna.

SEPA (0012), Edinburgh World Heritage (0339)

The policy should be modified.

James Forbes (0647)

Erasing green blue features and starting again should be not just discouraged but forbidden except in very rare circumstances.

**Env 33 – Amenity**

Archie Clark (0003)

Policy has too much scope for exceptions to nominal policy requirements.

Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350), Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

Achieving acceptable standards for odour, space provision, noise, daylight, sunlight, privacy or immediate outlook required under this policy is challenging on brownfield sites with such high density aspirations.

Greater clarity and detail is needed on specifics as this policy as proposed it is too vague, including in relation to odour, space standards, noise, daylight, sunlight, privacy or immediate outlook.

## **Env 34 Pollution and Air, Water and Soil Quality**

Archie Clark (0003)

Length of policy and support text is too long

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

City Plan should be cognisant of draft NPF4, including policy 14 which seeks health impact assessment for all proposed development that is considered to be likely to generate significant health effects, or is within the categories of national developments, or major developments, or is EIA development. In relation to national or major developments, provision for regulations for an assessment of likely health effects is also included in the Planning (Scotland) Act 2019.

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

What would constitute a 'significant adverse affect'?

This policy must align with Building Standards.

## **Env 35 – Reducing Flood Risk**

Archie Clark (0003)

Too much scope for weaken or circumvent policy requirements which can be exploited by developers.

Nature Scot (0528)

Evidence from Dynamic Coast shows that we will be facing some very challenging issues in future regarding flooding and coastal change. The importance of resilience and adaptation of communities and infrastructure is an essential matter for City Plan 2030 to consider and plan for. The local development plan cannot do this itself.

Juniper Green & Baberton Mains Community Council (0306)

It is indicated that this policy should remove the various options to weaken or circumvent previous categorical statements as otherwise developers will exploit this.

Shiela Strathdee (0448)

The flood risk mitigation required under this policy should be nature based and should be paid for by developers.

Scottish Water (0342)

Increase the emphasis on betterment and addressing existing known flood risk through the planning of new development. We would support the inclusion of this as the aims of the policy appear to remain on not increasing existing issues.

Crosswind Development Ltd (0184)

This policy should be modified or alternatively a statement in the supporting text should be added to clarify that proposals for de-culverting/ re-meandering of rivers should be properly evidenced and justified, with appropriate consultation undertaken with SEPA and with cooperation and agreement sought among landowners to ensure proposals are deliverable.

NHS Lothian (0596)

Flood risk requirements should be able to be discussed on a case-by-case basis.

Edinburgh Airport Limited (0761)

This policy should be amended

Leith Central Community Council (0614)

The policy should put the onus on applicants which should, by default, systematically demonstrate flood mitigation measures and provide a Flood Risk Plan.

There should be an explicit presumption against residential development in flood areas without in-principle support from SEPA.

Edinburgh World Heritage (0339)

This policy should address the need to improve certain existing situations as Major redevelopments of existing sites may increase existing issues in terms of flood risks and surface water management. These existing sites may not have or have insufficient mitigations measures in place in terms of flood risks and surface water management. It will be important to significantly improve the management of flood risks

**Env 36 – Designing for Surface Water**

Archie Clark (0003)

What is meant by water flowing 'above ground'?

What is the problem with using underground storage tanks?

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Over what time period is the first 5mm of surface water to be managed under this policy?

Archie Clark (0003), Scottish Water (0342)

In point (e) it is not clear whether the policy supports development which does not remove existing surface water pipes or not if it does remove the pipes?

Scottish Water (0342)

In section 3.168 Surface water in the combined sewer network can increase the risk of impacts on the water environment and/or sewer flooding as a consequence of more intense rainfall....It is important to note that our position is clear as set out in our Surface Water Policy (<https://www.scottishwater.co.uk/Business-and-Developers/NEW-Connecting-to-Our-Network/Developing-housing-and-commercial-properties/Preparing/Surface-Water-Policy>) will not allow any additional surface water from new development into the combined sewer network.

James Forbes (0647)

The policy should be amended.

Edinburgh Airport Limited (0761)

Changes are required to para 3.169 to acknowledge Airport Safeguarding matters within 13km of the aerodrome to ensure this policy does not lead to unmanageable risks in terms of aircraft safety.

Edinburgh World Heritage (0339)

Changes are needed to make clear the nominal requirements may not be suitable in the Old and New Towns of Edinburgh World Heritage Site.

**Env 37 – Designing-in Positive effects for Biodiversity**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

This policy allows exceptions to the initial statement of requiring positive effects, in particular criterion b. and para 3.171.

Archie Clark (0003)

If exceptions to are to be allowed then financial contributions towards mitigation must be sufficient to provide overall positive effect and be rigidly applied.

NatureScot (0528), Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The applicability clause precedes the requirement of scale and nature. In the draft National Planning Framework 4, the national policy is clear that developments of different scales should protect, enhance and expand green blue infrastructure and networks.

Paragraph 3.185 could be interpreted as providing measures that are sufficient regardless of scale of development.

A reference to BS 8683 is included in paragraph 3.187 however this document currently incurs a charge. As the Local Development Plan should be accessible to all we suggest that an additional source that does not require payment will help communities and third sector organisations to use the plan more fully.

Edinburgh Airport Limited (0761), Crosswind Development Limited (0184).

This policy should be amended.

It is not always possible to carry out biodiversity enhancements or requirements and therefore a degree of flexibility is required in the policy. Having criteria worded as 'should' rather than 'must' be undertaken provides that flexibility and the introduction of supporting text makes the reasons clear.

The Association for the Protection of Rural Scotland (0334)

Wording detailing 'positive measures for biodiversity' should make clear the conservation of complete habitats and ecosystems is usually far better in terms of biodiversity than taking measures species by species.

RSPB (0648)

There is a significant focus within the City Plan 2030 on the development of brownfield sites, it is therefore recommended including the following text recognising that many mature brownfield sites support high levels of biodiversity, particularly invertebrates and plants.

### **All policies**

Mark Ockendon (0419)

All policies should include provision for new greenery, whether trees or other planting, to support a sense of wellbeing, carbon sequestration, and integrating nature with the community.

### **Modifications sought by those submitting representations:**

#### **Natural Environment Strategy**

Leith Central Community Council (0614).

City Plan should be more specific about how the target of 730000 trees shall be reached.

A stronger word than *encourage* should be used for new tree planting and it should be made mandatory in some instances.

Existing trees should be protected by default and the practice of felling trees and planting new ones in exchange should be revisited. Where accepted then there should be a requirement for precise tree specification.

Helen MacLeod (0364)

It is indicated that more natural spaces should be planted to support wildlife.

## **Env 6: Green Blue Infrastructure**

Wright PDL (0078), Homes for Scotland (0404), HUB Residential (0582), Barratt David Wilson Homes (0677); Ambassador Group (0683); Crosslane Co-Living SPV 2 Limited (0687); Hazledene House Limited (0695); Steve Loomes (0767)

No specific wording proposed however it is indicated that less stringent requirements are set out for blue green infrastructure and that allowance should be made for other factors that have a bearing on the developability of a site such as density. It is also indicated requirements of this policy should align with Scottish Water guidelines and Building Standards.

### Crosswind Developments Ltd (0184)

A proposed amendment (Page 102) is set out below:

*“As far as applicable to the scale and nature of the development, proposals must protect, enhance and link to the city’s green/blue network through the following steps:*

- a. incorporating and enhancing existing green and blue features such as biodiverse vegetation and watercourses on the site, where possible and appropriate;*
- b. providing new green blue infrastructure on-site which is linked within the site through careful consideration of site layout; and*
- c. linking new green blue infrastructure to the city wide green blue network using components such as parks, woodland, street trees and blue/green roofs where possible and appropriate.”*

### 0761 (Edinburgh Airport Limited)

A proposed amendment is set out below:

“As far as applicable to the scale and nature of the development, proposals should protect, enhance and link to the city’s green/blue network through the following steps:

- a. incorporating and enhancing existing green and blue features such as biodiverse vegetation and de-culverting watercourses on the site, where possible and appropriate;
- b. providing new green blue infrastructure on-site which is linked within the site through careful consideration of site layout; and
- c. linking new green blue infrastructure to the city wide green blue network using components such as parks, woodland, street trees and blue/green roofs where possible and appropriate.”

### Ratho and District Community Council (0289)

No specific wording proposed however it is indicated that it should be specified that the proposals do not include any standing water or could give rise to areas of standing water.

#### Juniper Green & Baberton Mains Community Council (0306)

No specific modification specified. It is indicated that there may be a desire to remove the extra work required in this policy if resourcing is not available to adequately assess compliance.

#### AREAA (0358)

Reword opening line of Policy ENV 6 to read "As far as applicable to the scale and nature of the development, proposals must protect, enhance and link to the elements of the city's green/blue network that are of value through the following steps:"

#### NatureScot (0528)

The leading sentence of the policy (page 102) should be amended to "Development proposals will be supported where they can demonstrate, in proportion to their scale and nature, that they will protect, enhance and link to the city's green network through the following steps:"

#### Wildlife Trust Lothian Group (0560)

No modification specified but it is indicated that it should be made clear that habitat created should be extensions of existing habitat and for invasive species to be mitigated against.

#### SEPA (0012)

Support the first line of the policy but would add to it as follows:

*"As far as applicable to the scale and nature of the development, proposals must protect, enhance, and link to the city's green/blue network while contributing to the recovery of ecosystems services through the following steps:..."*

Amend criterion b to read as follows:

*"(b) providing new green blue infrastructure on-site which is linked within the site through careful consideration of site layout 'and the facilitation of opportunities for direct community contribution of their needs and aspirations.'"*

Add a reference to "blue/green walls" to criterion c given these are important blue green infrastructure measure for a densely populated context urban context.

For paragraph 3.95 it is proposed to add text to the effect: - *'Natural flow paths of water must be identified at the visioning stage and inform design. The interaction of blue-green infrastructure with wider infrastructure types to maximise place-led social, economic and environmental benefits will be at the heart of best practice in future fitting design.'*

It is proposed water efficiency should also be a key consideration for this policy although no specific wording is proposed in this regard.

#### Archie Clark (0003)

Clarity is needed on how the Council will ensure full compliance with the 'catch-all'

requirements in paragraph 3.95.

James Forbes (0647)

No text specified but it is indicated that the policy should be strengthened to make clear erasing of existing blue and green features should not be allowed except for 'exceptional circumstances'.

Edinburgh World Heritage (0339)

Amend main policy wording to read:

*"As far as applicable to the scale, nature and historic character of the area and its development, proposals must..."*

New main policy bullet (a, b, c) to be added as follows:

*"d. conserve and where possible enhance the special interest and positive character of historic green blue infrastructure"*

Add new supporting text (e.g. new para next to 3.93, 3.94) as follows:

*"In recognition of the outstanding quality of Edinburgh's historic green blue infrastructure, and their contribution to social, environmental and economic wellbeing, proposals should demonstrably; understand their special heritage interest, conserve and where possible enhance them to conserve them as important and irreplaceable assets."*

These changes are needed to appropriately conserve Edinburgh's Outstanding Universal value as a World Heritage Site. To recognise the outstanding quality and contribution of historic and existing green blue infrastructure (including undesignated sites) and ensure appropriate protection as important and irreplaceable assets.

**Env 33 – Amenity**

Archie Clark (0003)

Policy should be amended to give less scope for exceptions to nominal policy requirements.

Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350), Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

Greater clarity and detail is needed on specifics as this policy as proposed it is too vague.

**Env 34 - Pollution and Air, Water and Soil Quality**

Archie Clark (0003)

It is indicated that the length of the policy and support text should be reduced.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

No modification stated however it is indicated that the policy should consider requiring health impact assessments for developments likely to generate significant health effects, or is within the categories of national developments, or major developments, or is EIA development.

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

Clarity must be provided on what would constitute a 'significant adverse affect'

**Env 35 – Reducing Flood Risk**

Archie Clark (0003)

There should be less scope for exceptions to nominal policy requirements.

Nature Scot (0528)

Paragraph 3.166 (page 118) should be amended to include reference to the need to prepare some form of Coastal Adaptation Plan.

Juniper Green & Baberton Mains Community Council (0306)

It is indicated that this policy should remove the various options to weaken or circumvent notional requirements.

Shiela Strathdee (0448)

It is indicated that the policy should be more explicit that the flood risk mitigation required under this policy should be nature based and should be paid for by developers.

Scottish Water (0342)

Increase the emphasis on betterment and addressing existing known flood risk through the planning of new development.

Crosswind Development Ltd (0184)

Request criterion d. is amended as follows:

"d. fail to allow sufficient space to incorporate and enhance existing features into the proposal's design which would add to the blue network, for example de-culverting and re-meandering rivers, unless it is demonstrated this is not viable."

Alternatively, a statement in the supporting text should be added to clarify that proposals for de-culverting/ re-meandering of rivers should be properly evidenced and justified.

NHS Lothian (0596)

It is indicated that the requirements in respect of flood risk to be addressed by the site should be able to be discussed on a case-by-case basis.

Edinburgh Airport Limited (0761)

Criteria d of the policy should be reworded as follows:

“d. fail to allow sufficient space to incorporate and enhance existing features into the proposal’s design which would add to the blue network, for example de-culverting and re-meandering rivers, unless it is demonstrated this is not viable.”

Leith Central Community Council (0614)

It is indicated this policy should, by default, systematically demonstrate flood mitigation measures and provide a Flood Risk Plan.

There should be an explicit presumption against residential development in flood areas without in-principle support from SEPA.

Edinburgh World Heritage (0339)

It is indicated that this policy should address the need to improve certain existing situations.

**Env 36 – Designing for Surface Water**

Archie Clark (0003)

Further explanation is needed in relation to the following;

- What is meant by water flowing ‘above ground’?
- Why underground storage tanks are inappropriate?

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The Plan should clarify the time period in which the first 5mm of surface water are to be managed under this policy?

Archie Clark (0003), Scottish Water (0342), Juniper Green & Baberton Mains Community Council (0306)

Clarity on the purpose of point (e) to confirm if this seeks for the removal of existing surface water pipes.

Scottish Water (0342)

This section may need clarity on the purpose of point (e). Could this section be linked to how 'viability' is assessed?

James Forbes (0647)

Policy should not allow proposals which take no account of surface water draining from outside the site.

Edinburgh Airport Limited (0761)

Changes are required to para 3.169 to acknowledge Airport Safeguarding matters within 13km of the aerodrome to ensure this policy does not lead to unmanageable risks in terms of aircraft safety:

*“3.169 Water can be stored above ground in basins, ponds or in features such as blue roofs so long as this is not an unmanageable risk in terms of Airport Safeguarding. Development must where feasible avoid the use of underground tanks and maximise evapotranspiration to reduce both volume and rate at which water enters rivers and drainage systems. Further detail on how the above principles should be achieved as part of developments is set out in the Edinburgh Design Guidance and associated appendices as well as the Council’s ‘Vision for Water Management for the City of Edinburgh’.”*

Edinburgh World Heritage (0339)

Add to first paragraph as follows:

*“Detailed applications involving the construction of one or more buildings and major redevelopments of existing sites will be supported by this policy...”*

This change is needed as Major redevelopments of existing sites may increase existing issues in terms of flood risks and surface water management. These existing sites may not have mitigations measures in place in terms of flood risks and surface water management. This proposal can significantly improve the management of flood risks.

Amend paragraph 3.169 as follows:

*“...Water can be stored above ground in basins, ponds or in features such as blue roofs where appropriate”*

It is indicated that, as de-culverting watercourses could increase the flooding risk in some instances then they should always be supported by a flood risk assessment.

**Env 37 – Designing-in Positive effects for Biodiversity**

Archie Clark (0003); Juniper Green & Baberton Mains Community Council (0306)

No specific wording stated however it is indicated the policy should allow less scope for exceptions to developments delivering overall positive effects for biodiversity on-site.

It is also indicated that the policy must be more explicit that, where exceptions are allowed, these must be sufficient to still result in overall positive effect

NatureScot (0528)

The leading sentence of the policy should be amended to “In proportion to their scale and nature, development proposals must have a positive effect on biodiversity by following the sequence of principles below:”

Paragraph 3.170 (page 120) of the Proposed Plan should be amended to: “The built environment will benefit from biodiversity corridors that protect and allow the movement of species across the city. Developments should contribute towards Edinburgh’s wider green / blue and nature networks as required by their location, scale and density. Ecological features within development such as living roofs, rain gardens, swift bricks and hedgehog highways are valuable assets within the city-wide networks.”

Direction should be provided on how “it should be ensured that all opportunities to embed measures ... have been explored” in paragraph 3.173 (page 120). A reference to Nature Scot’s “Developing with Nature” guidance may be acceptable.

Nature Scot (0528), Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

It is indicated that the reference to BS 8683 in para 3.172 should be removed and an alternative inserted. One such alternative could be the Developing with Nature guidance that Nature Scot are currently consulting on, which will be finalised prior to the adoption of City Plan 2030: <https://www.nature.scot/doc/consultation-developing-nature-guidance>. Reference to this new guidance would also help provide a route through which “opportunities to embed” could be demonstrated. The guidance includes a section on “Selecting the measures that are appropriate” that may be useful to users of the plan in support of Policy Env 37.

Crosswind Development Limited (0184), Edinburgh Airport Limited (0761)

Propose that the policy (page 119) is reworded as follows:

*“So far as applicable to the scale and nature of the development, proposals should must have a positive effect on biodiversity by ensuring proposals follow the sequence of principles below:*

- a. Avoid impact, wherever possible, by identifying existing species, spaces and features of biodiversity on-site and including these within new developments;*
- b. Where impact cannot be avoided this effect should must be minimised, for example by prioritising the retention of the most the important areas for of ecological networks;*
- c. Any remaining adverse impacts should must be wholly mitigated by new biodiversity measures; and*
- d. Additional improvements should then be included, where required, to tilt the balance of impact from neutral to an overall positive effect for biodiversity, for example through incorporating measures to improve the conservation status of notable species.*

*Consideration of biodiversity should include, but is not limited to, soils, habitat networks and environmental quality within and linking to a site.”*

The Association for the Protection of Rural Scotland (0334)

No specific wording cited however it is stated that wording detailing 'positive measures for biodiversity' should make clear the conservation of complete habitats and ecosystems is usually far better in terms of biodiversity than taking measures species by species.

RSPB (0648)

Include the following text:

*"Many mature brownfield sites support high levels of biodiversity, particularly invertebrates and plants. Therefore, ecological surveys focused on these groups will be needed to identify existing species and features of biodiversity on-site so that they can be included within new developments. There must also be adequate, qualified, resource within the Council to assess the results of the surveys."*

## **All policies**

Mark Ockendon (0419)

All policies should include provision for new greenery, whether trees or other planting.

### **Summary of responses (including reasons) by planning authority:**

## **Natural Environment Strategy**

Leith Central Community Council (0614), Helen MacLeod (0364)

A greater level of detail on proposals involving tree planting will be set out in the Council's next Forestry and Woodland Strategy. The Council considers that in high level terms the Plan does support the ambition to plant significantly more trees. E.g. Policy 27 (see issue 11: Design and Placemaking) sets out new requirements for minimum tree canopy coverage for development sites as well as strengthened policy Env 20 (see Issue 15: Natural Environment policies) setting out details on protecting existing trees, including the requirement that the specification of these new trees is to be appropriate. It is for the development management process and potentially landscaping plans to address further specifics on new planting details. **No modification proposed.**

## **Env 6: Green Blue Infrastructure**

Wright PDL (0078), Homes for Scotland (0404), HUB Residential (0582), Barratt David Wilson Homes (0677); Ambassador Group (0683); Crosslane Co-Living SPV 2 Limited (0687); Hazledene House Limited (0695); Steve Loomes (0767)

Green blue infrastructure is just as important in urban, dense sites so the Council does not accept that requirements should be lessened in these locations, given it is still deliverable on smaller sites, adapted to the context. e.g. it is multifunctional so as to maximise the benefits in the space available, with recreational open space also serving for wildlife and water management. The Council does not consider City Plan misaligns with Scottish Water guidelines. **No modification proposed.**

Crosswind Developments Limited (0184), Edinburgh Airport Limited (0761)

In general, the Council expects de-culverting to be a preferred option, however, paragraph

3.167 under policy Env 35 does clarify such de-culverting is sought whenever possible i.e. accepting there may be circumstances it is impracticable.

The provision of buffers along watercourses is important for providing and maintaining riparian habitat, recreation, flood risk and water management. The width of such buffers is proportionate to the watercourse in question in line with SEPA guidance (page 24 of SEPA's Planning Background Paper: Water Environment 2017) CD129 however where buffers are provided these will also often function as part of a site's open space requirement. As such they will not necessarily sterilise significant amounts of a site as need to provide for open space under existing and proposed open space policy (Adopted LDP policy Hou 3 and City Plan policy Env 32 respectively) **No modification proposed.**

Ratho and District Community Council (0289)

This is a site specific consideration more appropriately addressed in individual applications. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306)

The Council does not expect an excessive level of additional work will be created as a result of this policy. **No modification proposed.**

AREAA (0358)

Where a green network within/adjacent to a site is of limited existing value there is scope for development to enhance it as set out in the proposed policy. Paragraph 3.96 also makes provision for the principle of enhancement of the green blue network off-site where on-site provision is not possible and this does provide flexibility where it is demonstrated that the preferred policy approach is not practical. **No modification proposed.**

NatureScot (0528)

The Council considers that the first clause of the proposed policy wording is about establishing the *extent* to which the policy applies rather than necessarily *if* it applies.

The Council acknowledges NPF4 is likely to be adopted soon and once this occurs Reporter(s) may wish to take this into account during Examination. **No modification proposed.**

SEPA (0012)

This policy is intended to address a wide range of green blue infrastructure in different contexts and to maximise its full range of benefits, including ecosystem services. The Council is satisfied the 'high level' language used achieves this and considers adding additional clarifications as proposed would detract from the simplicity of language which is key to this policy. There are other, related policies, where more specific details on the implementation of blue green infrastructure in more specific contexts are set out, e.g. Env 36 Designing for Surface Water. **No modification proposed.**

Wildlife Trust Lothian Group (0560)

The Council considers the points in this representation are not requiring the policy text to be altered (since there is no misalignment). Issues such as specification of native species are more appropriately addressed through guidance. **No modification proposed.**

Archie Clark (0003)

Council planning officers, including those with more specialist ecological knowledge who can support particular cases where needed, can ensure the terms of paragraph 3.95 are fulfilled as required. Evidentially much of the work involved is on applicants themselves in the first instance, however the Council considers itself able to ensure compliance with the terms of the text in question. **No modification proposed.**

James Forbes (0647)

The policy does state that green blue infrastructure should be retained rather than erased, with any loss of such infrastructure being an exceptional circumstance. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council considers it appropriate that this policy should, in principle, apply to developments in historic contexts. As such it is not considered appropriate to introduce the historic character as a factor in the degree to which the policy should apply by way of the first modification sought in representation.

This policy shall have effect alongside other policies (such as Env 1) which ensure that developments, including their green and blue infrastructure required under Env 6, shall be cognisant of the characteristics of built heritage of an area. As such the new criterion d) and the new supporting text both proposed in representation are not considered necessary for this policy. **No modification proposed**

The Council notes that the following representations support the policy as proposed:

Leith Harbour and Newhaven Community Council (0776), Grange/Prestonfield Community Council (0192), HUB Residential (0582), RSPB (0648), Ambassador Group (0683)

### **Env 33 - Amenity**

Archie Clark (0003)

The Council considers the policy is clear on the requirements to be met and does not leave open license for exploiting exceptions. **No modification proposed.**

Stewart Milne Homes (0118), Taylor Wimpey (0200), BDW Trading (0350), Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

The Council does not agree that the policy should leaving open the issue of the extent of compliance with this policy depending on context. It is for the decision maker to assess It is not for LDP policy to account for the variables of a particular proposal.

The Council considers the proposed policy provides sufficient detail, with the supporting paragraph making clear that guidance provides additional information on interpretation. This guidance addresses in more detail the issues raised in representation. **No modification proposed.**

The following representations were received in support of this policy as proposed:

Grange/Prestonfield Community Council (0192), Scottish Wildlife Trust Lothian Group (0560), SEPA (0012)

### **Env 34 – Pollution and Air, Water and Soil Quality**

Archie Clark (0003)

The Council considers the policy length is proportionate the nature of the matter that it addresses. **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The policy does direct decision makers to consider health impacts as applicable.

Notwithstanding this, the Council acknowledges NPF4 is likely to be adopted soon and once this occurs Reporter may wish to take this into account during Examination. **No modification proposed.**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

This policy does not conflict with Building Standards, although they generally address different matters. The term significant adverse effect is appropriate for the purposes of policy application. Individual applications and decision makers can apply this more specifically on a case by case basis reviewing impacts arising and receptor proximity and sensitivity. It is not practicable for policy wording to account for every eventuality. **No modification proposed.**

The following representations were received in support of this policy as proposed:

SEPA (0012), Grange/Prestonfield Community Council (0192), Scottish Wildlife Trust Lothian Group (0560), RSPB (0648), The Coal Authority (0765)

### **Env 35 – Reducing Flood Risk**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The Council considers the policy text itself is clear on the stated requirements. The final paragraph of the policy and the policy supporting text itself provide assistance on interpretation in the event exceptional circumstances may apply but this does not itself lessen the applicability of proposals to meet the stated, clear policy requirements. **No modification proposed.**

Shiela Strathdee (0448)

The Council considers the final sentence of supporting paragraph 3.165 is adequate in setting out the position on the nature based mitigation, where mitigation in principle is considered appropriate. **No modification proposed.**

Scottish Water (0342)

The Council considers that criterion (d) of this policy does mean that, where relevant, development shall contribute to betterment rather than simply avoiding harm. The final paragraph of the policy text itself will also result in betterment in many situations since it will mean that new developments should not always be able to simply continue to practice of discharging surface water into sewer networks even when this the current practice on-site. The Council also notes that the title of the policy is now proposed to be '*Reducing Flood Risk*' to reflect the sentiment of betterment. **No modification proposed.**

Nature Scot (0528)

The Council agrees that resilience and adaptation of communities and infrastructure is important, including in the context of flooding and coastal change as demonstrated very clearly in the work by Dynamic Coast CD135. The Council does recognise the importance of progressing a Coastal Adaptation Plan. The purpose of this policy is for guiding and assessing development so it is not considered the place for setting out this intention. **No modification proposed.**

Crosswind Development Ltd (0184), Edinburgh Airport Limited (0761), NHS Lothian (0596)

Viability is a material consideration which is more appropriately addressed at the stage of individual planning applications where the range of specific variables can be more precisely understood and considered. It is not necessary for it to be explicitly stated in policy terms as to cases where it may be applicable. **No modification proposed.**

Leith Central Community Council (0614)

The Council considers that the policy puts the emphasis on applicants to demonstrate compliance, with the supporting text noting the need for Flood Risk Assessments, including relevant measures to be incorporated. The Council considers criterion (a) appropriately addresses the circumstances of how a proposed development is considered if it is at risk of flooding and that this is in line with national policy, particularly part (b) of Policy 13 of draft NPF 4 CD098. The process for SEPA involvement for such applications is covered by existing legislation. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council considers this policy makes provision for the improvement of existing situations, in particular criterion d. and also the requirement that surface water should not be discharged into the sewer network. Policy Env 36 sets out high standards for proposals to meet in terms of surface water management. In all of the above these requirements ensure adequate management of water and flood risk irrespective of

whether they are redevelopment proposals. Where such proposals do relate to a site with poor existing handling of surface water example then the effect of Env 36 shall be to require improvement.

De-culverting as a general principle has a net positive effect on flood risk given it reduces potential for bottlenecks, in addition to other benefits. Notwithstanding this, it is acknowledged that de-culverting would alter how and where water would behave in a flood event. The Council considers it self-evident an FRA would be needed to accompany proposals involving de-culverting. **No modification proposed.**

The following representations were received in support of this policy as proposed:

Andrew Brown (0007), SEPA (0012), Sheila Strathdee (0448), Caroline Thomas (0570), Grange/Prestonfield Community Council (0192), May Lawson (0410), Scottish Wildlife Trust Lothian Group (0560), RSPB (0648)

### **Env 36 – Designing for Surface Water**

Archie Clark (0003),

The Council considers it sufficiently clear what ‘water flowing above ground’ refers to. There are several reasons underground storage tanks are not the optimal solution for handling surface water. Firstly, they do not achieve the range of other ecosystem benefits that can be achieved from handling surface water above ground as part of nature based solutions. Secondly, once their finite attenuation capacity is exceeded then they create a ‘bottleneck’ in the handling process of surface water which then results in adverse flood risk events focused in particular points which greatest a greater severity in impact. **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The intensity of rainfall events may vary, as does the rate at which the rainfall fills up a site’s capacity to retaining the first 5mm of rainfall. The key issue is not the time period over which this 5mm is intercepted, but rather that it represents the first 5mm of any given rainfall event. **No modification proposed.**

Archie Clark (0003), Scottish Water (0342), Juniper Green & Baberton Mains Community Council (0306)

The Council agrees with the representations noting the issue in relation criterion (e) giving the opposite impression of what was intended regarding the removal of surface water pipes. The Council acknowledges this is a drafting error and should be corrected as a minor drafting/technical matter by removing the words ‘..fail to..’ from the criterion.

Scottish Water (0342)

The purpose of criterion e. is to remove surface water pipes which are no longer needed as a result of surface water being separated from the sewer network. **No modification proposed.**

James Forbes (0647)

The Council considers that the policy does require proposals to take account of surface water behaviour outwith the site – see criterion c. requiring consideration of overland flow paths and criterion a requiring Surface Water management Plan. Both of these elements should consider the surrounding context. **No modification proposed.**

Edinburgh Airport Limited (0761)

The Council does not consider it necessary to modify the supporting text to confirm the position specifically in relation to airport safeguarding. This is a site specific consideration which can be addressed as and when applicable if/when such applications are submitted. **No modification proposed.**

Edinburgh World Heritage (0339)

The first modification sought is not needed as the City Plan existing wording ‘...construction or change of Use of one or more buildings...’ would capture redevelopments.

The second modification proposed is not needed as this policy sets out the default expectation. The decision maker on any given application has the prerogative to consider if other considerations such as heritage may come into conflict with the stated terms of this policy and thus justify a different approach. **No modification proposed.**

The following representations were received in support of this policy as proposed:

SEPA (0012), Grange/Prestonfield Community Council (0192), Scottish Wildlife Trust Lothian Group (0560), Caroline Thomas (0570), RSPB (0648)

**Env 37 – Designing-in Positive Effects for Biodiversity**

Archie Clark (0003)

The Council agrees and considers that the policy makes provision for this. **No modification proposed.**

Archie Clark (0003); Juniper Green & Baberton Mains Community Council (0306)

The overall effect of the policy is to create positive effects. Criterion b. is part of how this process is to be achieved in the most appropriate way. It does not exist in isolation. In conjunction with the other criteria an overall positive effect is achieved. **No modification is proposed.**

Nature Scot (0528), Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The first clause of the proposed policy wording is about establishing the *extent* to which the policy applies rather than necessarily *if* it applies.

The Council notes that paragraph 3.170 states that the extent of enhancement will be proportionate to the scale of the development.

Paragraph 3.172 also refers to the CIEEM guidance on Biodiversity Net Gain principles CD136 which is free to access. The Council acknowledges that the emerging Developing with Nature guidance shall be finalised soon and the Reporters may wish to give consideration to this during the course of Examination. **No modification proposed.**

Crosswind Development Limited (0184), Edinburgh Airport Limited (0761)

The policy wording sets out requirements to be met in order for proposals to be supported by this policy. Accordingly, the use of the word 'must' is considered appropriate in this instance. It is for the decision maker to assess a particular proposal in with the context of Plan policies and other material considerations. The policy makes as clear as possible what proposals it lends support to. **No modification is proposed.**

The Association for the Protection of Rural Scotland (0334)

The Council considers the policy sets out the first preference is for conservation of complete habitats and ecosystems through the order of the criteria. **No modification is proposed.**

RSPB (0648)

The Council considers that criterion a. of the policy sets out the requirement suggested. The additional text is not needed. The Council considers it may unintentionally risk other species and circumstances not mentioned by giving a lesser importance by omission even when these merit equal consideration.

The last sentence of the paragraph relates to a matter of resourcing for the Council rather than the City Plan policy itself and so is not considered appropriate for inclusion in the supporting text. **No modification proposed.**

The following representations were received in support of this policy as proposed:

SEPA (0012), NHS Lothian (0596), Grange/Prestonfield Community Council (0192), Scottish Wildlife Trust Lothian Group (0560), Esme Clelland (0778)

## **All policies**

Mark Ockendon (0419)

It is not necessary to duplicate the requirements relating to new greenery across every policy as policies such as Env 6 (Green Blue Infrastructure) already apply as appropriate to each proposal. **No modification.**

## **Reporter's conclusions:**

## **Reporter's recommendations:**

Issue 17	Open Space Policies	
Development plan reference:	Policies Env 23 - 24, Env 31 - 32	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):

Provision of the development plan to which the issue relates:	Policies relating primarily to the protection of the existing Natural Environment	
Planning authority's summary of the representation(s):		
<div>Env 23 – Open Space Protection</div> <div>Archie Clark (0003)</div> <div>Policy title duplicates the word protection</div>		

Goff Cantley (0032), Jim Henry (0096),

This will see the loss of valued open space in housing estates to development. Env 23 has to take a lead from NPF 4 and be stronger in its defence of the Green Belt, blue/green networks and greenspaces. NPF4 promotes the enhancement of such spaces, nature recovery and facilitating biodiversity enhancement.

The Friends of Midmar Paddock, Edinburgh (0121)

We would contend that NPF 4, as drafted, offers stronger protection of our Green Belt and our blue/green networks, and far from suggesting they should be open to "development for a community purpose", it instead promotes the enhancement of such spaces, nature recovery and facilitating biodiversity enhancement. Env 23 has to take a lead from NPF 4 and should therefore be stronger in its defence of the Green Belt and greenspaces by dropping the reference, in sub-para. "e", to allowing "development for community benefit". If this reference is dropped, proposals can still be considered sui generis.

Jim Henry (0096)

The first bullet point is too subjective; who decides what is a significant impact?

Criterion b. is poorly worded and will not protect open spaces in housing areas.

There is no definition of what an "appropriate walking distance is". Alternative local and large standard spaces could therefore be considered adequately close even if a mile away and then used to justify the loss of more important spaces within neighbourhoods.

The supporting text means this policy does not protect open space that is not publicly accessible. All open space should be protected, irrespective of accessibility.

Space in private ownership could be fenced off making it inaccessible and may render unprotected by the policy. The resultant loss of open space could reduce open space below original standards and reduce the amenity of the area and wellbeing of residents.

This same supporting text conflicts with accessibility rights afforded under the terms of the Right to Roam legislation as land that is fenced off can still be enjoyed without right of access, for example Queen Street Gardens which are only accessible by key holders.

Criterion (c) takes no account of open space which can be discrete and not part of a continuous green or blue network whilst still being of value to the amenity and wellbeing of residents.

Criterion (d) allows a prospective developer to provide open space elsewhere or to pay a sum to improve an existing park, in both cases without specification of proximity to the development site. This could secure the release of valued open space without ensuring continued open space provision in the local area that maintains amenity and wellbeing for residents.

CALA Management Ltd (0465), Hallam Land Management (0599). Miller Homes Limited (0649)

Not all Local Standard or Large Standard spaces will be within 400m and 800m respectively and nor do they need to be to function as effective spaces within the local community network.

Goff Cantley (0032), Jim Henry (0096), The Friends of Midmar Paddock (0121)

Criterion "e", allows all kinds of development "for a community purpose". Many developments, other than private houses, can be described as being for a community purpose; from sewage treatment plants to casinos. This criterion is too subjective with no clear guidance as to who will decide if open space need outweighs public need. NPF 4 does not allow development of open space for community purposes

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The policy suggests that there are five criteria to comply with, when there is really fewer criteria, as criterion d. and criterion e. are alternatives to consider.

Defence Infrastructure Organisation (0124)

This policy makes no provision for the military to provide additional infrastructure for the Units displaced by the site disposals announced under the Better Defence Estate (BDE) programme. This is relevant to land within Dreghorn Barracks itself and the Service Families Accommodation. If development is required the MOD would, where possible, seek alternative provision.

University of Edinburgh (0464)

The wording of the policies should be more explicit about the need for a balanced approach to the wider benefits to use, participation, quality, and contribution to health and wellbeing for all users in the local and wider community.

CALA Management Ltd (0465), Hallam Land Management (0599),  
Miller Homes Limited (0649)

There may be circumstances where proposals will not be able to meet the requirements in the first three criteria of this policy but could still be important in securing an improvement in the quality of the existing open space network.

Wright PDL (0078), Homes for Scotland (0404)

No specific modification proposed however it is indicated that the requirements of this policy are too onerous.

The cumulative effect of this policy in combination other requirements is too onerous and make developments unviable

Ian Ross (0423)

This policy should not allow any future development.

#### Edinburgh World Heritage (0339)

Amend policy appropriately protect and enhance the Outstanding Universal Value of the Old and New Towns of Edinburgh World Heritage Site.

#### Russell Gray (0444)

The recognition of the beauty of the environment needs to be matched by a commitment to preserve green spaces that are open to public access through recognised rights of way, to support the idea that the city is a place that belongs to us and where we all belong. The presumption must be that new development is not on locations that currently provide citizens with much needed access to green spaces and the natural world; new development needs to be redevelopment of existing residential/industrial areas.

### **Env 24 – Protection of Outdoor Sports Facilities**

#### Archie Clark (0003)

Need to ensure sports facilities are acknowledged as a valuable resource that need to be provided as part of 20-minute neighbourhoods.

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

Lack of clarity on how it will be established whether there is a clear excess of sports to meet current and anticipated future demand.

#### Defence Infrastructure Organisation (0124)

Policy Env 24 is too rigid as it does not allow military development on outdoor sports facilities on military sites.

The outdoor sports facilities at Dreghorn are for military use and therefore are not open for general public use. The MOD has its own requirements for the provision of sports facilities for military personnel.

Dreghorn Barracks needs to provide additional infrastructure for Units displaced by site disposals announced under the Better Defence Estate (BDE) programme and will be subject to increased pressure for development. If development is required the MOD would, where possible, seek alternative provision.

#### University of Edinburgh (0464)

The wording of the policies should be more explicit about the need for a balanced approach to the wider benefits to use, participation, quality, and contribution to health and wellbeing for all users in the local and wider community.

#### SportScotland (0671)

The third and fourth bullet points of the policy should be changed to follow that of SPP (para 226), which is similar to the text in draft NPF 4.

there are a few drafting errors in the \* para after this (Para 3.140)

### **Env 31 – Useable Open Space in New Developments**

Celia Mainland (0447), James Forbes (0647)

There is no definition of what constitutes 'green space'. This should not include artificial surfaces such as plastic grass.

Jennifer Inglis (0437)

This policy only requires open space rather than greenspace and means developments will provide hard landscaping to meet open space requirements. This would be counter to Edinburgh's Net Zero ambitions and increase health and other inequalities, for example by reducing outdoor leisure opportunities for those without a garden. Good quality green space is important for human wellbeing, biodiversity, air quality flood control, carbon capture and storage.

Archie Clark (0003)

20% is too low for useable space. Previous Council standards required much more.

These standards should equally apply to 'existing' developments.

Developers will choose to make a financial contribution as this is an easier option for them.

Wright PDL (0078), Melford Development Ltd (0308), Homes for Scotland (0404), S Harrison Developments Limited (0460), Barratt David Wilson Homes (0677), Crosslane Co-Living SPV 2 Limited (0687), Steve Loomes (0767); The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496), HUB Residential (0582), Unite Group (0628), Ambassador Group (0683), Summix Capital Limited (0747), Dandara East Scotland (0757).

The requirement for 20% open space is too onerous.

It will reduce developable area and increase densities on the remaining part of the site to meet site capacities and mean the requirement for 65 dwellings per hectare (dph) is actually 75 dph.

It is not viable in conjunction with City Plan's brownfield strategy and density requirements and other design and environmental policies (including Env 26, 30, 31). Has the Council assessed the viability of these cumulative requirements?

This policy is too rigid in its open space requirements and does not allow for site-specific factors or viability in the decision making process. It does not take into account the scale, nature, location of development. For example, proposals may involve redevelopment of an established use or require costly ground remediation works which will already have environmental benefits. Business and industry developments (Use classes 4, 5 and 6)

often require large areas of floor space and an additional 20% open space would be excessive.

The Royal London Mutual Insurance Society Ltd (0149), Melford Development Ltd (0308), Forth Ports Limited 0496)

The specified rate of 10sqm per unit/20% (either on site or by financial payment) is arbitrary, unjustified and not evidenced.

The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited 0496)

Not all new-built development has a need for open space or have a damaging impact on the environment or amenity of the local area. It is not appropriate for the Council to extract advantages, benefits or payments from landowners or developers which are not directly related to the proposed development.

The requirement for a financial sum does not comply with the established Policy tests for planning obligations made under section 75 of the Act and as outlined in paragraphs 14 to 25 of Circular 3/2012. It particularly conflicts with tests relating to the 'relationship to the proposed development test' and 'Scale and kind'.

Watkin Jones Group (0516), Unite Group plc (0628), Summix Capital Limited (0747)

Purpose Built Student Accommodation is a distinct type of use and should not be treated the same as residential in terms of open space requirement e.g. no need for play space. It has a high level of internal amenity and is less reliant on large areas of useable greenspace, therefore as students are provided with high quality internal amenity and have access to alternative space and recreation elsewhere on campus. High quality multi-purpose space can increase development density and promote greater social interaction. The external amenity requirement should therefore be much lower than mainstream housing.

NHS Lothian (0596)

This policy does not address the need to ensure open space provision is accessible for a range of mobility needs.

Edinburgh Airport Limited (0761)

Given the nature of the airport, it is not appropriate or possible to include the provision of open space as part of a new development within the operational boundary. A degree of flexibility is required to the policy to allow the requirement to be assessed on a case by case basis.

## **Env 32 - Useable Communal Open Space and Private Gardens in Housing Developments**

Celia Mainland (0447)

There is no definition of what constitutes 'green space'. This should not include artificial surfaces such as plastic grass.

Jennifer Inglis (0437)

This policy only requires open space rather than greenspace and means developments will provide hard landscaping to meet open space requirements. This would be counter to Edinburgh's Net Zero ambitions and increase health and other inequalities, for example by reducing outdoor leisure opportunities for those without a garden. Good quality green space is important for human wellbeing, biodiversity, air quality flood control, carbon capture and storage.

Archie Clark (0003)

20% is too low for useable space. Previous Council standards required much more.

These standards should equally apply to 'existing' developments.

Developers will choose to make a financial contribution as this is an easier option for them.

The space requirements take no account of bins and bikes.

Leith Central Community Council (0614)

Allowance for contributions in lieu of on-site open space is too vague and can result in too many housing developments not meeting this policy by default.

Wright PDL (0078), Melford Development Ltd (0308), Homes for Scotland (0404), S Harrison Developments Limited (0460), Barratt David Wilson Homes (0677), Crosslane Co-Living SPV 2 Limited (0687), Steve Loomes (0767); The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496), HUB Residential (0582), Unite Group (0628), Ambassador Group (0683), Summix Capital Limited (0747), Dandara East Scotland (0757), Crosswind Developments Limited (0184), Hazledene House Limited (0695) The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496)

The requirement for 20% open space is too onerous.

It will reduce developable area and increase densities on the remaining part of the site to meet site capacities and mean the requirement for 65 dwellings per hectare (dph) is actually 75 dph.

It is not viable in conjunction with City Plan's brownfield strategy, building height, townscape and heritage considerations in addition to density requirements and other design and environmental policies. Has the Council assessed the viability of these cumulative requirements?

This policy is too rigid in its open space requirements and does not allow for site-specific factors or viability in the decision making process. It does not take into account the scale, nature, location of development. For example, proposals may involve redevelopment of an established use or require costly ground remediation works which will already have environmental benefits. Business and industry developments (Use classes 4, 5 and 6)

often require large areas of floor space and an additional 20% open space would be excessive.

Melford Development Ltd (0308)

The specified rate of 10sqm per unit/20% (either on site or by financial payment) is arbitrary, unjustified and not evidenced.

Leith Central Community Council (0614)

Conversions of front gardens into private parking should not be acceptable.

**Modifications sought by those submitting representations:**

**Env 23 – Protection of Open Space**

Archie Clark (0003)

Modify title of policy to remove duplication of the word 'protection'

Goff Cantley (0032), The Friends of Midmar Paddock, Edinburgh (0121)

Remove the reference in sub-para. "e" to allowing "development for community benefit". If this is done proposals proposal can still be considered 'sui generis'

Jim Henry (0096)

No specific wording proposed, however the following changes are inferred:

Greater clarity should be provided on the process for assessing 'significant impact' in criterion a.

Greater clarity should be provided on what appropriate walking distances equate to in criterion b.

Explanatory footnote text for criterion b should be amended to delete the caveat relating to public accessibility so all spaces protected, especially for spaces in housing estate.

Criterion c should include spaces that are not part of a wider green blue network.

Criterion d is not supported as it is proposed. If it is to be included it is indicated that upgrading of other spaces must be only be permitted if they are within a specified distance.

Criterion e should be amended to ensure that local residents and wider community support the proposed use.

Defence Infrastructure Organisation (0124)

Add a new criterion f as follows:

*f. for sites used by the Military there is a demonstrated military need to develop on areas of open space and alternative provision will be made available when possible.*

University of Edinburgh (0464)

Amend criterion e) in respect of Policy ENV 23.

CALA Management Ltd (0465), Hallam Land Management (0599),  
Miller Homes Limited (0649)

Amend wording of policy to read as follows:

*Proposals involving the loss of open space will not be permitted unless it is demonstrated that:*

*a. there will be no significant impact on the quality or character of the local environment, or*

*b. the loss of open space should not cause any existing homes to stop being within the appropriate walking distance of Local or Large standard open space\* and*

*c. the loss would not be detrimental to the wider green and blue network (including its continuity, visual amenity, water management function or biodiversity value); and either:*

*c i) there will be a local benefit, proportionate to the scale of the development, in allowing the development in terms of either alternative equivalent provision being made or improving an existing public park or open space, or*

*c ii) the development would be for a community purpose\*\* and have an overriding benefit to the local community and public that outweighs the loss of open space.*

Wright PDL (0078), Homes for Scotland (0404)

No specific modification proposed however it is indicated that the requirements of this policy are too onerous.

Ian Ross (0423)

This policy should not allow any future development.

Edinburgh World Heritage (0339)

Add a new bullet at second-to-last position to read:

*“The loss would not be detrimental to the character of historic areas of the city. Open spaces are a vital and significant design feature of town planning. The location and size of open spaces often defines the character of the historic built environment. These spaces should be protected against development in conservation areas to preserve their historic function, amenity and community values.”*

This is needed to appropriately protect and enhance the Outstanding Universal Value of the Old and New Towns of Edinburgh World Heritage Site.

Russell Gray (0444)

It is indicated that there should be a new development is not on locations that currently provide citizens with much needed access to green spaces.

## **Env 24 – Protection of Outdoor Sports Facilities**

Archie Clark (0003)

Para 3.140 should clarify that the reference to city-wide resource means that this means sports facilities are to meet standards required for 20-minute neighbourhoods in new and existing settlements.

Wright PDL (0078), Homes for Scotland (0404), Barrat David Wilson Homes (0677), Steve Loomes (0767)

Greater clarity should be provided on how it will established whether there is a clear excess of sports to meet current and anticipated future demand.

Defence Infrastructure Organisation (0124)

The DIO are seeking the addition of criterion e detailed below;  
e. The proposed development relates to the loss of outdoor sport facilities that are located on military sites and have only been open for use by military personnel.

University of Edinburgh (0464)

Amend criterion e) in respect of Policy ENV 23 and introducing a similarly worded additional criterion to Policy ENV 24.

SportScotland (0671)

The third and fourth bullet points of the policy should be changed to follow that of SPP (para 226).

## **Env 31 – Useable Open Space in new Development**

Celia Mainland (0447), James Forbes (0647)

Exact wording is not specified however it is indicated that a definition of greenspace should be provided that precludes artificial surfaces and that this policy should require greenspace rather than just open space.

Jennifer Inglis (0437)

No wording specified however it is indicated that this policy should require greenspace rather than open space.

Archie Clark (0003)

No specific suggested text given however it is indicated that:

More than 20% of site areas should be useable open space

This policy should apply to existing developments

There should not be option to pay a financial contribution in lieu of providing space on-site.

Wright PDL (0078), Melford Development Ltd (0308), Homes for Scotland (0404), S Harrison Developments Limited (0460), Barratt David Wilson Homes (0677), Crosslane Co-Living SPV 2 Limited (0687), Steve Loomes (0767); The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496), HUB Residential (0582), Unite Group (0628), Ambassador Group (0683), Summix Capital Limited (0747), Dandara East Scotland (0757), The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496)

No specific suggested text however it is indicated that the requirement for 20% open space should be removed. Other representations indicate that the amount of open space required under this policy should be flexible and be cognisant of viability, site context nature of the proposal and uses both existing and proposed.

Watkin Jones Group (0516)

Generally, a qualitative approach to assessing open space and public realm in proposals should be adopted instead of a quantitative assessment

Summix Capital Limited (0747),

A more flexible requirement reflecting the nature of PBSA developments should be included.

Unite Group plc (0628)

This policy should not apply to PBSA.

Melford Development Ltd (0308)

The wording of this policy should be relaxed.

The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited 0496)

Amend policy to reflect an approach which considers the scale, nature, location of development and site specific constraints and, considerations, as follows:

*ALL-Proposals containing new-build development (except householder development and housing proposals covered by policy Env 5 above) shall include the provision of good quality, attractive, useable and publicly accessible open space where appropriate, taking into account the scale, nature, location of development and site specific constraints and considerations.*

*\*\* Wherever possible, this provision shall take the form of extensions and/or improvements to the green and blue network.*

3.167 *\*This policy ensures that development proposals, (other than private and affordable housing development) include appropriate open space provision. This includes specialist housing built for occupation by groups such as students or the elderly. The supporting text for Env 32 also sets out an explanation of how open space should be provided as well as what type of space should be counted as open space, with this addressed further in the Edinburgh Design Guidance and associated appendices.*

3.168 *\*\*Where proposals necessitate open space provision and do not meet requirements of this policy on-site, proposals may be supported if appropriate provision or financial contribution is made, subject to compliance with circular 3/2012, to implement an action which improves park/open space/green network provision in the area (or access to these), with this normally needing to be an identified action in this Plan and/or Open Space Strategy.*

Alternatively maintain the approach in the extant Local Development Plan (Policy Env 20)

NHS Lothian (0596)

Reference should be made within the Policy to ensure that any provision is accessible for a range of mobility needs.

Edinburgh Airport Limited (0761)

The wording should be amended to:

*Where appropriate, proposals containing new build development (except householder development and housing proposals covered by policy Env 32 below) shall include the provision of good quality, attractive, useable and where appropriate publicly accessible open space that forms at least 20% of the total site area.*

### **Env 32 – Useable Communal Open Space and Private Gardens in Housing Development**

Jennifer Inglis (0437)

No wording specified however it is indicated that this policy should require greenspace rather than open space.

Celia Mainland (0447).

Exact wording is not specified however it is indicated that a definition of greenspace should be provided that precludes artificial surfaces and that this policy should require greenspace rather than just open space.

Archie Clark (0003)

It is stated that this this policy should require more space, however it is also indicated that:

More than 20% of site areas should be useable open space and be cognisant of space requirements for bins and bikes

This policy should apply to existing developments

There should not be option to pay a financial contribution in lieu of providing space on-site.

It is indicated the wording of paragraph 3.153 should be amended so that it is clarified that student accommodation and specialist housing are classed as 'residential' for the time that they are occupied.

Leith Central Community Council (0614)

The circumstances in which contributions shall be permitted in absence of on-site provision should be more clearly defined and have conditions attached.

This policy should set or refer to expected levels of amenity for proposed open spaces and private gardens.

Specify that conversion of front gardens into private parking is not acceptable.

Wright PDL (0078), Melford Development Ltd (0308), Homes for Scotland (0404), S Harrison Developments Limited (0460), Barratt David Wilson Homes (0677), Crosslane Co-Living SPV 2 Limited (0687), Steve Loomes (0767); The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496), HUB Residential (0582), Unite Group (0628), Ambassador Group (0683), Summix Capital Limited (0747), Dandara East Scotland (0757), The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496)

It is indicated that the requirement for 20% open space should be removed. Other representations indicate that the amount of open space required under this policy should be flexible and be cognisant of viability, site context nature of the proposal and uses both existing and proposed.

Crosswind Developments Limited (0184)

Amend policy so that it reads as follows:

*"Housing development will be supported by this policy where it provides good quality, useable open space and/or private gardens as applicable to meet the needs of future residents in line with the requirements below:*

*In developments containing flats where communal provision will be necessary, this will be based on a standard of 10 square metres per flat (excluding any units which are to be provided with adequate\* private gardens). Where justified, developments should seek to achieve up to 20% of total site area as useable open space and/or private gardens. Where development cannot meet the criteria above, a contribution towards the open space and/or green blue network will be negotiated\**

*For housing developments with private gardens, a contribution towards the open space and/or green network will be negotiated if appropriate, having regard to the scale of development proposed and the opportunities of the site and surrounding area".*

Hazledene House Limited (0695)

The specific type and quantity of open space and public realm should be assessed on a case-by-case basis and depending on the site's context.

Melford Development Ltd (0308)

The wording of this policy should be relaxed.

**Summary of responses (including reasons) by planning authority:**

**Env 23 – Open Space Protection**

Archie Clark (0003)

The Council acknowledges this error and will corrected as a typographical change to the Proposed Plan.

Ian Ross (0423)

This would be too sweeping a policy position given there are specific circumstances when development may be appropriate and may, in fact, result in a net betterment in terms of the quality/access to open space provision in an area. **No modification proposed.**

Goff Cantley (0032), Jim Henry (0096), The Friends of Midmar Paddock, Edinburgh (0121)

The term 'significant impact' is considered appropriate for LDP policy which is established in its use in policy terms as suitable the assessment of various impacts in the determination of planning applications against LDP policy.

The footnote relating to criterion b. provides context on walking distances. It is considered appropriate that this specifies publicly accessible open spaces given that the objective of this policy criterion is about ensuring adequate public access to open space rather than retaining open recreational amenity value. There are other policy requirements that are about the other value offered by open space and greenspace which are not specifically linked to public accessibility.

The glossary definition of Green Blue Network in City plan refers to this being the totality of green blue infrastructure in an area. This means smaller, physically unconnected spaces can be considered covered by this criterion.

Specifying a specific distance within which upgrading takes place is not necessary in respect of criterion d. since this criterion states that benefit arising from the development must be 'local'. This is considered adequate. Criterion b. addresses the issue of ensuring a continuation of access to publicly accessible open space and must be met irrespective of the provisions of this criterion so exploitation of criterion d. in the manner set out in representation is addressed by that.

The use of the term of 'Community Purpose' is considered appropriate. It is not practical to specify every use this may cover however it is sufficient for a judgement on this to made by a case by case basis by the decision maker considering the proposal in question.

The development management process makes provision for representations to be made on a given planning application, however, simply making proposals contingent on the support of a sufficient proportion of the local community does not make for clear policy making for guiding development. Moreover it would also be unfair to communities less likely to mount effective, numeric opposition to a proposal despite a space to potentially have significant value to them. Requiring a consultative exercise is also outwith the power of LDPs to specify.

The Council considers this policy, alongside others in the Plan, fully address the importance of green belt, green blue networks and greenspaces as well nature recovery and facilitating biodiversity enhancement.

Draft NPF 4 CD099 Policy 12 addresses themes around the provision and loss of open space as part of green and blue infrastructure. In this regard the Council considers this policy in alignment with NPF4, however City Plan sets out more specific criteria relating to proposals that would result in the loss of open space. The Council acknowledges NPF4 is likely to be adopted soon and once this occurs Reporter(s) may wish to take this into account during Examination.

Regarding the 'loophole' whereby space could be fenced off to prevent it being protected by this policy; that would not work since this policy protects all open space. It is only specific parts of this policy that concern issues of public accessibility. This point also means the Council does not consider there is a conflict regarding Right to Roam legislation. **No modification proposed.**

CALA Management Ltd (0465), Hallam Land Management (0599),  
Miller Homes Limited (0649)

The walking distances of 400m and 800m for Local Standard or Large Standard spaces respectively are considered important standards for ensuring adequate accessibility since open space is a form of amenity where being able to walk to it is essential to its function. Given that adequate information on this is available in the Council's Open Space Strategy CD066, it is an important standard to set out for more precise and informed policy assessment. It also ensures consistency and alignment of the LDP with the Open Space Strategy's objectives.

The point regarding criteria d. and e. being alternatives is noted, however in combination with the preceding four criteria there are still six in total. Issues of presentation of this are not considered a substantive matter.

The Council considers the modification suggested is not acceptable given it would make criterion a. something which would not have to be complied with rather than it apply in all instances as the Council considers necessary. **No modification proposed.**

Defence Infrastructure Organisation (0124)

It is not practicable for this policy to be tailored for every specific type of applicant/landholder and their particular considerations. **No modification proposed.**

University of Edinburgh (0464)

The change proposed would be too open to interpretation and so make consistent, informed decision making difficult. Criterion e. as proposed is therefore considered appropriate as it is. **No modification proposed.**

Wright PDL (0078), Homes for Scotland (0404)

The Council does not consider that the requirements of this policy are onerous, either individually or cumulatively, however an applicant always has the option of raising and detailing the issue of viability on a case by case basis through the planning application process. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council agrees that open space often plays an important role in defining and enhancing the character of historic areas of the city. Open space also has an important role in terms of the character of other parts of the built environment that are less historic. The Council considers the term environment referred to in criterion a) can be applied to natural and/or built environment. **No modification proposed.**

Russell Gray (0444)

Policy Env 23 provides this protection, in particular criteria a-c require consideration of the values of open space raised in representation. **No modification proposed.**

The following representations have been submitted in support of the policy as proposed:

SEPA (0012), Tessa Haring (0112), Grange/Prestonfield Community Council (0192), The Association for the Protection of Rural Scotland (0334), AREAA (0358), George Kelsey (0386), Scottish Wildlife Trust Lothian Group (0560), Kathryn Poolman (0574), Leith Harbour and Newhaven Community Council (0776)

## **Env 24 – Protection of Outdoor Sports Facilities**

Archie Clark (0003)

Paragraph 3.195 supporting Policy Inf 1 ‘Access to Community Facilities’ addresses 20 minute neighbourhoods. It sets out sport and recreation as types of facilities that are important for community life and should be provided by new development where appropriate to address existing shortfalls. **No modification proposed.**

Wright PDL (0078), Homes for Scotland (0404), Barratt David Wilson Homes (0677), Steve Loomes (0767)

The Council has information on sports provision as well as consulting internally and externally (for example with SportScotland) to help the decision maker on a given application come to an informed judgement about whether there is an excess of sports provision in an area as well as current and future demand. **No modification proposed.**

Defence Infrastructure Organisation (0124)

It is not practicable for this policy to be tailored for every specific type of applicant/landholder and their particular considerations. **No modification proposed.**

University of Edinburgh (0464)

The change proposed would be too open to interpretation and so make consistent, informed decision making difficult. **No modification proposed.**

SportScotland (0671)

The errors in the footnote paragraph will be corrected as a typographical change.

The Council acknowledges there is technical error in respect of the footnote and that these should be corrected as a minor drafting/technical matter.

The Council considers the substantive policy requirements of criterion d. to be in alignment with the corresponding fourth criterion of Policy 12 e. of SPP CD096 para. 260 and draft NPF 4 CD099. There is a small degree of difference in the wording in criterion c) of Env 24 and the third bullet point of SPP para. 260 and draft NPF 4 Policy 12, criterion e). The Council does not consider the divergence to be significant. No modification proposed, however, the Council acknowledges NPF4 is likely to be adopted soon and once this occurs Reporter(s) may wish to take this into account during Examination.

The following representations have been submitted in support of the policy as proposed:

Philip Endecott (0079), Grange/Prestonfield Community Council (0192)  
The Association for the Protection of Rural Scotland (0334), George Kelsey (0386),  
Kathryn Poolman (0574), Scottish Wildlife Trust Lothian Group (0560), James Forbes  
(0647), RSPB (0648)

## **Env 31 – Useable Open Space in New Developments**

Celia Mainland (0447), James Forbes (0647)

A definition of Greenspace is provided in the Glossary of City Plan. This states the definition relates to 'Any vegetated land or structure, water or geological feature in the urban area including playing fields, grassed areas, trees, woodlands and paths.' **No modification proposed.**

Jennifer Inglis (0437)

The Council considers open spaces of a non-vegetated variety can provide amenity value if designed appropriately, however it is noted that there are a range of other Environment policies applicable to proposals, for example Env 6 'Green Blue Infrastructure', which this policy will need to be read in conjunction with. The net effect of the policies of City Plan will ensure new developments provide adequate greener, sustainable places. **No modification proposed.**

Archie Clark (0003)

The current LDP adopted in 2016 applies a standard of 20% in certain circumstances for residential developments. The historic position prior to this of less direct relevance. Notwithstanding this, 20% is considered a reasonable level to provide a balance between delivering development itself whilst also providing amenity and a high quality of environment on site and for the surrounding area.

It is not the role of LDP's to apply standards retrospectively to existing development.

The policy states that it 'may' be possible for applicants to make a financial contribution in lieu of on-site provision, however the Council would have to assess if this was appropriate in the circumstance in question rather than it simply being a matter of preference for the applicant. **No modification proposed.**

Wright PDL (0078), Melford Development Ltd (0308), Homes for Scotland (0404), S Harrison Developments Limited (0460), Barratt David Wilson Homes (0677), Crosslane Co-Living SPV 2 Limited (0687), Steve Loomes (0767); The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496), HUB Residential (0582), Unite Group (0628), Ambassador Group (0683), Summix Capital Limited (0747), Dandara East Scotland (0757).

20% is considered a reasonable level to provide a balance between delivering development itself whilst also providing amenity and a high quality of environment on site and for the surrounding area. It is not considered this will make developments unviable and is commensurate with the level required under existing LDP CD039 policy Hou 3 for residential development.

The Council does not consider this policy requirement will render developments unviable, either individually or cumulatively with other policy requirements, however applicants are able to raise the issue of viability as part of an application if they consider the particular circumstances merit it.

20% is considered deliverable and generally compatible with density requirements set out in this Plan. Further discussion on issues around density and compatibility with other requirements of City Plan are addressed in 'Issue 12: Density'. **No modification proposed.**

Melford Development Ltd (0308), The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496)

The provision of space on-site or contributions in lieu of this is directly relevant to the provision of general non-residential development. It is an essential part of achieving a positive urban realm and delivering on placemaking and environmental objectives which all development addressed by this plan should deliver. As such the policy is considered compliant with Planning Circular 3/2012 CD117 in meeting the 'relationship to the proposed development test'. Clearly there is a need for any individual obligation and contribution to be proportionate, however, the policy as set out here does not pose any problems in meeting this test. The requirement for a 20% figure for on-site provision sets a consistent and proportionate baseline from which a mitigating contribution would be necessary to off-set any shortfall in such on-site provision. **No modification proposed.**

Watkin Jones Group (0516), Summix Capital Limited (0747), Unite Group plc (0628)

This policy does not set out a need for play space provision and Policy Env 31 acknowledges there are some differences between residential and non-residential development in respect of open space provision.

Student accommodation is still considered to need to provide the same level of open space as other non-residential development for the reasons above relating to the delivery of the strategy objectives of this plan. This includes providing outdoor amenity space for students since outdoor amenity space provides health and wellbeing benefits that cannot be fully replicated in indoor communal areas, such as exposure to nature and sunlight. It also provides for the future adaptability of that accommodation. **No modification proposed.**

#### NHS Lothian (0596)

Paragraph 3.156 sets out the need for open space to be accessible for everyone, though this text is in support of Policy Env 32 rather than this Policy Env 31. No modification proposed, however, should the Reporter be so minded that greater clarity is needed then the Council would not see issue in a modification to move paragraphs 3.156, 3.158 and 3.159 to follow on immediately after paragraph 3.154 so as to proceed both Env 31 and 32.

#### Edinburgh Airport Limited (0761)

If there are locationally specific reasons why a developer or land-owner considers the policy should not apply then this can be raised in a particular application however it is not the place of this policy to consider making provision for each circumstance that might apply. **No modification proposed.**

The following representations have been submitted in support of the policy as proposed: SEPA (0012), Grange/Prestonfield Community Council (0192), Stirling Developments Limited (0303) Pawel Stankiewicz (0445), NatureScot (0528), Scottish Wildlife Trust Lothian group (0560), James Forbes (0647), RSPB (0648)

### **Env 32 - Useable Communal Open Space and Private Gardens in Housing Developments**

#### Celia Mainland (0447)

A definition of Greenspace is provided in the Glossary of City Plan. This states the definition relates to 'Any vegetated land or structure, water or geological feature in the urban area including playing fields, grassed areas, trees, woodlands and paths.' **No modification proposed.**

#### Jennifer Inglis (0437)

The Council considers open spaces of a non-vegetated variety can provide amenity value if designed appropriately, however it is noted that there are a range of other Environment policies applicable to proposals, for example Env 6 'Green Blue Infrastructure', which this policy will need to be read in conjunction with. The net effect of the policies of City Plan

will ensure new developments provide adequate greener, sustainable places. **No modification proposed.**

Archie Clark (0003)

The current LDP adopted in 2016 applies a standard of 20% in certain circumstances for residential developments. The historic position prior to this of less direct relevance. Notwithstanding this, 20% is considered a reasonable level to provide a balance between delivering development itself whilst also providing amenity and a high quality of environment on site and for the surrounding area.

It is not the role of LDPs to apply standards retrospectively to existing development.

The policy states that it 'may' be possible for applicants to make a financial contribution in lieu of on-site provision, however the Council would have to assess if this was appropriate in the circumstance in question rather than it simply being a matter of preference for the applicant.

The decision maker of an application will assess what areas contribute towards open space. It would be expected that site layouts show bin storage areas and this would mean the decision maker can come to an informed judgement about what areas they consider comprise open space.

The Council considers that paragraph 3.153 is appropriate in stating that student accommodation and specialist housing should be addressed as part of Env 31 relating to general new development, rather than Env 31 relating to residential development. Requirements for open space in these types of development should typically be communal rather than private gardens for individual homes. **No modification proposed.**

Leith Central Community Council (0614)

The Council considers it appropriate that the decision maker assess when, and to what extent, contributions may be acceptable in lieu of on-site provision. The policy sets out considerations for assessment, in particular the existing opportunities in the surrounding area.

Policy Env 33 (amenity) sets out further details on level of amenity expected, with this covering space standards for future occupiers. Guidance expands on this further. The Council considers it unnecessary to duplicate this in Policy Env 32.

Policy Env 5 (Alternations, Extensions and Domestic Outbuildings) addresses domestic scale proposals. Proposed driveways in existing properties are more fully addressed in Edinburgh's 'Guidance for Householders'. The Council considers this has an appropriate balance for when the formation of driveways is acceptable and this is reviewed regularly to ensure it remains fit for purpose. **No modification proposed.**

Wright PDL (0078), Melford Development Ltd (0308), Homes for Scotland (0404), S Harrison Developments Limited (0460), Barratt David Wilson Homes (0677), Crosslane Co-Living SPV 2 Limited (0687), Steve Loomes (0767); The Royal London Mutual Insurance Society Ltd (0149), Forth Ports Limited (0496), HUB Residential (0582), Unite Group (0628), Ambassador Group (0683), Summix Capital Limited (0747), Dandara East

Scotland (0757), Crosswind Developments Limited (0184), Hazledene House Limited (0695)

20% is considered a reasonable level to provide a balance between delivering development itself whilst also providing amenity and a high quality of environment on site and for the surrounding area. It is not considered this will make developments unviable and is commensurate with the level required under existing LDP CD039 policy Hou 3 for residential development.

The Council does not consider this policy requirement will render developments unviable, either individually or cumulatively with other policy requirements, however applicants are able to raise the issue of viability as part of an application if they consider the particular circumstances merit it.

20% is considered deliverable and generally compatible with density requirements set out in this Plan. Further discussion on issues around density and compatibility with other requirements of City Plan are addressed in 'Issue 12: Density'. **No modification proposed.**

Crosswind Developments Limited (0184)

The modification proposed in this representation is too equivocal on the requirement for 20% of the site area to be useable open space and/or private gardens. The policy puts the emphasis on the Council to justify why a development needs to provide open space rather than an applicant demonstrating why they should not. This is not the approach LDP policy should take in order to provide certainty in how the Council considers the form development should take.

**No modification proposed.**

The following representations have been submitted in support of the policy as proposed:

SEPA (0012), Grange/Prestonfield Community Council (0192),  
Stirling Developments Limited (0303), Pawel Stankiewicz (0445), Scottish Wildlife Trust  
Lothian group (0560), RSPB (0648)

Provision of the development plan to which the issue relates:	Blue Green Network Proposals	
Planning authority's summary of the representation(s):		

## **Promoted Blue Green Network proposals**

### Andy Inglis (0138)

Too few proposals and these are of insufficient size and ambition. More space needs to be given to greenspace rather than for it be contained in small areas. The plan fails to recognise the part other species play in the survival of humans.

### Archie Clark (0003)

Parts of the greenbelt appear non existent or are so vulnerable eg Balerno, they could easily be breached.

No reference to cemeteries.

### Hillside Leisure Ltd (0080)

The Proposed Plan does not include the Pentlands Trail Centre, which is an important proposal. It will help the plan deliver the objective of 'protecting and enhancing blue and green infrastructure' by creating new linkages from the city to the Pentlands and planting and managing existing woodland.

This supports the Million Trees initiative and Forum through, with a substantial level of phased replenishment work is required to ensure the longevity of the woodland. Without this it is possible that the woodland would continue to fail as demonstrated by an appropriate survey noting that the loss of trees is acceptable due to their poor condition and appropriate replacement of any lost trees is necessary.

### Cramond & Barnton Community Council (0243), Michael Ramsay (0011)

Add Lauriston Farm Community based Agro-ecology Project site as a Green Blue Network proposal. The site is located at Lauriston Castle farmland and is approximately bounded by Cramond Road North, Lauriston Castle parkland, Lauriston Farm Road, Silverknowes Road (North) and Marine Drive.

City Plan should identify potential sites for allotments (e.g. Green Belt between Cammo Estate LNR and Craigs Road). This would encourage provision for, and development of, allotments and other community food growing spaces is an essential element to achieve sustainability, net zero (e.g. reduction in food miles) and community health objectives.

### Murrayfield Community Council (0146)

90 people have expressed a desire for allotments at Balgreen Park however the Plan does not make provision for this.

### Jan Hume (0420)

The Royal Edinburgh Hospital is an important, if small, site as it is the only green space in the vicinity of Morningside Road to the west of Morningside Road. Its sympathetic management will enhance biodiversity and attractiveness as a green space which can

contribute to the well-being of both patients and the local community. On a small site, major new construction and increased building footprint may already have been approved - which makes it more important than ever that ingenuity and environmental respect are brought to bear on a vision for the remaining land and its curation and management.

Ursula Wright (0662), Louise Baker (0773), Helen MacLeod (0364)

There is inadequate provision for any allotments, community gardens and orchards for residents. This is despite the benefits this would have for the productivity of open space, reducing emissions and packing, ecology, health, community learning and engagement practice with increased activity and interaction opportunities – especially in new development areas. In addition, if residents feel ownership they will care for area and preserves its original ethos. This plan also does not encourage food growing in private gardens despite this having many of the above benefits.

Ursula Wright (0662)

This lack of growing space and allotments is particularly evident in Seafield.

William Brotherston (0754)

The nearby Lang Linn path from the back of Blackford Hill and the Hermitage of Braid to the Braid Hills has been neglected and allowed to fall into disrepair. The railings that used to line it were removed by the contractors making the now defunct children's golf course and never replaced, and the path has sometimes been used as a dump e.g. for large hay bales.

Juniper Green and Baberton Mains Community Council (0306)

It is indicated that a site at the Muir Wood Field in Currie should be included in the Proposed Plan given the strategic importance of open space for space in this area and to contribute to the 20 minute neighbourhood concept. To this end a core path should also be provided along the north side of the space also. This would be in line with the longstanding aims of the Council for this land and which was stated in relation to a public enquiry P/PPA/230/242.

Michael Ramsay (0011)

Support the extension of the River Almond Walkway to Kirkliston

### **Comments across multiple BGN proposals**

SEPA (0012)

BGN4, BGN5, BGN6, BGN8, BGN9, BGN10, BGN11, BGN12, BGN14, BGN14, BGN15, BGN16, BGN18: these proposals should state that blue green infrastructure should be multifunctional and connect to wider green-blue network.

BGN 2, BGN 7, BGN 25-BGN 47 and BGN 50-57: potential to connect to the wider green blue network and to incorporate elements of blue-green infrastructure, including slowing

and filtering rainwater and providing greater local biodiversity in their layout and planting. Emphasise that blue green infrastructure should be multifunctional and connect to wider green-blue network. Also draw attention to Sustainable Rainwater Guidance once this is available.

### **Strategic Green Blue Network**

#### NatureScot (0528)

It is difficult to relate the green blue network to proposed and existing development. The focus on mapped data rather than specific places, safeguarded assets and proposed connections means that few identifiable and place specific opportunities for expanding and enhancing the city's green blue network are identified and shown in the Proposed Plan's Proposals Map.

### **BGN 1 Inch Nursery and Park**

#### Grange/Prestonfield Community Council (0192)

This proposal must be integrated with proposed extra Place based Policy "Cameron Toll" in view of shopping centre redevelopment including housing etc.

#### The Woodland Trust (0774)

Add a native tree element to this proposal if this does not exist already.

#### Robyn Kane (0091)

Leave Inch Park as it is. Do not build on it.

#### SEPA (0012)

Should refer to the importance of parks in water management and implementation in the City's Water Vision. In particular advise of the need for multi-faceted use in zoning. The importance of use being determined by weather conditions if park space is to contribute to adaptative response to future fitting place should be stressed.

### **BGN 2 – Leith Links**

#### SEPA (0012)

Draw attention to the potential for restoration of the Water of Leith. We recognise this is a complex catchment with flood scheme infrastructure, UNESCO designation and amenity access, with several large weirs which act as barriers to fish movement. Initial scoping has been recently completed and discussions, with Water of Leith Conversation Trust and all interested parties will review these results over 2022. SEPA will work with all other partners to achieve what is possible.

### **BGN 3 Inverleith Depot**

The Friends of Inverleith Park (0459), Stockbridge and Inverleith Community Council (0741)

The reference to Inverleith park and depot in BGN3 is NOT equivalent to the corresponding Adopted LDP 2016 designation (GS8) as it does NOT protect the depot area from development as the depot area is classified as white Urban Space and not green Open Space like the rest of the park.

Inch Park has a substantially bigger depot than this site and it does not have its depot area differentiated from the rest of the park. That is the correct approach. Why should a different approach be taken to Inverleith?

The Inverleith depot has large areas of green vegetation – it is not an urban type space.

In both the recent and more historic past the Council has given inconsistent positions on whether it will protect the depot from development and consider it as greenspace as part of the overall park. Designating the depot as greenspace will ensure any change of personnel will not put the depot area at risk of housing development. The depot should be considered part of the park as shown in the original minutes of the decision in 1891 to buy the land for the park from the Rocheid Estate. The Council minute of 1891 said that this land was essential as part of the park.

Current LDP proposal GS8 which proposes the conversion of the depot into greenspace better protects the depot and reflects the position agreed with the Minister of the Environment that was incorporated into LDP 2016

SEPA (0012)

Current work in this area to support future fitting water management and climate adaptation needs to be considered in the development and implementation of this proposal.

Naomi Appleton (0271)

Flooding frequently cuts off access through the park and makes the green areas unusable.

Those of us without dogs would appreciate a space where dogs must be kept on leads. This park is particularly problematic in terms of random dogs jumping up at you, which scares children (and some adults) and gets us all unnecessarily muddy.

**BGN 7 - Little France**

SEPA (0012)

There is the potential to incorporate the proposed restoration of Burdiehouse Burn as part of restoration and regeneration project involving Edinburgh and Lothians Green Space Trust/Scottish Wildlife Trust/SEPA and other partners.

**BGN 17 - Murrayburn Road**

Archie Clark (0003)

What is meant by the development principle relating to the Murray Burn?

SEPA (0012)

SEPA has completed initial scoping of opportunities to improve the physical condition of this waterbody and consider this work could add considerable amenity benefits enhancing areas of green space for the local communities in Longstone and Wester Hailes areas of the city. Restoration potential has been identified in between Longstone Road and Murray Burn-Water of Leith confluence and to the West of the Western Hailes Education Centre. There would be the potential in these to improve the river environment as well create greenspaces and active travel route which could be enjoyed by the local community.

**BGN 19 - Gorgie Road (east)**

SEPA (0012)

This proposal needs to be clarified or rather the SFRA needs to be amended. No flood risk assessment (FRA) is requested in Appendix D which does not equate with the suggestion here to open up a natural watercourse. While we welcome de-culverting and the naturalisation of watercourses, an FRA will be needed to inform development.

**BGN 20 - Crewe Road South**

Shona Morland (0769), Ian R N Stewart (0131)

It is important this proposal is carried out prior to any development work to avoid the problem occurring prior to the water table being affected by additional building.

**BGN 21 – South Fort Street**

SEPA (0012)

Ask that proposal is clarified. As it is written it could be read that built development should avoid the 20m buffer and that is all that is needed.

**BGN 22 – Royal Victoria Hospital**

Ian R N Stewart (0131)

Consider this site for a new school/community buildings.

**BGN 23 – Astley Ainsley Hospital**

Neil Ross (0610)

There should be a wider buffer along the Jordan Burn.

Astley Ainslie Community Engagement Group (AACEG) (0275)

Concerns around tree loss given the importance of these and the risk of harm given the work proposed.

## **BGN 24 - Granton Waterfront Coastal Park**

Biffa (0804)

This is undeliverable without displacing and relocating the occupiers of the West Shore Trading Estate at great expense. It is clearly unsustainable and not economically viable to demolish an operational waste management facility, along with the neighbouring premises, and develop new facilities at alternative sites which are not available.

## **BGN 26 – Cramond Road North**

Paul Kleiser (0126), Lucile Cruikshand (0783)

Do not allow possibility of housing development as part of this proposal. The site should be a quiet, green open community space for families and children.

Lucile Cruikshand (0783)

It should not be used for further housing developments

Richard Bright (0627)

It is critical that this area is to be used and maintained as accessible community open space *by* and *for* local people

AMA (New Town) Ltd (0446)

AMA has marketed the site and engaged in discussions with extensive sports clubs and providers to try and bring forward sports provision on the site in line with existing planning permission 01/01881/FUL and the Cramond Campus Planning Brief. AMA is undertaking engagement with the local community on a route map for the delivery and nature of the sport facilities and open space. This is as part of Section 42 application 20/02916/FUL which is seeking an extension to the timescale for delivering the sports provision.

AMA is concerned this proposal and allocation for a large green space standard of 2 hectares on the site is premature while sports/open space options for the site are still being considered/advanced and does not fully take into account the site's planning history.

AMA are also unclear how possible sports provision options would align with the 2 hectares large open space standard set out in this proposal. For example, the three minded to grant permissions for different combinations of sports provision for the site (which were previously accepted by the Council and are in accordance with the Brief) do not appear to align with this designation.

This space is currently fenced off for safety purposes. It does not yet provide any publicly accessible open space.

Sportscotland (0671)

The current planning permission for the site includes sports facilities.

The Davidson's Mains and Silverknowes Association (0454)

This proposal is not compatible with proposals to lease the site to the Agri Eco Co-Operative for organic food growing and some tree planting. The Agri Eco proposals are welcomed and supported. The site will be accessible to the public with a network of pathways around the site and towards Silverknowes and the foreshore

**BGN 29 Craiglockhart**

SEPA (0012)

Discharging surface water to the canal is referenced in the SFRA.

**BGN 36 Royal Victoria Hospital**

SEPA (0012)

Refer to BGN22 and ask if these should be separate.

**BGN 37 - Orchard Brae Avenue**

Ian R N Stewart (0131)

Consider this site for a new school/community buildings.

SEPA (0012)

Believes there are opportunities here to manage surface water more effectively. Managing water would begin the process of incremental improvements to benefit the areas at the foot of the hill where there are problems with surface water management.

**BGN 38 - Duddingston Park South**

SEPA (0012)

Initial scoping has been completed on Braid Burn identifying huge amenity benefits and value. Undertaking restoration work in these areas would significantly improve the biodiversity along the channel in addition to improving the amenity of area. Smaller measures to improve habitat diversity could also be undertaken within Braids Valley Park, The Hermitage and Figgate Park. Although, it is recognised that further flood walls or embankments may be proposed along the burn to reduce flood risk, ask that these are set-back as far as possible from bank top to maintain the physical character and ecological value of the burn as much as possible.

**BGN 42 - Balgreen Park**

SEPA (0012)

Mentions green/blue in the table 'type' but no details in the 'description'.

**BGN 44 Leith Western Harbour Central Park Western Harbour EW1a**

Forth Ports Limited (0496)

The site area of 5.2ha stated in the plan is incorrect. Development of the Western Harbour Park has commenced and it has a site area of 4.4 ha in line with permission 19/01040/AMC

SEPA (0012)

Mentions green/blue in the table 'type' but no details in the 'description'.

**BGN 46 South East Wedge Parkland (Little France Park)**

SEPA (0012)

There is considerable potential to incorporate into the proposed restoration of Burdiehouse Burn as part of restoration and regeneration project involving Edinburgh and Lothians Green Space Trust/Scottish Wildlife Trust/SEPA and other partners.

**BGN 48 - W. Edinburgh Blue Green Network**

Ratho and District Community Council (0289)

The Blue Green network does not take into account the necessity to ensure there is no standing water to encourage roosting birds within the Edinburgh Airport Safety Zone

The Davidson's Mains and Silverknowes Association (0454)

It needs to be recognised that the open space at Silverknowes between Cramond and Granton is an essential element of the network. The omission is demonstrated on the spatial plan on map 1 on page 9 of the document

NatureScot (0528)

West Edinburgh represents an opportunity to address strategic issues, particularly north-south green blue network connections that are currently weak and/or underdeveloped. The inter-relationship between sites in the wider West Edinburgh area are important, particularly how sites identified as 'West Edinburgh' in the Proposed Plan relate to each other to create a new 20 minute neighbourhood and also deliver functions for the other areas identified in paragraph 3.53 (page 71)

The focus on play facilities and open space and on particular ecosystem services during preparation also means that connectivity and multi-functionality are not ensured. The green blue network as currently shown will not safeguard existing network assets and enhance key networks and wider links.

**BGN 49 (Gogar Burn)**

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

The benefits of the proposal and the extent of buffer zone have not been evidenced or qualified and nor have metrics agreed for measuring them.

Details have not been provided of the exact costs and delivery mechanism.

In this regard there will not be a benefit as any diversion or restoration of the Gogar Burn would need to be culverted and further mitigation would also be required, for example with netting put in place to prevent attracting wildlife. No standing water could be allowed given potential to encourage roosting birds.

This lack of benefit would be significantly outweighed by the very high cost of around £10 million, further cost for land acquisition and the lost development potential of this land.

This route has not yet been proven to be viable.

There has been inadequate consultation with landowners (including Edinburgh Airport) undertaken despite the significant impact on them.

The proposals do not reflect ongoing concerns in relation to land ownership

Potential to increase bird strike risk, with potential to create flight lines for birds between water bodies through the critical approach and landing corridors. The risk in such critical areas of airspace is too great to manage safely as there is no effective way to manage or deter the risk. Flight safety would be compromised as ultimately wildlife strikes can result in aircraft damage and possible fatalities. The Council has not undertaken and/or provided evidence assessing safety impact.

It is unreasonable to expect such a large buffer zone which will cut the Crosswind development site in two based on the indicative location for the re-routing of the burn on the proposals map. There is not space within the airport's grounds for such a wide buffer zone either.

The proposal would require significant earthworks and ground raising so levels would be created higher than the end of the runway. A channel with embankments to form a 5m deep burn to flow into the River Almond would be required, which is not a practical solution. A section of twin culverts is a more realistic engineering proposal for this area, notwithstanding the bird strike issue, given the shallow hydraulic gradients and flooding issues. However, this would not improve the geomorphological status of the burn.

The existing Gogar Burn has over 15 surface water outfalls discharging into it from the airport, in addition to several others from City of Edinburgh Council roads and private buildings. The 20 km of surface water networks discharging to the burn represent enormous infrastructure costs invested. These cannot be diverted to the proposed new route due to gradient issues. Consequently, the existing burn and Gogar culvert would need to be retained as a surface water system discharging to the River Almond, should the upper section be diverted.

The Gogar Burn diversion through CDL and Edinburgh Airport land is shown on Map 2 and referenced in the key, but none of the other Table 1 proposals are given such a reference. This is disproportionate. The Spatial Strategy is not the place to illustrate such

a proposal. No other water courses are illustrated, and other route diversions are not illustrated i.e. at Edinburgh Park / Garden District.

West Town Edinburgh Ltd (0660)

The proposed re-alignment of the burn should be removed as a proposal. If it is included however then it should be noted that the current route will remain an outlet for sustainable water management purposes if/when the proposal proceeds.

Ratho and District Community Council (0289)

These proposals cannot include any standing water due to airport safeguarding.

SEPA (0012)

If this proposal was linked or incorporated into BGN 46, however, it could be part of a much more dynamic and interesting place and form a more extensive part of the city's green/blue infrastructure.

**BGN 52 - Edinburgh 205**

SEPA (0012)

Site could be linked to BGN 49 and be part of a much more dynamic and interesting place and form a more extensive part of the city's green/blue infrastructure.

**BGN 53 - Turnhouse Road**

SEPA (0012)

Potential to incorporate elements of blue-green infrastructure should be included, not least to be part of a system that slows and filters rainwater to avoid the inundation of sewers, drains and watercourses. These areas could also be considered in terms of their potential to provide greater local biodiversity in their layout and planting

**BGN 54 - Turnhouse Road (SAICA)**

SEPA (0012)

Potential to incorporate elements of blue-green infrastructure should be included, not least to be part of a system that slows and filters rainwater to avoid the inundation of sewers, drains and watercourses. These areas could also be considered in terms of their potential to provide greater local biodiversity in their layout and planting

**BGN 56 - Land adj. to Edinburgh Gateway**

SEPA (0012)

Please see our comments on Proposal BGN 49.

**BGN 57 (Seafield)**

## SEPA (0012)

Potential to incorporate elements of blue-green infrastructure should be included, not least to be part of a system that slows and filters rainwater to avoid the inundation of sewers, drains and watercourses. These areas could also be considered in terms of their potential to provide greater local biodiversity in their layout and planting

## **Modifications sought by those submitting representations:**

### **Promoted Blue Green Network proposals**

#### Andy Inglis (0138)

Designate Holyrood Park a National Park and let it grow wild. \*Then\* there will be biodiversity. It is also indicated the Spatial Strategy should be more emphatic in recognising the need to give over greater areas to genuine rewilding, particularly paras. 2.57 and 2.72.

#### Archie Clark (0003)

No modification specified however it is indicated that proposals should be introduced to reinforce the Green belt and to expand cemetery provision.

#### Hillside Leisure Ltd (0080)

The Pentland Trail Centre (PTC) site should be allocated as a potential outdoor leisure recreation facility will further help to promote the Pentland Hills as a beautiful multi-use green space and with a particular focus on the future health and well-being of the population of Edinburgh, Midlothian and further afield.

A starting point will be the future management and phased re-planting of the "T-wood" on the higher slopes of the proposed PTC, located north of Caerketton Hill and immediately west of the ski centre.

The proposal would provide an opportunity to further extend the Strategic Active Travel project and safeguard of reference ATSR3, the 'Pentlands to Portobello Link' shown by the map on Page 31 of City Plan, and included in Table 3 on page 166 of City Plan and to extend green and blue networks from the city into the Pentland Hills.

#### Cramond & Barnton Community Council (0243), Michael Ramsay (0011)

Add Lauriston Farm Community based Agro-ecology Project site as a Green Blue Network proposal.

City Plan should identify potential sites for allotments (e.g. Green Belt between Cammo Estate LNR and Craigs Road).

#### William Brotherston (0754)

The Lang Linn should be properly re-instated as an important connection between Blackford Hill and the Braids.

With reference to the defunct children's golf course, could some other use be found for it e.g. for allotments of which there are do not seem to be many on the south side of Edinburgh?

Louise Baker (0773)

No specific wording proposed but it is indicated existing and proposed projects akin to the Granton Community Gardeners should be included in the plan. Projects such as Grass Roots Remedies Co-op also play an important role in the health of communities and should be supported.

Murrayfield Community Council (0146)

Balgreen Park should be designated for allotments

Jan Hume (0420)

No specific modifications specified but it is indicated a proposal should be added to the plan for The Royal Edinburgh Hospital to ensure its current landscape could be restored and improved.

Ursula Wright (0662), Louise Baker (0773), Helen MacLeod (0364)

It is indicated that there should be more proposals for community gardens and allotments across the City.

Ursula Wright (0662)

It is indicated that there should be more proposals for community gardens and allotments particularly in the Seafield area.

Louise Baker (0773)

There should be greater encouragement of private food growing in addition to allotments, community orchards and growing areas. Existing projects such as the Granton Community Gardeners and Grass Roots Remedies Co-op should be supported.

Juniper Green and Baberton Mains Community Council (0306)

No specific modification stated but it is indicated that a site at the Muir Wood Field in Currie should be included in the Proposed Plan.

Michael Ramsay (0011)

It is indicated that the extension of the River Almond Walkway to Kirkliston should be included as a proposal.

**Comments across multiple BGN proposals**

#### SEPA (0012)

BGN4, BGN5, BGN6, BGN8, BGN9, BGN10, BGN11, BGN12, BGN14, BGN14, BGN15, BGN16, BGN18: these proposals should state that blue green infrastructure should be multifunctional and connect to wider green-blue network.

BGN 2, BGN 7, BGN 25-BGN 47 and BGN 50-57: potential to connect to the wider green blue network and to incorporate elements of blue-green infrastructure. Also draw attention to Sustainable Rainwater Guidance once this is available

### **Strategic Green Blue Network**

#### NatureScot (0528)

No modifications specified however it is indicated that a revised strategic blue green network should be produced with a different methodology and that this should inform and identify a greater number of opportunities for expanding and enhancing the city's green blue network.

### **BGN 1 Inch nursery and Park**

#### Grange/Prestonfield Community Council (0192)

This proposal must be integrated with proposed extra Place based Policy "Cameron Toll".

#### The Woodland Trust (0774)

Add a native tree element to this proposal if this does not exist already.

#### Robyn Kane (0091)

Leave Inch Park as it is. Do not build on it.

#### SEPA (0012)

Should refer to the importance of parks in water management and implementation in the City's Water Vision.

### **BGN 2 Leith Links**

#### SEPA (0012)

It is indicated that the proposal should incorporate flood storage within green space along the Leith Links Active Travel route, green roofing on bus shelters/potential for green walling. The proposal should also consider the potential for restoration of the Water of Leith.

### **BGN 3 Inverleith Depot**

The Friends of Inverleith Park (0459), Stockbridge and Inverleith Community Council (0741)

Update BGN3 wording on Inverleith Park and to correct the Proposals Map so that the whole area of the park including the depot is classified as open green space which will ensure that the land in the area called the depot remains as protected as possible.

The Park Improvement Plan has already been started which should be altered in the proposal.

Naomi Appleton (0271)

It is indicated that this proposal should address flooding and have some parts could be specifically for dogs off leads and some parts not.

SEPA (0012)

No modification specified but it is indicated that current work in this area to support future fitting water management and climate adaptation needs should be considered in the development and implementation of this proposal.

#### **BGN 7 - Little France**

SEPA (0012)

This proposal should incorporate the proposed restoration of Burdiehouse Burn.

#### **BGN 17 - Murrayburn Road**

Archie Clark (0003)

Clarity needed on what is meant by the development principle relating to the Murray Burn.

SEPA (0012)

It is indicated that the proposal should incorporate the waterbody restoration opportunities scoping work. This proposal should also implement City Mobility Plan, build into active and public transport, provide green roofs, SUDS, improve housing stock, harness renewables, reduce emissions and inequalities

#### **BGN 19 - Gorgie Road (east)**

SEPA (0012)

It is indicated that it should be stated an FRA shall be needed in connection with this proposal.

#### **BGN 20 - Crewe Road South**

Shona Morland (0769), Ian R N Stewart (0131)

City Plan should ensure this will be carried out prior to any development work.

Ian R N Stewart (0131)

Consider this site for a new school/community buildings.

**BGN 21 – South Fort Street**

SEPA (0012)

A flood risk assessment should be used to inform the buffer as well as well as the location of any housing.

**BGN 22 – Royal Victoria Hospital**

Ian R N Stewart (0131)

It is indicated this site should accommodate new school/community buildings.

**BGN 23 – Astley Ainsley Hospital**

Neil Ross (0610)

No wording specified however it is indicated that there should be a wider buffer along the Jordan Burn.

Astley Ainslie Community Engagement Group (AACEG) (0275)

At the end of first paragraph add “New building and digging of trenches should avoid the root protection area of the established trees.”

**BGN 24- Granton Waterfront Coastal Park**

Biffa (0804)

Indicated that this proposal should be deleted.

**BGN 26 – Cramond Road North**

Paul Kleiser (0126), Lucile Cruikshand (0783)

Do not allow possibility of housing development as part of this proposal.

Richard Bright (0627)

City Plan should state this area is to be able to used and maintained as accessible community open space *by* and *for* local people

AMA (New Town) Ltd (0446)

The BGN 26 Cramond Road designation should be removed from the plan and the area returned to “white land” in the urban area as per its designation in the Edinburgh Local Development Plan 2016; with the requirement for this site to deliver sports provision/open

space set out by the original Cramond Campus Brief, permission 01/01881/FUL and the Sports Management Plan approved under condition 13 of the aforementioned permission.

Sportscotland (0671)

It is indicated that the proposal should include a reference for the need for replacement sports facilities as per the current planning permission for the site.

The Davidson's Mains and Silverknowes Association (0454)

No wording is specified however it is indicated that the proposal should be modified to align with proposals by Agri Eco Co-Operative for organic food growing and some tree planting.

**BGN 29 Craiglockhart**

SEPA (0012)

The Council should consider specify that surface water should be discharged to the canal

**BGN 36 Royal Victoria Hospital**

SEPA (0012)

It is indicated this proposal should be grouped with BGN22.

**BGN 37 – Orchard Brae Avenue**

Ian R N Stewart (0131)

It is indicated that a new school/community buildings should be provided on site.

SEPA (0012)

It is indicated that this proposal should include surface water management.

**BGN 38 Duddingston Park South**

SEPA (0012)

It is indicated that the proposal should incorporate the waterbody restoration opportunities scoping work.

**BGN 42 Balgreen Park**

SEPA (0012)

It is indicated that details of the blue green infrastructure should be set out in the description to expand on the reference to blue green in the type of proposal.

#### **BGN 44 - Leith Western Harbour Central Park Western Harbour EW1a**

Forth Ports Limited (0496)

The site area in City Plan should be updated to 4.4ha.

SEPA (0012)

It is indicated that details of the blue green infrastructure should be set out in the description to expand on the reference to blue green in the type of proposal.

#### **BGN 46 South East Wedge Parkland (Little France Park)**

SEPA (0012)

It is indicated that the proposal should incorporate the waterbody restoration opportunities scoping work.

#### **BGN 48 - West Edinburgh Blue Green Network)**

Ratho and District Community Council (0289)

No specific wording proposed however it is indicated that it should be specified that the proposals do not include any standing water or could give rise to areas of standing water.

The Davidson's Mains and Silverknowes Association (0454)

No specific wording is proposed however it is indicated that the open space at Silverknowes between Cramond and Granton is included within the West Edinburgh Green network proposal

NatureScot (0528)

The plan should be amended to make clear further work is to take place to ensure that there is wider green/blue network and active travel connectivity within Place 16 that also links to the city's wider green blue network, particularly relating to the form and function of the network.

#### **BGN 49 - Gogar Burn**

Crosswind Developments Ltd (0184)

No specific wording proposed however it is indicated that the following changes be made:

The proposal should be deleted from the Proposed Plan

If it is to be included, Proposal BGN 49 should be identified as indicative only, including on Map 2, however the representation has concerns about its inclusion on this map at all.

Further guidance is required as to whether it is 40m on each side of the burn, or 40m in total.

Edinburgh Airport Limited (0761)

It is indicated that the proposed re-alignment of the burn should be removed as a proposal and more general reference to it in the plan should also be removed, including in development principle (j) of the West Edinburgh Place Policy.

West Town Edinburgh Ltd (0660)

The proposed re-alignment of the burn should be removed as a proposal, however, it should be noted that the current route will remain an outlet for sustainable water management purposes in the event that any such diversion proceeds.

Ratho and District Community Council (0289)

No specific wording proposed however it is indicated that it should be specified that the proposals do not include any standing water or could give rise to areas of standing water.

SEPA (0012)

It is indicated that this proposal should be linked/combined with BGN 46.

**BGN 52 - Edinburgh 205**

SEPA (0012)

It is indicated that this proposal should be linked/combined with BGN 49.

**BGN 53 - Turnhouse Road**

SEPA (0012)

Potential to incorporate elements of blue-green infrastructure should be included.

**BGN 54 - Turnhouse Road (SAICA)**

SEPA (0012)

Potential to incorporate elements of blue-green infrastructure should be included.

**BGN 56 (Land adj. to Edinburgh Gateway)**

SEPA (0012)

The potential to incorporate elements of blue-green infrastructure should be included.

**BGN 57 (Seafield)**

SEPA (0012)

Potential to incorporate elements of blue-green infrastructure should be included.

## Summary of responses (including reasons) by planning authority:

### Promoted Blue Green Network proposals

#### Andy Inglis (0138)

The Council considers that there are a good number, scale and range of green blue network proposals so as to deliver the strategy and outcomes of the Plan. **No modification proposed.**

#### Archie Clark (0003)

Green Blue Network proposals should be provide multiple benefits. This means there are no proposals solely about increasing the defensibility of the Green belt, however certain proposals such as BGN 46 - South East Wedge Parkland (Little France Park) do achieve a range of benefits and these add weight to the protected status of Green belt land.

It was investigated whether there were likely to be proposals for cemetery creation or expansion coming forward the lifetime of City Plan however this was not the case so there are no such proposals in the Plan. **No modification proposed.**

#### Hillside Leisure Ltd (0080)

Although this is not proposed in the Plan it could be pursued through an application for planning permission, to be considered against relevant policies. **No modification proposed.**

#### Murrayfield Community Council (0146), Ursula Wright (0662), Louise Baker (0773), Cramond & Barnton Community Council (0243), William Brotherston (0754), Helen MacLeod (0364), Michael Ramsay (0011)

The Council is aware that there is demand for allotments across the city. Plan preparation included consultation with the Council's allotment officer, who identified certain proposals as being most suitable for delivery in the lifetime of the plan. These are shown in Table 1 of City Plan. The Council considers the Plan policies appropriate for assessing such proposals that come forward. **No modification proposed.**

#### Louise Baker (0773)

Private food growing projects are not identified in the Plan however the Council considers the policies adequate for assessing proposals that come forward. **No modification proposed.**

#### Jan Hume (0420)

The Council is not aware of specific proposals of the type referred to for this site and accordingly has not made provision for them in table 1. The Council considers the policies of the Plan, particularly Policy Env 6, support landscaping type proposals should they require planning permission. **No modification proposed.**

#### William Brotherston (0754)

The reinstatement works proposed in the representation for the Lang Linn path mainly relate to improving its overall condition (removing dumped material etc.) and thereafter ensuring adequate attention to avoiding the path deteriorating further. These types of matters are not for Local Development Plans to address as they do not constitute development in planning terms. **No modification proposed.**

#### Juniper Green and Baberton Mains Community Council (0306)

Muir Wood Field is in use as an agricultural field so is not designated in the Plan as a formal open space in the proposals map. Policy 23 'Protection of Open Space' can apply to non-designated spaces if relevant.

Upgrading of the path and conversion of the field into open space is appropriate to the Council review of its Open Space Strategy (OSS) CD066, as the main strategy document for considering the strategic provision of open space rather than through the LDP process. If such a proposal is included in the OSS then that may be appropriate to capture in the subsequent LDP. **No modification proposed.**

### **Strategic Green Blue Network**

#### NatureScot (0528)

The Council notes that the Green Blue Network (Map 6 in City Plan) is a strategic map. It is not intended to be used to identify the fine detail of opportunities for expansion and enhancement of the network. The Council will produce a refined version of the Green Blue Network map in order to inform its next Open Space Strategy as draft legislation indicates it will need to consider green networks (and proposals relating to these). **No modification proposed.**

### **Comments across multiple BGN proposals**

#### SEPA (0012)

Policy Env 6 sets requirements for green blue infrastructure. The Glossary sets out the benefits of green and blue features in the built and natural environment which provide a range of benefits which reflect the multiple functions of green blue infrastructure. It states that all new green and blue infrastructure should seek to be multifunctional and seek to provide as many of the benefits as possible. This includes the benefits for water management and biodiversity. Policy 36 (Designing for Surface Water) provides links to the Council's Surface Water Management Guidance CD077. It is not necessary to state this at each blue green network proposal. **No modification proposed.**

### **BGN 1 Inch nursery and Park**

#### Grange/Prestonfield Community Council (0192)

The Council considers that works proposed at Inch Nursery and Park should not be dependent on what changes are made at Cameron Toll. Delivery of BGN 1 has merit and deliverability in their own right. Under the Plan policies, development at Cameron Toll

would be expected to contribute in kind or financially toward BGN 1. The specifics of this are for consideration of any application which comes forward in the context of the relevant policies and guidance rather than integrating spatial allocations. **No modification proposed.**

The Woodland Trust (0774)

The Council agrees with the principle of this representation however this is a very specific matter more appropriately addressed as part of the Park Improvement Plan. **No modification proposed.**

Robyn Kane (0091)

The Blue Green Network proposal for Inch Park (BGN 1) relates to a Park Improvement Plan. It is not a housing development proposal. **No modification proposed.**

SEPA (0012)

The development of the Park Improvement Plan can incorporate the work in this area to support future fitting water management and climate adaptation. **No modification proposed.**

**BGN 2 Leith Links**

SEPA (0012)

This City Plan's policy framework, including Env 6: Green Blue Infrastructure, encourage the principle of the measures listed. To avoid duplication the Council has generally avoided specifying matters in proposals which are already addressed by policies. **No modification proposed.**

**BGN 3 Inverleith Depot**

The Friends of Inverleith Park (0459), Stockbridge and Inverleith Community Council (0741)

The Council is bringing forward a number of park improvement plans. In the case of Inch Park and Inverleith it is understood that these are both integrating the associated depot/nursery areas. In the Plan consistency has been sought to reflect this as part of overall BGN allocations for both sites that covers each element. This is the reason for BGN 3 having a different boundary to GS 8 in the Adopted LDP CD039.

Notwithstanding this, the Council notes the points made around the difference in the proposal text between GS8 and BGN3. This is again a reflection of the fact that the boundaries have changed as part of the depot being combined with the wider park for the purposes of an overall park improvement plan, however it is acknowledged that has meant less explicit comment has been made specifically about the depot in BGN 3.

It is possible for the Park Improvement Plan to take account of community views on this issue and to specify the use of the depot as greenspace.

City Plan is reflecting the delineation of open space set out in the Council's Open Space Strategy CD066, unlike Inch Nursery (which is also more centrally located within the overall park area). It is also noted this is same designation of open space that exists in the LDP 2016 CD039. It does not appear that the depot has significantly changed from these assessments of the nature of space, as it is not sufficiently vegetated or civic in nature to be considered open space. The Council will consider how the nature of and land changes over time however and this will be reviewed further at the next iteration of the Council's Open Space Strategy. **No modification proposed.**

Naomi Appleton (0271)

The matters raised are more appropriately addressed through the Park Improvement Plan for this site. This will be subject to consultation where views on these points can be shared. **No modification proposed.**

SEPA (0012)

The development of the Park Improvement Plan can incorporate the work in this area to support future fitting water management and climate adaptation. **No modification proposed.**

#### **BGN 7 - Little France**

SEPA (0012)

Primarily this proposal relates to food growing however the City Plan's policy framework, including Env 6: Green Blue Infrastructure, would be supportive of the potential to support with the proposed restoration of Burdiehouse Burn if the opportunity arises. **No modification proposed.**

#### **BGN 14 – Roseburn Street**

The following representations were received in support of this policy as proposed:

Liberton and District Community Council (0084)

#### **BGN 17 – Murrayburn Road**

Archie Clark (0003)

The proposal requires any developer of the site to undertake works to investigate the burn (for example its exact route, depth etc) to see if it is appropriate for this to be daylighted and incorporated into the development. **No modification proposed.**

SEPA (0012)

The proposal is to be read as part of City Plan as a whole, including subject policies relating to these issues. This includes policies and proposals relating to biodiversity, green blue Infrastructure such as green roofs and SUDS, Transport, improving building efficiency, encouraging renewables and reducing emissions. As such the matters raised are more appropriately dealt with through other parts of the Plan.

The proposal does note the potential to investigate the potential to daylight and incorporate this into the development. If this does occur then the policy framework of City Plan, in particular Env 6, would be supportive in principle of many of the opportunities for the relevant stretch of the burn identified in the representation. **No modification proposed.**

#### **BGN 19 Gorgie Road (east)**

SEPA (0012)

The nature of daylighting a burn is considered sufficiently self-evident as requiring an FRA so it is not stated in appendix d. The policy and legislative framework exists to allow an FRA to be required irrespective of appendix d. **No modification proposed.**

#### **BGN 20 – Crewe Road South**

Shona Morland (0769), Ian R N Stewart (0131)

This proposal involves a number of elements. The exact phasing of these relative to different stages of other development on the site has not been set out, however it will be critical that the proposal is delivered as part of the development as stated in the proposal. As such, any development should not contribute to additional water management problems thereafter. **No modification proposed.**

Ian R N Stewart (0131)

Earlier in the process of preparing City Plan, a range of work was undertaken to make a strategic assessment of land use need for the city. This included a Monitoring Statement CD023 and Housing Study CD026 as well as other work. An Education Appraisal CD015 was also undertaken to inform City Plan, with other associated Strategies such as the Council's Open Space Strategy CD066 also taken into account. The overall conclusion of this was that housing (with associated play park provision) is the most appropriate use for this site. See Issue 29 'Education' regarding Flora Stevenson school. **No modification proposed.**

The following representations were received in support of this policy as proposed:

Andrew Brown (0007), Oliver Macintyre (0019)

#### **BGN 21 – South Fort Street**

SEPA (0012)

Appendix d makes clear an FRA is required. The Development Management process shall ensure FRA should inform proposals, including their layout. This proposal does not undermine this process. **No modification proposed.**

#### **BGN 22 – Royal Victoria Hospital**

Ian R N Stewart (0131)

Earlier in the process of preparing City Plan, a range of work was undertaken to make a strategic assessment of land use need for the city. This included a Monitoring Statement CD023 and Housing Study CD026 as well as other work. An Education Appraisal CD015 was also undertaken to inform City Plan, with other associated Strategies such as the Council's Open Space Strategy CD066 also taken into account. The overall conclusion of this was that housing (with associated play park provision) is the most appropriate use for this site. See Issue 29 'Education' regarding Flora Stevenson school. **No modification proposed.**

The following representations were received in support of this policy as proposed:

Liberton and District Community Council (0084)

### **BGN 23 – Astley Ainsley Hospital**

Neil Ross (0610)

The Council will bring forward updated guidance on widths of buffer zones adjacent to bodies of water, including water courses. This will provide additional information to underpin criterion c) of Policy Env 29 (Waterside Development). The guidance will reflect SEPA guidance in making the width of such buffers proportionate to the size of watercourse in question. The figure provided in the proposal reflects what the Council estimates to be appropriate at this juncture for the size. **No modification proposed.**

Astley Ainslie Community Engagement Group (ACEG) (0275)

Policy Env 20 'Protection of Trees and Woodlands' shall apply if there were to be any risk of harm to trees on site. There is also a Tree Protection Order pertaining to this site. The effect of the policy and TPO would confer the same protection as sought in the representation. **No modification proposed.**

The following representations were received in support of this policy as proposed:

Grange/Prestonfield Community Council (0192)

### **BGN 24 - Granton Waterfront Coastal Park**

Biffa (0804)

This proposal for a coastal park (and its boundaries) reflect the development principles of Granton contained in Place Policy 4 - Edinburgh Waterfront (and associated Map 19 – Granton). In terms of the implications of Place Policy 4 and BGN 24 regarding the displacement of commercial uses then these are addressed as part of Issue 3: Delivery of the Strategy. **No modification proposed.**

The following representation supports the proposal as drafted:

Helen Mitchell (0484)

### **BGN 26 – Cramond Road North**

Lucile Cruikshand (0783), Paul Kleiser (0126),

The key objective for this proposal is to meet the strategy and aims of the plan and to address the needs of the area – including the need for useable open space. To this end the site must come forward in the lifetime of the plan. The site is large enough to provide a 2ha Large standard of open space as identified in the Council's Open Space Strategy CD066 as being needed for the area, whilst still having sufficient space to accommodate a level of development necessary to deliver of the open space. A development would not make such a space excessively noisy or deter potential users of the space. **No modification proposed.**

Richard Bright (0627)

Issues of maintenance are not matters that the Plan can address, although this proposal does agree with the point on seeking that the site should provide open space available for local use. **No modification proposed.**

AMA (New Town) Ltd (0446)

The representor notes the site is fenced off and inaccessible at present. This highlights how little benefit and function that the site is providing presently and the need for City Plan to set out a positive proposal to bring the site forward in the most beneficial way.

The Council notes that BGN 26 does not prevent sports facilities being developed on the site alongside open space. In fact, some forms of sports provision such as open pitches and playing fields can be part of the overall open space requirement provided they are publicly accessible. The provision of a Large open space in this regard would be in line with the Council's Adopted Open Space Strategy's CD066 assessment of the needs of this area which is lacking in access to such a space. **No modification proposed.**

Sportscotland (0671)

The Council considers this proposal is compatible with a proposal that combines certain forms of sports provision with open space (either useable open space in its own right or sitting alongside the space). **No modification proposed.**

The Davidson's Mains and Silverknowes Association (0454)

The proposal does not preclude tree planting and food growing and would not conflict with Plan policies. The key point is that a 2ha Large Standard accessible Open Space is still provided on site. **No modification proposed.**

**The representations below were submitted indicating supporting on the following basis:**

Mr John K Skinner (0065), Colin Crichton (0068), Diane McCutcheon (0107), Nicola Archer (0110), Paul Kleiser (0126), Sue Fernandes (0128), Joanna McColm (0139), Joanne Macleod (0177), Timothy Chares Hanson Sale (0190), Cramond & Barnton Community Council (0243), J B Michael Dick & Mrs Helen M Dick (0338), Cramond Primary School (0341), John & Maureen Pope (0347), Archie Rose (0380), Jamie

Halstead (0434), Louise Halstad (0433), Tom Davidson (0453), Alexander Dunn (0506), C Wright (0553), Brighthouse Park Owners Association (0607), Alistair Chalmers (0609), Richard Bright (0627), Elanor Cameron (0764), Gavin Cameron (0782), Andrew Shiells (0803), Michael Ramsay (0011)

Support the site being greenspace that contributes to landscape, wildlife, green and ecological networks as well as amenity, mental and physical health, the benefit of the community and local schools'/extra-curricular opportunities as well sports and recreation provision for adults, the elderly and children. This is important to satisfy shortfalls in recreational open space as identified in CEC's 'Open Space Strategy' CD066.

Paul Kleiser (0126), J B Michael Dick & Mrs Helen M Dick (0338), C Wright (0503), Alexander Dunn (0506), C Wright (0553), Alistair Chalmers (0609)

Support the site coming forward as greenspace as the land is presently a mess, and unsafe to walk on.

Colin Crichton (0068), Diane McCutcheon (0107), Nicola Archer (0110), Paul Kleiser (0126), Sue Fernandes (0128), Joanne Macleod (0177), J B Michael Dick & Mrs Helen M Dick (0338), John & Maureen Pope (0347), Archie Rose (0380), Gavin Cameron (0782), Andrew Shiells (0803)

Proposals for sports facilities and pleasant greenspace however have failed to materialize over many years. Sports facilities are not going to be viable and deliver the improvement of the site for the local community.

### **BGN 29 Craiglockhart**

SEPA (0012)

The process for how surface water run-off should be managed is addressed in policy Env 36 'Designing for Surface Water'. This policy sets out the need for water to be stored and flow above ground. In addition, it makes reference to appropriate guidance and the 'Vision for Water management for the City of Edinburgh' CD052 which sets out further detail. **No modification proposed.**

### **BGN 34 – Liberton Hospital/Ellen's Glen Road**

The following representations were received in support of this policy as proposed:

Liberton and District Community Council (0084)

### **BGN 36 Royal Victoria Hospital**

SEPA (0012)

BGN 22 relates to the same site as BGN 36 however it has been stated separately to this proposal as this proposal relates to play facilities which are more specific in nature than the more general blue green. Cross referencing between different BGN proposals is not considered necessary since both proposals can be identified on the Proposals map. **No modification proposed.**

## **BGN 37 – Orchard Brae Avenue**

Ian R N Stewart (0131)

Earlier in the process of preparing City Plan, a range of work was undertaken to make a strategic assessment of land use need for the city. This included a Monitoring Statement CD023 and Housing Study CD026 as well as other work. An Education Appraisal CD015 was also undertaken to inform City Plan, with other associated Strategies such as the Council's Open Space Strategy CD066 also taken into account. The overall conclusion of this was that housing (with associated play park provision) is the most appropriate use for this site. See Issue 29 'Education' regarding Flora Stevenson school. **No modification proposed**

SEPA (0012)

Using the SFRA CD011 as a starting point, further work was undertaken by the same consultants to review of potential strategic SUDS opportunities for new City Plan housing proposals. This helped identify the strategic SUDS opportunities noted in BGN 8-15 (inclusive). This opportunities identification did not Orchard Brae Avenue as being a strategic SUDS opportunity. **No modification proposed.**

## **BGN 38 Duddingston Park South**

SEPA (0012)

The policy framework of City Plan, in particular Env 6, would be supportive in principle of many of the opportunities for the relevant stretch of the burn identified in the representation. **No modification proposed.**

## **BGN 42 Balgreen Park**

SEPA (0012)

The 'type' of proposal for BGN 42 is stated as 'Upgrade existing play facilities to excellent standard'. There is no mention of green/blue. **No modification proposed.**

## **BGN 44 – Leith Western Harbour Central Park, Western Harbour EW1a**

Forth Ports Limited (0496)

The area of the open space approved in 19/01040/AMC is 4.4ha. It is considered unnecessary to amend BGN 44 until such a time as the park has been delivered. **No modification proposed.**

SEPA (0012)

The 'type' of proposal states that the blue and green infrastructure is to be associated with the park. It is not considered expedient to specify detail beyond this as this infrastructure should be established as part of the development of the park itself. **No modification proposed.**

## **BGN 46 South East Wedge Parkland (Little France Park)**

### SEPA (0012)

The policy framework of City Plan, in particular Env 6, would be supportive in principle of many of the opportunities for the relevant stretch of the burn identified in the representation. **No modification proposed.**

## **BGN 48 - West Edinburgh Blue Green Network**

### Ratho and District Community Council (0289)

This proposal does not specify areas of standing water. The proposal is only set out in broad terms at this stage. Site specific constraints are considered more appropriately addressed as detailed proposals are brought forward. **No modification proposed.**

### The Davidson's Mains and Silverknowes Association (0454)

This proposal itself has its boundaries drawn more closely to reflect the area expected to be delivered. As such it does not include the area of land mentioned in this representation which is further to the north east. **No modification proposed.**

### NatureScot (0528)

The Council is updating the West Edinburgh Strategic Design Framework CD065 which will inform master planning, including phasing. This will include for the green blue network as a central part of successful placemaking in the West Edinburgh area.

The green blue network is an essential part of the good connectivity across the area of Place Policy 16 and with the surrounding area. This is part of creating welcoming and pleasant routes for travel as part of 20 minute neighbourhoods. That includes linking and delivery of open space and play spaces, as well as routes between other facilities such as schools and retail centres. It will also identify and protect key existing assets that form part of this.

Consideration of West Edinburgh Green Blue Network shall be a key part of the West Edinburgh Framework which will inform a masterplan and phasing plan. The development principles for Place 16 make clear the importance of the green blue network at West Edinburgh in this regard. **No modification proposed.**

## **BGN 49 - Gogar Burn**

### Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

There are a wide range of substantial benefits to the proposal: it would improve and diversifying biodiversity and riparian habitat for aquatic and land based species; provide significant levels of climate resilience through meandering the watercourse and naturally slowing of water flows and capacity to flooding events in the buffer zone. It would provide a continuous, natural focal point providing character and identity to the West Edinburgh area that would be central in connecting multiple development sites.

The broad level of improvement that would be seen is readily apparent when the potential of the new diversion is compared to the existing man-made route. This is un-naturally straight and causes fast flowing water with very little capacity for water level rise within the narrow channel, with a large section fully culverted. As a result, there is an area of land at high fluvial flood risk adjacent to the burn. The nature of the burn and its proximity to the airport cause pollution of the water environment I

The width of buffer zone is a matter which has been considered having had regard to SEPA's Planning Background Paper: Water Environment CD129. These buffers are based on making sure the buffer width is proportionate to the watercourse to allow room for natural fluvial processes to occur, stabilising banks and reducing erosion, reducing surface pollution getting into the watercourse itself as well as providing room for meandering. This is in addition to providing space that forms a key part of an area's open space and green and blue networks.

The area for development containing the proposed burn would require a large level of open space and green network provision even without this proposal. As a result, the burn can go a long way to delivering these requirements without involving the allocation of significant tracts of further land.

A significant part of the route that runs through the airport is within the land proposed for redevelopment as part of the Crosswinds site. North of this most of the route actually follows the periphery of the airport rather than cutting across it. There is not a significant issue of needing to repurpose large areas of airport land.

The exact costs are not finalised, but it is recognised it is a significant proposal with significant cost. It is accepted that funding for the delivery is not in place, however in terms of delivery it is equally important to recognise what parties need to be involved. There would need to involve significant levels of partnership working, particularly including immediate and neighbouring landowners/land interests as well as the Council itself and many key agencies, not least SEPA, Nature Scot, Scottish Water and others. As a precursor to delivery itself however it is imperative that the land in question is safeguarded to then enable land assembly and delivery in due course. Without this safeguarding then all prospect of achieving this significant environmental enhancement will be lost as a result of development now likely to take place in the lifetime of the Plan.

The Council is content that a *minimum* of 40m is an appropriate total buffer width (not inclusive of the width of the watercourse itself). The is clear from Table 1.

This proposal has been part of the Adopted 2016 LDP CD039 as well as part of the Proposed City Plan 2030. The Council considers due consultation has taken place, although further consultation would be a key part of subsequent stages of the proposal's development and delivery.

The proposal does not make reference to standing water and the watercourse will be defined by being moving water. The Council sees significant opportunity for habitat and biodiversity enhancement in a manner that does not have to entail excessive levels of safeguarding risk. The River Almond runs immediately parallel to the northern boundary to the airport and is an even greater width of watercourse than is proposed in BGN 49. The airport has managed to co-exist with the River Almond watercourse for many years.

As such a significant proposal, the Council considers this proposal merits being included on Map 2 even when other proposals in Table 1 are not.

It is inferred that the representor is meaning that the water level of the new watercourse where it joins the River Almond would be some 5m below ground level of much of the surrounding land. In approximate terms there would appear to be ample, unused land beyond the eastern end of the runaway to allow the requisite earthworks to take place to achieve the slope needed.

#### Ratho and District Community Council (0289)

It is not considered necessary to set out what is not intended to be provided as part of proposals. **No modification proposed.**

#### West Town Edinburgh Ltd (0660), Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

The Council is aware that existing and proposed developers adjacent to the Gogar Burn channel around the airport are querying if they could discharge surface water into this channel in the event BGN 49 goes ahead. The Council has no objection to this subject to consideration of detailed proposals. The Policies of the plan make provision for this already however. **No modification proposed.**

#### SEPA (0012)

Based on what is stated in SEPA's representation regarding BGN 52 then it is assumed that it is sought to link this proposal (BGN 49) with BGN 52 (Edinburgh 205) rather than BGN 46 as the latter relates to Little France in a very different location.

BGN 49 (Gogar Burn) partly relates to the same site as the BGN 52 proposal (Edinburgh 205) for open space and play facilities. It is important to keep the proposals separate however as the facilities and Local/Large standard spaces shall need to be somewhat spread around the large area of the 205 development to ensure they are within walkable distance. **No modification proposed.**

#### **BGN 52 - Edinburgh 205**

#### SEPA (0012)

BGN 49 (Gogar Burn) partly relates to the same site as this proposal for open space and play facilities however it is important to keep the proposals separate as the facilities and Local/Large standard spaces shall need to be somewhat spread around the large area of the 205 development to ensure they are within walkable distance. **No modification proposed.**

#### **BGN 53 – Turnhouse Road**

#### SEPA (0012)

The policy framework of City Plan, in particular Env 6, would require the incorporation of blue green infrastructure as part of this proposal so it does not need to be stated in the proposal itself. **No modification proposed.**

**BGN 54 – Turnhouse Road (SAICA)**

SEPA (0012)

The policy framework of City Plan, in particular Env 6, would require the incorporation of blue green infrastructure as part of this proposal so it does not need to be stated in the proposal itself. **No modification proposed.**

**BGN 56 - Land adj. to Edinburgh Gateway**

SEPA (0012)

The policy framework of City Plan, in particular Env 6, would require the incorporation of blue green infrastructure as part of this proposal so it does not need to be stated in the proposal itself. Please see the Council's response in relation to BGN 49 in respect of the applicable points made that cross refer to that proposal. **No modification proposed.**

**BGN 57 (Seafield)**

SEPA (0012)

The policy framework of City Plan, in particular Env 6, would require the incorporation of blue green infrastructure as part of this proposal so it does not need to be stated in the proposal itself. **No modification proposed.**

**Reporter's conclusions:**

Issue 19	Housing Supply Target and Land Requirement	
Development plan reference:	Part 2: Strategy - A City in which everyone lives in a home they can afford p26-28	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):		
<div>Archie Clarke (0003) Barratt David Wilson Homes (0677) BDW Trading (0350) BDW Trading (0678) CALA Management Ltd (0465) Dr David Houston (0655) Dr Helen Forrest (0315) Edinburgh Poverty Commission (0717) Esk Property LLP (0726) Glenmorrison Group (0600) Hallam Land Management (0599) Hallam Land Management (0615) Homes for Scotland (0404) Inverdunning (Hatton Mains) Ltd (0427) Juniper Green &amp; Baberton Mains Community Council (0306) Leith Central Community Council (0614) Mark Ockendon (0419) Mactaggart &amp; Mickel Homes Ltd (0312) Melford Developments Ltd (0308)</div> <div>Miller Homes Limited (0649) Mr T Klan (0307) Murray Estates (0197) Persimmon Homes (0495) Robertson Residential (0490) Scottish Government - Planning and Architecture Division - Development Plans Team (0309) SEEDCo (0198) Steve Loomes (0767) Stewart Milne Homes (0118) Tarmac (0244) Taylor Wimpey (0200) Taylor Wimpey and Hallam Land Management Ltd (0603) The Association for the Protection of Rural Scotland (0334) The Stoddart Family (0749) Watkin Jones Group (0516) Wright PDL (0078)</div>		
Provision of the development plan to which the issue relates:	This section of the Plan details the housing supply target and housing land requirement land requirement.	
Planning authority's summary of the representation(s):		
<div>Housing Supply Target</div> <div>Watkin Jones Group (0516) -support</div> <div>Agrees that Edinburgh needs more homes to meet housing need and support economic growth.</div> <div>Archie Clarke (0003)</div> <div>Does not believe current assumptions can be regarded as credible until after the results of Census 2022 have been published which should then determine housing need. Agree that the greatest need is for affordable housing. Note that SDP2 pitched need at over 50% and that is the level that needs to be aimed for – including a higher proportion in suitably-</div>		

priced local authority rented accommodation. Considers there are many references to affordable housing but unclear what the true affordable percentage need is for Edinburgh's entire stock, or where it should be located. Suggests that if the total need is nearly 50,000 units, then there will remain a serious shortage of affordable housing in the right places. There is no indication of where those who must live in affordable housing can be located.

Barratt David Wilson Homes (0677)

Accords with Homes for Scotland detailed submissions and recommendations to the proposed City Plan in that the basic HNDA toolkit methodology for assessing housing need and demand has serious shortcomings as a method of establishing the appropriate number of new homes to plan for. Submit Homes for Scotland Executive Summary and Housing Supply Targets and Housing Land Supply Assessment.

BDW Trading (0350), BDW Trading (0678), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

City Plan 2030 fails to engage substantively with how it can address affordability. There are significant economic and social consequences to not meeting identified need and demand in full. Neither City Plan nor the Housing Technical Note explain why, notwithstanding such consequences, a reduced figure has been chosen, nor considered its consequences. While the Plan aims to address affordability issues the housing targets it sets out and the wider spatial strategy appear more likely to contribute to the opposite outcome of reduced affordability driven by large shortages in supply.

Housing supply targets and housing and requirements are inadequate and fail to meet identified housing need and demand in full. Submit a Housing Supply Target and Land Requirement Assessment Prepared by Holder Planning. Consider that this demonstrates that the targets set out in City Plan will fall substantially short of the full housing need and demand set out in HNDA2. The Plan seeks to meet just 69% of need and demand, a shortfall of 25,577 homes in the period to 2032 which is contrary to Scottish Planning Policy. No adequate explanation of why need and demand cannot be met in full or how the impacts of not doing so could be mitigated.

There is no agreement with adjoining authorities to accommodate Edinburgh's unmet need and demand. In context of suppressed household growth, the housing supply target is inappropriate and risks further entrenching the negative consequences of inadequate housing supply.

Assume open market shared equity 2017-21 refers to actual completions which would be reasonable but seek confirmation of this. Consider the deduction of anticipated future completions on unspecified sites is not an appropriate or reasonable approach as delivery of future supply is uncertain, therefore if it does not deliver as expected, then the housing supply target becomes artificially low and the shortcoming cannot be remedied by new supply. The anticipated 960 Open Market Shared Equity dwellings 2021-2027 should be removed from the calculation of the housing supply target which would result in an affordable housing supply target of 18,312 for 2021-32. which would result in the Council's stated affordable supply of 18,304 being less than the affordable housing supply target.

The affordable housing supply target does not reflect the HNDA and there is no justification for this and therefore is not consistent with SPP 2014 paragraph 118.

The Council has failed to consider intermediate steps which may mitigate the impact of unmet housing need. In the medium to long term, increased supply helps to dampen rent increases and so an effort to boost market housing could help contribute to increased affordability in the private rented sector, providing some mitigation for the unmet affordable need.

HNDA3 has not been consulted on and does not have robust and credible status. Raise questions over the methodology for NPF4 and HNDA3. Note the Review of Housing Need and Demand (September 2020) and that it does not address the issue of circularity. Agree that as set out in the City Plan Housing Technical Note that no evidence reviewed provides a basis for moving away from the HNDA2 wealth distribution scenario.

Consider that the proposed approach is contrary to SPP 2014 paragraph 1 which seeks to deliver sustainable economic growth and is contrary to paragraph 30. Proposed City Plan does not plan to meet identified development needs and is not sustainable because it fails to meet identified housing need and demand.

Consider the most reasonable strategy to seek is to meet the HNDA2 housing need and demand in full setting a housing supply target of 62,488.

The Plan has not sought to explore what would be the best options for addressing its housing needs.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The Plan places significant weight on the content set out in draft or interim planning documents that do not form part of the statutory development plan. Submit a Development Strategy Statement (ref) that examines methodology and assumptions of the Proposed Plan. Identifies significant issues in particular whether the proposed City Plan will allocate sufficient housing land to meet policy requirements of the SDP and whether it has had regard to NPF3 and SPP 2014.

Comments that the City Plan 2030 Housing Technical Note assertion that it seeks to address housing supply target is an incorrect interpretation of SPP 2014 as it is the housing land requirement that must be met.

Considers there are a number of issues in the approach to identify housing supply target and land requirement. HNDA2 does not form part of the approved development plan and should not form part of the methodology to determine housing supply targets and land requirement. Without a policy basis formed through a strategic development plan, the Plan must continue to meet the housing need and demand that arises within its authority area.

The approved SDP1 remains the extant strategic development plan and the Housing Land Technical Note (May 2014) identifies both the housing supply targets over the period 2009 to 2024 and the housing need and demand to be met from 2024 to 2032. SDP1 sets out the proposed City Plan should adopt an all tenure housing supply target of 52,015 homes

over the period from 2009 to 2032. Note that SDP1 makes no distinction between market or affordable housing.

Refer to examination report of the adopted LDP which concluded that the LDP was required to be consistent with the SDP, that it predated the SPP 2014 approach and it was not appropriate for it to redefine the targets established through SDP1 or to take a different approach and that these would be matters for the next development plan to address.

Consider approach to be contrary to SDP1 and SPP 2014.

Calculate that taking account of completions and demolitions, the remaining housing land requirement over the period 2021 to 2032 is 42,835.

Dr David Houston (0655)

Objects to the volume of housing. Consider this will lead to transport congestion and overload other existing infrastructure including schools, local NHS and social care services. Given the global warming emergency, city congestion should be avoided by developing and indeed reversing decline in other towns and villages in Scotland.

Edinburgh Poverty Commission (0717)

Do not disagree with statement regarding HNDA3 but using only the emerging data from HNDA3 and the inputs to NPF4 in respect of housing land in setting the housing supply targets is inappropriate. Neither process adequately explores and demonstrates real housing need.

Do not support statement at 2.100. If need for affordable housing is obvious then every effort must be made to publicise and demonstrate it and argue for sufficient capacity and resources.

Esk Property LLP (0726), Glenmorrison Group (0600)

SPP 2014 requires consideration of specialist housing provision as part of the Housing Needs and Demand Assessment. SPP 2014 states that where a need is identified, planning authorities should prepare policies to support the delivery of appropriate housing and consider allocating specific sites. There is no specific reference in the Plan to how these matters have been addressed and responded to.

Hallam Land Management (0615)

Aligned with Homes for Scotland and reserve the right to draw on their evidence as part of the LDP scrutiny and examination.

SDP 1 is out of date and provides no breakdown of housing land targets beyond 2024 meaning that there are no approved housing land targets for City Plan covering the period 2022 -32. HNDA2, HNDA3 and NPF4 are not appropriate and there is no formal mechanism for providing an alternative target. Furthermore, these appear to unduly underestimate the demand for market housing in the city thereby potentially constraining future land supply. The level of affordable provision, particularly social rented, is extremely optimistic.

No evidence that the housing supply targets consider wider economic and environmental factors.

Consider the affordable housing target based on difficulty of delivery to be perverse when the full target would be achieved by proportionately ramping up market housing supply. Suggest housing supply target of 61,467.

The Council acknowledge representations at Choices for a higher supply target without fully considering this approach and rule this out with reference to the Review of Housing Needs and Demand in Edinburgh Sept 2020. Situation is confusing and poorly aligned in terms of the LDP process which presented its own numbers through the Choices Report.

Do not agree with HNDA2. Have examined the Councils projections and make alternative suggestions within supporting note- Hallam Land Management Ltd Response to Housing Technical Note. Identifies higher level of market housing resulting in need and demand of 75,948. Consider this reflects evidence from HNDA and performance in terms across all tenures and a more realistic share of needs without bias to the affordable sector reflecting the level of likely public funding, delivery constraints, viability and reality that private development sites will need to drive affordable delivery in line with release of land for a minimum 35% provision.

#### Homes for Scotland (0404)

Submit an Executive Summary -City of Edinburgh Council Proposed 'City Plan' Consultation. Consider that the basic HNDA toolkit methodology has serious shortcomings and consider it would be appropriate to take these into account in establishing the Housing Supply Target. Refer to submitted document Abridged version of HFS April 2021 briefings on NPF4 MATHLRs.

The Council has only planned for 69% of the need and demand identified in HNDA2 and has not provided a good explanation as to why this is appropriate and how the consequences will be dealt with. Whether planning from the evidence base originally established through HNDA1, or the more recent HNDA2 update, note the Council's housing supply target is not aligned with either iteration, despite the Council appearing to want to meet its own need and demand rather than continuing to rely on housing development elsewhere in the city region. The Council has not given a clear set of reasons for its decision to under-plan. Provide an Executive Summary setting out concern that proposed City Plan should be founded on a strong understanding of need and demand and believe that instead the Plan is founded on not releasing any further greenfield land for housing irrespective of implications.

Makes reference to submitted report The Economic and Social Benefits of Home Building in Scotland 2016, which highlights issues in the gap between housing need and supply. Considers that limiting development opportunities risks limiting the capacity for post-pandemic recovery and exacerbating existing economic and social problems.

Raise concerns around HNDA3 methodology.

#### Inverdunning (Hatton Mains) Ltd (0427)

Submit a supporting document Representation to Proposed (Edinburgh) City Plan 2030 Supporting Document & Appendices. Consider that the Plan meets less than half of the net HNDA2 affordable demand between 2021-32. There is scope for increased supply through affordable housing policy (at 35%) on additional mixed-tenure sites which requires an increased overall housing and requirement. Affordable delivery can be via private housebuilders through range of unsubsidised tenures so it not reliant on capacity of Council or registered social landlord build programmes or grant funding. The completion of around 16,000 affordable homes between 2017-27 fall short of the 20,000 Council commitment figure for this period. The Plan should reflect that the affordable housing target is in excess of the council commitment.

Proposes two options to address the discrepancy between affordable housing need and target. Firstly, an adjustment based on increasing affordable housing target as set out which would require an increased market housing target to deliver affordable on a pro-rata basis. This option results in a large residual shortfall in target versus proposed supply. The second option would be to utilise the Council's proposed NPF4 minimum housing land requirement as this accords with latest projection for a set 10 year period. Considers that both options result in a significant shortfall in housing allocations based upon an assessment of deliverability of proposed plan allocations and additional sites with the option of new settlements should be included.

#### Juniper Green & Baberton Mains Community Council (0306)

Strongly agree that the greatest need is for affordable housing. Note with concern that plan states on page 28 "It is not realistic to set a housing supply target which provides in full for the need for affordable housing". Developers have found ways to pay unrealistically low commuted sums to avoid providing this accommodation and must be legally obliged to pay the full sum and provide the accommodation. Not in a position to judge the accuracy of the housing supply target calculation, but strongly request is reviewed as soon as 2022 Census results become available.

#### Leith Central Community Council (0614)

Ask "what is the Housing Supply target for Leith?"

#### Mactaggart & Mickel Homes Ltd (0312)

HNDA2 is dated 2016 or thereabouts and it is considered that a new HNDA should have been provided to support and inform the Proposed City Plan 2030. Whilst a HNDA3 is being prepared, it is understood that this has not been finalised to date. The Plan is considered non-compliant with SPP 2014, which states at paragraph 119 "Local development plans in city regions should allocate a range of sites which are effective or expected to become effective in the Plan period to meet the housing land requirement".

#### Mark Ockendon (0419)

Objects to the housing supply target as considers no growth is required and states that in relation to the higher minimum figure considered appropriate by the Council that a specific consultation with local residents should be conducted rather than councillor's views. Considers it nonsense that the public sector cannot deliver the affordable housing requirements itself and the Council should have more ambition.

Melford Developments Ltd (0308)

Not convinced that the HNDA and associated assessments are competent as different figures appear to be unreliable and therefore not credible. The Plan figures do not represent full need and demand requirements.

Mr T Klan (0307)

Amend Aim 6 to: 'Developing land to fully meet Edinburgh's housing needs over the next decade and securing a minimum of 35% affordable housing contribution from new developments across the city.'

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Note and welcome reference to the work undertaken to establish a Minimum All-Tenure Housing Land Requirement for draft NPF4. Note that the proposed plan was published prior to draft NPF4 being published, therefore, paragraphs 2.104 and 2.105 do not reflect the up to date position as contained within draft NPF4. Page 28 Paragraphs 2.104 and 2.105 should reflect that the Initial Default Estimates provided to local authorities were a starting point for local consideration and to enable local input and were in general, a statistical and policy neutral figure to build upon. The estimates were expected to see increase through local input that took into account public and private sector ambitions to support growth in housing provision. The Initial Default Estimates were not necessarily the estimates that were expected to be included within draft NPF4.

Paragraph 133 of SPP 2014 states local development plans should identify suitable sites for Gypsy/Travellers and Travelling Showpeople if there is a need. It is unclear from the Plan and associated background documents whether this need has been considered and if a need was identified. Draft NPF4 also states that diverse needs and delivery models should be taken into account across all areas, as well as allocating land to ensure the provision of accommodation for Gypsy/Travellers and Travelling Showpeople.

To meet the requirements of paragraph 132 of SPP 2014 which states 'as part of the HNDA, local authorities are required to consider the need for specialist provision that covers accessible and adapted housing, wheelchair housing and supported accommodation, including care homes and sheltered housing the Plan should clarify what specialist housing need, if any, was identified as part of the HNDA and what the Plan intends to do to support the delivery of other specialist housing, if a need was identified. Due regard should also be given to the requirement, published in Local Housing Strategy guidance, to set targets for wheelchair accessible housing across all tenures. Where a need is identified, planning authorities should prepare policies to support the delivery of appropriate housing and consider allocating specific sites'.

Draft NPF4 also states that an equalities led approach to addressing identified gaps in provision should be taken and it is unclear from the proposed plan and associated background documents whether this need has been considered and if a need was identified.

Tarmac (0244)

Aligned with Homes for Scotland and reserve the right to draw on their evidence as part of the LDP scrutiny and examination. Submit a supporting document Tarmac Response to Housing Technical Note, Rick Finc Associates.

SDP1 is out of date and provides no breakdown of housing land targets beyond 2024 meaning that there are no approved housing land targets for City Plan covering the period 2022 -32. HNDA2, HNDA3 and NPF4 are not appropriate and there is no formal mechanism for providing an alternative target. Furthermore, these appear to unduly underestimate the demand for market housing in the city thereby potentially constraining future land supply. The level of affordable provision, particularly social rented, is extremely optimistic.

No evidence that the housing supply targets consider wider economic and environmental factors. Consider the affordable housing target based on difficulty of delivery to be perverse when the full target would be achieved by proportionately ramping up market housing supply.

The Council acknowledge representations at Choices for a higher supply target without fully considering this approach and rule this out with reference to the Review of Housing Need and Demand in Edinburgh, 2020. Situation is confusing and poorly aligned in terms of the LDP process which presented its own numbers through the Choices Report.

#### Taylor Wimpey and Hallam Land Management Ltd (0603)

Refers to Taylor Wimpey's submission, Housing Supply Target and Housing Land Requirement Assessment, Holder Planning, December 2021 in respect to the housing land requirement which demonstrates that the targets set out in City Plan 2030 fall substantially short of reflecting the City's full housing need and demand set out in HNDA2 as it seeks to meet just 69% of need and demand, a shortfall of 25,577 homes in the period to 2032.

#### The Stoddart Family (0749)

Consider that a new HNDA should have been provided to support and inform the proposed City Plan 2030. Support the position of Homes for Scotland in terms of their objections raised to the proposed plan.

#### Wright PDL (0078) Steve Loomes (0767)

City Plan is informed by numbers that do not fully take account of the real need and demand. Consider there are shortcomings of the default HNDA methodology that would be appropriate to consider in setting the housing supply target. Refer to Homes for Scotland paper distributed to local authorities and the Scottish Government in Spring 2021, in relation to the emerging housing numbers for NPF4.

Whether planning from the evidence base originally established through HNDA1, or the more recent HNDA2 update, notes the Council's housing supply target is not aligned with either iteration despite the Council appearing to want to meet its own need and demand rather than continuing to rely on housing development elsewhere in the city region. Plan only provides for 69% of need and demand identified in HNDA2 with no clear reasons.

Raise concerns regarding HNDA3. The review of the most recent HNDA suggests household formation may be lower in the future than previously predicted. This proposition is based in incomplete evidence and fails to grapple with the full range of need and demand for homes in the city. If City Plan doesn't plan to meet all the demand that exists, there is a significant risk that prices will continue to increase as a consequence.

## **Housing Land Requirement**

Archie Clarke (0003)

20% generosity is a ridiculously high figure, would lead to land blight and should be reduced to 5% and only when the accommodation built and in occupation reaches 3% should the figure be revisited. The 25% 'flexibility allowance' mentioned in paragraph 2.104 appears to further increase this inflated figure.

BDW Trading (0350), BDW Trading (0678), Murray Estates (0197), Persimmon Homes (0495, Robertson Residential (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

Refer to Housing Supply Target and Housing Land Requirement Assessment, Holder Planning, December 2021. Note that the Plan is being prepared in an unstable policy and legislative context. Note that SDP1 and the Housing Land Supplementary Guidance documents were prepared before SPP 2014 and so do not include housing land requirements with a generosity included. Note that they do set out housing requirements which have been considered equivalent to housing supply targets at subsequent LDP examinations. Note that beyond 2024 a "likely" housing requirement is identified for the SESplan region as a whole for the 2024-32 period of 47,999 houses, but not expressed as a number that requires to be achieved, is not broken down by Council area and it is based on HNDA1, which has been superseded. Consequently, the Plan has no prescribed housing land requirement which it is to be consistent with. Question in this context if the Plan can set a housing land requirement and be consistent with the approved SDP.

The City Plan 2030 and Housing Technical Note refer to NPF4 minimum housing land requirements and preliminary results from HNDA3. The Council proposed a minimum 10-year housing land requirement of 48,125 which is notably higher on an annualised basis than the proposed City Plan housing land requirement of 44,293 (4,027dpa) over 11 years.

High generosity margin is not a substitute for a demonstrably deliverable housing land supply which the Plan fails to provide. Consider the most reasonable strategy to seek to meet the HNDA2 housing need and demand in full setting a housing supply target of 62,488. Suggest this would require a rethink of the spatial strategy and that it may be appropriate to review the generosity margin.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Refers to submitted Development Strategy Statement. HNDA2 should not form part of the methodology for determining the requirement. Note that the Council has adopted a

generosity allowance of 20% and taking this into account the Plan should identify a housing land requirement of 62,418 homes to be delivered over the period to 2032.

In accord with SPP 2014 the Council must first establish its housing land requirement before seeking to address the manner in which it will be met. Housing completions are required to be subtracted from the housing land requirement not the estimates of housing need and demand or housing supply target as proposed in the City Plan Housing Technical Note.

Refer to SESplan Housing Land Technical Note (May 2014) which establishes that completions; demolitions; effective land supply; constrained sites; and windfall should contribute to establishing whether the housing land requirement should be met. Taking account of completions and demolitions identify a remaining housing land requirement over the period 2021 to 2032 of 42,835.

Dr Helen Forrest (0315)

Extremely concerned about the continuing housing development in Edinburgh. Many of the new builds are bought for letting purposes and very little social housing is available. At a time when there is known to be no likelihood of native growth in population and hasn't been for many years, all population growth will be from outwith Scotland.

Hallam Land Management (0615) Tarmac (0244)

No explanation for generosity allowance of 20%. Given population projections, household formation and the strength of the market, could be higher at 25%.

The housing land requirement within the Plan is flawed in that it underplays the need and demand in the city and overestimates the quantum of land which can come forward over the Plan period, it will not meet demand in full or maintain a generous supply of land for housebuilding.

Inverdunning (Hatton Mains) Ltd (0427)

Housing land requirement and housing land supply should be amended based on deliverability assessment of City Plan sites. Propose two options set out in Representation to Proposed (Edinburgh) City Plan 2030 Supporting Document & Appendices. Firstly, meeting a higher proportion of the affordable housing demand, and secondly utilising the Council's proposed minimum all-tenure housing land requirement proposed to the Scottish Government as part of NPF4. Both options result in a significant shortfall in housing allocations based upon an assessment of deliverability. Require additional site to be brought forward and the spatial strategy option of new settlements should be included, in line with existing SPP.

Reference at 2.16 of plan to draft NPF4 minimum housing land requirement figures is not matched by reference to housing land requirements in associated housing section and there is a discrepancy between reference to draft NPF4 figures and the figures utilised in tables on pages 28-29 of the plan.

Juniper Green & Baberton Mains Community Council (0306)

Consider that flexibility allowance of 25% for calculating housing land needed appears excessive and should be reduced to perhaps 5% and then revisited only when the approved housing has been built and fully occupied. The relationship to section 2.104 of the table on page 29, showing a flexibility allowance of 56%, is not clear and are unsure of the purpose of the table.

The Association for the Protection of Rural Scotland (0334)

Support the allocation of land, well above the amount required by the housing supply targets and the minimum all tenure housing land requirement in draft NPF4. Express disappointment that circumstances require the allocation of larger amounts of land for market housing in order to achieve a target amount of affordable housing which seems at odds with policies to use land and resources more efficiently.

**Modifications sought by those submitting representations:**

**Housing Supply Target**

Archie Clarke (0003)

No modification specified.

Barratt David Wilson Homes (0677)

Aligned with Homes for Scotland response.

BDW Trading (0350), BDW Trading (0678), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

Amend Table on p. 28 City Plan Housing Land Requirement 2021-2032 to meet HNDA2 housing need and demand in full equating to a Housing Supply Target of 62,488.

Remove anticipated 960 open market shared equity dwellings 2021-2027 from the calculation of the housing supply target.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

No modification specified.

Dr David Houston (0655)

No modification specified however infers there should be no growth.

Edinburgh Poverty Commission (0717)

Implies plan should aim to meet full need for affordable housing.

Esk Property LLP (0726)

Identify need for specialist housing provision.

Consider allocation of specific sites.

Glenmorrison Group (0600)

Amend paragraph 2.2 criterion 6 (page 8) to:  
Delivering land to meet Edinburgh's housing needs over the next decade... including sufficient land to make provision for the specific needs of elderly people

Hallam Land Management (0615)

Aligned with Homes for Scotland response.

Suggest Alternative HNDA scenario.

Positive Scenario	2012-2032	Completions 2012-21	Need / Demand 2021-32
Social Rent	36,969		
Sub- Market Rent	12,944		
Total Affordable	49,913	6,984	42,929
Private Rent	15,762		
Owner Occupied	29,470		
Total Market	45,232	12,213	33,019
Total Housing	95,145	19,197	75,948

Suggest total all tenure Housing Land Supply Target of 58,000 with 28,500 being affordable.

Amend Housing Supply Targets as follows:

City Plan Housing Supply Targets	2021-32
Market Demand 2012-32	45,232
Completions 2012-21	12,213
Market Target 2021-32	33,019
Affordable Target 2017-27	20,000
Affordable Target 2027-32	2,500
New Build Completions 2017-21	3,306
Open Market / Shared Equity 2017-21	882
Open Market / Shared Equity 2021/32	
New Build Affordable Target 2021-32	28,448
Total Housing Supply Target 2021- 32	61,467

Revise paragraph 2.16 on minimum housing land to reflect amended housing land supply and requirement.

#### Homes for Scotland (0404)

No specific change suggested but consider it would be appropriate to take into account shortcomings of HNDA methodology in calculating housing supply target.

#### Inverdunning (Hatton Mains) Ltd (0427)

Amend line 2 of Introduction 1.4: "City Plan 2030 will allow for affordable homes targets to be increased to address the significant level of assessed demand, which will include a higher contribution via new mixed tenure housing land allocations."

Amend line 2 of para 2.101 "The affordable housing supply target set out will exceed the 2017 Council commitment and ensure identified demand is more fully addressed."

Amend para 3.22 to reflect affordable housing target to be in excess of current Council commitment.

Amend Housing supply target to:

Option 1:

Market demand 2012-2032 (HNDA2-upper)	41,166
Completions 2012-2021	12,213
Market Target 2021-2032	28,953
Affordable Demand 2012-2032 (HNDA2 – mid)	49,913
Completions 2012-2021	6,984
Affordable Net Demand 2021-2032	42,929
SHIP Forecast 2021-2027	11,342
Rolled forward SHIP Forecast 2027-2032	9,451
Additional AHP Contribution	4,322
Affordable Target 2021-2032 (58% demand)	25,115
Total Housing Supply Target 2021-2032	54,068

Option 2:

Total All-Tenure Housing Supply Target 2022-2032	38,500
--	--------

No modification specified.

The Stoddart Family (0749)

A new HNDA should have been provided to support and inform the plan.

Support the position of Homes for Scotland in terms of their objections raised to the proposed plan.

Wright PDL (0078), Stephen Loomes (0767)

Implies that full need and demand should be met.

**Housing Land Requirement**

Archie Clarke (0003)

Reduce 20% generosity figure to 5% and only when the accommodation built and in occupation reaches 3% should the figure be revisited.

BDW Trading (0350), BDW Trading (0678), Murray Estates (0197), Robertson Residential (0490), Persimmon Homes (0495), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

Review generosity margin.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Amend housing land requirement as follows:

	2021-2032	
Housing land Requirement	62,418	
Housing Completions	23,651	<i>minus</i>
Demolitions	4,068	<i>plus</i>
Remaining HLR	42,835	<i>equals</i>

Dr Helen Forrest (0315)

No modification specified.

Hallam Land Management (0615) Tarmac (0244)

Implies increasing generosity allowance to 25%

Inverdunning (Hatton Mains) Ltd (0427)

Implies removal of reference to NPF4 figures.

Amend housing land requirement for option 1 to 67,585.

	Total	Market	Affordable
Total Housing Supply Target 2021-2032	54,068	28,953	25,115
Generosity Allowance 25%	13,517		
Housing Land Requirement	67,585		

Amend housing land requirement for option 2 to 48,125.

	Total	Market	Affordable
Total Housing Supply Target 2021-2032	38,500	Tbc	Tbc
Generosity Allowance 25%	9,625		
Housing Land Requirement	48,125		

Amend para 2.103

“The rate at which housing sites are developed is constrained by a variety of factors including market conditions. In order to ensure that a generous supply of land for housing is provided, SPP states that the Housing Supply Target should be increased by a margin of 10 to 20%, depending on local circumstances to establish the housing land requirement. However, the Proposed National Planning Framework 4 proposes 25% generosity allowances for urban areas including Edinburgh and this is reflected in the Proposed City Plan 2030.”

Juniper Green & Baberton Mains Community Council (0306)

Reduce generosity allowance of 25% to 5% and revisit only when the approved housing has been built and fully occupied.

The Association for the Protection of Rural Scotland (0334)

No modification specified.

## Summary of responses (including reasons) by planning authority:

### Housing Supply Targets

Barratt David Wilson Homes (0677), BDW Trading (0350), BDW Trading (0678), CALA Management Ltd (0465), Edinburgh Poverty Commission (0717), Hallam Land Management (0599), Hallam Land Management (0615), Homes for Scotland (0404), Inverdunning (Hatton Mains) Ltd (0427), Mactaggart & Mickel Homes Ltd (0312), Melford Developments Ltd (0308), Miller Homes Limited (0649), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198), Steve Loomes (0767), Stewart Milne Homes (0118), Taylor Wimpey (0200), Tarmac (0244), Taylor Wimpey and Hallam Land Management Ltd (0603), The Stoddart Family (0749), Wright PDL (0078)

The housing supply target is a policy view of the number of homes to be delivered in Edinburgh over the period of the Plan. The housing supply targets have been set using a methodology compliant with SPP 2014 and related guidance. The methodology is set out Section 3 of the City Plan Housing Technical Note (CD018) and additionally the first part of the Housing Study (CD026) produced for the MIR.

SPP 2014 (CD096) requires that the LDP sets the housing supply target, split between affordable and market housing based on evidence from the Housing Need and Demand Assessment (HNDA). The target should be reasonable, should properly reflect the HNDA estimate of housing demand in the market sector, and should be supported by compelling evidence. In Edinburgh the housing supply target would normally be set by the SDP. The approved SDP1 2013 (CD087) provides an all-tenure housing supply target to 2024. Following rejection of SDP2 (CD088) which would have covered the period of City Plan 2030 there is no housing supply target at local authority level to cover the entire period of City Plan.

At the time of the proposed plan's preparation the most up to date assessment of future housing need and demand for City of Edinburgh over the City Plan period was the Housing Need and Demand Assessment (HNDA2) (CD094) carried out to inform the Proposed SDP2 2016. HNDA2 was prepared in line with Scottish Government's HNDA Guidance and determined to be robust and credible by the Scottish Government. While the Proposed SDP2 2016 (CD088) was rejected by Scottish Ministers, the Report of Examination of SDP2 (CD155) and subsequent rejection by Scottish Ministers did not question the validity of HNDA2. HNDA2 forms the basis to determine how much of the remaining regional housing supply target from SDP1 (CD087) should be met within Edinburgh.

HNDA2 set out three scenarios Steady Recovery, Wealth Distribution and Strong Economic Growth. In 2013 a study, Edinburgh City Region Economic Review, Economic Futures 2011 (CD092), was carried out to assist SESplan in selecting the most appropriate scenario upon which to base its housing supply targets. The study concluded that either of the two lower forecasts of need/demand (steady recovery or wealth distribution) may be suitable but that the higher scenario (strong economic growth) was unrealistic. The wealth distribution scenario has been used to form the basis of the City Plan housing supply target.

HNDA2 (CD094) gives estimates of affordable housing need and demand for market housing. Demand for market housing includes the demand for owner occupied homes and the demand for private rented homes. Affordable housing need is defined as the need for homes that cannot be met through the open market – that is social rented homes and homes for rent below market rates.

### Housing Demand

The housing supply target set out in section 3 of the City Plan Housing Technical Note, September 2021 (CD018), and page 28 of the proposed plan seeks to meet the demand for market housing over the Plan period in full. Demand for market homes is the total demand for owner occupied homes and private rented homes. Over the period 2012 to 2032, the HNDA2 (CD094) estimate of demand for market homes was 31,772. Over the period 2012 to 2021, there have been 12,213 market homes completed (sourced through the annual housing land audit and completions programme). Deducting this figure from the total estimate of demand for 2012 to 2032 yields an estimate of demand for the period 2021 to 2032 of 19,559 homes. This estimate of total demand for market housing forms the Housing Supply Target for market homes set out in Table 2 of the City Plan Housing Technical Note, September 2021 (CD018) and the table on page 28 of the Plan.

### Affordable Housing Need

HNDA2 (CD094) estimated the need for affordable housing for the period 2012 to 2032 to be 49,913 homes. This includes need for social rented homes and homes for rent below market rate. Deducting affordable completions for the period 2012 to 2021 results in an estimate of housing need for the period 2021 to 2032 of 42,929 affordable homes.

In setting housing supply targets, SPP 2014 (CD096) requires planning authorities to take into account “wider economic, social and environmental factors, issues of capacity, resource and deliverability”. Delivery of affordable housing is largely determined by availability of funding and is also dependent to a significant extent upon private sector housing delivery and the affordable housing policy of the development plan. The Council Business Plan 2017-2022 (CD085) set out a commitment to develop a programme to deliver at least 10,000 social and affordable homes over the following five years, with a plan to build 20,000 by 2027.

It would not be realistic to set a target which provides in full for the need for affordable housing identified in HNDA2. It would not be possible to deliver that amount of affordable housing within the period of the Plan with regard to the issues of capacity and resources. Delivery of affordable housing is largely determined by availability of funding. The Council’s Strategic Housing Investment Plan (SHIP) 2022-2027 (CD057) sets out the delivery plan for new affordable homes. Around half of the sites included in the SHIP are in the control of private sector landowners and developers. Delivery of affordable housing is, therefore, also dependent to a significant extent upon private sector housing delivery and the affordable housing policy of the development plan. Over 50% of the current land supply (legacy sites and other sites in the current land supply) are already committed to provide affordable housing under the adopted Edinburgh Local Development Plan (CD039) affordable housing policy requirement of 25%.

Table 2 of the City Plan Housing Technical Note, September 2021 (CD018) sets out the housing supply targets taking account of actual completions for market housing and

affordable housing, including Open Market Shared Equity. Open Market Shared Equity are existing homes currently in the market sector that are purchased under shared equity arrangements. These contribute toward meeting the Council commitment to affordable housing and are included in the calculation to determine the target for new build affordable housing.

The affordable housing supply target has been set at 17,350 for the period 2021 - 2032. This will meet the Council Commitment in full and acknowledges that affordable housing will continue to be delivered beyond 2027. It takes account of the constraints on delivery of affordable housing and the reliance on market housing to provide affordable housing.

## **Conclusion**

There is no justification for a higher supply target than set out in HNDA2 (CD094). A Review of Housing Need and Demand in Edinburgh (CD019) was carried out in September 2020 by consultants Indigo House. The study included a review of the HNDA2 figures based on the most recent Household Projections since HNDA2, interpretation of HNDA2 in Choices for City Plan 2030 (CD022), along with other available evidence on need and demand. The study also examined the likely impact of the current crisis/recession on demand for affordable housing. As set out above the HNDA2 provided a range of estimates of housing need and demand based on different assumptions about the local economy and possible household growth. The study found the medium and low scenarios to be the most likely. The study concluded that the City Plan housing supply target set out in Choices was reasonable when considered against the reviewed HNDA2 estimates of need and demand.

The local authorities within South East Scotland area have jointly prepared Housing Need and Demand Assessment 3 (HNDA3) (CD095) for South East Scotland. It was determined to be robust and credible by the Scottish Government on 28 July 2022. HNDA3 estimates for need and demand for new housing continue to show a strong need for affordable housing compared to market housing. The estimate of demand for market housing is lower than that estimated in HNDA2. The all tenure housing supply target in the Plan is higher than the HNDA3 all tenure figure. This suggests that the housing supply target is more than enough to meet need and demand.

Further detail on the methodology for setting the housing supply target for affordable homes is set out in paragraphs 3.13 to 3.22 of the City Plan Housing Technical Note, September 2021 (CD018). A Review of Housing Need and Demand in Edinburgh (CD019) concluded that the housing supply targets set out in Choices were reasonable when considered against the reviewed HNDA2 estimates of need and demand. The housing supply targets comply with the requirements of SPP 2014 (CD096) and are considered deliverable over the Plan period. **No modification proposed.**

Archie Clarke (0003), Juniper Green & Baberton Mains Community Council (0306)

Population projections form part of the HNDA methodology. HNDA2 (CD094) forms the basis of the housing supply target and has signed off as been robust and credible by the Scottish Government. It is necessary to utilise projections to allow forward planning and it not considered appropriate to withhold the Plan process until such time as Census 2022 results are published. **No modification proposed.**

Dr David Houston (0655)

Edinburgh's population is forecast to grow. The Plan is required to meet the housing needs to support this growth. Policies are set out to protect residential amenity and to ensure that any community infrastructure required as a result of development is provided. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

It is not necessary to amend line 2 of para 2.101 or para 3.22. As set out above it is not realistic to set a housing supply target which provides in full for the need for affordable housing identified in the HNDA2 (CD094) as it would not be possible to deliver the amount of affordable housing within the period of the Plan with regard to the issues of capacity and resources. **No modification proposed.**

It is not necessary to amend line 2 of Introduction 1.4. As set out above the affordable target has been set at a level that is considered to be deliverable. Allocating more land for mixed tenure housing to address the affordable demand would not be likely to increase the likelihood of more affordable housing provision due to limitations on funding and the capacity of market developers to open up sites and allow for additional affordable supply. **No modification proposed.**

Leith Central Community Council (0614)

SPP 2014 (CD096) requires only that housing supply targets are set at local authority level. **No modification proposed.**

Mark Ockendon (0419)

SPP 2014 (CD096) requires that the LDP sets the housing supply target, split between affordable and market housing based on evidence from the HNDA. HNDA2 (CD094) identifies a need for housing based upon a growing population. **No modification proposed.**

Mr T Klan (0307)

It would not be realistic to set a target which provides in full for the need for affordable housing identified in HNDA2 (CD094) as it would not be possible to deliver that amount of affordable housing within the period of the Plan with regard to the issues of capacity and resources. **No modification proposed.**

**Specialist Housing Need**

Esk Property LLP (0726), Glenmorrison Group (0600), Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

SPP 2014 (CD096) requires consideration of specialist housing provision as part of the Housing Need and Demand Assessment. It states that where a need is identified, planning authorities should prepare policies to support the delivery of appropriate housing and consider allocating specific sites. HNDA2 (CD094) has been assessed as robust and credible by the Scottish Government. It does not provide a separate assessment of need

for specialist housing. This is included within the overall assessment of need and demand.

There is limited availability of robust data on the extent and nature of provision and amount and unmet housing need for specialist housing and housing for older people. There is therefore no basis on which to quantify need.

Instead, delivery of specialist housing and housing for older people is supported in City Plan policies. Policy Hou 3 Mixed Communities requires that the mix of housing provided should respond to the differing needs of residents, including older people and those with special needs. The Council's Edinburgh Design Guidance (CD047) supports Scottish Government's Housing for Varying Needs Standards which sets good practice on design of housing to achieve flexibility and suitability for people of all abilities and is the standard which applies to all RSL development. Policy Hou 3 is dealt with under Issue 24: Mixed Communities and specific policy for specialist needs is dealt with under Issue 26: Housing Policies. **No modification proposed.**

Paragraph 133 of SPP 2014 states local development plans should identify suitable sites for Gypsy/Travellers and Travelling Showpeople if there is a need. In producing HNDA2 (CD094) the SESplan Core Housing Market Partnership considered that there was a lack of up to date information and data relating to Gypsy/Travellers and their accommodation needs nationally making it difficult to assess housing need. In the absence of any demonstration of need the City Plan Policy Hou 9 Sites for Gypsies, Travellers and Travelling Showpeople provides flexibility to deal with any evidence which may emerge during the lifetime of the plan. **No modification proposed.**

### **HNDA3**

Barratt David Wilson Homes (0677), BDW Trading (0350), BDW Trading (0678), CALA Management Ltd (0465), Edinburgh Poverty Commission (0717), Hallam Land Management (0599), Hallam Land Management (0615) Homes for Scotland (0404), Miller Homes Limited (0649), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198), Steve Loomes (0767), Stewart Milne Homes (0118), Tarmac (0244), Taylor Wimpey (0200), Wright PDL (0078) The Stoddart Family (0749)

The local authorities within South- East Scotland area have jointly prepared Housing Need and Demand Assessment 3 (HNDA3) (CD095) for South East Scotland. Estimates of future need and demand for new housing under the default scenario are set out in the City Plan 2030, Housing Technical Note, September 2021 (CD018). These have been provided for information and do not form part of the methodology for calculating the housing supply target for City Plan 2030. The methodology for HNDA3 is set by Scottish Government. HNDA3 was determined robust and credible by the Scottish Government in July 2022. **No Modification proposed.**

### **NPF4 Housing Land Figures**

Archie Clarke (0003), BDW Trading (0350), BDW Trading (0678), CALA Management Ltd (0465), Edinburgh Poverty Commission (0717), Hallam Land Management (0615) Hallam Land Management (0599), Inverdunning (Hatton Mains) Ltd (0427), Juniper Green & Baberton Mains Community Council (0306), Miller Homes Limited (0649), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198),

Stewart Milne Homes (0118), Taylor Wimpey (0200), Scottish Government - Planning and Architecture Division - Development Plans Team (0309), Tarmac (0244)

The City Plan 2030 Housing Technical Note, September 2021 (CD018) sets out the proposed methodology, issued by Scottish Government, to calculate the amount of housing land that should be allocated as a default minimum requirement in Local Development Plans. This has been provided for information and does not form part of the methodology for calculating the housing supply target for City Plan. There is no discrepancy between the figures set out on page 28 and 29 of the proposed City Plan which set out the housing land requirement and housing land supply and paragraph 2.16. Paragraph 2.16 is a reference to the publication of NPF4 housing land figures and does not suggest that these form any part of the methodology for calculating the housing land requirement for City Plan. The methodology is set by Scottish Government. **No modification proposed.**

### **Housing Land Requirement**

BDW Trading (0350), BDW Trading (0678), CALA Management Ltd (0465), Hallam Land Management (0615), Hallam Land Management (0599), Inverdunning (Hatton Mains) Ltd (0427), Miller Homes Limited (0649), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198), Stewart Milne Homes (0118), Tarmac (0244), Taylor Wimpey (0200), The Association for the Protection of Rural Scotland (0334)

The housing supply target is a policy view of the number of new homes to be delivered over the Plan period. The housing land requirement is the amount of land required to ensure that the target can be met. SPP 2014 (CD096) states that in order to ensure that a generous supply of land for housing is provided the housing supply target should be increased by a margin of 10 to 20% to establish the housing land requirement. It allows for the extent of the margin to be set dependent on local circumstances. The housing supply target and housing land requirement are set out on page 28 of the proposed plan. The methodology for setting the housing supply target is detailed in Section 3 of the City Plan 2030 Housing Technical Note, September 2021 (CD018). Section 4 shows how the housing supply target is used to set the housing land requirement.

The City Plan housing land requirement adds 20% to the housing supply target to ensure that there is sufficient housing land for the target to be met. This is the upper end of the range set by SPP 2014 (CD096) paragraph 116 and reflects the spatial strategy of the plan. The sources of land to meet the housing land requirement are detailed in the table on page 29 of the proposed plan. This identifies land supply 50% higher than the housing supply target. Land supply is dealt with under Issue 20: Assessment of Housing Land Supply.

It is accepted that the draft NPF4, November 2021 (CD099) provides a higher generosity figure of 25%. However, NPF4 has not yet been finalised and as such the figure is consistent with current policy. The City Plan housing land requirement is similar to the Minimum All-Tenure Housing Land Requirement set out in draft NPF4. Additionally, as noted above, the Plan provides additional generosity though the land supply which is in excess of 50%. 20% generosity is considered to be appropriate and there is no need to review the generosity margin. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306), Archie Clarke (0003)

The housing land requirement adds 20% to the housing supply target to ensure that there is sufficient housing land for the target to be met. This is the upper end of the range set by SPP 2014 (CD096). Reference to 25% flexibility allowance at paragraph 2.104 relates to the methodology for calculating the amount of housing land that should be allocated in NPF4 (CD099) as a default minimum requirement. This has been provided for information and does not form part of the methodology for calculating the housing supply target for City Plan. **No modification proposed.**

Dr Helen Forrest (0315)

The Council considers the population of Edinburgh is to grow and therefore additional housing is required. The Council is seeking to provide affordable housing to meet Edinburgh's needs. The Council sets out its position in detail in its responses in Issue 23: Affordable Housing. **No modification proposed.**

**Reporter's conclusions:**

**Reporter's recommendations:**

Issue	20 Assessment of Housing Land Supply

Provision of the development plan to which the issue relates:	This section of the Plan sets out the housing land supply to meet the housing land requirement.	
Planning authority's summary of the representation(s):		
<div>Archie Clark (0003)</div> <div>Questions what legacy sites are.</div> <div>Barratt David Wilson Homes (0678)</div>		

Affordability factors will be impacted by restricting the available land and restricting the supply of viable greenfield land, which will reduce the volume of housing delivered across all tenures, thereby exacerbating existing affordability issues.

Aspiring to enable people to live in a home they can afford is a misleading statement. People only live in homes they can afford, even if these homes are not suitable to meet their needs. Plan will exacerbate the existing affordability crisis and under-provides for the demand for private homes.

Lack of information presented on land supply does not allow for a precise understanding. There is no definitive list of sites counted towards meeting the land supply, there is no programming of sites showing capacity is expected to deliver over the Plan period, no schedule of legacy sites and capacities, no explanation of why sites are considered effective/deliverable, housing allocations at IBG & Bioquarter and three smaller sites were not included in the Main Issues Report and 50 of the new allocations were assessed as being unsuitable for development at the Main Issues Report stage and there is no explanation of the Council's changed position.

Position supported by a Housing Land Supply Assessment, Holder Planning, December 2021 which finds that the housing land supply can only reasonably be expected to deliver around half of the homes the Plan claims. It shows that the Council's own, non SPP compliant and deficient Housing Land Requirement (44,293) will be missed with a shortfall of 13,150 to 16,350 homes. When compared with a Housing Land Requirement which reflects full housing need and demand in HNDA 2 of around 75,000, the shortfall is in the region of 45,000 homes. Failure to meet housing targets will accelerate housing costs.

Continuing with a spatial strategy where need and demand is not met in full is likely to lead to an uneven distribution of the benefits of Edinburgh's growth. Land supply is inadequate and the Council's justification for its spatial strategy is seriously flawed.

Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Homes for Scotland (0404), Steve Loomes (0767), Wright PDL (0078)

Submit an Executive Summary -City of Edinburgh Council Proposed 'City Plan' Consultation. Consider the Plan fails to provide for an adequate number and variety of opportunities for residential development and the proposed sites present a variety of delivery challenges. The Plan is therefore contrary to SPP 2014, particularly paragraph 110, 119 and it conflicts with para 15.

Strategy of only allocating new brownfield sites and re-allocating employment land is high-risk, lacks resiliency and is inflexible. A blend of brownfield and greenfield allocations would ensure that the housing demand is being met and help to deliver a consistent pipeline of new housing across all tenures year on year. The Council have failed to respond to concerns set out by Homes for Scotland and its members in response to Choices.

Restricting the available land for residential development and the supply of viable greenfield land will reduce housing delivery across all tenures either severely restricting residential development worsening the affordability challenges and/or redirecting development to locations outwith the city boundaries.

Land identified will not be capable of delivering the new homes required within the Plan period. A significant volume of the newly allocated land is active employment land. Brownfield sites often have multiple landowners and may not be financially viable for housing development. Question how the Council have satisfied themselves that the approach is deliverable. Also have availability concerns. Several sites not promoted by the landowner and no evidence of willingness to make them available. Raise concerns with the apparent lack of engagement between the Council and site owners and consider this to be contrary to the 'ownership' test of effectiveness set out in Planning Advice Note 2/2010 (PAN 2/2010). Consider there is a lack of information on methodology for analysing and processing comments previously submitted. No evidence that each site will be deliverable over the Plan period and refer to Holder Planning and Geddes submission which considers that the Plan is only expected to deliver approximately half of the homes allocated for over the Plan period and several hundred businesses would have to be displaced.

Not possible to assess which sites the Council is confident will be delivered in the short or long term as no programming is provided.

An assessment of consequences of shortfall in housing delivery should be carried out and the strategy and allocations revisited prior to Examination. Consider the flaws of the Plan to be significant and question the ability of an Examination to tackle them.

Consider that failure to properly meet need and demand influence some of the issues of affordability and traffic as households have been required to move further afield to find a home which suits their requirements. No evidence that strategy will achieve a city where you do not need a car. Restricting the available supply of well-connected greenfield sites runs directly contrary to achieving goal to become a sustainable and net zero city.

Proposals and policies are included which will restrict opportunities to bring other sustainable sites forward.

Nearly two-thirds of the total households in city live in flatted accommodation and Plan represents an opportunity to re-dress balance through an allocation of a variety of land for development.

BDW Trading (0350), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

Plan fails to set out a spatial strategy which can reasonably be expected to meet the housing land requirement therefore is contrary to SPP policies including paragraphs 30 and 119. Consider there is a lack of attention paid to housing delivery with no programming or definitive list of sites included in the housing land supply contrary to delivery focus in NPF 3 and SPP.

Representation is supported by a Housing Land Supply Assessment, Holder Planning, December 2021 Assessment finds that the Proposed City Plan 2030 housing land supply can only reasonably be expected to deliver around half of the homes the Plan claims with a shortfall of 13,150 to 16,350 homes and note that compared with a Housing Land Requirement reflecting full need and demand in HNDA 2 of around 75,000, the shortfall is in the region of 45,000 homes. Failure to meet housing targets will accelerate housing costs.

Large scale displacement of employment land with no coherent plans for relocation is contrary to the SDP. Greenfield land would need to be released to accommodate the displacement. Evidence base has not weighed up how the disbenefits from allocating additional housing and employment land in the greenbelt have been weighed against the loss of jobs and displacement of business. There is a disconnect between the evidence base and the spatial strategy, it is inconsistent with site assessments at MIR and other reports. Important documents are either not included or have not been made publicly available. Plan is misleading as the impact on employment and housing will be damaging to equality and prosperity. Despite points being raised at MIR stage they appear to have been discounted with no explanation. Question if consultation on land supply was meaningful or effective.

Plan promotes a spatial strategy with little consideration of whether or not it can be delivered. If it were delivered there would be significant negative economic and social consequences. Should the Plan be submitted for Examination ask that a public hearing assesses these matters. Due to shortcomings in evidence base and chosen strategy question whether the Plan should proceed to examination.

The lack of information presented on land supply does not allow for a precise understanding as there is no definitive list of sites counted towards meeting the land supply, there is no programming of sites showing what proportion of the sites' capacity is expected to deliver over the Plan period, no explanation of why sites are considered effective/deliverable, housing allocations at IBG & Bioquarter and three smaller sites were not included in the Main Issues Report and 50 of the new allocations were assessed as being unsuitable for development at the Main Issues Report stage and there is no explanation of the Council's changed position. There is no schedule of legacy sites and capacities. No indication of assumptions of how many homes will deliver over the Plan period. Programming should not be subject to information received from representation as the Plan is supposed to be the settled will of the Council. Limited information is set out on the suitability of sites, many not promoted through earlier stages of the Plan and owners only notified once the Plan was published.

Question whether the 5 housing sites should be allocated until they have been consulted upon and assessed for suitability.

Consider that the reallocation of IBG for predominantly housing is contrary to NPF3.

It is not clear to what extent the Edinburgh Commercial Needs Study: Mixed Use Delivery, December 2020 has informed the approach as it post dates MIR and is not a supporting document to the Proposed Plan. Request sight site assessment breakdown.

Delivery of sites will require step change on current delivery rates and no explanation of how this will be achieved. Threat of widespread CPO is not credible. Many sites already have a favourable policy context for housing therefore allocation is not a policy sea-change.

Calculate an expected delivery of 19,695 homes from the effective supply over the 2021-2032 period. Contribution of constrained sites of 2,140. Provides programming for IBG, Crosswinds and Bioquarter and consider they will deliver 2,400 homes over the Plan period. Provide an assessment of effectiveness and likely delivery for 92 new allocations. Consider delivery of site to be in region of 3,717-6,908 in the Plan period.

This results in a delivery assumption of 27,952-31,143. Consider that as overall supply will only deliver half of Council's assumption that affordable supply would fall short of the Council's affordable housing target.

Identify potential for double counting in the Council's land supply. There is no clear explanation of densities and capacities applied to allocations.

Significant changes required throughout outcomes section of the Proposed City Plan 2030, including the allocation of substantially more deliverable housing allocations.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Submit a Development Strategy Statement - City Plan 2030, Geddes Consulting, that examines methodology and assumptions of the proposed Pplan. Identifies significant issues in particular whether the Proposed LDP will allocate sufficient housing land to meet requirements SDP and whether it has had regard to NPF3 and SPP.

Have significant concerns regarding the selection of sites which appear to rely only on assessment process in the MIR Housing Study and there is no new evidence. Prior to publication of City Plan 2030, the Council should carry out an updated assessment to determine if any of the sites it had determined as unsuitable for housing development before publishing the Proposed LDP are now suitable for development.

Proposed sites are windfall that may or may not deliver over the Plan period. Accordingly, these should be treated as such. Many currently in active use, owned privately and are not subject to any planning intention for other uses.

No programming of housing land supply is provided beyond 2028. Suggest the extrapolated method agreed at all other SESplan LDP Examinations should be adopted.

Programming assumptions for the MIR Housing Study sites do not equate with Council's completions on brownfield sites from 2015 to 2021 which suggest that around 830 homes per annum is achievable.

Proposed LDP anticipates that all sites identified in established housing land supply and all new housing proposals will deliver 55,720 homes by the end of the Plan period however no programming is provided. Assertions set out in Table 7 of the Housing Technical Note are unsubstantiated and therefore invalid. The Council should adopt the only substantive evidence they have set out in the Housing Land Audit and Completions Programme 2021.

Assuming optimistic output from the sites that should be identified to accord with SDP1 and NPF3, the housing land supply identified in the Plan would deliver around 28,011 homes which is 29,417 homes fewer than the 57,428 homes asserted by the Council and may be optimistic based on the use of compulsory purchase powers. In terms of enabling the housing land requirement of 42,835 homes by 2032, a shortfall of at least 14,824 homes emerges. The Council should allocate land on greenfield sites to enable the delivery of at least 14,824 homes by 2032.

Concerned that the Council has introduced 5 sites -H62, H63, H64, H86, H90 that were not identified as part of the Choices in the MIR or assessed for housing development in the MIR Housing Study. Consider these should not be included as they have not been subject to public consultation at a formative stage in the process. Consequently,

participants have been significantly disadvantaged as they have not been able to engage in the way envisaged by Circular 6/2013. Should also consider the implications arising from Gunning Principles.

Accept that H86 Edinburgh BioQuarter has an element of housing development however, the scale of development has been confirmed at 600 homes and not 2,500 homes set out by the Council. Both Proposal H62 Land adjacent Edinburgh Gateway and Proposal H63 Edinburgh 205 are contrary to SDP1 and NPF 3 and cannot be included.

The proposed development strategy will not maintain a five year effective housing land supply at all times over the development plan period to 2032.

Consider no evidence has been set out to demonstrate strategy can be delivered and lack of this information undermines the representation process.

Given the scale of deficiency and inconsistency presented in the Proposed LDP suggest the Council modify and reconsult on its proposed development strategy prior to submission to the Scottish Ministers for Examination. Consider the most appropriate spatial strategy to meet its housing land requirement is a blended approach.

#### Esk Property LLP (0726)

Recognise the importance of developing brownfield land but consider the approach of meeting all of Edinburgh's housing need, including for care and retirement-living type developments, solely on brownfield land to be unrealistic and high-risk and will fail to address housing need and demand during the City Plan period.

Notable that within the Spatial Strategy, no reference is made to the provision of age restricted development and if these uses have been incorporated into overall housing land figures there is a lack of recognition of how this will disadvantage the development of specialist care/housing sector as the land values involved are very different from mainstream housing. Unless there is specific provision made within land allocations for housing, the care and housing for older people sector will not be able to access development opportunities as they cannot pay the same prices for sites as mainstream housebuilders and residential developers.

No evidence to indicate that the effectiveness and deliverability of sites has been considered or subject to a robust assessment. Many of the new housing proposals will fail to meet the test of effectiveness contained within PAN2/2010.

To ensure a deliverable supply of housing land, including for care and retirement living type developments, the Council must consider the release of some land within the green belt.

#### Hallam Land Management (0457)

Over-reliance on brownfield sites will result in a housing land shortfall and compulsory purchase requirements. Several of the housing allocations have not been brought forward by landowners themselves therefore there is no evidence that landowners will be willing to make these sites available for development. Approach avoids exploring legitimate opportunities for green belt / countryside release, puts extra pressure on Council and the housebuilding industry to deliver housing within constrained brownfield sites, fails to meet

requisite housing need and demand, promotes high density brownfield development within city, fails to take account of the changing needs of the housing market and ignores opportunities for phased release of suitable and sustainable greenfield sites. Approach is overly restrictive and lacks the degree of flexibility needed to accommodate wider aspirations. Based on current delivery rates of constrained sites consider that it is not achievable to deliver all constrained sites within plan period.

Julie Robertson (0210)

Consider that knocking down existing businesses for housing, pushes too many businesses out of the localities, making people travel further. Harry Lauder Road areas and Salamander Street have lost many businesses and gained very many new residents, but not sure that these are good quality spaces for living in or have the necessary infrastructure to support such a large change in society.

Hallam Land Management (0615), Tarmac (0244)

Submit a supporting document - City Plan 2030 Proposed LDP Response to Housing Technical Note. Consider that sustainability, delivery and affordability factors will be affected by strategy and policies. Reserve the right to defer to evidence provided by Homes for Scotland and Scottish Property Federation as part of their representation.

Consider that the Plan suppresses demand through its spatial strategy. Insufficient land is provided. There is little evidence that housing policies in City Plan will provide required housing in mixed-use sustainable communities where there is infrastructure capacity and that this provision can be part of a sustainable 20-minute neighbourhood.

Consideration of re-use and redevelopment is not sufficiently robust or sound enough to rule out greenfield land. There is no objective evidence of optimising existing available infrastructure or resource capacity. No land has been used adjacent to settlements to the detriment of potentially sustainable sites. Development on the proposed sites would have negligible amenity or economic benefits by introducing high density development and dispersing local jobs.

Express doubt regarding the feasibility, viability and deliverability of the sites. Consider that overestimation of housing sites, capacities and delivery has restricted the need for additional sites. High level of generosity in housing land supply of 56% makes the methodology for calculation to be dubious irrespective of the policy drivers and spatial strategy and re-enforces the inherent weakness in allocating land that is not necessarily available for development and will take time to assemble and market.

Consider established supply for 33,000 homes to be an overestimate as a proportion of the sites identified in the Housing Land Audit and Completions programme 2021 are unlikely to come forward during the Plan period. Delivery through SHIP and CPO is risky and not reflected in any tangible policy commitment.

Contribution of private rent, build to rent and the role of Edinburgh Living is not underpinned by analysis. Performance in this sector is unclear based on the level of applications in this sector and cannot be treated more than windfall.

Densities identified within the allocated sites are unlikely to be achieved and despite the generosity allowance this is likely to result in a shortfall of supply over the Plan period.

Objects to the manner in which the housing land requirement and spatial strategy has developed from Option 12 of Choices. Concerned that matters relating to West Edinburgh have been manipulated to artificially create housing land at the expense of economic growth and requests that the Council reviews these aspects of the LDP.

#### Inverdunning (Hatton Mains) Ltd (0427)

Submit a supporting document - Representation to Proposed (Edinburgh) City Plan 2030 Supporting Document & Appendices, December 2021. Consider that there is a lack of deliverability across a large proportion of the proposed housing allocations. Of the new sites, which theoretically provide for 25,000 homes, only around a third of this capacity (8,000 homes) is realistically deliverable in the Plan period. Sites for over 7,000 homes are currently occupied by existing business who have voiced their opposition to plans to relocate them, resulting in likely lengthy CPO requirements. Half of these active business sites are in multiple ownership. Land proposed for over 10,000 homes will not be available in the Plan period or cannot be phased in the timescale. There is an estimated shortfall of between 12,000 homes, if using the Council's demand figures put forward to NPF4, and 30,000 homes, if increasing affordable targets.

Allocations will not provide a range of sites or sufficient land to meet housing targets. There is a lack of deliverability across many sites and considers there are options for sustainable greenfield development.

Set out two options for housing targets and land requirement. Consider that both options result in a significant shortfall in housing allocations based upon an assessment of deliverability. Land for over 10,000 homes will not be available in the period and cannot be phased in the timescale.

Of the 95 sites allocated, 54 are potential windfall only with no commitment to housing therefore specific references should be removed. Consider that a general windfall allowance would allow for a proportion of these sites to come forward, note that none are committed for housing. It is not apparent that any of the 54 windfall sites have a high probability of development. No contact with site owners, timescale and resource for CPO is not deliverable within the Plan period.

Astley Ainslie and Redford are not available in the Plan period and Royal Victoria hospital may not be available. Suggest a further 6 sites to be reduced in size/capacity to reflect land ownership control.

Cannot deliver targets on brownfield approach alone and new sustainable communities are needed. Additional sites will require to be brought forward and option of new settlements should be included, in line with SPP 2014.

#### Landowner of East Foxhall (0544)

Consider that a brownfield only strategy will not provide sufficient housing delivery across the Plan period. There is no justification of delivery and strategy should be amended to include a more balanced approach, including greenfield allocations.

Need to be ensured that allocated sites are also appropriate for the market and are therefore deliverable. Allocating sites with high density do not deliver required numbers.

Consider this is a relevant consideration for the majority of brownfield sites as they are in urban areas where density is already high and require flattened development to be delivered, which is not what the market requires.

Should provide for a range of housing types to ensure that an appropriate mix of housing is available, but also one which the market is able to both deliver and sell.

Currently allocated sites within the adopted Edinburgh Local Development Plan (November 2016) should be reviewed to ensure that all sites remain deliverable. A large proportion of sites are currently within active employment use, and they may have no intentions for relocation. Question whether sites will be able to come forward for delivery within the Plan period, even with the CPO powers. Request further consideration of the deliverability of sites.

Lord Dalmeny (0475)

Consider dependence on brownfield sites is seriously flawed. Suggest that the contribution of brownfield sites is overestimated. The Plan fails to recognise that a significant proportion of the brownfield land that is proposed for housing purposes is currently occupied by other uses. Environmental Report confirms that Edinburgh has a relatively low incidence of vacant and derelict land compared with other Central Belt authorities; high land values and pressures for development means that land tends to be re-used quickly. CPO is costly and time consuming process which is unlikely to deliver timeous supply of housing land.

Lynn Grattage (0362)

Does not agree developments should be mainly brownfield and farms within the city boundary should be compulsory purchased and have communities complete with facilities.

Mark Ockendon (0419)

Considers that any new housing should be on the outskirts of the city, away from the culturally historic areas.

Mactaggart & Mickel Homes Ltd (0312)

By seeking to provide new homes on existing and operational employment land the Council will not meet its basic aim of providing more homes, ensuring they are affordable, in the most appropriate location to allow and facilitate future economic growth. City Plan highlights the greatest requirement is for affordable housing in paragraph, however, without any controlled or limited greenfield housing land release via a blended brownfield and greenfield strategy, the Council's stated strategy is going to exacerbate the affordable housing need, yet further. Pursuing new housing on existing and operational employment land present planning challenges before they can eventually be developed. This may in turn lead to a situation where the level of affordable housing that can be offered, on any of the new strategic housing led developments will be far less than 35%. This encapsulates the flawed strategy.

#### Melford Developments Ltd (0308)

Consider that the Plan potentially increases the affordability crisis in the city by restricting available land for housing and orientating these on more difficult sites.

Some of the land allocated is not on the market or available for development as there are ongoing viable businesses accommodating these sites. Consider the strategy is high risk and potentially undeliverable.

Caution that the emphasis of retrofitting neighbourhoods in an urban and often historic context must not be underestimated, as opposed to establishing hubs in more feasible and viable greenfield locations. Concerned that the Council is constraining land and unduly intervening in the property market. Council's role as landowner and planning authority raise issues of issues of impartiality and conflict of interest.

Consider the impact of plan will be to raise development costs, increase the price of land, make the decision making process more complex and lengthier, and make much of the land in the city unviable for development. Brownfield land first approach seriously underestimates the difficulty with implementation.

The spatial strategy is reliant on sites that are now identified for development which are already in the hands of landowners with development interests. Given current land shortages demand and price will rise which, together with rising development costs will create supply difficulties further constraining the market.

Consider there is a failure to understand land economics and a high percentage of sites may not come forward for housing given existing site uses and CPO cannot be relied upon and should be a means of last resort.

Consider that Council must be more flexible with its overall allocations throughout the city if it wishes to encourage urban re-development and sustainability.

#### Miller Homes (0256)

Consider that strategy of City Plan will not maintain a five year effective housing land supply at all times over the development plan period to 2032 and a blended approach whereby the Council would deliver more land in the urban area and release some land from the Green Belt and the allocation of Riccarton Village could address the flaws identified in the City Plan.

#### Mr T Klan (0307)

Plan does not identify sufficient land that can be delivered over the Plan period in an appropriate mix and type of location. Wish to see greater scrutiny and assessment of the supply figures. Dubious that brownfield and legacy sites can deliver anything approaching the levels predicted.

Not feasible to deliver the required development in time and on budget with a brownfield only approach.

#### NatWest (0477)

Many brownfield sites allocated may not come forward for development as some allocated sites have no evidence landowner's support, there is a reliance on sites carried over from

the Edinburgh Local Development Plan 2016 that suffer from high barriers to development and compulsory purchase is too time consuming to rely on. A more balanced approach with brownfield and greenfield release required.

#### Nicola McCowan Hill (0195)

Plan fails to provide for an adequate number and variety of opportunities for residential development and the sites present a variety of delivery challenges. Plan has not made proper provision even for the number of homes the Council is itself aiming for, let alone the full level of need and demand identified in HNDA2. Plan is therefore contrary to SPP, particularly paragraph 15, 110 and 119. Includes many proposals and policies which will detrimentally affect the viability of sites, restrict opportunities to bring other sustainable sites forward which is likely to either severely restrict residential development or redirect development to locations outwith the city boundaries, forcing higher levels of commuting and impacting on affordability by reducing the volume of housing delivered across all tenures. The Plan also imposes unrealistic density requirements that will lead to an overprovision of smaller, flatted sites, and an under provision of larger, family homes.

Has viability and availability concerns over sites, many of which have not been put forward by landowners and consider that abnormal costs may result in land value close to nil, or very low leaving nothing for developer contributions. Asks how contributions will be procured without a 'roof tax' style infrastructure levy. Questions if the Council is under-planning.

Refers to evidence submitted by Holder Planning and Geddes Consulting which shows sites will yield only about half of the homes which the Council is relying on them to deliver by 2032.

Request that an assessment of consequences of shortfall in housing delivery is carried out and strategy and allocations revisited prior to Examination. Consider the flaws of the Plan to be significant and question the ability of an Examination to tackle them.

The importance of home building to the economy is not fully recognised.

City Plan is too reliant on existing employment land and a wider variety of housing land requires to be allocated or otherwise given policy support and this should include greenfield land. Considers release and coordinated delivery of greenfield sites can better support sustainable development, and the creation of 20-minute neighbourhoods.

#### Robertson Residential Group (0537)

Over-reliance on brownfield sites will result in a housing land shortfall and compulsory purchase requirements. Several of the housing allocations have not been brought forward by landowners themselves therefore there is no evidence that landowners will be willing to make these sites available for development. Approach avoids exploring legitimate opportunities for green belt / countryside release, puts extra pressure on Council and the housebuilding industry to deliver housing within constrained brownfield sites, fails to meet requisite housing need and demand, promotes high density brownfield development within city, fails to take account of the changing needs of the housing market and ignores opportunities for phased release of suitable and sustainable greenfield sites. Approach is overly restrictive and lacks the degree of flexibility needed to accommodate wider aspirations. Based on current delivery rates of constrained sites consider that it is not

achievable to deliver all constrained sites within plan period. Refer to Housing Land Supply Assessment, Holder Planning, December 2021, which shows City Plan 2030 can be expected to deliver between 29,100 and 31,100 homes from the existing and proposed Housing Land Supply within Plan period and demonstrates that the Council's current position that all constrained sites will be delivered in the Plan period is far from achievable.

Rosebery Estate (Bankhead) (0618)

Welcome support for other sites in the urban area but needs to be part of a balanced development strategy to ensure that there is an ongoing supply and choice of apartments and family housing.

Brownfield only approach is unrealistic. Brownfield sites often have multiple landowners, and it can be difficult to align aspirations amongst multiple parties. Some have many more constraints than others.

Consider there is a lack of information provided regarding the methodology for analysing and processing the comments previously submitted.

A significant volume of the newly allocated land is active employment land. Consider the approach is high-risk, lacks resiliency and is inflexible.

Housing Land Supply Assessment, Holder Planning, December 2021, which finds that the City Plan Proposed Plan housing allocations can only be reasonably be expected to deliver around half of the homes the Plan claims.

Have sustainability concerns as restricting the available land for residential development will push people away from the city into the surrounding towns and villages, forcing longer commutes.

Note that no programming is provided for the sites therefore not possible to assess which sites will be delivered in the short term, and which sites may take longer to come forward. Not all of the brownfield sites allocated are currently within easy access of a bus stop or train station,

The Council's report analysing the 2011 Census, Topic summary: Housing: dwelling type, tenure, rooms, overcrowding and under-occupancy" (February 2014) states that nearly two-thirds of the total households in the city live in flatted accommodation. This is very high, compared to other parts of Scotland. This Plan represents an opportunity to re-dress this balance, through an allocation of a variety of land for residential development.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Draft NPF4 sets out that plans should have a focus on the delivery of housing at all stages of the Plan making process and beyond into the delivery role of the plan. The Council should consider how the proposed plan will establish a deliverable housing land pipeline as set out in draft NPF4.

Scottish Property Federation (0144)

Consider that brownfield sites are not always a viable option for development without very significant long term remediation, or infrastructure investment and could conflict with the

intended purpose of delivering more homes, including affordable homes as well as related employment opportunities and community facilities.

The strategy for achieving affordable housing targets through use of CPOs on employment land sites is not likely to achieve the stated targets within the intended timescales. Consider aspirations for rate of production and the delivery of sites is unrealistic and highly dependent on recently added proposals which were previously allocated to employment uses.

Would like to see a more realistic analysis of the rate of production of new homes, including affordable housing. Would be helpful to see an analysis of alternative strategies should the primary policy of reallocation of new employment and in-use employment sites fail to deliver the scale and rate of housing supply proposed by the plan.

#### Spire Healthcare Limited (0719)

Brownfield strategy is overly restrictive, does not reflect challenges in developing such sites, will lead to less housing completions overall, result in a housing land shortfall and affect the delivery of housing for older people / specialist housing.

Should be greater support for delivering housing for older people allowing for allocations for such housing or care homes on greenfield sites that are well located to the services, facilities and public transport. Costs of delivery are generally greater than for mainstream housing and higher costs on brownfield land will be challenging.

Concerned that as many of the sites have not been put forward by owner, there no guarantee of delivery. A greater number of appropriate sites should be supported by the strategy / aims and by new allocations on greenfield sites.

NPF4 requires a deliverable housing land pipeline to be established for the Housing Land Requirement and more land should be allocated to meet the Housing Land Requirement in sustainable locations that people want to live.

#### Stirling Developments Limited (0303)

Requirements within place policies for master plan / place brief suggests that sites will not be able to come forward for development early in the Plan period. Must therefore consider existing, effective sites that already have masterplans and briefs that can be extended. Inclusion of additional greenfield sites should be considered as part of a holistic plan for West Edinburgh.

The Plan needs to incorporate flexibility to allow effective greenfield sites to support the delivery of housing. A wider variety of housing land requires to be allocated or otherwise given policy support.

The Plan is too reliant on existing employment land to deliver the housing mix and volume proposed. Greenfield land has been such an important contributor to housing delivery in Edinburgh under the current and previous plans and the proposed strategy risks failure to deliver on its housing targets.

Clarity is sought on section 1.4 and how the figure of 20,000 affordable homes will be delivered. In the context of the wider plan, many of these affordable homes will be delivered as part of a mixed tenure scheme. Concerned that if private housing is constrained, affordable housing will be as well and the target will be unachievable.

#### Taylor Wimpey East Scotland (0770)

Approach of meeting all of Edinburgh's housing need solely on brownfield land is unrealistic and high-risk and will fail to address housing need and demand during the Plan period. No evidence to indicate that the effectiveness and deliverability of sites has been subject to a robust assessment. Many of the new housing proposals will fail to meet the test of 'effectiveness' contained within PAN2/2010.

Approach to site selection does not comply with either SPP or Circular 6/2013.

Essential that additional land is allocated for residential development on appropriate and available greenfield land if a sufficient volume and range of homes are to be built during the Plan period. Consider that this can be identified and planned in a manner that would support the key aims of City Plan 2030.

Refer to Housing Land Supply Assessment, Holder Planning, December 2021, as justification for the need to allocate additional sites.

#### Taylor Wimpey and Hallam Land Management Ltd (0603)

Object to the City Plan housing strategy in its current form. Sites allocated do not deliver the number of homes and affordable homes to meet identified needs, could push prices beyond people on average salaries and will displace a significant part of commercial employment base beyond the city.

Refers to Taylor Wimpey's submissions in respect to the Housing Land Requirement and the supply of housing which considers there is a shortfall in allocated housing sites.

Points to evidence in Homes for Scotland's response to the Proposed City Plan 2030 on why pursuing an all-brownfield strategy will result in housing need and demand being significantly unmet.

Spatial strategy should be amended to adopt a blended approach to the allocation of deliverable greenfield and brownfield land which is sufficient to meet housing need and demand.

#### The Association for the Protection of Rural Scotland (0334)

Support the allocation of land, well above the amount required by the housing supply targets and the minimum all tenure Housing Land Requirement in draft NPF4. Express disappointment that circumstances require the allocation of larger amounts of land for market housing in order to achieve a target amount of affordable housing which seems at odds with policies to use land and resources more efficiently.

#### The Catchelraw Trust (0137)

Consider that there is an over reliance on non-deliverable brownfield sites that will lead to under-delivery of homes. Should be a blend of greenfield and brownfield sites to ensure a

continual five year supply of a range of house types. Lack of supply will ensure the lack of affordable housing delivery and further unsustainable house price inflation for open market homes.

The Stoddart Family (0749)

Plan does not provide a range of sites and is reliant on high density previously developed land to provide for its housing need. Does not consider any of the sites to be guaranteed effective. Questions if relocation of businesses which would result is a sustainable approach. Consider Plan is non-compliant with SPP 2014 requirement to allocate a range of sites which are effective or expected to become effective in the Plan period.

Support the position of Homes for Scotland in terms of their objections raised to the proposed plan.

University of Edinburgh (0464)

In addition to the need to ensure an appropriate supply of purpose built student housing to meet current and future need and demand, wider housing tenures are also of relevance to the University of Edinburgh. This relates to the need to maintain a range of housing suitable for staff at all levels within the University, as well as for more mature students, couples or family housing where mainstream student accommodation is not suitable.

A functioning and healthy housing market is key to attracting and retaining staff, and this includes access to affordable solutions, and in locations that are accessible to university facilities.

The Plan introduces an ambitious and laudable approach to housing policy in seeking to maximise the use of brownfield land rather than greenfield. The University of Edinburgh support this aim, however caution that the approach needs to be deliverable, and to meet the expected housing requirements throughout the lifetime of the plan.

Many of the identified brownfield housing land opportunities are currently in active alternative use and with no immediate prospect of conversion to housing which is likely to place additional pressure on available and deliverable sites, which may result in continued, and aggressive inflation of land values, if demand continues to outstrip supply.

Watkin Jones Group (0516)

Support aim to maximise the use of brownfield land rather than greenfield however caution that the approach needs to be deliverable and meet the expected housing requirements. Consider that the identification of brownfield housing land opportunities currently in active alternative use and with no immediate prospect of conversion to housing likely to place additional pressure on available and deliverable sites which may result in inflation of land values, if demand continues to outstrip supply.

West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352)

Consider the approach of meeting all of Edinburgh's housing need on brownfield land to be unrealistic and high-risk and will fail to address housing need and demand during the Plan period.

No evidence to indicate that the effectiveness and deliverability of these sites has been considered or subject to a robust assessment. Many of the new housing proposals fail to meet the test of 'effectiveness' contained within PAN2/2010: Affordable Housing and Housing Land Audits.

Note that at Choices for City Plan stage of 275 hectares of urban land identified as potentially suitable for housing-led development, only 11 hectares was vacant and ready for development and only 30 hectares benefitted from planning permission. The remainder of the land was in active alternative use – primarily business and industrial land in private ownership. There is no evidence that this position has changed significantly in the intervening period.

Question if the Council considered circumstances where due to existing industrial use value it would not be financially viable to sell for housing. The success of the Plan's spatial strategy is reliant on a range of commercial factors outwith the Council's control.

Considers that on the evidence available City Plan's approach to site selection does not comply with SPP 2014 or Circular 6/2013 and there is a lack of documents to allow for proper scrutiny.

An alternative option must be pursued if Edinburgh's housing targets are to be met which necessitate development on both greenfield and brownfield land. Considers release and coordinated delivery of greenfield sites can better support sustainable development, and the creation of 20-minute neighbourhoods.

#### **Modifications sought by those submitting representations:**

##### Archie Clark (0003)

No modification specified but representation suggests that the term "legacy sites" should be defined in the plan.

##### Barratt David Wilson Homes (0678), Mactaggart & Mickel Homes Ltd (0312)

Amend spatial strategy to adopt a blended approach to the allocation of deliverable greenfield and brownfield land which is sufficient to meet housing need and demand.

##### Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Homes for Scotland (0404), Nicola McCowan Hill (0195), Steve Loomes (0767), The Stoddart Family (0749), Wright PDL (0078)

Allocate a greater volume and range of land to include greenfield, particularly in accessible areas that do not result in the displacement of businesses.

##### BDW Trading (0350), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

Amend spatial strategy to adopt a blended approach to the allocation of deliverable greenfield and brownfield land which is sufficient to meet housing need and demand.

Replace table on p. 29 entitled 'Housing Land Supply' with table showing realistic housing delivery

Make consequential changes to the spatial strategy, including the allocation of substantially more deliverable housing allocations.

Amend Housing Technical Note to set out a full list of sites the Council is relying on in its land supply and programming for them.

Should set out detailed evidence to justify the density assumptions.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Continue to adopt the existing policy framework set out in the adopted LDP which has regard to the land use at H61 *Crosswinds*, H63 *Edinburgh 205* and H62 *Land adjacent Edinburgh Gateway*.

Remove H62, H63, H64, H86, H90 as they were not identified as part of the Choices in the MIR or assessed for housing development in the MIR Housing Study.

Allocate land on greenfield sites to enable the delivery of at least 14,824 homes by 2032.

Esk Property LLP (0726)

Consider the release of some land within the green belt to ensure a deliverable supply of housing land, including for care and retirement living type developments.

Hallam Land Management (0457)

Amend aim 2 to read

‘the Plan will meet these aims through: ‘Allocating sufficient housing land, comprising a mixture of brownfield and greenfield land, improving and re-imagining Edinburgh’s neighbourhoods, rebuilding the city from within and delivering new communities in Edinburgh Waterfront, West Edinburgh and on other major development sites across the city.’

Hallam Land Management (0615), Tarmac (0244), Mr T Klan (0307)

Revert to the blended brownfield / greenfield approach suggested in Choices.

Inverdunning (Hatton Mains) Ltd (0427)

Table 7, Housing Land Supply – For Option 1, amend:

	<b>2021-2032</b>
Housing Supply Target	54,068
Generosity Allowance	13,517 (25%)
A - Housing Land Requirement	67,585
Effective Supply 2021-28 (HLA21)	16,573

Effective Supply 2028-32*	3,275
Total Effective Supply	19,848
Contribution from Constrained Sites**	2,880
Contribution from Windfall Sites***	5,000
<b>B - Total Supply from existing sources</b>	27,728
Required new LDP allocation (A-B)	39,857
Proposed LDP allocation****	8,000
Residual Surplus/Shortfall	-31,857

Table 7, Housing Land Supply – For Option 2, amend:

	<b>2021-2032</b>
Housing Supply Target	38,500
Generosity Allowance	9,625 (25%)
A - Housing Land Requirement	48,125
Effective Supply 2021-28 (HLA21)	16,573
Effective Supply 2028-32*	3,275
Total Effective Supply	19,848
Contribution from Constrained Sites**	2,880
Contribution from Windfall Sites***	5,000
<b>B - Total Supply from existing sources</b>	27,728
Required new LDP allocation (A-B)	20,397
Proposed LDP allocation****	8,000
Residual Surplus/Shortfall	-12,397

\*rolled forward HLA21 programming

\*\*35% allowance from HLA21 sites (8228 units), as per 2016 LDP %

\*\*\*500pa allowance based on previous windfall completions in period 2015-21, HLA21

\*\*\*\*Proposed City Plan 2030 allocates 24,938 units across 95 sites but as detailed in Appendix 1 – Proposed City Plan Sites Assessment, 54 sites (-6,379 units) should be deleted as they comprise potential windfall sites only and are allowed for in general windfall allowance, 3 sites (-1,660 units) should be deleted as not available in plan period and 3 sites should have reduced capacities deliverable in plan period (-9,000 units). Allocated sites where capacities have been increased through consents have been adjusted. Net estimated delivery of 7,900 units from allocated sites has been rounded up to 8,000.

2.2 (2) – Amend line 1: “Directing new development to brownfield land and a limited number of greenfield new sustainable community locations”...

2.59 – Amend line 2: “The boundaries of the green belt shown on the Proposals Map are amended from the 2016 Local Development Plan to reflect the need for new sustainable communities”.

2.110 – Amend line 1: “To support delivery of a mixed brownfield and sustainable greenfield site approach and provide the right type and number of homes that we want requires everyone to work together proactively.

2.112 – Amend line 1: “City Plan’s spatial strategy directs growth to brownfield sites within the urban area or in strategic expansion areas or new sustainable community locations where there is good public transport, including tram and express bus service.”

2.85 – Amend line 1: delete “To achieve this, City Plan seeks to improve air quality in the City, reducing emissions by promoting an approach based upon 20-minute neighbourhoods, a modal shift away from private car travel, supporting zero carbon energy schemes, and by increasing the City’s capacity for air purification through its green infrastructure proposals.

2.88 – Extend line 2: “The City Plan spatial strategy prioritises new homes on brownfield land and redevelopment of existing areas. in addition to a limited number of identified new sustainable communities”.

2.100 – Add line at end: “However, the Plan seeks to address an increased proportion of affordable demand by allocating sufficient land for mixed-tenure housing subject to the associated affordable housing policy.”

Julie Robertson (0210)

No modification specified.

Landowner of East Foxhall (0544)

Provide a range of brownfield and greenfield land.

Lord Dalmeny (0475)

Amend paragraph 2.2, point 2 to clarify the timescale for and mechanism by which City of Edinburgh Council intends to secure delivery of such ‘brownfield sites’.

Lynn Grattage (0362)

Farms within the city boundary should be compulsory purchased and have communities complete with facilities.

Mark Ockendon (0419)

No modification specified however representation infers allocation of sites and policy to direct new housing to the outskirts of the city, away from the culturally historic areas.

Melford Developments Ltd (0308)

More flexible with allocations throughout the city.

Miller Homes (0256)

Allocate greenfield sites.

Mr T Klan (0307)

At aim 2 add South East Edinburgh to list of new communities.

NatWest (0477)

Include greenfield and brownfield allocations.

Robertson Residential Group (0537)

Amend aim 2 to “Allocating sufficient housing land, comprising a mixture of brownfield and greenfield land, improving and re-imagining Edinburgh’s neighbourhoods, rebuilding the city from within and delivering new communities in Edinburgh Waterfront, West Edinburgh and on other major development sites across the city. In addition, it is clear that to meet the City’s needs a range of different sites, sizes and tenures will be required in order for CEC to have a deliverable HLS and therefore meet their eventual HLR”

Robertson Residential Group (0537), Hallam Land Management (0457)

Revise paragraphs 2.104 – 2.110 and the associated housing land requirement table (page 28) and housing land supply table (page 29) to reflect a strategy which focuses on allocating both brownfield and greenfield housing sites to ensure a significant shortfall to housing land does not result within the Plan period.

Amend [aragraph 2.88 on page 26 to read:

‘We want our homes to be accessible, affordable, well designed and energy efficient with the right homes in the right places supported by local facilities. The City Plan spatial strategy makes provision for the development of new homes on brownfield land, supplemented by suitable greenfield land to ensure adequate and effective housing land is available for development within the Plan period’.

Rosebery Estate (Bankhead) (0618)

Allocate additional land on a range on sustainably located greenfield sites.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The Council should consider how the proposed plan will establish a deliverable housing land pipeline as set out in draft NPF4.

Scottish Property Federation (0144)

Provide more realistic analysis of the rate of production of new homes, including affordable housing.

Spire Healthcare Limited (0719)

Allocate more land to meet the housing land requirement

Amend Aim 2 to “ Maximising the use of brownfield land as the preferred option for new development but supported by appropriate greenfield sites in sustainable locations, with an overall focus on improving and re-imaging Edinburgh s neighbourhoods, rebuilding the city from within and delivering new communities in Edinburgh Waterfront, West Edinburgh and on other major development sites across the city. A broad mixture of dwelling sizes and tenure types (including for homes for older people) should be supported to ensure the housing needs for all of the City’s residents are met.”

Paragraphs 2.104 2.110 (page 28 & 29) and the associated City Plan housing land requirement table (page 28) and housing land supply table (page 29) should be revised to reflect a strategy which focuses on allocating both brownfield and greenfield housing sites to ensure a significant shortfall to housing land does not result within the Plan period.

Amend housing outcomes on page 26 to:

“We want our homes to be accessible, affordable, well designed and energy efficient with the right homes in the right places supported by local facilities. The City Plan spatial strategy makes provision for the development of new homes on brownfield land, supplemented by appropriate greenfield land close to services and facilities, to ensure adequate and effective housing land is available for development within the Plan period.”

Stirling Developments Limited (0303)

Include additional greenfield sites as part of a holistic plan for West Edinburgh.

Incorporate flexibility to allow effective greenfield sites to support the delivery of housing.

Taylor Wimpey East Scotland (0770)

Adopt alternative strategy which makes provision for housing development on both greenfield and brownfield land.

Taylor Wimpey and Hallam Land Management Ltd (0603)

Provide a combination of brownfield and greenfield sites identified within City Plan 2030.

The Association for the Protection of Rural Scotland (0334)

No modification specified.

The Catchelraw Trust (0137)

Provide a blend of greenfield and brownfield sites to ensure a continual five year supply of a range of house types.

University of Edinburgh (0464)

No modification specified.

Watkin Jones Group (0516)

No modification specified.

West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352)

Provide for housing development on both greenfield and brownfield land.

#### **Summary of responses (including reasons) by planning authority:**

##### **Existing land supply**

Barratt David Wilson Homes (0678), Barratt David Wilson Homes (0677), BDW Trading (0350), CALA Management Ltd (0465), Dandara East Scotland (0757), Hallam Land Management (0457), Hallam Land Management (0599), Hallam Land Management (0615), Homes for Scotland (0404), Inverdunning (Hatton Mains) Ltd (0427), Landowner of East Foxhall (0544), Miller Homes Limited (0649), Mr T Klan (0307), Murray Estates (0197), Nicola McCowan Hill (0195), Persimmon Homes (0495), Robertson Residential (0490), Robertson Residential Group (0537), Rosebery Estate (Bankhead) (0618), SEEDCo (0198), Steve Loomes (0767), Stewart Milne Homes (0118), Tarmac (0244), Taylor Wimpey (0200), Taylor Wimpey and Hallam Land Management Ltd (0603), Taylor Wimpey East Scotland (0770), The Stoddart Family (0749), West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352), Wright PDL (0078)

Paragraph 117 of SPP 2014 (CD096) sets out that the housing land requirement can be met from a number of sources, most notably sites from the established supply which are effective or expected to become effective in the Plan period, sites with planning permission, proposed new land allocations, and in some cases an element of windfall.

Allocations in the adopted Edinburgh Local Development Plan 2016 (CD039) will continue to deliver housing in the period of City Plan. Relevant sites have been carried forward and are identified as legacy sites. These are set out in Part 4, Table 2 of the Plan. Capacities have been adjusted to take account of existing allocations.

An assessment of the established land supply against the criteria contained in PAN 2/2010 (CD118), identified that as at 31 March 2021 there was land free of planning constraints for 22,411 dwellings. It identifies an established land supply of 32,380.

The established land supply includes constrained sites. There were 8,139 constrained units at 2021. Many sites considered to be constrained at the present time are affected by short term constraints which may quickly be overcome. Sites are constrained through ownership/control of the site, landowner not currently marketing for development or site currently in use for non-housing.

Since the Edinburgh Local Development Plan 2016 was adopted of the 26 sites categorised as constrained (8,800 units), 17 have become effective (2,600 units). Programming of sites recognises the capacity of constrained sites to become effective over the Plan period. **No modification proposed.**

### **Identification of sites**

Barratt David Wilson Homes (0678), BDW Trading (0350), CALA Management Ltd (0465), Hallam Land Management (0457), Hallam Land Management (0599), Hallam Land Management (0615), Homes for Scotland (0404), Inverdunning (Hatton Mains) Ltd (0427), Landowner of East Foxhall (0544), Lord Dalmeny (0475), Mactaggart & Mickel Homes Ltd (0312), Melford Developments Ltd (0308), Miller Homes Limited (0649), Mr T Klan (0307), Murray Estates (0197), Nicola McCowan Hill (0195), Persimmon Homes (0495), Robertson Residential (0490), Robertson Residential Group (0537), The Stoddart Family (0749), Rosebery Estate (Bankhead) (0618), SEEDCo (0198), Steve Loomes (0767), Stewart Milne Homes (0118), Tarmac (0244), Taylor Wimpey (0200), Taylor Wimpey and Hallam Land Management Ltd (0603), Taylor Wimpey East Scotland (0770), West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352), Wright PDL (0078)

Para 119 of SPP 2014 (CD096) states that local development plans in city regions should allocate a range of sites which are effective or expected to become effective in the Plan period to meet the housing land requirement of the strategic development plan up to year 10 from the expected year of adoption. They should provide for a minimum of 5 years effective land supply at all times. In allocating sites, planning authorities should be confident that land can be brought forward for development within the Plan period and that the range of sites allocated will enable the housing supply target to be met.

To determine the additional land required to meet housing land requirement of 44,293 the existing land supply was deducted from the requirement identifying a need for additional sites to be allocated.

SDP 1 (CD087) sets out a spatial strategy for Edinburgh and the South East to 2032. It steers housing growth to sustainable locations where there is infrastructure capacity or which minimise the requirement for additional investment. City Plan's spatial strategy directs new development to, and maximises the use of, brownfield land rather than greenfield land. Spatial strategy is dealt with under Issue 2.

An assessment of urban brownfield land was undertaken to identify land with potential for housing development and estimate the housing capacity that could be delivered on that

land, this is detailed in the City Plan Choices Housing Study (CD026). Densities applied and a methodology are set out within the study and are consistent with the City Plan aims.

Ryden Mixed Use Delivery Study (CD036) considered the potential impacts of a brownfield approach. Its focus was on industrial sites. The majority of sites identified in Choices (CD022) are not industrial, including for example smaller sites such as former community centres and gap sites, and larger sites such as cleared housing land, car showrooms, and former hospitals. For the purpose of policy development and not a definitive opinion on each site, the Ryden study categorised industrial sites into two categories of short to medium term redevelopment potential and medium to long term redevelopment potential.

Sites identified in Choices (CD022) were further considered prior to the proposed Plan to take into account changes in planning status, development activity, Choices consultation comments, SEA, intentions of public sector land owners and other site factors.

Of the 162 sites identified in Choices, 86 have been taken forward into City Plan.

In addition to the urban brownfield sites, strategic sites are identified -H59, H60, H61, H62, H63, H55 and H86. These sites are larger scale or part of a grouping of sites. The inclusion of specific sites is dealt with under Issues 4-8 Proposed Sites.

Methodology used to determine indicative capacities for allocated brownfield sites is set out in the City Plan Choices Housing Study (CD026). A range of density bands were developed based on existing planning approvals in the Council's area over the last 10 years and the anticipation that higher densities could be achieved subject to changes in existing planning policies and guidance resulting from City Plan. Notably zero or very low car parking in areas of high public transport accessibility and that sensitive architectural design and site layouts could achieve higher densities than the prevailing character of an area.

Site specific analysis undertaken prior to the proposed Plan considered detailed factors including building heights, views, site conditions, environmental and other physical constraints. This has resulted in adjustment of capacity of some sites. Adjusted capacities take account of any requirements for the provision of school infrastructure.

Capacity of proposed sites have been adjusted to take account of existing allocations. Open Market Shared Equity are existing homes currently in the market sector that are purchased under shared equity arrangements, and they form part of the calculation of what the housing target should be. There is no double counting in the site capacities.

Capacities for strategic sites have been estimated based upon discussions with owners/developers on a site by site basis. The capacities are considered achievable. Capacities of individual sites are considered under Issues 4-8 Proposed Sites. **No modification proposed.**

Lynn Grattage (0362)

New allocations have been made in line with the spatial strategy which directs new development to brownfield land and existing allocations. This includes delivering new communities in Edinburgh Waterfront, West Edinburgh and other major development sites.

Policy Inf 1 Access to community facilities supports development where key community facilities are walkable within a 20-minute return trip. **No modification proposed.**

### **Total Housing Land Supply**

Barratt David Wilson Homes (0678), Barratt David Wilson Homes (0677), BDW Trading (0350), CALA Management Ltd (0465), Dandara East Scotland (0757), Hallam Land Management (0457), Hallam Land Management (0599), Hallam Land Management (0615), Homes for Scotland (0404), Inverdunning (Hatton Mains) Ltd (0427), Landowner of East Foxhall (0544), Melford Developments Ltd (0308), Miller Homes (0256), Miller Homes Limited (0649), Mr T Klan (0307), Murray Estates (0197), Nicola McCowan Hill (0195), Persimmon Homes (0495), Robertson Residential (0490), Robertson Residential Group (0537), Rosebery Estate (Bankhead) (0618), SEEDCo (0198), Spire Healthcare Limited (0719), Steve Loomes (0767), Stewart Milne Homes (0118), Tarmac (0244), Taylor Wimpey (0200), Taylor Wimpey and Hallam Land Management Ltd (0603), Taylor Wimpey East Scotland (0770), The Association for the Protection of Rural Scotland (0334), The Stoddart Family (0749), University of Edinburgh (0464), West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352), Wright PDL (0078)

City Plan 2030 identifies the Housing Land Supply:

<b>Proposals</b>	<b>Total</b>	<b>Market</b>	<b>Affordable</b>
Strategic Sites	14,250	9,263	4,987
Brownfield Sites	10,798	7,019	3,779
Legacy Sites	18,801	13,168	5,633
Proposals Total	43,849	29,450	14,399
Other sites in current land Supply	12,838	29,450	14,399
Consents since 31/03/21	263	233	30
New applications pending determination	478	360	118
<b>Total Land Supply</b>	<b>57,428</b>	<b>39, 124</b>	<b>18,304</b>

A total land supply of 57,428 is identified. The housing land requirement is 44,293. The total land supply therefore provides a flexibility of 30%. A maximum of 20% is already applied to the housing supply target to calculate the housing land requirement. When compared with the housing supply target of 36,911 there is flexibility of 56%.

City Plan allocates more land than the requirement for market and affordable housing to allow affordable housing to be provided through the delivery of market housing. Existing allocations and new proposals provide a range of sites, which are effective or expected to become effective in the Plan period, more than sufficient to ensure that should some sites not come forward for development as expected there will be adequate land to meet the housing land requirement and maintain a five year effective supply.

Policy Hou 4 provides for circumstances where a shortfall in the maintenance of the 5-year housing land supply is identified. It is dealt with under Issue 21 Housing Land Supply Policy.

Para 30 of SPP 2014 (CD096) sets out requirements of development plans. For the reasons stated above it is considered that City Plan meets with these requirements. No modification proposed.

### **Displacement of businesses**

Barratt David Wilson Homes (0678), Barratt David Wilson Homes (0677), BDW Trading (0350), Dandara East Scotland (0757), Homes for Scotland (0404), Julie Robertson (0210), Murray Estates (0197), Nicola McCowan Hill (0195), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198), Steve Loomes (0767), Stewart Milne Homes (0118), Taylor Wimpey (0200), The Stoddart Family (0749), Wright PDL (0078)

Brownfield sites allocated in City Plan are within the general urban area. They are not allocated as employment land within the current development plan. 64% of allocated brownfield sites have operational businesses. City Plan aims to deliver mixed use communities. Policy Econ 5 Employment Sites and Premises requires that redevelopment of employment sites of all sizes includes floorspace designed to provide for a range of business and commercial users. This will retain and include small business commercial units within mixed use developments. Displacement, relocation and the need for employment land are dealt with under Issue 3 Delivery of the Strategy. **No modification proposed.**

### **Deliverability of Sites**

Barratt David Wilson Homes (0678), Barratt David Wilson Homes (0677), BDW Trading (0350), CALA Management Ltd (0465), Dandara East Scotland (0757), Esk Property LLP (0726), Hallam Land Management (0457), Hallam Land Management (0599), Hallam Land Management (0615), Homes for Scotland (0404), Inverdunning (Hatton Mains) Ltd (0427), Landowner of East Foxhall (0544), Lord Dalmeny (0475), Mactaggart & Mickel Homes Ltd (0312), Melford Developments Ltd (0308), Miller Homes Limited (0649), Mr T Klan (0307), Murray Estates (0197), NatWest (0477), Nicola McCowan Hill (0195), Persimmon Homes (0495), Robertson Residential (0490), Robertson Residential Group (0537), Robertson The Stoddart Family (0749), Rosebery Estate (Bankhead) (0618), Scottish Property Federation (0144), SEEDCo (0198), Steve Loomes (0767), Stewart Milne Homes (0118), Stirling Developments Limited (0303), Tarmac (0244), Taylor Wimpey (0200), Taylor Wimpey and Hallam Land Management Ltd (0603), Taylor Wimpey East Scotland (0770), The Catchelraw Trust (0137), University of Edinburgh (0464), Watkin Jones Group (0516), West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352), Wright PDL (0078)

Allocated sites are considered to be deliverable in the period of the plan. The Council does not consider it necessary for a site to be promoted by a landowner to be identified as a suitable development opportunity. Whilst some sites may be technically constrained by PAN 2/2010 (CD118) definition of ownership, once allocated, this could change over the course of the plan. The Council will work with partners and landowners to bring sites forward throughout the Plan period. As referred to above there is evidence from the existing housing land supply of constrained sites where the identified constraint was ownership, which have come forward for development.

Scottish Government Guidance, Compulsory Purchase Orders and Acquiring Authorities: Guidance on CPO Use, 2018 (CD120) encourages authorities to consider using their CPO powers when necessary and appropriate. The Council acknowledges that, should it be necessary, it may have to use its compulsory purchase powers and this is referred to in the plan. This is addressed further in Issue 3 Delivery of the Strategy. The Plan does not rely on CPO to deliver the land supply.

Sites totalling 5,430 units are in public ownership. 3,262 are in full or partial Council ownership.

There is development activity (pre-app, EIA screening, PAN, application, consent) on sites which could provide 13,273 units. Almost half of the allocated units are in control of owners pursuing mixed use residential development.

Occupation of sites is not considered to be a barrier to development. Many of the industrial sites allocated are outdated properties that will ultimately become obsolete. The value of older real estate and the income in perpetuity will therefore inevitably fall as it becomes obsolete, either in terms of its stock or its location and owners will be faced with the choice of investing in the real estate to replace the buildings or by selling the site to developers. It is for this reason that there has been long term trend for the redevelopment of old employment sites. Residential land values have historically been higher, particularly compared to dated industrial stock, and as a result the Council does not consider the fact that sites have been in active employment use will intrinsically hinder the delivery of the housing.

Ryden Mixed Use Delivery Study 2020 (CD036) examines redevelopment of industrial buildings which have taken place. Residential use is the most common redevelopment. Particularly in the north east there are examples of redevelopment on sites similar to those identified in City Plan.

Many of the sites are within areas of which are already changing in nature toward residential and mixed use.

It is not accepted that the cost of developing brownfield land will be prohibitive in delivering housing. Development of windfall sites has been above the level anticipated in the Edinburgh Local Development Plan 2016 (CD042). The Plan anticipated a contribution of 4,650 units on windfall sites between 2015 and 2026. Up to 2021, there have already been 3,050 windfall completion with a further 4,120 programmed for completion up to 2026. This forward programme equates to 830 homes per year. In reality it is likely to be even higher as the programming only relates to windfall sites that already have consent – additional consents on windfall sites are likely over the next 5 years.

Developer contributions will be sought in line with Policy Inf 3 Infrastructure Delivery and Developer Contributions.

Further sites proposed in representations are dealt with under Issue 11 Suggested Greenfield Sites and Issue 12 Other Sites. **No modification proposed.**

### **Affordable Delivery**

Barratt David Wilson Homes (0678), BDW Trading (0350), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), Scottish Property Federation

(0144), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200), Taylor Wimpey and Hallam Land Management Ltd (0603), The Catchelraw Trust (0137), Stirling Developments Limited (0303)

There is a clear commitment and strategies in place to deliver affordable housing in Edinburgh. The Strategic Housing Investment Plan (SHIP) 2022-27 (CD057) sets out a pipeline of 11,188 affordable homes that could be approved for site start and 10,124 potential completions over the next five years through a mix of grant funding, registered social landlords own finance, finance raised by private developers, institutional investment, developer contributions and Housing Revenue Account (HRA) funding. In 2021/22 there were 1,251 new affordable homes approved for site start for social rent, mid-market rent and low-cost home ownership and a total of 1,041 homes completed. Over 10,000 affordable homes have been approved since 2015/16, with almost 8,000 affordable homes completed over the same period.

Grant funding limitations are acknowledged, and the SHIP (CD057) sets out other mechanisms to accelerate the delivery of affordable housing, including affordable homes delivered without grant subsidy. Funding requirements are updated to Scottish Government annually through the SHIP and these would include any additional grant funding required to deliver affordable housing. Edinburgh has benefitted from over £36m in additional Affordable Housing Supply Programme funding in recent years. **No modification proposed.**

Lord Dalmeny (0475)

Para 2.3 of the Plan sets out the aims. It is not necessary or appropriate to amend para 2.2 to clarify timescales and means to be used to secure delivery of brownfield sites. All sites are considered to be deliverable in the period of the plan. **No modification proposed.**

### **Programming**

Barratt David Wilson Homes (0678), Barratt David Wilson Homes (0677), BDW Trading (0350), CALA Management Ltd (0465), Dandara East Scotland (0757), Hallam Land Management (0457), Hallam Land Management (0599), Hallam Land Management (0615), Homes for Scotland (0404), Inverdunning (Hatton Mains) Ltd (0427), Landowner of East Foxhall (0544), Melford Developments Ltd (0308), Miller Homes Limited (0649), Mr T Klan (0307), Murray Estates (0197), Nicola McCowan Hill (0195), Persimmon Homes (0495), Robertson Residential (0490), Robertson Residential Group (0537), Rosebery Estate (Bankhead) (0618), Scottish Property Federation (0144), SEEDCo (0198), Steve Loomes (0767), Stewart Milne Homes (0118), Stoddart Family (0749), Tarmac (0244), Taylor Wimpey (0200), Taylor Wimpey and Hallam Land Management Ltd (0603), Taylor Wimpey East Scotland (0770), West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352), Wright PDL (0078)

Programming of existing land supply sites is set out in the Housing Land Audit and Completions Programme 2021 (HLACP) (CD055) and has been agreed with Homes for Scotland.

Each of the proposed sites has been assigned an estimated delivery programme. The programming has been carried out using the following methodology. Sites were first categorised according to the likely start date. Sites have been categorised as

- Early start: first completions 2023 to 2025
- Mid start: first completions 2026 to 2027
- Late start: first completions 2028 to 2030

Each site has been considered separately according to the following factors:

- Planning Status – any current or previous planning application to develop the site
  - Site with planning applications/consents will generally be categorised as ‘Early start’
- Current use of site - number and type of businesses operating
  - Vacant sites will generally be categorised as ‘Early start’
  - Sites with single or few occupiers will generally be categorised as ‘Mid start’.
  - Sites with multiple businesses operating will be categorised as ‘Late start’
- Size and location of site
  - Larger sites requiring new infrastructure will have a later start than smaller or infill sites
- Ownership – council, other public or private. Indication of landowner’s intention
  - Public Sites, particularly council owned sites will generally be considered for earlier start than privately owned sites with the landowner’s intention is not known
- Known developer interest
  - Site with known developer interest will generally be considered for earlier start where interest to develop is unknown.
- Responses to proposed plan

Once the estimated start date has been made, the annual rate of development is determined, based upon evidence from previous housing land audits. Consideration is given to size and density of site.

All allocations are considered to be deliverable within the Plan period. Notional programming is set out in Appendix 1 to this schedule (CD176). **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309), Spire Healthcare Limited (0719)

Draft NPF4 (CD099) sets out that plans should have a focus on the delivery of housing at all stages of the Plan making process and beyond into the delivery role of the plan. The Council’s annual Housing Land Audit and Completions Programme (HLACP) (CD055) is consulted upon with the development industry through the representative body, Homes for Scotland. As well as agreeing the likely forward programme of completions on each site, the sites are also assessed against a range of factors affecting delivery. Each site is classified as to what action, if any, would be required to increase completion rates. This allows the council and partners to focus upon increasing or accelerating delivery on land

where and when it is needed. This is considered to be in the spirit of drat NPF4 (CD099). **No modification proposed.**

## Range of sites

Barratt David Wilson Homes (0678), Barratt David Wilson Homes (0677), BDW Trading (0350), CALA Management Ltd (0465), Dandara East Scotland (0757), Esk Property LLP (0726), Hallam Land Management (0457), Hallam Land Management (0599), Hallam Land Management (0615), Homes for Scotland (0404), Inverdunning (Hatton Mains) Ltd (0427), Landowner of East Foxhall (0544), Lord Dalmeny (0475), Melford Developments Ltd (0308), Miller Homes Limited (0649), Mr T Klan (0307), Murray Estates (0197), Persimmon Homes (0495), Nicola McCowan Hill (0195), Robertson Residential (0490), Robertson Residential Group (0537), Rosebery Estate (Bankhead) (0618), SEEDCo (0198), Spire Healthcare Limited (0719), Steve Loomes (0767), Stewart Milne Homes (0118), Stirling Developments Limited (0303), Tarmac (0244), Taylor Wimpey (0200), Taylor Wimpey and Hallam Land Management Ltd (0603), Taylor Wimpey East Scotland (0770), The Catchelraw Trust (0137), The Stoddart Family (0749), West Craigs Limited & Dunedin Canmore Housing Association (Wheatley Group) (0352), Wright PDL (0078)

The overall land supply provides flexibility, with a range of sites. The allocations in the Plan range in scale from 8 units to 7,000, 40% is greenfield and 60% brownfield.

## Breakdown of proposals

	Sites >50	Sites<50	Greenfield	Brownfield
All	42,783	970	17,534	26,219
Strategic	14,250	0	9,750	4,500
Brownfield	9,732	970	0	10,702
Legacy	18,801	0	7,784	11,017

It is considered that the Plan provides a generous supply of housing land on a range of sites across the city and it is not necessary to allocate further sites. Spatial strategy is addressed in Issue 2 Spatial Strategy. **No modification proposed.**

## General

### Archie Clark (0003)

Paragraph 2.106 of the Plan explains the components of the housing land supply set out in the accompanying table, which refers to legacy sites. It explains that the existing land supply identified in the Housing Land Audit and Completions Programme 2021 (CD055) provides a starting point to meet the calculated requirement and that this includes allocations carried over from the Edinburgh Local Development Plan 2016 (CD042). These are identified as legacy sites in the accompanying table. **No modification proposed.**

### Esk Property LLP (0726), Spire Healthcare Limited (0719)

The release of greenbelt is not necessary for the reasons given above. Allocations provide a range of sites both greenfield and brownfield. Policy Hou 1 supports housing

development on these sites and this could include housing to meet specialist needs. There is no basis on which to allocate sites for specialist housing. This is dealt with under Issue 19: Housing Supply Target and Land Requirements. The planning application process allows for material considerations, including viability, to be considered on a case-by-case basis. **No modification proposed.**

Mark Ockendon (0419)

New allocations have been made in line with the spatial strategy which directs new development to brownfield land. Place policies and Development Principles are set out in the Plan to guide development of individual sites recognising their individual characteristics. City Plan policies Env 9 – Env 13 provide policy to protect historic area. **No modification proposed.**

BDW Trading (0350), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

Housing delivery is considered to be realistic therefore there is no need to replace table on p. 29 entitled 'Housing Land Supply' or to make consequential changes to the spatial strategy. **No modification proposed.**

Hallam Land Management (0457), Robertson Residential Group (0537)

There is no need to revise paragraphs 2.104 – 2.110 and the associated City Plan housing land requirement table (page 28) and housing land supply table (page 29). The strategy provides for greenfield alongside brownfield and it is considered that the land supply is sufficient. **No modification proposed.**

There is no need to amend paragraph 2.88 to refer to additional greenfield land. The allocations provide a range of brownfield and greenfield land. **No modification proposed.**

Hallam Land Management (0457), Inverdunning (Hatton Mains) Ltd (0427) Robertson Residential Group (0537)

There is no need to amend aim 2. The land supply provide a range of sites and it is not necessary to allocate additional greenfield land. Spatial strategy is dealt with under Issue 2 Spatial Strategy. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

There is no need to amend the housing land supply calculation. As set out above the calculation is considered to be appropriate. Individual housing proposals are considered under Issue 4-8 Proposed Sites. **No modification proposed.**

There is no need to amend paragraphs 2.110, 2.112 or 2.88 as the land supply is considered to be sufficient and a range of sites provided. It is not necessary to release additional greenfield land. **No modification proposed.**

There is no need to add to paragraph 2.100 as this paragraph relates to the setting of target and not allocations. **No modification proposed.**

It is accepted that plan identifies significant proposals in South East Edinburgh however it is not considered necessary to refer specifically to the delivery of new communities in south east Edinburgh as the aim includes "on other major development sites across the city" **No modification proposed.**

Spire Healthcare Limited (0719)

Change to aim 2 to include reference to support for greenfield sites is not accepted for the reasons given above. The mix of dwelling sizes and tenure types including for homes for older people are dealt with under Issue 26: Housing Policies. It is not appropriate to refer to policy within this aim. **No modification proposed.**

There is no need to amend paragraphs 2.104 to 2.110 or the City Plan housing land requirement table (page 28) and housing land supply table (page 29) or outcomes on page 26. The spatial strategy is considered to be appropriate and provide sufficient land to meet the housing land requirement on a range of sites. It is not necessary to allocate additional greenfield land. Spatial Strategy is dealt with under Issue 2 Spatial Strategy **No modification proposed.**

**Reporter's conclusions:**

**Reporter's recommendations:**

Issue 20: Assessment of Housing Land Supply

Issue 21	Housing Land Supply Policy	
Development plan reference:	Part 3: Policies - page 122, Policy Hou 4 Housing Land Supply	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):		
<div><div><div>Alexander Sutherland (0193)</div><div>Archie Clark (0003)</div><div>Barratt David Wilson Homes (0677)</div><div>BDW Trading (0350)</div><div>CALA Management Ltd (0465)</div><div>Dandara East Scotland (0757)</div><div>Dunedin Canmore Housing Limited (0766)</div><div>Hallam Land Management (0457)</div><div>Hallam Land Management (0599)</div><div>Hallam Land Management (0615)</div><div>Homes for Scotland (0404)</div><div>Landowner of East Foxhall (0544)</div><div>Miller Homes Limited (0649)</div><div>Mr T Klan (0307)</div><div>Pawel Stankiewicz (0445)</div></div><div><div>Robertson Residential Group (0537)</div><div>Steve Loomes (0767)</div><div>Stewart Milne Homes (0118)</div><div>Stirling Developments Limited (0303)</div><div>Tarmac (0244)</div><div>Taylor Wimpey (0200)</div><div>Taylor Wimpey and Hallam Land Management Ltd (0603)</div><div>The Association for the Protection of Rural Scotland (0334)</div><div>Wright PDL (0078)</div></div></div>		
Provision of the development plan to which the issue relates:	Policy to apply where a shortfall in the maintenance of the 5-year housing land supply is identified.	
Planning authority's summary of the representation(s):		
<div><div><div>Alexander Sutherland (0193)</div><div>Suggests removal of the opening paragraph option of Hou 4 to accept proposals in countryside or green belt.</div><div>There should not be a get-out clause that circumvents the aim of "Directing new development to, and maximising the use of, brownfield land rather than greenfield land."</div></div><div><div>Archie Clark (0003)</div><div>Greenfield development must be prevented. Consider that the statement in the policy "Where a shortfall in the maintenance of the 5-year housing land supply is identified ... proposals within the countryside or green belt area will only be permitted where..." will be used by developers to promote their green belt/green field proposals. Suggests alternative as "Proposals for development in the green belt and Countryside will not be considered unless they are for a short-term (5 years) or of a reversible nature to ensure that prime quality agricultural land, or land of lesser quality that is locally important retains its capacity for food production in support of national goals for food security. Proposals will only be permitted in the countryside where they are a brownfield development or on land that is of LCA Class 4.1 or a higher number. These must take account of principle C in Scottish Land Use Strategy ('Getting the best from our land') which states: "Where land is</div></div></div>		

highly suitable for a primary use (for example food production, flood management, water catchment management and carbon storage) this value should be recognised in decision-making.”

Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Homes for Scotland (0404), Steve Loomes (0767), Wright PDL (0078)

Parts (a) and (b) make any additional housing sites in these locations highly questionable given the highly restrictive proposed policies on development in the green belt or countryside. Therefore, if the 5-year housing land supply is not being met, the ability for the new build sector to identify any further sites to plug the gap in delivery is extremely challenging. Concern that the Council’s unwillingness to allocate a suitable range and volume of land will exacerbate existing affordability issues. What happens within Edinburgh has significant consequences for other areas and urge the Council to seriously reconsider their current strategy.

Suggested that this policy be amended to better reflect and align with SESplan Policy 7, and to move towards a more achievable bar for development proposals to meet once a shortfall is established.

BDW Trading (0350), Stewart Milne Homes (0118), Taylor Wimpey (0200)

Submit a supporting document - Housing Land Supply Assessment, December 2021.

Hou 4 (a) should be amended to avoid harm to the character of the settlement and local area rather than requiring it to be reflected.

Hou 4 (b) should be removed. A decision maker must be able to weigh any impacts on the objectives of the green belt against potential benefits of the proposal and reach a decision. Any negative impact on the green belt will not always outweigh positive impacts of development including meeting market housing demand and affordable need in a city with restricted housing supply.

In *Gladman v Scottish Ministers* ([2020] CSIH 28) the Opinion of the Court of Session explained the following in relation to a shortfall in housing land supply

“The greater the shortage, the heavier the weight which tilts the balance will be. If the appellants’ figures for the shortage are correct, that weight may well be very substantial.” (para. 50)

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Submit a supporting document - Development Strategy Statement - City Plan 2030. In accord with SPP (paragraph 110 and 119), SESplan Policy 7 and the Housing Land Technical Note (May 2014), the Council is required to achieve the housing land requirement by 2032. Accordingly, the purpose of Policy Hou 4 is to achieve the housing land requirement through a monitoring exercise maintaining a five year effective housing land supply at all times. This takes account of housing completions to date over the Plan period. The wording related to infrastructure provision is not in accord with SESplan (2013) and requires amendment.

Dunedin Canmore Housing Limited (0766)

Considers that there needs to be a greater focus on deliverability to ensure that housing needs are met within the City Plan 2030, particularly affordable housing provision. Many of the identified brownfield housing land opportunities are currently in active alternative use and with no immediate prospect of conversion to housing. To ensure deliverability, and to meet the expected housing requirements throughout the lifetime of the plan, there needs to be allowances for others site to come forward.

Hallam Land Management (0615), Mr T Klan (0307), Tarmac (0244)

The restrictions imposed through Hou 4, together with other restrictions in policies such as Env 18, will make it nigh on impossible for a developer to present an unobjectionable proposal to the decision makers.

The Plan either needs to allocate acceptable greenfield housing sites or relax the policy restrictions to ensure greenfield sites have a legitimate chance of gaining consent.

Hallam Land Management (0457), Robertson Residential Group (0537)

Consider Policy Hou 4 contrary to the aims of Hou 3 Mixed Communities and therefore Policy Hou 4 should be amended so as not to impose a blanket requirement for 65 dwellings per hectare.

Policy Hou 4 should be amended to reflect realistic tests, which ensure that the delivery of greenfield land is not significantly constrained by such restrictive policy. Hou 4 (a) and Hou 4 (b) make any development within the green belt or countryside significantly challenging given the restrictive policies contained within the Plan regarding green belt and countryside. Policy will therefore severely inhibit greenfield sites coming forward for development, due to the difficulty the private sector would face in identifying suitable sites to meet this policy, further exacerbating housing land shortfalls and ultimately undermining the outcomes of City Plan 2030, including 'A city in which everyone lives in a home which they can afford'.

Re-worded to read:

'Where a shortfall in the maintenance of the 5-year housing land supply is identified (as evidenced through the housing land audit) proposals within the countryside or green belt area will be supported by the Council where it is demonstrated that the proposal:

- a) is effective or capable of becoming effective in the relevant timeframe,
- b) provides requisite infrastructure capacity to absorb the additional impact of the development or demonstrates that infrastructure is already available or can be delivered at the appropriate time,
- c) is sustainable development, and
- d) is compatible with other policies of the plan.'

Landowner of East Foxhall (0544)

Objects to the wording of policy on the basis that it is not specific in regard to the age of the Housing land Audit, nor how it has been agreed. Request that a change is made to this policy to state that the shortfall must be identified in an "up to date, annual housing land audit", which has been agreed by the industry, or Homes for Scotland.

Pawel Stankiewicz (0445)

Remove Hou 4 (a) and Hou 4 (b) as Edinburgh during its history changed its character constantly, so it should not be avoided in the future and green belt objective is to block new housing in its area.

Stirling Developments Limited (0303)

Support policy Hou 4, but note there needs to be an ongoing, independent, rigorous review of the housing land supply throughout the Plan period.

Taylor Wimpey and Hallam Land Management Ltd (0603)

Refer to Court of Session in the case of Gladman Developments Ltd v Scottish Ministers [2020] CSIH 28 which considered how paragraph 33 of SPP should be interpreted and whether a housing proposal needed to contribute to sustainable development or comply with all of the sustainability criteria in paragraph 29 of SPP.

At paragraph 46 of the Courts judgment, it states a housing development which will remedy, to some extent, a housing shortage is something which almost inevitably contributes to sustainable development, which is what paragraph 33 requires, in one degree or another. It will do so also in terms of the economic benefits of construction and in other ways too. Whether it is, in overall terms, a sustainable development is another question. That is one for planning judgment, but it involves the use of the tilted balance.

On this basis, Hou 4 (b) should be removed. A decision maker must be able to weigh any impacts on the objectives of the green belt against potential benefits of the proposal and reach a decision. Any negative impact on the green belt will not always outweigh positive impacts of development including meeting market housing demand and affordable need in a city with restricted housing supply.

Hou 4 (c) states that proposals would only be acceptable if a site is sustainable development, however, it is not clear how this criterion would be applied. Whether a development is, in overall terms, a sustainable development is one for the planning balance. If the Council's definition is to comply with all the sustainability criteria in paragraph 29 of SPP then this policy would not be lawful. Furthermore, there is a policy in SESplan (Policy 7) which provides the decision maker with criteria to consider where there is a shortfall in the housing land supply. Policy 7 of SESplan does not include this criterion. Question whether it is necessary to include this policy in the LDP and why it diverges from the criteria in Policy 7 of SESplan. Therefore, submit that Hou 4 (b) and Hou 4 (c) are deleted.

The Association for the Protection of Rural Scotland (0334)

Hope policy on land supply will become obsolete in light of indications from Scottish Government. Agree that the Housing land supply policy should not be used to force approval for development which is incompatible with the aims and policies of the Plan and the Council's Climate Strategy. In particular the presumption against development in the Green Belt and countryside should be upheld in the face of the climate emergency and nature crisis.

Agree that "Any shortfall in housing land supply, whilst carrying weight, does not necessarily over-ride other considerations such as directing development to sustainable locations, securing green belt objectives and the appropriate provision of supporting infrastructure." Otherwise, the plan-led system of development control and management is undermined and early engagement of residents in planning becomes less worthwhile.

**Modifications sought by those submitting representations:**

Alexander Sutherland (0193)

Remove opening paragraph to accept proposals in countryside or green belt.

Archie Clark (0003)

Change to "Proposals for development in the green belt and Countryside will not be considered unless they are for a short-term (5 years) or of a reversible nature to ensure that prime quality agricultural land, or land of lesser quality that is locally important retains its capacity for food production in support of national goals for food security. Proposals will only be permitted in the countryside where they are a brownfield development or on land that is of LCA Class 4.1 or a higher number. These must take account of principle C in Scottish Land Use Strategy ('Getting the best from our land') which states: "Where land is highly suitable for a primary use (for example food production, flood management, water catchment management and carbon storage) this value should be recognised in decision-making."

Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Homes for Scotland (0404), Steve Loomes (0767), Wright PDL (0078)

Suggest that policy be amended to better reflect and align with SESplan Policy 7, and to move towards a more achievable bar for development proposals to meet once a shortfall is established.

BDW Trading (0350), Stewart Milne Homes (0118), Taylor Wimpey (0200).

Amend Hou 4 (a) to "Would not have a harmful impact on the character of the settlement and local area"

Remove Hou 4 (b).

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Amend Hou 4 to:

"The council is required to maintain a least a 5 year effective housing land supply at all times throughout the lifetime of the Plan to achieve the housing land requirement. An annual audit of the housing land supply (agreed with housing providers) will monitor and review the housing land supply in accordance with SPP and the Strategic Development Plan.

Where it is demonstrated that a least a 5 year effective housing land supply is not maintained at all times over the Plan period to achieve the housing land requirement,

proposals within the countryside or green belt area may be granted planning permission where:

- a. the development is in keeping with the character of the settlement and local area,
- b. the development will not undermine green belt objectives,
- c. the development contributes to sustainable development as set out in SPP 2014,
- d. the development is effective or capable of becoming effective within a five year period,
- e. any additional infrastructure required as a result of the development is either committed or to be funded by the developer, and,
- f. is compatible with other policies of the plan.”

Dunedin Canmore Housing Limited (0766)

No change suggested.

Hallam Land Management (0615), T Mr T Klan (0307), Tarmac (0244).

Alter first sentence in policy to say ‘...evidenced through an up to date and agreed housing land audit)....’

Remove ‘in the relevant timeframe’ and replace with ‘within 5 years’ from clause Hou 4 (d).

As a concluding policy statement under clause (f) state ...’ Proposals that do not accord with the development plan will not be considered acceptable unless material considerations indicate otherwise’.

Hallam Land Management (0457), Robertson Residential Group (0537)

Re-word Policy Hou 4 to:

‘Where a shortfall in the maintenance of the 5-year housing land supply is identified (as evidenced through the housing land audit) proposals within the countryside or green belt area will be supported by the Council where it is demonstrated that the proposal:

- a) is effective or capable of becoming effective in the relevant timeframe,
- b) provides requisite infrastructure capacity to absorb the additional impact of the development or demonstrates that infrastructure is already available or can be delivered at the appropriate time,
- c) is sustainable development, and
- d) is compatible with other policies of the plan.’

Landowner of East Foxhall (0544)

Change wording of policy to reflect Planning Advice Note 2/2010 that Housing Land Audits should be undertaken on an annual basis. The Housing Land Audit should be consulted on and agreed by the housing industry.

Pawel Stankiewicz (0445)

Remove Hou 4 (a)

Response suggests removal of policy

Remove Hou 4 (b)

Remove Hou 4 (c).

The Association for the Protection of Rural Scotland (0334)

No modification specified.

**Summary of responses (including reasons) by planning authority:**

Alexander Sutherland (0193)

The aim of the Plan is to deliver mixed use sustainable communities on the allocated land supply set out in Part 4, Table 2 and other suitable sites within the urban area. SPP 2014 (CD096) requires that a 5-years' supply of effective housing land is always maintained. A generous land supply is identified on page 29 of the Plan which should ensure that there is more than sufficient effective land to avoid the need for release of countryside or green belt land. SDP Policy 7 (CD087) allows housing development on greenfield land, subject to a number of criteria, where this is required to maintain the 5-years' effective housing land supply. Policy Hou 4 in the Plan sets the policy for Edinburgh and is consistent with SDP Policy 7. **No modification proposed.**

Archie Clark (0003)

The aim of the Plan is to deliver mixed use sustainable communities on the allocated land supply set out in Part 4, Table 2 and other suitable sites within the urban area. SPP 2014 (CD096) requires that a 5-year supply of effective housing land is always maintained. A generous land supply is identified on page 29 of the Plan which should ensure that there is more than sufficient effective land to avoid the need for release of countryside or green belt land. SDP Policy 7 (CD087) allows housing development on greenfield land, subject to a number of criteria, where this is required to maintain the 5-years' effective housing land supply. Policy Hou 4 in the Plan sets the policy for Edinburgh and is consistent with SDP Policy 7(CD087). The purpose of the policy is to allow for development in countryside or green belt locations to maintain a 5-year effective land supply. The suggestion that development in these areas is limited to short term uses would not meet with the objective of the policy. The value and use of land is a consideration within the assessment against Policy Hou 4 (c). **No modification proposed.**

Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Homes for Scotland (0404), Steve Loomes (0767), Wright PDL (0078)

The aim of the Plan is to deliver mixed use sustainable communities on the allocated land supply set out in Part 4, Table 2 and other suitable sites within the urban area. A generous land supply is identified on page 29 of the Plan which should ensure that there is more than sufficient effective land to avoid the need for release of countryside or green

belt land. The amount and range of land is sufficient and is covered in Issue 20 Assessment of Housing Land Supply. Spatial strategy is covered under issue 2 Spatial Strategy.

Policy Hou 4 sets the policy for Edinburgh and is consistent with SDP Policy 7 (CD087). SDP Policy 7 allows housing development on greenfield land, to maintain the 5-years effective housing land supply, subject to the following criteria (a) the development will be in keeping with the character of the settlement and local area, (b) the development will not undermine green belt objectives, and (c) any additional infrastructure required as a result of the development is either committed or to be funded by the developer. Policy Hou 4 interprets this for Edinburgh. It reflects Part 2 of Policy Hou 1 in the adopted Edinburgh Local Development Plan, November 2016 (CD042). The adopted LDP Policy Part 2 of Hou 1 was included following the Examination of the Plan (CD158). In addition to the criteria set out in SDP Policy 7 the Reporter recommended that an additional criterion on sustainability be included to reflect the objectives of SPP 2014 (CD096).

SPP 2014 (CD096) sets out a presumption in favour of development that contributes to sustainable development. Policy Hou 4 (c) requires that proposals are sustainable development. The policy therefore goes further than SPP 2014 by requiring that development does not just contribute to sustainable development but is itself sustainable development. Sustainable development is defined in the Glossary of the Plan as 'development that meets the needs of the present without compromising the ability of future generations to meet their own needs.' This is the definition provided in SPP 2014.

**No modification proposed.**

BDW Trading (0350), Stewart Milne Homes (0118), Taylor Wimpey (0200)

Policy Hou 4 (a) requires that proposals are in keeping with the character of the settlement and local area. This reflects the wording of SDP Policy 7. It is in line with proposed plan Policy Env 1 Design Quality and Context and Env 4 Development Design – Impact on Setting, which encourage design which draws upon positive characteristics of the surrounding area and where it will have a positive impact on its surroundings including the quality and character of the wider townscape. There is no justification to change the text as proposed. **No modification proposed.**

The change suggested is to remove Policy Hou 4 (b). Policy Hou 4 (b) requires that proposals will not undermine green belt objectives. This reflects SDP Policy 7 (CD087). Edinburgh's green belt plays an important role in directing the planned growth of the city, protecting and enhancing the quality, character, landscape setting and identity of the city and neighbouring towns, protecting and giving access to open space within and around the city and neighbouring towns. Hou 4 (b) is required to ensure that the Edinburgh Green Belt continues to meet its objectives while accommodating growth requirements. **No modification proposed.**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The meaning of the suggested replacement policy text is the same as that set out in the Plan and does not change the policy, but rather phrases it in a different way. The text of the policy contained within the Plan is sufficient and the Council sees no merit in the change suggested. **No modification proposed.**

Change is suggested to Hou 4 (d) to identify the relevant timeframe as five years. considered necessary. The suggestion that this state 5 years is not accepted. The policy sets out that it applies where there is a shortfall in the maintenance of the 5-year housing land supply and I is not necessary to restate this in Hou 4 (d). **No modification proposed.**

Policy Hou 4 (d) requires that proposals are effective or capable of becoming effective in the relevant timeframe. **No modification proposed.**

Change suggested to Hou 4 (e) would remove the requirement for infrastructure to be delivered at the appropriate time. The wording of Hou 4 (e) reflects proposed plan policy Inf 3 Infrastructure Delivery and Developer Contributions. It is essential that infrastructure is not just committed but can be delivered at the appropriate time to absorb the additional impact of development. SDP Policy 9 (b) (CD087) requires Local Development Plans to provide policy guidance that will require sufficient infrastructure to be available or its provision to be committed before development can proceed. **No modification proposed.**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Taylor Wimpey and Hallam Land Management Ltd (0603)

Hou 4 (c) requires that proposals are sustainable development. SDP Policy 7 (CD087) allows housing development on greenfield land, subject to the following criteria; the development will be in keeping with the character of the settlement and local area, the development will not undermine green belt objectives and any additional infrastructure required as a result of the development is either committed or to be funded by the developer. City Plan Policy Hou 4 interprets this for Edinburgh. It reflects Part 2 of Policy Hou 1 in the adopted LDP (CD042). The adopted Edinburgh Local Development Plan (CD037) policy Part 2 of Hou 1 was included following the Examination of the Plan (CD158). In addition to the criteria set out in SDP Policy 7 the Reporter recommended that an additional criterion on sustainability be included to reflect the objectives of SPP 2014 (CD096).

SPP 2014 sets out a presumption in favour of development that contributes to sustainable development. City Plan Policy Hou 4 (c) requires that proposals are sustainable development. The policy therefore goes further than SPP 2014 (CD096) by requiring that development does not just contribute to sustainable development but is itself sustainable development. An outcome of City Plan is for Edinburgh to be a sustainable city. The Council has set target for the city to be net zero by 2030. Addressing climate change is central to City Plan. To achieve the objectives of the Plan future growth of the city must meet the ambition to be a climate ready city where new homes are built to the highest emissions quality standards in resilient, connected neighbourhoods, in the right locations, with the right infrastructure. The requirement for sustainable development on unallocated green belt or countryside is aligned with the objectives of the emerging policy in draft NPF4 (CD099) and the sustainability related policies of City Plan. Sustainable development is defined in the Glossary of the Plan as 'development that meets the needs of the present without compromising the ability of future generations to meet their own needs.' This is the definition provided in SPP 2014 (CD096). **No modification proposed.**

Dunedin Canmore Housing Limited (0766)

The aim of the Plan is to deliver mixed use sustainable communities on the allocated land supply set out in Part 4, Table 2 and other suitable sites within the urban area. A

generous land supply is identified on page 29 of the Plan which should ensure that there is more than sufficient effective land. Policy Hou 1 supports housing on sites within the urban area that are not allocated, allowing for other sites to come forward. SPP 2014 (CD096) requires that a 5-year supply of effective housing land is always maintained. Policy Hou 4 provides for this circumstance and allows housing development within the countryside or green belt area. **No modification proposed.**

Hallam Land Management (0615), Mr T Klan (0307), Tarmac (0244)

The Plan aims to direct new development to, and maximise the use of, brownfield land rather than greenfield land and to deliver mixed use sustainable communities on the allocated land supply set out in Part 4, Table 2 and other suitable sites within the urban area. A generous land supply is identified on page 29 of the Plan which should ensure that there is more than sufficient effective land to avoid the need for release of countryside or green belt land. The amount and range of land is sufficient and is covered in Issue 20 Assessment of Housing Land Supply. Spatial strategy is covered under issue 2 Spatial Strategy.

The Edinburgh Green Belt plays an important role in directing the planned growth of the city, protecting and enhancing the quality, character, landscape setting and identity of the city and neighbouring towns, protecting and giving access to open space within and around the city and neighbouring towns. Policy Env 18 controls development in the green belt and countryside to enable it to fulfil its important role. It does not allow for housing development except in exceptional circumstances. Policy Hou 4 allows for housing development within the countryside or green belt area should there be an identified shortfall in the 5-year housing land supply. Policy Hou 4 is consistent with SDP Policy 7 (CD087). SDP Policy 7 allows housing development on greenfield land, to maintain the 5-years effective housing land supply, subject to the following criteria (a) the development will be in keeping with the character of the settlement and local area, (b) the development will not undermine green belt objectives, and (c) any additional infrastructure required as a result of the development is either committed or to be funded by the developer. Policy Hou 4 interprets this for Edinburgh. It reflects Part 2 of Policy Hou 1 in the adopted Edinburgh Local Development Plan, November 2016 (CD039). The adopted LDP Policy Part 2 of Hou 1 was included following the Examination of the Plan (CD158). In addition to the criteria set out in SDP Policy 7 the Reporter recommended that an additional criterion on sustainability be included to reflect the objectives of SPP 2014. **No modification proposed.**

Paragraph 4 of PAN 2/2010 (CD118) states that regular monitoring of housing completions and the progress of sites through the planning process can be achieved through the preparation of a housing land audit carried out annually in conjunction with housing and infrastructure providers. It is not considered necessary to refer to this within the Plan. The Edinburgh Housing Land Audit (CD055) is produced annually and reported to Planning Committee. It is agreed with Homes for Scotland. The current reference to the housing land audit within the policy is considered to be sufficient. **No modification proposed.**

Change is suggested to Hou 4 (d) to identify the relevant timeframe as five years. The suggestion that this state 5 years is not accepted. The policy sets out that it applies where there is a shortfall in the maintenance of the 5-year housing land supply. It is not necessary to restate this at Hou 4 (d). **No modification proposed.**

The addition of a clause to state 'Proposals that do not accord with the development plan will not be considered acceptable unless material considerations indicate otherwise' is unnecessary. This is the basis for the plan-led system and is set out in Section 25 of the Town and Country Planning (Scotland) Act 1997 (CD101). **No modification proposed.**

Hallam Land Management (0457), Robertson Residential Group (0537)

The change suggested is to remove Policy Hou 4 (a). Policy Hou 4 (a) requires that proposals are in keeping with the character of the settlement and local area. This reflects SDP Policy 7 (CD087). It is in line with proposed plan Policy Env 1 Design Quality and Context and Env 4 Development Design – Impact on Setting, which encourage design which draws upon positive characteristics of the surrounding area and where it will have a positive impact on its surroundings including the quality and character of the wider townscape. **No modification proposed.**

The change suggested is to remove Policy Hou 4 (b). Policy Hou 4 (b) requires that proposals will not undermine green belt objectives. This reflects SDP Policy 7 (CD087). Edinburgh's green belt plays an important role in directing the planned growth of the city, protecting and enhancing the quality, character, landscape setting and identity of the city and neighbouring towns, protecting and giving access to open space within and around the city and neighbouring towns. Policy Hou 4 (b) is required to ensure that the Edinburgh Green Belt continues to meet its objectives while accommodating growth requirements. **No modification proposed.**

The change suggested is that the words "will only be permitted" are changed to "will be supported". The language used reflects that this is an exceptional policy. The change is not accepted. **No modification proposed.**

Landowner of East Foxhall (0544)

The Housing Land Audit (CD055) is produced annually and reported to Planning Committee. It is agreed with Homes for Scotland. It is not considered necessary to refer to this within the Plan. The current reference to the housing land audit within the policy is considered to be sufficient. **No modification proposed.**

Pawel Stankiewicz (0445)

The change suggested is to remove Policy Hou 4 (a). Policy Hou 4 (a) requires that proposals are in keeping with the character of the settlement and local area. This reflects SDP Policy 7 (CD087). It is in line with proposed plan Policy Env 1 Design Quality and Context and Env 4 Development Design – Impact on Setting, which encourage design which draws upon positive characteristics of the surrounding area and where it will have a positive impact on its surroundings including the quality and character of the wider townscape. **No modification proposed.**

The change suggested is to remove Policy Hou 4 (b). Policy Hou 4 (b) requires that proposals will not undermine green belt objectives. This reflects SDP Policy 7 (CD087). Edinburgh's green belt plays an important role in directing the planned growth of the city, protecting and enhancing the quality, character, landscape setting and identity of the city and neighbouring towns, protecting and giving access to open space within and around the city and neighbouring towns. The policy does not preclude development in the green

belt where the objectives of the green belt are maintained. Criteria (b) is required to ensure that the Edinburgh Green Belt continues to meet its objectives while accommodating growth requirements. **No modification proposed.**

Stirling Developments Limited (0303)

The housing land supply is monitored and reviewed through the Housing Land Audit and Completions Programme which is prepared annually. **No modification proposed.**

Taylor Wimpey and Hallam Land Management Ltd (0603), The Association for the Protection of Rural Scotland (0334)

The inclusion of Policy Hou 4 is considered to be necessary. The aim of the Plan is to deliver mixed use sustainable communities on the allocated land supply set out in Part 4, Table 2 and other suitable sites within the urban area. SPP 2014 (CD096) requires that a 5-year supply of effective housing land is always maintained. A generous land supply is identified on page 29 of the Plan which should ensure that there is more than sufficient effective land to avoid the need for release of countryside or green belt land. SDP Policy 7 allows housing development on greenfield land, subject to a number of criteria, where this is required to maintain the 5-years' effective housing land supply. Policy Hou 4 in the Plan sets the policy for Edinburgh. It reflects Part 2 of Policy Hou 1 in the Edinburgh Local Development Plan 2016 (CD042). Part 2 of Hou 1 was included in the adopted LDP following the Report of Examination (CD158). The Reporter recommended that the policy be included to provide a policy basis to apply to sites outwith the allocated sites and the urban area and to allow for the local translation of SDP Policy 7. **No modification proposed.**

The Edinburgh Green Belt plays an important role in directing the planned growth of the city, protecting and enhancing the quality, character, landscape setting and identity of the city and neighbouring towns, protecting and giving access to open space within and around the city and neighbouring towns. Hou 4 (b) is required to ensure that the Edinburgh Green Belt continues to meet its objectives while accommodating growth requirements. The inclusion of Hou 4 (b) does not prevent the decision maker weighing the impacts on the green belt objectives against other matters. **No modification proposed.**

**Reporter's conclusions:**

**Reporter's recommendations:**

Issue 22	Housing Development Policy	
Development plan reference:	Part 3: Policies - page 121, Policy Hou 1 Housing Development	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):		
Ambassador Group (0683) Cala Management Ltd (0465) CBRE Global Investors (0644) Cockburn Association (0777) Crosslane Co-Living SPV 2 Limited (0687) Crosswind Developments Ltd (0184) Dunedin Canmore Housing Limited (0766) Forth Ports (0497) Hallam Land Management (0599) Hallam Land Management (0615) Hazeldene House Limited (0695) Homes for Scotland (0404) Howard Jones (0424) HUB Residential (0582)		Inverdunning (Hatton Mains) Ltd (0427) Leith Harbour and Newhaven Community Council (0776) Melford Developments Ltd (0308) Miller Homes Limited (0649) Mr T Klan (0307) Nuveen Real Estate (0734) Scottish Property Federation (0144) Stirling Developments Limited (0303) Tarmac (0244) Theo Spanellis (0415)
Provision of the development plan to which the issue relates:	Policy Hou 1 sets out where housing development will be supported.	
Planning authority's summary of the representation(s):		
<u>Nuveen Real Estate (0734), CBRE Global Investors (0644) -Support</u>  Fully support Policy Hou 1 in allowing for housing development in a range of locations, including defined town, local and commercial centres. Supporting paragraph 3.177 considered to be progressive and appropriate. Housing complements existing retail floorspace and helps to best utilise available land and create sustainable mixed use communities within the urban area. In such circumstances, increased land efficiencies and densities around existing amenities and infrastructure is sustainable and wholly desirable in planning and commercial terms.  <u>Crosswind Developments Ltd (0184)-Support</u>  Supportive of Policy Hou 1 Housing Development. In particular the inclusion of H61 in Part 4, Table 2 Housing Proposals.  <u>Ambassador Group (0683)</u>  Fully supports Policy Hou 1 in allowing for housing development in a range of locations, including defined town, local and commercial centres, subject to the preparation of an overarching masterplan. Supporting paragraph 3.177 is considered to be progressive and appropriate, recognising that through redevelopment, housing could complement existing retail floorspace and utilise available land to create sustainable mixed-use communities within the urban area. However, consider that the requirement for a Place Brief or		

masterplan in order for housing to come forward in a commercial centre is overly prescriptive and should be considered on a case by case basis.

Cala Management Ltd, (0465) Hallam Land Management (0599), Miller Homes Limited (0649)

Consider requiring brownfield land to be delivered in advance of green belt release is not realistic or consistent with the housing delivery objectives of SESplan (2013) or national planning policy set out in SPP 2014.

Policy Hou 1 Housing Development should recognise that further land can be release on brownfield or greenfield sites and direct the user to Policy Hou 4 Housing Land Supply.

Cockburn Association (0777)

Support Hou1 subject to in some instances, the sites allocated are not genuine effective housing sites as constraints may mitigate against development.

More reassurance is required that this policy is not a 'trojan horse' for development of greenbelt land.

Dunedin Canmore Housing Limited (0766)

Does not consider that all development should be directed to brownfield land rather than greenfield, instead an opportunistic approach should be taken with a greater focus on deliverability to ensure that housing needs are met, particularly affordable housing provision.

Many of allocated sites are currently in active alternative use with no immediate prospect of conversion to housing. To ensure deliverability, and to meet the expected housing requirements throughout the lifetime of the plan, there needs to be allowances for other sites to come forward.

Forth Ports (0497)

Proposed Plans commitment to the use of Compulsory Purchase Powers has the potential to undermine the City's fabric, including the Port of Leith, in seeking to address the need for housing, the proposal fails to recognise the wider impact and implications for the City's economy and infrastructure.

Hallam Land Management (0615), Tarmac (0244)

Consider there is a need to allocate a range of housing sites, including greenfield sites, to be in a position to confidently argue a case that sufficient effective housing land is provided in the Plan.

Hazeldene House Limited (0695), Crosslane Co-Living SPV 2 Limited (0687), HUB Residential (0582), Ambassador Group (0683)

To meet the growing housing need, Edinburgh must seek to deliver new homes through a wide range of development options. Policy Hou 1 should acknowledge there are a range

of new and innovative approaches to development, including Build to Rent, which will all need to play a role. This sector can increase the quality and supply of modern sustainable homes more quickly and should be encouraged as a sector to increase the supply of homes for the city.

The majority of policies specific to mainstream residential use set out in the Proposed Plan are not directly applicable to the Build to Rent model. Build to Rent housing should be subject to separate policies tailored to this new model.

#### Homes for Scotland (0404)

Support for other sites in urban area welcome but needs to be part of a balanced development strategy.

#### Howard Jones (0424)

Refers to supporting text of Hou 1 at paragraph 3.176 and does not agree with forcing land to be used for development that is currently valuable greenspace, Concerned that should areas of greenspace be offered-up for development, with the supposition of providing a certain scheme, that the council will subsequently fail to provide sufficient funds to create this and then sell onto a less considerate and profit-driven developer who will utilise what was greenspace for their personal profit; at the expense of local residents and members of the public who live/work/travel alongside this space daily.

#### Inverdunning (Hatton Mains) (0427)

Accept general principles of place based approach but should remain as a guide for certain areas rather than specifically linked to proposed allocations. Place-based policies include areas where specific allocations should be removed given their windfall nature. The place policies can guide development within each area as it comes forward.

#### Leith Harbour and Newhaven Community Council (0776)

Support in principle but suggest inclusion of small industrial units as well as commercial as many appear to be taken over by housing developments and result in local jobs and skills are being lost, they also support heritage of area, particularly in Leith.

#### Melford Developments Ltd (0308)

Object to the sites identified in Part 4 Table2 as this appears to give these areas an in-principle planning advantage, without any planning or feasibility work being available.

Hou 1 in relation to urban sites will affect the marketing value of land and the price of housing. In conjunction with other policies and requirements this will not assist the re-development of sites, particularly those with high development or regeneration costs. A general presumption in favour of urban land is all that is required for this policy.

Too much housing is being proposed on previously allocated economic led sites. Some sites are not on the market or available for development.

The Plan potentially increases the affordability crisis in the city by restricting available land for housing and orientating these on more difficult sites. Emphasis on brownfield sites high-risk and potentially undeliverable.

Mr T Klan (0307)

Considers that there is little evidence that policies in the Plan will provide required housing in mixed-use sustainable communities. A mixed approach to brownfield /greenfield release across the city is needed.

Scottish Property Federation (0144)

Consider that the intention to direct new development towards brownfield land should retain the current SPP requirement for brownfield to be considered first. Without this flexibility, the city is again constraining its own ability to support new developments in non-brownfield locations that could bring forward new homes and business premises much earlier than an alternative brownfield site could achieve.

Stirling Developments Limited (0303)

The support for other sites in the urban area is welcomed but needs to be part of a balanced development strategy. Brownfield development has always happened, but in coexistence with greenfield. The Plan needs to incorporate flexibility to allow effective greenfield sites to support the delivery of housing.

Theo Spanellis (0415)

The Housing Development Policy should focus mainly on reclaiming empty, uninhabited abandoned flats, and developing areas that have already been used for domestic/industrial purposes, e.g., old warehouses, factories, old housing developments, and leave the development of mainly green spaces into housing as a last resort.

**Modifications sought by those submitting representations:**

Ambassador Group (0683)

Delete requirement for a Place Brief or masterplan at Hou 1 (b)

Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazeldene House Limited (0695), HUB Residential (0582)

Policy Hou 1 should acknowledge there are a range of new and innovative approaches to development, including Build to Rent and serviced residential living which will all need to play a role.

Build to Rent housing should be subject to separate policies.

Cala Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Add:

c. where they accord with Policy Hou 4

Cockburn Association (0777)

No change suggested

Dunedin Canmore Housing Limited (0766)

Policy should allow for opportunistic development of brownfield and greenfield land.

Forth Ports (0497)

Page 121, paragraph 3.176

Delete the last sentence of the paragraph which reads, "On sites in private ownership the Council will, where necessary, intervene to ensure that land comes forward utilising compulsory purchase powers if required."

Hallam Land Management (0615), Tarmac (0244)

Alter part (a) to "on other sites within or adjacent to the urban area, provided proposals are compatible with other policies in the Plan and,"

Homes for Scotland (0404)

Support for other sites in urban area welcome but needs to be part of a balanced development strategy.

Howard Jones (0424)

Implies change to paragraph 3.176 as does not agree with forcing land to be used for development that is currently valuable greenspace.

Inverdunning (Hatton Mains) Ltd (0427)

Amend paragraph 3.175 to: "Place Policies and Development Principles (and technical requirements in Appendix D) set out the key elements to be delivered on allocated housing sites and on potential windfall sites during the plan period."

Leith Harbour and Newhaven Community Council (0776)

At 3.177 include small industrial units as well as commercial as many appear to be taken over by housing developments and result in local jobs and skills are being lost, they also support heritage of area, particularly in Leith.

Melford Developments Ltd (0308)

A general presumption in favour of urban land is all that is required for this policy.

Mr T Klan (0307)

Request alteration to Hou 1 (a) to 'on other sites within or adjacent to the urban area, provided proposals are compatible with other policies in the plan and;

Stirling Developments Limited (0303)

Effective greenfield sites should be supported if it can be demonstrated that the brownfield strategy is failing.

Policy Hou 1 should acknowledge there are a range of new and innovative approaches to development, including Build to Rent which should be subject to separate policies

Amend section 2.2 point 2 to:

“Directing new development to, and maximising the use of, brownfield land rather than greenfield land, unless where brownfield land is ineffective as demonstrated through a robust review of the effective land supply, improving and re-imaging Edinburgh’s neighbourhoods, rebuilding the city from within and delivering new communities in Edinburgh Waterfront, West Edinburgh and on other major development sites across the city, but supporting established effective settlements.”

Scottish Property Federation (0144)

Require brownfield first with flexibility to allow new developments in non-brownfield locations which could deliver much earlier than brownfield sites.

Theo Spanellis (0415)

Focus policy on reclaiming empty, uninhabited abandoned flats, and developing areas that have already been used for domestic/industrial purposes and leave the development of mainly green spaces into housing as a last resort.

#### **Summary of responses (including reasons) by planning authority:**

Ambassador Group (0683)

Hou 1 (b) supports proposals for housing as part of redevelopment proposals in a commercial centre subject to retention of its function as a commercial centre and a Place Brief or masterplan of the overall site area in accordance with plan policies. The Council encourages a comprehensive approach to redevelopment and regeneration wherever possible, and the preparation of place briefs and masterplans to identify the full design potential for creating successful places. Piecemeal development is less likely to lead to the creation of well-defined and cohesive networks of streets and spaces. Env 2 Co-ordinated Development encourages this approach. **No modification proposed.**

Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazeldene House Limited (0695) HUB Residential (0582)

It is not agreed that Policy Hou 1 should acknowledge the range of approaches to development. This is outwith the scope of the policy, the purpose of which is to identify locations where housing development is supported. Build to rent is considered to be a strand of mainstream housing. **No modification proposed.**

Cala Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

It is not agreed that an additional criterion should be added to support housing development which accords with Policy Hou 4. Policy Hou 1 is concerned with delivering

the allocated land supply and other sites in line with the spatial strategy of the plan. Policy Hou 4 allows for development in the countryside or green belt in circumstances where there is a shortfall in the maintenance of the 5-year housing land supply. It is not necessary to include a cross reference as the Plan should be read as a whole. **No modification proposed.**

Cockburn Association (0777)

Policy Hou 1 supports housing development on allocated sites. Allocated sites are considered under Issue 20 Assessment of Housing Land Supply. A generous land requirement combined with the sites allocated should ensure that if any sites do not come forward as expected there is more than sufficient identified land supply to meet the requirement without the need for release of green belt. **No modification proposed.**

Dunedin Canmore Housing Limited (0766)

In addition to allocated sites Policy Hou 1 supports proposals for housing on other sites in the urban area, provided proposals are compatible with other policies in the plan. This allows for opportunistic development within the urban area. The Plan aims to direct new development to, and maximise the use of, brownfield land rather than greenfield land. A generous land supply has been identified to meet the housing land requirement which is addressed under Issue 20 Assessment of Housing Land Supply. Allowing opportunistic development of greenfield land is not necessary or in line with the spatial strategy of the Plan. Policy Hou 4 allows for housing within the green belt or countryside where there is a shortfall in the maintenance of the 5-year housing land supply. **No modification proposed.**

Forth Ports (0497)

Scottish Government Guidance, Compulsory Purchase Orders and Acquiring Authorities: Guidance on CPO Use, 2018 (CD0120) encourages authorities to consider using their CPO powers when necessary and appropriate. The Council acknowledges in paragraph 3.176 of the Plan that, should it be necessary, it may have to use its compulsory purchase powers. This is addressed further in Issue 3 Delivery of the Strategy. The Council is only likely to instigate compulsory purchase powers with regard to specific identified sites where there is market failure, and this failure has implications in terms of delivering the strategy and more specifically the housing land supply. It is considered appropriate to refer to the availability of these powers within the supporting text. **No modification proposed.**

Hallam Land Management (0615), Tarmac (0244)

It is not accepted that part a of Policy Hou 1 should allow for development on areas adjacent to the urban area. Outwith the urban area land is identified as countryside or green belt. Development in the countryside and green belt is not supported except in the circumstances set out in Env 18 Development in the Green Belt and Countryside and Policy Hou 4 Housing Land Supply. **No modification proposed.**

Homes for Scotland (0404)

Policy Hou 1 supports housing development on allocated sites, other sites within the urban area and as part of redevelopment proposals in commercial centres. The support for other sites within the urban area is part of a balanced strategy. Sites include undeveloped greenfield allocations from the adopted Edinburgh Local Development Plan (CD039) alongside urban brownfield and strategic sites which include greenfield land. **No modification proposed.**

Howard Jones (0424)

Paragraph 3.176 of the Plan encourages development of housing on sites, not allocated for other uses, within the urban area. It does not imply that valuable greenspace will be forcibly developed. The proposals map identifies area of open space. Policy Env 23 Protection of Open Space protects all open spaces designated or which otherwise contribute to the amenity of their surroundings and the city; and or provide or are capable of providing for the recreational needs of residents and visitors; and/or are part of the city's landscape and townscape character; and or part of its biodiversity and green/blue network. Where there is a loss of open space Policy Env 23 (d) requires that there is a local benefit, proportionate to the scale of the development in terms of either alternative equivalent provision being made or improving an existing public park or open space. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

It is not accepted that the specific allocations are windfall in nature and should be removed. Land supply and identification of sites is addressed in Issue 20: Assessment of Housing Land Supply. It is therefore not accepted that 3.175 should refer to allocated sites and windfall sites. **No modification proposed.**

Leith Harbour and Newhaven Community Council (0776)

Text at paragraph 3.177 of the Plan relates to the redevelopment of commercial centres to include housing to complement existing floorspace. Many small industrial units are located within the general urban area, which is supported by Policy Hou 1 (a), and could therefore be brought forward for housing development. It is therefore unnecessary to set out specific support for housing in these locations beyond that stated at Policy Hou 1 (a). **No modification proposed.**

Melford Developments Ltd (0308)

The general presumption in favour of urban land suggested is not considered sufficient to direct housing development in line with the spatial strategy. Policy Hou 1 supports housing on the allocated sites which include a range of locations and other sites within the urban area. In addition, it provides support for housing as part of redevelopment proposals in a commercial centre which recognises that housing could complement existing floorspace and utilise available land to create sustainable mixed-use communities within the urban area in line with the aims of the plan. **No modification proposed.**

Allocated sites are considered to be deliverable within the Plan period. Allocated sites and their delivery are addressed in Issue 20 Assessment of Housing Land Supply and individual sites are addressed under Issues 4-8 Proposed Sites. **No modification proposed.**

Policy Hou 1 supports housing development on allocated sites, other sites within the urban area and as part of redevelopment proposals in commercial centres. Sites include undeveloped greenfield allocations from the Edinburgh Local Development Plan 2016 alongside urban brownfield and strategic sites which include greenfield land. **No modification proposed.**

Sites and proposals vary in nature and not all policies of the development plan will be applicable to each proposal. Development plan policies set out where and how development should be carried out. Development plan policies should be considered by developers in their decisions on land options and acquisition. **No modification proposed.**

Mr T Klan (0307)

It is not accepted that Hou 1 (a) should allow for development on areas adjacent to the urban area. Outwith the urban area land is identified as countryside or green belt. Development in the countryside and green belt is not supported except in the circumstances set out in Env 18 Development in the green belt and countryside. **No modification proposed.**

Scottish Property Federation (0144)

Policy Hou 1 supports the development of allocated sites which includes both brownfield and greenfield land. It supports housing on other sites in the urban area and as part of redevelopment proposals in a commercial centre. A generous land supply has been identified to meet the housing land requirement which is addressed under Issue 20 Assessment of Housing Land Supply. Allowing development of greenfield land is not necessary or in line with the spatial strategy of the plan. Notional programming is set out for allocated sites at Appendix 1 to Issue 20 Assessment of Housing Land Supply (CD176). This identifies that sites will be delivered throughout the period of City Plan 2030 including in the early years. Policy Hou 4 allows for housing within the green belt or countryside where there is a shortfall in the maintenance of the 5-year housing land supply. **No modification proposed.**

Stirling Developments Limited (0303)

It is not accepted that the Policy Hou 1 should support effective greenfield sites. The Plan aims to direct new development to and maximise the use of brownfield land rather than greenfield land. This accords with the policy principle of SPP 2014 (CD096) that consideration should be given to the re-use or redevelopment of brownfield land before new development takes place on greenfield sites. Spatial strategy is dealt with under Issue 2 Spatial Strategy. Issue 20 addresses the issue of land supply and identifies that there is sufficient volume and range of sites. Policy Hou 4 allows for the development of greenfield sites should there be a shortfall in the housing land supply. **No modification proposed.**

Hou 1 sets out where housing development is supported. Policy Hou 4 sets out policy which will apply where the sites provided for in Hou 1 are not sufficient to maintain the 5-year housing land supply. This allows for development within the countryside or green belt area. **No modification proposed.**

It is not agreed that Policy Hou 1 should acknowledge the range of approaches to development. This is outwith the scope of the policy which identifies locations where housing development is supported. Build to rent is considered to be a strand of mainstream housing. **No modification proposed.**

It is not necessary to add text at paragraph 2.2 (2) to set out the circumstances in which green field development may come forward. This section sets out the aims of the Plan which is to maximise the use of brownfield land and it is not necessary to set out exceptions. Policy Hou 4 sets out policy where there is a shortfall in the maintenance of the 5-year housing land supply. **No modification proposed.**

Theo Spanellis (0415)

Policy Hou 1 and other policies of the Plan direct development towards brownfield or existing allocations and protect greenfield sites from development. Policy Hou 1 supports the development of the allocated sites to deliver the housing land requirement in the period of the plan. The majority of sites are within the existing urban area on land which has previously been developed or previously allocated sites which have yet to be developed. A number of these sites have been or are in use for industry. In addition, the policy supports housing development on other sites within the urban area and redevelopment of commercial centres. Policy Env 23 protects open space except in certain circumstances, Env 18 controls development in the green belt and supports housing only in limited circumstances. Policy Hou 4 allows for development within the countryside and green belt where there is a shortfall in the maintenance of the 5-year housing land supply. **No modification proposed.**

<b>Provision of the development plan to which the issue relates:</b>	This section of the Plan sets out affordable housing policy to be applied to housing development.
<b>Planning authority's summary of the representation(s):</b>	
<p><u>The Association for the Protection of Rural Scotland (0334)-Support</u></p> <p>Supports the reasoning for the setting of a minimum 35% affordable housing target given the considerably greater need for social and affordable accommodation that exists in the city.</p> <p><u>Dunedin Canmore Housing Limited (0766)-Support</u></p> <p>Given the scale of affordable need, housing developments should support the delivery of new affordable homes as far as possible.</p> <p><u>NHS Lothian (0596) Support</u></p> <p>Supportive of the retention of an affordable housing policy. Consider delivering appropriate amounts of affordable housing, which is commercially viable to ensure supply, should be a key requirement of the Proposed Plan and any affordable homes delivered are across a variety of tenures and types.</p> <p>Consider that housing cannot be provided in isolation and are supportive of the CEC promoting affordable housing as an integral part of 20-minute walkable neighbourhoods that are high quality, high density and mixed-use, linked by better active travel and public transport infrastructure, green and blue networks and with essential community services brought closer to homes.</p> <p><u>Affordable Housing consultant, JLA (0756)</u></p> <p>Questions if an increase in affordable housing policy land risks a reduction in affordable housing delivery given that if it is unused after 60 months any land that comes through the Affordable Housing Policy reverts to the developer for market housing. No guarantee of pro rata increase in public sector housing grant funding to deliver units on the additional land. Questions if a significant per-unit net decrease in funding, allied to increased costs would bring an increased risk of non-delivery.</p> <p>Those delivering affordable housing policy developments may be compounded further in some cases by the requirement to provide housing as part of commercial developments and as such these developments are likely to attract reduced economies of scale and higher costs-per-unit to deliver than a more typical residential site. Concludes that it is reasonable to assume there will be an increase in the number of developments where a commuted sum is the only deliverable outcome, if the land is not to be "lost" through being timed out.</p> <p>Request that Council review and consult on affordable housing guidance to support the policy.</p>	

Ambassador Group (0683), HUB Residential (0582), Crosslane Co-Living SPV 2 Limited (0687), Hazledene House Limited (0695)

Provision of 35% affordable housing across all housing sites is likely to affect site viability, and many urban brownfield sites will be marginal, and is not considered appropriate to increase delivery of housing, including affordable housing, across the board. Policy should remain at 25% and recognise all forms of affordable housing tenure and allow a broader approach to delivery.

Policy should acknowledge that Build to Rent operates a different model to traditional housing for sale, therefore a specific approach to affordable housing is necessary.

Affordable housing offer should be entirely Discounted Market Rent and managed by the Build to Rent provider to enable units to be fully integrated into the development.

Archie Clark (0003)

Considers 25% requirement as far too low and developers have found ways to pay unrealistically low commuted sums. Developers need to pay the full sum and provide the accommodation on their sites to avoid creating unbalanced communities. Suggest that surplus student housing should be converted into affordable housing. Assessment of the cumulative total of developments planned by a developer (including those of fewer than 12 units) should be undertaken to avoid submission of multiple applications for fewer units

AREAA (0358)

Object to the increase to 35 % and seek greater flexibility in the policy to ensure viability. Seek an amendment to include the allowance of a Viability Assessment.

Note that SPP and the draft NPF4 advises of a 25 % affordable housing requirement and consider that on this basis, an increase on 25% would require justification and should be sought on a case by case basis, rather than as a blanket policy requirement.

Astley Ainslie Community Engagement Group (AACEG) (0275)

Affordable and social rent housing should be integrated within the site.

Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Homes for Scotland (0404), Steve Loomes (0767), Wright PDL (0078)

Insufficient clarity on how the increase to 35% may be implemented. Lack of information on methodology for analysing and processing the comments previous submitted.

Consider there to be insufficient evidence that 35% will increase the affordable housing supply. Increase may cause some sites to become unviable, particularly given the focus on brownfield land.

Request additional work is required to better evidence that this uplift will not lead to fewer sites coming forward, and potentially decreasing the delivery of affordable homes. Additional information is also required in terms of a City of Edinburgh Council/District Valuer viability assessment.

It would be particularly inappropriate, and a risk to viability, if the 35% affordable housing requirement was applied to any newly allocated sites identified in this Plan. Retroactive changes particularly risk affecting the viability of sites wherein significant investment may have already been made on the reasonable assumption that 25% affordable was to be required.

Before consideration can be given to the threshold, overall delivery needs to be dealt with in greater detail and more realistically. The threshold will be relatively academic if the overall delivery of new homes cannot be substantially increased. Caution is also needed in moving away from the clear national 25% threshold set out in SPP which is well understood and achievable in most areas. Regional variations could add uncertainty and create distortions in the market.

Consider it to be unbalanced to introduce untested mechanisms for seeking to unilaterally raise the requirement for affordable housing, which may lead to a decrease in the delivery of the associated (and required) private tenures.

Mix of affordable housing required should be reviewed, and where it can be evidenced that viability issues may exist, or where need for types of properties are evident, the split should be assessed. Should retain an ability to be flexible in seeking different types of affordable housing. Consider it is positive that the policy allows for tenure to be flexible, to remain consistent with local housing need which is consistent with the definition of affordable housing, defined at paragraph 126 of SPP.

Consider that additional funding would be required from the Scottish Government to deliver the new affordable housing policy, in line with current aspiration for 70% of these to be provided for social rent. There is insufficient evidence available to be certain that this funding is available, and that the burden will not be unreasonably passed onto RSLs.

Focus on brownfield will increase costs putting viability of affordable housing delivery at risk without further grant funding or a higher burden on the developer, or reduced numbers of units per development for Section 75. RSLs have advised that, in terms of self-delivery, it is unlikely that they would take on complex brownfield land developments. Overall, delivery is going to be challenging if the planning system does not allocate enough land of the right type to keep a steady release of new homes.

In Edinburgh, to render the uplift in the affordability requirement to 35% viable, this would have to be across all affordable tenures, include outright sale, enabling more people into home ownership in a challenging market for first time buyers and those looking for family space. The 70% as social rent approach is a national target, and it would be difficult to argue that there is not a need. The additional 10% is where the focus could be on additional tenures, particularly forms of affordable ownership. A needs-based assessment on a site-by-site basis is proposed for the remaining 10%.

Overall, the challenge in Edinburgh is going to be delivering enough housing of the right type and tenure, that meets the need to get to net zero at a price that is affordable across both the rental and ownership tenures. If all of the objectives of the Plan are to be realised then the level of public investment, risk and potentially reward will have to increase significantly.

Viability matters in this regard are not fully considered within the Proposed Plan, Documents referred to by the Council (e.g., District Valuer report and its review) have not been made public. This has severely undermined the consultation as the full suite of evidence has not been made available.

Given the scale of affordable need in the city and the large contribution that the private sector housing industry offers to the delivery of these homes the Plan should be doing more to assist in the delivery of all tenure housing. A range and choice of sites (brownfield and greenfield) would ensure a constant delivery of new homes annually.

The policy is not consistent with national policy nor is it supported by available evidence. A clear national policy contributes positively, providing a predictable environment for investment. A movement away from this with differences between authorities adds complexities and potential distortions to the housing market.

Considers that the Council has withheld the evidence it claims supports this policy. Understand there are important inconsistencies between the actual evidence and the way it is described in the Housing Technical Note. Have concerns about the status District Valuers report and its availability. It is not clear the extent to which the draft District Valuer Report or the Council has considered the 35% in the context of the viability considerations outlined in the Edinburgh Commercial Needs Study.

Should amend requirement to 25% affordable housing requirement, aligning with national policy. The policy should not be overly prescriptive on the types of affordable tenure permitted to enable flexibility over time and changes in funding to be adapted to.

CALA Management Ltd (0465), Hallam Land Management (0599)

Council has not made available for public consideration the supporting information, including the District Valuer assessment, it relies on to support of the increase from 25% to 35%.

There is no evidence that this increase, combined with the brownfield first strategy and suite of policies can actually be delivered or to support the assertion that the 35% requirement can be achieved within current subsidy budgets. Accordingly, policy should revert to the benchmark set out in SPP 2014 and the statutory development plan, SDP1 2013.

Crosswind Developments Ltd (0184)

Object to the blanket increase in the affordable housing requirement and seek greater flexibility to ensure viability. Seek an amendment to include the allowance of a viability assessment to ensure that the level of affordable housing contribution being requested does not render development in the city unviable.

An increase on 25 % would require justification to meet with SPP and should be sought on a case by case basis, rather than as a blanket policy requirement.

Cockburn Association (0777)

Support policy subject to the removal of "or as far as" within the supporting text.

#### Crosslane Co-Living SPV 2 Limited (0687)

Serviced residential living developments operate differently to traditional housing, being typically large-scale shared living developments under single management and subject to management plans. therefore, a specific approach to affordable housing is required. Due to their shared facilities, serviced residential living units are smaller than standard housing units, but offer a much higher level of amenity provision to residents and local community. Therefore, a financial contribution towards affordable housing is considered appropriate.

#### Defence Infrastructure Organisation (0124)

Supports the provision of affordable housing however concerned about the impact on redevelopment of more challenging sites, such as Redford Barracks, where the potential costs of adapting so many listed buildings are already high. Requests that policy is applied flexibly to sites where there are exceptional costs, and where clear evidence of these exceptional costs can be demonstrated.

#### Edinburgh Dog and Cat Home (0310)

Important that planning policies which require affordable housing strike a balance so that any requirements do not render a residential development unviable. Achieving strategic goals may not be achievable alongside affordable housing. Unless justified requirement should be reduced to 25% and include reference to viability in line with SPP.

Consider it is not necessary to include the word normally in relation to on site provision as exceptions to policies are already allowed for by material considerations and this addition is unnecessary and confusing and if retained clarification of what this means required.

Encourage additional text in the housing chapter to acknowledge the need for additional guidance on viability and delivery which should include the opportunity for future proposals on brownfield sites to include a report on viability and delivery.

#### Edinburgh Poverty Commission (0717)

Support 35% requirement and the statement that "The highest housing need in the city is for homes delivered for social rent." Consider there is confusion between the terms affordable and social housing and plan must be clear what its priorities and greatest needs are. Argue that an adequate supply of new housing for social rent is most necessary.

#### Edinburgh World Heritage (0339)

Consider it would be appropriate to add weight to address fact that diversity and cultural resilience is more of an issue in some areas, including the World Heritage Site.

#### Elaine Sosinka (0721)

Support 20 minute neighbourhood agenda. 'Mix of housing' should include social rent. Affordable housing commitment for each scheme should be on site, not off-set in another

locality. Edinburgh needs more social rent in the centre and council should not rely on developers to achieve this.

Grange/Prestonfield Community Council (0192)

Consider there to be too much off-site provision supported by the Council and there should be an early review of how 35% is working compared with previous 25%, as the cross- subsidy of 35% onto market housing may increase the cost of the latter and hence reduce its affordability.

Hallam Land Management (0615) Tarmac (0244)

Supports the aim that housing developments should support the delivery of new affordable homes. 35% requirement appears to be a random figure not been evidenced or supported by market tests and may make many allocated brownfield sites unviable and non-effective, particularly when open space requirements are also to be met. Rigid target will put more pressure on the need to identify greenfield releases and should influence the recommendations from the District Valuer in this regard.

Not convinced it will meet the affordable targets. Greater emphasis needed on how this can be delivered delivery within funding constraints. A more progressive form of affordable housing provision should be introduced otherwise there is a risk that the level of delivery expected will not be achieved. Minimum threshold for affordable should be 20 and with a sliding scale for affordable provision on larger sites.

James Forbes (0647)

Proposed increase to 35% is good but too easy for developers to avoid on-site provision of affordable housing through contribution to the cost elsewhere. Should be encouraging integrated communities through on-site affordable housing.

J. Smart & Co. (Contractors) PLC (0483)

No evidence provided to support the argument that a 35% affordable homes requirement will deliver more affordable homes and it is more likely to negatively impact on the development of housing sites resulting in less affordable housing being delivered. Will have a negative impact on land value and question if Council considered circumstances where a site's existing industrial use value is in excess of the residential value. Alongside other 'abnormal' costs associated to brownfield development, may dictate that there is no financial logic in the site owners obtaining vacant possession and redeveloping for residential use in turn, this is likely to further undermine the Proposed Plan's 'brownfield first' approach to delivering the City's housing targets during the plan period. Suggest existing 25% policy requirement is retained.

Juniper Green & Baberton Mains Community Council (0306)

Assessment of the cumulative total of developments planned by a developer (including those of fewer than 12 units) should be undertaken to avoid submission of multiple applications for fewer units. Practice of commuted sums must be resisted as they are frequently inaccurate, and housing needs to be provided within the community of the development.

KR Developments Group Limited (0263)

Consider requirement to provide 35% affordable housing could be counterproductive by making some projects unviable, possibly slowing down the provision of much needed new housing and a deterrent from investing in the city. May also deter further purpose built student accommodation investment and build to rent development.

Preferable to reduce or maintain the existing 25% requirements as this is familiar to development industry. Prescriptive approach requiring 35% affordable housing in Build to Rent will slow down the supply of this type of new home and potentially make proposals unviable. The additional need for 20% of the units to be made available for larger families is also too prescriptive, could also affect viability and may not reflect the market demand in some locations. Would be preferable for the Council to take a more pragmatic approach and discuss each proposal on its own merits and based on the locational and specific demand dynamics.

Lady Road Investment S.A.R.L. (0625), Tiger Developments Ltd (0602), Arnold Clark Automobiles Ltd (0750)

Considers that the requirement for a blanket 35% affordable housing policy will lead to many developments being unviable and will provide a risk to high quality housing being delivered.

Suggests policy should instead require applicants to consult with and deliver what social housing providers actually need in terms of the provision and mix of tenures and units to be delivered.

Encourage the Council to update and be more flexible in their definition of affordable housing.

Leith Central Community Council (0614)

Wish to see a target of 50% social housing in Leith and would like to see a clear definition of truly affordable housing as a ratio of the National Living Wage.

The affordable housing contribution in Leith Central Community Council area should be primarily for rent.

Asks what size of developments 35% requirement applies to.

Provision of 35% affordable housing should always be on site rather than "normally on site". Wording is not prescriptive as it only mentions units. Consider it should be a minimum of 35% of total habitable space.

Leith Harbour and Newhaven Community Council (0776)

Support in part the increase to 35% requirement however concerned that affordable housing should not be segregated and passed over to RSLs as this leads to stigma and provides houses not homes.

LPBZ Commercial Ltd (0391)

Addressing affordability will require an element of subsidised affordable housing, but this should not be seen as the only policy mechanism necessary, and the focus requires to be on providing more housing of all tenures. 35% is not supported by Scottish Planning Policy therefore suggest requirement should remain as 25%. If the Council pursue the additional 10% affordable units, then this should be presented in this policy as an option for developers which can provide them with a financial return, such as unsubsidized Low-Cost Home Ownership or the 10% could be used to provide housing for older people as required by the new Planning Act.

Lynn Grattage (0362)

Sites should provide 70% affordable housing.

Mark Ockendon (0419)

Considers that including a proportion of affordable housing in private developments is not a good solution and if there is a shortfall in affordable housing this should be addressed directly by the council or government and not passed to private developers.

Melford Developments Ltd (0308)

Object on basis that there is a lack of evidence presented to justify the changes proposed which would adversely affect delivery of sites by developers in conjunction with RSLs.

Morag MacLean (0326)

Would like to see more emphasis on social housing, rather than affordable housing. Term "affordable housing" implies that the rest of the development is "unaffordable. Developers should have to build social housing and housing that is actually affordable before they are allowed to build expensive luxury flats.

New Town & Broughton Community Council (0254)

Generally support an increase in provision but may be negative consequences in terms of impact on level of new housing and policy does not distinguish between categories of 'affordable housing' – being either Mid-Market Rent or 'Social Rent'.

Significant increase and not aware of any analysis of the effects and if this would actually increase the supply of truly affordable housing. Suggest alternative approach to focus on ensuring that, firstly, the 25% affordable housing requirement is delivered, and that 'affordable' housing is actually affordable.

Note that there is particular demand for social rent housing in Edinburgh and believe focus should primarily be on an improved definition of affordable housing and strengthened guidance on the inclusion of a Social Rent element.

Prefer to retain 25% requirement and include, either on-site or, if justified, at a nearby city centre location, a significant percentage of this being truly affordable housing. Updated

guidance could also include a more relevant definition of affordable housing, reflecting the average wage.

Nicola McCowan Hill (0195)

Consider that before consideration given to the affordable housing threshold overall delivery needs to be dealt with in greater detail and more realistically. Threshold will be academic if overall delivery of new homes cannot be substantially increased. Caution needed in moving away from the clear national 25% threshold set out in SPP as threshold is well understood and achievable in most areas. Regional variations could add uncertainty and create distortions in the market for new housing land. 35% across all brownfield sites may render sites unviable. Flexibility in terms of the percentage to deliver affordable homes should be carefully considered.

Consider it positive that the policy allows for tenure to be flexible, to remain consistent with local housing need. The policy should remain flexible. A degree of flexibility is consistent with SPP which states: "Planning can help to address the challenges facing the housing sector by providing a positive and flexible approach to development." (Paragraph 109)

Consider there to be insufficient evidence that 35% will increase the affordable housing supply. Increase may cause some sites to become unviable, particularly given the focus on brownfield land.

Request additional work is required to better evidence that this uplift will not lead to fewer sites coming forward, and potentially decreasing the delivery of affordable homes. Additional information is also required in terms of a City of Edinburgh Council/District Valuer viability assessment.

It would be particularly inappropriate, and a risk to viability, if the 35% affordable housing requirement was applied to any newly allocated sites identified in this Plan. Retroactive changes particularly risk affecting the viability of sites wherein significant investment may have already been made on the reasonable assumption that 25% affordable was to be required.

Parabola Edinburgh Limited (0723)

Consider there would be serious challenges in delivering the type of housing proposed at Edinburgh Park if more than 25% affordable housing requirement was sought.

Encourage the Council to update their definition of affordable housing, in recognition of the range of alternative models that can help in securing affordable homes for the city.

Peter Allen (0336)

Community-led collective custom build has a proven ability to deliver and support the principles set out in the Plan including affordable housing. Would therefore like to see this method of delivering housing and commercial / community facilities referenced throughout the Plan both to encourage take-up and to ensure that Council sets aside parcels of land for this purpose.

Robertson Residential Group (0537)

Disagree with the level of affordable housing provision sought and consider it should be amended to a minimum of 25% of the total number of units proposed.

On the basis of SPP and NPF4 consider proposed increase would not be in the best interests of some of the larger housing sites and may unnecessarily contribute to viability challenges, particularly given the overreliance on piecemeal brownfield housing sites and this will lead to less housing completions overall, as well as a lower number of affordable houses being delivered in the Plan period.

Limited evidence provided on whether increasing the affordable housing requirement to 35% will result in the delivery of more affordable homes on the ground. Note that 25% is a tried and tested percentage which is achievable in most areas across Scotland.

Suggest some flexibility to ensure the viability of private housing developments and ensure that affordable housing requirements do not act as a barrier to development. Consider there is scope for the Council to work in partnership with the development industry to secure unique and innovative solutions to affordable housing delivery and ultimately more private housing completions would lead not only to housing completions but in turn provide a higher contribution to affordable housing.

Any increase in the affordable housing requirement needs to be given priority over increasing the financial burden on homebuilders and landowners in other policy requirements of the Plan and therefore this matter needs to be considered holistically.

#### Rosebery Estate (Bankhead) (0618)

Increase to 35% should only be applied to new sites identified in plan as many sites being carried forward have been subject to significant work and investment.

#### Spire Healthcare Limited (0719)

Consider increase to a minimum of 35% for affordable housing may unnecessarily contribute to viability challenges in delivering some allocated sites and some future windfall sites, particularly as a specific justification of evidence of need is not provided for all sites. As the housing delivery element of the Plan has an over-reliance on brownfield housing sites this will lead to less housing completions overall and will also affect the delivery of housing for older people / specialist housing.

Requirement should remain at 25%, as has been the standard set by SPP, unless the Council has site specific evidence on a requirement for a higher provision to be set within the requirements of specific allocations in City Plan.

#### SAICA (0590), Nuveen Real Estate (0564), Nuveen Real Estate (0734), CBRE Global Investors (0644)

Additional provisions should be included to ensure viability concerns can be fully considered on a site by site basis, if need be. This would allow flexibility to be applied in select circumstances on both tenure and in the percentage applied to ensure the delivery of much need market and affordable housing is not unintentionally undermined.

#### Sapphire Land (0247)

Supportive of principle of providing affordable housing but consider applying a fixed affordable housing rate of 35% is not appropriate for all sites. Requirement does not account for sites with viability challenges which are likely to be exaggerated brownfield approach and will result in marginal housing sites remaining undeveloped, putting significant development pressure on other, less marginal sites - for example in the green belt in direct contradiction to the spatial strategy. Will stifle any development prospects at Western Harbour. Not appropriate to apply any fixed requirement for affordable housing and this should be discussed on a site-by-site basis subject to viability considerations. Flexibility in affordable housing provision for long term vacant sites which are faced with significant viability challenges should be incorporated within the policy.

#### Scottish Property Federation (0144)

Seek a change to the minimum affordable housing target because we feel it will be unachievable for many development projects and will therefore conflict with other policy aspirations. This could include a failure to support much needed new purpose built student accommodation, new forms of residential investment that could support the creation of new communities, such as build-to-rent, and to meet the needs of 'last-mile' logistics and distribution to support the city economy.

Requirement for a 35% will make some forms of development unviable and will be an obstacle to much needed investment in the purpose built student accommodation sector and the build-to-rent sector. There needs to be greater flexibility with this requirement, otherwise development may simply become unviable. Propose that 35% is an aspiration, flexed to adapt to different projects and not a minimum requirement.

Requirement for commercial developments above 0.25ha. to support affordable housing should be dropped. Prefer requirement for affordable housing to be on a selected basis, in discussion with potential commercial developers where the council believes there is a viable case for affordable housing contributions.

#### Southside Community Council (0781)

Supports the setting of a minimum affordable housing requirement on 35% - in some cases if the aim of addressing inequality and poverty is to be met, much higher percentages of affordable homes will need to be stipulated. Given the housing affordability crisis that exists in Edinburgh suggests that in terms of meeting the aims of the Strategy/Outcomes– a level of 40% would be more appropriate.

Request a strong statement in the policy text or narrative that any applications to reduce affordable housing requirements will be dismissed and more clarity of the definition of affordable housing.

#### Suzanne McIntosh (0409)

35% makes many sites unviable and does not assist the end goals of the plan. The Plan provides opportunity to ensure a brownfield first approach and re-use of land, often with significant demolition/ land restoration/ contamination costs. A blanket requirement for

affordable housing does nothing to assist the sequential approach. The sites that are edge of city, greenfield, often green belt type allocations should reasonably contribute more given significantly more is being lost in terms of the land around the city enjoyed for the public benefit.

Taylor Wimpey and Hallam Land Management Ltd (0603)

Support the Council's aspirations of delivering more affordable but express caution over the proposed change to 35%. Needs to be balance between encouraging affordable housing and not prohibiting market housing coming forward. Increasing the required provision of affordable housing without consideration of viability could impact on delivery.

Council has not planned to meet the housing need and demand identified in its own evidence base and this constrained supply of housing has impacted upon the affordability of housing in general. Consider first step to reducing affordability and increasing affordable housing delivery to be to increase delivery of all tenures which requires allocation of effective sites. The combination of a brownfield only approach and a 35% threshold will have an adverse impact on housing delivery.

Should consider the cumulative impact of increasing the financial burden on homebuilders from contributions sought in other policy areas.

Telereal Trillium (0540)

Consider blanket affordable housing policy across the whole city to be punitive when there are critical urban brown field sites which will be subject to viability stresses. Refer to work with other planning authority where 100% waiver was the sole reason for the site progressing.

Suggests a change to allow specific viability delivery cases to be made.

The Stoddart Family (0749)

Support the position of Homes for Scotland in terms of their objections raised to the proposed plan.

Union Property Services Ltd/VRS Ltd (0584), Ryden LLP (0578)

Affordable housing should continue to include a range and mix of tenures, 35% should be aspiration, viability based on land currently being transacted on assumptions of affordable provision at 25% should be recognised. Lead in time will be needed where detailed appraisals are required to assess the impact of such a significant change on potential land values and full costs of demolition, land remediation and redevelopment. To ease that transition a range of potential affordable tenures should be included to allow a blended approach to delivery.

Different forms of acceptable tenure require to be explicitly stated within the policy and need to be flexibly applied to ensure delivery based on viable economics of development.

University of Edinburgh (0464)

Increase in affordable housing requirement places additional pressure on land values and delivery of housing numbers. Do not wish to provide detailed comment on the wider debate around housing delivery however implications of a successful housing market have a direct influence on the future success of the University. The ability to attract and retain staff, researchers, and certain cohorts of the student population is directly influenced by the ability to access suitable housing options. In future, if the housing market dictates that there is a need for the University to intervene and provide selected housing offerings to meet wider staff and student need, this may be an area that requires to be factored into the delivery of university facilities. In such cases, it would need to be acknowledged that any provision would be specifically to meet University requirements and be controlled as such through suitable restrictions and would not be considered as general market housing. Consequently, the University of Edinburgh would not expect to be required to provide affordable housing as part of any proposal, as this would further impact on the viability and deliverability of product where this is deemed to be required.

#### Watkin Jones Group (0516)

Consider that 35% on-site affordable housing may have an adverse impact on development viability. Due to already high land values in the city, the affordable housing requirements should remain at 25% or lower for urban and brownfield sites, and the higher percentage requirements should be on greenfield sites only. Approach makes it more attractive for developers to build on brownfield sites which are often constrained and pose a number of other issues which need to be addressed.

There should be flexibility in tenures and definitions of affordable housing, and viability should be a consideration. Particularly pertinent for Build to Rent projects.

#### BDW Trading (0350), Stewart Milne Homes (0118), Taylor Wimpey (0200)

The policy is not consistent with national policy nor is it supported by available evidence. A clear national policy contributes positively, providing a predictable environment for investment. A movement away from this with differences between authorities adds complexities and potential distortions to the housing market.

Considers that the Council has withheld the evidence it claims supports this policy. Understand there are important inconsistencies between the actual evidence and the way it is described in the Housing Technical Note. Have concerns about the status District Valuers report and its availability.

It is not clear the extent to which the draft District Valuers Report or the Council has considered the 35% in the context of the viability considerations outlined in the Edinburgh Commercial Needs Study.

Should amend to a 25% affordable housing requirement, aligning with national policy.

The policy should not be overly prescriptive on the types of affordable tenure permitted to enable flexibility over time and changes in funding to be adapted to.

**Modifications sought by those submitting representations:**

Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazledene House Limited (0695), HUB Residential (0582)

Amend requirement to 25% and recognise all forms of affordable housing tenure.

Acknowledge in policy that Build to Rent operates a different model to traditional housing for sale, therefore a specific approach to affordable housing is necessary.

Affordable housing offer should be entirely Discounted Market Rent and managed by the Build to Rent provider to enable Discount Market Rent units to be fully integrated into the development.

Affordable Housing consultant, JLA (0756)

Request that Council review and consult on affordable housing guidance to support the policy.

AREAA (0358)

Reword policy to read:

“Developments including conversions, consisting of 12 or more units are required to provide affordable housing amounting to at least 25 % and upwards to 35% of the total number of units proposed, subject to a viability assessment. The provision should normally be on site. Tenure should be consistent with local housing need”.

Astley Ainslie Community Engagement Group (AACEG) (0275)

Replace “The provision should normally be on site.” with “The provision should be on site except in exceptional circumstances. “

Barratt David Wilson Homes (0677), Dandara East Scotland (0757), Steve Loomes (0767), Wright PDL (0078)

Support Homes for Scotland recommendations

BDW Trading (0350), J. Smart & Co. (Contractors) PLC (0483), Stewart Milne Homes (0118), Taylor Wimpey (0200), Taylor Wimpey and Hallam Land Management Ltd (0603)

Amend affordable housing requirement to 25%

CALA Management Ltd (0465), Hallam Land Management (0599)

Amend policy to:

Developments including conversions, consisting of 12 or more units are required to provide affordable housing amounting to no more than 25% of the total number of units proposed. The provision should normally be on site. Tenure should be consistent with local housing need.

Cockburn Association (0777)

Remove text from para 3.178 "or as far as".

Crosslane Co-Living SPV 2 Limited (0687)

Infers policy should require a financial contribution for serviced-residential living developments.

Crosswind Developments Ltd (0184)

Amend policy as follows:

"Developments including conversions, consisting of 12 or more units are required to provide affordable housing amounting to at least 25 % and upwards to 35% of the total number of units proposed, subject to a viability assessment. The provision should normally be on site. Tenure should be consistent with local housing need".

Defence Infrastructure Organisation (0124)

Add sentence to paragraph 3.178 of the proposed plan to explain that exceptions and flexibility in the application of policy Hou 2 will be considered on a case by case basis where justified by exceptional circumstances, for example, where a development contains exceptional costs that would make 35% affordable housing on-site unviable.

Dunedin Canmore Housing Limited (0766)

No change proposed

Edinburgh Dog and Cat Home (0310)

Amend Policy Hou 2 to:

"Developments including conversions, consisting of 12 or more units are required to provide affordable housing amounting to 25% of the total number of units proposed taking into account the viability of the proposed development. Tenure should be consistent with local housing need."

Edinburgh Poverty Commission (0717)

Clarify priorities and greatest needs in terms of affordable and social housing.

Edinburgh World Heritage (0339)

Amend policy wording to:

"...provision should normally be on site and weighted to support the diversity and cultural resilience required locally"

Elaine Sosinka (0721)

No modification is specified but the representation implies that affordable housing should be social rent and should be provided on site.

Grange/Prestonfield Community Council (0192)

Delete “normally” from policy.

Hallam Land Management (0615), Tarmac (0244)

Provide additional detail on analysis and justification.

Alter threshold to a higher figure on larger sites in a progressive way.

Introduce a new clause that ‘On sites of 200 or more units the level of provision may be varied in accordance with local housing needs and the prospects for delivery within the Plan period.’

Homes for Scotland (0404), The Stoddart Family (0749)

Mix of affordable housing required should be reviewed, and where it can be evidenced that viability issues may exist, or where need for types of properties are evident, the split should be assessed.

James Forbes (0647)

Infers that policy should not allow for commuted sums.

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Assessment of the cumulative total of developments planned by a developer (including those of fewer than 12 units) should be undertaken to avoid submission of multiple applications for fewer units.

Resist practice of commuted sums.

KR Developments Group Limited (0263)

Exclude build to rent from 35% requirement and provide for a more flexible approach which considers each proposal on its own merits based on the locational and specific demand dynamics.

Lady Road Investment S.A.R.L. (0625), Tiger Developments Ltd (0602), Arnold Clark Automobiles Ltd (0750)

Remove requirement for 35 % affordable housing and require applicants to consult with and deliver what social housing providers need in terms of the provision and mix of tenures and units to be delivered.

LPBZ Commercial Ltd (0391)

Amend policy to require 25% affordable requirement

Present additional 10% in policy as an option for developers which can provide them with a financial return, such as unsubsidized Low-Cost Home Ownership or the 10% use to provide housing for older people.

Lynn Grattage (0362)

Sites should provide 70% affordable housing

Leith Central Community Council (0614)

Require 50% social housing in Leith.

Require affordable housing contribution in LCCC area primarily for rent.

Include definition of affordable housing as a ratio of the National Living Wage.

Amend policy requirement to a minimum of 35% of total habitable space.

Leith Harbour and Newhaven Community Council (0776)

No change specified however comments infer that social housing should not be segregated from market housing.

Mark Ockendon (0419)

At 2.2(6): remove "and securing a minimum 35% affordable housing contribution from new developments in Edinburgh."

At 2.92 remove "and a requirement for market housing developments to deliver a proportion of their units for affordable housing."

At 2.92 remove "and requires that market sites provide 35% of their units to deliver affordable housing in mixed use sustainable communities"

Melford Developments Ltd (0308)

Set threshold of 20 units and a requirement of 30% on brownfield sites with 35% (maximum) on greenfield sites of over 50 units.

Morag MacLean (0326)

More emphasis on social housing, rather than affordable housing.

New Town & Broughton Community Council (0254)

Retain 25% requirement but include, either on-site or, if justified, at a nearby city centre location, a significant percentage of this being truly affordable housing.

NHS Lothian (0596)

No modification specified.

Nicola McCowan Hill (0195)

25% maximum with the policy being flexible to deal with viability of sites.

Parabola Edinburgh Limited (0723)

Infers that requirement should be 25%.

Peter Allen (0336)

Include reference to community-led collective custom build throughout the plan

Set aside land for community-led collective custom build.

Robertson Residential Group (0537)

Amend policy to require 25% affordable requirement.

Amend Paragraph 2.92 on page. 26 to:

‘There is a very significant all tenure housing need across Edinburgh. Affordable housing in Edinburgh is delivered directly through the Council’s affordable housing programme and a requirement for market housing developments to deliver a proportion of their units for affordable housing. City Plan aims to increase the amount new homes that are affordable and requires that market sites provide a minimum 25% of their units to deliver affordable housing in mixed use sustainable communities.’

Amended aim 6 to read:

‘Delivering land to meet Edinburgh’s housing needs over the next decade and securing a minimum 25% affordable housing contribution from new developments in Edinburgh.’

Rosebery Estate (Bankhead) (0618)

Change supporting text to:

“This policy will be applied to all developments of 12 or more residential units allocated in this Plan. It does not apply to student accommodation or to housing sites carried forward from the LDP”.

SAICA (0590), Nuveen Real Estate (0564), Nuveen Real Estate (0734), CBRE Global Investors (0644)

Include additional provisions to ensure viability concerns can be fully considered on a site by site basis, if need be.

Sapphire Land (0247)

Amend policy to state that for sites which are subject to significant viability challenges, a reduction in affordable housing provision could be negotiated, subject to sufficient viability information being submitted to the Council.

Scottish Property Federation (0144)

Amend policy to state that 35% is an aspiration, flexed to adapt to different projects and is not a minimum requirement.

Remove requirement for developments above 0.25ha. to support affordable housing.

Spire Healthcare Limited (0719)

Amend policy to:

“Developments including conversions, consisting of 12 or more units are required to provide affordable housing amounting to 25% of the total number of units proposed. The provision should normally be on site. Tenure should be consistent with local housing need.”

Amended aim 6 to read:

“Delivering land to meet Edinburgh’s housing needs over the next decade and securing a 25% affordable housing contribution from new developments in Edinburgh.”

Amend paragraph 2.92 to state 25%.

Southside Community Council (0781)

Infers that policy should require 40% affordable housing

Include a statement in the policy text and/or surrounding narrative that any applications to reduce affordable housing requirements will be dismissed and more clarity of the definition of affordable housing.

Suzanne McIntosh (0409)

Require a lower percentage requirement on windfall sites and a higher percentage requirement on allocated sites.

Telereal Trillium (0540)

Amended requirement to 25%.

Add paragraph after 3.178:

“Whilst the above policy sets the benchmark for all housing sites with the aspiration for a higher quota of affordable housing, some of the allocated housing sites will involve more challenged brownfield land with historic infrastructure, remediation or viability and delivery issues. Policy Hou2 will be applied with an allowance for planning applications to be accompanied by a report of evidence on viability and delivery challenges and an

acceptance that some sites, where evidence is demonstrated, will be allowed relaxations on the normal requirements for affordable housing contributions.”

University of Edinburgh (0464)

Infers that provision of housing by universities should be excluded from the affordable housing requirement

Union Property Services Ltd/VRS Ltd (0584), Ryden LLP (0578)

Add wording is required to recognise that viability of redevelopment of land currently being transacted on assumptions of affordable provision at 25% should be taken into account. In such cases a range of potential affordable tenures should be included in policy reference so that a blended approach to delivery of affordable housing can be taken.

Watkin Jones Group ((0516)

Requirement should be 25% or lower for urban and brownfield sites, and a higher percentage requirement should be on greenfield sites only.

**Summary of responses (including reasons) by planning authority:**

**General**

Archie Clark (0003)

Policy Hou 5 Conversion to Housing supports change of use of existing buildings in non-residential use to housing which would allow for the conversion of student housing to residential use. Policy Hou 2 Affordable Housing applies to conversions. **No modification proposed.**

Astley Ainslie Community Engagement Group (AACEG) (0275)

The use of the word normally implies that as a rule affordable housing provision should be on site. This is considered appropriate language. **No modification proposed.**

Cockburn Association (0777)

Paragraph 3.178 of the Plan states that ‘Given the scale of affordable housing need developments should support the delivery of new affordable homes as far as possible’. This acknowledges that there may be circumstances where this is not possible but that these would be exceptional. **No modification proposed.**

Crosslane Co-Living SPV 2 Limited (0687)

Policy Hou 2 requires that affordable housing provision should normally be on-site. This acknowledges that there may be circumstances where it is not possible for on-site provision therefore allows for a financial contribution. **No modification proposed.**

Edinburgh Poverty Commission (0717)

The priority for affordable housing and social rented housing is made clear in the plan. The Plan sets out requirements for affordable housing and defines this within paragraph 3.178. This also identifies that the highest housing need is for homes delivered for social rent. Further guidance on affordable housing tenure is set out in non-statutory Affordable Housing Guidance (CD053) as referred to in paragraph 3.178 of the plan. This sets out an expectation that 70% of affordable housing provision on each site be for social rent. **No modification proposed.**

Edinburgh World Heritage (0339)

It is not considered necessary for Policy Hou 2 to be weighted to support the diversity and cultural resilience required locally. The need for affordable housing is city wide. **No modification proposed.**

Elaine Sosinka (0721)

Policy Hou 2 requires that provision is normally on site. Paragraph 3.178 of the Plan states that the highest housing need in the city is for homes delivered for social rent. It encourages early engagement with a Registered Social Landlord. Further guidance on affordable housing tenure is set out in non-statutory Affordable Housing Guidance (CD053) as referred to in paragraph 3.178 of the plan. This sets out an expectation that 70% of affordable housing provision on each site be for social rent across the city. **No modification proposed.**

Grange/Prestonfield Community Council (0192)

Policy Hou 2 requires that provision is normally on site. The use of the word normally acknowledges that there may be circumstances where this is not possible but that these would be exceptional. Non-statutory Affordable Housing Guidance (CD053) sets out criteria. It is not considered necessary to remove the word 'normally'. **No modification proposed.**

James Forbes (0647)

Policy Hou 2 requires that developments including conversions, consisting of 12 or more units provide affordable housing and that provision should normally be on-site. Commuted sums are not addressed within the proposed plan. Non-statutory Affordable Housing Guidance (CD053) sets out the approach which accepts commuted sums only in exceptional circumstances. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Policy Hou 2 requires that developments, including conversions, consisting of 12 or more units are required to provide affordable housing amounting to 35% of the total number of units proposed and that provision should normally be on site. Further information on the application of the policy is set out in non-statutory Affordable Housing Guidance (CD053) as referred to in paragraph 3.178 of the plan. Guidance states that where a proposal is fewer than 12 units but is clearly part of a phased development of a larger site which would be subject to an affordable housing requirement, an affordable element will be required at an appropriate stage in the development of the site as a whole.

Commuted sums are not addressed within the proposed plan. non-statutory Affordable Housing Guidance (CD053) sets out the approach which accepts commuted sums only in exceptional circumstances. **No modification proposed.**

Leith Central Community Council (0614)

It is suggested that the definition of affordable housing should be based upon a ratio of the national living wage. It is considered that the definition provided within the glossary is acceptable as it describes affordable housing as meeting the needs of people who cannot afford to buy or rent housing available on the open market and reflects the definition provided in SPP 2014. **No modification proposed.**

Paragraph 3.178 of the Plan states that the highest housing need in the city is for homes delivered for social rent. It encourages early engagement with a Registered Social Landlord. Further guidance on affordable housing tenure is set out in non-statutory Affordable Housing Guidance (CD053) as referred to in para 3.178. This sets out an expectation that 70% of affordable housing provision on each site be for social rent across the city. **No modification proposed.**

It would not be appropriate to set a target for the Leith Community Council area that requires affordable housing to be for rent only. This would not be in line with the approved affordable housing tenures which include low cost home ownership. Council guidance sets out approved tenures ranked by priority and requires that applicants in the first instance identify how their proposals have been designed to allow for on-site delivery by an RSL in the first instance. **No modification proposed.**

Policy Hou 2 requires that developments, including conversions, consisting of 12 or more units are required to provide affordable housing amounting to 35% of the total number of units proposed and that provision should normally be on site. Policy acknowledges that there may be circumstances in which it is not possible to provide affordable housing on site. The exceptional circumstances are set out in non-statutory Affordable Housing Guidance (CD053).

SPP 2014 (CD096) sets out that the level of affordable housing required as a contribution within a market site should generally be no more than 25% of the total number of houses. It does not require it to be 25% of habitable space. **No Modification Proposed**

Leith Harbour and Newhaven Community Council (0776)

Policy Hou 2 requires that provision of affordable housing should normally be on site. Integration of social rented housing is addressed in non-statutory Affordable Housing Guidance (CD053) which includes avoiding large groupings of the same tenure type and that no more than 0.5Ha of social rented housing should be located together. **No modification proposed.**

Mark Ockendon (0419)

The greatest need is for affordable housing. Delivery of affordable housing is largely determined by availability of funding. Delivery of affordable housing is, therefore, also dependent to a significant extent upon private sector housing delivery and the affordable housing policy of the development plan. To deliver the affordable housing target it is necessary to require a proportion of market sites to deliver affordable housing as part of

the development. It is therefore appropriate to include the reference to the 35% affordable housing contribution from new developments in Edinburgh within the Aims set out at 2.2 of the Plan and the outcomes at paragraph 2.92. **No modification proposed.**

Morag MacLean (0326)

Paragraph 1.4 of the Plan sets out a commitment to building 20,000 affordable and low cost homes. Affordable housing is defined as housing that is for sale or rent, to meet the identified needs of people who cannot afford to buy or rent housing generally available on the open market. It includes social housing. Paragraph 3.178 of the Plan states that the highest housing need in the city is for homes delivered for social rent. It encourages early engagement with a Registered Social Landlord. Further guidance on affordable housing tenure is set out in non-statutory Affordable Housing Guidance (CD053) as referred to in paragraph 3.178 of the plan. This sets out an expectation that 70% of affordable housing provision on each site be for social rent. It is considered that there is appropriate emphasis on social rent. **No modification proposed.**

New Town & Broughton Community Council (0254)

Policy Hou 2 requires that provision under the policy should normally be on-site. Policy acknowledges that there may be circumstances in which it is not possible to provide affordable housing on-site. The exceptional circumstances are set out in non-statutory Affordable Housing Guidance (CD053). The Affordable Housing Guidance is subject to regular review. **No modification proposed.**

Peter Allen (0336)

While the Council acknowledge that community-led collective custom build can play a role in delivering affordable housing it does not consider it necessary to refer to one specific type of delivery within paragraph 2.92. Part 4, Table 2 Housing proposals and the proposals map identifies allocated housing sites where development for housing is supported by Policy Hou 1. In addition, Hou 1 supports housing on other sites within the urban area. It is not considered necessary to allocate specific sites for community-led custom build. **No modification proposed.**

University of Edinburgh (0464)

Policy Hou 1 applies to housing development. The nature of university provided housing for staff would be considered on a case by case basis through the planning application process which takes into account other material considerations. **No modification proposed.**

### **Definition of Affordable Housing**

Arnold Clark Automobiles Ltd (0750), Lady Road Investment S.A.R.L. (0625), LPBZ Commercial Ltd (0391), New Town & Broughton Community Council (0254), Parabola Edinburgh Limited (0723), Southside Community Council (0781), Tiger Developments Ltd (0602), Watkin Jones Group (0516)

The definition of affordable housing is set out in the Glossary. It is considered that the definition provided is acceptable as it describes affordable housing as meeting the needs

of people who cannot afford to buy or rent housing available on the open market and reflects the definition provided in SPP 2014 (CD096).

Policy Hou 2 does not define the affordable housing tenures. These are set out in non-statutory Affordable Housing Guidance (CD053). The guidance sets out a range of tenures in line with PAN 2/2010 (CD118). Sufficient flexibility in tenures is provided within this approved range. It is not appropriate to distinguish between these within the Plan as these will be determined at application stage ensuring that proposed developments meet an affordable housing need at the point where planning consent is issued.

Paragraph 3.178 of the Plan states that the highest housing need in the city is for homes delivered for social rent. It encourages early engagement with a Registered Social Landlord. Council guidance sets out an expectation that 70% of affordable housing provision on each site be for social rent across the city. **No modification proposed.**

### **35% Requirement for Affordable Housing**

Ambassador Group (0683), AREAA (0358), Barratt David Wilson Homes (0677), BDW Trading (0350), CALA Management Ltd (0465), Crosslane Co-Living SPV 2 Limited (0687), Crosswind Developments Ltd (0184), Dandara East Scotland (0757), Hallam Land Management (0599), Hallam Land Management (0615), Hazledene House Limited (0695), Homes for Scotland (0404), HUB Residential (0582), J. Smart & Co. (Contractors) PLC (0483), LPBZ Commercial Ltd (0391), Nicola McCowan Hill (0195), Parabola Edinburgh Limited (0723), Robertson Residential Group (0537), Sapphire Land (0247), Spire Healthcare Limited (0719), Steve Loomes (0767), Stewart Milne Homes (0118), Tarmac (0244), Taylor Wimpey (0200), Taylor Wimpey and Hallam Land Management Ltd (0603), Telereal Trillium (0540), The Stoddart Family (0749), Watkin Jones Group (0516) Wright PDL (0078)

SPP 2014 (CD096) paragraph 129 states that plans should identify any expected developer contributions towards delivery of affordable housing. Where a contribution is required, this should generally be for a specified proportion of the serviced land within a development site to be made available for affordable housing. Planning authorities should consider the level of affordable housing contribution which is likely to be deliverable in the current economic climate, as part of a viable housing development. The level of affordable housing required as a contribution within a market site should generally be no more than 25% of the total number of houses. No maximum level is specified. Draft NPF4 (CD099) requires that at least 25% of the total number of homes is affordable and a higher contribution may be sought where there is evidence of need.

It is acknowledged that the need for affordable housing must be balanced with the viability of developers to provide this. The Council commissioned the District Valuer in 2019 to model the impact of changes to affordable housing policy on development viability in Edinburgh. To demonstrate a correlation between the affordable housing percentage requirement and the existing use value / alternative use value of existing brownfield sites, the impact on value of an actual sample brownfield site which could, in the medium term, be brought forward for redevelopment purposes was examined, assuming both redevelopment for existing use and redevelopment for residential use. The exercise suggests that land values in Edinburgh are high enough to justify an affordable housing

requirement above 25%. Based upon this, Choices for City Plan 2030 (CD022) set an affordable housing requirement of 35%. This reflects that the greatest need is for affordable housing.

Comments received during the Choices consultation were considered. Comments were summarised and reported to Planning Committee on 12 August 2020 (CD038). Following the Choices consultation, a review of the 35% requirement was carried out which concluded that the correlation between land value and the level of affordable housing provision that can potentially be sustained is broadly the same as that identified in 2019 which influenced Choices. Based upon this, and that the greatest need is for affordable housing City Plan 2030 maintains an affordable housing requirement of 35%.

The report provided by the District Valuer is not a public document. It was prepared by the DVS who are regulated in terms of disclosure of information. In response to a Freedom of Information request a redacted copy of the report was provided. The extent of the redaction to protect confidentiality is such that part of the analysis and the entirety of the conclusion has been removed. Given the value of the report in this form to the public it has not been made publicly available as a matter of course. Section 3 of the City Plan Housing Technical Report (CD018) sets out the scope and conclusions from the report. Delivery of affordable housing is dealt with under Issue 20: Assessment of Housing Land Supply.

The policy sets out requirements. Any exception to this will be considered through the planning application process. Section 25 of the Town and Country Planning (Scotland) Act 1997 (CD101), allows for material considerations, including viability, to be considered on a case-by-case basis. Sites and proposals vary in nature and not all policies of the development plan will be applicable to each proposal. The requirements of the development plan should be taken into account in negotiations. **No modification proposed.**

A threshold of 12 or more units is an established local development plan policy. Increasing the threshold would reduce the amount of affordable housing provided which would not be appropriate given that the greatest need is for affordable housing. **No modification proposed.**

It is not considered necessary to have a different requirement for brownfield and greenfield land or for different size of sites. Both types of land and a range of site sizes have been considered in determining the 35% requirement set out in city plan. **No modification proposed.**

It is suggested by some representees that that the requirement should be 25% with a needs based assessment for an additional 10% and that this could focus on additional tenures beyond currently approved housing tenures. It is considered that the 35% affordable requirement is achievable and it provides a level of certainty for developers. **No modification proposed.**

Policy Hou 2 sets out the requirement for affordable housing provision. The Council's non-statutory Affordable Housing Guidance (CD053) provides detail. It is not necessary to refer to viability within the policy. The requirement has been set at a level that has been assessed as achievable and exceptions to this will be considered on a site by site basis

through the planning application process which takes account of other material considerations including viability. **No modification proposed.**

Given the level of need for affordable housing and limitations on funding there is a need to maximise the amount of affordable housing provided through the market. Where new applications are submitted it is considered acceptable and necessary that the affordable housing policy is applied as set out in City Plan 2030. The preferred option to increase the affordable housing requirement to 35% was set out in Choices for City Plan 2030 (CD022) which was published in January 2020. The time to adoption of City Plan provides a period of several years of awareness of the requirements and for these to be taken into account. The requirements of the development plan should be taken into account in negotiations. Any exception to this will be considered through the planning application process. Section 25 of the Town and Country Planning (Scotland) Act 1997 (CD101), allows for material considerations, including viability, to be considered on a case-by-case basis. **No modification proposed.**

Other local authorities have requirements above 25%, e.g., Stirling. It is considered to be widely understood that different authorities will have different policies in place and it is not accepted that a percentage other than 25% will lead to confusion. **No modification proposed.**

#### Affordable Housing consultant, JLA (0756)

Funding requirements are updated to Scottish Government annually through the Strategic Housing Investment Plan (SHIP) (CD057) and would include any additional grant funding required to deliver 35% affordable housing.

Grant rates for affordable housing have increased in the past year. Grant requirements for each local authority area are updated each year. There are unsubsidised affordable housing tenures which do not require any grant funding. The representation appears to assume that there would be a reduced grant rate but this is not happening in practice – a reduction in grant has not been proposed by the City of Edinburgh Council or Scottish Government. If further grant funding is required, this would be requested from Scottish Government.

The non-statutory Affordable Housing Guidance (CD053) is not out of date, having been last updated with minor changes in 2021 and is subject to regular review. The commuted sum policy is compliant with Planning Advice Note Pan 2/2010 (CD118), which sets out that “The decision to accept a commuted sum is one for the planning authority, and the rationale for accepting or rejecting a commuted sum should be set out clearly in local policy” and published guidance does set out the Council policy for commuted sums. That the Council’s policy differs only because PAN 2/2010 suggests that the planning authorities consider a local commuted sums policy. The Council’s Affordable Housing guidance has been effectively implemented, resulting in the delivery of thousands of affordable homes. **No modification proposed.**

#### Crosswind Developments Ltd (0184), CALA Management Ltd (0465), Hallam Land Management (0599)

It is not necessary to amend the wording of the policy to set an affordable housing requirement of 25% for the reasons set out above. The requirement has been set at a

level that has been assessed as generally achievable. Exceptions to this will be considered through the planning application process which allows for the consideration of other material considerations including viability. **No modification proposed.**

Defence Infrastructure Organisation (0124)

Policy Hou 2 sets out the requirement for affordable housing provision which includes conversions of existing buildings. The requirement has been set at a level that has been assessed as generally achievable and exceptions to this will be considered through the planning application process. **No modification proposed.**

Edinburgh Dog and Cat Home (0310)

The requirement of 35% has been set at a level that has been assessed as achievable. The requirements of the development plan should be taken into account in negotiations. Exceptions to this will be considered through the planning application process which takes account of material considerations including viability on a case by case basis. It is not considered necessary to include additional text to refer to viability or amend the text to require 25% affordable housing. **No modification proposed.**

Policy Hou 2 requires that affordable housing provision should 'normally' be on site. This acknowledges that there may be circumstances where it is not possible for on-site provision. **No modification proposed.**

Hallam Land Management (0615), Tarmac (0244)

The 35% requirement is considered appropriate for the reasons set out above. It is not considered necessary to introduce a new clause that 'On sites of 200 or more units the level of provision may be varied in accordance with local housing needs and the prospects for delivery within the Plan period.' The greatest need is for affordable housing, therefore it would not be appropriate for the policy to state any variance for larger sites. The requirement of 35% has been set at a level that has been assessed as achievable on sites of 12 or more units. Exceptions to this will be considered through the planning application process which takes account of material considerations on a case by case basis. **No modification proposed.**

A threshold of 12 or more units is an established local development plan policy. Increasing the threshold would reduce the amount of affordable housing provided which would not be appropriate given that the greatest need is for affordable housing. **No modification proposed.**

HUB Residential (0582), Hazledene House Limited (0695) Crosslane Co-Living SPV 2 Limited (0687), Ambassador Group (0683)

25% requirement is not supported for the reasons above. Build to rent developments are considered as a strand of mainstream housing therefore is considered appropriate that they meet with the affordable housing requirement. Policy Hou 2 requires provision of affordable housing. Council Guidance sets out approved tenures which are in line with those set out in PAN 2/2010 (CD118). This provides for a range of tenures and allows for delivery of on-site unsubsidised units. **No modification proposed.**

J. Smart & Co. (Contractors) PLC (0483)

The 35% requirement is considered appropriate for the reasons set out above.

Existing use values of land is likely to vary considerably. Many of the allocated sites have outdated buildings reaching the end of their life and will ultimately become obsolete. The value of older real estate and the income in perpetuity will therefore inevitably fall as it becomes obsolete, either in terms of its stock or its location and owners will be faced with the choice of investing in the real estate to replace the buildings or by selling the site to developers. It is for this reason that there has been long term trend for the redevelopment of old employment sites. Residential land values have historically been higher, particularly compared to dated industrial stock, and as a result the Council does not consider the sites existing use value to be prohibitive in bring forward housing development overall. **No modification proposed.**

KR Developments Group Limited (0263)

It is considered to be widely understood that different authorities will have different policies and it is not accepted that a percentage other than 25% will lead to confusion.

The requirement of 35% has been set at a level that has been assessed as achievable and along with other requirements of the Plan should be taken into account in negotiations. Sites and proposals vary in nature and not all policies of the development plan will be applicable to each proposal. Exceptions will be considered through the planning application process which takes account of material considerations including viability on a case by case basis.

Build to rent developments are considered as a strand of mainstream housing therefore is considered appropriate that they meet with the affordable housing requirement. **No modification proposed.**

Lady Road Investment S.A.R.L. (0625), Tiger Developments Ltd (0602), Arnold Clark Automobiles Ltd (0750)

Policy Hou 2 sets out the requirement for affordable housing provision. The non-statutory Affordable Housing Guidance (CD053) provides detail of the application of the policy. The requirement has been set at a level that has been assessed as achievable and exceptions to this will be considered through the planning application process. **No modification proposed.**

Paragraph 3.178 of the Plan states that early engagement should take place with a Registered Social Landlord when designing a scheme. Non-statutory Affordable Housing Guidance (CD053) sets out the tenure types ranked to reflect the housing needs of the city. It is not appropriate to distinguish between these within the Plan as these will be determined at application stage ensuring that proposed developments meet an affordable housing need at the point where planning consent is issued. **No modification proposed.**

LPBZ Commercial Ltd (0391)

SPP 2014 (CD096) sets out that the level of affordable housing required as a contribution within a market site should generally be no more than 25% of the total number of houses. It does not specify a maximum level. The 35% requirement is considered appropriate for

the reasons specified above. It is considered that the 35% affordable requirement is achievable, and it provides a level of certainty for developers. The Council does not support the suggestion that should the Council pursue the additional 10% affordable units, then this should be presented in policy as an option for developers which can provide them with a financial return, such as unsubsidized low-cost home ownership or to provide housing for older people. The Plan sets out the requirement and exceptions to this will be considered on a case by case basis through the planning application process which takes account of other material considerations. **No modification proposed.**

Lynn Grattage (0362)

Viability assessment suggest that 35% could be supported however there is no basis for an increase beyond this. **No modification proposed.**

Melford Developments Ltd (0308)

A threshold of 12 or more units is an established local development plan policy. Increasing the threshold would reduce the amount of affordable housing provided which would not be appropriate given that the greatest need is for affordable housing. Many allocations in City Plan are brownfield as are windfall sites. Reducing the requirement to 30% for brownfield sites would reduce the amount of affordable housing provided. The requirement has been set at a level that has been assessed as achievable and exceptions to this will be considered through the planning application process. **No modification proposed.**

Robertson Residential Group (0537)

There is no need to amend Paragraph 2.92 or Aim 6. The 35% requirement is considered to be appropriate for the reasons provided above. **No modification proposed.**

Rosebery Estate (Bankhead) (0618)

Proposed changes to policy text are not accepted. Given the level of need for affordable housing and limitations on funding there is a need to maximise the amount of affordable housing provided through the market. Where new applications are submitted it is considered acceptable and necessary that the affordable housing policy is applied as set out in City Plan 2030. The preferred option to increase the affordable housing requirement to 35% was set out in Choices for City Plan 2030 (CD022) which was published in January 2020. The time to adoption of City Plan provides a period of several years of awareness of the requirements and for these to be taken into account. **No modification proposed.**

SAICA (0590), Nuveen Real Estate (0564), Nuveen Real Estate (0734), CBRE Global Investors (0644)

Policy Hou 2 sets out the requirement for affordable housing provision. Other material considerations will be taken into account in determining any applications. The Council's non-statutory Affordable Housing Guidance (CD053) provides detail. It is not necessary to refer to viability within the policy. The requirement has been set at a level that has been assessed as achievable and exceptions to this will be considered through the planning application process. **No modification proposed.**

Sapphire Land (0247)

It is not necessary to amend the policy as suggested. The 35% requirement on all sites is considered appropriate for the reasons given above. Exceptions to policy can be considered through the planning application process which considers other material considerations including viability. **No modification proposed.**

Scottish Property Federation (0144)

Policy Hou 2 sets out the requirement for affordable housing provision. Build to rent developments are considered as a strand of mainstream housing therefore is considered appropriate that they meet with the affordable housing requirement. The requirement has been set at a level that has been assessed as generally achievable and exceptions to this will be considered through the planning application process. Student accommodation is supported in Policy Hou 6 and addressed under Issue 25 Student Accommodation. **No modification proposed.**

Policy Econ 2 Commercial development requires that proposals for commercial uses within the urban area on site 0.25ha or larger, should where compatible and appropriate with the site context, provide at least 50% of the site for housing. This policy supports the approach of the Plan to create sustainable communities, maximise opportunities for housing and avoid large mono use developments. The greatest need in Edinburgh is for affordable housing. It is therefore considered reasonable that where the development is for 12 or more units that it should contribute to the provision of affordable housing. Policy Econ 2 is covered under Issue 36 Commercial Development **No modification proposed.**

Southside Community Council (0781)

Whilst the greatest need for is for affordable housing this needs to be balanced with the viability of developers to provide this. Viability assessment suggest that 35% could be supported however there is no basis for an increase to the 40% suggested. **No modification proposed.**

Spire Healthcare Limited (0719)

It is not considered necessary to amend the text of the policy, aim 6 or paragraph 2.92 as suggested. The 35% requirement is considered appropriate for the reasons set out above. Exceptions to policy can be considered through the planning application process which considers other material considerations including viability. **No modification proposed.**

Suzanne McIntosh (0409)

Allocated sites include both greenfield legacy sites and brownfield sites. A higher percentage requirement on allocated sites could impact negatively on the delivery of allocated sites in preference to windfall sites with a lower requirement. The greatest need is for affordable housing. Windfall sites can contribute to meeting this need and to providing sustainable mixed communities. **No modification proposed.**

Taylor Wimpey and Hallam Land Management Ltd (0603)

25% requirement is not supported for the reasons above. The Plan meets the requirement for market housing in full. More than sufficient sites which includes a mix of brownfield and greenfield have been allocated to meet the housing land requirement. This

is addressed at Issue 20 Assessment of Housing Land Supply. Not all contributions sought in other policy areas will be applicable to every site. **No modification proposed.**

Telereal Trillium (0540)

It is not considered necessary to add the suggested paragraph after 3.178. The 35% requirement on all sites is considered appropriate for the reasons given above. Exceptions to policy can be considered through the planning application process which considers other material considerations including viability. **No modification proposed.**

Union Property Services Ltd/VRS Ltd (0584), Ryden LLP (0578)

The requirement has been set at a level that has been assessed as achievable and exceptions to this will be considered through the planning application process. Given the level of need for affordable housing and limitations on funding there is a need to maximise the amount of affordable housing provided through the market. Where new applications are submitted it is considered acceptable and necessary that the affordable housing policy is applied as set out in City Plan 2030. The preferred option to increase the affordable housing requirement to 35% was set out in Choices for City Plan 2030 (CD022) which was published in January 2020. The time to adoption of City Plan provides a period of several years of awareness of the requirements and for these to be taken into account.

There is a broad range of affordable housing tenures which are contained in Scottish Government Circular PAN 2/2010 (CD118) paragraph 5. The current approved tenures are set out in Council Guidance which allows for tenure type to be updated to reflect any change in Scottish Government Guidance.

The precise tenure mix will be determined at the point of application which allows for viability, financial and deliverability considerations to be fully taken into account. It not considered necessary to specify the approved tenures within the Plan. **No modification proposed.**

Watkin Jones Group (0516)

The requirement of 35% has been set at a level that has been assessed as achievable and exceptions to this will be considered through the planning application process. **No modification proposed.**

It is not considered necessary to have a different requirement for brownfield and greenfield land or for different size of sites. Both types of land and a range of site sizes have been considered in determining the 35% requirement set out in city plan. **No modification proposed.**

**Reporter's conclusions:**

**Reporter's recommendations:**

Issue 24	Mixed Communities	
Development plan reference:	Part 3: Policies - p 121, Policy Hou 3 Mixed Communities	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):		
<div>Ambassador Group (0683) AREAA (0358) BDW Trading (0350) CALA Management Ltd (0465) Colin and Emma Auld (0021) CoMoUK (0728) Crosslane Co-Living SPV 2 Limited (0687) Crosslane Group (0356) Crosswind Developments Ltd (0184) Dandara East Scotland (0757) Edinburgh Access Panel (0611) Hallam Land Management (0457) Hallam Land Management (0599) Hallam Land Management (0615) Hazledene House Limited (0695) Homes for Scotland (0404) HUB Residential (0582) Janet Woolley (0470) KR Developments Group Limited (0263) Leith Harbour and Newhaven Community Council (0776)</div> <div>Melford Developments Ltd (0308) Miller Homes Limited (0649) Mr T Klan (0307) Peter Allen (0336) Robertson Residential Group (0537) Scottish Government - Planning and Architecture Division - Development Plans Team (0309) Scottish Property Federation (0144) Spire Healthcare (0719) Steve Loomes (0767) Stewart Milne Homes (0118) Stirling Developments Limited (0303) Tarmac (0244) Taylor Wimpey and Hallam Land Management Ltd (0603) Watkin Jones Group (0516) West Town Edinburgh Ltd (0660) Wright PDL (0078)</div>		
Provision of the development plan to which the issue relates:	Policy Hou 3 sets requirements to deliver a range and mix of housing.	
Planning authority's summary of the representation(s):		
<div><u>Robertson Residential Group (0537), Hallam Land Management (0457) -Support</u>  Support policy and recognises the need for the delivery of a mixture of housing types, including larger family homes.  <u>West Town Edinburgh Ltd (0660)</u>  Support policy.  <u>Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazledene House Limited (0695), HUB Residential (0582)</u></div>		

Consider approach to be overly prescriptive as a mix of house types and sizes, cannot be readily applied to the serviced residential living model, which in itself is addressing a particular need within the housing market. Size and type of housing will depend on the site's location and context.

Should be acknowledged that build to rent and serviced residential living operates a different model to traditional housing for sale, therefore a specific approach to affordable housing is necessary.

#### AREAA (0358)

A requirement to apply policy on small sites will render some developments undeliverable. Certain sub-sectors and tenures of the housing market require certain economies of scale to make developments viable and to maximise efficiency. Examples include housing for older people with extra care, RSL managed affordable housing and student housing. Similarly, market housing on certain windfall sites may be unable to accommodate multiple house types within parameters set by other policies.

BDW Trading (0350), Dandara East Scotland (0757), Homes for Scotland (0404), Steve Loomes (0767), Stewart Milne Homes (0118), Taylor Wimpey (0200), Wright PDL (0078)

Would like further information on the definition of a larger family, the type of housing the Council considers suitable for family housing and why just 20% of new homes being for larger families is considered to be enough.

CALA Management Ltd (0465), Miller Homes Limited (0649) Hallam Land Management (0599)

Plan provides no clarity on why only a minimum of 20% of units suitable for larger families or clarification on the type of housing the Council considers suitable for family housing. Suggest a minimum of 30% of units suitable for larger families is provided. Otherwise, it may be appropriate to delete Hou 3 (b) entirely.

#### Colin and Emma Auld (0021)

Supportive of new housing however, feel the specific needs of families have not been considered. Many of the allocated sites in the Plan appear to have been unbuilt sites carried over from previous plans, which brings into question how the desired number of houses will really be achieved. Ask that the Plan be broadened to include more houses suitable for families with children (3, 4, 5 + bedrooms with gardens) and, in particular, for the sites in desirable areas in the south/south west of the city to be considered for inclusion.

#### CoMoUK (0728)

Incorporate shared transport solutions within new developments in mixed communities' policy to address the issues around transport poverty in areas of the Scottish Index Multiple Deprivations.

#### Crosslane Group (0356)

Potential co-living developments have not been taken into consideration. Summary of build to rent does not acknowledge that co-living is a concept of its own and policy must recognise this. The Edinburgh Design Guidance does not sufficiently address co-living and therefore the Plan should identify that co-living schemes meet a specific housing need and should be assessed differently. Consider that greater flexibility is required within the Plan to cater for co-living schemes so ensuring that it meets the tests set out within SPP.

Crosswind Developments Ltd (0184)

Supportive of the policy in general however seek an amendment for greater flexibility as a mix of house types or sizes may not always be possible, or suitable. Question viability of for a minimum of 20% of units suitable for large families, in addition to the other density requirements of the proposed plan.

Edinburgh Access Panel (0611)

Consider reference to a balanced mix including older people and special needs is too vague. There needs to be a specified proportion for the provision of accessible housing for developments of over 10 or 12 units and these should not be limited to the affordable sector and should apply to all private developer projects.

There is a shortage of appropriate accessible housing (to Housing for Varying Needs or BS9266-2013 standards) being provided and failure to address this could be taken as a failure of the Council to carry out its duties under the Equalities Act 2010.

Without a specific policy on accessible housing provision non-provision is not a planning matter and consider this to be an unacceptable situation that must be addressed to comply with the Council's responsibilities under the Equalities Act 2010.

Hallam Land Management (0615), Mr T Klan (0307), Tarmac (0244),

Consider there is no need for Hou 3 (a) which just restricts development and should not be basis for planning decisions. Suggests aspiration could be referred to in supporting policy text but should not be a requirement of policy.

Each site or phase of development should be treated in its own merits and be demand and market led. Applying a specified percentage may be a constraint on delivery or infrastructure particularly where a different mix is justified. Higher density more compact flatted developments at minimum standards required may not be appropriate environments for larger families in terms of garden and recreational space.

Hallam Land Management (0615), Mr T Klan (0307)

Policy should be relaxed where alternative provision for elderly or retirement living is provided in conjunction with mainstream market and affordable housing'

KR Developments Group Limited (0263)

Need for 20% of the units to be made available for larger families is too prescriptive, could affect viability and may not reflect the market demand in some locations. Preferable to

discuss each proposal on its own merits based on the locational and specific demand dynamics.

Janet Woolley (0470)

Considers there is a missed opportunity to include cohousing and housing cooperatives.

Leith Harbour and Newhaven Community Council (0776)

Fully support policy but does not appear to be for all. Range of housing should be integrated through entire development including affordable housing and there should be separate section for elderly and disabled who not always qualify for affordable housing due to financial requirements and categories, therefore, are excluded.

Considers that current developments, particularly build to rent does not provide multi-generational communities and developments should provide local facilities.

Melford Developments Ltd (0308)

Object to policy as it is overly prescriptive and regressive in nature. Should not include all proposals for housing and should be flexible. Unreasonable and disproportionate in scale and kind. Integration should be where possible.

Peter Allen (0336)

Support policy but would like to add support for community-led custom build as a way of delivering mixed communities.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Requests that the policy direction signalled by draft NPF4 (policy 9 – section f) in relation to supporting affordability and choice through new housing proposals is noted.

Scottish Property Federation (0144)

Requirement for 20% of the units to be made available for larger families may fail to support the viability of some build to rent opportunities. Believe objectives should be discussed with developers and investors on a project basis, with a view to requirements for larger family units and affordable housing contributions considered as part of bigger mixed development proposals, and in relation to how a build to rent proposal complements existing housing proposals and supply.

Spire Healthcare Limited (0719)

No specific policy support to the dedicated delivery of housing for older people or private care home accommodation. Mixed communities seeks to support delivery of a mix of housing types and sizes to cater for multi-generational communities, including responding to the needs of older people. However, strict application of Policy Hou 3 in development management decisions could prevent the delivery of dedicated housing for older people on appropriate sites.

Stirling Developments Limited (0303)

Support policy but note that it will be difficult to deliver with a blanket approach to housing density.

Taylor Wimpey and Hallam Land Management Ltd (0603)

Consider new build family housing to be important in meeting demand. Question feasibility to deliver the percentage of units suitable for larger families given density and other policy requirements such as public open space provision.

Watkin Jones Group (0516)

Consider that policy should be more flexible, including a site by site approach to providing family housing (3 bed units) based on specific housing needs, demographics of the area, and the demand for particular products, such as build to rent. Not all sites are suitable or desirable for family housing and therefore this policy should make reference to demand. Policy should expressly identify the range of housing types that are being actively encouraged, including build to rent.

**Modifications sought by those submitting representations:**

Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazledene House Limited (0695), HUB Residential (0582)

At paragraph 3.181 acknowledge that Build to Rent operates a different model to traditional housing for sale and requires a specific approach to maintain its integrity.

AREAA (0358)

Reword Policy Hou 3

“Proposals for housing will be permitted if it is demonstrated that:

- a. development provides an appropriate range of housing of different types and sizes based on location and need,
- b. major housing developments of 12 or more units to provide a minimum of 20% of units suitable for larger families and,
- c. the range of housing provided is well integrated through the entire development scheme”.

BDW Trading (0350), Dandara East Scotland (0757), Homes for Scotland (0404), Steve Loomes (0767), Stewart Milne Homes (0118), Taylor Wimpey (0200), Wright PDL (0078)

Provide further information on the definition of a larger family, the type of housing the Council considers suitable for family housing.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Amend policy to:

Proposals for housing will be permitted if it is demonstrated that:  
development provides an appropriate range of housing of different types and sizes,  
developments of 12 or more units provide a minimum of 30% of units suitable for larger  
families and, the range of housing provided is well integrated through the entire  
development scheme.

Or delete Hou 3 (b) entirely.

Colin and Emma Auld (0021)

Include more houses suitable for families with children (3, 4, 5 + bedrooms with gardens).

Infers inclusion of further sites.

CoMoUK (0728)

Incorporate shared transport solutions within new developments in policy.

Crosslane Group (0356)

Within the supporting text identify that co-living schemes meet a specific housing need  
and should be assessed differently. Or:

Include a specific policy on co-living.

Crosswind Developments Ltd (0184)

Change policy to:

“Proposals for housing will be permitted if it is demonstrated that:

- a. development provides an appropriate range of housing of different types and sizes  
based on location and need,
- b. major developments of 12 or more units to provide a minimum of 20% of units suitable  
for larger families and,
- c. the range of housing provided is well integrated through the entire development scheme

Edinburgh Access Panel (0611)

Include a policy on accessible housing provision with a specified proportion for  
developments over 10.

Hallam Land Management (0615), Mr T Klan (0307)

Add supporting text to indicate ‘This policy may be relaxed where alternative provision for  
elderly or retirement living is provided in conjunction with mainstream market and  
affordable housing’

Hallam Land Management (0615), Mr T Klan (0307), Tarmac (0244)

Delete Hou 3 (a)

Alter threshold in Hou 3 (b) from 12 to 30 or more units and add 'unless it can be demonstrated through compelling evidence that that this would not be practical in market or viability terms'.

Janet Woolley (0470)

Response infers that cohousing and housing cooperatives should be included in policy.

KR Developments Group Limited (0263)

Remove requirement for 20% family housing and consider on a case by case basis.

Leith Harbour and Newhaven Community Council (0776)

Amend Hou 3 (c) to: - ensure range of housing is integrated through entire development including affordable housing.

Include separate section for elderly and disabled.

Melford Developments Ltd (0308)

Increase threshold for units suitable for larger families to 30.

Apply maximum percentage of 20% to greenfield sites and 15% on brownfield land

Peter Allen (0336)

Add support for community-led custom build as a way of delivering mixed communities.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

No change requested, however should note the policy direction signalled by draft NPF4 (policy 9 – section f) in relation to supporting affordability and choice through new housing proposals.

Scottish Property Federation (0144)

Infers that rather requiring 20% family housing the amount should be determined on a project basis, with a view to requirements for larger family units and affordable housing contributions considered as part of much bigger mixed development proposals and considered in relation to how a build-to-rent proposal complements existing housing proposals and supply.

Spire Healthcare (0719)

Amend policy to:

“Proposals for housing will be permitted if it is demonstrated that:

- a) development provides an appropriate range of housing of different types and sizes (unless the overall development is for dedicated provision for housing for older people / specialist housing),
- b) developments of 12 or more units provide a minimum of 20% of units suitable for larger families (unless the overall development is for dedicated provision for housing for older people / specialist housing) and,
- c) the range of housing provided is well integrated through the entire development scheme.”

Stirling Developments Limited (0303)

Support this policy but note that it will be difficult to deliver with a blanket approach to housing density.

Taylor Wimpey and Hallam Land Management Ltd (0603)

No modification specified.

Watkin Jones Group (0516)

Policy should be more flexible, including a site by site approach to providing family housing (3 bed units) based on specific housing needs, demographics of the area, and the demand for particular products, such as build-to-rent.

Policy should expressly identify the range of housing types that are being actively encouraged, including build-to-rent.

**Summary of responses (including reasons) by planning authority:**

Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazledene House Limited (0695), HUB Residential (0582)

As set out in paragraph 3.181 of the Plan, build-to-rent developments are considered to be a strand of mainstream housing therefore should meet with the housing policies of the plan. The Council’s non-statutory Edinburgh Design Guidance (CD047) provides guidance on the approach to be taken to build-to-rent. All developments vary and the planning application process allows for material considerations to be taken into account.

**No modification proposed.**

AREAA (0358), Crosswind Developments Ltd (0184)

The Council consider that as worded the policy provides flexibility. Hou 3 (a) requires that development provides an appropriate range of housing of different types and sizes. Hou 3 (b) requires that as part of this mix where development is 12 or more units that a minimum of 20% of units are suitable for larger families. The requirement is a minimum and is considered to allow sufficient flexibility in the range of house types and size. Density examples set out in the City Plan 2030 Housing Study January 2020 (CD026). Appendix 1 demonstrate that a range of house types can be provided at high density including those suitable for larger families. The inclusion of the word appropriate is considered sufficient

to allow for location and need to be taken into account. The planning application process allows for material considerations, including viability, to be taken into account on a case by case basis. **No modification proposed.**

The inclusion of the word major in Hou 3 (b) is not necessary or appropriate. The policy applies to developments of 12 or more units. The use of the word major alongside the specified 12 units would be inconsistent with what may generally be thought of as major development as defined in The Town and Country Planning (Hierarchy of Developments) Scotland) Regulations 2009 (CD163). **No modification proposed.**

BDW Trading (0350), Dandara East Scotland (0757), Homes for Scotland (0404), Steve Loomes (0767), Stewart Milne Homes (0118), Taylor Wimpey (0200), Wright PDL (0078)

It is considered that sufficient information is provided in the text at paragraph 3.180 of the Plan which states that the mix of size of dwellings should provide for the needs of larger families. This includes larger units of three or more bedrooms, with access to private garden ground from ground or first floor level. The Council's Edinburgh Design Guidance (CD047) sets out further details. **No modification proposed.**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The suggestion that the 20% requirement is either increased to 30% or removed seems to be at odds with each other. The Council does not agree that the 20% requirement should be removed.

Minimum requirement of 20% units suitable for larger families is an established requirement in the Council's non-statutory Edinburgh Design Guidance (CD047), bringing the requirement into policy strengthens this and reflects the need for family housing in Edinburgh.

The Census 2011 showed that 13% of households in Edinburgh are overcrowded (based upon rooms available vs. rooms needed) compared to Scottish average of 9%. 16% of households with dependent children are overcrowded. Larger households (3+persons) in Edinburgh have smaller dwellings than Scottish average: 26% have 4 rooms or more compared to Scottish average of 30%. Families with children are under-represented in terms of migration into the city: 17% of households migrating out of the city were families with children compared to 10% of households migrating in.

The Council does not agree that the requirement for 20% of units to be suitable for larger families should be increased to 30%. Hou 3 (a) requires that development provides an appropriate range of housing of different types and sizes. Hou 3 (b) requires that as part of this mix where development is 12 or more units that a minimum of 20% of units are suitable for larger families. Raising the minimum requirement would reduce the flexibility of Hou 3 (a). The requirement is a minimum and the appropriate range of house sizes may include a higher proportion of units suitable for larger families. **No modification proposed.**

Colin and Emma Auld (0021)

The Plan acknowledges the need for family housing. Policy Hou 3 (b) requires that developments of 12 or more units provide a minimum of 20% of units suitable for larger families. Paragraph 3.180 states that this should include larger units of three or more bedrooms, with access to private garden ground from ground or first floor level. Allocation of sites is considered in the Council's response to issue 20 Assessment of Housing Land Supply. **No modification proposed.**

CoMoUK (0728)

Policy Hou 3 is concerned with housing mix. It is not appropriate to include the suggested reference to shared transport solutions within this policy. **No modification proposed.**

Crosslane Group (0356)

New concepts for housing emerge over time. It is not necessary for the policy to make reference to every type of proposal that might come forward, or for the Plan to contain separate policies for specific models.

Hou 3 (a) states that it must be demonstrated that development provides an appropriate range of housing of different types and sizes. It is appropriate for all housing to be assessed against this policy. The policy as worded provided allows flexibility in the types of housing.

The Plan aims to provide a mix of housing within developments and the planning application process allows for material considerations to be taken into account on a case by case basis. **No modification proposed.**

Hallam Land Management (0615), Mr T Klan (0307)

The aim of Hou 3 is to ensure a mix of house types and sizes to provide for multi-generational living. It would be expected that within this mix there would be accommodation which would be appropriate to a range of ages and needs. It would not be appropriate to refer to relaxation of policy where specific provision is being made for elderly or retirement living. The planning application process allows for material considerations to be taken into account on a case by case basis. **No modification proposed.**

Hallam Land Management (0615), Mr T Klan (0307), Tarmac (0244)

Hou 3 (a) states that it must be demonstrated that development provides an appropriate range of housing of different types and sizes. It is not an aspiration but a policy requirement that an appropriate range of housing is provided. Hou 3 (a) provides potential for multi-generational communities, allowing people to remain in their home or find a new home within the same community and meets the aim of City Plan is to deliver mixed use sustainable communities. The inclusion of the word appropriate within the policy is considered sufficient to allow for location and need to be taken into account. Density examples set out in the City Plan 2030 Housing Study January 2020 (CD026). Appendix 1 demonstrate that a range of house types can be provided at high density including those suitable for larger families. **No modification proposed.**

Hallam Land Management (0615), Mr T Klan (0307), Tarmac (0244), Melford Developments Ltd (0308)

Hou 3 (b) sets a threshold of 12 units for the provision of 20% units suitable for larger families. The raising of this to 30 is not accepted. 12 units is considered to provide an appropriate scale of development to be able to provide this proportion. The suggestion of additional text to provide an exemption to the policy is not appropriate. The planning application process allows for material considerations, including viability, to be taken into account on a case by case basis. **No modification proposed.**

Janet Woolley (0470)

Policy Hou 3 is concerned with range of house type and size it does not address delivery of housing. It would therefore not be appropriate to refer to a particular delivery model such as housing co-operatives or co-housing. Neither provide a specific type or size of property therefore it is not necessary to include them specifically within the policy as they can be assessed against the policy as set out. Types of housing provision would be more appropriately addressed within guidance if necessary. **No modification proposed.**

Leith Harbour and Newhaven Community Council (0776), Edinburgh Access Panel (0611)

Response seems to suggest that developments should include an element of housing set aside for elderly and disabled. Paragraph 3.180 of the Plan states that an inclusive approach to design of market and affordable housing should be taken. Guidance is provided in the Council's Edinburgh Design Guidance (CD047). This supports the Scottish Government's Housing for Varying Needs Standards (CD164) which set out good practice on the design of housing to achieve flexibility and suitability for people of all abilities and is the standard which applies to all Registered Social Landlord (RSL) development. An inclusive approach to all housing is encouraged.

Not all locations will be suitable for accessible housing. Hou 3 (a) requires that development provides an appropriate range of housing of different types and sizes. Paragraph 3.180 states that the mix should respond to the differing needs of residents, including those with special needs and immediate site conditions.

Accessibility is addressed in Building Standards. Standard 4.2 of The Building (Scotland) Regulations 2004 (CD108) requires that every building must be designed and constructed in such a way that: a. in non-domestic buildings, safe, unassisted and convenient means of access is provided throughout the building b. in residential buildings, a proportion of the rooms intended to be used as bedrooms must be accessible to a wheelchair user c. in domestic buildings, safe and convenient means of access is provided within common areas and to each dwelling d. in dwellings, safe and convenient means of access is provided throughout the dwelling, and e. in dwellings, unassisted means of access is provided to, and throughout, at least one level. **No modification proposed.**

Leith Harbour and Newhaven Community Council (0776)

Policy Hou 3 is concerned with the range of type and size of housing. While integration of affordable and market housing is desirable this may not always be practical. For example, on smaller developments of between 20 and 50 flats, it is likely an RSL will want to consolidate ownership of the affordable homes within a single stairwell. It is therefore

appropriate that this is addressed in guidance rather than policy. Non-statutory Affordable Housing Guidance (CD053) provides guidance on integration of affordable housing and states that where practical affordable housing should be integrated with market housing and social rented housing should be situated close to local amenities, services and public transport. It should be tenure blind and well-integrated with housing for sale. Large groupings of the same tenure type should be avoided. **No modification proposed.**

Policy Hou 3 requires a mix of housing types and sizes. Paragraph 3.179 of the proposed plan refers to this requirement as providing potential for multi-generational communities, allowing people to remain in their home or find a new home within the same community as their needs evolve and provides opportunities for informal social and practical support. Build to rent is considered a strand of mainstream housing and Hou 3 will apply.

Proposed plan policy Inf 1 supports housing development where key community facilities are walkable within a 20-minute return trip. Proposals for housing in areas that do not currently meet this walking distances will be considered only where these services can be delivered. It is therefore not necessary to make reference to this within Policy Hou 3 as the Plan should be read as a whole. **No modification proposed.**

Melford Developments Ltd (0308)

The Council does not consider the policy is restrictive or inflexible. Hou 3 (a) includes the word appropriate which allows for consideration of the range and type of housing provided. **No modification proposed.**

Applying a maximum percentage for the proportion of family housing would not be appropriate. There is a need for family housing in Edinburgh and providing a cap on this would reduce the flexibility of the policy to meet that need. It is not desirable to apply a different requirement to brownfield and greenfield sites. The planning application process allows for material considerations to be taken into account on a case by case basis. **No modification proposed.**

Peter Allen (0336)

Policy Hou 3 is concerned with mix of housing it does not address delivery of housing. It would therefore not be appropriate to refer to a particular delivery model such as community-led custom build. **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The policy support in draft NPF4 (CD099) in relation to supporting choice through new housing proposals is noted. Policy Hou 3 (a) is considered to provide flexibility to allow for an identified gaps in provision to be considered through the application of the policy and provides for a range of housing of different types and sizes. **No modification proposed.**

Scottish Property Federation (0144)

The policy aims to ensure that across all sites housing suitable for larger families is provided as part of the mix. Hou 3 (b) specifies the percentage requirement for units suitable for larger families. The minimum requirement of 20% units suitable for larger

families is an established requirement in the Council's non-statutory Edinburgh Design Guidance (CD047), bringing the requirement into policy strengthens this and reflects the need for family housing in Edinburgh. The Council does not accept that the requirement should be removed and considered on a case by case basis. The planning application process allows for material considerations to be taken into account on a case by case basis. As set out in paragraph 3.181 of the plan, build to rent developments are considered to be a strand of mainstream housing therefore should meet with the affordable housing policies of the plan. **No modification proposed.**

Spire Healthcare (0719)

The aim of Hou 3 is to ensure a mix of house types and sizes to provide for multi-generational living. It would be expected that within this mix there would be accommodation which would be appropriate to a range of ages and needs. It would not be appropriate to refer to relaxation of policy where specific provision is being made for elderly or retirement living. The planning application process allows for material considerations to be taken into account on a case by case basis. **No modification proposed.**

Stirling Developments Limited (0303)

The proposed plan does not set a blanket approach to density. Policy Env 26 requires identified sites should deliver density and dwelling numbers in line with those set out in the Plan and on other sites development must achieve an appropriate density. Density is addressed at Issue 12 Density. **No modification proposed.**

Taylor Wimpey and Hallam Land Management Ltd (0603)

Hou 3 (a) states that it must be demonstrated that development provides an appropriate range of housing of different types and sizes. The inclusion of the word appropriate is considered sufficient to allow for location and need to be taken into account. Higher densities on urban sites can provide family housing. Density examples set out in the City Plan 2030 Housing Study January 2020 (CD026). Appendix 1 demonstrate that a range of house types can be provided at high density including those suitable for larger families. **No modification proposed.**

Watkin Jones Group (0516)

Hou 3 (a) states that it must be demonstrated that development provides an appropriate range of housing of different types and sizes. The policy as worded provided allows flexibility of the types of housing. The inclusion of the word appropriate is considered sufficient to allow for location and need to be taken into account. The planning application process allows for material considerations to be taken into account on a case by case basis. Paragraph 3.181 addresses build to rent and recognises that it can be delivered rapidly and provide affordable housing. **No modification proposed.**

Watkin Jones Group (0516), KR Developments Group Limited (0263), Hallam Land Management (0615), Mr T Klan (0307)

The policy aims to ensure that across all sites housing suitable for larger families is provided as part of the mix. Hou 3 (b) specifies the percentage requirement for units

suitable for larger families. The minimum requirement of 20% units suitable for larger families is an established requirement in the Council's non-statutory Edinburgh Design Guidance (CD047), bringing the requirement into policy strengthens this and reflects the need for family housing in Edinburgh.

There is a need for family housing in Edinburgh. The Census 2011 showed that 13% of households in Edinburgh are overcrowded (based upon rooms available vs. rooms needed) compared to Scottish Average of 9%. 16% of households with dependent children are overcrowded. Larger households (3+persons) in Edinburgh have smaller dwellings than Scottish average: 26% have 4 rooms or more compared to Scottish average of 30%. Families with children are under-represented in terms of migration into the city: 17% of households migrating out of the city were families with children compared to 10% of households migrating in.

The Council does not accept that the requirement should be removed and considered on a case by case basis. The planning application process allows for material considerations to be taken into account on a case by case basis. **No modification proposed.**

**Reporter's conclusions:**

<b>Provision of the development plan to which the issue relates:</b>	Policy sets out circumstances in which planning permission will be granted for purpose built student accommodation.			
<b>Planning authority's summary of the representation(s):</b>				
<p><u>Archie Clark (0003), Juniper Green &amp; Baberton Mains Community Council (0306)</u></p> <p>Agree that, as stated in paragraph 2.93 "Purpose-built student accommodation...[is] often being built at the expense of creating strong, sustainable communities" and question if any recent assessment of need has been made in the light of Brexit and reduced non-local student numbers.</p> <p>Off-campus accommodation should be capable of being converted into affordable housing to improve the balance of housing in an area and to ensure that, should there be an over-provision of student accommodation post-COVID, it can readily be used to address the affordable provision identified in SDP2.</p> <p><u>Cockburn Association (0777)</u></p> <p>Concerned that there is no position on over-provision in areas of existing concentrations of student housing and advocate a return to a threshold policy. Query suitability of site area-based threshold in the context of housing and affordable housing provision suggests a threshold based on numbers and density might be better.</p> <p>Design of student accommodation should be capable of adaption to mainstream housing. Ask for clarification of criteria with will be used to determine no adverse impact on established character of an area.</p>				

Crosswind Developments Ltd (0184)

Object to supporting text on the grounds of viability. Consider site size threshold is too small and could render most student housing development sites unviable. Requirement may not be possible once taking into consideration all the other requirements of the plan.

Question the suitability of the proposed mix. Households in social rented housing are often families or older people who will ultimately have different housing requirements. For example, being close to their social networks, being located in areas with easy access to convenience retailing where their shopping needs can be met and near facilities such as doctors, playparks and schools are far more important to them. These are rarely found in city centre locations close to universities. In addition, there are the potentially conflicting lifestyles between residents and students, which quite often result in complaints.

David Fraser (0768)

Object to the limit of 10% of studio accommodation. Cluster flats not suitable for all groups and lack of studios may put people off studying in Edinburgh, studios provide a safer environment for social distancing and limiting the number of studios will result in prices increases for the existing studio accommodation.

Do not agree with requirement for 50% housing on sites above 0.25Ha. Will result in smaller schemes, which pushes rental level higher due to efficiencies, provide smaller amenity space and lower staff numbers creating a less well managed student experience and larger student operators, tend to want schemes of 300 beds minimum which cannot be achieved with this restriction resulting in smaller, less reputable student operators.

Edinburgh Napier University (0731)

No immediate requirement for any further bed spaces but seek a flexible policy framework that would allow future opportunities as and when the University grows and in response to student needs and demand.

Provision of additional purpose built student accommodation in Edinburgh should be delivered in line with demonstrable demand for bed spaces.

Do not have any strong view as to the maximum number of studios that should be permitted, recognise that the provision of a variety of formats of is important to ensure sufficient choice. Suggest that rather than restrict the provision of a particular form of student accommodation product, without any evidence to support this approach, policy should focus on promoting high quality of design to ensure safe and welcoming living environments.

Supportive of reference to amenity but suggest this could be developed further with supporting text added which states this should include common spaces, as well as group and individual study spaces as a minimum. Encourage a design approach that provides flexible private and communal space to meet the future needs of students. This should include the benefits of communal living in cluster flat arrangements, as well as access to study and amenity areas to ensure that there are maximum opportunities to live within buildings outside of individual private bedrooms.

Seek clarification as to whether requirement to provide housing will apply to university led schemes and ask that this is referenced in the policy. Consider this would have an adverse impact on the viability and deliverability of schemes and could inhibit the provision of further purpose built student accommodation.

Elaine Sosinka (0721)

Does not understand why Env policy does not apply to purpose built student accommodation if development to be flexible for future-proofing. Students have the same right to a pleasant environment as everyone else. Green space standards should apply to all accommodation.

Grange/Prestonfield Community Council (0192)

Considers that the Council has been too supportive of applicants and not adequately protected its local communities and residents. Adaptability is required to allow for student demand reduction due to market changes.

Requests that the term “campus” is defined to avoid stand-alone student accommodation proposals being labelled “campus” to escape the housing obligations.

Julie Robertson (0210)

Considers that no more student accommodation is needed in Edinburgh and space should be used for the community itself, for either housing or support services. Buy to let should be very limited on new properties.

KR Developments Group Limited (0263)

Consider that there is insufficient supply of purpose built student accommodation in the city resulting in more students in houses in multiple occupation and other residential dwellings than necessary taking them out of the housing supply and leading to excess demand existing purpose built student accommodation resulting in higher rents.

Requirement for sites greater than 0.25ha to provide mixed use development is too restrictive and will make it difficult to provide new developments of the scale required.

Do not agree with limit of 10% studios. Policy is not necessary and could lead to higher rents on existing stock. Agree that the wellbeing of students is paramount but do not agree that living in studio accommodation leads to social isolation. Preferable for the operators/investors to determine the appropriate mix. If supply and type of accommodation is restricted city could become a less desirable location for students.

Leith Central Community Council (0614)

Wish to see explicit policies limiting student housing to prevent transient populations undermining the social fabric that underpins and supports high density.

Planning permission for student accommodation should only be granted if it has been demonstrated that the proposal will not result in an excessive concentration of student

accommodation (including that in the private rented sector) to an extent that would be detrimental to the maintenance of balanced communities or to the established character and residential amenity of the locality. Developments should be close to the universities and colleges and accessible by public transport.

Requirement for 50% housing should apply to all sites. Housing should comprise 50% of all student accommodation floor space and not units.

Should require the timely monitoring of capacity (headcount), units and footprint dedicated to students to enable early detection of negative impact on the availability of permanent residential units and skewed demand (towards transient population needs) at local shops.

#### Leith Links Community Council (0617)

Purpose built Student Accommodation unfit for purpose. It is too expensive and many students would anyway prefer to live in the community. When students are away on vacation, it is used as short term tourist lets. Student accommodation should only be consented / built for administration by a local college or university and not for profit by independent commercial operators. There is too much student accommodation being built. The need is reducing post Covid Any future student accommodation should only be built as part of innovative designs such as mixed age intersectional housing complexes.

#### Lynn Grattage (0362)

All student accommodation needs to be built within a 20 minute walk of the educational establishment. Exceptions might be nearer Herriot Watt University at Riccarton or students working at the bush estate, where they could be on a bus corridor to those places.

#### Scottish Property Federation (0144)

Policy will make it hard to propose any new purpose built student accommodation to meet the city's student accommodation demand, unless it is a smaller proposal that would come below the 0.25 ha size, which would be at a size of 100 or so beds. However, developers need to attract investors and the investment appetite for student accommodation is mostly fixed on much bigger developments.

Policy of requiring contribution to housing and affordable housing for a development above 0.25ha must be dropped.

Requirement to limit studio flats to no more than 10% is overly prescriptive and should be removed. Restriction could remove opportunity to develop student accommodation that might be targeted at bespoke forms of student requirement, such as postgraduates.

#### S Harrison Developments Limited (0460), Summix Capital Limited (0747)

Supportive of accessibility by public transport and active travel however Council considers areas of high concentration to be in excess of 50% students, areas with lower student concentrations tend to be further away from university campuses making it more difficult to provide accommodation where there are good active travel routes.

Supportive of high levels of amenity to students however raise concerns over the open space requirement being applied too rigidly.

Object to limit of 10% studios. The mix and type of student accommodation should be driven by market evidence. Impact from COVID-19 is likely to make studio accommodation a more popular choice. Consider there are sites that are not suitable for a cluster model and studio rooms can offer more flexibility and efficiency.

No measurable evidence of harm from student accommodation, (refers to Report to Planning Committee of 25 February 2016) and the Council maintain that they will have a considerable surplus of 20,000 units in available housing land supply so it is unclear why this additional requirement for mainstream housing is being requested on student accommodation sites. Windfall sites do not prevent other land uses from coming forward through an arbitrary requirement for mainstream residential housing and are assessed on their individual merits.

Refers to Appeal Decision (PPA-230-2298) and agree with conclusion of Reporter and consider that it would be illogical to refuse proposals for student accommodation where there is no evidence of harm.

Object to requirement to provide 50% housing and question why such a significant policy requirement is not within the proposed policy itself. No justification provided and requirement would have significant viability implications. Purpose-built student accommodation can free up general residential housing and impact of significant number of economically active students in an area has a positive effect on local businesses providing direct and indirect employment. Would significantly reduce floor space which would increase the fixed costs leading to higher rents. This could have the potential of making schemes unviable for delivery particularly in the lower rent areas away from main campuses and would not deliver the accommodation needed to meet the student population.

The threshold of 0.25 ha is much too low to make delivery of student and residential housing viable and does not allow sufficient space for clear separation of students and residential populations. Each use type would require its own cycle storage, car parking (where required), refuse storage and plant rooms, 20% residential family home requirement including access to private gardens, external amenity space and access and egress to principal entrances. Each of these spaces require a significant area at ground floor and on smaller sites this is unlikely to be feasible, driving accommodation to upper floors and making building much taller. Making these smaller sites viable would unlikely be possible due to existing constraints which would reduce the number of people that can be accommodated creating less efficient use of land making development economically unviable.

#### Southside Community Council (0781)

Believes provision of dedicated student accommodation in area has reached saturation point and hope better public transport and active travel will open up wider areas of Edinburgh as realistic options for student accommodation.

Supports the requirement for provision of open space in student accommodation, but there should be a percentage requirement as in other development categories. Also supports the limit of 10% studios in terms of potential for future adaptability.

Supports para 3.186 which aims to create more balanced developments also incorporating dwellings with an affordable housing requirement but wishes this to be included in the body of the policy.

Consider it does not appear that sites for student accommodation are strategically assessed through the Plan process, meaning that all student accommodation applications are speculative. Suggests greater collaboration between the Council, institutions and student housing providers in planning strategically.

#### Tiger Developments Ltd (0602)

Agrees that student accommodation should be located on sites that have good access by public transport and active travel routes.

Supportive of a cluster biased scheme with a target of 10% studio provision. Considers it is important that the design of purpose built student accommodation creates safe and pleasant places for occupants, residents, and the wider community.

Agree that amenity, including open space requires to be considered as part of this policy.

Technical considerations including daylight and sunlight, open space, internal space standards and noise should also be considered.

#### Unite Group plc (0628)

Consider the wording of paragraph 3.185 does not go far enough to set out the importance of purpose built student accommodation and suggest the wording from the current adopted plan is carried forward.

Supports criteria Hou 6 (a)

Agree with the principle of Hou 6 (b), but do not support the wording of paragraph 3.187 which states that student accommodation is expected to be designed to provide 'equivalent amenity required for housing', or the 20% site area open space requirement set out under policy Env 31. It is a distinct type of accommodation and amenity standards should be specific to address the particular characteristics of these types of developments. Consider space standards are to be considered they should be based on HMO guidelines as a minimum safeguard, with the market then able to bring forward larger units and included in the Plan so they are properly considered and examined.

Support Hou 6 (c) but recommend the supporting text in paragraph 3.188 recognises the important role that studios play in meeting all student accommodation needs, particularly the overseas and post-graduate student market. As part of development management decisions, flexibility should be applied to support proposals for a higher level of studios where there is a clear market demand. Justification for this could be evidenced through a demand assessment.

Meaning of Hou 6 (d) is unclear and unclear how this will be used in the assessment of applications. Consider that in mixed use areas, additional student accommodation will have no material effect on the established character of the area or any adverse effect on existing residents. Should continue to recognise that it is preferable that student needs are met in purpose built accommodation and accept that this should be allowed in areas of the city where students already reside.

Not adverse to the principle of student schemes delivering market and affordable housing as part of the mix, however, should only be required as part of larger development schemes and not applied as a blanket approach to all sites of 0.25ha or greater as proposed. Desire to provide mainstream housing should also not be at the expense of the delivery of other housing types. Suggest that the wording of para 3.186 is amended

#### University of Edinburgh (0464)

Plan should be explicit in its support for the development of purpose built student accommodation, however, needs to reflect current needs and demands of the student population in a sustainable manner, and in locations where development can be integrated successfully into its surroundings.

Benefits the university brings to the city should not be underestimated and further support for the growth and continuation of its development activity should be explicitly stated in policy.

Agree that student accommodation should be located on sites that have good access by public transport and active travel routes to further and higher education institutions.

Agree that amenity, including open space requires to be considered as part of this policy. Technical considerations including daylight and sunlight, open space, internal space standards and noise should also be considered. Consider it essential that each development has space to create a student common room / amenity space and other support facilities to foster a community.

Note that studio flats do not foster healthy student communities and can often lead to social isolation. Welcome the reduction of studios to no more than 10%, as this closely aligns with the University's Residential Strategy. In addition to concerns of the high cost of studios, they also pose flexibility issues as they cannot be readily converted to other residential uses.

Consider that supplying purpose built student accommodation will allow for a release of some private rented accommodation.

Welcomes the removal of the requirement that purpose built student accommodation needs to be built exclusively for and managed by universities and considers reference should be made to consultation with them. Planning applications for student accommodation development should evidence, that it is being brought forward to satisfy the universities and college's accommodation demand which would reduce the speculative applications and ensure no negative perception of "overprovision."

Consider there is a significant under supply of purpose built student accommodation to meet demand in the city, however the location and concentration of additional supply needs to be monitored carefully to reflect a very dynamic market and demand position.

Recommended that Policy Hou 6 be amended to include reference to the need for applications to demonstrate evidence of need and demand and that the University and other higher education institutions should be afforded an opportunity to respond as consultees on any new applications for purpose built student accommodation. Submit a position paper setting out the University's views.

Do not support requirement for 50% housing on sites, as this conflicts with their ability to deliver PBSA schemes at an affordable and deliverable level, and with a set target of a minimum of 200 units, as dictated within the University's Residential Strategy. The requirement would also reduce the density of student accommodation that could be achieved on any given site, with the result being that the same quantity of student accommodation is required over a greater number of sites, making it more difficult to operate and maintain. The stated 0.25ha is a very small area to require 50% housing on and would result in a site where the student accommodation component would be too small to be operationally viable. The University maintain that this 50:50 housing provision should not apply to university-led and delivered student accommodation on sites which are being progressed by the University.

#### Watkin Jones Group (0516)

Proposed plan should be more explicit in its support for the development of purpose built student accommodation. Agree with criteria a and b. Object to supporting text that student housing should be designed to provide equivalent amenity required for housing as the amenity requirements for need to be considered on a case by case basis, reflect market trends and needs of students. Fully support principle of providing suitable levels of amenity but with opportunities for shared spaces, communal areas, as well as on site facilities and amenities, the comparison with mainstream housing is not appropriate, nor reflective of occupant needs.

Do not welcome the reduction of studio flats to no more than 10%. Students should be entitled to a choice of accommodation, and it should be for the market to respond.

Policy approach should focus on the principle of the use being demonstrated as acceptable, rather than the form of accommodation within it. The approach also fails to acknowledge the wider role of studio style accommodation in terms of futureproofing, and suitability for conversion to build to rent co-living etc.

Agree with Hou 6 (d).

#### **Modifications sought by those submitting representations:**

##### Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Require off-campus accommodation to be capable of being converted into affordable housing.

##### Cockburn Association (0777)

Suggest a threshold for provision of housing based on numbers and density.

Suggests design of student accommodation should be capable of adaption to mainstream housing.

Crosswind Developments Ltd (0184)

Delete Para 3.186

David Fraser (0768)

Remove Hou 6 (c).

Suggests that schemes which are all studios, or a high proportion of studios should have a minimum amount of amenity space per bedroom.

Remove site size limit of student housing. Suggest alternative to have a percentage of larger student scheme, say over 250 beds, to provide a percentage of beds at an affordable rent.

Edinburgh Napier University (0731)

Provide flexibility in policy to allow development in response to need and demand.

Suggest that rather than limiting studio flats to 10% that policy should focus on promoting high quality of design to ensure safe and welcoming living environments.

Require development to be delivered in line with demonstrable demand for bed spaces.

Add supporting text to state that amenity should include common spaces, as well as group and individual study spaces as a minimum.

Include reference in policy whether requirement to provide housing will apply to university led schemes.

Elaine Sosinka (0721)

Infers policy should require student accommodation to meet green space standards for housing.

Grange/Prestonfield Community Council (0192)

At Hou 6 (b) define "suitable" and add "and would not detract from the amenity of existing residents."

At Hou 6 (b) add: "All proposals must show how the student accommodation could be adapted to normal housing meeting all standards applicable to housing."

At Hou 6 (d) define "area" as applicants have used a loose definition to suit their case to the detriment of existing communities.

At 3.186 in 5th line before the word “campus” insert “existing university and FE college “

Julie Robertson (0210)

No modification specified but infers that student accommodation should not be supported in the Plan.

KR Developments Group Limited (0263)

Infers requirement for sites greater than 0.25ha to provide mixed use development should be amended.

Infers removing criteria Hou 6 (c)

Leith Central Community Council (0614)

Include policy limiting student housing.

Require demonstration that proposal will not result in an excessive concentration of student accommodation (including that in the private rented sector) to an extent that would be detrimental to the maintenance of balanced communities or to the established character and residential amenity of the locality.

Remove threshold for requirement for 50% housing and apply to all sites.

At 3.186 housing should comprise 50% of all student accommodation floor space and not units.

Include requirement for monitoring of capacity (headcount), units and footprint dedicated to students to enable early detection of negative impact on the availability of permanent residential units and skewed demand (towards transient population needs) at local shops.

Leith Links Community Council (0617)

Student accommodation should only be built for administration by a local college or university.

Student accommodation should only be built as part of innovative designs such as mixed age intersectional housing complexes.

Lynn Grattage (0362)

Infers that policy should require all student accommodation to be built within a 20 minute walk of the educational establishment.

Scottish Property Federation (0144)

Remove requirement for housing for developments above 0.25ha.

Removes Hou 6 (c).

S Harrison Developments Limited (0460), Summix Capital Limited (0747)

Delete Hou 6 (c) and paragraph 3.186.

Southside Community Council (0781)

Include a percentage requirement for open space.

Include requirement for 50% housing on sites greater than 0.25ha in the body of the policy.

A more strategic approach to site identification should be taken.

Tiger Developments Ltd (0602)

Technical considerations including daylight and sunlight, open space, internal space standards and noise should also be considered.

University of Edinburgh (0464)

Include reference to the need for applications to demonstrate evidence of need and demand.

Include requirement that the University and other higher education institutions should be afforded an opportunity to respond as consultees on any new applications for PBSA.

50:50 housing provision should not apply to university-led and delivered student accommodation on sites.

Watkin Jones Group (0516)

Give more explicit support to development of PBSA.

Remove supporting text that student housing should be designed to provide equivalent amenity required for housing.

Remove limitation on studio flats.

Unite Group plc (0628)

Delete Hou 6 (d)

Amend para 3.185 to:

“Purpose built student accommodation makes a valuable contribution to housing Edinburgh’s many students. It is preferable in principle that student needs are met as far as possible in purpose built and managed schemes rather than the widespread conversion of family housing. Increasing the amount of purpose built student accommodation assists the growth of universities and the attractiveness of the city as a centre for higher education. Ensuring it is delivered at the right scale and in the right locations is required to balance this with the needs of the existing community and the need for residential

dwellings. It is particularly important that the design of purpose-built student accommodation should create safe and pleasant places for occupants, residents and the wider community, create a mix of uses avoiding a single land use and ensure adaptability.”

Amend para 3.186 to:

“Larger sites provide an opportunity to balance the mix of land uses and to contribute to delivery of housing. A mix of student accommodation and housing is required on all sites greater than 0.5ha. Housing should comprise approximately 50% of all student accommodation units. Some flexibility to both the site threshold and percentage split of housing may be justified where required to reflect individual site considerations, design proposals and housing need. A variety of forms of housing delivery will be acceptable to satisfy this policy; in addition to traditional homes (built for sale) this will also include Build to Rent (BTR) and co-living developments. The affordable housing policy of 35% will apply. This will not apply in self-contained campus locations. Council Guidance sets out further details.”

Amend para 3.187 to:

“To avoid additional pressures on existing local amenities and open space there is a need for purpose-built student accommodation to provide students with high quality living and adequate on-site amenity spaces and communal facilities. The amount of internal and external amenity space in purpose-built student accommodation should be assessed on an individual case-by-case basis taking into account site context and the quality and functionality of amenity provision on offer. Student accommodation should be designed to provide appropriate daylight and sunlight, noise and internal space standards for students. Internal space standards for student beds should be based on HMO guidelines as a minimum safeguard.”

Amend para 3.188 to:

“Studio flats play an important role in meeting student accommodation needs, particularly the overseas and post-graduate market. However, studio flats can lead to social isolation and in high concentration do not foster healthy student communities. Cluster flat arrangements allow the opportunity for students to interact and improve well-being. Flexibility on the 10% studio limit may be permissible where need is evidenced through a market demand assessment.”

#### **Summary of responses (including reasons) by planning authority:**

David Fraser (0768), Edinburgh Napier University (0731), KR Developments Group Limited (0263), Scottish Property Federation (0144), S Harrison Developments Limited (0460), Summix Capital Limited (0747), Unite Group plc (0628), Watkin Jones Group (0516)

Hou 6 (c) requires that no more than 10% studio flats are provided. The limit on this type of provision is intended to ensure that student accommodation is meeting the needs of students. Studio flats can lead to social isolation and in high concentration do not foster healthy student communities. They are generally more expensive. Cluster flat arrangements allow the opportunity for students to interact and improve wellbeing. In addition, cluster flat arrangements allow developments to be future proofed so that they

can easily be converted to traditional residential dwellings should there be a reduction in demand.

University of Edinburgh (0464) provide support in their representation for the 10% limit on studio flats. The University believes that the studio flats do not foster healthy student communities. The studio stock that they have is usually the most expensive and has the lowest student uptake.

The limit recognises that there is a role for studio accommodation but that most student needs are best met in traditional cluster flat arrangements. **No modification proposed.**

Crosswind Developments Ltd (0184), KR Developments Group Limited (0263), Scottish Property Federation (0144), S Harrison Developments Limited (0460), Summix Capital Limited (0747), University of Edinburgh (0464)

The concentration of students, as a proportion of the transient population, can undermine the social and physical fabric which defines a community and place. In recent years the development of a significant number of larger student developments, in the Old Town, South Side and Fountainbridge have been on sites where much needed housing would previously have been delivered. This policy seeks to balance the need for additional student accommodation with the need for mainstream and affordable housing in the most sustainable locations to meet the wider need of the community. The limited quantity of housing development on site and consented across the city, and in the city centre in particular, means that it is essential to consider the merit of additional student accommodation while giving due consideration to the opportunity to deliver much need housing. A significant element of Edinburgh's character is the balanced sustainable communities which make up the whole city including the city centre. Balanced sustainable communities require the dominant residential component to be permanent and not transient.

Paragraph 3.186 requires that a mix of student accommodation and housing is required on sites greater than 0.25ha. This requirement is currently set out in non-statutory Student Housing Guidance (CD048). In establishing the principles of delivering housing on the same sites as purpose built student accommodation an examination of site sizes and density of student accommodation applications was carried out.

This analysis demonstrated that off campus student development generally generates 782 bedspace per ha. Development capacity at West Tollcross and West Approach Road where consented residential development has been changed into student accommodation was also analysed. This analysis demonstrates that on comparable sites, development generates 282 residential units per ha.

In considering mixed used development, a variety of theoretical site areas, applying a 50/50 development split between student accommodation and housing were considered. This approach will generate a split of around 57% students to 43% residents, based on two residents per dwelling,

The impact of student only development and mixed use development has been tested, on sites of 0.3ha, 0.5ha and 0.75ha, using the 2011 census data. This analysis demonstrates that mixed use development mitigates the impact of larger student development, that in areas where students represent around 20% of the population, purpose-built student

development will significantly change the mix of residents, while mixed use development will moderate the level of change, that in areas with higher existing levels, over 50%, the mixed use development will have a near neutral impact and in areas with the highest existing concentrations, delivering mixed use development can reduce the concentration of students.

There are a number of examples of consents which have delivered housing alongside student accommodation at around 50% of the student accommodation floorspace.

APPLIC. NO	ADDRESS	Area Ha	Dwellings	Student Beds	% floorspace dwellings	% floor space student accom.
<u>20/02827/FUL</u>	Abbey Lane, 2	0.51	66	298	45	55
20/00972/FUL	Iona Street, 48-50	0.53	80	250	50	50
<u>19/04557/AMC</u>	London Road, 151	0.75	107	377	51	49
<u>20/00292/FUL</u>	Peffer Place, 2 (Site 90 Metres South Of)	1.19	64	153	70	30
18/02719/FUL	Sciennes Road (Royal Hospital for Sick Children)	1.47	126	323	63	37

The policy sets out requirements. Any exception to this will be considered through the planning application process. Section 25 of the Town and Country Planning (Scotland) Act 1997 (CD101), allows for material considerations, including viability, to be considered on a case-by-case basis. It is open to developers, including universities, to justify mono use developments where they consider mixed use development inappropriate or incompatible.

The Council's strategy of seeking housing on sites proposed for student housing if they are larger than 0.25ha is not a new policy approach as set out in criterion c of the non-statutory Student Housing Guidance (CD048). Policy Hou 6 of the Plan seeks to formally include this existing policy requirement in the guidance within the development plan.

The requirement for housing alongside all commercial development, including student housing, is set out in Policy Econ 2. **No modification proposed.**

#### Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Policy supports student accommodation and allows for development in response to need and demand. Paragraph 3.137 sets out that student accommodation is expected to be designed to provide equivalent amenity required for housing. This includes daylight and sunlight, open space, internal space standards and noise. This allows adaptability for future conversion to housing. **No modification proposed.**

#### Cockburn Association (0777)

Some locations by their nature are better placed to accommodate a particularly high concentration of students. It is not appropriate to apply a percentage threshold through the development plan. Hou 6 (d) requires that there will be no adverse impact on the

established character of the area. This enables flexibility to apply a realistic interpretation based on the established character of the area.

A minimum site size is needed to ensure that it would be possible to deliver housing alongside student accommodation with regard to viability and mix of housing and student accommodation. **No modification proposed.**

Paragraph 3.137 of the Plan sets out that student accommodation is expected to be designed to provide equivalent amenity required for housing. This includes daylight and sunlight, open space, internal space standards and noise. This allows adaptability for future conversion to housing. **No modification proposed.**

David Fraser (0768)

Studio accommodation is expected to be designed to provide equivalent amenity required for housing and this includes internal space standards. Space standards are set out in the Council's Edinburgh Design Guidance (CD047). This sets a minimum internal floorspace for studios. **No modification proposed.**

It would not be practical to remove the threshold. A minimum site size is needed to ensure that it would be possible to deliver housing alongside student accommodation with regard to viability and mix of housing and student accommodation. **No modification proposed.**

Edinburgh Napier University (0731)

Policy supports student accommodation and allows for development in response to need and demand. **No modification proposed.**

Student housing is a commercial development and where this is not provided for a specific institution it is only likely to be built where it is financially viable which is likely to be in areas of demand. Hou 6 (a) guides the location of student accommodation and Hou 6 (c) ensures that development can be integrated into its surroundings. The Plan requires that student accommodation is designed to provide equivalent amenity to housing. This allows flexibility for adaptation to housing in future should demand for student accommodation fall. **No modification proposed.**

Paragraph 3.137 of the Plan sets out that student accommodation is expected to be designed to provide equivalent amenity required for housing. This includes daylight and sunlight, open space, internal space standards and noise. Standards are set out in the Council's Edinburgh Design Guidance (CD047). **No modification proposed.**

It is not considered necessary to add supporting text to state that amenity should include common spaces, as well as group and individual study spaces as a minimum. Paragraph 3.187 states that there is a need for purpose-built student accommodation to provide students with high quality living and adequate on-site amenity spaces and communal facilities. **No modification proposed.**

Paragraph 3.186 states that the requirement for housing does not apply in self-contained campus locations. Out with these areas the policy would apply regardless of the developer. **No modification proposed.**

Elaine Sosinka (0721)

Policy Env 31 requires that proposals for new development, including student accommodation, include the provision of open space that forms at least 20% of the total site area. Policy Env 32 sets out the same requirement for flatted developments where communal provision is necessary. **No modification proposed.**

Grange/Prestonfield Community Council (0192)

It is not necessary to define suitable amenity in Hou 6 (b) or add the suggested text. Amenity requirements are set out in Env 33. The Council's Edinburgh Design Guidance (CD047) provides further information on how to ensure proposals provide acceptable levels of amenity for new occupiers and neighbouring developments. Paragraph 3.137 of the Plan sets out that student accommodation is expected to be designed to provide equivalent amenity required for housing. This includes daylight and sunlight, open space, internal space standards and noise. The Plan therefore does require that standards are met which allow adaptability. Standards are set out in the Council's Edinburgh Design Guidance (CD047). **No modification proposed.**

It is suggested that at Hou 6 (d) that the 'area' should be defined. The Council does not agree as the area will be dependent on the individual circumstances of a proposal and its location. This is best defined through the planning application process. **No modification proposed.**

The Council does not agree that it is necessary to include the word "existing" to the policy text referring to campus locations. Any future self-contained campus would be assessed against this policy. **No modification proposed.**

Julie Robertson (0210)

Purpose built student accommodation makes a valuable contribution to housing the student population and is supported in the plan. The policy ensures that it will be delivered at the right scale and in the right locations to balance the provision of purpose built student accommodation with the needs of the existing community, the need for residential dwellings and a stable population. **No modification proposed.**

Leith Central Community Council (0614)

Purpose built student accommodation makes a valuable contribution to housing the student population and is supported in the plan. The policy ensures that it will be delivered at the right scale and in the right locations to balance the provision of purpose built student accommodation with the needs of the existing community, the need for residential dwellings and a stable population. Limiting student housing would not provide flexibility to meet with demand which changes over time. **No modification proposed.**

Policy requires that there will be no adverse impact on the character of the area. The consideration would include the concentration of students in the area. Student housing guidance which is subject to regular review provides guidance. A significant element of Edinburgh's character is its balanced sustainable communities. The student population can be a significant element of the transient population. Balanced sustainable

communities require the dominant residential component to be permanent and not transient however student accommodation is only one land use which contributes to the transient population within Edinburgh. Imbalance in communities cannot solely be controlled through purpose built student accommodation. Policy requirement for housing on sites 0.25ha or greater is intended to ensure development of mixed communities. **No modification proposed.**

It would not be practical to remove the threshold. A minimum site size is needed to ensure that it would be possible to deliver housing alongside student accommodation with regard to viability and mix of housing and student accommodation. **No modification proposed.**

It is accepted that a degree of inconsistency can be perceived between the supporting text at paragraph 3.186 of the Plan which requires that on sites greater than 0.25ha housing should comprise 50% of all student accommodation units and Policy Econ 2 which requires that proposals for commercial uses, including student accommodation provide at least 50% of the site for housing. No modification proposed however should the Reporter see merit in further clarification for consistency between policies seeking the same objective the Council would accept this. **No modification proposed.**

As part of the planning application process and consideration against Hou 6 (d) the impact on the character of the area would be considered on a case by case basis at the time of application. It would not be appropriate to include a requirement for monitoring within the Plan. Monitoring of student accommodation proposals is carried out by the council and reported on an annual basis in the Student Accommodation Schedule (CD058). **No modification proposed.**

#### Leith Links Community Council (0617)

Purpose built student accommodation makes a valuable contribution to housing the student population and is supported in the plan. The policy ensures that it will be delivered at the right scale and in the right locations to balance the provision of purpose built student accommodation with the needs of the existing community, the need for residential dwellings and a stable population. Limiting student housing would not provide flexibility to meet with demand which changes over time. **No modification proposed.**

It is not appropriate to require that all student accommodation is built for or managed by a college or university. It is not always possible for institutions to deliver or take leases for all of their student's needs. **No modification proposed.**

Policy Hou 6 requires a mix of housing and student accommodation on larger sites. **No modification proposed.**

#### Lynn Grattage (0362)

Limiting student accommodation to a 20 minute walk of institutions could result in intensifying the concentration of students in certain areas. Student accommodation is not always built for a particular institution and it is not possible to control the occupation of student accommodations to those attending particular institutions it would not be possible to require this limitation. Hou 6 (a) requires that there is good access by public transport and active travel routes to further and higher education institutions. This ensures that

students are able to travel easily and without the use private transport to their place of study. **No modification proposed.**

S Harrison Developments Limited (0460), Summix Capital Limited (0747)

Policy requires that there is good access by public transport and requires that there will be no adverse impact on the established character of the area. It does not make any reference to high concentrations. **No modification proposed.**

Env 31 Useable Open Space in New Development requires that all proposals containing new-build development shall include the provision of good quality, attractive useable and where appropriate publicly accessible open space that forms at least 20% of the total site area. Supporting text states that this includes specialist housing built for occupation by groups such as students. The supporting text sets out that where that where proposals do not meet the full requirements of the policy on-site they may be supported if certain circumstances are met. The planning application process allows for consideration of material considerations on a case by case basis. **No modification proposed.**

The policy text applies to all proposals for purpose-built student accommodation. The supporting text sets out the requirement for sites over 0.25ha to provide housing. The Town and Country Planning (Scotland) Act 1997 37 (2) (CD101) requires that in determining an application for planning permission the authority shall have regards to the provisions of the development plan, so far as material to the application, and to any other material considerations. This means all provisions of the development plan and not just the policy text. Policy Econ 2 Commercial Development Commercial Development states that proposals for commercial uses within the urban are on sites 0.25ha or larger, should where compatible and appropriate within the site context, provide at least 50% of the site for housing. The supporting text states that this applies to developments for commercial uses including student housing. It is not considered necessary to include the reference to the requirement for housing on some sites within the policy text. **No modification proposed.**

It is not appropriate to define areas within the plan. Communities vary in nature and what might be determined as part of an area will depend on a number of factors. **No modification proposed.**

It is not accepted that the exemption from the requirement for housing should not apply to any new self-contained campuses. It is appropriate that these should be treated in the same way as existing campus locations. **No modification proposed.**

Southside Community Council (0781)

Env 31 Useable Open Space in New Development requires that all proposals containing new-build development shall include the provision of good quality, attractive useable and where appropriate publicly accessible open space that forms at least 20% of the total site area. Supporting text states that this includes specialist housing built for occupation by groups such as students. **No modification proposed.**

The policy text applies to all proposals for purpose-built student accommodation. The supporting text sets out the requirement for sites over 0.25ha to provide housing. The Town and Country Planning (Scotland) Act 1997 37 (2) (CD101) requires that in

determining an application for planning permission the authority shall have regards to the provisions of the development plan, so far as material to the application, and to any other material considerations. This means all provisions of the development plan and not just the policy text. It is not considered necessary to include the reference to the requirement for housing on some sites within the policy text. Policy Econ 2 Commercial Development Commercial Development states that proposals for commercial uses within the urban are on sites 0.25ha or larger, should where compatible and appropriate within the site context, provide at least 50% of the site for housing. The supporting text states that this applies to developments for commercial uses including student housing. **No modification proposed.**

Demand for student accommodation fluctuates. Policy Hou 6 guides purpose-built student accommodation to appropriate locations and provides flexibility to provide for development where demand exists. It is not considered to be necessary to have a more strategic approach to the location of student accommodation. **No modification proposed.**

#### University of Edinburgh (0464)

Student housing is a commercial development and where this is not provided for a specific institution it is only likely to be build where it is financially viable which is likely to be in areas of demand. Hou 6 (a) guides the location of student accommodation and Hou 6 (c) ensures that development can be integrated into its surroundings. The Plan requires that student accommodation is designed to provide equivalent amenity to housing. This allows flexibility for adaptation to housing in future should demand for student accommodation fall. **No modification proposed.**

The Town and Country Planning (Development Management Procedure) (Scotland) Regulations 2013 Schedule 5 (CD103) sets out bodies to be consulted on planning applications. Universities are not included within this. As universities are not statutory consultees it would not be appropriate to state within the Plan that they should be consulted on applications for purpose built student accommodation. **No modification proposed.**

#### Tiger Developments Ltd (0602)

The final sentence of paragraph 3.187 states that equivalent amenity includes daylight and sunlight, open space, internal space standards and noise. **No modification proposed.**

#### Unite Group plc (0628)

It is preferable that student needs are met as far as possible in well managed and regulated schemes and policy Hou 6 supports this. However, the quantity of students can place pressures on the physical and social infrastructure of an area and change the area's character. The concentration of students, as a proportion of the transient population, can undermine the social and physical fabric which defines a community and place. While students make many positive contributions to society, excessive concentrations may over time result in a poor quality of place, a diminished sense of community and make an area less attractive to all sections of the population. Student accommodation is only one land use which contributes to the transient population within Edinburgh. In mixed area the impact of student accommodation may be greater than in more mono-use areas as it may tip the balance in the community. Hou 6 (d) is necessary to ensure that student

accommodation is appropriate to an area. Council guidance provides details of how policy will be implemented. **No modification proposed.**

It is not necessary to further state the benefits of purpose built student accommodation within paragraph 3.185. The first sentence recognises the valuable contribution that it makes to housing students. **No modification proposed.**

It is not necessary to add to paragraph 3.186 additional text to provide for flexibility on site threshold and percentage split of housing or tenure. The planning application process allows for material considerations to be taken into account on a case by case basis. It is also not necessary to specify particular types of housing. Build to rent is considered to be a strand of mainstream housing. **No modification proposed.**

Student accommodation is primarily a place of residence, and it is important that it provides as equivalent amenity required for housing. The provision of equivalent amenity allows for adaptability for any future conversion to residential use. **No modification proposed.**

#### Watkin Jones Group (0516)

Policy Hou 6 and supporting text at paragraph 3.185 acknowledges the valuable contribution of purpose built student accommodation. **No modification proposed.**

Paragraph 3.137 sets out that student accommodation is expected to be designed to provide equivalent amenity required for housing. This includes daylight and sunlight, open space, internal space standards and noise. Academic terms cover a significant part of the year, and it is important to ensure that students have an equivalent level of amenity to housing during this time. In addition, the provision of an equivalent level of amenity allows for adaptability for future conversion to residential use. **No modification proposed.**

#### **Reporter's conclusions:**

Airbnb (0474) Andy Agnew (0562) Archie Clark (0003) Barratt David Wilson Homes (0677) Calex Group Ltd (0556) Christopher Brown (0378) Cockburn Association (0777) Cramond & Barnton Community Council (0243) Deirdre Henderson (0727) Edinburgh World Heritage (0339) Esk Property LLP (0726) Glenmorrison Group (0600) HCPII Properties 101LP (0517) Homes for Scotland (0404)	Juniper Green & Baberton Mains Community Council (0306) Leith Central Community Council (0614) Melford Developments Ltd (0308) Mrs Patricia Stott (0349) New Town & Broughton Community Council (0254) Philip Endecott (0079) Southside Community Council (0781) Terry Levinthal (0313) Toby Subiotto (0580) SEPA (0012) Shelagh Sharp (0111) Wright PDL (0078)			
<b>Provision of the development plan to which the issue relates:</b>	Hou 5, Hou 7, Hou 8, Hou 9.			
<b>Planning authority's summary of the representation(s):</b>				
<p><b>Hou 5 Conversion to Housing</b></p> <p><u>Archie Clark (0003), Juniper Green &amp; Baberton Mains Community Council (0306)</u></p> <p>No definition of what a 'satisfactory residential environment' is but consider a feature of other conversions has been unfeasibly small units insufficient for quality of life and so a minimum size of unit should be stated.</p> <p><u>Barratt David Wilson Homes (0677), Homes for Scotland (0404), Wright PDL (0078)</u></p> <p>Further information is required regarding what is meant by a "satisfactory residential environment".</p> <p><u>Edinburgh World Heritage (0339)</u></p> <p>Consider policy to be important policy in light of changing use patterns and while care must be taken not to erode historic character through inappropriate change in use, there are a number of areas in the city which have lost their historic residential use and would benefit from re- introducing and strengthening residential communities.</p>				

#### HCPII Properties 101LP (0517)

Support policy however, with reference to Hou 5 (c), consider more clarity should be included on what “appropriate” open space, amenity and parking standards would be as often there are site-specific constraints which prevent the conversion from achieving the same design standards as new build residential development.

Consider that more flexible design standards in terms of issues such as open space, dual aspect, and amenity space should be included within the wording of the policy.

#### Leith Central Community Council (0614)

Should not suggest that a conversion to residential use should be supported where the shop unit has been vacant for a significant period of time and been actively marketed as this can encourage developments with badly located shop units to be naturally turned into flats after a very short period of time.

#### Melford Developments Ltd (0308)

Consider that Hou 5 (d) is too wide ranging and unspecific and should be removed or made much more specific. Query why it is necessary in addition to a, b and c. Consider a specific time period is needed to keep the policy consistent for all proposals and asks what form of marketing would be acceptable. Considers that at Para 3.184 'significant period' needs to be defined and suggest 12 months.

### **Hou 7 Loss of Housing**

#### Deirdre Henderson (0727)-support

Support policy. Residents need affordable and accessible homes and communities need long term neighbours to ensure safety and reduce poverty and isolation / loneliness.

#### Airbnb (0474)

Consider policy will bring about a blanket ban on short-term letting and strongly object to this. Would impact on jobs and income, would not increase number of available homes and would be damaging to tourism.

Supporting documents do not consider economic consequences, policy is not clear as to whether it applies to permanent changes of use or to any change of use, it is disproportionate and should instead set criteria for when and where short-term letting would be supported. May be justification for introducing more stringent policy controls for permanent changes of use in the City Centre.

Where evidence that use of properties for short-term letting is responsible for housing shortages and where evidence suggests restrictions would address policy goals, believe it is appropriate to enforce planning permission on professional operators. However, concerned that the Council has not produced evidence that short-term letting of properties does have a widespread impact across every City ward in Edinburgh.

#### Christopher Brown (0378)

Comments that the use of residential properties for short-term lets, student accommodation and conversion to HMO is destroying previously thriving communities and considers this to drive demand for new homes and push families further from the centre of the city, putting additional strain on transport infrastructure.

Cockburn Association (0777)

Welcome and support policy however, advocate a policy statement in enforcement in areas of significant short-term let concentrations which have no consent and policy should comment on the proposed short-term let control area.

Cramond & Barnton Community Council (0243)

Should be more explicit as to what restrictions will be placed on short-term lets and how these will be implemented. Should identify proposed short-term let control areas or indicate that the entire city will be a short-term let control area as without such clarity and firm implementation will fail to stem the continuing loss of housing stock to short-term lets.

Edinburgh World Heritage (0339)

Fully support principle of policy, and in particular the presumption against loss of housing to short-term lets. Assume that follow-up policies and guidance provide sufficient clarity and criteria for the regulation of short-term lets.

Leith Central Community Council (0614)

Wish to see policy explicitly limit use of residential properties for short-term lets to prevent loss of homes, limit the effect of transient populations and dilution of resident population. Policy should require monitoring of capacity, units and footprint dedicated to tourist populations to identify negative impacts.

Melford Developments Ltd (0308)

Consider policy is overly restrictive and unworkable and will, in combination with other policies, restrict the scope for beneficial development. Other criteria must apply relating to the effective use of land or buildings within the urban area. Not clear why such a development should provide necessary community facilities which are undefined in any case and not clear how this relates to integrated neighbourhoods or Policy Inf 1 Community Facilities, object to this requirement.

Mrs Patricia Stott (0349)

Appears to address issues connected with short-term lets and should be clearer as to objectives and how it would be implemented.

New Town & Broughton Community Council (0254)

Unclear if this policy is necessary, given the other separate national legislative changes regarding short-term lets. Concerned prescriptive policy may prevent some change of

uses which would be beneficial and may preclude some change of use in city centre locations which are fully in accord with the principle of 20 minute neighbourhoods.

Policy should be amended to be more specific regarding short-term lets with a policy statement covering enforcement in areas of significant concentrations, include the proposed short-term let control area and outline a policy-basis for considering change of use applications associated with it.

Philip Endecott (0079)

Would like to see more long-term residents but believe focus of attention on holiday lets is misdirected. Filling empty properties would make difference and consider worst possible outcome would be for currently holiday lets to become student flats.

Does not seem to be the case that demand from holiday lets has driven up prices driving residents elsewhere. Do not support council guidance which suggests that tenement stair flats are unsuitable for holiday lets, while main door ground floor flats could be allowed as more disturbance may be created, main door ground floor flats have private gardens more suited to permanent residents and are accessible to wheelchair users.

Shelagh Sharp (0111)

Would like to see a stricter control of short-term lets and the same safety requirements, such as smoke detectors, occupancy limits etc, should apply to short-term lets as to long term lets.

Southside Community Council (0781)

Strongly supports policy with regard to refusing proposals for change of use to short-term lets however "exceptional circumstances, where it would provide necessary community facilities without loss of amenity of neighbouring residents" could never apply to applications for short-term lets and the policy should be amended to clarify this matter.

Terry Levinthal (0313)

Support policy, but para 3.190 should make reference to tenements and common stairs, indicating that commercial short-term let businesses are generally inappropriate in tenements if accessed from the common stair, reflecting current practice of the Council.

Toby Subiotto (0580)

Support policy in principle, however, consider that the Council itself is not adhering to its implementation. Suggests consideration should be given to wider policies such as HMO licensing, and how to retain young families in the city, and not just development. Consider that there is an oversupply of HMOs and student housing which does not match with statements at para 3.191.

## **Hou 8 Inappropriate uses in Residential Areas**

New Town & Broughton Community Council (0254)-support

Support policy, reflecting the intent of the policy in the existing LDP Hou 7 which provides protection for residents in already densely populated areas preventing any further deterioration in living conditions in more mixed-use areas which nevertheless have important residential functions.

Andy Agnew (0562)

Considers that new housing developments should include details of acceptable level of housing that can be used for short-term lets and there should be a monitoring of compliance with the regulations.

Cockburn Association (0777)

Welcome policy and its intention. Advocate retention of the policy statement in the existing LDP Hou 7 which states, "the intention of the policy is firstly, to preclude the introduction or intensification of non-residential uses incompatible with predominantly residential areas and secondly, to prevent any further deterioration in living conditions in more mixed-use areas which nevertheless have important residential functions."

Cramond & Barnton Community Council (0243)

Hou 8 refers to issues connected with short-term lets and should be more explicit as to what restrictions will be placed on short term lets and how these will be implemented.

Mrs Patricia Stott (0349)

Hou 8 appears to address issues connected with short-term lets and should be clearer as to objectives and how it would be implemented.

Philip Endecott (0079)

Aspirational objective, which has been present in previous plans, is worthless unless enforced.

Terry Levinthal (0313)

Considers it essential that policy is properly assessed in planning applications and requests clarification of "deterioration in living conditions" in guidance.

**Hou 9 Sites for Gypsies, Travellers and Travelling Showpeople**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Consider policy should include requirements for access to education and health facilities, as well as access to public transport, shops, open spaces, recreational amenities etc. as for permanent residents. Long-standing need for sites was identified by SESplan and it was anticipated that local authorities would make the necessary provision. The extent of demand for this provision should be assessed, and suitable sites provided.

SEPA (0012)

Do not support policy. Consider policy is framed in a negative way and may discriminate against people living in these sites. Assumes sites are problematic and makes no attempt to integrate them in a community setting or provide them with equal access to amenities. Sites can generate waste which is fly-tipped and have inadequate waste-water drainage facilities because sites are in areas without access to public water supplies and the public sewer and can be in areas of flood risk. Believe policy is inconsistent with the aims of the for equality and inclusivity and needs to be re-considered and re-written.

Ask if “Gypsies, Travellers and Travelling Showpeople” is a description chosen by the residents to which it refers and if not, the terms chosen by them should be used as the description for this policy.

## **Additional Policies**

### **Housing for Older People**

#### Calex Group Ltd (0556)

Consider there is an absence of specific policies for distinct housing requirements of the elderly as expected by Planning Act and specific policy is required. Should be based upon on a robust evidence base that identifies the housing requirements of specialist housing for older people. Should set out clear policy to address housing needs for older people on land in, or adjacent to settlement boundaries where those settlements that provide a certain level of services and facilities, where the proposed development provides sustainable transport measures and communal facilities and where there is an identified need. Should set indicative figures or a range for the number of specialist housing for older people needed across the Plan area throughout the Plan period and this must recognise the diverse models that exist. Should monitor delivery of housing for older people and deliver action plans to address under provision.

Should consider the inclusion of specialist housing for older people within appropriate strategic or other site allocations subject to consideration of need, site and locational factors and deliverability. Should recognise the significant benefits associated with specialist housing for older people.

Should set different policy requirements, for example, affordable housing, for an integrated retirement community (Class 8 use) compared to residential development (Class 9 use) and the evidence base and viability should take into account the different circumstances between the uses (e.g., integrated retirement communities provide significant levels of communal facilities/non-saleable floorspace and their ongoing maintenance and management, staffing, funding, etc). Where there is doubt, policies should provide sufficient flexibility for specific circumstances, which may include viability, to be assessed through a planning application.

#### Esk Property LLP (0726)

Note that there are no specific policies that refer specifically to age-restricted housing or similar uses and consider this is an oversight. Consider it is inappropriate to assess new age restricted development proposals against mainstream residential policies given the clear differences in planning considerations and locational requirements between the two uses. Suggest a new policy is introduced offering support to age-restricted residential and

social care uses on appropriate sites. Consider this could include green belt or countryside locations which could accommodate low density development with large amounts of open space.

Glenmorrison Group (0600)

Plan does not meet duty set out in the 2019 Town and Country Planning (Scotland) Act and in the national guidance to make strategic provision for elderly living.

NPF4 identifies the provision of housing for the elderly and Outcome Statements refer to meeting the housing needs for older people and the ability to age in place.

**Other**

Cramond and Barnton Community Council (0243)

Risk that speculative developers may 'create' brownfield sites to influence planning decisions in favour of development request an additional policy to prevent such actions with the specific intention of creating brownfield sites.

**Modifications sought by those submitting representations:**

**Hou 5 Conversion to Housing**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Include minimum unit size in policy.

Barratt David Wilson Homes (0677), Homes for Scotland (0404), Wright PDL (0078)

Include detail on what constitutes a satisfactory residential environment.

Edinburgh World Heritage (0339)

Amend Hou 5 (b) to:

"...housing would be compatible with nearby uses and the character of any heritage assets"

Amend paragraph 3.184 to: "...which are supported by this plan. It further has the opportunity to return historic residential character to areas which have lost this due to conversion, and support community and cultural resilience. Policy Re 4..."

HCPII Properties 101LP (0517)

Include within the wording of the policy more flexible design standards in terms of issues such as open space, dual aspect, and amenity space.

Leith Central Community Council (0614)

Remove last sentence from paragraph 3.184.

Melford Developments Ltd (0308)

Define 'significant period' at paragraph 3.184 and suggest 12 months.

**Hou 7 Loss of Housing**

Airbnb (0474)

Remove policy and replace with a statement indicating the Council's intention to introduce a criteria based policy on short-term lets once it has undertaken a proper analysis of all of the factors listed in Supporting Submission Airbnb Response: City Plan 2030.

Christopher Brown (0378)

No change suggested

Cockburn Association (0777)

Include a policy statement in enforcement in areas of significant short-term let concentrations which have no consent.

Include comment in policy on proposed short-term let control area.

Cramond & Barnton Community Council (0243)

Extended policy to refer in more detail to the Council's short-term lets policies and state precisely how, when and where these will be implemented.

Edinburgh World Heritage (0339)

No modification specified.

Leith Central Community Council (0614)

Include within policy limit on use of residential properties for short-term lets.

Include in policy requirement for monitoring of capacity (headcount), units and footprint dedicated to tourist populations to enable early detection of negative impact on the availability of permanent residential units and skewed demand (towards transient population needs) at local shops.

New Town & Broughton Community Council (0254)

Amend policy to be more specific regarding short-term lets – with a policy statement covering enforcement in areas of significant short-term let concentrations and include the proposed short-term let control area and outline a policy-basis for considering change of use applications associated with it.

Shelagh Sharp (0111)

No modification specified but implies there should be a stricter policy on short-term lets.

Terry Levinthal (0313)

Expand paragraph 3.190 to make reference to tenements and common stairs, indicating that commercial sort-term let businesses are generally inappropriate in tenements if accessed from common stair.

Melford Developments Ltd (0308)

Remove policy Hou 7.

Mrs Patricia Stott (0349)

Make clear in policy what the objectives are and how it would be implemented.

Philip Endecott (0079)

Include commitment in policy to working to make the neighbourhoods more attractive to permanent residents and focus equally on all other non-permanent-residential uses including empty properties and student flats.

Southside Community Council (0781)

Amend policy to clarify that “exceptional circumstances, where it would provide necessary community facilities without loss of amenity of neighbouring residents” could never apply to applications for short-term lets.

Toby Subiotto (0580)

Suggests consideration should be given to wider policies such as HMO licensing, and how to retain young families in the city, and not just development.

**Hou 8 Inappropriate Uses in Residential Areas**

Andy Agnew (0562)

Infers that new housing developments should include details of acceptable level of housing that can be used for short-term lets and there should be a monitoring of compliance with the regulations.

Cockburn Association (0777)

Retain policy statement in the existing LDP Hou 7 which states, “ the intention of the policy is firstly, to preclude the introduction or intensification of non-residential uses incompatible with predominantly residential areas and secondly, to prevent any further deterioration in living conditions in more mixed-use areas which nevertheless have important residential functions.”

Cramond & Barnton Community Council (0243), Mrs Patricia Stott (0349)

Extended policy to refer in more detail to the Council's short term lets policies and state precisely how, when and where these will be implemented.

Philip Endecott (0079)

No modification specified

Terry Levinthal (0313)

No modification specified but suggests provision of guidance.

### **Hou 9 Sites for Gypsies, Travellers and Travelling Showpeople**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Include requirement for access to education and health facilities, access to public transport, shops, open spaces, recreational amenities.

Assess demand and provide suitable sites.

SEPA (0012)

Re-write policy to include access to amenities.

Change title of policy.

### **Housing for Older People**

Calex Group Ltd (0556)

Include a specific policy to cater for the distinct housing requirements of the elderly based on the following criteria;

1. Be based on a clear understanding of specialist housing for older people drawing upon national guidance and other sources, particularly regarding the use class and recognise the different types of specialist housing which exist.
2. Be based on a robust evidence base that identifies the housing requirements of specialist housing for older people drawing upon appropriate sources recognised within the sector.
3. Set out clear and specific policy / policies to address housing needs for older people (e.g. integrated retirement communities and extra care), on land in, or adjacent to settlement boundaries where those settlements that provide a certain level of services and facilities, where the proposed development provides sustainable transport measures and communal facilities and where there is an identified need.
4. Set indicative figures or a range for the number of specialist housing for older people needed across the Plan area throughout the Plan period and this must recognise the diverse models that exist.
5. Monitor the delivery of housing for older people and deliver action plans to address under provision.

6. Consider the inclusion of specialist housing for older people within appropriate strategic or other site allocations subject to consideration of need, site and locational factors and deliverability.

7. Recognise the significant benefits associated with specialist housing for older people and this can inform planning decision making.

8. Set out different policy requirements, for example, affordable housing, for an integrated retirement community (Class 8 use) compared to residential development (Class 9 use) and the evidence base and viability should take into account the different circumstances between the uses (e.g. integrated retirement communities provide significant levels of communal facilities/non-saleable floorspace and their ongoing maintenance and management, staffing, funding, etc). Where there is doubt, policies should provide sufficient flexibility for specific circumstances, which may include viability, to be assessed through a planning application.

#### Esk Property LLP (0726)

Include a new policy offering support to age-restricted residential and social care uses on appropriate sites.

#### Glenmorrison Group (0600)

Insert a new policy after Hou 3:

“Housing for Older People

'Developments for specific formats of residential facilities to make provision for older people and elderly care will be permitted subject to impact on landscape character and all other environmental and design impacts according to other relevant policies in this plan. The planning authority will report to Scottish Ministers every two years on how the planning system is operating in the city to make provision for the housing needs of older people.’

#### **Other**

#### Cramond & Barnton Community Council (0243)

Include a specific policy aimed at deterring the deliberate creation of brownfield conditions by speculative developers with the intention of seeking development on greenfield sites.

### **Summary of responses (including reasons) by planning authority:**

#### **Hou 5 Conversion to Housing**

#### Edinburgh World Heritage (0339)

It is not considered necessary to amend Hou 5 (b) to include compatibility with heritage assets. The Plan should be read as a whole and policies Env 9-Env 17 of the Plan set out policies to protect the historic environment. **No modification proposed.**

It is not considered necessary to include the suggested sentence in paragraph 3.184 of the plan. Paragraph 3.184 as existing states that conversion of existing buildings can help

create high-density mixed use environments. The text as set out is preferable as it highlights the opportunity to create a mix of uses which is supported by the plan. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003), Barratt David Wilson Homes (0677), Homes for Scotland (0404), Wright PDL (0078)

Policy Hou 5 sets out a requirement for conversion to residential use to provide a satisfactory residential environment. Hou 5 (b) requires that appropriate amenity standards are met. Policy Env 33 addresses amenity and Edinburgh's Design Guidance (CD047) provide further information. The Council's non-statutory Guidance for Businesses sets out guidance in relation to achieving a satisfactory residential environment. It sets out minimum requirements for dwelling sizes. It is considered appropriate that this level of detail is contained within guidance rather than policy. **No modification proposed.**

Leith Central Community Council (0614)

Conversion of existing buildings can make a contribution to housing provision and support the aim of the Plan to create high-density mixed use environments. To safeguard shop units for shopping and small business use Policy Re 4 and Re 5 presume against the conversion to housing within town centres and local centres. Outwith these locations Policy Re 8 sets policy for the determination of applications for the change of shop units. Paragraph 3.184 sets out that such a conversion, if it were to residential use, could be supported where the shop unit has been vacant for a significant period of time, and actively marketed, where there is a local need and demand for a range of housing types and for town centre living. It is suggested that this provides a loophole for developments to intentionally locate shop units in a location which is not desirable to occupiers with the intention that they can then be easily converted into residential use after a short time. Paragraph 3.184 states that the unit should be vacant for a significant period of time. This support is considered to be appropriate to provide additional housing where other uses have not come forward. **No modification proposed.**

HCPII Properties 101LP (0517)

Policies within the Plan address amenity, open space and private car parking for development which would include change of use. It is not necessary to replicate these policies within the wording of Hou 5 as the Plan should be read as a whole. The Council's non-statutory Guidance for Businesses (CD050) sets out the criteria to be met by Policy Hou 5 where there are proposals to convert to residential use. Daylighting requirements are set out in the Council's Edinburgh Design Guidance (CD047). It is not considered appropriate or necessary to set out the design standards within the plan. Any flexibility in design standards would be a matter for the planning application process which allows for material considerations to be taken into account on a case by case basis. **No modification proposed.**

Melford Developments Ltd (0308)

There is no standard definition of a significant period of vacancy. The policy allows for flexibility depending on the individual circumstances. **No modification proposed.**

## Hou 7 Loss of Housing

### Airbnb (0474)

It is not considered that Hou 7 prohibits short-term lets. Policies in the Plan can only be applied in circumstances where planning permission is required. The whole of Edinburgh was designated as a Short-term Let Control Area on 5 September 2022 requiring permission for change of use of dwellings to secondary letting however home-sharing and home letting may not require planning permission. It is not role of the Plan to set out when planning permission is required but to set out the policy which will apply in such circumstances.

The Plan is required to set policy. It would not be appropriate to set out the intention to develop policy at a future date. The policy aims to retain existing dwellings and protect amenity of residents. It presumes against loss of residential dwellings for these reasons therefore a criterion based policy would not be appropriate.

The need to control short-term letting in Edinburgh has been explored and established through the designation of the whole of Edinburgh as a Short-term Let Control Area. The impact of loss of dwellings to short-term lets is explored in the Designation of Short-Term Let Control Area for Edinburgh Statement of Reasons Background Report, February 2022 (CD059). Available evidence indicates that the use of dwellings for short-term letting is impacting upon the housing market. Scottish Government in approving the short-term let control area considered that the designation was reasonable. It is not desirable to set less stringent policy on loss of housing within certain parts of the city as this could have a knock on effect into other areas.

Development Plan policy is applied at the time of application. Its effect is therefore upon future proposals. Any economic impact of future growth of short-term lets within residential dwellings must be balanced against the aim of the Plan to protect the availability of housing and protect residential amenity. The Plan recognises tourism is a key sector in the city's economy and that maintaining and developing it relies upon sufficient provision of high quality tourist accommodation. Policy Econ 6 supports hotel development in appropriate locations.

It is suggested that the Plan should state if the policy applies only to permanent change of use. It is not necessary or appropriate to refer to the length of time to which any consent might apply. This a matter for the planning application process. **No modification proposed.**

### Christopher Brown (0378)

Policy Hou 7 aims to retain housing by presuming against change of use of dwellings to other uses including short-term lets. Policy Hou 8 controls Houses in Multiple Occupation and Policy Hou 6 aims to ensure that student accommodation is delivered at the right scale and locations to provide balance. **No modification proposed.**

### Cockburn Association (0777)

It is not the purpose of the Plan to set out enforcement policy. Planning Enforcement powers are set out in the Town and Country Planning (Scotland) Act 1997 (CD101) and

the Council's Planning Enforcement Charter December 2021 (CD078) explains the purpose of the Council's planning enforcement service, the process for handling enquiries, and sets out the standards of service. Since publication of the proposed plan the whole of the City of Edinburgh Council area has been designated as a short-term let control area. This requires that planning permission is sought for change of use of a dwelling to secondary letting. It is not role of the Plan to set out when planning permission is required but to set out the policy which will apply in such circumstances. The control area designation is open to review and for this reason it would not be appropriate to refer to it within the policy text. **No modification proposed.**

#### Cramond & Barnton Community Council (0243)

The City of Edinburgh Council designated the whole of the council area as a Short-Term Let Control Area on 5 September 2022. The control area is designated under the Town and Country Planning (Short-term Let Control Areas) (Scotland) Regulations 2021 (CD104). It is not appropriate to set out this designation in the plan. The Plan sets policy which will be applied not when planning permission will be required. The control area is open to review within the period of the plan.

Policy Hou 7 applies to a change of a dwelling to any other use including short-term lets. It is not specific to short-term lets as it is recognised that any change of use may impact on availability of housing and on existing residents. The Council's non-statutory Guidance for Businesses (CD050) sets out further detail on the implementation of the policy for change of use to short-term letting and will be reviewed and updated accordingly. **No modification proposed.**

#### Edinburgh World Heritage (0339)

The Council's non-statutory Guidance for Businesses (CD050) sets out guidance on short-term lets and is subject to regular review. A general policy with specific guidance is considered to be appropriate. **No modification proposed.**

#### New Town & Broughton Community Council (0254)

Legislative changes introduced by the Short-term Let Control area regulations do not set policy to be applied to short-term lets. It is therefore necessary to include the policy in the Plan which will be applied to all changes of use from residential including to use as a short-term let. The policy would not prevent changes of use which would be beneficial, it allows for change of use where it would provide necessary community facilities.

Policy Hou 7 applies to the loss of residential dwellings to any use. It is not a specific short-term let policy. Short-term lets are only one use which results in loss of housing, and it is appropriate to have a general policy. The Council's non-statutory Guidance for Businesses (CD050) sets out guidance on short-term lets and is subject to regular review. A general policy with specific guidance is considered to be appropriate. **No modification proposed.**

#### Leith Central Community Council (0614)

Where planning permission is required policy Hou 7 presumes against a change of use of a dwelling to a short-term let. It is therefore considered sufficient to prevent loss of homes

as far as possible. A requirement for the suggested monitoring would not be appropriate in the plan. Future local development plans will be accompanied by an Evidence Report which provides an appropriate means of monitoring policies within the Plan. **No modification proposed.**

Melford Developments Ltd (0308)

The policy aims to retain existing dwellings and protect amenity of residents. It presumes against loss of residential dwellings for these reasons however the policy does not prevent changes of use which would be beneficial, it allows for change of use where it would provide necessary community facilities. This allows for circumstances where the benefits of the proposed use would outweigh the loss of a dwelling as it was providing a use required in a community. Community facilities is defined within the Plan Glossary. It is defined as facilities and uses that are required and widely used by all and foster a vibrant community. Examples are provided. Inf 1 sets out requirements for housing developments to have access to community facilities while Hou 7 reference relates to the use of the proposal. **No modification proposed.**

Mrs Patricia Stott (0349)

The objective of the policy to retain existing dwellings as a means of meeting housing need is set out in paragraph 3.190 of the plan. The Council's non-statutory Guidance for Businesses (CD050) sets out further detail on the implementation of the policy for change of use to short-term letting and will be reviewed and updated accordingly. This is considered to be appropriate. **No modification proposed.**

Philip Endecott (0079)

Policy Hou 7 applies to all changes of use of dwellings not just to short-term lets. As set out in paragraph 3.190 of the Plan there has been an increase in short term letting in Edinburgh and the Designation of Short-Term Let Control Area for Edinburgh Statement of Reasons Background Report, February 2022 (CD059) identifies impacts of this on housing. It is therefore considered appropriate to specifically refer to short-term lets within the policy.

Policy Hou 8 Inappropriate uses in residential areas would apply to planning applications for Houses in Multiple Occupation which would apply to many properties occupied by students thereby ensuring that they do not have a detrimental effect.

The policy as set out is considered to ensure residential areas are maintained and therefore attractive and available to permanent residents therefore no further commitment is necessary within the policy.

Student housing is controlled through Policy Hou 6. It is not considered necessary to refer to this in Policy Hou7 as the Plan should be read as a whole. Policy Hou1 supports housing in the urban area which would allow for empty properties to be converted to housing. **No modification proposed.**

Shelagh Sharp (0111)

Safety requirements for short-term lets are outwith the scope of the plan. Policy Hou 7 controls change of use of dwellings to short-term lets. It presumes against such a change unless there are exceptional circumstances. It therefore does provide a strong policy. **No modification proposed.**

Southside Community Council (0781)

Community facilities is defined within the Plan Glossary. It is defined as facilities and uses that are required and widely used by all and foster a vibrant community. Examples are provided schools, community centres, GP surgeries, dentists, local shops and amenities. The definition would clearly not include use as a short-term let. It is not considered necessary to state this within the policy. **No modification proposed.**

Terry Levinthal (0313)

The level of detail suggested for inclusion is considered to be more appropriate for guidance rather than inclusion in the plan. The Council's non- statutory Guidance for Businesses (CD050) sets out the approach to change of use in flatted properties. **No modification proposed.**

Toby Subiotto (0580)

Houses of Multiple Occupation (HMO) licencing is outwith the scope of the plan. HMOs are controlled in planning at the point at which there is considered to be a material change of use. Policy Hou 8 Inappropriate Uses in Residential Areas allows for assessment of planning applications in such situations.

The Plan allocates sites for housing within the urban area. To provide for families Policy Hou 3 Mixed Communities requires a mix of housing types and sizes, and that developments of 2 or more units provide a minimum of 20% of units suitable for large families. Policy Hou 6 supports purpose-built student accommodation and ensures that it is balanced with the needs of existing communities. **No modification proposed.**

**Hou 8 Inappropriate Uses in Residential areas**

Andy Agnew (0562)

Licensing regulations for short-term lets are subject to a separate legislative regime and are not within the scope of the development plan. Policy Hou 7 would apply to a change of use from a dwelling to a short-term let. Where new housing is developed any use change of use of this would be assessed against Policy Hou 7 and Hou 8 and other relevant policies in the plan. A development of short-term lets would be considered under Policy Econ 2 Commercial Development. **No modification proposed.**

Cockburn Association (0777)

Policy Hou 8 paragraph 3.192 retains the wording of current LDP Policy Hou 7 supporting text except for the word firstly. This is considered superfluous and re-introducing this word would not change the policy or its objective. **No modification proposed.**

Mrs Patricia Stott (0349), Cramond & Barnton Community Council (0243)

Policy Hou 8 paragraph 3.192 is quite clear of the intention of the policy. Policy Hou 8 is unchanged from current LDP Policy Hou7. The Council's non-statutory Guidance for Businesses (CD050) sets out guidance on the application of LDP Policy Hou 7 and will be updated as appropriate. **No modification proposed.**

Philip Endecott (0079)

Comment noted. **No modification proposed.**

Terry Levinthal (0313)

Policy Hou 8 is unchanged from current LDP Policy Hou7. The Council's non-statutory Guidance for Businesses (CD050) sets out guidance on the application of LDP Policy Hou 7 and will be updated as appropriate. **No modification proposed.**

### **Hou 9 Sites for Gypsies, Travellers and Travelling Showpeople**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Paragraph 133 of SPP 2014 states local development plans should identify suitable sites for Gypsy/Travellers and Travelling Showpeople if there is a need. The Council acknowledge that draft NPF4 (CD099) requires that land should be allocated ensure provision of accommodation for Gypsy/Travellers and Travelling Showpeople and the location of where new homes are allocated should be consistent with the principles of 20 minute neighbourhoods and an infrastructure-first approach. In producing HND A2 (CD094) the SESplan Core Housing Market Partnership considered that there was a lack of up to date information and data relating to Gypsy/Travellers and their accommodation needs nationally making it difficult to assess housing need. In the absence of any demonstration of need the City Plan Policy Hou 9 Sites for Gypsies, Travellers and Travelling Showpeople provides flexibility to deal with any evidence which may emerge during the lifetime of the plan.

The nature and requirements of occupants of housing and sites for gypsies, travellers and travelling show people are different and it would not be appropriate to apply the same requirements as housing. **No modification proposed.**

SEPA (0012)

The nature and requirements of occupants of housing and sites for gypsy/travellers and travelling show people are different and it would not be appropriate to apply the same requirements as housing. Policy is supportive of development of sites and sets a criteria base policy. As such it forms a straightforward set of criteria to assess applications, makes explicit the consideration of individual merits, and does not try to apply a homogeneous approach to site developments. Hou 9 (d) requires that the site can be provided with essential services. While not exact replication of the term used in Scottish Planning Policy (CD096) and draft NPF4 (CD099) the term gypsies, travellers and travelling showpeople used within Hou 9 is considered to have the same meaning and reflects national policy. **No modification proposed.**

### **Housing for Elderly**

Calex Group Ltd (0556), Esk Property LLP (0726), Glenmorrison Group (0600)

Housing need is addressed at Issue 19 Housing Supply Target and Land Requirement. It is not agreed that a separate policy is required for housing for older people. Support is provided for housing for older people in Policy Hou 3 which requires a mix of housing to meets the differing needs of residents including older people. Paragraph 3.180 requires an inclusive approach to the design of all housing. Guidance is provided in the Council's non-statutory Edinburgh Design Guidance (CD047). This supports the Scottish Government's Housing for Varying Needs standards which set out good practice on the design of housing to achieve flexibility and suitability for people of all abilities.

Where housing is proposed it is appropriate that this is assessed against the relevant housing policies of the Plan regardless of the age of occupier. The requirements of the development plan should be taken into account in negotiations. Section 25 of the Town and Country Planning (Scotland) Act 1997 (CD101), allows for material considerations, including viability, to be considered on a case-by-case basis. **No modification proposed.**

Esk Property LLP (0726), Glenmorrison Group (0600)

It is not accepted that housing for older people would require a green belt or countryside location to provide for appropriate open space. Policy Hou 1 sets the locations where housing development is supported which includes a range of greenfield and brownfield sites. **No modification proposed.**

Glenmorrison Group (0600)

The duty set by the Planning Act 2019(CD102) to report to Parliament on the housing needs of older people is placed upon Scottish Ministers. While Planning Authorities are required to be consulted upon this there is currently no reporting process. As the requirement is set out in legislation and applies to Scottish Ministers it is not accepted that reference to this should be included within the plan. **No modification**

Spire Healthcare Limited (0719)

The Plan aims to direct development to and maximise the use of brownfield land rather than greenfield land. Part 4, Table 2 Housing Proposals identifies allocated sites which combined with existing land supply will meet the housing supply target. Policy Hou 1 supports development on allocated sites and other sites within the urban area. Land supply is addressed in Issue 20 Assessment of Housing Land Supply. It is not necessary to allow for development on greenfield land. Policy Hou 3 aims to provide a range of housing for differing needs, including older people within each development to provide for multi-generational communities. It is not necessary to refer to each policy within the aims of the plan. **No modification proposed.**

**Other**

Cramond and Barnton Community Council

Policy Hou 1 supports housing development on allocated sites, other sites within the urban area and as part of redevelopment proposals in commercial centres. The proposals map

identifies the urban area and areas of countryside and green belt. Policy Env 18 controls development in the green belt and countryside. It is not necessary to provide policy for the circumstances described to prevent the creation of a brownfield site. **No modification proposed.**

**Reporter's conclusions:**

**Reporter's recommendations:**

Issue 27	Infrastructure Delivery and Developer Contributions

Provision of the development plan to which the issue relates:	Relates to Policy Inf3 which supports development where there is sufficient infrastructure or where not proposals will be required to deliver or contribute towards provision of infrastructure.	
Planning authority's summary of the representation(s):		
<div><div>Delivery of Infrastructure</div><div><div><u>Hallam Land Management (0599), Miller Homes Limited (0649)</u></div><div><p>The Action Programme sets out a number of infrastructure requirements, but does not actually set out the actions required to deliver these or the Council's proposed development plan strategy as a whole. There is a lack of relationship in the Action Programme between the proposed development and infrastructure requirements. There is also limited information on the associated costs of these actions, how they will be funded or when they are expected to be delivered.</p><p>The Proposed LDP does not include any programme for the delivery of the development plan strategy, which is reflected in the Action Programme. In particular, there is no information provided in the Action Programme how the Council intends to bring forward specific brownfield sites for development, address ownership issues or the various constraints associated with brownfield development. It is unclear whether the Council's development strategy is deliverable.</p></div></div></div>		

Section 10 of the Proposed Action Programme is expected to set out the healthcare infrastructure actions required to support the development strategy set out in the Proposed LDP. However, no specific actions are stated. Some general references are made to new practices and expansions in the Healthcare Infrastructure Requirements column, however, the size of any new premises is not stated, nor an indication of the costs. It also does not state where the mitigation will be provided and no timescales are provided for the delivery of any actions. It is therefore unclear how these unspecific actions relate to the delivery of the Proposed LDP development strategy.

It is also not possible to demonstrate that the relationship and scale and kind tests of Circular 3/2012 can be met in any planning obligation for healthcare infrastructure based on this Action Programme.

Section 26 of the Town and Country Planning (Development Planning) (Scotland) Regulations 2008 and paragraph 130 of Circular 6/2013 Development Planning lists the content that Action Programmes must include. These state that Action Programmes should include: a list of actions required to deliver each of the plan's policies and proposals; the name of the person who is to carry out the action; and the timescale for carrying out each action.

The Action Programme does not detail what actions are required, or the timescale for carrying out these actions. It also does not specify the person that will carry out the actions, stating that this is ...to be confirmed. It therefore does not meet the minimum requirements for an Action Programme with regard to infrastructure requirements, as set out in Circular 6/2013 and the 2008 Regulations.

### **Inf 3 Infrastructure Delivery and Developer Contributions**

#### Newcraighall LLP (0466)

Object to CEC taking forward their approach of seeking developer contributions to healthcare infrastructure. The Infrastructure and Transport Policy Inf 3 Infrastructure Delivery and Developer Contributions should be amended.

Object to the specific reference in Place 32 Newcraighall stating that Newcraighall East is to, 'h. Provide or contribute towards education, and healthcare infrastructure and community facilities.' The Council's response is set out in Issues 4-8 Individual Sites.

The principle of Policy Inf 3 Infrastructure Delivery and Developer Contributions is supported whereby, 'Development will be supported where there is sufficient infrastructure capacity already being available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts' in accordance with the relevant legislative and statutory policies and guidance.

It is unclear what is meant however where Policy Inf 3 continues to state that, 'Where, by the nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions will be sought.' The nature of the infrastructure should be defined, and if it cannot be delivered by the developer directly, it should be clarified how developer contributions are to be sought.

Object to the principle of development providing or contributing towards healthcare

infrastructure. Healthcare infrastructure (such as GP services) is currently not an issue (either legally or financially) that can be addressed by the planning system. Any developer contributions must be imposed according to the tests set out in the relevant Scottish Government Circular. Healthcare requirements must form part of a wider NHS forward programme. The NHS operate a 'list system' which allocates a certain number of registered patients per GP. If a GP has too many patients registered, then funding is available for a new GP as part of that practices business case to expand services where required to meet additional demand. The funding of healthcare is an issue for central government. GP practices are often run as individual businesses who make a business case to expand and establish the practices if they seek to do so. The decision therefore to allocate funding to GP practices is a matter for central government in line with the business cases presented to them.

Recommended amendments to Part 3: Infrastructure and Transport Policies Inf 3  
Infrastructure Delivery and Developer Contributions Proposed City Plan 2030.

Barratt David Wilson Homes (0677), Steve Loomes (0767)

BDW would ask that the Council provides clear evidence that developer obligations in respect of healthcare contributions are proven to be required.

Homes for Scotland (0404), Wright PDL (0078), Steven Loomes (0767)

The Council has previously lost an appeal in West Edinburgh on healthcare contributions (DPEA Ref: PPA-230-2207), wherein it was determined that a lack of information had been put forward by the Council to justify the assumption of the volume of new patients the Council had claimed there would be. The Council requires to evidence clearly that developer obligations in respect of healthcare contributions are proven to be required. The decision on the last Supplementary Guidance (letter sent 17 January 2020 – attached as an additional document herein) also questioned the validity of the contribution zones the Council had used – nothing has changed.

Home builders and other delivery partners need clarity at the Plan stage on what infrastructure will be expected to be provided through new development. Any developer obligations related to infrastructure requirements must be properly justified having regard to policy. They should be able to be viably delivered.

As well as satisfying the policy tests, it will be important that the Council has a clear awareness of and strategy for any land assembly work required for the delivery of the desired infrastructure, so it avoids a situation where the delivery of early phases of large sites is stalled because all of the land necessary for a such connections is not in the applicant's or the Council's control. The Council also needs to be aware of the realistic costs and timeframe of this process.

We consider that issues such as education, transport and other infrastructure need to be led by expert advice and evidence.

There are concerns that, with regards to education, the Council appears to have adopted the same approach to contributions as the previous guidance, which Ministers rejected.

Developer contributions for education and healthcare must be justified. The proposed

approach is not justified in this case. A clear link between the development and what is claimed to be needed is required to be established. A clear link has not been established in this case.

Has the Council considered the impact of cumulative costs? Is there a commitment to closing potential funding gaps (e.g., NHS Lothian)?

Contributions need to be fairly and reasonably related to what is proposed and must be necessary for the development to proceed. It will be important that the Council avoids a situation where the delivery of early phases of large sites are stalled because all the land necessary for such connections is not in the applicants control.

New development can and should only contribute to what is fairly and reasonably related to the development which is proposed as established in Circular 3/2012 and the Elsie Supreme Court judgement ([2017] UKSC 66). It will be necessary to support a phased approach to provision so requirements do not prevent the delivery of larger sites where early phases can be delivered. It will also be essential that those preparing place briefs involve developers, fully understand land ownership and take a pragmatic, delivery focused approach.

It is important that policies are drawn up with a clear knowledge of how they will cumulatively impact upon developments. Presenting applicants with an irreconcilable set of policy asks creates uncertainty and adds complexity and risk to the planning application process.

Tessa Haring (0112)

Any new large building developments must include Medical Centres. Our GP surgeries are already oversubscribed as are our schools.

Ian R N Stewart (0131)

Support the proposals in principle subject to the caveats below:

1 Stockbridge Health Centre is at capacity pre City plan developments and additional capacity is required

2 Stockbridge Health Centre makes good use of what was a tight city centre footprint and functioned reasonably well pre-covid, however on occasion there was greater demand in the waiting areas than there was capacity to satisfy need.

3 If - as it seems - covid and covid style pandemics are to be more frequent and something with which we all have to live, then any new provision should be more spacious. That would allow the Health Centre to continue to function within the need for greater distancing

4 That would suggest that any new build should take place on a more roomy and open site. Those at Crewe Rd S/ Fettes and the RVH (Places 5 and ^) would be particularly suitable.

Lynn Grattage (0362)

Agree need many more GP practices, and hope the Council is including the fact there isn't enough already even without housing developments. Not enough Chemists as well. Why was chemist rejected at Longstone? Why not chemist at the shopping centre off Chesser Avenue.

Hallam Land Management (0599), Miller Homes Ltd (0649), CALA Management Ltd (0465)

Table 12 Healthcare Infrastructure should be amended.

The proposals set out in Table 12 – Healthcare Infrastructure are not based on a reliable or robust assessment of the impacts of pupils from new homes on healthcare infrastructure. The Healthcare Infrastructure Proposals are based on the findings of the Healthcare Appraisal (September 2021).

The Healthcare Appraisal contains a number of issues and omissions that call into question the reliability of its assessment.

The Healthcare Infrastructure proposals in Table 12 are grouped within four localities. These localities bear little relationship to the four localities used in Part 3 of the Proposed LDP for the place-based policies. The boundaries of the localities have not been shown on a plan. Each locality will take in numerous medical practice catchment areas, however, it is unclear how closely these localities follow the existing medical practice catchment areas. This adds a level of unnecessary complication for applicants seeking to understand their potential planning obligations.

The use of localities shows that the Council is considering a cumulative approach to healthcare infrastructure. The scale of the localities are too large to demonstrate a relationship between the sites included within them. There is no clear relationship between allocations in the inner city to mitigation proposed at the edge of the city. A cumulative approach would therefore fail the relationship test set out in Circular 3/2012.

Infrastructure actions should instead be based on the impact within existing medical practice catchment areas. Where cumulative mitigation solutions are considered necessary, these should be based on a suitable scale (such as across adjoining catchment areas) in order to meet the tests of Circular 3/2012.

Table 12 does not state what specific healthcare infrastructure is required. No actions have been included in the Actions column. Some general references are made to new practices and expansions in the Descriptions column, however, the size of any new premises is not stated, nor an indication of the costs. It also does not set out where the mitigation will be provided, or when. Without an identified trigger for an infrastructure action, it is not possible to suitably define a planning obligation to form part of a legal agreement.

Paragraph 16 of Circular 3/2012 is clear that planning obligations need to be rooted in the development plan. Given that specific details of planning obligations for healthcare infrastructure are not included in the development plan, they must be included in statutory supplementary guidance which would form part of the development plan once adopted. It would not be appropriate for planning obligations related to healthcare infrastructure to be

set out in non-statutory guidance, which would not form part of the development plan or be subject to the same level of scrutiny.

Table 12 does not therefore provide an adequate level of detail to allow any meaningful consultation to be carried out. It is considered that details of planning obligations relating to healthcare infrastructure should have been included in the Proposed LDP for consultation, as it is unclear whether the Council will be able to bring forward supplementary guidance before Section 22 of the 1997 Act is repealed and any subsequent transitional period.

Section 10 of the Proposed Action Programme is expected to set out the healthcare infrastructure actions required to support the development strategy set out in the Proposed LDP. However, no specific actions are stated. Some general references are made to new practices and expansions in the Healthcare Infrastructure Requirements column, however, the size of any new premises is not stated, nor an indication of the costs. It also does not state where the mitigation will be provided and no timescales are provided for the delivery of any actions. It is therefore unclear how these unspecific actions relate to the delivery of the Proposed LDP development strategy.

Miller Homes Ltd (0649), Hallam Land Management (0599)

Paragraph 1.2 of the Healthcare Appraisal (September 2021) states that it is a ...high level assessment... and that further actions will be necessary to refine the assessment. These further actions include discussion with the individual medical practices.

A high level assessment is an inadequate level of assessment for a Proposed LDP. The future further actions noted in paragraph 1.2 should have been undertaken and made available for public comment during the consultation period. Discussion with the medical practices is a significant omission, as these medical practices (as independent contractors) would need to agree to any mitigation proposed at existing premises. Mitigation proposed without the agreement of these medical practices may not be deliverable. It is therefore unclear whether the necessary healthcare infrastructure can be made available to support the Council's development strategy.

Further consultation with medical practices would also allow greater consideration to be made between physical capacity constraints and workforce capacity. Audit Scotland has recently highlighted concerns regarding the recruitment and retention of GPs in Scotland. The Healthcare Appraisal needs to ensure that a clear distinction between infrastructure capacity issues and workforce capacity issues (which are not related to planning) has been made in its capacity assumptions.

Perceptions of capacity may also be complicated by the ongoing Covid-19 pandemic. It is important to ensure that current social distancing policies limiting patient numbers in medical practices do not skew physical capacity assumptions applied in this Healthcare Appraisal. This cannot be confirmed in this Healthcare Appraisal as it does not include a detailed assessment of capacity in existing medical practices.

The Healthcare Appraisal does not conduct an appropriately detailed impact assessment. Consequently, it is unable to define the mitigation required to accommodate the impact of the Proposed LDP. Some general references are made to new practices and expansions; however, the size of any new premises or extensions are not stated, nor an indication of

the costs. It also does not set out where the mitigation will be provided, or when. It therefore cannot be demonstrated that any planning obligations sought on the basis of this Healthcare Appraisal would meet the scale and kind tests in Circular 3/2012 Planning Obligations and Good Neighbour Agreements or that they relate to the impact of specific developments.

As a minimum, it would be expected that the Healthcare Appraisal methodology would begin by identifying the medical practice catchments that have housing allocations proposed within them, and then assess existing capacity. Instead, the Healthcare Appraisal has grouped sites within four localities (North West, North East, South West and South East) and has considered potential high-level impacts within these.

These localities bear little relationship to the four localities used in Part 3 of the Proposed LDP for the place-based policies. The boundaries of the localities have not been shown on a plan. Each locality will take in numerous medical practice catchment areas. However, it is unclear how closely these localities follow the existing medical practice catchment areas. This adds a level of unnecessary complication for applicants seeking to understand their potential planning obligations.

The use of localities shows that the Council is considering a cumulative approach to healthcare infrastructure. The scale of the localities are too large to demonstrate a relationship between the sites included within them. There is no clear relationship between allocations in the inner city to mitigation proposed at the edge of the city. Therefore, the use of localities may force a development to make financial contributions towards healthcare infrastructure outwith the catchment area that it is in.

A cumulative approach would therefore fail the relationship test set out in Circular 3/2012. This reflects the concerns raised by Reporter Liddle in his Report to Ministers on the Council's Supplementary Guidance on Developer Contributions, in which the Council adopted the same approach. The Council were directed not to adopt the Supplementary Guidance by Ministers. One of the reasons for Ministers' direction was that ...the Supplementary Guidance does not provide sufficient certainty that contributions sought on the basis of it will be always be used for the purpose for which they were gathered.

Infrastructure actions should instead be based on the impact within existing medical practice catchment areas. Where cumulative mitigation solutions are considered necessary, these should be based on a suitable scale (such as across adjoining catchment areas) in order to meet the tests of Circular 3/2012.

The Healthcare Appraisal does not set out the expected level of patients per household. It is therefore unclear what scale of impact is anticipated as a consequence of the Proposed LDP strategy. Paragraph 2.2 states that a proposed 5,350 units ...would generate additional population of over 10,000 people suggesting around 2 people per household. The number of people per household is likely to vary within different areas of the City, and depending on the type of housing proposed. Flats in the city centre are likely to have fewer residents than houses on edge of the city. It is noted that the Proposed LDP strategy to deliver high-density brownfield development will predominantly comprise flatted properties.

In addition, the Healthcare Appraisal does not make any allowance for existing patients migrating within the city. In reality, some persons buying new homes delivered on the proposed allocations will already live in the area. Research conducted within East Lothian

found that it is generally expected that around 33% of new homes are purchased by persons already living in the postcode area. This percentage is likely to rise when considering a larger area, such as the localities used in the Healthcare Appraisal. The Healthcare Appraisal therefore does not demonstrate that any planning obligations sought on the basis of this Healthcare Appraisal would meet the relationship and necessity tests in Circular 3/2012.

The level of proposed development also appears to be high compared against the Proposed LDP. The Healthcare Appraisal has assumed a higher number of homes can be delivered on a number of the brownfield sites compared to the Proposed Plan. The Healthcare Appraisal has assumed around 3,000 more homes will be delivered across the brownfield sites. The assessments in Sections 2-4 of the Healthcare Appraisal also assume a higher level of development on brownfield sites compared with the list of sites included in its own Appendix. These discrepancies between the assumed number of homes raises further doubts about the reliability of the Healthcare Appraisal.

The Healthcare Appraisal does not provide a robust and reliable assessment of the impact of the Proposed LDP strategy on healthcare infrastructure. The high level assessment undertaken does not provide a suitable level of detail for a Proposed LDP consultation, and is not sufficient to demonstrate that the healthcare infrastructure is capable of accommodating the Proposed LDP strategy. It also fails to establish that the undefined infrastructure actions are able to meet the relationship, necessity and scale and kind tests in Circular 3/2012.

#### Helen Forrest (0315)

Concerned that there will be insufficient GPs to man the health centres which will be required as a result of the following developments;  
CC3, H1-H28, EW2a-EW2d, H29-H34, EW1A-EW1C, H35-H58, DEL4, HSG1-HSG32, H59-H70, HSG31, H71-H85, HSG15-HSG40, H86-H95

#### Archie Clark (0003)

Table 12 - Healthcare Infrastructure – I understand there are issues with the provision of medical services in the Juniper Green/ Currie/ Balerno corridor following a substantial number of additional houses being built. There are no healthcare proposals for this area. At what stage will Healthcare provision be reviewed?

#### Genna Spears (0081)

Regarding healthcare proposals there are no provisions for South Gyle, East Craigs and Corstorphine which needs more services for the current housing stock.

#### Cramond & Barnton Community Council (0243)

In Healthcare Infrastructure Proposals, North West Locality a reference is made to '.... A new practice for West Edinburgh is already being planned ...'. It is assumed that this refers to a new GP practice at the proposed Maybury Hub, which will serve the new Cammo and Maybury communities. Given the rate of development at Cammo and Maybury, this provision will not be available for substantial numbers of new occupants. 'Infrastructure first' objectives are not being met.

New or redeveloped toilets should be included as projects or safeguards (e.g. replacement of public toilets at Cramond). Public toilets are a key public healthcare provision but are not mentioned in City Plan.

Proposals for the new Edinburgh Eye Pavilion should be included as a project or safeguard.

Stirling Developments Limited (0303)

Regarding Healthcare Infrastructure proposals the Garden District does not appear to be allocated in the plan, given this, therefore unsure why this site would be relevant to healthcare provision in the South West locality. Seek clarity on how contributions for healthcare are to be dealt with.

Juniper Green & Baberton Mains Community Council (0306)

Regarding "Healthcare Appraisal", agree with the comment in section 2.125 on page 32 that "primary care provision is already at capacity in many parts of the city at present and is struggling to meet additional new population demand". However, there are no proposals in Table 12 to show what is to happen within existing communities. These need to be addressed before new developments are built, as substantial developments have taken place over recent years which impact on local GP practices.

Table 12 - Healthcare Infrastructure: there are issues with the provision of medical services in the Juniper Green/ Currie/ Balerno corridor following a substantial number of additional houses being built. There are no proposals for this area and this needs review.

Susie Ross (0440)

Suggests that the Fettes/Crewe Road South site be used for the new Eye Pavilion being explored on the grounds that it is an area already very well-served by public transport and there are already many research facilities at the WGH and ambulances, A & E facilities etc. Its close proximity to the WGH would, surely, be of huge significance for both establishments. It would be an environmental travesty if the greenfield site was used for any new build. It is home to curlews, an endangered species, and many other rare birds, bats etc. In addition, developing this greenfield site would inevitably have a direct impact on the wildlife currently within the RVH site, Fettes College site, Inverleith Park and Comely Bank Cemetery.

Roderick Alexander (0454)

The existing health centre in Davidson's Mains is already operating at close to capacity and yet the plan has made no provision for future housing development at the brownfield site at the former Clydesdale/Clelands garage site in Davidson's Mains.

The provision requires to be reviewed in the context of the planned housing development on the site.

Melford Developments Ltd (0308)

Delete clause (c) of Inf 3 and differentiate between brownfield and greenfield sites in contribution zones.

Object on the basis that there is limited information provided in relation to contribution zones and in respect of individual areas for mitigation particularly education and healthcare.

This policy requires to be consistent with the Circular. At present the baseline for defining contributions is inadequate. Contribution zones should now differentiate between brownfield and greenfield sites given the nature of the LDP and relative viability differentials.

Further information is required in relation to cumulative assessment and reference should also be made to development costs and viability.

Contributions towards healthcare should not be progressed. Most healthcare facilities operate as private businesses and should not be supported by the development industry. Does case law support such an approach, unlikely?

#### AREAA (0358)

Delete criteria C of Policy INF 3 (P125) “primary healthcare infrastructure capacity – proposals to provide floorspace for the provision of new facilities or to extend existing facilities”

Increasingly across Scotland emerging draft development plans contain requirements for developer contributions for healthcare provision. This is always a point of contention for two reasons.

Firstly, the NHS is provided for by general taxation which housebuilders and new residents of the homes they build are contributors.

Secondly, GPs tend to operate as private businesses and it would be wholly inappropriate for one private business to pay for another through planning obligations.

For this reason, criteria C of Policy INF 3 should be deleted.

#### Crosswind Developments Ltd (0184)

CDL object to the requirements of Policy Inf 3 and request further information as to how healthcare and green network meet the criteria for developers’ contributions which is explored below.

Increasingly across Scotland emerging draft development plans contain requirements for developer contributions for healthcare provision. This is always a point of contention for two reasons.

Firstly, the NHS is provided for by general taxation which housebuilders and new residents of the homes they build are contributors.

Secondly, GPs tend to operate as private businesses and it would be wholly inappropriate for one private business to pay for another through planning obligations.

For this reason, “c” of Policy INF 4 should be deleted.

Green blue networks are not impacted upon by development, nor is the need to maintain, improve or expand blue green networks linked to development. It is not related in scale or kind from the development therefore, a contribution for this is not suitable. Therefore, the first part of point “d” should be removed.

CDL are not clear that point “e” is aligned with the findings of the Supreme Court in terms of Aberdeen City and Shire Strategic Development Planning Authority v Elsick Development Company Limited. On this basis CDL propose that point “e” is deleted.

#### NHS Lothian (0596)

Policy Inf 3 states that proposals will be required to deliver or contribute to infrastructure provision where relevant and necessary to mitigate any negative impact of a proposed development and to ensure that proposals can meet the Council's sustainable transport targets. The Policy states that this will include providing floorspace for new primary health care facilities, or to extend existing facilities. NHS Lothian would request that this requirement is amended so that it refers to the provision of healthcare facilities more generally, rather than just focusing on primary healthcare infrastructure.

#### University of Edinburgh (0464)

The approach to health and wellbeing should seek to encourage this to be a factor to be considered in the design of new facilities as well as considered from the perspective of wider health and wellbeing infrastructure – to ensure that the city is well placed to deliver what the population needs to maximise health and wellbeing benefits. This should include healthcare infrastructure, active travel networks and access to open spaces and sport and recreational facilities.

The University of Edinburgh's Biodiversity Strategy promotes the further development of “green communities”. Interactions and communities are central to the strategy, not only in terms of conservation of nonhuman organisms but also in terms of human interaction with and community in nature for health and wellbeing. Human health relies on ecological systems and species within them, but physical and psychological wellbeing has also been linked to contact with biodiversity or nature.

The University's Green Communities programme meets this need by providing staff and students with opportunities to green campuses and participate in community projects in the wider Edinburgh community. It supports the vision of their Biodiversity Strategy.

Health and wellbeing touch all aspects of University activity – the health and wellbeing of the University's staff and students is intrinsically linked to the success of the University as a whole, and a key aspect of this is the appropriate location, design, and specification of all estates facilities and associated spaces between and adjacent to buildings to support a healthy environment.

#### Roseberry Estate (0618)

The Council should provide evidence to support the need for healthcare contributions. The Council have recently lost an appeal on this issue and it is important that evidence is made available to support this, It is unclear why Fife Council (see Committee Report on 19/00250/EFULL) consider that there is no legal mechanism in the planning system to secure contributions towards healthcare, we would be keen to understand why Edinburgh feel differently.

Brian Grange (0042)

Additional healthcare facilities are required as a result of development at Crewe Road South.

**The following representations support the Healthcare Appraisal:**

Alistair Gillies (0035), Mike Richardson (0109), Julie Robertson (0210), Suzanne Baxter (0237), Antonio Alonzi (0270), Mrs Patricia Stott (0349), Tony Gray (0291), Michelle Mckinley (0432)

**Modifications sought by those submitting representations:**

**Delivery of Infrastructure**

Hallam Land Management (599), Miller Homes Limited (0649)

Modify action programme to set out actions to deliver infrastructure requirements and the proposed development strategy with information on costs, how they will be funded, who will deliver them and when they expect to be delivered. Modify action programme to include healthcare infrastructure actions, details of requirements, costs and timescales.

**Inf 3 Infrastructure Delivery and Developer Contributions**

Newcraighall LLP (0466)

Make the following modifications to Part 3: Infrastructure and Transport Policies Inf 3 Infrastructure Delivery and Developer Contributions Proposed City Plan 2030:

- Policy Inf 3 p.125 - 'Where, by the nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions will be sought.' The nature of the infrastructure should be defined, and if it cannot be delivered by the developer directly, it should be clarified how developer contributions are to be sought.
- Inf 3 p.126 – delete 'c. primary healthcare infrastructure capacity – proposals to provide floorspace for the provision of new facilities or to extend existing facilities'.

Barratt David Wilson Homes (0677), Steve Loomes (0767)

Modify plan to give evidence that developer contributions for healthcare actions are required and justified.

Homes for Scotland (0404), Wright PDL (0078)

Modify plan to give evidence that developer contributions for healthcare actions are

required and justified.

Tessa Haring (0112)

No modification proposed.

Ian R N Stewart (0131)

Modify Plan to provide new healthcare capacity associated with Stockbridge Health Centre

Lynn Grattage (0362)

No modification proposed.

Hallam Land Management (0599), Miller Homes Ltd (0649), CALA Management Ltd (0465)

Table 12 Healthcare Infrastructure and the Action Programme should be amended to list specific infrastructure requirements in the catchment areas of each existing and proposed medical practice. This should include the location, timing, size and type of infrastructure to be provided.

Miller Homes Ltd (0649), Hallam Land Management (599)

A Healthcare Appraisal need prepared that sets out an appropriately detailed impact assessment of new development.

Helen Forrest (0315)

No modification proposed.

Archie Clark (0003)

No modification proposed.

Genna Spears (0081)

No modification proposed, but implies healthcare provisions for South Gayle, East Craigs and Corstorphine.

Cramond & Barnton Community Council (0243)

Implies modification to bring forward new healthcare facility more promptly for West Edinburgh. Modify plan to include public toilet provision as part of healthcare requirements. Include proposals for the new Edinburgh Eye Pavilion.

Stirling Developments Limited (0303)

Modify plan to delete reference to healthcare associated with the garden district.

Juniper Green & Baberton Mains Community Council (0306)

Modify Table 12 to include existing healthcare provision issues.  
Modify Table 12 to include provision of medical services in the Juniper Green/ Currie/ Balerno corridor.

Susie Ross (0440)

Modify plan to identify the Fettes/Crewe Road South site for the new Eye Pavilion.

Roderick Alexander (0454)

Modify the plan to identify new healthcare provision to supplement the existing health centre in Davidson's Mains.

Melford Developments Ltd (0308), AREAA (0358)

Modify Policy to delete clause (c) of Inf 3.

Crosswind Developments Ltd (0184)

Modify Policy to delete criterion c, to delete first part of criterion d and delete criterion e.  
Amend policy as follows;

"Proposals will be required to deliver or contribute to the following infrastructure provision where relevant and necessary to mitigate\* any significant negative impact (either on an individual or cumulative basis) and to ensure the proposal can meet the Council's sustainable transport targets (mode share targets) and where commensurate to the scale of the proposed development:

a. transport proposals and safeguards from Part 4, tables 3-10 and/ or interventions identified in transport assessments and/or transport consultations in accordance with Policy Inf 4 Provision of Transport Infrastructure,

b. education provision including new schools, early years nursery proposals, school extensions to accommodate additional classrooms, and associated requirements to support the additional pupil numbers such as dining and gym facilities, taking into account opportunities to co-locate community services from Part 4, table 11, c. public realm where identified for the town centres or projects delivering the Council's City Centre Transformation. "

NHS Lothian (0596)

Modify the policy so it refers to the provision of healthcare facilities more generally.

University of Edinburgh (0464)

Modify the Plan to include health and well being in the design of new facilities as well as considered from the perspective of wider health and wellbeing infrastructure.

Rosebery Estate (0618)

Modify Plan to provide evidence to support the need for healthcare contributions.

Brian Grange (0042)

Modify Plan to provide additional healthcare facilities as a result of development at Crewe Road South.

### **Summary of responses (including reasons) by planning authority:**

#### **Delivery of Infrastructure**

Hallam Land Management (0599), Miller Homes Limited (0649)

The Council considers there is a clear link between the actions in the Action Programme and the Proposed Plan. Each of the actions in the action programme have a reference and most of them also have a Plan reference as well. The Plan reference relates to the Part 4 Proposals section of the Plan and this section sets out a series of tables with proposals for the various types of infrastructure. Where actions relate to a specific development proposal this is usually identified in the table. With regard to Education actions, a full break down of sites, their impacts and where actions are required to address these impacts can be found in the Council's Education Appraisal (CD015).

The content of action programmes is set out by legislation in section 21 of Part 2 of the Planning Scotland 2006 act (CD147) and the T&CP (Development Planning) (Scotland) Regulations 2008 (CD148)– Part 5 s.26 Form and Content of action programmes, which states: 'An action programme is to set out the following matters–

- (a) a list of actions required to deliver each of the policies and proposals contained in the relevant plan;
- (b) the name of the person who is to carry out each such action; and
- (c) the timescale for the conclusion of each such action.'

As such, costs are not required to be included. The Council considers the Action Programme has met the requirements of the legislation and regulations.

The Action Programme's role is to set out actions to deliver the plan's policy and proposals, not to set out how proposals themselves are delivered. It does not set out the delivery mechanism and funding of developers or Registered Social Landlords.

At this point in the plan's preparation, and this first Proposed Action Programme, it is not possible to be more specific around timescales of delivery. Most actions will be delivered with development, and so will follow the delivery and phasing timescales of development. Subsequent action programmes will be in a position to provide more information on delivery timescales, as development proposals come forward and are continuously informed by the pace of housing completions as evidenced by the Council's annual housing land audit and completions programme.

The Council considers the actions and the Plan's strategy can be delivered within the timeline of the Plan.

The Council when preparing the Plan engaged with the Edinburgh Health and Social Care Partnership. The Partnership have a responsibility, on behalf of NHS Lothian, to identify the impacts of future population growth on medical practices, and to plan for actions to mitigate those impacts. Additional housing development is a key source of growth in Edinburgh's population and in turn patient lists. The Council requested from the

Partnership an up to date primary healthcare appraisal in order to identify the impacts of new housing development on existing medical practices, and identify actions in order to mitigate those impacts to accompany the Proposed Plan. Unfortunately as a result of the Covid 19 pandemic the Partnership were unable to provide an up to date assessment before the Plan's publication. As a result, the Council had to rely on a preliminary draft that had been prepared at an initial stage in the Plan's preparation. The Council acknowledges that the information contained within the Plan is less than ideal but in the unprecedented circumstances seemed prudent to include.

The Partnership have now prepared an up to date appraisal (CD017). The appraisal sets out the current position of medical practices which established a baseline based on existing committed developments using data from the 2021 Housing Land Audit (CD055) which was the most up to date approved audit. Then the appraisal identifies the anticipated population generated by the additional housing sites proposed in the Plan and sets out a series of actions in the form of new practices or practice extensions to address the impacts of this additional population. What the appraisal demonstrates firstly is that existing medical practices have very little spare capacity to accommodate existing committed developments and that various actions are being planned to address that the new population. Secondly, it demonstrates that the new development sites in the Plan will significantly increase the population in Edinburgh and that the existing medical practices are unable to absorb that additional population. Thirdly, it identifies a series of new infrastructure actions that are required to accommodate the additional population generated by the new development sites in the Plan. As a result, the evidence in the health care appraisal demonstrates that the Council is justified for including a requirement within Policy Inf3 that developers provide or make contributions towards new primary healthcare infrastructure capacity. The Council considers the findings of the appraisal will inform the next update of the Action Programme. The Council has no objection to the reporters including the actions within a revised Table 12 of the Proposed Plan if they are minded to do so.

As set out in para 3.197 of the Plan planning guidance will be prepared that sets out the mechanism for the detailed calculation of proportionate contributions within a contribution zone. Any developer contributions sought will be done in accord with the requirements of Circular 3/2012 (CD117). **No modification proposed.**

### **Inf 3 Infrastructure Delivery and Developer Contributions**

#### Newcraighall LLP (0466)

The Council considers that seeking the provision of or contributions towards healthcare infrastructure is justified for the reasons set out in its response to 0559 and 0649 above.

The Council considers the nature of infrastructure is defined in the plan, in particular in Part 4 and in the Action Programme. The Council does not consider the wording of Inf 3 is unclear and any perceived ambiguity is resolved by further explanation in the supporting text paragraphs 3.197 to 3.199.

The Council considers that the principle of development providing or contributing towards the provision of additional healthcare infrastructure to address the population generated is an issue that can be addressed by the planning system. This is a principle that is already embraced within existing planning policy. Policy Hou10 of the adopted LDP states that planning permission will only be granted where there are associated proposals to provide

any necessary health facilities relative to the impact and scale of the development proposed. This policy and principle was not amended to remove healthcare infrastructure in the LDP's examination and therefore it is established in the Council's planning policy history as a valid form of infrastructure requirement required to support housing growth/mitigate the impacts of housing growth. Furthermore, the Council has been receiving developer contributions towards the provision of additional healthcare infrastructure for many years. All existing and future developer contributions sought will be done in accord with the requirements of Circular 3/2012 (CD117). **No modification proposed.**

Barratt David Wilson Homes (0677), Steve Loomes (0767)

An up to date healthcare appraisal has been prepared as referred to in the Council response to 0599 above. **No modification proposed.**

Homes for Scotland (0404), Wright PDL (0078), Steven Loomes (0767)

The Council acknowledges that the refusal of planning permission for application 16/04738/PPP (DPEA Ref: PPA-230-2207) (CD142) was overturned at appeal. The Council considers it important to stress that the appeal related to an allocated site within the adopted LDP which was refused consent on a number of grounds none of which were related to healthcare provision. The appeal was granted for a number of reasons including impact on the greenbelt, design, effective master planning, and transport. It is misleading to suggest that the Council lost the appeal on healthcare contributions. Healthcare contributions were considered at the appeal with respect to agreeing planning obligations. Furthermore, the reporters were satisfied, as set out in paragraph 114 of their decision, that the proposal would create a direct need for healthcare facilities. Although the reporters considered there was a lack of evidence to establish if the contribution was fair and reasonable this was largely because a healthcare appraisal was not provided as evidence during the appeal to justify the level of contributions sought. Matters relating to contribution zones, and the levels of contributions are relevant in the context of the preparation of the planning guidance, referred to in para 3.97 of the plan, not in terms of the content of the Plan. The purpose of the Plan is to establish the principle for developer contributions being sought for healthcare infrastructure, and the Council has set out its position with regard to that in its response to 0466 above.

The Council considers matters have progressed considerably since the Scottish Ministers issued a direction to the Council on 17 January 2020 not to adopt its finalised Developer Contributions and Infrastructure Delivery Supplementary Guidance (CD045). The Council emphasises that the Scottish Ministers' decision with regard to healthcare was on the grounds that the adopted LDP did not specifically refer to healthcare in Policy Del 1 in the context of preparing statutory supplementary guidance. Such a situation is unlikely to be repeated in the future, as the Council has included healthcare within Inf3 accordingly.

The Council considers seeking developer contributions towards healthcare infrastructure is justified for the reasons set out in its response to 0466 above. The updated Healthcare appraisal (CD017) provides the clear link between the impacts of development and the required actions to mitigate that impact. **No modification proposed.**

With regard to Education the Council response to this matter is set out in its response under Issue 29: Infrastructure Delivery – Education.

Tessa Haring (0112)

The Council agrees that new developments should make a contribution toward healthcare infrastructure in accord with the provisions of Circular 3/2012 (CD117).

Ian R N Stewart (0131)

As referred to in the Council's response to 0599 above the Edinburgh Health and Social Care Partnership have prepared a detailed appraisal to identify the impacts of new housing development on existing medical practices, and identify actions in order to mitigate those impacts. The actions identified in the appraisal will be set out in the revised action programme. **No modification proposed.**

Lynn Grattage (0362)

The Council notes the comments submitted. Matters related to provision of chemists is not a relevant matter for the development plan. **No modification proposed.**

Hallam Land Management (0599), Miller Homes Ltd (0649), CALA Management Ltd (0465)

As referred to in the Council's response to 0599 above the Edinburgh Health and Social Care Partnership have prepared an up to date detailed health care appraisal (CD017) to identify the impacts of new housing development on existing medical practices, and identify actions in order to mitigate those impacts. The actions identified in the appraisal will be set out in the revised action programme.

The Edinburgh Health and Social Care Partnership monitors and analyses population change across Edinburgh in the form of four localities. There is no requirement for those localities to be included in the plan nor is there any relationship between it and the areas identified in Part 3 of the Plan with regard to the place based policies. The Council has no intention of using the Partnership's locality boundaries for establishing developer contribution zones. Details relating to size and number of contribution zones, identification of development allocations within zones, levels of contribution etc and the justification for them are matters that will be addressed in the updated planning guidance as referred to in para 3.197 of the Plan. The Council agrees that developer contributions and the guidance should meet the requirements of Circular 3/2012 (CD117). The Council does not consider there is any requirement for planning obligations to be included within statutory supplementary guidance and has stated in para 3.197 that the provisions will be set out in a "planning guidance", i.e. non-statutory. As a result, the repeal of Section 22 of the 1997 Act (CD101) is not relevant. The Council will consult on the planning guidance as part of the process of preparing it, which will allow its contents to be given an adequate level of scrutiny. The final guidance will then have the status of a material consideration in the context of planning applications rather than forming part of the development plan. **No modification proposed.**

Miller Homes Ltd (0649), Hallam Land Management (0599)

The Council's position with regard to the Healthcare Assessment is set out in its response to 0599 above. The analysis and actions set out in the updated appraisal (CD017) have already been discussed with the medical practices. The appraisal focuses on infrastructure capacity issues rather than workforce capacity. Comments related to the use of locality

boundaries, and details associated with contribution zones etc has been addressed in the Council's response to Hallam Land Management (0599), Miller Homes Ltd (0649), CALA Management Ltd (0465) above. **No modification proposed.**

The updated healthcare appraisal set out the number of patients per household based on a figure of 2.1 This is considered a reasonable figure for healthcare planning purposes as it matches the average household size for Edinburgh. Whilst some households may be smaller others may be bigger and the Partnership consider it is not practical to vary the figure for different parts of the city. With regard to the reference to research for East Lothian showing that 33% of new homes are purchased by persons living in the postcode area, the Council has two concerns. Firstly, the data for East Lothian is not necessarily directly applicable for Edinburgh as East Lothian covers a large rural area, with a series of small towns. Secondly, this evidence does not demonstrate that the population is not growing and in turn not having an impact on medical practices. Whilst a new house could be purchased by someone local, their old house could in turn be purchased by someone migrating into the area, i.e. it still represents a net gain in population. The NRS population estimates and projections clearly demonstrate that the population of Edinburgh is rising. That being the case, new housing development is directly associated with inward migration and a rise in population levels with inevitable consequences for healthcare provision, which the Council is seeking to address through Policy Inf3. **No modification proposed.**

Helen Forrest (0315)

GP recruitment is a matter for NHS Lothian. **No modification proposed.**

Archie Clark (0003)

An up to date Healthcare appraisal (CD017) has been prepared by the Edinburgh Health and Social Care Partnership as referred to in the Council's response to 0599 above. **No modification proposed.**

Genna Spears (0081)

An up to date Healthcare appraisal (CD017) has been prepared by the Edinburgh Health and Social Care Partnership as referred to in the Council's response to 0599 above. **No modification proposed.**

Cramond & Barnton Community Council (0243)

The timely delivery of a new medical practice for West Edinburgh to serve committed developments is a matter for NHS Lothian.

The Council considers the provision of public toilets is an important issue, however, the Council considers this is a matter for the development management process and not a matter for the Proposed Plan. **No modification proposed.**

Stirling Developments Limited (0303)

The East of Millburn Tower (Garden District) site was not identified on the proposals map as it had not been granted consent by Scottish Ministers at the time the plan was published. However, it was factored into the housing calculations. The consent of the site for housing

development will have significant implications for the provision of healthcare and therefore it has been included within the healthcare assessment. Any developer contributions towards healthcare from the consent of this development will be progressed in accord with the requirements of Circular 3/2012 (CD117). **No modification proposed**

Juniper Green & Baberton Mains Community Council (0306)

An up to date Healthcare appraisal (CD017) has been prepared by the Edinburgh Health and Social Care Partnership as referred to in the Council's response to 0599 above. **No modification proposed.**

Susie Ross (0440)

The Healthcare Appraisal (CD017) does not identify the requirement or land to be safeguarded for a new Edinburgh Eye Pavilion. The Council understands that NHS Lothian are looking to re-provision the Eye Pavillion in some form, however, it is not clear at this stage whether a new a location is required. **No modification proposed.**

Roderick Alexander (0454)

An up to date Healthcare appraisal (CD017) has been prepared by the Edinburgh Health and Social Care Partnership as referred to in the Council's response to 0599 above. **No modification proposed.**

Melford Developments Ltd (0308), AREAA (0358)

The Council considers that seeking the provision of or contributions towards healthcare infrastructure is justified for the reasons set out in its response to 0559 and 0649 above. The boundaries and location of contribution zones is a matter for the planning guidance. **No modification proposed.**

Crosswind Developments Ltd (0184)

The Council considers that seeking the provision of or contributions towards healthcare infrastructure is justified for the reasons set out in its response to 0559 and 0649 above.

Green Blue Infrastructure and proposals are often required as part of new development (e.g. as part of Env 3 and Env 6 and table 1 showing Blue Green Network Proposals). Therefore, the Council considers it correct for Inf 3 to make provision for the delivery of this form of infrastructure, as well as for contributions toward its delivery off-site where necessary to address deficiency in new on-site provision and/or off-set an impact from development on the open space and the green blue network.

The council considers that criterion e is justified and sets out its position in detail in its responses in Issue 30: Transport Infrastructure contributions. **No modification proposed.**

NHS Lothian (0596)

Although new housing development will impact on the wider provision of healthcare facilities in Edinburgh these are regional facilities to meet the broader needs of the

population. The Council considers seeking contributions towards primary healthcare is justified in the context of Circular 3/2012 (CD117) as a direct relationship can be demonstrated between the new population generated by a development and the requirement to provide additional GP practice services to meet the needs of that additional population. The Council does not consider the same direct relationship can be demonstrated for wider healthcare or specialist services which may or may not be required by the additional population generated. **No modification proposed.**

University of Edinburgh (0464)

The Council considers the need for the design of facilities to contribute towards health and wellbeing is implicit within the strategy of the plan and that the policies of the plan will help to deliver that without the requirement for specific references, for example, policy Inf1 supports development where community facilities are within a 20minute return trip walking distance, which has health benefits in terms of encouraging active travel. **No modification proposed.**

Rosebery Estate (0618)

An up to date healthcare appraisal (CD017) has been prepared as set out in detail in the Council's response to 599 and 649 above. The Council acknowledges that the refusal of planning permission for application 16/04738/PPP was overturned at appeal. The Council considers it important to stress that the appeal related to an allocated site within the adopted LDP which was refused consent on a number of grounds none of which were related to healthcare provision. This matter is set out in detail in the Council's response to 0404, 0078 and 0767 above.

Brian Grange (0042)

An up to date Healthcare appraisal (CD017) has been prepared by the Edinburgh Health and Social Care Partnership as referred to in the Council's response to 0599 above. **No modification proposed.**

**Reporter's conclusions:**

**Reporter's recommendations:**

Issue 28	Infrastructure Delivery – Community Facilities	
Development plan reference:	Policy Inf 1 Access to Community Facilities Policy Inf 2 Loss of Community Facilities	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):		
<div><div><div>Ambassador Group (0683) Andrew Gray (0388) Archie Clark (0003) Barratt David Wilson Homes (0677) Cala Management Limited (0465) Cockburn Association (777) Crosswind Developments Ltd (0184) Cynthia Shuken (0632) E&amp;A Partnerships Ltd &amp; Niddrie Development Company Ltd (0753) Edinburgh Chamber of Commerce (0379) Hallam Land Management (0599) Hallam Land Management (0615) Homes for Scotland (0404)</div><div>Juniper Green and Baberton Mains Community Council (0306) Miller Homes Limited (0649) NHS Lothian (0596) Ratho and District Community Council (0289) Kyle Worgan (0272) Steve Loomes (0767) Scottish Property Federation (0144) Shortbread House of Edinburgh Ltd (0619) Tarmac (0244) The Davidson Mains and Silverknowes Association (0454) Wright PDL (0078)</div></div></div>		
Provision of the development plan to which the issue relates:	These policies support housing development where community facilities are within a 20 minute return trip, and seek to prevent development involving a loss of a valuable community facility.	
Planning authority’s summary of the representation(s):		
<div><div>Inf 1 Access to Community Facilities</div><div><div><div><div><u>Archie Clark (0003), Juniper Green and Baberton Mains Community Council (0306)</u></div><div>Given the Plan’s ambition to shift car trips to more sustainable modes strongly believe that more public toilets must be provided/re-opened across the city.</div><div>Consider that in the move towards 20-minute neighbourhoods would expect schools and libraries, even pubs, to take on larger roles as community centres.</div><div><u>Cala Management Limited (0465), Hallam Land Management (0599), Miller Homes Limited (0649)</u></div><div>The requirement for 20 minute neighbourhoods is not set out in any approved national planning policy or guidance. The only approved guidance on walking distances is set out in PAN 75 Planning for Transport. The inclusion of a requirement for 20 minute neighbourhoods based on the draft NPF4 should not be afforded any weight in the preparation of the Proposed LDP, as it has not been approved by Ministers and does not form part of the development plan.</div></div></div></div></div>		

While the Choices for City Plan 2030 document included a focus on sustainable communities and walking, it did not consult on the option to introduce a requirement for development to provide community facilities within a 20 minute return trip. This very specific requirement, which will have a fundamental impact on development, has not been consulted on at a formative stage in the development plan process. Instead, it has been introduced prematurely by the Council at the Proposed LDP stage on the basis of the draft NPF4, which currently does not form part of the development plan.

Circular 6/2013 identifies that the legal framework is not intended to allow the Proposed LDP to ...test the water... as ...new or controversial elements of plan content should already have been aired at the Main Issues Report stage (paragraph 80). The Council should undertake further consultation on this requirement or abandon the development of the Proposed LDP until NPF4 is approved by Scottish Ministers.

#### Hallam Land Management (0615), Tarmac (0244)

Modify Policy Inf 1 Access to Community Facilities.

Whilst the principle and sustainability of a 20-minute neighbourhood is supported it is essential that it is applied with a degree of flexibility. Whilst a walking distance of 800m is specified this is rather meaningless without an average speed. The word 'approximate' should be added to this policy in order to avoid meaningless disputes over isochrones.

Not all housing proposals will be capable of meeting this particular requirement. The policy also refers to the 'management' of services. Whilst the developer / landowner will be able to facilitate delivery ongoing management will almost certainly be in different hands.

Para 3.195 suggests some facilities 'which are necessary to foster community life'. It is questionable whether a 'water fountain' and 'public toilets' are necessary features to foster a strong community life, this should be amended in favour of real benefits accruing from development.

Finally, the provision of healthcare facilities, doctors and dentists is not something a housing developer can ensure without partnership with the NHS. Such facilities usually operate as private commercial businesses and can choose where to locate and can choose to cease to operate if they wish. What happens if a housing proposal is not within 800m walk of a local service and an alternative is not available at the time of decision making?

#### Shortbread House of Edinburgh Ltd (0619)

The policy does not properly take into consideration access to existing jobs and workplaces. These are essential as part of the 20 minute neighbourhood and existing businesses should not be pushed out of the city. This relocation would make it impossible for most of our existing team members to access to their '20-minute neighbourhood', a strong and admirable goal of the Plan. The 20-minute neighbourhood ideal should be a goal attainable for all workers, not just those in office-based roles. We must ensure Leith continues to offer a variety of employment opportunities to those with skills and trades in the industrial sector.

Barratt David Wilson Homes (0677), Wright PDL (0078), Steve Loomes (0767)

Various amendments are required to facilitate achieving the aims as set out.

Support the delivery of high-quality communities, and the promotion of active travel opportunities. However, it is unclear why these 20-minute neighbourhoods are limited to accessibility on foot, rather than also by cycling or public transport.

20-minute neighbourhoods are unlikely to be universally workable and will be dependent upon the existing urban form and surrounding area. Greenfield sites are often better able to deliver these 20-minute neighbourhoods, as necessary social infrastructure can be better delivered in a more planned way, and these sites are not constrained by the existing urban fabric.

Support the concept of walkable neighbourhoods. However, it should be understood that 20-minute neighbourhoods are unlikely to be workable in practice in every place (e.g. rural areas, existing urban areas which require the removal of listed buildings to comply, etc.). This Policy requires to be amended to enable greater flexibility in the decision-making process. The 20-minute neighbourhood concept should not be deployed as an anti-development policy.

There are several areas within the city where no new land allocations have been made, thereby limiting the opportunities to provide the necessary and desired enhancements. The City Plan Proposed Plan does not appear to seek to enable the delivery of 20-minute neighbourhoods in these areas e.g., existing suburban areas on the edge of the city.

Ambassador Group (0683)

We support the concept of the concept of '20-minute neighbourhoods' which are a key feature in the emerging NPF4. Notwithstanding this, walkable neighbourhoods which require key community facilities within a walking trip of 800 metres, are unlikely to be workable in practice in every location. This Policy requires to be amended to retain flexibility to allow appropriate developments to occur on sites depending on site specific circumstances.

E&A Partnerships Ltd & Niddrie Development Company Ltd (0753)

A broader definition of '20-minute neighbourhood' should be used.

In alignment with the approved Edinburgh Mobility Plan (2021), the Proposed City Plan 2030 places significant emphasis on the importance of 20-minute neighbourhoods in terms of creating sustainable residential developments and achieving good placemaking principles.

Our client is supportive of this approach in general, and their site at The Wisp would accord with these principles.

Notwithstanding this however, we consider City of Edinburgh Council's interpretation of 20-minute neighbourhoods is unduly restrictive and if applied across all proposed development sites, will serve to stifle the development of otherwise highly sustainable

sites. CEC's proposed definition of a 20-minute neighbourhood is as follows:

"20-minute neighbourhoods are places where people can access services which meet daily needs within a 10-minute walk/ wheel of their house, equivalent to a 20-minute round trip".

The emphasis on new development being located within a 20-minute round trip of amenities is a highly ambitious interpretation of the 20-minute principle, which in general is acknowledged as being a 20-minute single way trip – indeed, this is the RTPI's own interpretation (as per RTPI Scotland Briefing Note on 20-Minute Neighbourhoods, published 24 March 2021).

We therefore consider that Proposed Policy Inf 1 (Access to Community Facilities) should be amended to be supportive of the 20-minute neighbourhood principle as per the RTPI's definition as a minimum, while still indicating that development should strive to meet the more ambitious criteria which is currently supported in Proposed City Plan 2030.

Steve Loomes (0767)

Paragraph 2.39 notes that the Plan aims to ensure that everyone has access to a range of amenities in their area through the promotion of 20-minute neighbourhoods. This ignores existing neighbourhoods that do not have the range of amenities required. New housing allocations adjacent to existing neighbourhoods can play a role in improving the provision of services to everyone.

Inf 1 (Access to Community Facilities) - HFS supports the concept of walkable neighbourhoods. However, it should be understood that 20-minute neighbourhoods are unlikely to be workable in practice in every place (e.g. rural areas, existing urban areas which, for example, could require the removal of listed buildings to comply, etc.). This Policy requires to be amended to enable greater flexibility in the decision-making process. The 20-minute neighbourhood concept should not be deployed as an anti-development policy.

Cockburn Association (777)

Support, subject to:

The facilities and infrastructure referred to in para 3.203 needs to be considered in separate guidance and open to public consultation.

NHS Lothian (0596)

NHS Lothian are keen to work ever-closer with all of their partners, including with Local Authorities, third sector organisations, the Scottish Government, educational institutions and the private sector, in order to maximise and augment the positive impact each sector can have on citizen's lives. The Covid-19 pandemic has also shown NHS Lothian the importance of working effectively, and at speed, with all of their partners in the rest of the public sector, the third sector, and the private sector.

As NHS Lothian move from buildings that are no longer fit for purpose, they aim to utilise their land holdings to create modern, flexible and multi-use, accommodation to replace them. When NHS Lothian are required to replace or build new facilities, they are

committed to working with their partners from across the public square to ensure that these are multi-use and bring together as many services as possible. NHS Lothian are therefore supportive of the reference within Policy Inf 1 that states that “where possible, delivery of new community facilities should be as part of multi service hubs that bring community services together”.

However, NHS Lothian would stress the importance of a partnership approach to the provision of flexible, community facilities such as those promoted by Policy Inf 1 and would therefore encourage the CEC to include reference to this within the scope of the Policy. NHS Lothian would also welcome a reference within the Policy that states that the provision of community services is something that must be discussed as an integral part of development proposals, and that relevant bodies should be brought together to discuss community facility provision at the outset of projects. NHS Lothian also consider that services or facilities cannot be created without seeking the views of the communities they will ultimately serve, so would also support the addition of text within the Policy that sets out a need for developers to consult with and engage in dialogue with communities.

NHS Lothian understand that “community facilities” can relate to a multitude of uses and amenities, as highlighted by the supporting text for the Policy. NHS Lothian would therefore ask the CEC to consider the creation of a separate policy that supports development by NHS Lothian, and the wider Lothian Health and Care System, within the city. By way of an example, Midlothian Council have the following policies within their adopted Local Development Plan, which provide support for development that is related to health care and emergency services provision:-

- Policy IMP 4 Health Centres states that “the Council supports the development of new or extended health centre facilities where there is an identified need to enhance health services within a community”.
- Policy IMP 5 Emergency Services states that “the Council supports the provision and/ or expansion of facilities to enable the emergency services in Midlothian to cater for its existing and expanded communities, and for the proposed new developments”.

NHS Lothian would note that there are significant opportunities in the city for sharing energy, sustainable energy and transport infrastructure, which should be referenced within the concept of creating 20 minute neighbourhoods.

#### The Davidson Mains and Silverknowes Association (0454)

The DMSA fully supports the concept of 20 Minute Neighbourhoods and welcomes that the Plan is clear in the intention to embed the detail in new developments. However, the plan is very weak on how progress will be made in mature communities such as Davidson's Mains. It is one of many local centres across the city where local shopping and other local services have deteriorated over the past decades. Policies to reinvigorate local centres are essential if other targets around increasing active travel and reducing car use are to be achieved.

It would be beneficial to develop the plan to provide more information on how the 20 Minute Policy will be developed in mature communities where the potential exists for existing village centres to be improved to meet all the necessary requirement of a

community, social and commercial centre for a designated 20 Minute Neighbourhood.

Scottish Property Federation (0144)

We are also concerned that the requirement for new development to be located within the definition of a 20 minute neighbourhood is unnecessarily restrictive. If taken to its fullest definition, this would mean that a person should be able to leave their residence and within a 20 minute walk reach all of their social, health and economic requirements. This may not always be feasible in the context of city centre sites and again, the approach could conflict with potential regeneration of, for example former city centre offices or large industrial premises. If the requirement for development is rigidly required within the city's planning policies to meeting all of the tenets of a 20 minute neighbourhood, then we fear that the consequence could be that investment is attracted to alternative locations and regeneration projects could simply not happen.

The plan makes the achievement of 20 minute neighbourhoods a key outcome, defined as amenities being within a 800m walk. Again, the SPF recognises and supports the aspiration of 20 minute neighbourhoods but the plan should not be overly prescriptive across the whole of the city. There will be locations where some forms of development - alternative leisure uses for example, will support the regeneration of core high street locations. But it may not be possible for all developments to achieve all of the tenets of affordable housing demands, mixed-use developments and 20 minute neighbourhoods. The city must ensure that its planning policies do not constrain developments that can complement other uses.

We would also like to see the plan better acknowledge that the 20 minute neighbourhood concept needs to be flexible, as not every site will be able to cater for all amenities within a 20 minute walk. Taken to its extreme the policy could inhibit potential town centre renewal. Similarly the mixed use development aspirations need to be cognisant of how commercial developments may complement other uses within a location, and therefore should not always be required to meet high barriers of housing supply requirements stipulated by the plan.

Homes for Scotland (0404)

Aim 1 of the Plan supports the delivery of high-quality communities, and the promotion of active travel opportunities. It is unclear why these 20-minute neighbourhoods are limited to accessibility on foot, rather than also by cycling or public transport.

20-minute neighbourhoods are unlikely to be universally workable and will be dependent upon the existing urban form and surrounding area. Greenfield sites are often better able to deliver these 20-minute neighbourhoods, as necessary social infrastructure can be better delivered in a more planned way, and these sites are not constrained by the existing urban fabric.

There are several areas within the city where no new land allocations have been made, thereby limiting the opportunities to provide the necessary and desired enhancements. The City Plan Proposed Plan does not appear to seek to enable the delivery of 20-minute neighbourhoods in these areas e.g., existing suburban areas on the edge of the city.

Kyle Worgan (0272)

Alter paragraph 3.195 to refer to health and wellbeing.

Andrew Gray (0388)

"Aim 1. Delivering a network of 20-minute walkable neighbourhoods and embedding a 'place-based' approach to the creation of high quality, high density, mixed-use and walkable communities, linked by better active travel and public transport infrastructure, green and blue networks and bringing community services closer to homes." What exactly does that mean in English? What is a "walkable neighbourhood"? What is a "place-based approach"? What is "better active travel"?

If you explain your ambitions in terms that people can understand (and I have a degree in English and don't understand), then they will be able to comment in an informed way. Jargon helps no one, however laudable your aims may be.

Edinburgh Chamber of Commerce (0379)

20 minute neighbourhoods are being pursued at expense of the city centre. Ignores contribution city centre makes and 20 minute neighbourhoods should make reference to the future of the city centre.

Crosswind Developments Ltd (0184)

CDL seek an amendment to this policy (page 125) to bring it in line with the requirements set out in the draft NPF4. Page 73 of the draft NPF4 relates to 20 minute neighbourhoods and states:

"20 Minute Neighbourhoods are a method of achieving connected and compact neighbourhoods designed in such a way that all people can meet the majority of their daily needs within a reasonable walk, wheel or cycle (within approx. 800m ) of their home".

It is noted that 800m is a 10 minute walking distance and appropriate distances for wheeling and cycling should also be expressed.

CDL seek to emphasise that a liveable city should be accessible by wheeling, cycling and walking. To reflect this and to ensure City Plan is compliant with the draft NPF4.

Cynthia Shuken (0632)

I would like to see allotments specifically included in the list of amenities that should be provided within walking distance of developments. This would fit in with the Council's published aims of supporting the health of residents, encouraging local and sustainable food production and supporting the environment (by reducing food miles and other types of pollution, since most allotment growers produce food organically, recycling waste, etc).

Supportive Responses

Michael Ramsay (0011)

**Inf2 Loss of Community Facilities**

Ratho and District Community Council (0289)

Inf 2 - Development should include extension involving the loss of a valuable community facility. Appropriate alternative facility needs to take into account the community views not just the developer.

Inf 2 - Development should include extension involving the loss of a valuable community facility. Appropriate alternative provision needs to be reinforced especially to Council Departments - for example the extension of a school into a Community Centre with a proposed replacement single small area with sliding partitions to replace a full size recreational hall, 3 further rooms, and kitchen is not acceptable to the community and definitely .

Homes for Scotland (0404)

The Council should provide more clarity on how a “valuable community facility” is to be identified. It should avoid an approach which encourages reactive designations that are primarily designed to thwart development.

Cala Management Limited (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The inclusion of a requirement for 20 minute neighbourhoods in this policy based on draft NPF4 is premature. The introduction of this requirement at this stage in the development plan process is also not appropriate, as it was not consulted upon at a formative stage i.e. Choices for City Plan 2030. The only approved guidance is set out in PAN 75 Planning for Transport.

All references to the requirement for 20 minute neighbourhoods should therefore be removed from the Proposed LDP.

Barratt David Wilson Homes (0677), Steve Loomes (0767), Wright PDL (078)

The Council should provide more clarity on how a “valuable community facility” is to be identified. It should avoid an approach which encourages reactive designations that are primarily designed to thwart development.

Cynthia Shuken (0632)

I would like to see preservation (and increase) of allotment sites directly listed in this section as important facilities.

**Supporting Responses**

Ronald Shaw (0084), support Policies Inf1-5

**Modifications sought by those submitting representations:**

**Inf 1 Access to Community Facilities**

Archie Clak (0003), Juniper Green and Baberton Mains Community Council (0306)

No modification specified but representation infers that public toilet provision should be part of the plan and there should be a wider role for schools, libraries and pubs.

Cala Management Limited (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The Council should undertake further consultation on this (20 minute neighbourhood) requirement or abandon the development of the Proposed LDP until NPF4 is approved by Scottish Ministers.

Hallam Land Management (0615), Tarmac (0244)

Modify Policy Inf 1 Access to Community Facilities

- Add 'an approximate' before '20 minute' in first sentence.
- 'and managed as an integral component of a mixed-use development' should be deleted.
- Alter para 3.195 to simply say 'Facilities such as schools/lifelong learning, green spaces, sport and recreation, local doctor and dental surgeries, local shops and community facilities assist in fostering community life and reducing the need to travel for everyday services. Such uses should be available within walking distance of proposed housing development.'

Shortbread House of Edinburgh Ltd (0619)

Modify policy to take into account existing jobs and workplaces.

Barratt David Wilson Homes (0677), Wright PDL (0078), Robertson Residential Group (Steve Loomes) (0767)

Modify policy to allow greater flexibility.

Ambassador Group (0683)

Modify policy to allow greater flexibility.

E&A Partnerships Ltd & Niddrie Development Company Ltd (0753)

Modify policy to be supportive of the 20-minute neighbourhood principle as per the RTPI's definition as a minimum, while still indicating that development should strive to meet the more ambitious criteria which is currently supported in Proposed City Plan 2030.

Cockburn Association (777)

No modification proposed but infer adding reference to separate guidance.

Edinburgh Chamber of Commerce (0379)

Change reference in aims to include city centre.

NHS Lothian (0596)

Modify policy to refer to the importance of a partnership approach to the provision of flexible, community facilities, a reference that states that the provision of community services is something that must be discussed as an integral part of development proposals, and that relevant bodies should be brought together to discuss community facility provision at the outset of projects. In addition, the need for developers to consult with and engage in dialogue with communities.

Modify policy to include reference to sharing energy, sustainable energy and transport infrastructure in the context of 20 minute neighbourhoods.

Modify plan to add policy that supports development by NHS Lothian.

The Davidson's Mains and Silverknowes Association (0454)

Modify plan to provide more information on how the 20 minute neighbourhood policy will be developed in mature communities for existing village centres to be improved.

Scottish Property Federation (0144)

Modify policy to be more flexible.

Homes for Scotland (0404)

No modification identified but implies policy Inf1 should be altered so it does not just refer to walking in the context of 20 minute return trip but also cycling and public transport.

Kyle Worgan (0272)

Modify paragraph 3.195 to the following;  
Facilities such as schools/lifelong learning, green spaces, community gardens, sport and recreation, local doctor and dental surgeries, local shops, community halls and shared work/meet spaces, public toilets and water fountains, are necessary to foster community life support health and wellbeing and reduce the need to travel for everyday services, therefore should be protected and enhanced.

Andrew Gray (0388)

No modification identified

Edinburgh Chamber of Commerce (0379)

Modification Plan so that 20 minute neighbourhoods should make reference to the future of the city centre.

Crosswind Developments Ltd (0184)

Modify Policy as follows:

“Housing development will be supported where key community facilities are walkable\*, wheelable\*\* or cyclable\*\*\* within a 20-minute return trip. Applicants must demonstrate this through an assessment of distances to key services and infrastructure. Proposals for

housing in areas that do not currently meet this walking, wheel or cycle distance will be considered only where these services can be delivered, relative to the scale of development, and managed as an integral component of a mixed-use development.

In areas that do not currently meet this walking, wheel or cycle distance, opportunities to provide services will be considered where these meet other policies in the plan. Wherever possible, delivery of new community facilities

should be as part of multi-service hubs that brings community services together, increasing opportunities for linked trips where the long-term sustainability of the facilities is prioritised. Proposals for new schools provide the opportunity to consider the integration of community services provision.

\* our analysis is based on a walking trip of 800m

\*\* an acceptable distance for wheeling for 10 minutes would be xxxxm

\*\*\* an acceptable distance for cycling for 10 minutes would be xxxxm”.

Cynthia Shuken (0632)

Modification not specified by implies modifying paragraph 3.195 to include allotments in list of amenities.

## **Inf 2 Loss of Community Facilities**

Ratho and District Community Council (0289)

Modify Policy to allow an extension of an existing facility as an alternative to the loss of a community facility.

Homes for Scotland (0404) Barratt David Wilson Homes (0677), Steve Loomes (0767), Wright PDL (078)

Modify plan to clarify how a “valuable community facility” will be identified.

Cala Management Limited (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Modify plan to remove all references to 20 minute neighbourhoods.

Cynthia Shuken (0632)

Modification not specified by implies modifying paragraph 3.195 to include allotments in list of amenities.

## **Summary of responses (including reasons) by planning authority:**

### **Inf 1 Access to Community Facilities**

Archie Clark (0003), Juniper Green and Baberton Mains Community Council (0306)

Policy Inf 1 support development where key community facilities are walkable within a 20-minute return trip. Paragraph 3.195 gives examples of community facilities. The Council considers that water fountains and public toilets constitute community facilities. Policy Inf 1 requires that where possible, delivery of new community facilities should be part of a multi-service hub bringing together community services and increasing opportunities for linked trips. It highlights that schools provide the opportunity to consider the integration of community services provision. **No modification proposed.**

Cala Management Limited (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Scotland's Draft Fourth National Planning Framework (NPF4) (CD099) was published in November 2021. Although NPF4 at this time has not yet been approved it gives a clear steer on the direction that Scottish Government's national policy is heading and it would be remiss of the Council not to give cognisance to its draft provisions for two reasons. Firstly, it is likely to be approved during the Plan's examination stage. Secondly, the Plan covers the period up to 2031 and will have the role of implementing the Government's national strategy. The examination phase will give the reporters the opportunity to amend the provisions of the Plan should the draft provisions of NPF4 be altered to an extent that the Plan was inconsistent with approved National Policy. The 20 minute neighbourhood concept is embedded within the review of NPF4 as a means of transforming the way Scotland's population will live in the future, by creating places with good quality homes close to local facilities and services. **No modification proposed.**

The Council considers that whilst the term '20 minute neighbourhoods' was not used in Choices for City Plan 2030 it is clear that the principles and concept were, in terms of promoting high density, mixed use neighbourhoods supporting good services, active travel and public transport demand to connect to the wider area and with an emphasis on brownfield land. In addition, the provisions of the 1997 Act (CD101) require the Council to take into account the National Planning Framework, and as it does not specify that it has to be approved it would be remiss of the Council not to take account of an emerging NPF. The Act also allows the Council to have regard to such other information and considerations as appear to be relevant when preparing a LDP, and the NPF4 Position Statement (CD098) and the draft NPF4 are, in the Council's view, a relevant consideration. When the NPF4 is approved by Scottish Ministers it will become a statutory part of Development plan and the Council considers that the Plan must developed in conjunction with it. **No modification proposed.**

Hallam Land Management (0615), Tarmac (0244)

The Council welcomes the support in principle for the 20 minute neighbourhood approach. For the purposes of the policy the Council considers the reference to 800m is approximate, as the speed at which people walk is variable. The Council considers a reference to 'approximate' is unnecessary as it is implicit. **No modification proposed.**

The Council considers the policy sets out requirements. Any exception to this will have to be justified through supporting evidence and considered through the planning application process. The Council considers the reference to "managed" in the policy relates to delivery of a proposal and not long term management of a community facility. **No modification proposed.**

Paragraph 3.195 gives examples of community facilities. The Council considers that water fountains and public toilets constitute community facilities. **No modification proposed.**

Policy Inf 1 does not refer to specific facilities. this provides flexibility in terms of implementation. The text set out in paragraph 3.195 gives examples of community facilities. The individual circumstances will vary depending on the location of a proposed development and proposals will be considered on their individual merits taking into account various factors including healthcare facilities. The Council is working in partnership with the NHS and an up to date Healthcare Assessment (CD017) has been published, which sets out the impacts of proposed housing led mixed use allocations within the plan and the required infrastructure actions to address the impacts. The results from the Assessment will inform the Action Programme and provide a steer for developers bringing forward development proposals. Supporting paragraph 3.194 states, "The intention of the following policy is to ensure that new housing development is directed to where residents can access a range of key services within walking distance *when this is practicable and reasonable.*" As a result, the Council considers the policy has sufficient flexibility. **No modification proposed.**

Shortbread House of Edinburgh Ltd (0619)

The Strategy of the plan is to take a place based approach to future growth. It seeks to do this by delivering a network of 20 minute neighbourhoods (Aim1), by directing new development to and maximising the use of brownfield land rather than greenfield land (Aim 2), and by delivering Edinburgh's key economic land use needs by providing land for modern business as part of housing led mixed-use development (Aim 10). A key aim of the strategy, in circumstances where an allocated site already has existing businesses on it, is to seek to retain businesses where compatible with a residential environment as part of a mixed use development. As a result, there is no need to refer to businesses with Policy Inf 1, which is seeking to ensure new development, as part of 20 minute neighbourhoods concept, has access to community facilities. **No modification proposed.**

Barratt David Wilson Homes (0677), Wright PDL (0078), Robertson Residential Group (Steve Loomes) (0767)

The Council considers that the concept of 20 minute neighbourhoods, as defined in draft NPF4, is based on a 20 minute walk time, which is approximately 800m. It is not intended that access to community facilities is limited to just walking, rather the policy uses walking time as a means of defining distance between a proposed development and community facilities. Including a reference to cycling or public transport in the policy would be confusing, as the distance travelled in 20 minutes by cycle or public transport would involve a distance greater than 800m. As a result, the Council considers the proposed policy is reasonable and justified.

The Council welcomes support for the concept of walkable neighbourhoods. Draft NPF4 (CD099) states that the 20 minute neighbourhood principle can be adjusted to include varying geographical scales from cities and urban environments to rural and island communities. As a result, the Council disagrees that greenfield sites are better able to deliver these neighbourhoods or that they are unlikely to workable in practice in every place. The Council considers the policy sets out requirements. Any exception to this will

have to be justified through supporting evidence and considered through the planning application process. Supporting paragraph 3.194 states, “The intention of the following policy is to ensure that new housing development is directed to where residents can access a range of key services within walking distance *when this is practicable and reasonable*.” As a result the Council does not agree greater flexibility is required and considers additional flexibility would undermine the concept contrary to the intentions of draft NPF4. **No modification proposed.**

The Council has now established a dedicated 20 minute neighbourhood multidisciplinary team to progress and develop various initiatives e.g. public realm, active travel, mobility hubs etc to support and deliver the 20 minute neighbourhood approach across the city within existing urban form. **No modification proposed.**

Ambassador Group (0683)

The Council welcomes support for the concept of walkable neighbourhoods. The Council does not agree further flexibility is required for the reasons set out in its response to 0677 above. **No modification proposed.**

E&A Partnerships Ltd & Niddrie Development Company Ltd (0753)

The Council welcomes support for the concept of walkable neighbourhoods. The Council considers the definition of a 20 minute round trip in the Plan is consistent with draft NPF4 (CD099). In the context of 20 minute neighbourhoods NPF4 identifies a distance of 800m, which is approximately 10 minutes walking time, i.e. a 20 minute round trip. **No modification proposed.**

Steve Loomes (0767)

The Council agrees that new housing allocations can play a role in the provision of services to existing neighbourhoods as well as new ones.

The Council welcomes support for the concept of walkable neighbourhoods. The Council does not agree further flexibility is required for the reasons set out in its response to 0677 above. **No modification proposed.**

Cockburn Association (777)

Paragraph 3.203 relates to parking and the Council assumes that the comment is in relation to paragraph 3.195. The Council considers the provisions within the plan are sufficient to deliver the strategy with regard to community facilities and therefore has no intention of providing separate guidance. **No modification proposed.**

NHS Lothian (0596)

The Council has and will continue to work in close partnership with NHS Lothian to deliver the strategy of the plan. The Council has worked closely with NHS Lothian, as part of the Edinburgh Health and Social Care Partnership, in the context of the primary health care appraisal as referred to in paragraphs 2.125 and 2.126 of the Plan. The updated appraisal (CD017) identifies the impacts of new development sites on primary care provision and identifies the healthcare infrastructure actions required to address

these impacts. The Council will continue to work with the Partnership in the context of the action programme, developer contributions and planning guidance in order to deliver new health care infrastructure alongside the development. Whilst the Council puts great value on this partnership it does not consider it necessary to refer to that in the context of Policy Inf1, which has the role of setting out policy to ensure new housing development is directed where residents can access a range of key services within walking distance when this is practicable and reasonable.

The Council agrees that it is important to consult with communities and aim 9 of the Plan states that where new infrastructure is required, the Council will take a consultative approach with communities to address future healthcare and education requirements. In addition, in the areas of the City where the Council is preparing place briefs the Council will engage with communities as part of that process. Finally, there is an existing requirement for developers to consult on major development proposals they are bringing forward and this would give an opportunity for communities to give an input on community facilities as part of that process. As a result, the Council considers that the development strategy has consultation with communities imbedded within the Plan and therefore there is no need to include a specific reference within Policy Inf 1.

As set out in its response to 0596 above the Council considers the plan is already seeking to provide necessary health care facilities as part of the strategy, to address the impacts of development. In addition, Policy Inf 3 on infrastructure delivery and developer contributions is seeking developer contributions towards healthcare facilities. As a result, the Council considers that support for health care facilities is implicit within the plan and additional supportive policies are unnecessary. The Council notes that Midlothian Council do not seem to have worked in partnership with the NHS to prepare a healthcare appraisal to identify the healthcare infrastructure required as part of the plan's strategy, and presumably have taken a decision to include supportive policies as an alternative.

The Council considers the plan should be read as a whole. The provisions of the plan with regard to sustainable energy and heat networks is set out in Policy Inf16 and there are numerous policies addressing transport infrastructure. **No modification proposed.**

#### The Davidson Mains and Silverknowes Association (0454)

The Strategy of plan is to take a place based approach to future growth. It seeks to do this by delivering a network of 20 minute neighbourhoods (Aim1), and by directing new development to and maximising the use of brownfield land rather than greenfield land (Aim 2). Policy Inf1 sets out policy requirements for new housing to ensure good access to community facilities. Where new housing developments are being brought forward within the Davidson Mains area there will be an opportunity to improve access to community facilities as part of that process. In addition, the Council has now established a dedicated 20 minute neighbourhood multidisciplinary team to progress and develop various initiatives e.g. public realm, active travel, mobility hubs etc to support and deliver the 20 minute neighbourhood approach across the city within existing urban form. **No modification proposed.**

#### Scottish Property Federation (0144)

As referred to in the Council's response to 0465, 0599 and 0649 above, the 20 minute neighbourhood concept is embedded within draft NPF4 (CD099) as a means of

transforming the way Scotland's population will live in the future, by creating places with good quality homes close to local facilities and services. Draft NPF4 states that the 20 minute neighbourhood principle can be adjusted to include varying geographical scales from cities and urban environments to rural and island communities. The Council considers the policy sets out requirements. Any exception to this will have to be justified through supporting evidence and considered through the planning application process. Supporting paragraph 3.194 states, "The intention of the following policy is to ensure that new housing development is directed to where residents can access a range of key services within walking distance *when this is practicable and reasonable*." As a result, the Council considers the provisions of the plan have sufficient flexibility and it will not result in investment being attracted to alternative locations or negative consequences for regeneration. **No modification proposed.**

#### Homes for Scotland (0404)

The Council considers the reference to walkable 20 minute neighbourhoods is reasonable for the reasons set out in the Council's response to 0677 above.

Draft NPF4 (CD099) states that the 20 minute neighbourhood principle can be adjusted to include varying geographical scales from cities and urban environments to rural and island communities. As a result, the Council disagrees that greenfield sites are better able to deliver these neighbourhoods or that they are unlikely to workable in practice in every place.

The Council has now established a dedicated 20 minute neighbourhood multidisciplinary team to progress and develop various initiatives e.g. public realm, active travel, mobility hubs etc to support and deliver the 20 minute neighbourhood approach across the city within existing urban form. **No modification proposed.**

#### Kyle Worgan (0272)

The Council considers the plan should be read as a whole. Improving health and well being is an underlying part of the strategy of the plan as set out in paragraph 2.35 of the plan. **No modification proposed.**

#### Andrew Gray (0388)

Further information on 20 minute walkable neighbourhoods is set out in Policy Inf 1 and the support text in paragraphs 3.193 and 3.194. A definition is also provided in the glossary. **No modification proposed.**

#### Edinburgh Chamber of Commerce (0379)

The Council considers the provisions of Inf1 will apply across the whole city. Therefore, the Council considers a reference to the future of the city centre with regard to this policy is unnecessary. The important role of the city centre, including its role as a regional shopping centre is highlighted in the plan e.g. paragraph 2.145. The Council does not agree that the 20 minute neighbourhood approach is being pursued at the expense of the city centre and it is important that the plan is read as a whole. **No modification proposed.**

Crosswind Developments Ltd (0184)

The concept of walkable neighbourhoods is based on a 10 minute walking distance or 800m. The suggested changes are not consistent with the concept of 20 minute neighbourhoods as defined in the draft NPF4. It is not intended that access to community facilities is limited to just walking, rather the policy uses walking time as a means of defining distance between a proposed development and community facilities. Including a reference to cycling or public transport in the policy would be confusing, as the distance travelled in 20 minutes by cycle or public transport would involve a distance greater than 800m. As a result, the Council considers the proposed policy is reasonable and justified. **No modification proposed.**

Cynthia Shuken (0632)

The Council considers the list of facilities in paragraph 3.195 are examples rather than a comprehensive list and allotments are considered relevant community facilities in the context of Inf1. It should be noted that the Plan has identified the need for various new allotments in Table 1 Environment Proposals and therefore the Council is supportive of providing allotments to meet community needs. **No modification proposed.**

**Inf2 Loss of Community Facilities**

Ratho and District Community Council (0289)

The Council agrees that it is important to consult with communities, which is one of the aims of the strategy, and is a requirement of the plan as set out in further detail in the Council's response to 0596 above.

The Council considers there is sufficient flexibility in the wording of Inf2 to support an extension of an existing facility under criterion b or c. The policy could not be applied to proposals which are being progressed under permitted development rights. **No modification proposed.**

Homes for Scotland (0404)

The wording of Policy Inf2 is largely the same as Policy Hou10 in the adopted LDP which was subject to examination. A definition of community facility is provided in the glossary of the Plan. The Council considers a "valuable community facility" will be an existing facility that is or was recently in active community use, the loss of which would leave or has left, the community adversely effected and disadvantaged. **No modification proposed.**

Cala Management Limited (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The Council has set out its position with regard to draft NPF4 (CD099) in its response to (0465), (0599) and (0649) under Inf1. **No modification proposed.**

Barratt David Wilson Homes (0677), Steve Loomes (0767), Wright PDL (078

The Council has addressed this point in its response to 0404 above. **No modification proposed.**

Cynthia Shuken (0632)

The Council has addressed this point in its response to 0632 above in the context of Inf1.  
**No modification proposed.**

**Reporter's conclusions:**

Provision of the development plan to which the issue relates:	Education policy and proposals	
Planning authority’s summary of the representation(s):		
<p><b>Promoted Education Proposals not in City Plan</b></p> <p><b>New High School, Primary School and Nursery as part of new development east of Kirkliston</b></p> <p><u>BDW Trading/Taylor Wimpey (0199)</u></p> <p>Taylor Wimpey &amp; Barratt &amp; David Wilson Homes (BDW) are joint venture partners who control the site known as Almondhill.</p>		

Miller Homes Limited and Wheatlands Farming Partnership (0592)

Miller Homes Limited and Wheatlands Farming Partnership are promoting an area of land identified as Kirkliston East.

BDW Trading/Taylor Wimpey (0199), Miller Homes Limited and Wheatlands Farming Partnership (0592)

The Almondhill site promoted in (0199) pertains to an area within the overall Kirkliston East site promoted as part of (0592). It is noted that both representations are in agreement that the promoted development promoted development can incorporate a new Secondary School and primary school. Other parts of these representations are promoting the development sites more generally, including for residential development, and these comments are addressed in Issue 9. Both representation do however make comments in support of a promoted proposal for a secondary school and these are addressed below.

BDW Trading/Taylor Wimpey (0199).

Children from houses in the promoted site will add significantly to the new school's roll, ensuring it's sustainability. This could be added to further by catchment reviews to bring in pupils from smaller communities such as Ratho Station, relieving pressure on existing High Schools, and reducing longer distance travelling to schools.

BDW Trading/Taylor Wimpey (0199), Miller Homes Limited and Wheatlands Farming Partnership (0592).

Sir Jack Stewart-Clark (0800)

The Council accepts that two High Schools, each of 1,200 pupil capacity are required in West Edinburgh. This is due to the allocation of additional housing land and the fact pupils at Kirkliston presently go to South Queensferry High School which will exceed capacity by 2025.

The Council understands the potential benefit of this site in helping deliver a new High School and have expressed an interest in this site accordingly. BDW/TW have been working with them to progress proposals, including a masterplan and Almondhill Vision Document.

Despite this there are no specific proposals for High Schools in West Edinburgh in table 11 detailing Education Infrastructure, nor are they identified on the Proposals Map.

Appendix B of the Council's Education Committee Report dated 7th December 2021, sets out the issues around the identification of sites for new West Edinburgh High Schools. Attention is particularly drawn to paragraphs 1.25 to 1.43. This appendix notes four potential options for discussion for which secondary school Kirkliston primary school should feed into:

- 1) An extended Queensferry High School;
- 2) A new High School in or around the Kirkliston urban area;
- 3) A new West Edinburgh High School;
- 4) Another existing High School either in West Edinburgh or West Lothian.

The report provides further discussion of these options, however it can be summarised that all these apart from option 2, are very difficult and/or impractical for one reason or another.

In contrast, the only difficulty identified for the Kirkliston location is the site is in the Green Belt and is associated with new housing. It is questioned why this is a problem given the IBG and Bioquarter housing allocations are greenfield.

The appendix also notes a new High School may not be provided early in the phased delivery of new West Edinburgh Development sites set out in City Plan and the difficulties this would create. Even allowing for careful management of non-catchment places and catchment change, Craigmount High School may require temporary accommodation before a new high school is delivered.

The non-allocation of a High School in Kirkliston creates the very real possibility that Kirkliston children will not have an adequate High School to attend and could well be accommodated in temporary units in the short/medium term, and thereafter attend a school some considerable distance from where they live. Clearly that contradicts the Council's objective to create 20-minute neighbourhoods.

#### Miller Homes Limited and Wheatlands Farming Partnership (0592)

A financial contribution toward the provision of a Serviced site for the new Secondary School will be required from the Council. This would be proportionate to the level of pupils from existing homes that would attend the new school.

#### BDW Trading/Taylor Wimpey (0199), Miller Homes Limited and Wheatlands Farming Partnership (0592)

A new primary school will likely be needed to provide capacity, in particular for children generated from the Kirkliston East development and the proposed development can incorporate this alongside nursery provision. The realistic maximum size likely to be needed would be a three-stream school on a 2ha site however in the first instance a two-stream school would be provided for initial development- with this being able to be extended at a later date if needed.

It is likely that the optimal scenario for accommodating these would be to combine education provision in a single campus of circa 8ha.

#### Miller Homes Limited and Wheatlands Farming Partnership (0592)

No new denominational schools are considered to be necessary on-site.

It is considered only around 80-100 new pupils would be generated in this regard, partly due to the effect of the new non-denominational primary within the site reducing demand for denominational school places. As a result there is considered to be capacity at the existing denominational primary school which can be extended if needed.

Existing denominational high school capacity will be exceeded and it is noted there are proposals to provide additional capacity in this regard. Details are still to be provided in this respect but it is considered that the promoted development at Kirkliston East can contribute to the emerging solution as a more appropriate capacity solution rather than providing an on-site denominational high school.

### **New Primary School at Hatton Village**

Inverdunning (Hatton Mains) Ltd (0427)

In order to serve the associated promoted development then a new primary school is needed.

### **Currie Community High School**

Archie Clark 0003

City Plan should be modified.

### **New annexe to Flora Stevenson's Primary School**

Helen MacLeod (0364)

Crewe Road South site is a wonderful opportunity to build a beautiful annexe and create outdoor learning spaces, plant for wildlife and enjoyment of being outside.

### **New Flora Stevenson Primary School at Royal Victoria Hospital Site**

Iain R N Stewart (0131), Suzie Ross (0440), Jacqueline Christie (0023), Howard Jones (0424), Ian McRae (0028)

Flora Stevenson's Primary School school is full to capacity every year, and the playground is very small, more tarmac than anything else. The building is old and not energy efficient. Research shows that school children and young people are suffering unprecedented levels of mental health issues. A calm school environment promoted by roomy well-designed classrooms and communal areas, access to green open spaces and Nature are needed. The Scottish Government's own Curriculum for Excellence stresses the value of the outdoor classroom, learning first-hand in the natural environment.

Current school at capacity and in an area with pollution problems (air and noise). Current Flora Stevenson School site is more appropriate for housing if housing is needed in this area.

### **New High School at Frogston Road**

Bo Adams (0363)

A new high school should be built at Frogston Road , there is too much of new development in the area , Frogston provides great area for a high school , could catch pupils from Buckstone , Feirmilehead , Liberton , Kaimes , Limes. New highs schools is desperately needed in this area

New Frogston primary should have a bigger brother in a form of a High School on Frogston road . If this enabled more houses to be built along Frogston road it would be better for the community overall , as long as new development also provides some shop and restaurant place and active infrastructure.

## **Education mitigation and/or new school provision associated with development at Riccarton Village**

### Miller Homes (0256)

The Education Appraisal, dated September 2021, considers the capacity of primary and secondary schools and where new and extended schools are required as a result of the City Plan. Although Riccarton Village has not been included in the appraisal, it is noted that there is spare capacity in some primary and secondary schools whose catchment area includes the site including Currie Primary School, Currie Community High School, and St Augustine's RC High School. This suggests that the Preliminary Education Infrastructure Note (Geddes Consulting) submitted by Geddes Consulting to the Choices for City Plan 2030 which included a comprehensive note on education infrastructure in the context of Riccarton Village and identified that there was sufficient capacity to support an initial phase of the development of the site, remains the case.

As also identified in the Preliminary Education Infrastructure Note (Geddes Consulting), education mitigation will be required as a direct and cumulative result of the development of Riccarton Village. 2ha of land will be made available to deliver a primary school at Riccarton Village. This is sufficient to accommodate up to a three- stream primary school and is considered to be the realistic maximum scale of school required.

The timing for the delivery of the school will be subject to detailed assessment, however, it will not be required at an early date due to the availability of interim spaces. If a denominational new primary school is required to serve the wider area, a joint campus primary school could be considered as part of the proposals.

Additionally, there may be a requirement to provide additional non-denominational secondary school capacity. If additional capacity is required, this may be delivered at the site of the replacement Currie High School, either as part of the initial replacement or future expansion. Alternatively, if this option was not feasible, if required, Riccarton Village could provide land for a new secondary school on site. This would need to be considered as part of a detailed feasibility study.

## **General across the City**

### Lynn Grattage (0362)

Insufficient information on what is being done to increase the quality of comprehensive schools in Edinburgh, and how many schools would be needed if the huge amount of children going to private schools had to go to comprehensives instead. It is indicated the Plan needs to do more to make the balance better for equality.

### Archie Clark (0003)

Nowhere is there a reference to the optimum size of school to suit pupil intake or size of efficient provision. Sizes seem more related to administrative convenience. A report by the CEC's Children and Families Department in 2006 advised that the optimum size of a secondary school was either 900 or 1200 pupils. Smaller schools would reduce the impact of closures to due outbreaks such as Covid. This is also in line with the '20-minute

neighbourhood' concept as it brings homes and schools closer together and would give more sense of 'community' to the settlement.

## **Education Proposals in City Plan**

### **FH1, FH2, ED7 and FH3**

#### Defence Infrastructure Organisation (0124)

Further information is needed. The education issues are far from resolved, and in particular, it is considered that insufficient justification has been provided for the siting, scale and location of the potential new annexe to Firhill High School.

The costs and any associated site for new school facilities needs to be proportionate and reasonable or they will be prohibitive to future development on the site. This is especially important for challenging development sites such as Redford where the high number of listed buildings and associated constraints impact development viability.

The DIO is particularly concerned with proposal ED7 / FH2 and the possible requirement for 2.3Ha of the Redford Barracks site to be for a new annexe to Firhill High School. The potential location for the high school annexe as the playing fields located at the South west of the Barracks site. This would remove a significant portion of the site which is free from heritage assets and which offers the opportunity to provide new build residential development which is vital in terms of development viability. This is recognised by Historic Scotland in its managing change guidance that sets out that in sites which have larger areas of open ground, some form of enabling development may be required to achieve the reuse of a listed building. The area indicated for the school is also vital for the development to provide a mix of new build family housing alongside the listed building conversations as these are likely to feature a high number of apartments given the scale and characteristics of the existing buildings.

The education appraisal shows that Firhill High School has a capacity of 1,150 pupil with a baseline peak roll of 1,251. This baseline projection shows that the school will be required to operate over capacity before the impact of new housing development is considered. 85 secondary school pupils are estimated to be generated from new development in the area from both the LDP 2016 and the City Plan (of which 77 are estimated to be from the Redford Barracks development). The education appraisal states that Firhill HS has a site area of 3.53 ha over a sloping site and shares sports facilities with the neighbouring Braidburn Special School. It states that a roll between 1,200- 1,400 requires a site area of 2.8 ha and 4 ha for playing fields. A site of 2.3 ha is proposed for the potential school annexe.

On the basis of the above, the requirement of an annexe of 2.3 ha clearly goes beyond what is necessary as a result of Redford Barracks development and is considered excessive to accommodate only an additional 186 pupils over the school's existing capacity. The impact of this on the Redford Barracks proposals therefore does not fairly and reasonably relate to the scale of development proposed and suggests that a proportionate financial contribution only would be more appropriate at this stage. The DIO questions what analysis has been undertaken in terms of accommodation needs at Firhill, what assessment has been undertaken in terms of extending the existing school and what other sites have been considered for a potential annexe.

Archie Clark 0003

Details should be provided on the physical nature of extension to the school and where this will be positioned.

**ED3/ECB1: Annexe at Crewe Road South to Flora Stevenson Primary School to provide additional primary and nursery places**

Police Scotland / Scottish Police Authority (0659)

Insufficient information provided to justify 0.8ha education provision on-site.

Appendix 2 of the EA projects the school roll to decline to 455 pupils by 2030. If the LDP pupils (16) and City Plan pupils (151) are then added to this in 2030 then the pupil roll would be 622 pupils and therefore within current capacity so no action is needed.

The proportions in Table 20 do not calculate out according to the numbers in Table 19.

There is no reference as to how the council procures the school site, the associated costs, transfer mechanisms, equalisation etc. This lack of detail is unacceptable and reflects a wider deficiency in information in this regard addressed further below in relation to the EA.

Notwithstanding the need for this proposal being unproven, co-locating an annexe with either an existing or proposed school could be a more appropriate, efficient, and cost-effective solution, for example at Broughton High School or on the Royal Victoria Hospital Site, which is being considered as a potential site for a new Gaelic High School. Have these options been considered?

Padraic Kinsella (0298)

Main issue is lack of consideration and forward planning for demand for Gaelic Medium Education places. This proposal appears contrary to ongoing discussions on potential sites for the GME secondary school which have yet to conclude regarding the same location. The potential for this site as a location for the GME secondary school has been raised by the Convener and Vice-Convener of the Education, Children and Families committee with the Cabinet Secretary for Education and Skills. It is disappointing to see this proposal which appears to present another choice between an English Medium Education (EME) provision and Gaelic Medium Education (GME) on the same site before the discussions with the Scottish Government have concluded.

**ERC1: 2 Classes to be provided at Holy Cross Primary School**

Police Scotland / Scottish Police Authority (0659)

Insufficient information provided to justify 0.8ha education provision on-site.

The school's capacity does not need to be increased as the Councils baseline projections show the school roll as declining to 179 pupils in 2030. Adding in the 108 pupils generated by the proposed new development would give a roll of 287 pupils - within the current capacity of 315 pupils.

Even if capacity needed to be created, a catchment review potentially remain as an affordable option for the Council.

#### **ED7/FH2 – 85 secondary pupils at Firrhill Secondary School**

Archie Clark 0003

The additional capacity is not defined in physical terms and it is unclear whether the site exists for this development. Where would the additional accommodation be provided?

#### **ECB4: Additional Secondary Capacity at Craigroyston High School and Broughton High School**

Police Scotland / Scottish Police Authority (0659)

The total of 1,521 pupils on the Broughton school roll includes 31 pupils not arising from the LDP or City Plan. The Council should be responsible for these, however the EA apportions the cost between the LDP and City Plan development sites.

Notwithstanding this, Broughton could have a capacity of 1,400 pupils within regulation once extended. Given the projected roll (with new development added) declines to 1428 pupils by 2030 then the extended school is likely able to meet the needs of the catchment considering factors such as placing requests and the fact the PGR used in the EA already over-inflates projections (see EA sub-issue below). As a result the solution to capacity issues in relation to ECB4 should be substantially less than the £15,256,610 estimated by the Council.

Iain R N Stewart (0131)

ED3/ECB4 points to the need for additional capacity for Broughton High but does not stipulate where.

#### **ERC8: Additional Secondary Capacity at St Thomas of Aquin's High School**

Police Scotland / Scottish Police Authority (0659)

The peak roll from the Baseline Projections shows 786 pupils, and this becomes 887 once the LDP and City Plan pupils are added (56 and 45 respectively). This is above the 750 pupil capacity, however this peak however is expected in 2022. The baseline projection shows roll declining to 596 by 2030. If the 101 pupils from the LDP and City Plan were added then it would result in a roll of 697 pupils i.e. within capacity. The need for a contribution is therefore unproven.

Notwithstanding this, a total contribution of £5,313,509 is stated however this cost is only broken down to contribution zones, but not to individual sites.

#### **ECB5: Additional Primary Capacity at St David's Primary School (1 Class)**

Police Scotland / Scottish Police Authority (0659)

Why has St David's Primary School referenced as CB5 and included within Craigroyston / Broughton rather than as an RC school in its own right and linked within the denominational secondary school numbers? It is therefore unclear if it is added to Broughton numbers, or St Thomas of Aquin's or both.

### **ED5/DLT2 – Bonnington / Jane Street Primary School**

#### APS Group (Scotland) Ltd (0518)

It is inappropriate and premature to identify a specific site for this school without assessing or justifying the site's suitability to accommodate a new school in any way, including regarding feasibility, availability of the site or land ownership.

In this regard, the proposed new school site covers the entirety of APS Group's business premises at both 21 Tennant St and (adjacent) at 88-92 Jane St. APS Group benefit from a favourable lease which has a further 5 years to run, and the intention is to remain in occupation. Building the school on the site where APS Group operate their business would have a significant negative impact - requiring them to vacate and relocate which would incur costs, cause great inconvenience, disruption and uncertainty. The proposed school is therefore not deliverable.

As an existing occupier of the proposed new school site at H41, APS Group wishes to take part in this forthcoming 'statutory consultation.' APS Group would welcome the opportunity for further discussions with CEC on the nature of and justification for the proposed education provision in respect of its sites at 21 Tennant St and 88-92 Jane St.

No explanation has been provided as to what analysis has been undertaken on school accommodation needs to arrive at the 1.2ha site requirement.

The Scottish Government has put renewed focus on a delivery-focussed planning system as set out in The Draft Local Development Planning Regulations and Guidance, particularly Part C. It is indicated that City Plan, particularly its proposals for Education, are not deliverable in this context as it is not clear about what is sustainable, desirable and achievable and they have not been developed through collaboration and based on robust evidence.

#### **Padraic Kinsella (0298)**

Significant new housing development is described in Section 4 of the Education Appraisal, and modelling of pupil generation for the Drummond, Leith, Trinity Contribution Zones indicates the need to expand existing schools and create 2 new primary schools.

Since opening in 2013, trends show that an increasing number and proportion of children attending Bun-sgoil Taobh na Pàirce live within the local catchments of Drummond, Leith and Trinity. In figures supplied in 2021 over 55%, 238 of a total roll of 418 pupils, of primary GME children now live within these zones, by comparison in 2018 this proportion was only 42.5%, and 148 children. If this trend continues, driven higher by local development, and the school reaches capacity this will potentially create an equity issue for families who wish to access GME from other parts of the city.

As such it is not unreasonable to link increasing demand in one part of the city with the need to provision new capacity in another part of the city with the appropriate redrawing of

catchment boundaries, indeed it has previously been the Council's plan to establish a second GME primary school at the JGHS Darroch annexe, and most recently through two new primary units at locations in the west and south east.

I also note proposals for Place 8 - Jane Street. Jane Street is adjacent to Edinburgh's GME primary school and nursery at Bun-sgoil Taobh na Pàirce. Included for Place 8 is an expectation that proposals "make provision for a new Primary School (1.2ha) and Nursery (0.3ha)." As this proposal is indicative of increased PGRs in the local area this gives me further cause for concern that local demand will also increase for places at Bun-sgoil Taobh na Pàirce, which itself is located on a site constrained by natural boundaries of Bonnington Road, adjacent housing developments, and Pilrig Park. Without consideration for this increased demand and appropriate action plans I worry that Bun-sgoil Taobh na Pàirce will more quickly exceed capacity thus limiting access for families in the locality and from other parts of the city.

A document with full background is attached.

Edinburgh Council took an important step forward in 2011 when all parties approved the establishment of Bunsgoil Taobh na Pàirce, Edinburgh's Gaelic-medium Education (GME) primary school. The Council's vision has been rewarded with the demand for GME increasing and this thriving school now operating at near capacity. The growth of GME in Edinburgh is a success story for this Council and has created a valuable asset for the city.

Edinburgh's GME children are part of the school estate in our city, they are the children of taxpaying Edinburgh residents, and their school accommodation is the responsibility of the local authority. The expansion in infrastructure required for GME should be considered within the context of the significant infrastructure projects required to meet rising rolls across the city.

Expansion of GME has led to the need to establish a standalone GME secondary school in Edinburgh. Parents with children in GME, have worked with the Council over many years to ensure parents' views are central to a successful proposal. A GME secondary school is not only essential in securing the 0 -18 immersive educational pathway parents seek for our children, it will also help to alleviate the aggregate rising roll at James Gillespie's High School.

In establishing a GME secondary school the importance of deliverability and funding has been emphasised on repeated occasions by Council Officers and Elected Members throughout these discussions.

Given the above context it is therefore disappointing that GME is explicitly excluded from the City Plan 2030 Education Appraisal. The omission of GME from these reports does not inspire confidence that the council is delivering on commitments of equality for Gaelic, and parity of esteem for children in GME.

#### **ED6/DLT4 – Waterfront Primary School**

Forth Ports Limited (0496)

City Plan identifies an 'indicative school proposal' with 1.3ha within the operational Port of Leith. This is entirely inappropriate for the following reasons:

1. Forth Ports continues to utilise its port land holdings for port and port related uses;
2. There has been no discussion with Forth Ports regarding the potential to locate a school within the Port of Leith despite being aware of point 1 above;
3. It is not a suitable location for a school. The Port is not open to public access as this would conflict with Forth Ports statutory and legal obligations and duties as a Statutory undertaker and port operator (appendix 2.2 Section 5);
4. The land is identified for business and industry in the proposed Plan;
5. A school is not compatible with the industrial and fluid nature of Port operations, with this reflected in Class 35 of Permitted Development Order (as amended) for port permitted development rights; and
6. The Port of Leith is the City's port and is the largest enclosed deepwater port in Scotland. It provides access to shipping, which is less carbon intensive form of transport than other modes and replaces many vehicle miles and so supports the City's ambition to be carbon neutral by 2030.
7. The Port provides full modern docking and cargo handling services for a range of vessels and cargoes. This infrastructure cannot be easily replicated and must be carefully nurtured.
8. 6. It undermines the important role of the Port of Leith's port infrastructure has at a city, city region and national levels:
  - At a National level, it supports essential actions to address the climate change emergency including supporting the off-shore renewables industry and, and which is recognised by national policy; and
  - At a City Region level, it supports a range market requirements.

## **ESW2 – Dean Park Primary School**

Archie Clark 0003

The proposal will increase the size to 21 classes (612 pupils). Does this exceed a recommended maximum size of a primary school?

## **ESW5 – Location unknown**

Archie Clark 0003

Where would this be located?

## **EWE10 – Craigmount Secondary School**

Archie Clark 0003

This school would have 1,684 places. A single school of this size would be beyond what the maximum size should be of 1200. Will catchment areas be redrawn to ensure this occurs? The impact of events like COVID shutting down schools was, more severe the larger the school. This will impact on family life with the possibility that parents will not be able to work during these periods. Therefore school capacities should not exceed 900, and that they should operate well within that number to allow for transfer of pupils between schools when closures occur.

Mrs Patricia Scott (0349)

The plans appear nebulous for the Edinburgh West area. For example secondary schools Craigmount, The Royal High to name two already have waiting lists. Provision for secondary and primary schools must be given priority in an future plans. Young people are our future and should be given the best educational opportunities.

**Roman Catholic : Additional RC primary school capacity (St. Josephs)**

Genna Spears (0081)

These extra capacities will not fully address the current problem of over-capacity, let alone for the extra children that will move into this area from the proposals in City Plan.

**Roman Catholic : Additional RC secondary school capacity (st. Augustines)**

Genna Spears (0081)

These extra capacities will not fully address the current problem of over-capacity, let alone for the extra children that will move into this area from the proposals in City Plan.

**Place 16 West Edinburgh Secondary School mitigation**

**EWE4 – West: Additional Primary School Capacity Turnhouse Road (SAICA)**

Ryden LLP (0578), SAICA (0590)

The proposed siting of a new Primary School should be reviewed further and a full comparative analysis undertaken based on education requirements as well as design principles for placemaking and most efficient patterns of use of land.

School catchment areas will also need to be assessed in further detail and the physical urban form of new development zones will need to take account of the scale, massing, space requirements and access requirements of a new school facility.

The potential to upgrade or extend existing schools within the catchment also requires further assessment to ensure there schools are located centrally and conveniently to the catchments within which they sit. This includes the new Maybury Primary School being constructed nearby to the north. This would be a better option than having two new schools so close together as more evenly spread schools reduce travel times and reduce issues of congestion at drop-off/collection times occurring in the same locale.

The education requirements for West Edinburgh need to be assessed on a holistic basis and subject to more detailed scrutiny in consultation with Education Officers. The potential for community hubs and potential to extend schools should also be considered where space is available.

Education contributions are accepted based on a formulaic response where the cost of school provision is clear. However, the full economic impact on viability of land take associated with a new school also needs to be considered. The net loss in value associated with reduction in gross and net developable area should also be factored when assessing the location of new schools.

Wider connectivity and access to open space and other community facilities and sports provision will also be important considerations in siting new schools.

#### SAICA (0590)

#### **No research on PGR for high density. Not appropriate to apply EA PGR to high density at W. Ed**

There exists practically no research into impacts of very high-density housing on pupil generation and there is no local research on the PGRs applicable. The Education Appraisal will have been predicated on average densities of new development pertaining in the last 14 years, in which the average will be closer to 30 - 40 houses/ha overall (including flats).

#### **High density of w. Ed/H59/H60 = less family homes and lower PGR**

The proposals for Edinburgh West are nearer to 90/ha. As a result, it is not appropriate to apply this PGR for West Edinburgh sites or for the SAICA site where the proportion of family homes would not exceed 20% i.e. the minimum level proposed by the Council for larger families (3+ bedrooms). In general areas, including those on which the EA's PGR will be based, the proportion of family homes will be higher.

#### **High density of w. Ed/H59/H60 = smaller units and lower PGR**

In addition, the individual size of units are generally likely to adhere to Council minimum standards i.e. about 20% smaller (95 sqm for a 3-bed flat compared to circa 110 to 120 sqm of existing housing stock throughout city). High density units regardless of bedspaces are historically less likely as family homes in relative terms due to the practicality of each flat to accommodate school-age children.

#### **W. Ed has other differences from PGR normative sample e.g. Build to Rent**

West Edinburgh is also more distinct from other sites, including those informing the evidence base for the appraisals PGR, when innovative concepts like Build to Rent (BTR) are part of the mix.

#### **Estimating an appropriate PRG for W. Ed**

It is estimated that, just as normal flat development reduces PGRs to 30% that of standard, the flat densities of Edinburgh West, at 50% higher (60/ha up to 90/ha) will reduce the PGA to, proportionately, 20%, bringing the PGA for the flats down to 0.07. A similar argument must apply to the 'family' houses of Edinburgh West. Their floor space configuration will, as with the flats, most likely be smaller than comparative existing housing stock, with likely limited external private space, and it is suggested that their allocated PGR be also proportionately reduced, from 0.348 to 0.232.

#### **Implication of applying the amended PGR to W. Ed**

The Educational Appraisal identifies a requirement for 2,281 more school places from the 11,000 total units. However, if 20% of the 11,000 units were family houses (a more realistic estimation), the pupil generation would be 1,681. If the PGRs are as proposed as suggested above, the number of pupils generated would be 1,126.

#### **Build out rate of 800 units per year = 80-120 pupils p.a**

If the West Zone achieves a build-out rate of around 800 residential units per year (one third of the City total), between 80 and 120 primary pupils are calculated to be generated annually, depending on the PGR applied (i.e. Council or revised proposed rate).

### **New school needed to meet demand**

As stands, in isolation, the current West Zone schools cannot accommodate the corresponding level of impact and a new school will be required in the first 5 years from commencement of development, over and above the new Meadowfield PS.

A second school would be needed five years thereafter.

### **Existing capacity freeing up**

In parallel however, there will be substantial spare capacity emerging in neighbouring schools from 2030 and beyond. Four schools in the West Zone (Blackhall, Carrick Knowe, Clermiston and Roseburn) remain well within capacity after accounting for new housing, and at 2030 are projected to have over 600 spare spaces. As Edinburgh West is rolled out, this spare capacity may become significant. It may justify a catchment review, before commitment is made to a second new school, and certainly before any potential third.

### **Need to monitor school rolls**

School Rolls must be monitored closely to observe (1) the existing capacities and (2) annual pupil generation from Edinburgh West. As Edinburgh West is rolled out, this spare capacity may become significant. It may justify a catchment review, before commitment is made to a second new school, and certainly before any potential third new school.

### **House occupancy to be monitored**

Occupancy of the Edinburgh West developments should also be monitored and kept under review to gauge incoming populations of school age children to measure the take up of the flats as family homes. This is important as densities of 90 units per hectare are unproven locally in terms of young buyers embarking on, or pursuing, a family life.

### **Benefits of monitoring**

A rate of build-out of around 800 completions p.a. in the West Zone allows time and adequate sampling to monitor the actual pupil generation rates from the high density developments. Only constant monitoring of occupancy trends, and future research, will determine what is a reasonable PGR. It may then be possible to adjust calculations accordingly for the timing of a second school, and for the Developer Contributions which will pertain. Such analysis should be conducted from the start, incorporating all completions and occupations in each phase of 'Place 16' housing

### **Interim projections**

Ahead of this information being available the Council should proceed with caution and utilize the more conservative PGR figures suggested above.

### **H59/H60 unsuited for school**

Locating the school within the SAICA site H59 is incompatible with the density aspirations for this site which are the highest for any in the West Edinburgh area.

Accommodating a new school in either H59 or H60 site would likely markedly reduce both the number of deliverable units and associated pupil generation from the sites. A new school site would be closer to 2 hectares (versus the 1ha referenced in the City Plan, assuming a minimum 210 pupil school) and consequently would be reduce available H59/H60 land for housing, which would further reduce the overall pupil generation (and

market/affordable housing delivery), potentially by as much as a third. This would further reduce the need for a school on the site.

### **Larger schools more efficient**

Moreover, most new schools are most efficiently funded to be 450 capacity, with an associated larger land take, emphasising the above factors further

### **Need for new school on site not justified; send children to other schools**

In light of the above, a new school to service H59/H60 is not justifiable, with the comparatively small sites generating an insufficient amount of pupils for a dedicated school (only 106 pupils according to the lower estimate of the representation). In light of this, and the additional fact of the inter-connectedness of Edinburgh West, it would be more appropriate to allocate H59/H60 pupils to one of the neighbouring school sites, new or existing. The H59/H60 sites would instead contribute to any justifiable education contributions in the normal way

### **EWE 13 - West : Additional RC primary school capacity (St. Andrews)**

Genna Spears (0081)

These extra capacities will not fully address the current problem of over-capacity, let alone for the extra children that will move into this area from the proposals in City Plan.

Cramond & Barnton Community Council (0243)

Additional information and surety needed that the additional capacity proposed will be delivered at early stage relative to the contributing housing development.

### **EWE7 - West: Additional primary school capacity (Gylemuir)**

Genna Spears (0081)

These extra capacities will not fully address the current problem of over-capacity, let alone for the extra children that will move into this area from the proposals in City Plan.

### **EWE3, EWE9, EWE10 - EWE13**

Cramond & Barnton Community Council (0243)

Substantial concerns about mismatch between the delivery of this additional capacity and the rate of current and future housing completions and that 'infrastructure first' objectives will not be met.

### **Place 16 West Edinburgh Secondary School mitigation**

### **EWE5 – West: Additional Primary School Capacity**

West Craigs Limited (0472)

H62 is located close to the proposed new Maybury Primary School which is

located to the north within the main West Craigs site. Connectivity between H62 and the school will be enhanced through the creation of a new active travel route over the railway line, via the pedestrian / cycle bridge consented under application 20/01148/AMC.

Connectivity to Craigmount High School is also good and will be further improved by the new active travel route.

Travel to both schools from H62 / West Craigs South can therefore be achieved in a safe and sustainable manner.

A recent report to the Education, Children and Families Committee (7th December 2021) titled 'Learning Estate Update' acknowledged that Craigmount High School has capacity until 2026. The report also notes that Craigmount "includes a high percentage of non-catchment pupils and the projections assume a continuation of this pattern". In response to this a 'catchment block' to release additional capacity within the school is mooted.

The report also acknowledges the potential to extend Craigmount High and the ability of an extended school to accommodate 1800 pupils and that a feasibility study has been undertaken confirming the school can be extended.

#### Crosswind Developments Limited (0184)

In relation to the text regarding education facilities (page 72), as well as the inclusion of education facilities on Map 24 (Page 73) – which include one new primary school and a potential new high school within the Crosswind (H61) boundary, we must emphasise that Crosswind Development Ltd engaged in the pre-application process with the council and throughout the planning application process and no proposal was put to the applicant regarding accommodating a primary or secondary school on site. Financial contributions toward new schools in West Edinburgh were requested. Notwithstanding this, the application description includes Class 10 (non-residential institutions) which in principle and as set out above CDL would be prepared to identify a plot/plots for new schools.

Nevertheless, CDL wish to object on the basis that there is excessive school provision identified. As set out in paragraph 3.60, CDL are concerned about the amount of education provision that has been attributed to West Edinburgh. For CDL's recent planning application (ref. 20/03210) which is currently at appeal (ref. PPA-230-2333), Communities and Families calculated that a total of 137 ND and D primary school aged pupils and 62 secondary aged pupils would be generated by the proposed development. This was based on a mix of 1, 2 and 3 bed flats.

CDL cannot understand therefore why the Education Appraisal includes for 456 ND primary aged pupils for the same number of units. Similarly, the IBG Phase 1 site that is currently with Scottish Ministers for determination is proposing only flats so it will not generate the 100 ND primary aged pupils set out in the Education Appraisal either.

Furthermore, Crosswind Development Ltd engaged in the pre-application process with the council and throughout the planning application process and no proposal was put to the applicant regarding accommodating a primary or secondary school on site. Financial contributions toward new schools in West Edinburgh were requested. Notwithstanding this, the application description includes Class 10 (non-residential institutions) which in

principle would mean that some school provision could be made within the scope of the current application but this would need to be subject to discussion and negotiation.

Edinburgh Airport Limited (0761)

An indicative location for a primary school is also identified within the airport's boundary on Map 24. It is not considered appropriate to propose in such a location without any consultation with the Airport and it is not considered an appropriate location for a school so close to the operational area of the airport with no regard to safe routes to school.

**EWE12 - West: Additional secondary school capacity (The Royal High)**

The Davidson's Mains and Silverknowes Association (0454)

Education Proposals Table 11 shows a deficit of only 2 places. This school is supported but it is noted that Education Proposals Table 11 shows a deficit of only 2 places and this is being used as a contribution to the total shortfall in West Edinburgh and justification for the need for a new secondary school in the west of the city.

Police Scotland / Scottish Police Authority (0659)

There is contribution of £105,218 for 2 secondary pupils in the Royal High School catchment area (WE12). This is a very high cost of solution for such a minor, and perhaps short term, level of capacity exceeded and raises questions over if more cost effective mitigation have been explored.

**LG5 and ELG 6 –Gracemont HS and Liberton HS: Additional Secondary school capacity**

Bo Adams (0363)

Liberton HS proposal will not cope with additional numbers. Liberton is also far from Kaimes and Gracemont. It is inferred from the representation that it is considered that even both Gracemont and Liberton proposals combined will not provide enough capacity.

Robyn Kane (0091)

Further details of the proposal need to be provided as to when it will be built and how many more pupils the school will be able to take on after the new school is built. It is also stated that this proposal should set out that the proposal should amount to a new school given the existing school is not fit for purpose.

**Extension to Newcraighall Primary School**

Newcraighall LLP (0466)

Object to the Map 32 Newcraighall/Brunstane layout making provision for an extension of Newcraighall Primary School's grounds. It was previously considered this ground would be needed for a school extension and provision for this was made as part of No.10/03506/PPP and the associated legal agreement. The Council has confirmed that

they now no longer require this land however and so the City Plan reference to this is out of date and not in line with school requirements .

#### Newcraighall Heritage and Residents Association (0759)

Newcraighall Primary School is due to close when the new school is built on the Brunstane housing area. The land reserved for the extension of Newcraighall Primary School playground was originally part of the open space required in the planning consent for the Avent Homes site. This should be preserved as such and not sold for building land in due course. It could be a community space or a rewilding project for wildlife refuge, due to the scale of new development in the area. The junctions at the A1 and around Fort Kinnaird become overloaded at peak times; the development should not be allowed to proceed until the tram network extends this far and the infrastructure has been fully upgraded.

### **Co-Location of Community Facilities and Schools**

#### Frances Guy (0589)

There is no commitment in any of the plans for community use of education facilities despite the benefits of local access to sports and other facilities being a key part of physical and mental wellbeing alongside facilitating greater community management of these.

### **Financial Contributions**

#### Stirling Developments Limited (0303), Ryden LLP (0578)

Further detail required on how contributions will be determined across all education provision. This must result in a clear formula of cost to the developer that links directly to the mitigation being contributed to.

### **Education Appraisal**

#### **Replication of flaws from rejected 2016 guidance**

Wright PDL (0078), Defence Infrastructure Organisation (0124), CALA Management Ltd (0465), Hallam Land Management (0599),

Miller Homes Limited (0649), Barratt David Wilson Homes (0677), Steven Loomes (0767)

The City Plan Education Appraisal (EA) follows the same flawed methodology, including cumulative approach detailed below, as used in the 2016 LDP Education Infrastructure Appraisal which supported the adopted Edinburgh Local Development Plan (LDP) (2016). The EA is principally based on its own experience of timetabling rolls and class organisations against available learning and teaching accommodating.

The previous appraisal was scrutinised as part of Scottish Ministers examination of the Council's draft Supplementary Guidance: Developer Contributions & Infrastructure Delivery (2018). Ministers directed the Council on 17th January 2020 not to adopt the Supplementary Guidance. This was because, amongst other matters, there was a lack of

compliance with Circular 3/2012. The education contributions had not been demonstrated to fairly and reasonably relate in scale and kind to the proposed development; nor reflect and be proportionate to the actual impacts of proposed development. In addition, there was not sufficient certainty that the contributions would always be used for the purpose for which they were gathered. It also does not address the more detailed concerns set out by Reporter Liddell in his Report to Ministers on the Supplementary Guidance.

By replicating these mistakes then the City Plan, Action Programme and EA do not meet the tests set out in Circular 3/2012. In particular the education contributions do not fairly and reasonably relate in scale and kind to the proposed development or reflect the actual impacts of specific developments such as Redford Barracks.

### **Lack of information and reservations: Pupil Generation Rates (PGRs)**

CALA Management Ltd (0465), Hallam Land Management (0599),  
Miller Homes Limited (0649), Police Scotland / Scottish Police Authority (0659), West  
Town Edinburgh Ltd (0660), Barratt David Wilson Homes (0677)

In this regard, there is concern with the Pupil Generation Rates (PGRs) set out in the EA because, if these are too high, the level of infrastructure required will be overstated and not relate in scale or kind test in Circular 3/2012 nor the impact of pupils from new development.

The assessment to underpinning the PGRs is not provided in support of the EA or otherwise available in the public domain. This is very important since the PGRs adopted by the Council represent a significant increase to that applied by the Council in its adopted LDP Education Impact Appraisal, in particular the total primary school PGR has increased from 0.3 to 0.4 for houses and from 0.2 to 0.24 for secondary. A PGR of 0.4 for primary schooling is substantially higher than that applied by other councils across Scotland, which is on average around 0.3. The EA PGRs are also higher than the PGRs approved by the Council's Education, Children and Families Committee for use in statutory consultations on 21st May 2019 (the total primary PGR was 0.375 and for secondary was 0.23). It is considered that the PGR used in 2016 is a more appropriate figure, in line with national averages across Scotland.

The EA has not provided any indication as to how this applied within an actual forecast. It is also noted that a peak year is selected for identifying capacity exceeded rather than numbers at the last year of projection. This is critical when assessing the demands that new residential development has on catchment schools. New development cannot be held responsible/required to support excess occupancy/over capacity from previous development.

Wright PDL (0078), Defence Infrastructure Organisation (0124), Steven Loomes (0767),  
Homes for Scotland (0404)

Insufficient information has been published on the updated pupil per house'/flat rates used in the Education Appraisal. It is also not clear how accommodation standards have been calculated.

Insufficient information has been provided on the analysis of new LDP sites and the impact of these on the education estate and the relationship with new education mitigation.

In this respect, it is not clear how the pupils generated from individual developments have been calculated and in doing so, whether any regard has been given to the specific nature of sites and prospective developments. For example, Redford Barracks is site which is likely to feature a high number of apartments, which generate less pupils.

### **Lack of information: baseline school roll projections**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660)

The EA sets out existing and future capacity based by using a baseline school roll projection, however there is insufficient detail to understand how these baseline projections have been calculated.

Police Scotland / Scottish Police Authority (0659)

Figures 1a and 1b in the EA are misleading. The Council must confirm its methodology for both sets of projections. The Council should also provide more detail for its LDP and City Plan 2030 projections and break down admissions into catchment and non-catchment pupil numbers.

### **Lack of information: general concerns**

Wright PDL (0078), Defence Infrastructure Organisation (0124), CALA Management Ltd (0465), APS Group (Scotland) Ltd (0518), Hallam Land Management (0599), Miller Homes Limited (0649), Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660)

The lack of information underpinning the EA, City Plan and Action Programme, including both PGRs and baseline data/projections, is a significant problem as this means there is insufficient information to justify the assumptions adopted or allow for meaningful consultation.

### **Flaws in Impact Assessment Methodology**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The cumulative approach used by the EA is known to overstate the number of pupils expected from new homes as confirmed in DPEA Appeal Decisions (PPA-390-2056 & PPA-230-2007). The number of homes expected is multiplied by the relevant PGR to derive a total number of pupils expected from new homes. The total number of pupils is then added to the projected baseline school roll to assess the need for new accommodation. This approach is not an appropriate way to measure the direct and cumulative impact of pupils from new homes for the following reasons:

1. It does not consider the progression or transitioning of pupils through school year groups over the development period for new homes. It assumes all pupils from new housing are in primary schools at the same time and in perpetuity. It fails to take account of pupils leaving primary school for secondary schooling on an annual basis. Ignoring this inflates the number of pupils in this type of impact assessment; and

2. Pupils can only be generated from new homes when they are completed and occupied. These completions occur over time, not all at once, as demonstrated by the housing land audit. The effect of this is that that pupil generation will fluctuate depending on the number of homes built each year. The EA methodology has not considered the impact of this.

### **Overstating impact**

Defence Infrastructure Organisation (0124), Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660)

Based on the limited information provided, the Education Appraisal may well be overstating school roll projections, births and pupil generation rates. They appear to be greater than requirements necessitate and result in significant excess cost to developers.

Whilst a section 75 planning agreement could contain school roll tracking clauses to correct for overestimating impact to ensure provision is in line with demand and vice versa, this is not considered suitable. In particular it may influence scenario option planning and lead to poor scenario planning in that some options should already be ruled out as pupil numbers are over stated from the outset.

Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660)

The Council only provides summary baseline projections, picking out the maximum school roll over the projection period, even when there is sustained school roll decline projected as is the case for all of the catchment schools and St Mary's Edinburgh. Note: if primary school rolls are reducing then the demand for nursery places is also decreasing.

The EA implies that the baseline long term trend for pupil school rolls is that they are cyclical and table. This is not the case however as the projected proportion of children in the population is expected to decrease with National Records for Scotland (NROS) projecting a decrease of 1.9% from 2018 to 2028. This will mean less likelihood of pressure on school rolls and capacity. Data from recent years when incorporated may also show some wide fluctuations and COVID/Brexit may also suppress population growth.

As a baseline, the primary school roll projection without housing shows school roll decline but with recovery in the last 3-4 years of the projection however birth data show a decline of births and P1 admissions which the total primary school roll will follow. NROS confirms Edinburgh as having the lowest standardised birth rate and fertility rate in Scotland coupled with negative migration in the 0-14 age groups. Likewise, the projection shows roll recovery with the new housing feeding in, but the level of new housing has been increasing in recent years and yet school rolls have declined. The authority needs to demonstrate why it expects these roll changes can take place contrary to the aforementioned broader trends and projections. Note: if primary school rolls are reducing then the demand for nursery places is also decreasing.

Increases in secondary school roll through increased stay-on-rate are accepted as potentially increasing but not going to be comparable with the period 2002-2020 as most of the potential growth has already happened. The authority needs to demonstrate how these roll changes can take place.

CALA Management Ltd (0465), Miller Homes Limited and Wheatlands Farming Partnership (0592), Miller Homes Limited (0649)

It appears the Council's approach is designed to over provide capacity based on its cumulative approach. An example of this is from a new primary school at Gilmerton Station Road that was an Adopted LDP proposal. As a result of a Section 75B appeal, the Council conceded in a report to its Development Management Sub-Committee on 18th March 2020 that the need for this may not arise purely as a result of the development subject of the application or from other developments in the contributions zone.

If the Council's proposal is to overprovide capacity, this should be made clear and the costs apportioned between the Council and developer contributions to ensure that any resulting planning obligations accord with the tests of Circular 3/2012.

While existing and future capacity has been taken into account in the assessment through adding the total number of pupils from new homes to the baseline school roll projection, there is insufficient detail to understand how these baseline projections have been calculated.

### **Methodology for establishing capacity of schools**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), West Town Edinburgh Ltd (0660)

The Council does not adopt Scottish Government's Guidance on Determining Primary School Capacity (2014) when reporting on the capacities of its primary schools. Instead, it uses its own formula for calculating capacity which produces a lower capacity figure. The Council and EA do not explain this deviation however. This is despite the government guidance noting the benefits of a consistent forward planning approach across the country, particularly fairer and quicker negotiations in obtaining developer contributions and helping developers understand the implications of their development proposals.

### **Action Summary Table and Cost Schedule**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660)

The Cost Schedule sets out the cost assumptions for education infrastructure. The following matters which require explanation and justification from the Council:

- How the 12% uplift in costs for CEC Quality Uplift have been calculated or why this is justified;

- It is not clear if there is some double counting within the Scottish Futures Trust (SFT) metric, given Scottish Government's energy efficiency targets as part of the Learning Estates Investment Programme;
- How the 5% contingency has been calculated for new primary schools or why this is justified;
- The basis for indicative floor and site areas. It is presumed these may be based on the Councils Schedule of Accommodation however, this has not been provided as part of the Education Appraisal for consultation;
- How a cost per m2 of £5,365 for extensions to primary schools has been calculated, which is significantly higher than costs for new schools;
- How the indicative floor areas and site areas for the extensions have been calculated, these are significantly larger than required by the Schools Premises Regulations – especially for primary school extensions;
- There is no breakdown of the costs for a single classroom extension or dining hall;
- Why a higher contingency of 10% should be applied to extensions.
- Why 12.7 m2 per pupil has been applied to secondary school cost, which is higher than that advocated by the SFT metric based on existing secondary school sizes in Edinburgh; and
- How the abnormal costs, fees, quality uplift or contingency have been calculated for secondary schooling.
- What do RSR and EoMT stand for in the Action Summary table column headers?

The Council's Schedule of accommodation is greater than the area per pupil allowance made by SFT for both primary school and nursery. The Council has also only used the primary school cost metric and not that for Early Learning and Childcare (ELC). The Council is cherry picking SFT data.

The Council's schedule may be a standard that many of its existing schools do not meet and therefore using this schedule for new schools means there is a degree of aspirational cost that the Council is passing on to developers. The 2014 primary school capacity guidance provides a minimum area per pupil that can be applied to teaching spaces.

SFT recommends 11 sqm per pupil for an 800-1200 secondary school. The Council is exceeding this by 1.76 sqm; equating to an additional cost of £5509 per pupil before additions. The more recent base index adds £10 to the SFT sqm rate.

Information is needed on the accommodation schedules of Sciennes and Currie (from which the Council's aforementioned estimates are based on) as the Council could also be adding in measures to correct existing shortfall and passing these onto developers.

Many of the city's schools should not be/have been extended as they are already below statutory site regulations. Inner city schools are often unusual buildings with very high costs associated with design, maintenance and on-site construction. These have used a more recent index, with a slight bearing on costs.

Page 10 of the EA states that land values and remediation costs will be set out in the Action Programme. The Action Programme sets out no such details however.

No timescales are set out for the delivery of any of the Actions, how these actions relate to the delivery of new housing development or when these actions will be required to

accommodate pupils expected from new homes. The Action Summary must clearly show actions attributable to the City of Edinburgh and any capital funding from the Council.

Without information on costs, timing and triggers for infrastructure actions it will not be possible to draft a legal agreement for planning obligations and developers will not know the financial requirements of planning obligations when undertaking development appraisals and in designing proposals.

Overall, the accommodation standards would appear to be greater than requirements and at significant excess cost to the development industry.

### **Lack of detail defining Education Actions**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Many actions in the EA do not sufficiently define the specific infrastructure to be delivered. No further clarification provided in the Action Programme or City Plan. It is often just stated that capacity for a certain number of pupils is to be provided, but does not specify how, where or when this is to be delivered.

It is unclear how proposed costs have been established when the actual infrastructure action is not defined or how the Education Infrastructure proposals in Table 11 of City Plan can be assessed in terms of their suitability or impacts as part of this consultation or LDP Examination without this information.

As a result of the above it cannot be stated these actions are deliverable, nor it is not possible to judge if the actions relate to the impact of development or relate in scale or kind in accord with the tests of Circular 3/2012. As a result, the proposals set out cannot be used for planning obligations in legal agreements based. There is also a lack of certainty for developers whether they require to make allowances for education infrastructure on their site.

### **Feasibility assessment of proposed sites and review of alternative sites and options to address capacity issues**

APS Group (Scotland) Ltd (0518), Ryden LLP (0578), Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660)

The Education Appraisal does not contain any consideration of other alternative site options, including within the Drummond/Leith/Trinity, Craigroyston/Broughton and West contribution zones. These areas might potentially be more suitable or why the proposed sites were preferable to alternatives. There particularly appears to be scope to extend some of the schools in Edinburgh within regulation to provide additional capacity efficiently, especially at secondary school level.

Such an analysis should be based on education requirements as well as access and design principles for placemaking and most efficient patterns of use of land for the school facility as well as any associated development.

A site-proving exercise should be undertaken before including the proposal in the City Plan, to ensure any new School is deliverable. CEC acknowledges this exercise is still to be undertaken.

The full economic impact on viability of land take and net loss in value associated with reduction in gross and net developable area should also be factored when assessing the location of new schools.

The site-proving and comparison analysis also needs to be done alongside a more detailed assessment of other options to address capacity issues, including reviews of school catchment areas and the potential to upgrade or extend existing schools within the catchment.

This holistic assessment process must consider the relative importance of ensuring that schools are located centrally and conveniently to the catchments within which they sit as well as achieving a certain level of pupil numbers to sustain the schools.

Wider connectivity and access to open space, sports provision and other community facilities should also be factors in the consideration of school options, as is the option to co-locate with community hubs.

The Council notes sustainability and carbon footprint should be considered in terms of catchment reviews however this is less of an issue with a move to electric and hydrogen powered vehicles this and when compared to the total carbon footprint of new school buildings on new school sites rather than extending and adapting existing buildings and maximising capacity within statutory limits

Undertaking a full and comparative analysis accounting for the issues above would increase the range of scenarios that the council could deploy to address short, medium and long term needs arising from the LDP and City Plan 2030.

### **Not appropriate to defer detail to SG**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Given the need to ensure that planning obligations are rooted in the development plan (paragraph 16, Circular 3/2012), it is not appropriate to reserve the detail of these requirements, including the level of financial contributions, to a later date through the preparation of supplementary guidance.

It is also unclear whether the Council will be able to bring forward such supplementary guidance before Section 22 of the 1997 Act is repealed and any subsequent transitional period. The Council has had difficulties with its timescale for adopting statutory supplementary guidance previously where it was directed by Scottish Ministers not to adopt its Supplementary Guidance on Developer Contributions on a number of occasions.

### **Errors in Appraisal**

The Davidson's Mains and Silverknowes Association (0454)

The brownfield development site at the former Clydesdale / Cleland garage sites may have been missed from the plan. This would result in an underestimating of impact and the numbers of required pupil places at the Royal High School, and also Davidson's Mains Primary.

Police Scotland / Scottish Police Authority (0659)

Various errors in the EA states, including that the number of units to be delivered on site H32 stated as 320 units however the suggested capacity under Housing Proposals H32 is 256.

The reference to the School Premises (General Requirements and Standards) (Scotland) Regulations 1976 (as amended)" is incorrect. The Council should refer to the statutory guidance issued in Scottish Executive Education Circular 3/2004 in relation to secondary schools.

Table 1 contains an error in the column headed "Stage" where it is assumed the third row should read Secondary and not "House".

The ordering by "Ref." results WE10, WE11 coming before WE2.

There contribution of £105,218 for 2 secondary pupils in the Royal High School catchment area (WE12) raises concern that there could be other very detailed anomalies hidden within the data.

The title for Table 19 incorrectly refers to Castlevew Primary School.

**Modifications sought by those submitting representations:**

**Promoted Education Proposals Not in City Plan**

**Proposed Education Campus on land to the East Kirkliston/Almondhill**

BDW Trading/Taylor Wimpey (0199), Miller Homes Limited and Wheatlands Farming Partnership (0592), Sir Jack Stewart-Clark (0800)

A proposal for a non-denominational High School in Kirkliston should be included in the Plan as part of an 8ha education campus also accommodating a non-denominational primary school and nursery.

**New Primary School at Hatton Village**

Inverdunning (Hatton Mains) Ltd (0427)

Include proposal for new Primary School as part of wider residential led proposal at Hatton Village. This school could be part of a Community Hub.

**Education mitigation and/or new school provision associated with development at Riccarton Village**

Miller Homes (0256)

No modification specified however it is indicated that City Plan confirm what education proposals are necessary to accommodate the promoted development at Riccarton Village and make provision for the relevant education proposals.

### **Currie Community High School**

Archie Clark 0003

The rebuilding of this school should be in the Plan and Action Programme with details on what level of funding is being provided and where this is coming from. It is also indicated that the proposal to be included in the plan should not necessarily be a full rebuild given the existing school is in good condition.

### **New annexe to Flora Stevenson's Primary School**

Helen MacLeod (0364)

The Crewe Road South site should be used to build an annexe with an outdoor learning spaces, plant for wildlife and enjoyment of being outside.

### **New Flora Stevenson Primary School at Royal Victoria Hospital Site**

Suzie Ross (0440), Sheila Strathdee (0448), Iain R N Stewart (0131)

The RVH site should be allocated for a new Flora Stevenson Primary School, with significant extra capacity than is needed to just meet current projection it is not too small before it is even completed.

It would be safe for children, easy to secure, have minimal need for vehicles access, allow retention of protected trees and biodiversity (including some protected species), have ample play areas and opportunity for outdoors teaching. The skyline would be protected also. There would be space, too, for the Gaelic School being considered. The existing school could then be redeveloped.

### **New Flora Stevenson Primary School at Crewe Road South site**

Jacqueline Christie (0023), Howard Jones (0424), Ian McRae (0028)

The site would be suitable for a new larger Flora's Stevensons PS with a large greenspace.

The old Flora's site could also be developed into affordable flats (not too many) with on site parking and extensive landscaping to assist with run off for flooding and nature.

Current school at capacity and in an area with pollution problems (air and noise). Current Flora Stevenson School site is more appropriate for housing if housing is needed in this area.

### **New High School at Frogston Road**

Bo Adams (0363)

New Frogston primary should have a bigger brother in a form of a High School on Frogston Road.

### **General City-wide proposals**

Lynn Crattage (0362)

It is indicated that the quality of comprehensive schools across Edinburgh should be improved and the number of these should be increased to accommodate private school pupils for the eventuality these children had to go comprehensives instead.

Archie Clark (0003)

Policy to ensure schools are retained at a comfortable size for their communities is needed for this plan.

### **Education Proposals in The Plan**

#### **West area primary schools general**

SAICA (0590)

Delete the requirement for 5 primary schools to serve the West Edinburgh allocations (Place 16). It is indicated this should be replaced with a reference to two or three primary schools at most.

#### **FH1, FH2, ED7 and FH3**

Defence Infrastructure Organisation (0124)

The proposed annexe should be removed from the site pending further assessment and consideration of all site options.

#### **LG5 and ELG 6 –Gracemont HS and Liberton HS: Additional Secondary school capacity**

Bo Adams (0363)

It is indicated that these proposals need to be supplemented or replaced by a new high school should be built at Frogston.

Robyn Kane (0091)

No specific wording proposed however it is indicated that further details of the proposal need to be provided.

**FH2 – 85 secondary pupils at Firhill Secondary School.**

Archie Clark 0003

It is indicated that details should be provided on the physical nature of extension to the school and where this will be positioned.

### **ED5/DLT2 – Bonnington / Jane Street Primary School**

APS Group (Scotland) Ltd (0518)

The education provision should be reviewed and all references the potential new primary school under ED5/DLT2 should be deleted, pending further assessment.

We request the Plan is changed to remove this proposed new primary school from Part 4 Education Infrastructure Proposal Table 11, from the development principles diagram Place 8 – Jane Street (map 22 on page 60), the Proposals Map and all other associated documents, until school requirements are more resolved and fully justified. Jane St Development Principles criteria c) 'Make provision for a new primary school (1.2ha)' should be deleted pending further assessment/evidence on educational needs and an assessment of all potential suitable sites.

The development principles diagram should be amended to annotate that it is 'indicative at this stage,' as the precise location and form of development will ultimately be defined through planning applications and future master-planning.

Padraic Kinsella (0298)

The Council should review the Education Appraisal with respect to GME schools, to validate the approach and to ensure that adequate action plans are in place for future years to secure the funding needed to ensure every child accessing GME can be educated according to their parents' wishes as the city develops and grows.

### **ED6/DLT4 – Waterfront Primary School**

Forth Ports Limited (0496)

Identify an alternative location, outside the operational Port of Leith for the proposed new Waterfront school – ED6 DLT4 which can be delivered without significant impact on port infrastructure.

### **ESW2 – Dean Park Primary School**

Archie Clark 0003

It is indicated that the school should not be extended to the size proposed due to the size of primary school being created being too large.

### **ESW5 – Location unknown**

Archie Clark 0003

Details should be provided on where this would this be located.

## **EWE10 – Craigmount Secondary School**

Archie Clark 0003

It is indicated that this school should not be extended to the large size proposed.

Mrs Patricia Scott (0349)

No modification proposed however it is indicated that education proposals should be the greatest priority in the planning of development.

## **ERC4 - Roman Catholic : Additional RC primary school capacity (St. Josephs)**

Genna Spears (0081)

No specific wording is provided but it is indicated that a greater level of additional capacity needs to be provided than is proposed by providing greater extensions and/or additional schools. If this is not done then housing proposals in the catchment should be removed from the plan.

## **ERC7 - Roman Catholic : Additional RC secondary school capacity (st. Augustines)**

Genna Spears (0081)

No specific wording is provided but it is indicated that a greater level of additional capacity needs to be provided than is proposed by providing greater extensions and/or additional schools. If this is not done then housing proposals in the catchment should be removed from the plan.

## **EWE4 – West: Additional Primary School Capacity Turnhouse Road (SAICA)**

### **Place 16 West Edinburgh Secondary School mitigation**

Ryden LLP (0578)

It is indicated that the proposed school should be deleted from the plan pending a review of the siting of the school and a full comparative analysis undertaken based on education requirements as well as design principles for placemaking and most efficient patterns of use of land.

SAICA (0590)

The proposed school should be deleted from the plan.

## **EWE5 – West: Additional Primary School Capacity**

### **Place 16 West Edinburgh Secondary School mitigation**

West Craigs Limited (0472)

It would be appropriate to link any developer contributions for new school infrastructure arising from the development of H62 to Maybury Primary and Craigmount High. It has

been demonstrated both schools are easily accessible from the site and, crucially, have sufficient capacity. We consider the approach proposed within Proposed City Plan 2030 would result in significant delays to the delivery of educational facilities for pupils of H62, and therefore request that this approach is amended within City Plan 2030.

Edinburgh Airport Limited (0761).

The indicative location for a primary school is not appropriate and should be removed from the map or reallocated in a suitable position within the proposed residential areas of development.

Crosswind Developments Limited (0184)

No modification proposed however it is indicated that the level of school provision should be reduced.

**EWE7 - West: Additional primary school capacity (Gylemuir)**

Genna Spears (0081)

No specific wording is provided but it is indicated that a greater level of additional capacity needs to be provided than is proposed by providing greater extensions and/or additional schools. If this is not done then housing proposals in the catchment should be removed from the plan.

**EWE3, EWE9, EWE10 - EWE12**

Cramond & Barnton Community Council (0243)

It is indicated that the Plan should provide additional information and surety that the additional capacity proposed will be delivered at early stage relative to the contributing housing development. Clarity must be provided on the proportionality of the solution relative to the impact from development.

**EWE12 - West: Additional secondary school capacity (The Royal High)**

The Davidson's Mains and Silverknowes Association (0454)

No modification specified however it is indicated that the proposal should be clarified to confirm if the two 'places' specified for this proposal description in Table 11 is correct. If it is not correct then it should be updated accordingly.

**EWE13 - West : Additional RC primary school capacity (St. Andrews)**

Genna Spears (0081)

No specific wording is provided but it is indicated that a greater level of additional capacity needs to be provided than is proposed by providing greater extensions and/or additional schools. If this is not done then housing proposals in the catchment should be removed from the plan.

Cramond & Barnton Community Council (0243)

It is indicated that the Plan should provide additional information and surety that the additional capacity proposed will be delivered at early stage relative to the contributing housing development.

### **Extension to Newcraighall Primary School**

Newcraighall LLP (0466)

Amend notation from Map 32 to remove reference to 'School grounds extension at Newcraighall'.

Newcraighall Heritage and Residents Association (0759)

Para 33.8 refers to Newcraighall Primary School and extending the playground. If this school closes this space should be protected as open space so that it cannot be built on.

Para 33.8.1c refers to the new housing area having a road link to Newcraighall but this should make clear that the road junctions at the A1 and around Fort Kinnaird will also need upgrading to cope with the increase in use

### **ECB4: Additional Secondary Capacity at Craigroyston High School and Broughton High School**

Police Scotland / Scottish Police Authority (0659)

It is indicated that this proposal should be removed from the Plan as it is presently described.

Iain R N Stewart (0131)

It is indicated that further details should be provided on this proposal.

### **ED3/ECB1: Annexe at Crewe Road South to Flora Stevenson Primary School to provide additional primary and nursery places**

Police Scotland / Scottish Police Authority (0659)

This proposal should be removed from the Proposed Plan.

Padraic Kinsella (0298)

This site should be used as a location for Gaelic Medium Education (GME) in line with the proposed raised by the Education, Children and Families committee.

### **ERC1: 2 Classes to be provided at Holy Cross Primary School**

Police Scotland / Scottish Police Authority (0659)

It is indicated that this proposal should be removed from the Plan.

### **ERC8: Additional Secondary Capacity at St Thomas of Aquin's High School**

Police Scotland / Scottish Police Authority (0659)

It is indicated that this proposal should be removed from the Plan.

### **Co-Location of Community Facilities and Schools**

Frances Guy (0589)

It is indicated that there should be a clear statement that schools shall include community facilities such as sports facilities.

### **FINANCIAL CONTRIBUTIONS**

Stirling Developments Limited (0303), Ryden LLP (0578)

No modification specified but it is indicated that the Plan should provide clarity on how contributions will be calculated and that this will clearly and transparently inform stated and specific levels of contributions for Education infrastructure.

### **VARIOUS EDUCATION PROPOSALS AND EDUCATION APPRAISAL**

Wright PDL (0078), Defence Infrastructure Organisation (0124), Steven Loomes (0767), Homes for Scotland (0404)

It is indicated that all proposals are objected to as it stands and that the EA should be updated with all relevant information provided and that re-consultation should take place after this. The Plan should not proceed until this has occurred.

The Davidson's Mains and Silverknowes Association (0454)

It is indicated that the former Clydesdale / Cleland garage site should be included in appraisal and update mitigation as required in the appraisal and City Plan.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660), Barratt David Wilson Homes (0677)

It is indicated that all proposals set out in Table 11 of the Proposed LDP should be reviewed based on a corrected, reliable and robust Education Appraisal. The updated EA and proposals accompanied by more specific details that make clear the implications for development in the Proposed Plan. The Proposed Plan and EA should then be reconsulted upon to allow due scrutiny of this information.

Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660)

The EA should also identify that all new schools, not just new school buildings for existing schools will require appropriate school consultation, catchment area adjustments and revised secondary school arrangements.

It is indicated that the Proposed Plan should state that there should be discussion regarding school consultations required and how this links in with residential planning/master planning/budget provision, school design and procurement. Additionally, it should be made clear developers and land owners should have a role in the design and procurement of school/accommodation schools being funded by them and there should be early discussion on mechanisms for tracking school population growth so that it ties in with the efficient provision of new school accommodation. This should also involve community representation.

#### **Summary of responses (including reasons) by planning authority:**

##### **New High School, Primary School and Nursery as part of new development east of Kirkliston, New Primary School at Hatton Village**

BDW Trading/Taylor Wimpey (0199), Miller Homes Limited and Wheatlands Farming Partnership (0592), Sir Jack Stewart-Clark (0800), Inverdunning (Hatton Mains) Ltd (0427)

The education appraisal CD015 assesses the impact of sites identified as suitable for housing development in the proposed City Plan. It does not assess the infrastructure required to support other developments that have been promoted by others as suitable for housing development. If such sites were allocated as suitable for housing development then an assessment of their impact on the learning estate will be required.

The education authority is consulting the school communities aligned to Queensferry High School to develop a learning estate strategy for West Edinburgh that will inform any future statutory consultation process. Through this process it will be determined whether Queensferry High School is permanently extended to accommodate pupils from the new primary school in HSG 32: Builyeon Road and pupils from Kirkliston or if it will be temporarily extended to accommodate pupils until a new high school, either in Kirkliston or West Edinburgh, is delivered. **No modification proposed.**

##### **Education mitigation and/or new school provision associated with development at Riccarton Village**

Miller Homes (0256)

The education appraisal CD015 assesses the impact of sites identified as suitable for housing development in the proposed City Plan. It does not assess the infrastructure required to support other developments that have been promoted by others as suitable for housing development. If such sites were allocated as suitable for housing development then an assessment of their impact on the learning estate will be required. **No modification proposed.**

##### **Currie Community High School**

Archie Clark 0003

The project to replace Currie High School is part of the Council's Wave 4 Investment Programme. Currie High School is being replaced because the structure is approaching the end of its lifespan resulting in a requirement to replace the school. Funding is secured

through the Council's Sustainable Capital Budget Strategy which is reported to the Finance and Recourses Committee each February.

The proposed LDP does not propose further housing growth in Currie High School's catchment area and school roll projections show there is spare capacity in the school. Therefore because the requirement to replace Currie High School is not directly related to pupil generation from housing developments it is not identified in the proposed LDP. **No modification proposed.**

### **General City-wide proposals**

Lynn Grattage (0362), Archie Clark (0003)

The Council is committed to the delivery of a high-quality education for all children and young people. Edinburgh Learns for Life CD0079 is a strategic plan for education designed to meet the objectives of the City Vision 2050 CD076 and is reported to the Education, Children and Families Committee. It was recently updated in response to the recommendations of the Poverty Commission report CD137.

Mixed communities creating genuinely mixed catchment areas is identified in the Poverty Commission report as a key factor to addressing the poverty related attainment gap and inequality across the city. Policies directing developments to create mixed communities will assist in establishing socially diverse catchment areas. **No modification proposed.**

### **Co-location and Community Access**

Frances Guy (0589), Crosswind Developments Limited (0184)

All new schools will be designed for community access in line with policy Inf 1: Access to Community Facilities. Extensions to existing schools will explore improving community access. **No modification proposed.**

### **Capacity and size of schools (extensions to existing and new schools)**

**ESW2 – Dean Park Primary School, EWE10 – Craigmount Secondary School, Additional RC primary school capacity (St. Joseph's RC Primary School), Additional RC secondary school capacity (St. Augustine's RC High School), EWE 13 - West : Additional RC primary school capacity (St. Andrews), EWE7 - West : Additional primary school capacity (Gylemuir)**

Archie Clarke (0003), Genna Spears (0081), Mrs Patricia Scott (0349),  
Cramond & Barnton Community Council (0243)

The Education Appraisal CD015 identifies a baseline peak roll for each primary and secondary school that shows the forecast peak if there were no further housing developments. Estimated pupil generation from housing sites is then added to the baseline peak roll to establish whether the school has capacity to accommodate the cumulative number of pupils expected to be generated to ascertain whether action is required. Actions will be delivered through engagement with affected communities. This engagement process will explore, where appropriate, providing additional accommodation at the affected school(s), catchment changes and new schools. Once agreed and if

necessary, a separate statutory consultation process will be undertaken to change a school catchment area or establish a new school or stage of education. This statutory process will take approximately six months. Where a new school is required, an agreed site will need to be identified before a statutory consultation can proceed.

The Council does not have a maximum size for primary or secondary schools. **No modification proposed.**

## Education Proposals

### **FH2/ED7 Firrhill High School Annexe at Redford Barracks** Archie Clark (0003), Defence Infrastructure Organisation (0124)

The education appraisal shows that Firrhill High School's capacity is regularly breached and that forecast growth, of up to 101 pupils, is attributed to general population growth in its catchment area. Accordingly, pupil generation from new housing developments that are expected to add a further 85 places will exacerbate an existing problem.

The education appraisal explains Firrhill High School cannot be extended on its existing site because of the limits of the site in terms of its topography and size. The capacity of the existing accommodation's social spaces, i.e., dining and assembly space cannot be increased. There are no suitable Council owned sites in close proximity to Firrhill High School to provide annexe accommodation, therefore, in order to support housing growth in its catchment area, a site for an annexe is required. A site of 2.3 ha is required to meet the area requirements of a school with a roll between 1,200-1,400.

The education appraisal CD015 acknowledges alternative options will be considered, including catchment change, however that is a separate statutory consultation process that cannot be prejudged by assumptions in a proposed local development plan. Accordingly, it is necessary to safeguard a site to enable Firrhill High School to extend.

The Council seeks contributions towards providing additional 85 places that are expected to be generated from housing growth in its catchment area, this is subject to change depending on the housing output and mix that comes forward from the Redford Barracks site. The Council will be responsible for its share of additional accommodation required from population growth, including land costs.

The Education Appraisal sets out forecast growth in Firrhill's catchment area as follows:

Table 1: Estimated secondary school pupil generation from existing catchment areas

	Firrhill
Capacity	1,150
Baseline Peak Roll	1,251
Pupil Generation LDP 2016	8
Pupil Generation City Plan	77
Total ND SS	1,336

Proportionately the Council and developers will be responsible for the following costs to deliver additional secondary school capacity. Appendix 3 from the Education Appraisal

CD015 sets a per pupil cost for additional secondary school capacity at £52,609 per pupil (Q2, 2021), excluding land costs and servicing and remediation costs. The Education Appraisal set out costs from housing developments but did not state the Council's contribution. However, table 2 demonstrates the costs in the Education Appraisal relate solely to housing developments and does not attribute costs the Council is responsible for as costs to be incurred by developers.

Table 2: Proportionate costs of additional secondary capacity (Firrhill Contribution Zone)

	Places	£
Population growth (CEC)	101	£5,313,509
Pupil Generation LDP 2016	8	£420,872
Pupil Generation City Plan	77	£4,050,893
Total		£9,785,274
Total CEC		£5,313,509
Total – developers		£4,471,765

**No modification proposed.**

### **FH1 and FH3: Firhill – additional ELC and Primary School Capacity**

#### Defence Infrastructure Organisation (0124)

The Education Appraisal explains that Colinton Primary School (7-classes, 210 capacity) and its nursery class (20 places) do not have capacity to accommodate the estimated 116 ND PS pupils and 43 ELC places that would be estimated to come forward from the development of the Redford Barrack's site based on housing output assumptions of 800 units.

The projected peak roll including pupil generation from the Redford Barrack's site is estimated to be 297. A 12-class primary school with two GP classes is required to support that roll. Colinton Primary School's gym (137 sqm) and dining area (106 sqm) are both also used as circulation space and cannot accommodate further pupils, accordingly any extension to the school will also have to provide adequate core facilities.

The primary school site is 3.8 ha and can accommodate additional classes and ELC places on its site. However, the Education Appraisal notes a new primary school may be more appropriate if the housing output on the Redford Barrack's exceeds the assumptions in the Education Appraisal. This will be reviewed when a planning application is submitted. **No modification proposed.**

### **ESW5 – Location unknown**

#### Archie Clark 0003

The requirement for additional ELC places to mitigate development affects a number of ELC settings: Canal View, Clovenstone and Sighthill Primary Schools and Hailesland and Sighthill Early Learning Centres. The Council will engage with each setting and their

communities to determine where the additional places should be located. **No modification proposed.**

**ED3/ECB1: Annexe at Crewe Road South to Flora Stevenson Primary School to provide additional primary and nursery places**

**New Flora Stevenson Primary School at Royal Victoria Hospital Site**

Helen MacLeod (0364), Police Scotland / Scottish Police Authority (0659), Sheila Strathdee (0448), Iain R N Stewart (0131), Jacqueline Christie (0023), Howard Jones (0424), Ian McRae (0028), Helen MacLeod (0364), Suzie Ross (0440).

The projected peak roll, including pupil generation from known housing developments, is estimated to be 719 pupils, c 102 pupils across each stage. A 25-class primary school is required to support that roll.

The existing school has 21 classes and a 60 place nursery on a site with an area of 0.79 ha. The existing school, built in the Victorian period, does not meet the current site requirements of the School Premises (General Requirements and Standards) (Scotland) Regulations 1967 CD109 which require a site area of 1.2 ha and 0.6 ha for playing fields for a 21 class school and 0.23 ha for a 60 place nursery. The Education Appraisal CD015 states the school cannot be extended to provide additional classrooms to support the forecast pupils expected to be generated from new housing developments. Extending the school would limit the amount of outdoor space for the existing pupils. It is noted other representations, Helen MacLeod (0364) and Suzie Ross (0440), have raised concerns about the capacity and outdoor space at Flora Stevenson Primary School.

While it is acknowledged the school site at Flora Stevenson Primary School does not meet current site requirements and the design of new schools do not adopt the design principles of Victorian schools, there are no plans to replace the school. It is recognised that several schools across the Council's learning estate are in a similar situation. Such a proposal would require extensive engagement with the school community and a budget secured through the Council's Capital Programme, unless a new school can be wholly funded by developer contributions.

Accordingly, a suitable site to provide annexe accommodation located near the existing school site is required to mitigate the forecast pupil growth from new housing developments.

Four additional classes could accommodate up to 120 children. The School Premises Regulations CD109 requires 0.4 ha for school buildings for a primary school with a roll between 61-140 pupils and 0.2 ha for playing fields.

Additional 61 ELC places are also expected to be generated from new housing developments. In line with child/adult ratios, 64 ELC places are required. A 64 place ELC setting requires 0.185 ha for a building and 0.06 ha for outdoor space, a total site requirement of 0.245 ha.

Accordingly, a site with a minimum area of 0.845 ha is required to provide the additional education infrastructure necessary to support the cumulative impact of housing growth in Flora Stevenson's catchment area. Failure to secure the site area required by the

regulations will require an exemption from the Scottish Government which must be in place prior to the transfer of the land to the Council who must first agree to the reduced site. Assuming agreement, Ministerial consent would be sought by the Council by way of a letter outlining the rationale for the exemption. New housing developments cannot be supported without a site to deliver an annexe to provide additional accommodation at Flora Stevenson Primary School.

The alternatives proposed by the respondent include co-location at Broughton High School or with a new Gaelic High School at Victoria Hospital.

The Broughton High School site is 6.8 ha and the education appraisal identifies that additional accommodation is required to meet forecast growth in its catchment area. A site area of 6.8-7.4 ha is required for a roll between 1,400-1,600. Providing annexe accommodation on Broughton High School would compromise any extension required to support additional secondary school places generated from housing developments in its catchment area.

The proposed City Plan identifies the Royal Victoria Hospital site, located in Flora Stevenson Primary School and Broughton High School's catchment areas, as suitable for housing development. A report to Education, Children and Families Committee in September 2022 reported that the Crewe Road Site (Fettes Police Station) and Royal Victoria are not available for the school. The Committee agreed that Council officers will continue to explore options for GME secondary school provision with the GME community.  
**No modification proposed.**

Padraic Kinsella (0298)

With regard to the Crewe Road Site and the GME High School, a report to Education, Children and Families Committee in September 2022 reported that the Crewe Road Site (Fettes Police Station) and Royal Victoria are not available for the school. The Committee agreed that Council officers will continue to explore options for GME secondary school provision with the GME community. **No modification proposed.**

### **ERC1: 2 Classes to be provided at Holy Cross Primary School**

Police Scotland / Scottish Police Authority (0659)

Response to projection methodology covered separately.

Holy Cross RC Primary School shares catchment boundaries with St David's RC Primary School, St Mary's (Edinburgh) RC Primary School and St Mary's (Leith) RC Primary School. The Education Appraisal identifies a requirement to create additional capacity at St David's RC Primary School and St Mary's (Leith) RC Primary School but identifies there is spare capacity at St Mary's (Edinburgh) RC Primary School.

With regard to additional capacity at denominational schools, the Education Appraisal CD015 acknowledges prioritising baptised RC pupils to reduce accommodation pressure at denominational schools is an option but notes it will increase rolls and accommodation pressure at nearby non-denominational primary schools. Catchment change is an alternative option to creating additional capacity but that is a separate statutory consultation process that affects existing school communities and, in the view of the

Education Authority, cannot be prejudiced by proposed housing developments. **No modification proposed.**

#### **ECB4: Additional Secondary Capacity at Craigroyston High School and Broughton High School**

Police Scotland / Scottish Police Authority (0659), Iain R N Stewart (0131)

The Education Appraisal sets out forecast growth in Broughton and Craigroyston's catchment area as follows:

Table 3: Estimated secondary school pupil generation from existing catchment areas

	Broughton HS	Craigroyston HS
Capacity	1,200	600
Baseline Peak Roll	1,231	788
Pupil Generation LDP 2016	187	141
Pupil Generation City Plan	103	13
Total ND SS	1,521	942

Table 3 demonstrates each high school's baseline peak roll exceeds the school's capacity and therefore there is no spare capacity at either school to accommodate additional pupils from housing developments. The Council will be responsible for growth that is not attributed to housing developments.

Appendix 3 from the Education Appraisal CD015 sets a per pupil cost for additional secondary school capacity at £52,609 per pupil (Q2, 2021), excluding land costs and servicing and remediation costs. Proportionately the Council and developers will be responsible for the costs to deliver additional secondary school capacity. The Education Appraisal set out costs attributable to housing developments but did not state the Council's contribution Table 4 demonstrates that the costs in the Education Appraisal relate solely to housing developments and does not attribute costs the Council is responsible for to developers. **No modification proposed.**

Table 4: Proportionate costs of additional secondary capacity (Craigroyston / Broughton Contribution Zone)

Broughton High School	Places	£
Population growth (CEC)	31	£1,630,879
Pupil Generation LDP 2016	187	£9,837,883
Pupil Generation City Plan	103	£5,418,727
Total		£16,887,489
Total CEC		£1,630,879
Total – developers		£15,256,610

#### **ERC8: Additional Secondary Capacity at St Thomas of Aquin's High School**

Police Scotland / Scottish Police Authority (0659)

Despite regularly prioritising baptised Roman Catholic pupils, the roll at St Thomas of Aquin's High School has not been below 700 pupils since 2003 and it has operated over its 750 pupil capacity since 2009. Accordingly, while the projections may show a falling roll by 2030, this should be treated with caution and it is considered that the addition of a further 101 pupils generated by new development will result in accommodation pressures for a school that regularly exceeds its capacity from its existing catchment population alone. **No modification proposed**

#### **ECB5: Additional Primary Capacity at St David's Primary School (1 Class)**

Police Scotland / Scottish Police Authority (0659)

St David's RC Primary School is aligned to St Augustine's RC High School and its catchment area covers Broughton, Craigroyston and The Royal High Secondary Schools' catchment areas. New housing developments in St David's RC Primary School's catchment area are also in Broughton and Craigroyston High Schools' catchment areas, therefore pupil generation from those housing developments have only been applied to the Craigroyston/Broughton Contribution Zone.

The denominational schools assessed in section 12 of the Education Appraisal CD015 affect multiple contribution zones and the proportion attributed to each zone is set out in the assessment. **No modification proposed.**

#### **ED5/DLT2 – Bonnington / Jane Street Primary School**

APS Group (Scotland) Ltd (0518)

The Education Appraisal CD015 states that significant housing development is planned in the Bonnington area that has cross boundary impacts affecting three primary schools each aligned to different secondary schools; Broughton Primary School (Drummond High School), Leith Primary School (Leith Academy) and Trinity Primary School (Trinity Academy).

To accommodate the forecast pupils expected to be generated from new housing developments in each primary school's catchment area the schools would have to be capable of extending to the size shown in table 5.

Table 5: Proposed Capacity of Broughton, Leith and Trinity Primary Schools

School	Class Organisation	GP Requirements	Total Classes
Broughton	23	4	27
Leith	30	5	35
Trinity	23	4	27

In the Education Authority's opinion, Broughton, Leith and Trinity Primary Schools cannot be extended to the size required to support all housing developments proposed in their catchment areas. Accordingly, a new primary school and a site for a new primary school near the proposed housing developments will be required in order to provide the infrastructure necessary to support housing developments. The number of pupils expected to be generated in the Bonnington area is the equivalent of a 14 Class Primary

School with a capacity of up to 420 pupils. The School Premises (Scotland) Regulations (1967, amended in 1973) CD109 requires a site area of 1.2 ha for a 14-class primary school.

The proposed school site has been selected because it is centrally located and has regard to existing site constraints and other proposed development principles in Place 8 – Jane Street that developments in the Bonnington Cluster will be expected to meet. **No modification proposed.**

Padraic Kinsella (0298)

The Education Appraisal CD015 notes that *“The Council also provides education infrastructure for Gaelic Medium Education and for pupils with additional support needs at a city level – i.e. the catchment areas for these schools cover the whole city. Contributions are not sought for these city-wide provisions primarily because the limited size of the cohort makes it difficult to demonstrate that it is reasonable to seek a contribution. This is not only due to the geography (i.e. it is difficult to justify in planning terms that a development in the east of the city should contribute to infrastructure provision in the west of the city) but also the low numbers make projecting demand difficult.”* **No modification proposed.**

#### **ED6/DLT4 – Waterfront Primary School**

Forth Ports Limited (0496)

An indicative site for a new primary school is identified in the Edinburgh Waterfront area to mitigate accommodation pressure at Leith Primary School.

The Housing Land Audit CD056 identifies site LDP EW 1B: Central Leith Waterfront and LDP EW 1C: Leith Waterfront – Salamander Place as a constrained sites in multiple ownership. However, applications for new housing developments in EW 1B and EW 1C have been granted planning permission (HLA refs: 6040, 4893B, 5993, 6011, 4894.1C, 4894.1D, 4894.1E) others are to be determined at Salamander Street / Bath Road (ref: 21/01663/PPP) and Salamander Street / Salamander Yards (ref: 22/03430/FUL) and pre-application discussions are ongoing at others (Baltic Street / Constitution Street and Edinburgh Dock).

The Education Appraisal CD015 assesses the impact of the constrained sites coming forward because there is evidence of development activity in EW 1B and EW 1C.

The Education Appraisal CD015 assesses the impact of cumulative housing developments in Leith Primary School’s catchment area, assuming a new primary school in the Bonnington area can be delivered when it is required thereby removing some housing sites, and the pupils expected to be generated from them, from Leith Primary School’s estimated peak roll. It found Leith Primary School cannot accommodate the estimated number of pupils expected to be generated from housing developments in its catchment area, when the Bonnington housing proposals were excluded. To accommodate an estimated peak roll of 771 ND PS pupils a 26-class primary school with four general purpose classes would be required. In the Education Authority’s opinion, Leith Primary School cannot be extended to the size required to support all housing developments proposed in its catchment area. Accordingly, a new school and a site for a new primary school is required.

A new 12 class primary school is required to support a roll of 295 primary pupils. The Education Appraisal CD015 acknowledges the catchment area for a new Bonnington Primary School will capture some of Leith Primary School's existing catchment population that may reduce the overall size of a new primary school at Leith Waterfront. It is also acknowledged that there is spare capacity at a neighbouring school, Hermitage Park Primary School, that could also be used to reduce the size of a new primary school or potentially the requirement for a new primary school at Leith Waterfront. However, the delivery of the new primary school at Bonnington is not secure and is outwith the control of the developers of EW 1B and EW 1C. Furthermore, a catchment change is a separate statutory consultation process that affects existing school communities and, in the view of the Education Authority, cannot be prejudiced by proposed housing developments. Accordingly, while there may be alternatives to a new primary school at Leith Waterfront they are dependent on the delivery of other infrastructure elsewhere and a separate statutory process that cannot be undermined by assumptions that suit housing developers.

It is recognised the operational port is not a suitable location for a new primary school and the proposed school site is indicative only. However, to support the cumulative effect of further housing developments in EW 1B and EW 1C a safeguarded site for a new primary school is required. **No modification proposed.**

**EWE4 - West: Additional Primary School Capacity Turnhouse Road (SAICA)  
Place 16 West Edinburgh Secondary School mitigation**

**EWE5 – West: Additional Primary School Capacity  
Place 16 West Edinburgh Secondary School mitigation**

West Craigs Limited (0472), Edinburgh Airport Limited (0761), Crosswind Developments Limited (0184), Ryden LLP (0578), SAICA (0590)

These sites are currently aligned to Corstorphine Primary School which was extended to 21 classes (630 capacity) in 2017, along with a new 50 place ELC setting. The school site is 0.63 ha and cannot be extended further.

The new primary school located in LDP (2016) CD039 HSG 19: Maybury was designed to serve and is wholly required to accommodate pupils expected to be generated from HSG 19: Maybury and HSG 20: Cammo. Using latest pupil generation rates set out in the education appraisal and data from the housing land audit, cumulatively the sites are expected to generate 650 ND PS pupils.

Table 6: ND PS at HSG 19 and HSG 20

Housing site	Dwellings	ND PS
HSG 19: Maybury	1,780	517
HSG 20: Cammo	656	133
<b>Total</b>	<b>2,436</b>	<b>650</b>

The working capacity of a 21-class primary school is 630 pupils. The new school has been designed to provide a range of collaborative, flexible, learning and teaching spaces. If a peak of 650 is reached, then some of the 21 classes may require two teachers, known

as team teaching, in line with pupil/teacher ratios. The proposed learning and teaching spaces, including the outdoor space, has been designed to complement team teaching.

The proposed SAICA site is forecast to generate 141 ND PS and the adjacent site at Turnhouse Road is expected to generate 37 ND PS based on the housing capacity and mix assumptions provided by Planning, which are a medium-high density of 100-175 dwellings per hectare and a housing mix of 12% houses and 88% flats. The new primary school in HSG 19: Maybury cannot be extended without compromising the learning and teaching environment that has been designed. Accordingly, the estimated primary pupils expected to be forecast from the Turnhouse sites cannot be accommodated in Corstorphine Primary School or the new primary school in HSG 19: Maybury.

The Education Appraisal CD015 identifies the east coast railway line, Edinburgh Gateway Station and the tram depot as significant barriers to the other housing proposals in West Edinburgh. In the absence of a West Edinburgh master plan and phasing plan that details how and when West Edinburgh will be developed, including cross boundary links between sites H59, H60, H61, H62, H63 demonstrating a new primary school will be accessible using an attractive walking or cycling route and delivered in time to accommodate primary pupils from H59 and H60, it is necessary to safeguard a site for a primary school at Turnhouse. The airport itself does not prevent this safe and pleasant access being possible.

The Council is satisfied adequate consultation has taken place to date, with responses received from key stakeholders including the Airport on this Proposed Plan itself.

The Education Appraisal CD015 has not been based on the specific unit composition in planning application (ref. 20/03210). The Council refused this planning application and this is currently at appeal (ref. PPA-230-2333). City Plan has a different expectation of unit composition that should be delivered on this site and this is what the Education Appraisal is based on. The education appraisal does not specifically require a primary school on the Crosswinds site. Three ND primary schools and one RC primary school are required to serve the cumulative estimated pupil generation from developments at IBG, Crosswinds, Land adjacent to Edinburgh Gateway and Edinburgh 205. The education appraisal explains the location of new schools and their catchment areas will be determined in line with emerging masterplans and phasing plans of the area. **No modification proposed.**

#### Spare capacity at other West Edinburgh Primary Schools

It is acknowledged that other primary schools in the West Edinburgh Zone have spare capacity, but they are not located in a position to serve the proposed developments. Any catchment change will affect the existing population and will likely mean that existing residents will be expected to travel further to reach their new catchment school, for example both Blackhall Primary School and Roseburn Primary school are separated from existing settlements by Corstorphine Hill. In addition, catchment changes at Carrick Knowe, Clermiston, Blackhall primary schools will also affect high school catchment areas because they are not currently aligned to Craigmount High School. Catchment change is a separate statutory consultation process that, in the view of the Education Authority, cannot be prejudiced by proposed housing developments.

It is acknowledged that H62 'Land adjacent to Edinburgh Gateway' is located close to the new primary school in HSG 19: Maybury. However, as explained above, there is no spare

capacity at that school or the existing catchment school, Corstorphine Primary School. H62 is expected to generate 66 ND PS based on the housing mix and capacity assumptions provided by Planning. It is adjacent to other West Edinburgh Sites that cumulatively are expected to generate 1,692 ND PS pupils, the equivalent to two 21-class primary schools and one 15-class primary school which collectively would have capacity for 1,694 pupils.

The education authority is consulting the school communities aligned to Craigmount High School to develop a learning estate strategy for West Edinburgh that will inform any future statutory consultation process. Through this process it will be determined whether Craigmount High School is permanently extended to accommodate pupils from the new primary school in HSG 19: Maybury or if it will temporarily extended to accommodate pupils until a new high school in West Edinburgh, is delivered. The capacity of Craigmount High School would be extended to 1,800 to accommodate pupils from the new primary school in HSG 19. The education authority does not consider the school could be extended beyond 1,800. Accordingly, any new non-denominational primary school in West Edinburgh will be aligned to a new West Edinburgh High School and housing proposals in West Edinburgh will need to demonstrate the necessary infrastructure will be delivered when it is required. **No modification proposed.**

#### **EWE12 - West: Additional secondary school capacity (The Royal High)**

The Davidson's Mains and Silverknowes Association (0454), Police Scotland / Scottish Police Authority (0659)

The Education Appraisal CD015 identifies the Royal High Secondary School's roll is projected to exceed its notional capacity by 268 ND SS pupils, of which, housing developments in the Royal High Secondary School's catchment area are forecast to generate two additional ND SS pupils.

Appendix 3 of the Education Appraisal CD015 sets a per pupil cost for additional secondary school capacity at £52,609 per pupil (Q2, 2021), excluding land costs and servicing and remediation costs. Accordingly, developments in the Royal High Secondary School's catchment area are expected to contribute towards the costs of providing two additional places at the Royal High Secondary School, the Council will be responsible for the remainder of the costs. **No modification proposed.**

#### **LG5 and ELG 6 –Gracemount HS and Liberton HS: Additional Secondary school capacity, New High School at Frogston Road**

Bo Adams (0363), Robyn Kane (0091)

The Education Appraisal CD015 finds there is spare capacity at Gracemount and Liberton High Schools to accommodate some of the additional pupils that would be generated from new housing developments in their catchment areas but both schools will need to be extended to accommodate the forecast growth.

Frogston Primary School is aligned to Gracemount High School and the education appraisal identifies an extension to Gracemount High School is required as opposed to a new high school. It is noted the undeveloped land along Frogston Road is designated as

green belt therefore a new high school would not comply with City Plan policy Env 18: Development in the Green Belt and Countryside.

**No modification proposed.**

### **Extension to Newcraighall Primary School**

#### Newcraighall LLP (0466)

On the 12 March 2020, the Council approved the relocation of Newcraighall Primary School to the new primary school site located in HSG 29: Brunstane.

Given that the Council's intentions are not the only factor that determines if/when the new primary school shall proceed and be able to fully remove the need for the current school then the Council considers the existing safeguard should be retained. **No modification proposed.**

#### Newcraighall Heritage and Residents Association (0759)

The site does not need to be designated as open space in order for it to be treated as open space in terms of policy Env 23 'Protection of Open Space'. This is set out in paragraph 3.138. **No modification proposed.**

### **Additional denominational primary and secondary capacity**

#### Police Scotland / Scottish Police Authority (0659)

The Education Appraisal CD015 explains that denominational schools have cross boundary impacts that can affect more than one contribution zone. The citywide Roman Catholic/non-denominational split shows an approximate 13% value for RC at both primary and secondary levels, this value has been applied to the ND/RC pupil generation ratios for housing developments. **No modification proposed.**

### **Existing Capacity of the Learning Estate**

#### CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), West Town Edinburgh Ltd (0660)

Circular 3/2004 'Guidance on Determining School Capacities' CD121 states it is for education authorities to determine school capacities and the Scottish Government's Guidance on Determining Primary School Capacity (October 2014) CD124 continues to recognise that "it remains a Local Authority responsibility to choose how they calculate capacity in their areas".

Representations claiming the Council does not 'adopt' the Scottish Government's Guidance on Determining Primary School Capacity (October 2014) CD124 are mistaken.

The capacity of the learning estate is informed by the Circulars and Guidance and the education authority's experience on class organisation to ensure there is capacity to accommodate each stage based on P1 and S1 intakes. Maximum class sizes are in line with legislation and teachers' terms and conditions. An example of class organisation based on rolling forward P1 intakes across all stages is outlined in appendix 1: Primary School Class Organisation. CD177

The notional capacity of the secondary school estate takes cognisance of core facilities such as assembly hall and dining areas along with curriculum opportunities.

When assessing whether there is capacity on an existing school site the size of the school site and the requirements of the School Premises (General Requirements and Standards) (Scotland) Regulations 1967 (as amended) CD109 have been considered.

Any future changes to maximum sizes for classes, hours allocated for specific subjects (e.g., physical education) and entitlement to school lunches will affect the overall capacity of a school. **No modification proposed.**

### **Education Appraisal Methodology**

Various Representations: Wright PDL (0078), Defence Infrastructure Organisation (0124), CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660), APS Group (Scotland) Ltd (0518), Miller Homes Limited and Wheatlands Farming Partnership (0592), Barratt David Wilson Homes (0677), Steven Loomes (0767), Homes for Scotland (0404)

### **Pupil Generation Rates (PGR)**

The Council's PGR are based on the actual number of pupils that have been generated from new housing developments across the city. The latest published study covered a 14-year period, identifying the peak year for pupil generation in each sample development to set a city wide average. It indicates the proportion of dwellings that are likely to have primary or secondary school aged children at any one time and not the total number of pupils that will be generated from it. Peak pupil numbers are used to inform the city wide average because the Council needs its learning estate to be capable of accommodating peak cycles.

The Council's PGR are evidenced based and demonstrate a clear relationship between housing developments and the requirement for additional infrastructure to mitigate the cumulative impact of pupil generation from new housing developments. The assessment studied the number of pupils being generated from more than 50 developments across the city representing nearly 4,000 houses and 8,000 flats over a period from 2005 to 2020 and is provided for transparency, appendix 2: Pupil Generation Rates Assessment. CD178

The Council will continue to review the PGR regularly and will review infrastructure requirements accordingly. Respondents stating the Council's PGR are overstated have not provided any evidence or data to demonstrate why it should be lower. The PGR used by other local authorities may not necessarily differentiate between flats and houses and therefore are not a suitable comparison.

The education appraisal identifies spare capacity where it exists when assessing what additional accommodation is required. A cumulative assessment is carried out based on school catchment areas to determine the total number of additional pupils that will be added to a school's catchment population. The education appraisal will inform the actions, costs and contributions that will be set out in Planning Guidance. Per unit rates, based on the cumulative number of dwellings that contribute to the requirement for additional

infrastructure will be set to ensure each dwelling makes a proportionate contribution towards additional accommodation in the learning estate. **No modification proposed.**

### **Consequences of Inaccuracy**

The Council's Capital Investment Programme CD085 includes significant funding for education infrastructure and delivery is often planned in phases to review the requirement for it and provide only what is necessary. It is not in the Council's interest to overstate the requirements for additional education infrastructure that will increase the Council's carbon footprint and budget responsibilities for initially financing and managing and maintaining in the long term.

The Council has one opportunity to secure the funds necessary from developers to deliver education infrastructure, when a planning application or appeal is granted. In contrast, developers can apply to modify agreements they have previously signed up to and will have funds returned to them if they are not spent within the period prescribed in the legal agreement. The Council has no recourse to acquire funds from developers to fund any additional education infrastructure required to accommodate the pupils generated by their developments if what is initially provided is insufficient.

Developers are expected to pay for, or contribute to, additional education infrastructure that would not have otherwise been necessary to ensure the cumulative impact of development can be mitigated. If the amount secured from developers proves insufficient, the Council will be required to meet the funding gap. Having to secure capital funding through the Council's budget setting process for additional education infrastructure which is attributable to housing developments takes resources away from other Council priorities and projects.

For example, Kirkliston experienced substantial housing growth affecting one non-denominational primary school, Kirkliston Primary School. Two housing developments recently affected its catchment population: RWELP HSP 3: CD086 Kirkliston Distillery located to the south of the village and LDP HSG 3: CD039 Queensferry Road located to the north.

To mitigate the impact of new housing developments Kirkliston Primary School was extended from a 14-class primary school (working capacity 420) to a 19-class primary school (working capacity 546). The extension was completed in 2017. The Council received £4.147m in developer contributions for the extension which cost £5.739m to deliver.

Since then, pupil generation from the new developments (which were based on average rather than peak generation) has exceeded estimates and a four-class temporary unit has been delivered at a cost of c. £575k while a permanent solution to its accommodation pressure is developed and delivered.

To permanently address accommodation pressure at Kirkliston Primary School an annexe will be built on one of the playing fields at Kirkliston Leisure Centre to provide additional primary places at an estimated cost of £6m. Accordingly, the total cost of developing primary school provision in Kirkliston to meet demand for places from pupils generated by new development has been £12.314m with developers contributing only £4.147m.

In the absence of an alternative school or Council owned site the annexe will result in the loss of land used as open space and for outdoor sports. The education authority would not want to replicate the loss of open space and/or outdoor sports grounds across the city because of a failure to secure the necessary infrastructure to support pupil generation from new housing developments.

The example in Kirkliston demonstrates the issues the Council must address when insufficient funding for infrastructure is not secured from the outset. **No modification proposed.**

### **Projection Methodology**

As Education Authority, the Council is responsible for ensuring there are sufficient places in schools, including early learning, for all children.

There is no national policy or guidance directing how education authorities assess future demand for early learning and school places. However, the Council liaises with other local authorities on school roll projection methodologies and what applies to one authority does not always apply to another. Pupil generation and school attendance patterns in other authorities will not necessarily be comparable with those in Edinburgh. There will be different variables that need to be considered.

There are inherent matters such as personal circumstances, choices and decisions along with external factors such as geopolitical and global issues that make modelling human behaviour complex; therefore, school roll projections are not an exact science. Accordingly, as is the case with any population or financial market projection, the Council's school roll projections can only provide a guide to future school pressures. They, along with school capacity figures, are an early warning system which are designed to prompt closer investigation of a potential accommodation issue.

School roll projections are updated annually to ensure they are produced based on the best available information. They are informed by the following:

- Catchment population data, including births, P1 intake and S1 intake
- National Records of Scotland (NRS) CDN13918 population projections\*
- Historic patterns of attendance
- Pupil generation from new housing developments using programmed completions from the Housing Land Audit\*\* CD056

\* NRS update their population projections every two years with a two year lag. The 2020 projection was published on 1 March 2022 CD140. The NRS acknowledge their population projections have limitations; they explain "*A projection is a calculation showing what happens if particular assumptions are made. The population projections are trend-based. They are, therefore, not policy-based forecasts of what the government expects to happen. Many social and economic factors influence population change, including policies adopted by both central and local government. The relationships between the various factors are complex and largely unknown. The reliability of projections decreases over time, and projections tend to be less reliable in periods of rapid change... Projections of the number of adults (particularly elderly people) are usually more reliable than those for children because they are based on people who are already living in Scotland.*"

(<https://www.nrscotland.gov.uk/statistics-and-data/statistics/statistics-by->

theme/population/population-projections/uses-and-limitations-of-population-projections).

The proposed City Plan was published for consultation in September 2021. It is not approved policy and therefore the housing growth and subsequent population growth will not inform 2020 NRS population projection.

The NRS 2020 projection was not available for the projection published in the Education Appraisal (September 2021) or the 2021 annual school roll projection (February 2022). The 2018 NRS population projection for the City of Edinburgh Council local authority area was used to inform both projections.

**\*\* Housing proposals in the proposed City Plan will not be added to annual projections until it is adopted or planning permission is granted for specific proposals. Accordingly, annual projected rolls may show capacity in catchment schools however they do not take account of the urban area growth proposed by City Plan.**

The Council acknowledges that, like the limitations of NRS population projections, annual school roll projections are a snapshot from a point in time that cannot take account of changes in trends, such as birth rates, because they simply project forward past trends. School roll projections are also susceptible to future changes in patterns of attendance which may be driven by other external factors, such as public perception of a school or the popularity of neighbouring schools. They cannot take account of changes in the choices people make about attendance of Roman Catholic schools or Gaelic Medium Education. They cannot account for changes in Council or Government education policy or changes in financial circumstances which might, for example, result in changes in the percentages of pupils attending the independent sector.

For this reason, projections, and the PGR on which they are based, may be subject to change, and the further out projections extend, the less reliable they are likely to become. The production of annual roll projections incorporating the latest birth, catchment population and housing data means that, over time, projections should reflect shifting trends but this means they take time to reflect the impact of changes that may take place quite suddenly such as the opening of a new school or a change of catchment.

The education appraisal CD015 explains that Figures 1a and 1b show actual school rolls across the estate based on school census information from 1985-2020 and two sets of projected rolls; (1) showing the annual projection published in March 2021 which includes housing developments in the HLA CD056 (LDP 2016 CD039) and (2) showing the 2020 projection that is appended to the education appraisal where pupil generation from housing developments have been removed. Both projections are created using the same methodology, albeit one includes pupil generation from housing developments, and the other removes pupil generation from housing developments.

Contrary to the assertions from some representations, the Council's projection methodology does take account of children passing through the school system and the phased build out of housing when it is known and included in the Housing Land Audit CD056. What the representations appear not to understand is that, as explained above, the PGR represents the number of pupils that are expected to come forward at any one time and not the total number of pupils that a particular site will generate.

The education appraisal differs from the appraisal that supported the 2016 LDP CD039.

1. The baseline projection, excluding pupil generation from housing developments is included. A peak roll has been used to establish a baseline because, in the education authority's experience, school rolls are cyclical, and the Council needs to ensure its learning estate can respond to the peaks and troughs in population change evidenced in Figures 1a and 1b of the education appraisal.
2. Spare capacity in the existing learning estate is identified and the requirement for additional accommodation takes cognisance of any spare capacity that may exist.

The education appraisal continues to assess the cumulative impact of housing developments in school catchment areas to determine what additional infrastructure is required. School catchment areas are used to establish contribution zones and sub-zones. Accordingly, where additional infrastructure is required it will be directly linked to the school catchment area the proposed site is located in.

Arguments against providing necessary infrastructure to support new housing developments because there is theoretical capacity in the future do not, in the Council's opinion, justify not making a contribution towards additional education infrastructure when it is demonstrated that peak rolls cannot be accommodated without it, particularly when, in the Council's experience, projected rolls are less reliable the further they extend. It is not clear how the representations intend to accommodate peak rolls by solely relying on a theoretical future capacity.

Accordingly, the Council's assessment of the infrastructure needs from housing developments proposed in the City Plan use school roll projections as a guide but are based, most crucially, on its experience as an Education Authority accommodating changing populations. This means considering the long-term impact of a new development on a catchment population that will move in cycles lasting ten years at a time.

The education appraisal CD015, in the view of the education authority, has sufficient information to understand where capacity exists in the existing learning estate, what the peak generation from an existing catchment population may be, how many pupils are expected to be generated from housing developments across the city and what infrastructure is required to support that growth.

The education appraisal CD015 sets out the infrastructure required to support growth across the city using the latest pupil generation rates and best available data from projected rolls and housing output assumptions provided by Planning on the capacity of proposed sites and housing mix. **No modification proposed.**

### **Infrastructure Delivery; detail of proposed actions and alternative options**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), APS Group (Scotland) Ltd (0518), Ryden LLP (0578), Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660), Archie Clark (0003), Gemma Spears (0081), Robyn Kane (0091).

### **EWE3, EWE9, EWE10, EWE12**

Cramond & Barnton Community Council (0243)

The education appraisal CD015 sets out where there is spare capacity and where additional ELC, primary or secondary capacity is required to mitigate the impact of forecast pupil generation from new housing developments on the existing learning estate, based on its current catchment areas.

The education authority requires the actions to be flexible to achieve their aim of creating additional capacity in the ELC, primary and secondary estate. This is because, particularly with respect of new schools and any changes to existing catchment areas, a separate statutory consultation with existing school communities is required and the proposed City Plan and its education appraisal should not prejudice that process.

Before a statutory consultation can be carried out for a new school, the new school site has to be known to determine its catchment population to establish the affected communities. The statutory consultation process takes around six months to conclude depending on school holidays and committee cycles. The time to transfer land, design and build a new school (approximately four years) needs to be taken into account when planning the phasing of sites to ensure infrastructure is available when it is required. It is acknowledged the outcome of this separate statutory process may require a revision to the education infrastructure requirement.

When extending existing schools, the education authority consults the affected school community to develop a solution. The precise details of a refurbishment or an extension cannot be finalised without input from a design team and the school community. It would not be reasonable or feasible to appoint design teams and engage with all schools and their communities on how their school could be extended or refurbished to provide additional capacity for pupils estimated to be generated from housing developments that form part of a proposed LDP. The education appraisal provides a high-level assessment of the additional capacity required and the schools affected.

The education authority recognises there may be opportunities to reduce the scope of the actions identified in the education appraisal. However, this is predicated on the delivery of other infrastructure at the appropriate time to ensure capacity is available when it is required.

For example, in West Edinburgh the requirement for a new 7-class primary school could be removed if accessible, safe routes to a new primary school from H59: Land at Turnhouse Road (SAICA) to another West Edinburgh site can be delivered at the appropriate time. However, until a West Edinburgh Master Plan and phasing plan is prepared it cannot be assumed that the necessary infrastructure to support housing development at H59: Land at Turnhouse Road (SAICA) and H60: Turnhouse Road can be delivered at the appropriate time.

Similarly, the requirement for a new primary school at Leith Waterfront could be removed if a new primary school is delivered in the Bonnington area and a catchment change with Hermitage Park Primary School can be delivered at the appropriate time.

The delivery of the infrastructure required will be determined when the phasing and programming of new housing developments is known to ensure it is delivered at the appropriate time and will be reviewed annually in line with projected rolls and the Action Programme.

Accordingly, the education appraisal strikes a balance between identifying the infrastructure required to deliver the additional capacity necessary but retaining the flexibility to deliver the infrastructure in consultation with existing communities. **No modification proposed.**

### **Financial Contributions**

Stirling Developments Limited (0303), Ryden LLP (0578)

The Education Appraisal CD015 is an assessment of the infrastructure required to mitigate growth arising from additional pupils from new housing developments. Per unit rates will be set out in non-statutory guidance and reviewed and updated as part of annual reporting of the LDP Action Programme. **No modification proposed.**

### **Action Summary Table and Cost Schedule**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649), Police Scotland / Scottish Police Authority (0659), West Town Edinburgh Ltd (0660), Barratt David Wilson Homes (0677)

The cost schedule in the Education Appraisal CD015 is based on the Council's experience awarding contracts to extend existing primary and secondary schools and to build new primary and secondary schools. The costs reflect the Council commitment to deliver low energy, high quality, Passivhaus buildings. The requirement for all new buildings (including school extensions where possible) to meet Passivhaus standard is set out in the Council's Business Plan CD085.

The costs include provision for fees, furniture, fixtures and fittings but *exclude* any land acquisition costs and/or any site specific costs which would be established once sites have been determined. These costs also *exclude* future cost inflation. Infrastructure contributions will be index linked based on the increase in the BCIS Forecast All-in Tender Price Index. Indexing will not be applied to land costs.

Retaining contingency within a capital project (the budgets for which the cost schedule represents) is standard practise and is necessary to mitigate the impact of unexpected costs. The scale of the contingency applied (5% or 10%) is dependant on the scale of the project.

For transparency, Schedules of Accommodation CD179 for primary schools are provided at Appendix 3.

The floor areas for primary school extensions are all based on standalone extensions. The 4-classroom extension is based on the floor area of the new extension at Sciennes Primary School; the 3-classroom extension and 2-class extensions are based on buildings delivered through the Council's Rising Rolls 3 scheme.

The base cost for an extension of £5,365 sqm comes from the Stage 2 Cost report in March 2021 for the 4-classroom extension at Sciennes Primary School. This project was used as a benchmark for extension costs as the design already includes the required Passivhaus standard and therefore no additional costs are added for quality requirements.

It should be noted that given the significant cost increases experienced across all sectors it is likely that the costs in the education appraisal will increase as part of the next Action Programme to reflect the Council's more recent experience delivering capital projects.

All site areas for new infrastructure are based on statutory requirements set out in the Schools Premises Regulations, 1967 as amended CD109.

The value of the land will be determined by the district valuer and the cost of the land will be shared proportionally between developments that are located the relevant contribution zone or sub-zone. The value of the land will be credited against the site's overall education infrastructure contribution. The costs for servicing and remediating the land will be estimated by a quantity surveyor. However, these costs can only be set out when the land for a new school is known.

The delivery of the education infrastructure will be set out when the phasing of housing developments is known. **No modification proposed.**

#### **Clydesdale / Cleland garage sites**

Not available

The Davidson's Mains and Silverknowes Association (0454)

This site was refused planning permission for residential development (ref: 20/01410/PPP) and it is not identified as an 'other land' housing site in the proposed City Plan or in the latest Housing Land Audit CD056. The education appraisal only assesses sites in the latest Housing Land Audit and in the proposed City Plan. **No modification proposed.**

<b>Provision of the development plan to which the issue relates:</b>	Policy Inf 3 Infrastructure Delivery and Developer Contributions	
<b>Planning authority's summary of the representation(s):</b>		
<p><b><u>Inf 3. Infrastructure Delivery and developer Contributions.</u></b></p> <p><u>University of Edinburgh (0464)</u></p> <p>Important that a proportionate response is adopted and reflects the significant investment and contribution to the economy that the University activity already makes. Counterproductive to burden University projects unnecessarily with generic contribution requests where this would limit the ability to deliver the best out of proposals and to meet wider University and City Council aims and objectives.</p> <p>Important that this topic is given appropriate focus in the development of the plan content, and thereafter any revised guidance. Clarity of approach is critical to provide certainty on the criteria and application of any requirements, and the University would welcome further involvement and consultation on new Guidance.</p> <p><u>Barratt David Wilson Homes (0677), Homes for Scotland (0404), Wright PDL (0078), Steve Loomes (0767).</u></p>		

To what extent has this been scoped? To allocate the additional sites, and to not allocate others, must have been informed by an evidence-gathering process in this regard. Has this Policy been informed by background work?

It will be important to establish the cost of compliance here, and whether viability has been considered. Has the Council considered the impact of cumulative costs? Is there a commitment to closing potential funding gaps (e.g., NHS Lothian)?

Contributions need to be fairly and reasonably related to what is proposed and must be necessary for the development to proceed. It will be important that the Council avoids a situation where the delivery of early phases of large sites are stalled because all the land necessary for such connections is not in the applicant's control.

New development can and should only contribute to what is fairly and reasonably related to the development which is proposed as established in Circular 3/2012 and the Elsie Supreme Court judgement ([2017] UKSC 66). It will be necessary to support a phased approach to provision so requirements do not prevent the delivery of larger sites where early phases in single ownership can be delivered. It will also be essential that those preparing place briefs involve developers, fully understand land ownership and take a pragmatic, delivery focused approach.

It is important that Policies are drawn up with a clear knowledge of how they will cumulatively impact upon developments. Presenting applicants with an irreconcilable set of policy asks creates uncertainty and adds complexity and risk to the planning application process.

Information has been requested by HFS to demonstrate the evidence behind the updated pupil per house/flat rates in the Education Appraisal. This information has not been provided by then Council. Without this information, the Education Appraisal is not considered robust, and consultees are not in a position to provide fully informed representations.

Information was also requested by HFS to seek an analysis of the new LDP sites, and impact of allocating these sites on the education estate and the relationship with new education infrastructure mitigation set out in the Education Appraisal. The information provided in response did not allow for a robust analysis to be undertaken. As such, the Education Appraisal is not considered robust, and consultees are not in a position to provide fully informed representations.

#### Homes for Scotland (0404), Steve Loomes (0767)

Home builders and other delivery partners need clarity at the Plan stage on what infrastructure will be expected to be provided through new development. Any developer obligations related to infrastructure requirements must be properly justified having regard to policy. They should be able to be viably delivered.

The Council needs a clear awareness of and strategy for any land assembly work required for the delivery of the desired infrastructure, so it avoids a situation where the delivery of early phases of large sites is stalled because all of the land necessary for a such connections is not in the applicant's or the Council's control. The Council also needs to be aware of the realistic costs and timeframe of this process.

Issues such as education transport and other infrastructure need to be led by expert advice and evidence.

There are concerns that, with regards to education, the Council appears to have adopted the same approach to contributions as the previous guidance, which Ministers rejected.

#### Telereal Trillium (0540)

Change to policy is requested to allow viability-constrained sites to present a site-specific case to prove further evidence on site challenges and viability/implementation by reason of various factors including: threshold land value, profit margins impaired, historic infrastructure and future site clearance requirements.

The additional policy would help to deliver some larger urban brownfield sites and avoid an over-rigorous policy approach which could jeopardise the delivery of these sites. Matters of threshold land value and legacy site costs have to be aired in the planning process, in order to effect the implementation of a brown-field led plan.

#### Stewart Milne Homes (0118), BDW Trading (0350), Taylor Wimpey (0200)

Not enough information has been provided to assess this policy. Important supporting information should be made available for comment and to allow assessment. There is no evidence to demonstrate the Council has considered the cost of compliance.

It is important that Policies are drawn up with a clear knowledge of how they will cumulatively impact upon developments. Presenting applicants with an irreconcilable set of policy asks creates uncertainty and adds complexity and risk to the planning application process. New development can and should only contribute to what is fairly and reasonably related to the development which is proposed.

#### HUB Residential (0582), Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazeldene House Limited (0695).

Support in principle, however, the proposed planning guidance and contribution zones and levels should be subject to consultation with the development industry and the methodology should be clear. New development can and should only contribute to what is fairly and reasonably related to the development which is proposed

#### Transport Scotland (0480)

It is a commitment within the Edinburgh and South East Scotland City Region Deal (ESES CRD) to produce a Developer Contributions Framework based on the outputs of the Cross Boundary Study (2017). This commitment is reflected in the draft NPF4. There has not been further progress on this work to date and the Proposed Plan does not provide any further information. Cross boundary impacts have not been appraised or detailed within the Proposed Plan or Transport Appraisal.

The ESES CRD states:

2.52 Partners will put in place a Regional Developer Contributions framework based on the work currently being led by SESplan (the strategic development planning authority for Edinburgh and South-East Scotland) and findings of the Cross-Boundary Study, published

in 2017. These interventions and commitments, taken with the additional transport investment to enable the innovation and housing projects, will help ensure the city region continues to grow and flourish.

Within the Proposed Plan Policy Inf 4 Provision of Transport Infrastructure states; Development proposals relating to housing or other development sites which would generate a significant amount of trips, shall demonstrate through an appropriate transport assessment or statement, and proposed mitigation that:

a. Identified\* local, city-wide and cross boundary individual and cumulative transport impacts can be timeously addressed where this is relevant and necessary for the proposal.

Policy Inf 3 Infrastructure Delivery and Developer Contributions details a “cross-boundary delivery mechanism” and “for strategic infrastructure projects of regional significance, the Council will continue to work with partners across the region for an approach to funding.” Transport Scotland do not consider it an acceptable position for cross boundary impacts to be assessed by developers when submitting planning applications as detailed within Policy Inf 4 given the commitment made in the ESES CRD as reflected in draft NPF4.

Policy Inf 3 refers to a cross boundary delivery mechanism, however, no detail is provided on what this is and no specific details on funding are provided.

It is recommended that reference to cross boundary impacts is removed from Policy Inf 4 ‘Provision of Transport Infrastructure’ as the planning application stage is not an appropriate time where cross boundary impacts should be identified and appraised. It is not the responsibility of the developer to identify plan wide cumulative cross boundary impacts.

#### Stirling Developments Limited (0303)

Support the principles of the policies in this section albeit, request further detail on how CEC considers this can be delivered. Detail is sought on developer contributions and viability.

#### Suzanne McIntosh (0409)

Council needs to be more specific in the timing of the provision of infrastructure in relation to phased larger developments and retain tight control and enforcement of this. We have not seen that to date, especially in the developments on the south side of the city. Please ensure this is addressed in the plan.

#### Crosswind Developments Ltd (0184)

Object to the requirements of Policy Inf 3.

Not clear that point “e” is aligned with the findings of the Supreme Court in terms of Aberdeen City and Shire Strategic Development Planning Authority v Elsick Development Company Limited. (New development can and should only contribute to what is fairly and reasonably related to the development which is proposed).

#### Living Streets Edinburgh Group (0486)

Support the thrust of the policy, but there is no mention of securing contributions towards pedestrian infrastructure. Any development which generates additional pedestrian movements which did not exist previously has an impact on surrounding

pedestrian infrastructure. This impact can be material.

It is legitimate to require contributions if there is a demonstrable link between development and infrastructure. The alternative is not to allow development in cases where existing pedestrian infrastructure is inadequate.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Ltd (0649)

Planning obligations should meet all five policy tests of Circular 3/2012, which should be reflected in the Proposed LDP Policy Inf 3 Infrastructure Delivery and Developer Contributions.

Circular 3/2012 is clear that planning obligations need to be rooted in the development plan. Given that details of planning obligations are not included in the development plan, they must be included in statutory supplementary guidance which would form part of the development plan once adopted. It would not be appropriate for planning obligations to be set out in non-statutory guidance, which would not form part of the development plan or be subject to the same level of scrutiny.

Details of planning obligations should have been included in the Proposed LDP for consultation, as it is unclear whether the Council will be able to bring forward supplementary guidance before Section 22 of the 1997 Act is repealed and any subsequent transitional period. Particularly given the Council's previous difficulties adopting supplementary guidance, where it was directed by Scottish Ministers not to adopt its Supplementary Guidance on Developer Contributions on a number of occasions.

CoMoUK (0728)

The policy should include developer's contributions to shared transport schemes in the schedule of infrastructure shown. This will ensure and enable shared transport allocations in new developments.

Newcraighall LLP (0466)

It is unclear what is meant where Policy Inf 3 states that, 'Where, by the nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions will be sought.' The nature of the infrastructure should be defined, and if it cannot be delivered by the developer directly, it should be clarified how developer contributions are to be sought. Any developer contributions must be imposed according to the tests set out in the relevant Scottish Government Circular.

The Davidson's Mains and Silverknowes Association. (0454)

The principle that new development will only be supported where it can be demonstrated there is infrastructure capacity to absorb the additional impact of the new development is fully supported but the application of the principle needs to be significantly strengthened.

Developments have been approved where the existing main road infrastructure had already been operating at capacity and yet the proposed mitigations included in the Plan and the associated City Mobility Plan are minimal. The congestion causes serious air

pollution.

Grange/Prestonfield Community Council (0192)

Points out the limited scope of City Plan 2030 to bring about the necessary infrastructure on a city-wide basis. The LDP can only facilitate developer contributions in new development and not the required investment elsewhere.

West Town Edinburgh Limited (0660)

It is assumed that any developer contributions towards PT1 will be proportionately determined considering any public transport infrastructure that may be delivered as part of an individual development proposal. Similar points should be noted in respect of transport proposal PT4 – West Edinburgh A8 public transport corridor.

**Modifications sought by those submitting representations:**

**Inf 3. Infrastructure Delivery and Developer Contributions.**

University of Edinburgh (0464)

No modification specified but it is indicated that it is Important that this topic is given appropriate focus in the development of the plan content, and thereafter any revised guidance. Clarity of approach is critical to provide certainty on the criteria and application of any requirements, and the University would welcome further involvement and consultation on new Guidance.

Barratt David Wilson Homes (0677), Homes for Scotland (0404), Wright PDL (0078), Steve Loomes (0767).

No modification specified but questions are raised to what extent the policy has been scoped? And if it has been informed by background work?

It will be important to establish the cost of compliance here, and whether viability has been considered. Has the Council considered the impact of cumulative costs? Is there a commitment to closing potential funding gaps (e.g., NHS Lothian)?

Contributions need to be fairly and reasonably related to what is proposed and must be necessary for the development to proceed. Those preparing place briefs need to involve developers, fully understand land ownership and take a pragmatic, delivery focused approach being aware of the costs and timeframes.

It is important that Policies are drawn up with a clear knowledge of how they will cumulatively impact upon developments. Presenting applicants with an irreconcilable set of policy asks creates uncertainty and adds complexity and risk to the planning application process.

Homes for Scotland (0404), Steve Loomes (0767)

No modifications specified however it is indicated that home builders and other delivery partners need clarity at the Plan stage on what infrastructure will be expected to be provided through new development. Any developer obligations related to infrastructure requirements must be properly justified having regard to policy. They should be able to be viably delivered.

#### Telereal Trillium (0540)

Additional new policy after Inf 3, on the following lines:

Policy Inf 3 applies to all new development sites across the city but in the case of some brownfield sites with a legacy of on-site infrastructure, remediation, costs/revenue constraints, there will be an opportunity for a site viability/delivery report to be presented to evidence restrictive on-site costs, and a case for relaxation of the normal full infrastructure contribution tariff, if this will help to deliver a significant brownfield housing-led redevelopment.

#### Stewart Milne Homes (0118), BDW Trading (0350), Taylor Wimpey (0200)

There is an Asterisk next to the word mitigation, with no corresponding one to explain what this means. This should be clarified.

No other modification specified but it is indicated that not enough information has been provided to assess this policy. Important supporting information should be made available for comment and to allow assessment. There is no evidence to demonstrate the Council has considered the cost of compliance.

#### HUB Residential (0582), Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazeldene House Limited (0695).

No modifications specified however, it is indicated that the proposed planning guidance and contribution zones and levels should be subject to consultation with the development industry and the methodology should be clear.

#### Transport Scotland (0480)

Further information is requested on the references to a cross boundary delivery mechanism within Policy Inf 3 including the progress and timescales of this work, what infrastructure does it include and the funding and methodology for delivering infrastructure. This should be included in the plan. It is also recommended to include reference to 'Development Principles' within Policy Inf 3 Infrastructure Delivery and Developer Contributions, part a, to embed them within the requirements to be provided by developers.

It is recommended that reference to cross boundary impacts is removed from Policy Inf 4 'Provision of Transport Infrastructure' as the planning application stage is not an appropriate time where cross boundary impacts should be identified and appraised. It is not the responsibility of the developer to identify plan wide cumulative cross boundary impacts.

#### Stirling Developments Limited (0303)

No modifications specified but request further detail on how CEC considers Inf 3 can be delivered. Detail is also sought on developer contributions and viability.

#### Suzanne McIntosh (0409)

No modifications specified but it is indicated that the Council needs to be more specific in the timing of the provision of infrastructure in relation to phased larger developments and retain tight control and enforcement of this in the plan.

Crosswind Developments Ltd (0184)

An amendment to the wording of Policy Inf 3 is set out below:

Proposals will be required to deliver or contribute to the following infrastructure provision where relevant and necessary to mitigate\* any significant negative impact (either on an individual or cumulative basis) and to ensure the proposal can meet the Council's sustainable transport targets (mode share targets) and where commensurate to the scale of the proposed development:

Point (e) Inf 3 should be deleted.

Living Streets Edinburgh Group (0486)

The plan needs to revise how the Council assesses "new infrastructure" i.e. there needs to be assessments to ensure that existing infrastructure meets needs of pedestrians otherwise "new" needs to include upgrading/enhancement. This also has to be co-ordinated with an assessment of what is required across city much of which will not necessarily be picked up by planning proposals. Also, there is a need to assess proposals of all scales and secure proportionate contributions via S75 or upfront payments for a "walking pot".

CALA Management Ltd (0465), Hallam Land Management (0599) Miller Homes Ltd (0649)

Insert at end of policy text:

Developer contributions will require to accord with all of the tests of Circular 3/2012 *Planning Obligations and Good Neighbour Agreements*. Developer contributions required in support of planning applications will have regard to supplementary guidance prepared by the Council but will be considered on a case-by-case basis against all of the tests of Circular 3/2012.

Amend paragraph 3.197 as follows:

Supplementary planning guidance will set out the mechanism for the detailed calculation of proportionate contributions within a contribution zone, as well as any exceptions. It will detail which appraisal identified the impact of development on existing infrastructure capacity and the recommendation of mitigating actions.

CoMoUK (0728)

Propose the wording:

(f) Local scale shared transport infrastructure such as Mobility Hubs that will deliver a shared transport outcome in a development; with reference to Edinburgh City Mobility Plan Policy Movement 16 Shared Transport and Policy Movement 19 Mobility Hubs.

Newcraighall LLP (0466)

The nature of the infrastructure should be defined, and if it cannot be delivered by the developer directly, it should be clarified how developer contributions are to be sought.

The Davidson's Mains and Silverknowes Association (0454).

The principle that new development will only be supported where it can be demonstrated there is infrastructure capacity to absorb the additional impact of the new development needs to be significantly strengthened within the plan.

Grange/Prestonfield Community Council (0192)

Add to para 2.114: "Support for all these strategies is dependent on public investment in a timely and co-ordinated manner to ensure that the developer contributions support and achieve the desired outcome for the city as a whole"

West Town Edinburgh Limited (0660)

No modification specified but it is indicated that it is assumed that any developer contributions towards PT1 will be proportionately determined considering any public transport infrastructure that may be delivered as part of an individual development proposal. Similar points should be noted in respect of transport proposal PT4 – West Edinburgh A8 public transport corridor.

**Summary of responses (including reasons) by planning authority:**

**Inf 3. Infrastructure Delivery and Developer Contributions.**

University of Edinburgh (0464)

Policy Inf 3 notes that proposals will be required to deliver or contribute to the infrastructure provision listed in criteria (a-e), where, relevant and, necessary, to mitigate any negative impact (either on an individual or cumulative basis) and to ensure the proposal can meet the Council's sustainable transport targets and where, commensurate, to the scale of the proposed development.

The Council considers the wording of policy Inf 3 is suitably robust whilst still providing the degree of flexibility that is required when a planning application is being assessed. The importance of the policy is acknowledged. The Council welcomes the offer for further involvement with the University in terms of future guidance. **No modification proposed.**

Barratt David Wilson Homes (0677), Homes for Scotland (0404), Wright PDL (0078), Steve Loomes. (0767)

Part 4, tables 3-10 of the plan sets out the transport proposals to deliver the strategy and policies of the plan. These have been informed by the TA modelling and analysis (CD014), the ESSTS (CD071), CMP (CD062) as well as WETA 2016 Refresh (CD073) and WETIP (CD072).

Policy Inf 3 notes that proposals will be required to deliver or contribute to the infrastructure provision listed in criteria (a-e), where relevant and necessary, to mitigate\* any negative impact (either on an individual or cumulative basis) and to ensure the proposal can meet the Council's sustainable transport targets and where commensurate, to the scale of the proposed development.

The plan clarifies that the identified transport proposals in part 4, tables 3-10 and interventions set out in the Place Policies take into account the cumulative impact with other sites in the plan, from the TA modelling and analysis. Inf 4 requires that proposals carry out further assessment at the planning application stage to further inform any local impacts and to take into account the impact of any windfall sites progressed through the housing policies.

Where necessary to mitigate cumulative impacts, contribution zones will apply. These will demonstrate the direct relationship between development, either individually or cumulatively and the need for that infrastructure. For strategic infrastructure projects of regional significance, the Council will continue to work with partners across the region for an approach to funding.

Paragraph 3.198 states that it is the Council's preference that infrastructure is directly delivered by developers wherever possible. In most cases this will be possible where the land is in the control of the developer or the Council. Where an off-site action is needed on land not controlled by the Council or is an action that addresses cumulative impacts of more than one development, proportionate developer contributions shall be sought. The details of the actions are also set out and shall be updated in the Plan's action programme. (CD008).

Phasing of development has a dependency on landowner and developer decisions and timings. Therefore, the specifics of timing of infrastructure provision where required are part of planning application considerations. Most will be delivered with development and so will follow the delivery and phasing timescale of development at project level. Where development has a dependency on infrastructure provision that will be part of the project level considerations these will be controlled by conditions on the application. Subsequent action programmes will be updated and will provide more detail on delivery timescales as development proposals come forward and are continually informed by the pace of housing completions as evidenced by the Council's annual housing land audit and completions programme. The Council considers the actions and the Plan's strategy to be delivered within the timeline of the Plan.

Paragraph 3.199 states that planning guidance will set out the exceptions and mechanisms for the detailed calculation of proportionate contributions within a contribution zone. It will detail the relationship of development and infrastructure action(s) with its appraisal source for their identification. Developer contributions must be proportionate and attributable to the impacts of the development. All existing and future developer contributions sought will be done in accordance with the requirements of Circular 3/2012 (CD119).

The requirement for those preparing place briefs to involve developers and to take a pragmatic, delivery focused approach being aware of the costs and timeframes is acknowledged. The Council's position relative to healthcare contributions can be seen in Issue 27: Infrastructure Delivery and Developer Contributions. The Council's position

relative to education contributions can be found in Issue 29: Infrastructure Delivery-Education. **No modification proposed.**

Homes for Scotland (0404), Steve Loomes (0767)

Part 4, tables 3-10 of the plan sets out the transport proposals to deliver the strategy and policies of the plan. These have been informed by the TA modelling and analysis (CD014), the ESSTS (CD071), CMP (CD062) as well as WETA 2016 Refresh (CD073) and WETIP (CD072).

Policy Inf 3 notes that proposals will be required to deliver or contribute to the infrastructure provision listed in criteria (a-e), where relevant and necessary, to mitigate\* any negative impact (either on an individual or cumulative basis) and to ensure the proposal can meet the Councils sustainable transport targets and where, commensurate, to the scale of the proposed development.

The plan clarifies that the identified transport proposals in part 4, tables 3-10 and interventions set out in the Place Policies take into account the cumulative impact with other sites in the plan, from the TA modelling and analysis. Inf 4 requires that proposals carry out further assessment at the planning application stage to further inform any local impacts and to take into account the impact of any windfall sites progressed through the housing policies.

Where necessary to mitigate cumulative impacts, contribution zones will apply. These will demonstrate the direct relationship between development, either individually or cumulatively and the need for that infrastructure. For strategic infrastructure projects of regional significance, the Council will continue to work with partners across the region for an approach to funding.

Paragraph 3.198 states that it is the Council's preference that infrastructure is directly delivered by developers wherever possible. In most cases this will be possible where the land is in the control of the developer or the Council. Where an off-site action is needed on land not controlled by the Council or is an action that addresses cumulative impacts of more than one development, proportionate developer contributions shall be sought. The details of the actions are also set out and updated in the Plan's action programme (CD008).

Phasing of development has a dependency on landowner and developer decisions and timings. Paragraph 3.198 states that it is the Council's preference that infrastructure is directly delivered by developers wherever possible. In most cases this will be possible where the land is in the control of the developer or the Council. Where an off-site action is needed on land not controlled by the Council or is an action that addresses cumulative impacts of more than one development, proportionate developer contributions shall be sought. The details of the actions are also set out and updated in the Plan's action programme (CD008).

Paragraph 3.199 states that planning guidance will set out the exceptions and mechanisms for the detailed calculation of proportionate contributions within a contribution zone. It will detail the relationship of development and infrastructure action(s) with its appraisal source for their identification. Developer contributions must be proportionate and attributable to the impacts of the development. All existing and future developer contributions sought will be done in accordance with the requirements of Circular 3/2012 (CD119).

The Council considers the wording of policy Inf 3 to be suitably robust whilst still providing the decision maker the required degree of flexibility. **No modification proposed.**

Stewart Milne Homes (0118), BDW Trading (0350), Taylor Wimpey (0200)

The Council acknowledges that there is a technical error in that there is an asterisk in the first sentence on page 126. This will be removed as a minor drafting matter.

Policy Inf 3 notes that proposals will be required to deliver or contribute to the infrastructure provision listed in criteria (a-e), where relevant and necessary, to mitigate any negative impact (either on an individual or cumulative basis) and to ensure the proposal can meet the Councils' sustainable transport targets and where, commensurate, to the scale of the proposed development.

The plan clarifies that the identified transport proposals in part 4, tables 3-10 and interventions set out in the Place Policies take into account the cumulative impact with other sites in the plan, from the TA modelling and analysis. The plan requires that proposals carry out further assessment at the planning application stage to further inform any local impacts and to take into account the impact of any windfall sites progressed through the housing policies.

Where necessary to mitigate cumulative impacts, contribution zones will apply. These will demonstrate the direct relationship between development, either individually or cumulatively and the need for that infrastructure. For strategic infrastructure projects of regional significance, the Council will continue to work with partners across the region for an approach to funding.

Paragraph 3.198 states that it is the Councils preference that infrastructure is directly delivered by developers wherever possible. In most cases this will be possible where the land is in the control of the developer or the Council. Where an off-site action is needed on land not controlled by the Council or is an action that addresses cumulative impacts of more than one development, proportionate developer contributions shall be sought. The details of the actions are also set out and updated in the Plan's action programme (CD008).

Paragraph 3.199 states that planning guidance will set out the exceptions and mechanisms for the detailed calculation of proportionate contributions within a contribution zone. It will detail the relationship of development and infrastructure action(s) with its appraisal source for their identification. Developer contributions must be proportionate and attributable to the impacts of the development.

All existing and future developer contributions sought will be done in accordance with the requirements of Circular 3/2012 (CD119). **No modification proposed.**

HUB Residential (0582), Ambassador Group (0683), Crosslane Co-Living SPV 2 Limited (0687), Hazeldene House Limited (0695).

Paragraph 3.199 states that planning guidance will set out the exceptions and mechanisms for the detailed calculation of proportionate contributions within a contribution zone. It will detail the relationship of development and infrastructure action(s) with its appraisal source for their identification. Developer contributions must be proportionate and attributable to the impacts of the development.

All existing and future developer contributions sought will be done in accordance with the requirements of Circular 3/2012 (CD119). The draft guidance will be on the consultation hub for comment for a period no less than six weeks. **No modification proposed.**

#### Transport Scotland (0480)

The Developer Contributions Framework based on the outputs of the Cross Boundary Study (2017) produced by the Edinburgh and South East Scotland City Region Deal (ESES CRD) were not available at the time of preparing the proposed plan, or indeed currently, and as such further information in relation to cross boundary delivery mechanisms could not be included in the policy or consultation. Policy Inf 3 does confirm that for strategic infrastructure projects of regional significance, the Council will continue to work with partners across the region for an approach to funding.

The sentence asterisked under Policy Inf 4 explains that the identified transport proposals in part 4, tables 3-10 and interventions set out in the place policies take into account the cumulative impact with other sites in the plan, from the TA modelling and analysis (CD014).

The TA also states in its Summary of Transport Impacts and Mitigation Measures that “analysis of the impacts of the transport demand of the new developments has shown that the proposals for the brownfield locations and five further strategic sites can largely be accommodated without substantial local and/or wider transport network problems.” The TA has analysed the potential cross boundary impacts of the proposed developments. The other sentence asterisked under Policy Inf 4 states that the policy requires that proposals to carry out further assessment at the planning application stage to further inform any local impacts and to take account the impact of any windfall sites progressed through the housing policies. **No modification proposed.**

#### Stirling Developments Limited (0303)

Policy Inf 3 notes that proposals will be required to deliver or contribute to the infrastructure provision listed in criteria (a-e), where relevant and necessary, to mitigate any negative impact (either on an individual or cumulative basis) and to ensure the proposal can meet the Councils sustainable transport targets and where, commensurate, to the scale of the proposed development.

The plan clarifies that the identified transport proposals in part 4, tables 3-10 and interventions set out in the Place Policies take into account the cumulative impact with other sites in the plan, from the TA modelling and analysis (CD014). The plan requires that proposals carry out further assessment at the planning application stage to further inform any local impacts and to take into account the impact of any windfall sites progressed through the housing policies.

Where necessary to mitigate cumulative impacts, contribution zones will apply. These will demonstrate the direct relationship between development, either individually or cumulatively and the need for that infrastructure. For strategic infrastructure projects of regional significance, the Council will continue to work with partners across the region for an approach to funding.

Paragraph 3.198 states that it is the Councils preference that infrastructure is directly

delivered by developers wherever possible. In most cases this will be possible where the land is in the control of the developer or the Council. Where an off-site action is needed on land not controlled by the Council or is an action that addresses cumulative impacts of more than one development, proportionate developer contributions shall be sought. The details of the actions are also set out and updated in the Plan's action programme (CD008).

Paragraph 3.199 states that planning guidance will set out the exceptions and mechanisms for the detailed calculation of proportionate contributions within a contribution zone. It will detail the relationship of development and infrastructure action(s) with its appraisal source for their identification. Developer contributions must be proportionate and attributable to the impacts of the development.

All existing and future developer contributions sought will be done in accordance with the requirements of Circular 3/2012 (CD119). **No modification proposed.**

#### Suzanne McIntosh (0409)

Phasing of development has a dependency on landowner and developer decisions and timings. Therefore, the specifics of timing of infrastructure provision where required are part of planning application considerations. Most will be delivered with development and so will follow the delivery and phasing timescale of development at project level. Where development has a dependency on infrastructure provision that will be part of the project level considerations these will be controlled by conditions on the application. Subsequent action programmes (CD008) will be updated and will provide more detail on delivery timescales as development proposals come forward and are continually informed by the pace of housing completions as evidenced by the Council's annual housing land audit and completions programme (CD055). The Council considers the actions and the Plan's strategy to be delivered within the timeline of the Plan. **No modification proposed.**

#### Crosswind Developments Ltd (0184)

Policy Inf 3 notes that proposals will be required to deliver or contribute to the infrastructure provision listed in criteria (a-e), where relevant and necessary, to mitigate any negative impact (either on an individual or cumulative basis) and to ensure the proposal can meet the Council's sustainable transport targets and where, commensurate, to the scale of the proposed development. The Council considers the wording of policy Inf 3 to be suitably robust whilst still providing the required degree of flexibility.

It is a commitment within the Edinburgh and South East Scotland City Region Deal (ESES CRD) to produce a Developer Contributions Framework based on the outputs of the Cross Boundary Study (2017). This commitment is also reflected in the draft NPF4 (CD099). The Council feel that the inclusion of criterion (e) of Inf 3 is therefore reasonable. The Council's position with regards to healthcare contributions and green/blue network contributions can be found in issue 27. **No modification proposed.**

#### Living Streets Edinburgh Group (0486)

Policy Inf 3 states that development will be supported where there is sufficient infrastructure capacity already available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts.

This will include any impact upon existing pedestrian infrastructure and required active travel mitigation and improvements identified. Criterion (d) of policy Inf 3 states that proposals will be required to deliver or contribute towards public realm where identified for the town centres or projects delivering the Council's City Centre Transformation (CD060), which are people focussed and address pedestrian movements as a priority.

The plan states that the identified transport proposals in part 4, tables 3-10 and interventions set out in the Place policies take into account the cumulative impact with other sites in the plan, from the Transport Appraisal modelling and analysis (CD014). The plan requires that proposals carry out further assessment at the planning application stage to further inform any local impacts and to take into account the impact of any windfall sites progressed through the housing policies.

Policy Inf 3 states that where, by nature of the infrastructure, it cannot be delivered by the developer directly, developer contributions shall be sought. All existing and future developer contributions sought will be done in accordance with the requirements of Circular 3/2012 (CD055).

The Council considers the wording of policy Inf 3 is suitably robust and will ensure that development will deliver the strategy. **No modification proposed.**

CALA Management Ltd (0465), Hallam Land Management (0599) Miller Homes Ltd (0649)

Paragraph 3.199 states that planning guidance will set out the exceptions and mechanisms for the detailed calculation of proportionate contributions within a contribution zone. It will detail the relationship of development and infrastructure action(s) with its appraisal source for their identification. Developer contributions must be proportionate and attributable to the impacts of the development.

The Council considers that it has set out sufficient detail in the plan and all existing and future developer contributions sought will be done in accordance with the requirements of Circular 3/2012 (CD055). The wording of policy Inf 3 is suitably robust and will ensure that development will deliver the strategy. **No modification proposed.**

CoMoUK (0728)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport.

Part 4 of the plan sets out the proposals to deliver the strategy and policies, which includes identified proposed mobility hubs. Criterion (a) of policy Inf 3 states that proposals will be required to deliver or contribute to transport proposals and safeguards from part 4, tables 3-10 and/or interventions identified in transport assessments and/or transport consultations in accordance with policy Inf 4. The place based policies contained within the plan also provide indicative positions of proposed mobility hubs. Policy Inf 7 criterion (f) also states that for major new developments, and where

identified in a place policy or Development Principles, shared mobility services shall be provided and be conveniently located close together and near to public transport stops, potentially in a “mobility hub” with additional services, located with good natural surveillance. The Council considers the wording of policy Inf 3 is suitably robust and will ensure that development will deliver the strategy **No modification proposed.**

#### Newcraighall LLP (0466)

Infrastructure cannot always be delivered on land within the control of the applicant. One example of this is an active travel route, which, by its characteristics, its nature, often continues out with the site. Another example is of schools. The Council would not expect a developer to always be able to build a school on their land, however developer contributions would be sought to mitigate the impact of the development.

Policy Inf 3 notes that proposals will be required to deliver or contribute to the infrastructure provision listed in criteria (a-e), where relevant and necessary, to mitigate\* any negative impact (either on an individual or cumulative basis) and to ensure the proposal can meet the Councils sustainable transport targets and where, commensurate, to the scale of the proposed development.

The plan clarifies that the identified transport proposals in part 4, tables 3-10 and interventions set out in the Place Policies take into account the cumulative impact with other sites in the plan, from the TA modelling and analysis (CD014). The plan requires that proposals carry out further assessment at the planning application stage to further inform any local impacts and to take into account the impact of any windfall sites progressed through the housing policies.

Where necessary to mitigate cumulative impacts, contribution zones will apply. These will demonstrate the direct relationship between development, either individually or cumulatively and the need for that infrastructure. For strategic infrastructure projects of regional significance, the Council will continue to work with partners across the region for an approach to funding.

Paragraph 3.198 states that it is the Councils preference that infrastructure is directly delivered by developers wherever possible. In most cases this will be possible where the land is in the control of the developer or the Council. Where an off-site action is needed on land not controlled by the Council or is an action that addresses cumulative impacts of more than one development, proportionate developer contributions shall be sought. The details of the actions are also set out and updated in the Plan’s action programme (CD008).

Paragraph 3.199 states that planning guidance will set out the exceptions and mechanisms for the detailed calculation of proportionate contributions within a contribution zone. It will detail the relationship of development and infrastructure action(s) with its appraisal source for their identification. Developer contributions must be proportionate and attributable to the impacts of the development.

All existing and future developer contributions sought will be done in accordance with the requirements of Circular 3/2012 (CD055). The Council considers the wording of policy Inf 3 is suitably robust and will ensure that development will deliver the strategy. **No modification proposed.**

The Davidson's Mains and Silverknowes Association. (0454)

City Plan's spatial strategy has been informed by the Transport Appraisal (TA), (produced by Jacobs) (CD014) as well as the CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072).

The TA has modelled the impact of the plans spatial strategy and compared its impact with alternative spatial strategies. The planning objectives of the TA is to follow the transport hierarchy and aligning with and helping to deliver the CMP objectives.

Policy Inf 3 states that development will be supported where there is sufficient infrastructure capacity already available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts. This should be secured by legal agreement. Where by the nature of the infrastructure, it cannot be delivered directly, developer contributions shall be sought.

The plan makes it clear that the identified transport proposals in part 4, tables 3-10 and interventions set out in the Place policies take into account the cumulative impact with other sites in the plan, from the Transport Appraisal modelling and analysis. The plan requires that proposals carry out further assessment at the planning application stage to further inform any local impacts and to take into account the impact of any windfall sites progressed through the housing policies.

Applications will also be assessed at the planning application stage to ensure that they are fully compliant with policy Inf 3. The Council considers the wording of policy Inf 3 to be suitably robust and it will ensure that development delivers the strategy. **No modification proposed.**

Grange/Prestonfield Community Council (0192)

City Plan's spatial strategy has been informed by the Transport Appraisal (TA), (produced by Jacobs) (CD014) as well as the CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072).

Proposed infrastructure investment is set out in the CMP and work on regional or national investment in infrastructure is set out in Strategic Transport Project Review 2 (STPR2) (CD111). The spatial strategy of the plan aligns with these.

Policy Inf 3 states that development will be supported where there is sufficient infrastructure capacity already available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts. This should be secured by legal agreement. Where by the nature of the infrastructure, it cannot be delivered directly, developer contributions shall be sought.

The plan makes it clear that the identified transport proposals in part 4, tables 3-10 and interventions set out in the Place policies take into account the cumulative impact with other sites in the plan, from the Transport Appraisal modelling and analysis. The plan requires that proposals carry out further assessment at the planning application stage to further inform any local impacts and to take into account the impact of any windfall sites progressed through the housing policies.

Applications will also be assessed at the planning application stage to ensure that they are fully compliant with policy Inf 3.

All existing and future developer contributions sought will be done in accordance with the requirements of Circular 3/2012 (CD055). One of the four key outcomes of the City Plan is by 2030, we want Edinburgh to be a city where you don't need to own a car to move around. The proposals included in part 4 of the plan will benefit all the residents of Edinburgh.

The Council considers the wording of policy Inf 3 to be suitably robust and it will ensure that development delivers the strategy. **No modification proposed.**

West Town Edinburgh Limited (0660)

Place 16 states that the Council will coordinate a collaborative, multidisciplinary master plan approach to development across West Edinburgh.

Paragraph 3.197 states that planning guidance will set out the mechanism for the detailed calculation of proportionate contributions within a contribution zone as well as any exceptions. It will detail which appraisal identified the impact of development on existing infrastructure capacity and recommendations of mitigating actions. **No modification proposed.**

<p><b>Planning authority's summary of the representation(s):</b></p>	
<p><b><u>Transport Strategy and General Comments.</u></b></p> <p><u>Cramond and Barnton Community Council (0243)</u></p> <p>The Outcome 'A city where you do not need a car to move around' is too narrowly focussed on restraining car use. It should be phrased more positively to focus on the provision and promotion of high quality and readily accessible public transport services, active travel routes, and education and healthcare provision.</p> <p><u>Homes for Scotland (0404), Wright PDL (0078), Steve Loomes (0767)</u></p> <p>No objection to the aspiration, 'A city where you do not need a car to move around' but the plan policies will stop the city achieving them. The displacement of businesses may lead to an increase in car dependence for some, as these businesses may well relocate to more peripheral areas, increasing the need for work trips by car. Object to the fact the Council does not appear to have properly considered this. It requires to be established that the sites allocated are inherently more accessible via public transport/active travel options than non-allocated sites.</p> <p><u>Living Streets Edinburgh Group (0486)</u></p> <p>To deliver on, 'A city where you do not need a car to move around' particularly the excellent statement in 2.111, development location/type and supporting infrastructure need to be prioritised accordingly and the Council has to call a halt to the current way of</p>	

bringing development forward. Make it abundantly clear to developers that proposals which do not accord with this outcome and the transport hierarchy will be refused.

Support the introduction/aims section if you include reference to the Transport Hierarchy as set out in Scottish Planning Policy and the National Transport Strategy and the priority given to walking within the hierarchy which is now Council policy as articulated by the Convenor of the Transport Committee. A plan underpinned by walking will help deliver on ending poverty and wellbeing/equalities.

Gavin Cameron (0782)

In order to achieve, 'A city where you don't need to own a car to move around', there requires equal access to public transport across the city and for Cramond this is not the case. Cramond has never been suitably invested in.

Archie Clark (0003)

We need cars because the city has been designed for the car – not public transport, or bikes, or wheelchairs, or walking. Paragraph. 2.113 "We are committed to the reduction of traffic and traffic-borne air pollution" It is difficult to see this except in a very few city centre locations. To what extent largely untried novel ideas like LEZ's, mobility hubs, smart electric vehicle charging have been investigated and proved to be workable before being included in this Plan? Little point in defining LEZ areas as technology will result in older vehicles being replaced by more efficient designs that reduce pollution. LEZ will penalise those who have to use older technology. People will move out of the City Centre to shop elsewhere and be unable to visit friends.

"City Mobility Plan will widen travel choice and reinforce the national sustainable travel hierarchy that promotes walking, wheeling, cycling, public transport and car sharing in preference to single occupancy car use". That is being unduly optimistic with covid rife. The statement: "This will enable us to meet our target for a reduction in car kilometres by 20%" is not supported by any evidence and cannot apply in a City that for many years has had to become more car dependent as local facilities have been allowed to disappear.

Robert Drysdale (0354)

Supports City Plan Spatial Strategy section in all respects other than the transport aspects, specifically the maps on pages 9 and 10. The outcome 'A city where you don't need to own a car to move around' is verging on meaningless as, for the vast majority of citizens and visitors, this outcome already applies with the exception of those who suffer from mobility impairments. Public transport must become faster and more convenient than using the car if a reduction in car miles is to be achieved. Further expansion of suburban railway services and new stations will also be needed. The aim therefore should be to create 'A city where you don't need to use a car in order to move around quickly and efficiently'.

Crosswind Developments Ltd (0184)

Map 8 which has no reference or title but is concerned with movement and access is inconsistent with Map 1 and the errata and as such must be amended. It shows active travel as yellow but also as purple which is the same colour used for public transport. It

also does not show any active travel in West Edinburgh or how any of these routes join up or connect from significant starting points to significant destinations. Map 9 has no reference or title. The maps in this section would benefit from having policy references to aid the reader. It is unclear why subsections entitled Education Appraisal, Healthcare Appraisal, Resources and Services would be found under the heading “A city where you don’t need to own a car to move around”

Leith Central Community Council (0614)

Paragraph 2.30 states that the City Plan and Mobility Plan will enable us to meet our target for a reduction in car kilometres by 20%. This reduction seems small. What is the rationale behind this figure? Electric vehicle charging facilities are not properly accounted for. They should be encouraged for e-bikes and for shared or non-private car use. Many jobs rely on the use of private vehicles (trades, deliveries, etc) and will continue to do so in the near future.

Frances Guy (0589)

Considers that at paragraph 2.30 the city could have a more ambitious target for reducing car use especially as the city's own figures suggest that 50% of car use is short distance. Suggest increasing the target to a reduction of 40% and include a specific target for reducing car use to attend schools.

Hallam Land Management (0615)

Reference to the City Mobility Plan, the Edinburgh Sustainable Transport Study and associated strategic transport impacts related to the spatial strategy need to be more explicit in City Plan. The Mobility Plan needs to reference post-Covid travel patterns and the need for economic resilience. The Proposed LDP should identify how accessibility and public transport will be improved for the residents of Balerno rather than restraining development and investment. There may be a case where housing development can facilitate improvement to existing service provision. There is a lack of clear linkage between transport infrastructure and new neighbourhoods in relation to phasing and programming of development in this part of Edinburgh.

Whilst a shift to more sustainable modes is welcomed this will be predicated on financial investment to generate improvements in locations such as Balerno. City Plan fails to take into account any changes to travel demand which will prevail in the future and is planning for a congestion scenario without improvements to public transport services. Commuting is an issue for Balerno and requires investment, not an embargo on essential housing. A reduction of traffic and traffic-borne air pollution will be achieved by a change in behaviours and new technology. The ‘Edinburgh Strategic Sustainable Transport Study, Regional Transport Strategy and Strategic Transport Projects Review 2’ are not available for consultation as part of the LDP which is reliant on these assessments.

Tarmac (0244)

There is a large degree of reliance on the City Mobility Plan within City Plan 2030 and the Edinburgh Sustainable Transport Strategy which support investment in sustainable public transport as shown in paragraph 2.26. The interim Regional Spatial Strategy is based on

the Strategic Development Plan 2 spatial principles and City Region Deal projects. Again, this is not a legitimate basis for strategic planning and cross boundary co-operation across the SESplan area. Likewise, the transport assessments which 'underpin the opportunities for progress to be made to support better connectivity and access to jobs across the region whilst also supporting transition to net carbon zero movement' cannot be considered as legitimate guidance that have been consulted upon as part of this LDP process, which is therefore deficient.

Development can facilitate improvement to existing service provision, for example introduce and finance new bus stops on existing routes, or influence bus routes. Bairdview will increase potential patronage making existing supported services more viable.

Mark Ockendon (0419)

We should focus on the problem - reducing carbon emissions, increasing mobility and convenience - rather than vilifying the car. There are a range of ways this can be addressed including free and better connected public transport, low-carbon and electric vehicles with a network of EV charging points, better management of road works and traffic lights. Low-carbon transport ambitions should not be at the expense of convenience. People in many areas of Edinburgh have inefficient bus links, a presumption against cars leaves many people with limited options. A further study of the bus network and route layouts should be undertaken, not just from a cost/efficiency perspective, but also from a quality-of-life perspective (access and journey times). The cost of public transport is often more expensive than using a car for short journeys and hits the poorest hardest. A policy aim to provide free public transport for all local residents would be socially equalising.

Juniper Green & Baberton Mains Community Council (0306)

Regarding the Low Emission Zone for the city centre (section 2.30, page 13), we believe this must be introduced only after transportation changes have been implemented. If public transport has not improved, poorer residents will continue with older vehicles and thus are the ones who will be affected most. This would be contrary to the Plan objective (section 2.33, page 14) of Ending Poverty by 2030. The probability is that people would move out of the city centre to shop elsewhere, which does not represent sustainable development, and would also result in people parking outside their area in order to avoid being fined.

Regarding section 2.114 we would have liked to see more detail regarding the plan for "Edinburgh's mass transit network, including proposed new public transport actions".

Alasdair Gillies (0035)

In relation to paragraph 2.17, I don't support cars being at the bottom of the priority list. There are many areas in Edinburgh where public transport is poor (and no prospect in your proposals of improving) - eg Cramond to Edinburgh Park, the main hospital and city centre. With electric cars becoming the norm, I want the council to stop deliberately making it difficult to travel by car. Make it part of the mix, I simply can't walk or take the bus to work, there's zero options. And stop using spaces for people as an excuse to put bus lanes in without proper consultation.

Jean Morley (0461)

Older people would need more accessible / reliable public transport to make the strategy of being a city where you don't need a car to move around a reality. Bus services need to serve the whole city 24/7

SEPA (0012)

Supports the strategy of Edinburgh being a city where you don't need a car to move around but would highlight that CEC must also deal with historic planning decisions which have seen developments without high quality sustainable travel links, for this outcome to be achieved.

Sarah Adamson (0523)

The A8 corridor like many others in the city are plagued by idling traffic. In Corstorphine the air pollution has been highlighted as a major problem for over 30years. Yet the traffic still idles and creates health related problems.

Donald Macaulay (0188)

The plan is laudable but unless the basic infrastructure (roads and pavements) are maintained it will fail. Potholes are a menace to cyclists and drivers. Poor paving leads to falls and injuries

Genna Spears (0081)

There should be no dedicated cycle lanes. Do not remove parking spaces and introduce parking permits.

Rodger Musson (0162)

Society cannot keep going on as before if emissions are to be reduced. Developers are working on the assumption that all resident families will have at least one car and most likely two and will drive everywhere. Any new housing must be planned with local facilities - shops and schools - and adequate public transport links. Proposed developments that do not include this must be refused. It is up to the City Council to put in place measures to enforce policies to reduce car use in new housing estates.

Julie Roberts (0210)

Charging hubs for electric vehicles, need to be widely available, especially in areas where there are lots of flats/apartments, who don't have private gardens. We cannot & should not expect everyone to give up the use of a car. It takes away personal freedoms, especially as people get a bit older and cannot ride a bike or walk as much everywhere. Public transport links are not good for many places of interest, that you might want to visit. Public transport needs to be better thought out when planning timetables. Currently, we have a service which seems to provide buses almost back to back at times and then nothing for 15 to 20 minutes thereafter.

#### Dandara East Scotland (0757)

Parking requirements must be based on the levels of accessibility. It is important that maximum parking standards within new developments are based on levels of accessibility throughout the City. Although the city centre and surrounding areas are highly accessible, there are parts of the City (particularly on the outer edges) that do not benefit from such high quality public transport and/or pedestrian/cycling infrastructure (e.g. Kirkliston, Balerno).

Therefore, to suggest that areas which have lower accessibility levels 'don't need to own a car' should not be supported. Particularly within residential developments, sufficient parking standards are essential.

#### **Action Programme.**

#### Hallam Land Management (0599), Miller Homes (0649), CALA Management Ltd (0465)

The transport proposals identified under sections 2-8 of the Action Programme are understood to be required to support the delivery of the Council's development strategy. The purpose of the Action Programme should, therefore, be to provide sufficient details on each of these proposals, including costs, timescales and how the proposals are to be delivered. However, the Road Improvements set out in tables have no costs or timescales associated with the delivery of each proposal. It is therefore not possible to define the extent of the proposals listed or how these will be used to address the impact of the proposed development set out in the Proposed LDP and the Council's development strategy. This does not meet the policy tests of Planning Circular 3/2012 and a developer will not be able to determine the extent of any financial contributions that will be required towards the delivery of infrastructure proposals or how it relates to the delivery of their proposal. The Action Programme does not provide these details. The Action programme also does not meet the minimum requirements for an Action Programme with regard to infrastructure requirements, as set out in Circular 6/2013 and the 2008 Regulations. In failing to provide sufficient details or costs for the delivery of infrastructure proposals, the Council has not demonstrated that these proposals are deliverable or can be delivered within the timescales of the Proposed LDP.

#### Cramond & Barnton Community Council (0243)

Have considerable concern that so many component elements of the City Plan 2030 Action Programme do not have any target delivery timescales and only show 'with development' or 'TBC'. This gives our communities no confidence that 'infrastructure first' principles will be adhered to. Experience of current major developments, resulting from the previous LDP, shows that essential infrastructure has not been, and is not being, delivered in pace with housing development, with LDP Action Programme timescales being 'rolled over' annually with delayed timescales, which, in turn, are unlikely to be met.

#### Tarmac (0244)

The Proposed LDP should identify how accessibility and public transport will be improved for the residents of Ratho. There is a lack of clear linkage between transport infrastructure and new neighbourhoods in relation to phasing and programming of development in West Edinburgh.

## **Transport Appraisal.**

### (0615) Hallam Land Management

The city wide Transport Appraisal sets out the infrastructure actions required to deliver the growth within the plan without assessing how existing problems may be mitigated by development. It refers in paragraph 2.116 to changing travel patterns as a result of Covid-19, however no evidence of this was presented at Choices.

### Tarmac (0244)

City Plan fails to take into account any changes to travel demand which will prevail in the future and is planning for a congestion scenario without improvements to public transport services. The Transport Appraisal sets out the infrastructure actions required to deliver the growth within the plan without assessing how existing problems may be mitigated by development. It refers in paragraph 2.116 to changing travel patterns as a result of Covid-19, however no evidence of this was presented at Choices. A reduction of traffic and traffic borne air pollution will be achieved by a change in behaviours and new technology. Whilst a shift to more sustainable modes is welcomed this will be predicated on financial investment to generate improvements in locations such as Ratho. We have major misgivings of the LDP process and whether due consultation has taken place in relation to Ratho and the A8 corridor.

### Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Concerned to note that, despite the 'brownfield first' policy, indistinct diagrams in the Jacobs Transport Assessment continue to show 'Residential Development Sites' and 'Site Mitigation' measures in the green belt between Baberton and the A71 and between Baberton and the A71, at Goodtrees and near the Gogar roundabout. Despite promises that there would be no greenfield development, 'Land East of Riccarton' features in Fig. 6.3.

### Inverdunning (Hatton Mains) Ltd. (0427)

A series of uncertainties in relation to the proposed City Plan and its background supporting documents including the City Mobility Plan and accompanying Transport Assessment (prepared by Jacobs) have been identified. These focus predominantly on uncertainties based on assumptions made to accommodate impacts on travel behaviours caused by the COVID-19 pandemic on the modelling work. These could cast doubt on the veracity of the results produced and therefore the evidence used by CEC to allocate residential sites in the proposed City Plan. Hatton Village is supported by transport and mobility grounds. Based on the above, reconsideration to the allocation of the proposed site for Hatton Village.

Line 1 of 2.112, Outcome 3 - A city where you don't need to own a car to move around should be amended.

### CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

The proposals set out in table 6-7, 8-9 or 10 of the City Plan 2030 Proposed Plan (Proposed LDP) are not based on a reliable or robust assessment which evidences the requirement for the delivery of these proposals. The Transport Appraisal prepared in support of the Proposed LDP does not provide any analysis of each of the proposals and the impact these will have on the existing active travel network within the local authority. It is, therefore, not possible to determine whether the delivery of these proposals will provide any tangible improvements to the existing active travel network.

Table 6-7, 8-9 and 10 of the Proposed LDP also fail to provide any details or associated costs for the delivery of these proposals. It is, therefore, not possible to determine what each of the proposals will deliver or, indeed, whether they are required. The Transport Appraisal Technical Note (the Note) makes reference to twenty-minute neighbourhoods. The requirement for 20 minute neighbourhoods is not set out in any approved national planning policy or guidance and should not be afforded any weight in the preparation of the Proposed LDP.

The Council has failed to demonstrate that it has fully assessed the impact of all proposed sites for residential development within the Proposed LDP on the existing road network. The Council's Assessment has also failed to take account of all sites identified within Option 3 of Choice 12 of the MIR. The exclusion of these sites (and those which formed part of Option 2 of Choice 12) is contrary to the Council's statement that the Assessment ...was required to assess both the 'preferred approach' and the 'reasonable alternatives' approach of Choices for City Plan, the Main Issues Report (MIR) stage of the plan process.

The Proposed LDP identifies the site known as IBG2 as having capacity for 7,000 homes (reference: H63 Edinburgh 205). This is 2,000 homes more than was identified in the Assessment. It is, therefore, unclear if the Council has properly assessed the impact of the proposed 7,000 homes on the existing transport infrastructure.

The Assessment does not set out any clearly defined robust measures to ensure any car use resulting from the proposed residential development at IBG2 would be ...notably low in comparison with other similar developments and does not demonstrate how this makes the site at IBG2 more sustainable than for example the allocation of Land south east of Gilmerton (the Drum) which was also considered as one of the other three greenfield sites identified in the Assessment. The Assessment also fails to consider that these existing tram facilities will be utilised by existing development at this location.

The Assessment does not explain why the Council has ignored the findings of the Assessment which indicates that the site at Land south east of Gilmerton (the Drum) is more sustainable than that at IBG2. Nor does the Council explain why it has not allocated any other greenfield sites assessed as part of the MIR which had significantly less transport impacts.

#### Liberton & District Community Council (0084)

Liberton & District Community Council is concerned that the Transport Appraisal does not appear to take account of major housing developments in Midlothian which generate traffic movements across Council boundaries, particularly to Fairmilehead, Liberton, and Gilmerton. The proposed A701/ A702 relief road to Straiton is of particular concern. There appears to be no proposals for mitigating these traffic flows.

## **West Edinburgh Transport**

### Royal Highland & Agricultural Society of Scotland (0482)

Development principles of City Plan are supported in terms of West Edinburgh. In terms of WETA and interventions required, City Deal is the key focus for funding and delivery.

### Living Streets Edinburgh Group (0486)

No objection to locations, but there has to be clear reference to the transport hierarchy Scottish Planning Policy and National Transport Strategy throughout. The scale and location present challenges, but there is no reason why pedestrian priority and a largely car free development cannot be an underpinning principle. Contributions need to be secured to carry out the necessary enhancements to tram, rail, bus, pedestrian and cycle infrastructure thereby reflecting the transport hierarchy.

### Transport Scotland (0480)

The Transport Appraisal accompanying the LDP ('City Plan 2030 Transport Assessment, September 2021) details an impact on the M9 southbound on-slip at Newbridge roundabout as a result of cumulative impact of the developments in West Edinburgh. The impact presented details a 50% increase in Passenger Car Units over a 2 hour period, an increase of 854 in the AM period. This is a significant increase which requires measures to be implemented to promote a significant shift to sustainable travel modes and development phasing implemented to minimise the impact.

Further detail is required on the new tram stop (WE30) within Table 8 – West Edinburgh Transport Improvements as there are no details provided on its delivery. The tram stop is included within the Transport Appraisal as one of the measures recommended to assist in the mitigation of development impact, however this does not follow through to the plan.

The Proposed Plan does not include information on the phasing of development or linking the delivery of infrastructure to development phasing. This is an important in ensuring that development does not progress prior to the provision of required infrastructure to ensure the required shift to sustainable modes of travel is embedded from the outset. This is vital for mitigating the cumulative impact of the developments as detailed within the Transport Appraisal or delivering mode share targets and to avoid unacceptable impacts on the safe and efficient operation of the trunk road network in the absence of appropriate mitigation being delivered to address these impacts.

The delivery of sustainable transport measures from the outset and in the early phases of development is vital to minimise the impact on the M9 southbound on-slip as detailed within the LDP Transport Appraisal and to ensure the infrastructure provision for traveling by sustainable is available from the outset in line with national and local policies.

Joint representation made by Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761), West Town Edinburgh Ltd (0660). (See supporting documents: Crosswind Developments Ltd, Edinburgh Airport Limited, West Town Edinburgh Ltd)

Edinburgh Airport Limited (EAL) Crosswind Development (CDL) and West Town

Edinburgh (WTE) have collaboratively worked and have agreed a Movement and Access Framework plan. The joint Movement and Access Plan isn't constrained by individual site boundaries and that takes its lead from the indicative arrangements identified on the Proposals Map, Map 1, Map 2 and Map 8 (although we note that these are not correct as per the errata) and Map 24. EAL, CDL and WTL are committed to collaborating but are agreed that each party must be free to develop to their own programme. Early agreement on a Movement and Access Plan will allow this to happen within a co-ordinated framework.

The Transport Assessments states: "We have made assumptions regarding which transport investments will be delivered by 2030. These are 'reference case transport interventions', assumed to be delivered regardless of City Plan 2030 proposals, and as such do not need to be considered as City Plan 2030 mitigation measures. This clearly identifies that the WETA refresh 2016 road proposals are assumed to be delivered by 2030. This is welcomed and is interpreted to mean that policy support for interventions described on pages 31-36 of the WETA refresh document will remain throughout the lifetime of City Plan 2030. Notably the Airport / IBG Link Road, Eastfield Road upgrades, A8/Eastfield Road Dumbbells, Gogar Widening and, Gogar Roundabout to Maybury upgrades. Indeed, the recently approved (December 2021) LDP Action Programme contains these interventions and sets out the delivery timescales up to 2030. The Council's support for the WETA interventions is therefore already established and is set to continue. As these are already planned for, they are not included as mitigations or interventions to be included in the plan, although it would be useful to show these on the proposals map.

The Transport Assessment in Figure 5.26 identifies Committed and Potential Development Infrastructure but omits the Airport Link Road. We take it that this is an oversight and that it should have been included as it is a requirement of WETA 2016 (TR-CZ-WETA-18). Figure 5.27 does show the Airport Link Road in terms of a Public Transport connection. The Airport Link Road is still very much needed as it provides access to WTL land, Crosswind land and West Craigs land while importantly relieving the congestion on Eastfield Road.

In terms of unlocking the development of the West Edinburgh area identified by Policy 16. EAL, CDL and WTL have identified the following interventions as critically needed. These are shown in the Movement and Access Plan. (See supporting documents)

It should be noted however that while CDL's masterplan is evolved, WTL's is not, and therefore at this stage the internal layout, form and function of all roads from the eastern boundary of WTL's ownership to Eastfield Road to the west including any interventions on to the A8 will be deferred to their masterplan process, transportation assessment and the requirements of WETIP if appropriate. The representations to follow will suggest text to cover this flexibility adequately and it may be appropriate to annotate Map 24 which we will be asking to be amended to reflect the agreed Movement and Access Plan and for this to be included in the PLDP accordingly.

Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761)

CDL, EAL and WTL have been working collaboratively and have agreed a Movement and Access Framework plan. (See supporting documents: Crosswind Developments Ltd, Edinburgh Airport Limited, West Town Edinburgh.) CDL, EAL and WTL request that this

Movement and Access Framework Plan is recognised as the basis for co-ordinated development in West Edinburgh. The Movement and Access Framework plan should replace the current Map 24 of the proposed City Plan.

The requirement of a collaborative masterplan should be removed from Place Policy 16 as this agreed Framework means that a West Edinburgh Wide masterplan is not required as it would provide a level of detail to co-ordinate development between the neighbouring development sites while allowing each developer the opportunity to bring forward their own master planning proposals for consideration by the Council. As the policy stands it will cause significant delay to the development of important vacant/brownfield sites in the city. The Council can successfully co-ordinate development to ensure the sites work together without the need for a full masterplan to which all parties must accord.

On this basis, CDL and EAL wish to amend the text to remove the reference to an approved masterplan which is set out below. Amendments to criteria (L) (M) (N) and (O) in the West Edinburgh Development Principles should be made. Criterion m should include the Airport Link Road and IBG Main Street which are WETA priorities to support development in the area and provide resilience for the existing road network.

Map 24 does not reflect or recognise 2 recent planning applications (20/03219/PPP and 21/00217/FUL). Each of these were accompanied by detailed justifications for new proposed road alignments which were tested through TAs, EIAs, LVIAs and in terms of Design and Access Statements. These applications clearly represent the needs and development ambitions of the landowners (CDL and EAL) yet have not been adequately reflected on Map 24. CDL would like to see better alignment between these live proposals and the Proposed Plan. The map is not marked as indicative (others in the proposed plan are). This must be made clear so applications can deviate slightly from what is shown.

Given the assumptions of the Transport Appraisal (Table 2.1) a number of WETA Refresh 2016 (WETA) interventions should be included on the Proposals Map and map 24. Without these transport and movement is not adequately planned for in the city to 2030 and the conclusions of the Transport Appraisal are not correct.

The proposals fails to identify TR-CZ-WETA- 17. Although in Table 8 of the document it would appear that it is proposal WE28 and Road proposal R4 in Table 9. Table 8 identifies this as a dual carriageway which is consistent with WETA that says this is required when Airport and IBG traffic comes together. Given the only connection shown to the airport on the Proposals Map is when this road connects to Eastfield Road this would suggest that the whole connection from Gogar Roundabout through IBG requires to be Dual Carriageway. This is wholly unacceptable, both in placemaking terms and as the route of this road is identified as wrapping round the Grade A listed Gogar Castle and travelling through a Local Area for Nature Conservation.

The proposals map fails to identify TR-CZ-WETA- 18 correctly instead confusing this WETA intervention with TR-CZWETA- 6. This means that no link road to the Airport is shown which WETA identifies as needed to "improve network resilience to Edinburgh Airport and to open up of development opportunities in West Edinburgh." TR-CZWETA- 6 is the new main street for IBG and is identified in Table 8 as WE26 but it is not identified on the Proposals Map. Instead as stated above TR-CZ-WETA- 18 and WE29 are identified running through the middle of IBG and out on to Eastfield Road. Given TR-CZ-WETA- 18 was conceived to remove traffic from Eastfield Road and provide a second

access for the Airport this alignment totally fails in that respect.

Further consideration of this and cross referencing with Table 8 suggests that this may be an omission from the Proposals Map that should be rectified. If transport proposal WE29 is what is described in the extant LDP Action Programme as TR-CZ-WETA- 18 then this is indeed the case

In addition, TR-CZ-WETA- 19 is contrary to the proposal in WETA. TR-CZ-WETA- 19 is shown not as a direct connection from Gogar Roundabout to the Airport but as a much less direct route to the Airport via IBG and Eastfield Road. This proposal is identified as WE27 in Table 8. This is contrary to the proposal in WETA which is clear that the segregated cycleway should be along section 1 and 2 of the proposed “Y” shaped road which are the dual carriageway section and the Airport Link Road section.

The omission of the Airport/ IBG Link Road which WETA identifies to reduce journey time variability, provide additional resilience for access to Edinburgh Airport, provide the opportunity for access to potential future development and enhance active travel connectivity from the plan has serious implications for the soundness of the plan.

It is imperative that the road interventions are brought forward from WETA and that these interventions are delivered in the plan period. All of these interventions need to be listed in Part 4 and identified on the Proposals Map, including the Airport Link Road which is missing from key maps. (See supporting documents: Crosswind Developments Ltd, Edinburgh Airport Limited, West Town Edinburgh Ltd

There are several discrepancies between Map 24 (page 73) and the proposed Proposals Map in terms of various route alignments. We also note the errata and the maps of the Plan should be updated and aligned between the Proposals Map, Map 24, Map 1 and Map 8. Table 8 (West Edinburgh Transport Improvements) needs to identify a new airport link road as a key transport improvement as well as ensuring the improvements identified in Part 4 are included on the Proposals Map.

The new primary vehicle route on Map 24 is also shown running directly through the Crosswind development site. This should be located on the eastern side, adjacent to the railway lines, to avoid running a Primary Road through the middle of the development site and a new local centre given the ambitions that this should be a car lite development. The only primary connection shown to the airport on Map 24 is when this road connects back onto Eastfield Road. This would not provide the needed resilience for traffic to and from the Airport and the wider area and accordingly an Airport Link Road as set out in the WETA Refresh 2016 (WETA 18) and in line with WE29 requires to be shown connecting to the Eastern Terminus. EAL propose that this is shown as an extension to the new primary route that we have requested is shown adjacent to the Railway line and that it should connect to the Airport Eastern Terminus via Eastfield Avenue.

With regards to connectivity in West Edinburgh, a further inconsistency is the routing of the North South Orbital Bus Route which is Table 8 proposal WE16. This is shown on the Proposals Map connecting from Edinburgh Park through Gogar Roundabout up Myreton Drive and into the West Edinburgh sites where via a new railway bridge it crosses into the Maybury housing development area before connecting with Craigs Road and Maybury Road. This proposal is not shown on Map 1 in this location and is completely absent from Maps 24, 26 and 27 which are the detailed maps of Policy 16 West Edinburgh, Policy 19

Edinburgh Park and Policy 22 Maybury in the Proposed City Plan 2030 written document.

An errata has been published but is not well publicised. This is hidden with the background documents and the interactive proposals map remains unchanged. This significantly disadvantages consultees and could be easily missed. This errata does not identify that not only is the Proposals Map incorrect but also the Spatial Strategy Maps 1 and 2 and Map 8 show Transport Proposals and Safeguards in the actual LDP document. This makes the soundness of the consultation process questionable

West Town Edinburgh Ltd (0660)

Supports the Gogar Link Road transport proposal, however City Plan should incorporate the 'movement and access' plan produced by EAL, CDL and WTL at as the basis for providing a Gogar Link Road and map 2 and 8 should be amended as such. (See supporting documents: Crosswind Developments Ltd, Edinburgh Airport Limited, West Town Edinburgh.)

Active travel routes proposed are supported, and additional routes and connections are proposed within the movement and access plan most notably to the Airport, Maybury and to the A8.

The proposed primary vehicle routes, as shown on Map 24, may impinge on the quality of place of the new local centres at West Town and Elements Edinburgh (CDL land) if it is to carry all traffic.

City Plan should also make clear that the route is indicative at this stage and may involve multiple stakeholders and development sites. It should be stated that the city council will ensure that delivery of the route will be appropriately managed and coordinated to the benefit of all development in West Edinburgh.

While CDL's masterplan is evolved, WTL's is not, and therefore at this stage the internal layout, form and function of all roads from the eastern boundary of WTL's ownership to Eastfield Road to the west including any interventions on to the A8 will be deferred to their masterplan process, transportation assessment and the requirements of WETIP if appropriate. The representations to follow will suggest text to cover this flexibility adequately and it may be appropriate to annotate Map 24 which we will be asking to be amended to reflect the agreed Movement and Access Plan and for this to be included in the PLDP accordingly.

Supports the principle of applying a cumulative Transport Contribution Zone to address the area wide transport interventions required to support new development and as identified through the Transport Appraisal and the outcomes of WETA/WETIP in support of the measures being delivered as part of City Deal.

It is assumed that any developer contributions will be proportionately determined considering any public transport infrastructure that may be delivered as part of an individual development proposal. Similar points should be noted in respect of transport proposal PT4 – West Edinburgh A8 public transport corridor. It should also be made clear within the Place 16 section of the proposed plan that IBG 1 (Which is identified on map 25) will also form part of the assessment of mitigation required arising from its impacts on

various infrastructure matters.

Supports the inclusion of a 'potential option for vehicle access' from the A8 into the site as shown on map 24 – West Edinburgh. It is essential that such an option is retained within City Plan for this site allocation.

West Craigs Limited (0472)

Generally supportive of the proposed transport interventions. However, request additional clarity within the policy wording to ensure that vehicular access to H62 and the Tram Depot will be safeguarded, as per the existing T9 (Gogar Link Road) allocation contained within the currently adopted Local Development Plan (2016).

Planning permission has been granted for the active travel bridge (WE8) and the active travel link (WE9). These interventions will enhance connectivity between H62 and West Craigs to the north and will deliver improved connectivity opportunities for all development sites within the vicinity of Edinburgh Gateway station.

Pending PPP application for the Gogar Link Road (ref: 21/02941/PPP) and active travel route broadly aligns with transport proposals WE29 and R4 and will deliver the first part of the Gogar Link Road as outlined within WETA. It will also deliver dedicated active travel infrastructure as required under the policy for Place 16 (West Edinburgh). And connect with the approved active travel bridge and link (WE8 and WE9 respectively). Changes are required to the route of WE16 and PT6. The proposed route will cut through part of HSG19, where a pocket park and SUDS facility have been consented and constructed. There are some errors in the wording of Place 16.

Rosebery Estate (Bankhead) (0618)

(WE12) is identified as a "potential route", and we maintain our objections to the potential link to the north with a landing point in HSG19 as it is committed and being brought forward for development as envisaged (still) in the HLA2020. Neither the potential public transport proposal (Ref: WE12), nor the proposed allocation from which it arises (land adjacent to H61), were included in the Choices Consultation and this is a significant unanticipated and unwelcome change to the plan.

The land take for a landing point for a bridge of this sort would be significant and once the associated embankments, suds etc were provided, there would unlikely be much land left for the housing being relied upon in the Council's established supply. This land is therefore not available for the landing point of a potential public transport corridor and should be considered to have a landowner constraint and removed as a viable option to be explored further at this stage. Under emerging Policy Env 2, this proposal may result in the refusal of consent for land adjacent to H61 as it would compromise the effective development of adjacent ground. The possibility of utilising an existing bridge over the railway to the west of this should be explored.

Lynn Grattage (0362)

Agree with all the proposals, however, in respect of WE5 a new bus lane will be required and an off road cycle lane.

#### NatureScot (0528)

There is a need to set out a plan and design-led approach to long-term growth of this part of the city. Since the adoption of the West Edinburgh Landscape Framework and Strategic Design Framework in 2010 the strategy for and nature of proposals in West Edinburgh have changed. In addition, the wider context for delivery has change significantly following declarations of climate and nature emergencies and a more pronounced shift to integrated planning and delivery. There is a need to ensure connectivity and accessibility through provision of sustainable travel improvements, including the delivery of active travel corridors that are currently weak and/or underdeveloped. The inter-relationship between sites in the wider West Edinburgh area are important, particularly how sites identified as 'West Edinburgh' in the Proposed Plan relate to each other to create a new 20 minute neighbourhood and also deliver functions for the other areas identified in paragraph 3.53 (page 71).

#### Murrayfield Community Council (0146)

We are concerned that the proposed measures will be insufficient to prevent a massive increase in traffic volume heading from West Edinburgh through Murrayfield into the City. Trams are better than buses at getting people out of cars. Public transport routes should be tram routes and the developers should be required to pay.

#### Grange/Prestonfield Community Council (0192)

Where proposals affect more than one transport mode, e.g. rail and bus, interchange between modes of travel including pedestrian must be facilitated.

#### Ratho and District Community Council (0289)

Infrastructure must be in place prior to the commencement of development and in particular improvements to the A8 and the Gogar Roundabout to meet the additional vehicular traffic including construction vehicles and buses as well as private cars.

#### Simon Hindshaw (0095)

WE27 is not justified.

#### Alasdair Gillies (0035)

I don't support WE6, this will make congestion (and pollution) significantly worse for those who can only travel by car. In relation to WE12 and WE16 it is a missed opportunity to extend to Cramond and reintroduce public transport to Edinburgh Park.

#### Spokes Lothian (0545)

As part of the West Edinburgh Transport Infrastructure Programme, there are proposals for; 'Intelligent traffic signals at Newbridge / Gogar / Marbury'. Whilst this package includes safeguards for active travel & public transport improvements that Spokes supports, it should be noted these should be prioritised and even be in place before the

improvements that benefit car users. The proposals for Eastfield Road will again induce more car based journeys to and from the airport and make public and active travel modes a less attractive alternative.

Hallam Land Management (0615), Tarmac (0244)

Neither the WETA or WETIP reports, on which the Council relies heavily within the Proposed Plan, assess or appraise the level of housing now being proposed. In fact, the original 2010 WETA assessment assumed very little housing at all. We consider that the vision is flawed and seeks to shoehorn residential development into a 'city extension' which will not be sustainable due to transport and associated capacity limitations. The concentration and density of uses in the A8 corridor is not demonstrably deliverable without further analysis, much of which is delegated to a future Masterplan, subsequent assessments and supplementary guidance. This should be presented and fully considered as part of the Proposed Plan before being considered any further.

Juniper Green and Baberton Mains Community Council (0306), Archie Clark (0003)

The IBG area is substantial and traffic from it will put enormous pressure on to the road system, with developments approved under LDP2016 and 'Land East of Millburn Tower' adding to congestion at the Gogar roundabout. A long-term detailed masterplan therefore needs to be prepared by CEC well in advance and the traffic plan modelling checked by an independent reputable university. This should indicate the extent of shopping/ commercial/ administrative/ education/ workplace/ recreation facilities (including full-sized football/rugby pitches) in H63. This entire area needs to be looked at as a New town, complete with sufficient workplaces and services for the entire community.

Accidents on the Gogar Roundabout would have immediate and far-reaching consequences on all the roads leading to it as well as the airport. An incident in this area (like a train becoming derailed) could result in major disruption over a wide area.

Areas H59-H62 need to be incorporated into the mix so that residents are not encouraged to resort to their own transport.

Paragraph. 3.224 states "Additional capacity on the road network for private car use is not supported". Would that apply to the Gogar roundabout? Acronyms should be avoided and definitions of WETA/WETIP, CPZ and City Deal should be provided as well as links to these documents. Clarification is required over the use of a colon in criterion t (a) of West Edinburgh Design Principles.

Cramond and Barnton Community Council (0243)

Not confident that the Council will deliver travel infrastructure, education and other services to scales and timing fully compliant with 'infrastructure first' principles, or that traffic assessments and management measures, including actions to deter commuting and reduce car mileages, will adequately mitigate the impacts on communities neighbouring the A90 and A8 roads into the City from the impacts of traffic generated by all West Edinburgh developments and current and future traffic flows from West Lothian and Fife.

Corstorphine Community Council (0799)

Corstorphine residents regularly experience the detrimental effects of people using the streets as a long-term park and ride when travelling to the airport. CCC would expect the West Edinburgh development area to also experience this behaviour. It may be worth expanding the West Edinburgh Design Framework criterion to include mitigation measures so that people do not attempt to garner free long-term car parking when going on their holidays. There are no references to accessibility and equalities as part of the West Edinburgh Design Principles. CCC would like to see inclusion of accessibility standards so that West Edinburgh is genuinely inclusive and accessible to all. This would include elements like fully lit active travel routes that are overlooked and not isolated, adequate disabled parking provisions that allow people with limited mobility to access amenities without impediment, and strict adherence to the Edinburgh Street Design Guidance, so that accessible design is inbuilt throughout. There are no references to air pollution or mitigation measures to tackle this issue as part of the West Edinburgh development. As this development is sandwiched between two existing AQMAs (St Johns Road and Glasgow Road) CCC is surprised that management and improvement of air quality is not mentioned as part of the Design Principles. This should be included, so that any development and planning actively works to reduce air pollution impacts. For example, elements like the avoidance of canyoning, the inclusion of green infrastructure and EV infrastructure to help reduce reliance on ICE vehicles.

#### Network Rail (0071)

It is considered that further infrastructure will be required at rail stations to accommodate a significant increase in additional journeys. This could include an increase in facilities such as footpath/cycle links, cycle lockers, bus turning areas, taxi ranks, electric bike charge points, ticket machines and waiting shelters. Whilst sustainable modes of transport will be the preferred approach to travel to the station, it is likely that some journeys will be by car and that in order to avoid on-street car parking issues in surrounding areas, the requirement for additional set down areas, car parking and electric car charging points need to be fully assessed. The West Edinburgh development should therefore demonstrate the impact of the proposed increase in different modes of travel to and from nearby stations and further discussions held with Network Rail and Scotrail to agree how this impact can be accommodated.

#### Anna Goodwin (0302)

Development must encourage tram, bicycle and bus use. The road network is already very busy at key times of the day. The A8 into the city from the west is often stationary and is known for its poor air quality, and there are also regular bottle necks in areas such as the routes into/out of South Gyle. Sufficient infrastructure must be available to support the proposals. There are already large new developments to west of Edinburgh taking place. Whilst I appreciate the need for new housing and associated supporting amenities, high quality, independent cumulative/in-combination air quality, noise, access and traffic assessments must be undertaken, and the mitigation must be well enforced. At the moment, the wording of the strategy commonly uses 'should' when referring to such requirements; this needs to be definitive and say 'must'.

#### Michael Ramsay (0011)

Support these proposals and assume that the master plan with traffic assessments and consideration of infrastructure will be available for the decision process.

Pawel Stankiewicz (0445)

Quieter and safer active routes are more attractive to use. In the case of square urban blocks, diagonal routes cut walking distance by up to 30%.

**INF 4: Provision of Transport Infrastructure.**

West Town Edinburgh Ltd (0660)

Generally supports the policy. However, request further clarity on the necessity to undertake cumulative transport assessment within an individual site specific transport assessment. It is considered that cumulative impacts have already been assessed as part of the supporting City Plan 2030 Transport Appraisal to determine the area wide transport interventions. Suggest that an individual site specific transport assessment would examine that individual's transport impacts on the local road network only, in accordance with established Governmental Transport Assessment Guidance.

Crosswind Developments Ltd (0184)

The approach set out in the policy goes beyond Transport Scotland's current Transport Assessment Guidelines, most notably in relation to 'cumulative transport impacts'. TAG requires committed development to be considered, whereas the policy seems to be more wide ranging and likely to require consideration of development within City Plan itself, irrespective of whether its consented or not. Generally supports this policy, however, request further clarity on the necessity to undertake cumulative transport assessment within an individual site specific transport assessment. It is considered that cumulative impacts have already been assessed as part of the supporting City Plan 2030 Transport Appraisal to determine the area wide transport interventions. We would therefore suggest that an individual site specific transport assessment would examine that individual site's transport impacts on the local road network only, in accordance with established Governmental Transport Assessment Guidance.

Edinburgh Airport Limited (0761)

The approach set out in the policy goes beyond Transport Scotland's current Transport Assessment Guidelines, most notably in relation to 'cumulative transport impacts'.

Homes for Scotland (0404), Wright PDL (0078), Barratt David Wilson Homes (0677)

In terms of transport requirements, it will be important that the Council avoids a situation where the delivery of early phases of large sites are stalled because all of the land required for the necessary/desired connections is not in the applicant's control.

Ratho and District Community Council (0289)

Infrastructure must be in place prior to development. Development creates additional traffic especially construction vehicles. Overcrowded roads and roundabouts need to be improved in advance to reduce the congestion of undertaking improvements when the traffic has increased.

## **INF 5- Location of Major Traffic Generating Development.**

### **Hallam Land Management (0615)**

Inf 5 is inconsistent as far as development is concerned. All of the major developments in the Proposed LDP will generate traffic to a greater or lesser extent with reliance on the private car. Not all of the proposed allocations are in accessible areas and these should not be supported in preference to locations such as Goodtrees Farm. The reliance on the private car should be defined / explained. There is no clarity on what is good accessibility or the impact of technological change on travel patterns up to 2030. Constraining development on the basis of car reliance is not reasonable or sustainable. The current wording is too restrictive and, in practice, unworkable. The reduction in car use over the plan period is predicated on public transport improvements and modal shift. This is not clear and bears little relationship to commuting patterns or the location of employment and commuting needs. Craigiehall has the potential to take advantage of its proximity to the A90 and influence modal shift through its strategic location thereby intercepting a percentage of trips into and out of the city, particularly from Kirkliston and Dalmeny which has a rail link.

### **Tarmac (0244)**

The use of the word 'reliance' implies an absolute need to use the car. There is always going to be a situation where a use is reliant on some people accessing it by private car. The current wording is too restrictive. Accessibility is a relative term, and it is not clear what constitutes 'very good accessibility'. Proposed development at Bairdview Ratho is not only providing new facilities and services in situ for the village but is also providing green travel routes and connections to avoid car use wherever possible. The level of accessibility to community facilities for the whole of the village will become very good through this development.

### **Steve Loomes (0767), Wright PDL (0078), Homes For Scotland (0404), Barratt David Wilson Homes (0677)**

Clarification is required as to what is considered to be a "significant" trip generating use. Contributions need to be fairly and reasonably related to what is proposed and must be necessary for the development to proceed.

### **Miller Homes Limited (0649), Hallam Land Management (0599)**

The policy does not specify what a significant travel demand is. It is inappropriate to have such an ambiguously worded policy within the development plan. Impacts of developments on the transport network and modes should be considered on a case-by-case basis in accord with the relevant national and regional guidance.

### **Avison Young for Aldi Stores Ltd (0526)**

The wording of the following is ambiguous and could be misinterpreted and taken out of context:

"Proposals for major development\* which would generate significant travel demand will

not be supported where there is a reliance on private car use.”

“Such uses will only be permitted on suitable sites with very good accessibility by sustainable transport.”

In addition to the ambiguity of the first sentence, the phrase ‘very good’ is a subjective term, open to interpretation and therefore inappropriate within policy language.

Living Streets Edinburgh Group (0486)

Strongly supports the Council’s unambiguous position and requests that it is reflected throughout the place and subject policies in the plan so that developers clearly understand what is expected. Request that “major” be removed otherwise there will be cumulative impacts of smaller developments or even developers breaking proposals into smaller parcels so they can argue for continuing car led developments.

Cockburn Association (0777)

Policy is supported, however, Clarification of what criteria will be used to determine ‘very good accessibility by sustainable transport’ is required.

Cynthia Shuken (0632)

You say "Proposals for major development\* which would generate significant travel demand will not be supported where there is a reliance on private car use." However, by your recent restrictions on parking and narrowing of roads throughout the city (thus reducing the number of bus stops) and, particularly, the introduction of swingeing parking charges downtown on Sundays significantly increases: longer trips to out-of town shopping areas with large amounts of free parking; pollution from cars due to the slower through-put of traffic. It also mitigates against your Inf 1 and Inf 2 aims, as people increasingly use shops, leisure facilities, etc, that are located in out-of-town areas. This, in turn, kills off city-centre businesses, further resulting to more traffic and business going out-of-town. Some people may be encouraged to walk or cycle rather than use cars, but for many people this is not an option. In fact, this policy could, with some justification, result in indirect discrimination, as many older or disabled people, and many of those with young children, cannot cycle or walk long distances, and only the very fit can do so, especially when shopping and needing to carry large packages.

The reduction in bus stops resulting from the recent proliferation of cycle lane barriers further disadvantages people in these categories. Additionally, these barriers are dangerous, causing accidents with people tripping over them while watching the traffic to cross the road in shopping areas. I would like to see all of these physical barriers reduced, Sunday free parking downtown reinstated, and bus stops increased.

**INF 11: Public Transport Proposals and Safeguards, Table 6, Table 7 & Table 10**

Hallam Land Management (0615).

Public transport strategy and detailed improvements are not evident through the LDP. The implications of public transport proposals are not included within this part of the city and it is not clear if any will ‘come forward’.

There may be a case where development can facilitate improvement to existing service provision, for example. In a location such as Craigiehall a housing development could introduce new bus stops on existing routes, or influence bus routes for example along the Burnshot Road to Kirkliston. Development could facilitate a new Park and Ride, for example, such as is proposed at Craigiehall. The 'Edinburgh Strategic Sustainable Transport Study, Regional Transport Strategy and Strategic Transport Projects Review 2' are not available for consultation as part of the LDP which is reliant on these assessments. The LDP is not integrated in this respect and substantive comment is difficult in these circumstances.

Bo Adams (0363)

The positioning of bus stops around Kaimes Junction and Frogston road need to be looked at, they create congestion, and in some ways are not accessible for disabled or parents with prams and are dangerous for kids to cross the road.

National Galleries of Scotland (0725)

The Proposals Map includes a proposed safeguarded active travel route (ref. ATPR46) through The Art Works, Granton site. NGS welcomes the acknowledgement within the Policy that the routes shown are indicative, recognising that the exact configuration should be developed during the planning application process taking cognisance of local site conditions and constraints. The Proposed Plan should also explicitly acknowledge that in order to deliver some of the safeguarded active travel routes, the Council may need to use its Compulsory Purchase Order (CPO) powers.

Tarmac (0244)

There may be a case where development can facilitate improvement to existing service provision, for example. In a rural location a new housing development could introduce new bus stops on existing routes, or influence bus routes. A development could contribute financially to continue or provide a rural bus service. Bairdview will increase potential patronage making existing supported services more viable.

Simon Hindshaw (0095)

This section lacks credibility in terms of the improvements that will be necessary if the city is to meet its sustainability objectives. The Council has a track record in removing bus priority measures in favour of cyclists. A fleet of electric buses and the same on street priority measures as would be needed for a tram, most of the benefits could be delivered for a fraction of the cost. This is shaping up to be a scandalous waste of public money on a vanity project.

Louise Baker (0773)

The importance of peripheral connectivity within the city requires greater consideration. Much of the public transportation in the city requires a journey into the city centre to then access another peripheral area. This could be combated by bus route provision or by the development of resources such as the South Edinburgh Railway. While the city presently has good bus provision, it is expensive. Better integration of bus services and also bus

with tram services would be beneficial.

Juniper Green & Baberton Mains Community Council, (0306), Archie Clark) (0003)

Section 3.212 states, “Phase 2 of the study continues to build a strategic business case for two mass rapid transit routes for the city.” But gives no further detail.

A clear route map should show all the Orbital Bus routes. Bus routes inside the City Bypass will not be rapid as buses will be subject to local 20mph speed limits. Routes should be continuous (and not broken at the Musselburgh end) so that people do not have to change buses. It would be an encouraging step to match it with an express bus connecting the P&Rs along the route using the Outer City Bypass.

Archie Clark (0003)

‘Transport Proposals and Safeguards’ – There needs to be some data to justify the proposals – these were not available for ATSR6 – the West Edinburgh Link – in the Plan or in “Appendix 5 – The Transport Appraisal Technical Note”. Where can this information be found?

“Appendix 5 – The Transport Appraisal Technical Note” – The drawings in this section when read alongside area plans in Appendix 2 are difficult to interpret and may be providing conflicting information. Tracing the route of ATSR6 is a case in point.

Trams are enormously costly, are inflexible and use up a lot of road space that requires specialised maintenance. Buses are cheaper to run and when an incident occurs when the line needs closure, they can be diverted along nearby routes. The area of the City they cover is negligible. If the trams had been undergrounded (as in London and Glasgow) these issues would not have been so significant and the trams could run faster. The monies saved by not bring trams back could be transferred into creating meaningful 20-minute neighbourhoods with core facilities.

The former railway tunnel (Scotland Street Tunnel) (See supporting document Clark, Archie) should be utilised as a pedestrian traveller to link Waverley Station to a tram/bus stop in St Andrews Square. That would have the benefit of linking heavy rail, tram lines, distant and local bus services together. In relation to Table 10. Linking Waverley Station to a tram/bus stop in St. Andrew Square using the former railway tunnel for a pedestrian traveller.– something that is currently lacking where it is most needed.

Robert Drysdale (0354)

Support the principles set out in policy Inf 11 but wishes changes to the proposals and safeguards listed in Part 4. Also supports the strategy in all aspects apart from the transport aspects, specifically maps 1 and 2. The plan maps should be altered as per my diagram 1 (Proposed Changes to Spatial Strategy). (See my Supporting Document: Drysdale, Robert)

Routes TR1 and TR2 are already approved by Parliament (Tram Line 1 Act 2006) and is mostly off-road on former railway. This route was originally supported by the council’s consultants Jacobs Steer as being preferable to any street-running alternative. Their

later decision to consider a street-running alternative (TR3 – safeguarding option B2) appears to have been based largely on two false assumptions: (1) that bridges on the TR2 former railway route would require reconstruction to accommodate a footpath / cycleway alongside the tram line; and (2) there would be greater penetration into potential passenger market using an on-street route. Short sections of single-track tramline under/over bridges would be operationally straightforward. Tram stops are relatively infrequent compared with bus stops, and only three tram stops are envisaged between Crewe Toll and the city centre on the on-street route, so penetration into a larger passenger market is unlikely.

Comments about wildlife made during the parliamentary inquiry into the TR2 proposal in 2005 were thoroughly examined and debated but were considered insufficient to outweigh the benefits to be gained from the tram following this route. Tr3 would likely suffer from slow speeds and congestion unlike Tr2. Option B2 (TR3) was not mentioned in the Main Issues Report. Paragraph 80 of Circular 6/2013 on Development Planning makes clear that a proposed plan should not introduce new or controversial elements which were not aired in the preceding Main Issues Report; TR3 represents a major change.

#### University of Edinburgh (0464)

Supportive of the tramline being accessible to all parts of the University of Edinburgh campus and welcome the existing safeguard, along with proposed new safeguard options. However, careful consideration is required to achieve a suitable balance of public transport infrastructure with the unique character of Edinburgh City Centre and to balance this with key areas of public realm and movement / connectivity, especially where tram infrastructure could introduce unwelcome impacts or barriers to permeability. If any safeguard options impact upon the landownership of the University of Edinburgh estate, further dialogue is requested. TR6 Nicolson Square / Bioquarter route) The University of Edinburgh support retention of this safeguard and detailed consideration of the business case to progress towards implementation.

#### Cramond & Barnton Community Council (0243)

PT6 should be extended at least to Barnton, or preferably to Cramond, to provide links to The Gyle, Gateway Station and indirectly to the Airport.

#### Friends of Cammo (0387)

Support the orbital bus route but note that Spatial Strategy Maps 1 and 2 are inconsistent on the route taken near Maybury junction.

#### NatureScot (0528)

Generally welcome the proposals for the North and South Orbital. However, consider that these proposals should have more explicit links with active travel routes, proposals and safeguards which would make a modal shift, including changing mode during a trip, more feasible for most residents.

#### Mrs Patricia Scott (0349)

In relation to route PT6 more connections between the “villages” of Edinburgh are needed. Proposals for the New Eye Pavilion at Livingston and Care Homes are not at present addressed by existing bus routes. The proposed route should be extended at least to Barnton and Cramond to provide a link from Cramond to the Gyle, Gateway Station and the airport.

Inverdunning (Hatton Mains) Ltd. (0427)

An A71 Corridor Express Route/Rapid Bus Transit (Livingston South to City Centre) should be added to table 6 to reflect proposed Hatton Village allocation as set out in Supporting Document. Map 8 (Transport Proposals and Safeguards) – add line on A71 noting Public Transport Proposal – Bus Improvements, reflecting same route as identified Strategic Active Travel project.

Alasdair Gillies (0035)

Pt6 is a missed opportunity to strengthen and reintroduce public transport from Cramond to Edinburgh Park.

The Davidson’s Mains and Silverknowes Association (0454)

Supportive of improvements to bus services to enhance orbital bus services round the north west of the city. These should be further enhanced to provide better connections between local communities and main shopping centres. Examples are improved direct links between Cramond and Davidson’s Mains and between Davidson’s Mains and Stockbridge. The transport hub at Ingliston should be fully developed as an intermodal interchange for all transport links and linked into orbital bus service routes.

Ratho and District Community Council (0289)

Support the policy but the Orbital Bus Route should commence operation as soon as any houses/businesses open to relieve congestion on A8

Jean Morley (0461)

The orbital bus route would be vital and would benefit the elderly in the city. Cramond to the Gyle and the Airport should be a link that is introduced via Maybury Road.

Lynn Grattage (0362)

Supports the orbital bus route, especially since it seems to go to Edinburgh Royal Infirmary. However at least one more orbital bus route is required which goes between this and the more central ones. Ideally further consultation and discussion with Lothian buses should be carried out about where people live and work to finalise routes.

Lady Road Investment S.A.R.L. (0625)

Supportive of the safeguarded tramline (TR6) route being accessible to Cameron Toll. There is a concern however, that with the uncertainty of the exact route or without an indication of delivery, this could impact upon development options at Cameron Toll, and

their timescales for coming forward.

Miller Homes Limited and Wheatlands Farming Partnership (0592)

Supports the inclusion of the safeguarded options for the extension of the tram route in Table 7, however, objects to the failure of the Council to identify an extension of the tram route between the settlements of Newbridge and Kirkliston within Table 7 of the Proposed LDP. This extension would support the existing safeguard of the tram route between the Airport to Newbridge (Reference: TR10). The safeguarding for the extension of the tram route to Kirkliston will also support the proposal for the delivery of a housing and mixed use development promoted by Miller Homes on land at Kirkliston East.

Supports the route of the safeguard for the Almond Chord which runs along the northern boundary of the site promoted by Miller Homes and the Wheatlands Farming Partnership for a housing and mixed use development on land at Kirkliston East. However, there is a requirement to also safeguard the location of a new rail station to serve the existing settlement of Kirkliston. The delivery of a new train station will provide a significant transport intervention which will significantly improve existing public transport facilities in Kirkliston and connectivity to Edinburgh, Glasgow and the wider central Scotland rail network.

Alan Stevens (0646), B Hyland (0792), Sustrans (0561), Alistair Mackintosh (0650), C van der Dussen (0558), Claire Graf (0541), Connie Longmate (0707), Hannah Knechtli, (0259), Jakub Szwedowicz (0547), Joseph Coulson (0017), Katarzyna Wozniak (0546), Jordan Thomson (0676), Kasper Schwartz (0576), Fraser Wilson (0536), Despoina Papadopoulou (0575), Hannah Coulson (0331), Mark Beaumont (0752), Peter Moonlight (0550), Sandra Labinjoh (0690), Sophia Lycouris (0667), Graham Jones (0340), Mattia Ventre (0763), Catherine Labinjoh (0711), Andrew Longmate (0705), Heather Duque (0746), Patrick Longmate (0708), Gareth Wheeler (0636), Katherine Kennedy (0569), Heather R Finnegan (0664), Zuleika Connolly-Jones (0656), James McMeekin (0631)

Object to Tr2 Safeguard option B1b.

Alan Stevens (0646)

Tr 2 Option B1b, will stop people being able to get away from mechanised transport on busy roads. There must be alternatives to use existing roads to route trams if the strategy is to make it a city where there is no need for cars to get about.

B Hyland (0792)

Tr 2 Option B1b, would make the route unsafe for cyclists. It would cause noise. It would harm a natural space. It would impact on wildlife.

Sustrans (0561)

Need more detail on the proposals, to ensure that this popular active travel route is not adversely affected as a result of the proposed trams development

Alistair Mackintosh (0650)

The Council should look for on road options for trams.

C van der Dussen (0558)

This is an important traffic route for sustainable traffic and a valuable piece of natural environment in the city. A tramline would disturb and partly destroy an important natural part of our beautiful city.

Claire Graf (0541),

Preserving walking paths is essential for public mental health

Hannah Knechtli (0259)

Tr 2 Option B1b would be a loss of a vital and busy urban green space. It is also a benefit for walkers and their mental health. It would be detrimental to the character of the area and noisy. The expansions of trams is unnecessary and expensive.

Jakub Szwedowicz (0547)

The damage to the local green spaces in Ferry Road far outweighs the benefits to public transport provided by the tramway extension.

Joseph Coulson (0017)

There are perfectly good alternative routes, it would result in the destruction of key habitats, the removal of one of the only green quiet traffic free routes we have, the destruction of key areas of woodland, and the severe degradation of a critical cycling & walking link on which thousands of people depend for a few moments of fresh air and breathing space.

Katarzyna Wozniak (0546)

Roseburn path is an amazing place to cycle and walk away from the traffic. The tram should go by the main road.

Jordan Thomson (0676)

TR2 Safeguard option B1b is one of the only green traffic-free routes we have in the city. It would make the city less green and less clean

Kasper Schwartz (0576)

Safeguard option TR2 B1b will undoubtedly have great detrimental impact on the active travel and recreational qualities of the Roseburn path, as well as the established vegetation and biodiversity it holds. Instead, the council should use the new safeguard option B2 (TR3) if and when it looks to expand the tram network in this area of the city.

Fraser Wilson (0536)

There are already bus links which serve the areas covered by TR2 B1b so it will not benefit the city as the people who would take the tram on this route are already on buses. Taking away the cycle path will lead to more congestion on roads as cyclists will be forced to move onto the roads. It will not create a greener city as some cyclists will give up on the bike and return to their cars as they do not feel safe or feel uncomfortable cycling on busy roads.

Hannah Coulson (0331)

Safeguard option TR2 B1b would destroy this traffic-free, nature-filled space. This path is already part of important infrastructure – it is a National Cycle Route. It used by thousands of people already as they cycle and walk to work, school etc. It is also full of wildlife and trees which would be severely impacted by this work.

Mark Beaumont (0752)

The Roseburn path is an important green space and important active travel corridor. Running the tram down the road would be the preferred option.

Peter Moonlight (0550)

Green transport links between north Edinburgh and west Edinburgh are extremely rare. While I fully support Edinburgh having a well developed tram network, this should not come at the cost of existing, well-used green transport networks.

Sandra Labinjoh (0690)

TR2 B1b degrades a key section of national cycle route 1. This is an important, well used, environmental corridor in Edinburgh and a green amenity space.

Catherine Labinjoh (0711), Andrew Longmate (0705), Patrick Longmate (0708)

Tr 2 Option B1b would result in loss of green space, loss of the traffic free cycle path, changes to historic bridges along the route, increased noise for residents in a quiet area, increased light pollution, potentially damage properties along the route and cause loss of their value and harm wildlife and trees. There is insufficient evidence of the utility of the tram in this area which is well-served by a cycle path and buses. This proposal disproportionately impacts communities which are unlikely to use the tram but which benefit greatly from access to green space. It would harm an area of outstanding character. The Council should consider existing infrastructure routes, which complies with the council's own stated aim of: adopting an 'infrastructure first approach, directing new development to where there is existing infrastructure.

Connie Longmate (0707)

Tr 2 Option B1b would result in loss of green space, loss of the cycle path, change to historic bridges along the route, increase noise for residents, increase light pollution, potentially damage properties along the route and cause loss of value, harm wildlife and trees. Any extension of public transport should aim to displace high carbon modes of transport (like cars) not cycle paths.

Heather Duque (0746)

Roseburn walking and cycling path is quiet and leafy and promote wildlife, healthy living, quiet and peace. This kind of “progress” isn’t really the kind of thing that makes cities better for residents... or more attractive for people living in the neighbourhood.

Sophia Lycouris (0667)

Do not destroy the Roseburn Path to use for any new tram lines. There needs to be good walking space in a city, not just transport lines taking people from home to work and back, as if all people have to do in life is to work.

Graham Jones (0340)

The cycle paths should not be seen as only a transport route, it should also be viewed as part of the social fabric of the city that reaches throughout the city benefiting a diverse range of socio and economic communities. The importance of these social green pathways which are accessible to all is incredibly valuable to the healthy life of a modern city. The Roseburn cycle path, like so many of the cycle paths in Edinburgh, provides an alternative transport (cycling and walking) network that avoids hazardous and polluted roads. Due to Covid, we can expect a reduction in commuting traffic between home and workplace and the need for spaces where people can cycle, walk and exercise safely will increase. This type of organic urban rejuvenation should be celebrated and cultivated not destroyed for a single mode of transport.

Gareth Wheeler (0636)

Roseburn path is an excellent active travel asset for the city of Edinburgh.

Katherine Kennedy (0569)

Referring to TR2 B1b – The Roseburn path is a traffic free walking, cycling and wheeling route and should remain as such. If the trams are to be extended, take some road space from Ferry Road, not from an essential active travel route.

Heather R Finnegan (0664)

Do not support a tram being built on or around Roseburn Path. I prefer the preservation of green spaces in our city to noisy construction and tram lines.

Zuleika Connolly-Jones (0656)

Do not wish Roseburn path to be built over/used as a tramline. It is a space of nature where many people exercise, walk and be in nature in the city, which is invaluable for our mental health, especially with the recent lockdowns. Is this proposal for the people who live here or is it to bring up the house prices by minimising the travel time to the city centre and therefore bring more money to the city?

James McMeekin (0631)

This cycle/running/walking path is a vital part of the city's infrastructure and losing it would be a significant loss and set a worrying precedent for removing or reducing human powered connections in the city. This network is one of the few areas where people can travel a significant way without having to avoid cars and buses. It is also an under-recognised wildlife corridor within the city.

John Yellowlees (0024)

The Council seem to be seeking to undermine tram route (TR2) by introducing a new Safeguarding Option B2 (TR3). Trams are about providing fast transport to outer suburbs. By diverting the Granton route onto this new on street option, you would be lengthening journey-times while increasing the cost and timescale for construction and also missing out Haymarket, now one of the city's most important interchanges. The Roseburn Railway Path could run alongside the Tram – as the Airdrie-Bathgate path does alongside the railway that reopened in 2010. Public transport is for everyone, whereas active travel is for those (i.e. most but by no means all of us) who are able to participate. Option B2 would be to the detriment of public transport users.

John Watt (0321)

Support extending the tram network to the ERI and Bioquarter and then to Shawfair. However, this needs to be tied into a Park and Ride facility. Congestion charge or other model to reduce car access to the city centre and improve active travel modes should be considered. Extending network to Newbridge through the proposed new business district and creating new Park and Ride facilities at a Newbridge terminus together with disincentives to drive into the city should be progressed as speedily as possible.

Shawfair LLP (0258)

The tram safeguarded route shown in Maps 1 and 2 over the settlement of Shawfair requires to be amended. The route shown on this plan does not fit within the approved masterplan for the new settlement of Shawfair as it dissects several development plots, including brand new completed housing such as the Dandara plot which is almost complete. People will soon be moving into these homes.

Capital Rail Action Group (0789)

TR3 is an inferior option to TR2 as it misses Haymarket and will have slower running speeds due to congestion. TR4 would be very difficult to develop and would also be hugely disruptive to the life of the city for several years. Welcome proposals PTSG 1,2 and 3. However, changes to the routes and connections are suggested.

Spokes Lothian (0545)

Supports further investigation into the options of an on-road tram route as seen in 'Tram route safeguard TR1-11' or using the historic railway corridor. Understand that use of the former rail corridor would include a high quality active travel route (Active Freeway) alongside the tram. However this is not stated in the draft plan, and it must be made 100% explicit, together with an indication of what 'high quality' would mean. Major advantage of using the rail route for the tram would be to bring movement and light

to the path, together with external on-tram & tram stop CCTV, making the path far safer and more attractive. A road route for the tram could very likely rule out in perpetuity the prospect of segregated cycling provision on a major road artery into the city centre, and would mean a designed-in conflict with cyclists and tramlines on the narrow Dean Bridge. The road route could be significantly slower for the tram, reducing its potential to cut car use. Roseburn route is a very valuable quiet area and nature corridor, every effort must be made to preserve the nature corridor aspects. The reopening of stations on the South Suburban railway line would provide greater access to rail by bike as well as reduce car dependency in areas to the west, south and east of Edinburgh.

Peter Brown (0672)

The south suburban railway and stations should not only be safeguarded but be reopened to passenger traffic as it addresses connectivity and carbon emission objectives. Other closed railway lines should also be safeguarded for future reopening

Suzanne McIntosh (0409)

City Plan 2030 is an opportunity to look to the re-opening of the south sub-urban rail network in the city to assist active travel. Provision should be made for this in the plan.

Theo Spanellis (0415)

The only part I do not agree with is the South Suburban halts. There are ways to provide a suburban train service that will be quiet and of adequate speed allowing the existing train lines to be reused. A train service can link the southside quickly to the train hub at Haymarket, avoiding all the traffic of Lothian Road, and also helping to relieve that traffic, and provide an environmentally friendly solution to quick transport to and from the city centre.

Robert Falcon (0640)

Supports all the PTSG safeguards. However, there appears to be no detail on the infrastructure or other developments required to make these happen, in particular the reopening of Portobello – Piershill – Abbeyhill and associated rail stations will require road and wider infrastructure improvements, and for example consideration of diversions to bus routes.

Mr Cuchulainn Gent (0047)

Generally supports the plan, but I don't think it is very ambitious, nor will it make much of a difference in the next 10 years. Good to see active travel improvements, but this needs to be integrated with the very fabric of street design. I am unsure if the council has the expertise or capability to create appropriate active travel infrastructure. Fully support the protection of the train halts but it needs to be utilised. Edinburgh is poorly connected with respect to local rail and it has made no appropriate consideration as to how it would implement such infrastructure. The Jakob Steel report was very poorly done and did not seem to consider alternative uses for existing rail infrastructure. New rail stations and active travel interchanges should be introduced. Existing lines need to be upgraded. The South Suburban Line should also be opened and utilised.

Peter Allen (0336)

Supports the policy, but states that we need to protect every possible route for future public transport / cycle-wheel-walking paths, so that development does not preclude reactivation of any currently disused routes. Potentially possible to link the Tram system from Leith to Portobello using the old rail tracks that still exist at Seafield, and the old route that runs past industrial units below Seafield Road. If PTSG2 does not cover this possibility it should be added as another Safeguard

Grange/Prestonfield Community Council (0192)

The plan should review the feasibility of re-opening the South Suburban line to passengers and review safeguarding halts at Cameron Toll in relation to plans to redevelop site 21/06125/PAN (Proposed redevelopment of Cameron Toll neighbourhood centre, to include residential and hotel uses along with improvements to public realm and improved pedestrian, cyclist routes within the site and associated landscaping) & traffic impacts and suggested additional Place Proposal.

Transport Scotland (0480)

Recommends the rail stations detailed within Table 10 p178 – Public Transport – Other Safeguards under PTSG 2 and PTSG 3 are removed as they have not been the subject of an evidenced based appraisal such as a DPMTAG based appraisal in line with Scottish Transport Appraisal Guidance (STAG) and they have not been discussed or agreed with Transport Scotland as detailed within SPP. Furthermore, the Proposed Plan does not provide any information on funding, delivery mechanisms or timescales for the stations in accordance with SPP. The importance of providing this information upfront is reinforced by the Infrastructure First approach within the draft National Planning Framework. Early engagement on their inclusion and clarity on their need and delivery has not been undertaken or provided. It is not understood why they are required, for example, what specific transport problems they are addressing or how they would benefit communities.

Mike Richardson (0109)

The orbital bus route in Map 1 should be complete and continuous - it appears to be shown with a break in the Newcraighall area. It should be possible to travel around the orbital route in either direction without interruption.

Miller Homes Limited. (0256)

No justification has been provided to exclude the transit corridor towards the west of Hermiston, which was previously recommended for further consideration in the Edinburgh Strategic Sustainable Transport Study – Phase 1 (October 2019). Whilst it is noted that the spatial strategy provides a 10 year vision for the city, it is also noted that it has taken a significantly longer period to deliver the existing tram routes in Edinburgh, which is why any longer-term vision for a transit corridor to the west of Hermiston should be included in the City Plan now, and not wait until a further review of the plan. Riccarton Village can also assist with the longer-term vision of the transit corridor towards the west of Hermiston by creating a critical mass in this area and delivering a transport hub including a park and

ride.

**INF 13: Road Network Infrastructure, Table 9.**

Edinburgh Airport Limited (0761)

EAL wish to object to Policy Inf 13 on the grounds it references new transport infrastructure and junction improvements listed in Part 4 and shown indicatively on the Proposals Map however the Proposals Map does not align with the requirements of WETA Refresh 2016 or indeed the listed transportation improvements in Part 4 of the proposed City Plan.

Bo Adams (0363)

Kaimes Junction, Burdiehouse , Frogston , Captains and Liberton roads should all be closed for some time and redesigned fully to allow for the shift onto more active provisions and to get around with family on bike safely. No active infra at all, need direct safe routes on Captains, Burdiehouse , Frogston and Liberton roads, all main roads that are dangerous to use as a family or disabled person. There needs to be focus on noise reduction around bypass, noise absorbing asphalt combined with noise cancelling panels should be used along the bypass.

Corstorphine Community Council (0799)

CEC does not support the introduction of road infrastructure that creates additional capacity for private cars. Paragraph 3.214 should be amended to state that any proposed infrastructure changes should also support and prioritise sustainable transport, including public transport and protected on-road cycle provision.

West Town Edinburgh Ltd (0660)

Generally supportive, subject to the ability of large scale development to provide a permeable network of access points for all modes of travel to ensure a legible network that maximises use of existing infrastructure, whilst prioritising sustainable travel modes over private car use. The access strategy of these large scale developments, such as H63, is most appropriately developed through the site specific masterplan-led process.

Spokes Lothian (0545)

Without details this policy appears to be car focused and not prioritising active travel. Prefer to see junctions citywide being retrospectively improved to embody the transport hierarchy, prioritised for safety and VisionZero design principles. The grade separation of Sheriffhall Roundabout will provide significantly increased capacity for movements between areas north and south of the City Bypass. It seems completely contradictory for the ambition of Edinburgh being a city “where no one needs to own a car to get around. Although Sheriffhall is to be funded by the City Deal, the Deal can be modified. Glasgow City-Region Deal is being revised at the request of East Renfrewshire Council, to delete a major planned link road from the Deal and replace it by a new rail station, Country Park improvements and some smaller road upgrades.

Miller Homes Limited and Wheatlands Farming Partnership (0592)

Table 9 of the Proposed LDP does not identify the creation of a new loop road around the east of the existing settlement of Kirkliston. The delivery of this new loop road forms part of the proposal for a housing and mixed use development submitted by Miller Homes Limited (Miller Homes) as part of this consultation process. The delivery of the proposed loop road will improve road safety and provide relief from the existing traffic issues in Kirkliston by diverting traffic away from the centre of the settlement.

Mrs Patricia Scott (0349)

With traffic flow on the A90 at the Barnton Junction frequently at unsustainable high levels, proposals to adjust the phasing or otherwise of the traffic lights (R8) will do little to alleviate existing and major problems associated with the design of the junction itself nor projected greatly increased traffic volume. Additionally, further bus lanes will inevitably lead to an exacerbation of an increasingly time consuming delays.

Mr John G. Skinner (0065)

The action (R8) in table 9 is underwhelming with reference to the existing traffic at peak times.

Leonard Wallace (0314)

The term "Increase efficiency of signals." (In respect to action R8 in table 9) is to a degree vague. More specification of the proposed changes is required. Improvements to the efficiency of the Barnton Junction must necessarily include the needs of all users of the junction and all those who have an interest in the safe and efficient operation of this junction. Additional suggested road improvement measures are indicated.

Forth Ports Limited (0496)

Supports R1, but notes that the route crosses the operational port estate.

The Davidson's Mains and Silverknowes Association (0454)

Re-phasing of the traffic signals to improve traffic flows (R8) is a minimalist and inadequate response to traffic queuing and congestion at the junction. The junction needs to be completely re-modelled to give priority to public transport.

Network Rail (0071)

Generally supports the proposed new street in Leith Docks (R1) and the potential to create new development plots as part of the delivery project. However, access into this area is taken from Seafield Road at the junction with Marine Esplanade where there is an existing level crossing. Seafield Level Crossing is located at this junction. This is a Public Highway Manually Controlled Gate and has a high-risk rating in terms of public safety.

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

The Dalmahoy Road junction on the A71 should be included in Table 9. It is long overdue for pedestrian and signal upgrades despite funds being collected from developers. This should be a priority if the work has not been completed before the finalisation of this Plan.

Archie Clark (0003)

Monies have been collected from developers to install a MOVA system to improve traffic flows at the very busy Gillespie Crossroads junction on Lanark Road. This work should be included in the Plan with a timescale. What emissions are being created along Lanark Road at Gillespie Crossroads, the centre of Juniper Green, Blinkbonny Road/Lanark Road West and any narrowed parts of the road – e.g. Bridge Road/Lanark Road West in Balerno?. Recent temporary traffic light installations (an almost daily feature on this road) make the present level of pollution more obvious. Promoting ‘maximum parking limits’ will create problems for those areas where cars are needed as people will pavement park or park indiscriminately and an understrength police force cannot regulate that.

Jean Morley (0461)

Changes to the lights from Cramond Brig to Craigleith (R8) must reflect the safety of residents on both sides of the road to get in and out of their drives safely.

Cramond & Barnton Community Council (0243)

Support in principle R8, however this will not resolve current congestion issues. While there is a current redesign study for Maybury Road and Barnton Junction (Jacobs) focusing on active travel improvements a more holistic approach to traffic management on the A90 corridor from South Queensferry to the West End, Maybury Road and its approach from Gogar, and routes in North West Edinburgh used for ‘rat-running’ (e.g. Whitehouse Road to Cramond Road South, Drumbrae, Clermiston Road, Burnshot Road) is required. The Queensferry Road corridor between Craigleith and Barnton should be designated as an Air Quality Management Area as serious air quality issues in the vicinity of Barnton Junction will inevitably increase with new developments in West Edinburgh, West Lothian and Fife.

Gavin Cameron) (0782)

I don’t believe the signal efficiency is the issue at Barnton. (R8) The council changed the status of the land they had been bequeathed at Cammo / Maybury from green belt and then sold it. Circa 600 houses are now being built and the council stated this was a national road issue and not a local decision.

SEPA. (0012)

Support the policy, however ask for careful consideration of those parts of these proposals which may act against the aims of Edinburgh achieving its targets for net zero by simply enabling further use of the private car.

**INF 14: Rail Freight**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Consider that Edinburgh's current under-utilised rail network could be engaged in development of a fast and sustainable passenger transport network, or goods distribution network – even if only to the freight distribution hubs as visualised in section 3.245 on page 137.

Forth Ports Limited (0496)

Delete the second sentence of paragraph 3.215, which reads “Keeping a reduced general freight rail head to the east in Seafeld will complement the safeguard for a waste management facility in that location (see Policy Inf 18).” There is no justification provided for the safeguarding of a waste management facility at Seafeld.

**Modifications sought by those submitting representations:**

**Transport Strategy and General Comments**

Cramond and Barnton Community Council (0243)

The sole emphasis of the 'Outcome': 'A City where you do not need to own a car to move around' (p.15, para;2.36; p.30) should be extended to cover other key outcomes mentioned in the text, including education and healthcare, which should also be priorities for the City. It should be refocused to more positively state -

'A city where people enjoy high quality and readily accessible sustainable travel facilities (e.g. bus, tram, active travel), educational provision and healthcare services'.

The energy and waste statements within this 'Outcome' should be transferred to the first 'Outcome', which focuses on 'a sustainable City ...'.

Homes for Scotland (0404), Wright PDL (0078), Steve Loomes (0767)

No modification specified but it is indicated that the plan policies will stop the city achieving them the aim. Concerned that the displacement of businesses may lead to an increase in car dependence for some, as these businesses may well relocate to more peripheral areas, increasing the need for work trips by car. Object to the fact the Council does not appear to have properly considered this.

It requires to be established that the sites allocated are inherently more accessible via public transport/active travel options than non-allocated sites.

Living Streets Edinburgh Group (0486)

2.118 has to be reinforced as follows “To help achieve the sustainable mode share targets and deliver in line with the sustainable transport hierarchy, we require all development:...”

2.119 is not strong enough Its about more than “taking opportunities”....development "must enhance" etc...

Reference to the Transport Hierarchy as set out in Scottish Planning Policy and the National Transport Strategy and the priority given to walking within the hierarchy should be included in the City Plan 2030 aims (p8) A categorical statement should be made that the

Council is moving away from an assumption in favour of private car use, break down active travel to make clear walking & cycling, and state that provision is within developments as well as linking neighbourhoods.

Aim 8 should refer to enhanced or new pedestrian infrastructure to help deliver the transport hierarchy.

The plan should make it clear that the Transport hierarchy has been in Scottish Planning Policy (and Designing Streets) for some time and is therefore established planning policy.

Paragraph 2.30 which refers to City Mobility Plan and the transport hierarchy, it should have a stronger statement reinforcing walking is the top priority. Place Briefs should have specific reference in all of them to the Transport Hierarchy and the priority afforded to walking.

The grids used in Appendix D should have a separate column for delivery of pedestrian priority in accordance with the transport hierarchy.

The Glossary should offer a definition for walking and its priority within the Transport Hierarchy.

Gavin Cameron) (0782)

No modification specified but it is indicated that Cramond does not have equal access to public transport across the city and has never been invested.

Archie Clark (0003)

No modification specified but it is indicated that it will be difficult to see a reduction of traffic and traffic-borne air pollution and have ideas like LEZ's, mobility hubs, smart electric vehicle charging have been investigated and proved to be workable? Does not support LEZ. Reduction in car use will not be achieved.

Robert Drysdale (0354)

The plan maps should be altered as per my diagram 1 (Proposed Changes to Spatial Strategy). (See Supporting document Drysdale, Robert ANON-CUYN-2RUU-D)

The reference to 'A city where you don't need to own a car to move around' should be replaced with 'A city where you don't need to use a car in order to move around quickly and efficiently'.

In addition, I wish to see the following paragraph added after paragraph 2.114 on page 30: "Currently there are only limited opportunities available for passenger rail travel within the city, but those journeys which are possible are very rapid, for example from the ten railway stations located within the city boundary to Haymarket and Waverley stations in the city centre, and most rail services serving these stations operate frequently. The council will continue to liaise with Transport Scotland and train operators to explore ways in which greater use can be made of the city's rail network in terms of new stations and additional services, possibly also using tram-trains linking in with the tram network. The safeguards in Part 4, Table 10, reflect this".

A further requirement should also be added to this policy, cross referenced to policy Inf 4, relating to the safeguarding of former railway lines as they were under the Structure Plan and City Local Plan.

Crosswind Developments Ltd (0184)

Map 8 should be modified to be consistent with Map 1 and the ERRATTA It should show active travel routes in West Edinburgh and how these routes join up or connect from significant starting points to significant destinations. Map 8 should be labelled, have a policy reference and be clearer.

Leith Central Community Council (0614)

No modification specified but it is indicated that the rationale behind the 20% reduction in car kilometres should be explained. It is also indicated that electric vehicle charging facilities are not properly accounted for. They should be encouraged for e-bikes and for shared or non-private car use.

Frances Guy (0589)

At paragraph 2.30 provide more ambitious target for reducing car use to 40%.

Hallam Land Management (0615)

Update paragraph 2.17 in relation to the Strategic Transport Projects Review 2. No further specific modification proposed but it is indicated that reference to the City Mobility Plan and associated strategic transport impacts related to the spatial strategy need to be more explicit. The Mobility Plan needs to reference post-Covid travel patterns and the need for economic resilience. It needs to have bearing on and positive provisions for the mobility issues within Balerno.

The Proposed LDP should identify how accessibility and public transport will be improved for the residents of Balerno. There needs to be a clear linkage between transport infrastructure and new neighbourhoods in relation to phasing and programming of development in this part of Edinburgh.

Tarmac (0244)

No modification specified but it is indicated that reference to the City Mobility Plan and associated strategic transport impacts related to the spatial strategy need to be more explicit. It is also indicated that development can facilitate improvement to existing service provision and Bairdview will increase potential patronage making existing supported services more viable.

Mark Ockendon (0419)

Title: "A city where you don't need to own a car to move around" - reword to "A city that's easy and convenient to move around".

Paragraph 2.17: "walking, cycling and wheeling at the top and private car use at the

bottom." - replace with "walking, cycling, wheeling and zero-carbon vehicles operating in an integrated fashion."

Paragraph 2.24: "which are too heavily dependent on private car usage." Should be removed.

Paragraph 2.30: "Together with City Plan 2030, our City Mobility Plan will..." - remove from this sentence onwards and replace with "Together with City Plan 2030, our City Mobility Plan will aim to provide an efficient, convenient, and low-carbon plan to allow the effective movement of people throughout the city. It will include walking, wheeling, cycling, public transport, car sharing and private vehicles with a particular emphasis on low-carbon outcomes. A specific objective to provide free public transport to all residents will significantly help environmental and social outcomes for people from all walks of life."

Paragraph 2.36: "A city where you don't need a car to move around" - reword to "A city that's easy and convenient to move around".

Paragraph 2.40: remove "reduce private car use and"

Paragraph 2.85: "a modal shift away from private car travel" - replace with "a shift away from fossil-fuel based transport towards electric or low-carbon vehicles"

Paragraph 2.86: "City Plan establishes the principle of maximum parking limits for new developments as well as the need for these new developments to incorporate measures to promote active travel and shared mobility to reduce car ownership." - replace with "City Plan aims to improve the convenience, flexibility and affordability of public and shared transport in the city to encourage further use of alternative and low-carbon modes of transport."

Paragraph 2.111: "streets and public spaces for people over cars" - remove or replace with "streets and public spaces for people AND cars"

Paragraph 2.112: remove "follow the transport hierarchy"

Paragraph 2.113: "We are committed to the reduction of traffic and traffic-borne air pollution." - change to "We are committed to the reduction of traffic-borne air pollution." (remove "traffic and")

Paragraph 2.114: "sustainable public transport" - change to "sustainable and affordable or free public transport".

Paragraph 2.115: remove "reducing the need for car journeys".

Paragraph 2.115: "better serves walking, wheeling, cycling and public transport, making these our first choice over travel by private car." - replace with "supports an integrated approach including walking, wheeling, cycling, public transport, taxis, car clubs and private vehicles working in harmony to provide a convenient, efficient, and low-carbon way to travel around the city."

Paragraph 2.117 - reword to: "City Plan 2030 aims to promote the use of sustainable travel modes, without sacrificing flexibility and convenience."

Paragraph 2.118 - reword to "All development must work towards meeting targets to see emissions reduce and air quality improve. The council will encourage a more integrated and accessible public transport system to incorporate all developments, and encourage the use of electric and low-carbon vehicles with a broader Electric Vehicle Strategy for the city." All policies should include provision for electric vehicle charging points.

Paragraph 3.7: "working towards creating a largely traffic free city centre" This should be removed.

Paragraph 3.8: remove completely.

Paragraph 3.9: "a network of vehicle-free streets". This should be removed.

Paragraph 3.9: "restricting loading and servicing". This should be removed.

Place 1, requirement D: "traffic-free pedestrian routes" - replace with "green and convenient transport routes"

Modify criterion (G) of the West Edinburgh Development Principles as follows:  
"...designed for convenient, safe movement of pedestrians, cyclists, and public transport..." - replace with "designed for convenient, safe movement of pedestrians, cyclists, public and private transport", and append "including provision for electric vehicle charging infrastructure"

Modify criterion (N) of the West Edinburgh Development Principles as follows:  
"to minimise need for private car use and private vehicle ownership" - replace with "to integrate private car use with public transport facilities. Ensure support for low-carbon vehicles by providing electric vehicle charging points for all private and some on-street parking."

Policy Inf 5- "Proposals for major development\* which would generate significant travel demand will not be supported where there is a reliance on private car use." Should be replaced with "Proposals for major development which would generate significant travel demand will only be supported where adequate provision for infrastructure for electric or other low- carbon vehicles is included."

Criterion A of Inf 5 should be removed.

Paragraph 3.201 should be removed.

In Paragraph 3.211- remove "reduce reliance on travel by private car and"

In paragraph 3.212- "support wider policy outcomes such as..." - add 'convenience' and 'flexibility' as two of the wider policy outcomes.

#### Juniper Green & Baberton Mains Community Council (0306)

No modification specified but it is indicated that the Low Emission Zone for the city centre (paragraph 2.30, page 13), must be introduced only after transportation changes have been implemented

Paragraph 2.114 should include more detail regarding the plan for "Edinburgh's mass transit network, including proposed new public transport actions".

Alasdair Gillies (0035)

Paragraph 2.17 should be modified so that cars are not at the bottom of the priority list.

No further modification specified but it is indicated that the Council should stop using spaces for people as an excuse to put bus lanes in without proper consultation.

Jean Morley (0461)

No modification specified but it is indicated that older people need more accessible / reliable public transport to make the strategy of being a city where you don't need a car to move around a reality. Bus services need to serve the whole city 24/7

SEPA (0012)

No modification specified but it is indicated that CEC must also deal with historic planning decisions which have seen developments without high quality sustainable travel links, for this outcome to be achieved

Sarah Adamson (0523)

No modifications specified but it is indicated that a priority should be to keep the traffic moving through the Corstorphine shopping area.

Donald Macaulay (0188)

No modifications specified however it is suggested that basic infrastructure (roads and pavements) must be better maintained.

Genna Spears (0081)

No modifications specified however it is suggested that there should be no dedicated cycle lanes. Do not remove parking spaces and introduce parking permits.

Rodger Musson (0162)

No modification specified but it is indicated that any new housing must be planned with local facilities - shops and schools - and adequate public transport links. Proposed developments that do not include this must be refused and the Council must put in place measures to enforce policies to reduce car use in new housing estates

Julie Roberts (0210)

No modification specified but it is indicated that charging hubs for electric vehicles, need to be widely available, especially in areas where there are lots of flats/apartments, who don't have private gardens. We cannot & should not expect everyone to give up the use of a car. It takes away personal freedoms, especially as people get a bit older and cannot ride a bike or walk as much everywhere. Public transport links are not good for many places of interest. Public transport needs to be better thought out when planning timetables.

### Dandara East Scotland (0757)

No modification specified but it is indicated that parking requirements must be based on the levels of accessibility. To suggest that areas which have lower accessibility levels 'don't need to own a car' should not be supported. Particularly within residential developments, sufficient parking standards are essential.

### **Action Programme**

Hallam Land Management (0599), Miller Homes (0649), CALA Management Ltd (0465).

The Action Programme should be updated to provide sufficient details (including costs and timescales) for all proposed transport improvements identified within the Proposed LDP.

Cramond & Barnton Community Council (0243)

The component elements of the City Plan 2030 Action Programme should have target delivery timescales.

Tarmac (0244)

The Proposed LDP should identify how accessibility and public transport will be improved for the residents of Ratho. There is a lack of clear linkage between transport infrastructure and new neighbourhoods in relation to phasing and programming of development in West Edinburgh.

### **Transport Appraisal**

Hallam Land Management (0615)

The Transport Appraisal should assess how existing infrastructure problems may be mitigated by development. It is noted that the Transport Appraisal refers to changing travel patterns as a result of Covid-19, however no evidence of this was presented at Choices. City Plan should take into account any changes to travel demand which will prevail in the future.

Tarmac (0244)

The Mobility Plan needs to reference post-Covid travel patterns and the need for economic resilience. The Proposed LDP should identify how accessibility and public transport will be improved for the residents of Ratho. Update paragraph 2.17 in relation to the Strategic Transport Projects Review 2.

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

The plans/indistinct diagrams in the Jacobs Transport Assessment which show 'Residential Development Sites' and 'Site Mitigation' measures in the green belt between Baberton and the A71 need to be redrawn.

Inverdunning (Hatton Mains) Ltd. (0427)

Amend line 1 of 2.112, Outcome 3 - A city where you don't need to own a car to move around "City Plan's spatial strategy directs growth to brownfield sites within the urban area or in strategic expansion areas or new sustainable community locations where there is good public transport, including tram and express bus service."

No further modifications specified but it is indicated that there are a series of uncertainties in relation to the proposed City Plan and its background supporting documents including the City Mobility Plan and accompanying Transport Assessment (prepared by Jacobs) which have been identified. These focus predominantly on uncertainties based on assumptions made to accommodate impacts on travel behaviours caused by the COVID-19 pandemic on the modelling work. These could cast doubt on the veracity of the results produced and therefore the evidence used by CEC to allocate residential sites in the proposed City Plan. (Please see supporting document Inverdunning (Hatton Mains) Ltd)

The Hatton Village should be allocated in the City Plan 2030 as it is supported by transport and mobility grounds.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

All proposals set out in tables 6-7, 8 – 9 and 10 of the Proposed LDP should be reviewed based on a reliable impact assessment, taking into account the issues raised in the representation to the Transport Appraisal.

The Transport Appraisal technical note should be updated to remove reference to 20 minute neighbourhoods. In its place, reference should be made to the approved guidance set out in PAN 75.

An updated Assessment should be produced for consultation which fully considers the impact of proposed sites for residential development within the Proposed LDP on the existing road network. The Assessment should also be updated to consider the impacts of greenfield housing sites which have no insurmountable barriers to being brought forward to ensure sufficient housing land is identified within the Proposed LDP to meet the Council's emerging Housing Land Requirement.

The Council is required to update the Assessment to demonstrate that the full impact of the 7,000 homes at H63 Edinburgh 205, has been considered. This new assessment should be prepared in advance of the Proposed LDP being presented to Scottish Ministers for examination.

Liberton & District Community Council (0084)

Liberton & District Community Council is concerned that the Transport Appraisal does not appear to take account of major housing developments in Midlothian which generate traffic movements across Council boundaries, particularly to Fairmilehead, Liberton, and Gilmerton. The proposed A701/ A702 relief road to Straiton is of particular concern. There appears to be no proposals for mitigating these traffic flows.

**West Edinburgh Transport**

Royal Highland & Agricultural Society of Scotland (0482)

Paragraph 3.59 should be amended as follows:

A cumulative Transport Contribution Zone for infrastructure delivery should be on the basis of net additional cumulative impacts of increased traffic flows on the trunk and local road networks (taking into account all known proposed development and any potential cross-boundary impacts).

Living Streets Edinburgh Group (0486)

No modifications specified but it is indicated that development should be expected to follow the same principles as elsewhere in the city, designed accordingly, and contributions secured to carry out the necessary enhancements to tram, rail, bus, pedestrian and cycle infrastructure thereby reflecting the transport hierarchy, this must be made clear at the outset.

Transport Scotland (0480)

The LDP should set out information on the phasing of the West Edinburgh developments within Place 16, including sites H59 – H63 and how this development phasing will be linked to the provision of the infrastructure detailed within Infrastructure Tables 3 – 10 and within the Development Principles of Place 16.

Further information on the delivery of the new tram stop (WE30) detailed within Table 8 – West Edinburgh Transport Improvements should be provided.

The Transport Appraisal details an impact on the M9 southbound on-slip at Newbridge roundabout as a result of cumulative impact of the developments in West Edinburgh. The impact presented details a 50% increase in Passenger Car Units over a 2 hour period, an increase of 854 in the AM period. This is a significant increase which requires measures to be implemented to promote a significant shift to sustainable travel modes and development phasing implemented to minimise the impact.

Joint representation made by Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761), West Town Edinburgh Ltd (0660). (See supporting documents: West Town Edinburgh Ltd ANON-CUYN-2UJZ-A, Edinburgh Airport Limited ANON-CUYN-2UTK-5, Crosswind Developments Ltd ANON-CUYN-2RH9-4)

Map 24 should be replaced with a joint Movement and Access Plan. The Proposals Map, Map 1, Map 2 and Map 8 should also be amended as per the Movement and Access Plan.

In relation to East/West connections the following alterations are proposed, which are included in the Movement and Access Plan.

- (i) The A8 as the primary connection East/West with 2 key access points for the West Edinburgh sites – Gogar Roundabout and Eastfield Road Dumbbells.
- (ii) The new Main Street (TR-CZ-WETA-6 / WE 26). Map 24 illustrates two new primary vehicle routes into West Town – route 1 running West from Myreton Drive which is the Gogar Link Road alignment from the existing LDP and route 2

running southwest from the airport link road north of Crosswinds which is akin to the IBG Link Road / New Main Street illustrated in the WETA refresh. Route 2 is preferred by WTL as the New Primary Route into West Town.

- (iii) A new connection to the Eastern Terminus of the Airport (TR-CZ-WETA -18 / WE29) with the option to also connect to the Airport's cargo village.
- (iv) A new rail crossing point for buses and active travel only as part of the Bus Orbital (WE12)

In relation to North/South Connections, the following alterations are proposed;

- (i) Eastfield Road
- (ii) Airport Link Road
- (iii) Potential vehicular link to A8 from main street indicated on map 24.

In relation to new pedestrian / cycle connections (East/West connections)

- (i) WETA identified missing A8 link (TR-CZ-WETA-1 / WE7)
- (ii) New connections via new Local Centre, WTL land
- (iii) New connections via new rail bridge at Gateway Station and along Myreton Drive to West Craig's land.
- (iv) New connections via existing/new rail crossing from CDL to Maybury linking to wider connection planned at Turnhouse and the River Almond walkway.
- (v) New connections from CDL land to WTL land

(North/South connections)

- (i) New link to the Airport adjacent to Eastfield Road (TR-CZ-WETA-5 / WE23)
- (ii) New link to Airport from Myreton Drive adjacent to Airport Link Road (TR-CZWETA- 19 / WE 27)
- (iii) New link through new Local Centre, CDL land
- (iv) New connections to EAL from CDL and WTL v New connections from WTL to A8
- (v) New connection via Gogar Castle Drive to A8.

Crosswind Developments Ltd (0184) (Edinburgh Airport Limited (0761)

The Movement and Access Framework plan (See supporting documents: West Town

Edinburgh Ltd, Edinburgh Airport Limited, Crosswind Developments Ltd) should replace the current Map 24 of the proposed City Plan.

Active travel safeguards through West Edinburgh should be added on Map 1.

The position of the Orbital Bus Route shown in Map 1 needs to be modified to correctly align with the Errata. The Orbital Bus Route shown in Map 1 and Map 2 need to be modified so that they align.

The quality of Map 1 and Map 2 should be improved and would benefit from having policy references to aid the reader.

The WETA Refresh 2016 (WETA) interventions should be included on the Proposals Map. TR-CZ- WETA- 17 and TR-CZ-WETA- 18.

WE27 should be removed.

Criteria (l.) (m.) (n.) and (o.) of the West Edinburgh Development Principles should be amended as follows to remove the reference to an approved masterplan being required for the full West Edinburgh area.

Criterion (L) of the West Edinburgh Development Principles should also be amended as follows

“To address and connect across land ownerships and to the wider City – physically, visually and socially, including with urban frontages to site edges where appropriate and with active travel and public transport infrastructure which enables movement around the area and to the city. Active travel and public transport connectivity between the sites and to the north will be enabled by each development site as far as is reasonable and feasibly possible. Public transport options for orbital bus routes to north and south will be delivered either through improvements to public transport priority at the Gogar and Maybury roundabouts or through public transport access to the north. The Council will co-ordinate a joined-up approach in line with the Movement and Access Plan”

Criterion ‘M’ of the West Edinburgh Development Principals should include the Airport Link Road and IBG Main Street as follows:

“Road access which follows the principles of the WETA programme in providing a new Gogar Link Road, Airport Link Road and IBG Main Street and access from Eastfield Road will be supported. Planning applications should address the potential for local access from the south of the area to the A8 in conjunction with transport and traffic improvements.”

Criteria ‘n’ and ‘o’ should also be modified as below:

“n. Internal connectivity for active travel and public transport modes, including relationship with the Ingliston Park & Ride site and how that site might be relocated or redesigned for the better overall place making of the area. Planning applications should develop a design, parking strategy and parking standards approach to minimise need for private car use and private vehicle ownership. This and other demand management measures are an important element of relevant local, regional and national policies and will be critical in promoting sustainable travel behaviour in West Edinburgh area”.

“o. Planning applications should establish how a mix of uses, including vertical mix, is distributed across the area. The mix will include but not be limited to retail, professional services, food and drink, office and light industrial, industrial in appropriate locations away from residential use, assembly and leisure and community facilities/hubs as well as high and medium density residential with mixed tenure development as required by other plan policies”.

The errata and the maps of the Plan should be updated and aligned in relation to Proposals Map, Map 24, Map 1, Map 8. The new primary vehicle route on Map 24 should be located on the eastern side, adjacent to the railway lines.

#### West Town Edinburgh Ltd (0660)

Map 2 should be amended to reflect the 'movement and access' plan at appendix 2 of West Town Edinburgh Ltd's representations and which forms part of joint representations by West Town Edinburgh Ltd, Edinburgh Airport Ltd and Crosswind Developments Ltd. (See supporting documents: West Town Edinburgh Ltd, Edinburgh Airport Limited, Crosswind Developments Ltd)

The visual representation of certain 'Transport Proposals and Safeguards' on map 8 should be amended to reflect the 'movement and access' plan at appendix 2

West Town Edinburgh Ltd does not support map 24 in its current form. This should be amended to reflect the 'movement and access' plan at appendix 2 of West Town Edinburgh Ltd's representations and which forms part of joint representations by West Town Edinburgh Ltd, Edinburgh Airport Ltd and Crosswind Developments Ltd.

Map 24 should reflect or recognise 2 recent planning applications (20/03219/PPP and 21/00217/FUL).

City Plan should also make clear that the route is indicative at this stage and may involve multiple stakeholders and development sites. It should be stated that the city council will ensure that delivery of the route will be appropriately managed and coordinated to the benefit of all development in West Edinburgh.

The proposed primary vehicle route should be slightly amended from the Gogar Roundabout. A new junction will be required to enable the new WTL road to connect but this we believe can be accommodated in due course and will be part of the planning application for the new preferred WTL primary access.

No new primary vehicle link is shown to the Airport on Map 24. We have added this to ensure that as per the Transport Assessment, that supports the PLDP, the WETA Airport Link Road is included to provide network resilience, relief to Eastfield Road and access to development lands. We have added new public transport routes proposed in the Transport Assessment as per the errata.

West Town Edinburgh Ltd request that in the event that the City Council are of a mind to amend City Plan as requested in the joint representation they do so on the condition that the parties demonstrate that agreements are in place to secure delivery of the

interventions contemplated.

Paragraph 3.59 should be modified so that cumulative assessment is not required within individual site specific transport assessments in this case. It should also be made clear within the Place 16 section of the proposed plan that IBG 1 (Which is identified on map 25) will also form part of the assessment of mitigation required arising from its impacts on various infrastructure matters.

#### West Craigs Limited (0472)

The proposed route of WE16 and PT6 should be amended so that it does not cross into HSG19. The full text of paragraph (z) of Place 16 policies should be provided in full.

Additional clarity within the policy wording is required to ensure that vehicular access to H62 and the Tram Depot will be safeguarded, as per the existing T9 (Gogar Link Road) allocation contained within the currently adopted Local Development Plan (2016).

#### Rosebery Estate (Bankhead) (0618)

Delete the annotation on Maps 2 & 8, and all other references relating to the West Edinburgh Transport Improvements (WE12) in so far as they show a potential connection from the new addition to Place 16 adjacent to H61 linking over the railway into the Maybury (Place 22/HSG19) housing allocation being carried forward from the LDP.

The potential link to the north proposed under (WE12) with a landing point in HSG19 should be removed. Delete reference to link with West Craigs/Maybury and replace with "use existing bridge to west. Confirm that the cumulative Transport Contribution Zone (Para 3.59) will only apply to those sites in Place 16/West Edinburgh allocated in this document, not sites being brought forward from the LDP which are in the process of being delivered.

#### Lynn Grattage (0362)

In respect of WE5 a new bus lane will be required and an off road cycle lane.

#### NatureScot (0528)

No modification specified but it is indicated that further work needs to be carried out to ensure that the active travel connectivity within Place 16 should be progressed. The path network in this area will be required to accommodate significant numbers of people and for this to be convenient and safe more capacity (both extent and width) will be required.

#### Murrayfield Community Council (0146)

Public transport routes shown should be specified as tram routes.

#### Grange/Prestonfield Community Council (0192)

No modification specified but it is indicated that where proposals affect more than one transport mode, e.g. rail and bus, interchange between modes of travel including pedestrian must be facilitated.

Ratho and District Community Council (0289)

WE15- Its location should be noted on proposals map and needs road safety input.

WE19/20- It is indicated that significant consultations on this are required. WE21- Greater detail on this route needs to be provided.

Infrastructure must be in place prior to the commencement of development and in particular improvements to the A8 and the Gogar Roundabout to meet the additional vehicular traffic including construction vehicles and buses as well as private cars.

Simon Hindshaw (0095)

WE27 (Gogar Link Road Segregated cycle route) needs to be justified.

Alasdair Gillies (0035)

WE6 should be removed. WE12 and WE16 should be modified to be extended to Cramond and to reintroduce public transport to Edinburgh park.

Spokes Lothian (0545)

No modification specified but it is indicated that safeguards for active travel & public transport improvements should be prioritised and even be in place before the improvements that benefit car users. The proposals for Eastfield Road will again induce more car based journeys to and from the airport and make public and active travel modes a less attractive alternative.

Hallam Land Management (0615)

No modification specified however it is indicated that neither the WETA or WETIP reports, on which the Council relies heavily within the Proposed Plan, assess or appraise the level of housing now being proposed. In fact, the original 2010 WETA assessment assumed very little housing at all.

Tarmac (0244)

No modifications specified but it is indicated that this section on West Edinburgh needs a complete review and clear justification before any decisions on a finalised plan is made. Supporting studies and resultant reports are required to justify the Council's recent change in approach to West Edinburgh proposals.

Juniper Green and Baberton Mains Community Council (0306), Archie Clark (0003)

Definitions of acronyms should all be included in the glossary.

Page 76 contains, "a. Provide or contribute towards the following transport infrastructure:" where it appears elaboration should follow the colon, but there is no further content concerning this bullet. This should be clarified.

Page 77, bullet i, refers to, "Adoptable roads to be brought up to standard and an Internal

CPZ...", with no explanation of what CPZ is. This should be explained.

A long-term detailed masterplan for West Edinburgh needs to be prepared by CEC well in advance and the traffic plan modelling checked by an independent reputable university.

Clarification is required as to whether the statement "Additional capacity on the road network for private car use is not supported" in paragraph 3.224 would apply to the Gogar roundabout?

No further modification specified but it is indicated that the Gogar Roundabout and surrounding roads are not capable of taking the enormous additional traffic that will be generated by this development (Map 24). An accident on the Gogar Roundabout would have immediate and far-reaching consequences on all the roads leading to it. It could also impact on the airport.

#### Cramond and Barnton Community Council (0243)

No modifications specified but it is indicated that the Community Council is not confident that the Council will deliver travel infrastructure, education and other services to scales and timing fully compliant with 'infrastructure first' principles, or that traffic assessments and management measures, including actions to deter commuting and reduce car mileages, will adequately mitigate the impacts on communities neighbouring the A90 and A8 roads into the City from the impacts of traffic generated by all West Edinburgh developments and current and future traffic flows from West Lothian and Fife

#### Corstorphine Community Council (0799)

Criterion (n) of the West Edinburgh Design Framework could be expanded to include mitigation measures so that people do not attempt to garner free long-term car parking when going on their holidays.

References to accessibility and equalities should be added as part of the West Edinburgh Design Principles. This would include elements like fully lit active travel routes that are overlooked and not isolated, adequate disabled parking provisions that allow people with limited mobility to access amenities without impediment, and strict adherence to the Edinburgh Street Design Guidance, so that accessible design is inbuilt throughout. It is indicated that references to air pollution and mitigation measures should be included within the Design Principles.

#### Network Rail (0071)

No modifications specified but it is indicated that further infrastructure will be required at rail stations near West Edinburgh to accommodate a significant increase in additional journeys. This could include an increase in facilities such as footpath/cycle links, cycle lockers, bus turning areas, taxi ranks, electric bike charge points, ticket machines and waiting shelters. The requirement for additional set down areas, car parking and electric car charging points need to be fully assessed. The West Edinburgh development should therefore demonstrate the impact of the proposed increase in different modes of travel to and from nearby stations and further discussions held with Network Rail and Scotrail to agree how this impact can be accommodated.

Anna Goodwin.(0302)

Paragraph 3.59 page 72 should be amended so that the word should will be replaced with must. "These should include modelling of cumulative effect of increased traffic flows on the trunk and local road networks (taking into account all known proposed development and any potential cross- boundary impacts).

Michael Ramsay (0011)

No modifications proposed but the question is asked whether the master plan with traffic assessments and consideration of infrastructure will be available for the decision process.

Pawel Stankiewicz (0445)

In the criterion u on page 76 it should be added:

"Active travel route should run in some distance from primary vehicle routes, ideally in the middle between them, through the middle of urban blocks, where these primary vehicle routes are not main travel destination like local centre. Tram stops are focus points of footpaths coming to them diagonally across urban blocks"

#### **INF 4: Provision of Transport Infrastructure**

West Town Edinburgh Ltd (0660),

Wording of criterion (a) of Inf 4 should be amended so that only an individual site specific transport assessment would be required to examine the individual transport impacts on the local road network, in accordance with established Governmental Transport Assessment Guidance.

Crosswind Developments Ltd (0184)

No modification specified but it is indicated that the approach set out in the policy goes beyond Transport Scotland's current Transport Assessment Guidelines, most notably in relation to 'cumulative transport impacts'.

Edinburgh Airport Limited (0761)

The Policy should be rewritten to be consistent with Transport Scotland's current guidance. Assessment requirements on a site by site basis should be for committed/consented development only not for all the possible interventions listed in City Plan 2030.

Homes for Scotland (0404), Wright PDL (0078), Barratt David Wilson Homes (0677)

No modifications specified but it is indicated that it will be important that the Council avoids a situation where the delivery of early phases of large sites are stalled because all of the land required for the necessary/desired connections is not in the applicant's control.

Ratho and District Community Council (0289)

No modification specified but it is indicated that in relation to Policy Inf 4, Infrastructure must be in place prior to development.

## **INF 5- Location of Major Traffic Generating Development**

### Hallam Land Management (0615).

The word 'reliance' should be removed from the policy and substitute the words '...it is overly reliant...'. The word 'very' should be removed in the second sentence.

A new criterion (c) should be added. "a Travel Plan that responds to modal share targets and mitigates any adverse effect on the network by more sustainable travel choices". Quantification is needed so it is clear what level of trip generation is considered 'major' and what classifies as "good" accessibility.

### Tarmac (0244)

The word 'reliance' should be removed from the policy and substitute the words '...it is overly reliant...'. The word 'very' should be removed in the second sentence.

A new criterion (c) should be added. "a Travel Plan that responds to modal share targets and mitigates any adverse effect on the network by more sustainable travel choices". Quantification is needed so it is clear what level of trip generation is considered 'major' and what classifies as "good" accessibility.

### Steve Loomes (0767), Wright PDL (0078), Homes For Scotland (0404), Barratt David Wilson Homes (0677)

Clarification is required as to what is considered to be a "significant" trip generating use.

### Miller Homes Limited (0649), Hallam Land Management (0599)

No modification is specified however it is indicated that it is inappropriate to have such an ambiguously worded policy within the development plan. Impacts of developments on the transport network and modes should be considered on a case-by-case basis in accord with the relevant national and regional guidance.

### Avison Young for Aldi Stores Ltd (0526)

The phrase 'very good' should be removed or further clarification is provided to measurable factors for 'very good accessibility'.

It is suggested the first two sentences of Inf5 are merged to the following:

"Proposals for major development\* which would generate significant travel will only be permitted on suitable sites with good accessibility by sustainable transport, where the private car isn't prioritised."

### Living Streets Edinburgh Group (0486)

The word "major" should be removed from the first sentence. The Council's strong position that development predicated on private car use will not be supported should be

reflected throughout the place and subject policies in the plan.

Cockburn Association (0777)

Clarification of what criteria will be used to determine 'very good accessibility by sustainable transport' is required.

Cynthia Shuken (0632)

Cycle lane barriers should be removed, Sunday parking downtown reinstated and bus stops increased.

**INF 11: Public Transport Proposals and Safeguards, Table 6, Table 7 & Table 10**

Hallam Land Management (0615),

Add new sentence to policy Inf 11: 'Proposals which are brought forward by developers and others to improve the public transport services or enhance existing provision will be supported'.

No other modifications specified however it is indicated that public transport strategy and detailed improvements are not evident through the LDP. The implications of public transport proposals are not included within this part of the city and it is not clear if any will 'come forward'.

There may be a case where development can facilitate improvement to existing service provision. The 'Edinburgh Strategic Sustainable Transport Study, Regional Transport Strategy and Strategic Transport Projects Review 2' are not available for consultation as part of the LDP which is reliant on these assessments.

Bo Adams (0363)

No modifications specified but it is indicated that the positioning of bus stops around Kaimes Junction and Frogston road need to be looked at.

National Galleries of Scotland (0725)

The Proposed Plan should also explicitly acknowledge, after para 3.212, that in order to deliver some of the safeguarded active travel routes, including ATPR46 which in part links West Granton Road with Waterfront Avenue, the Council may need to use its Compulsory Purchase Order (CPO) powers.

Tarmac (0244)

Add new sentence to policy inf 11 'Proposals which are brought forward by developers and others to improve the public transport services or enhance existing provision will be supported.

No modifications specified but it is indicated that there may be a case where development can facilitate improvement to existing service provision, for example. In a rural location a new housing development could introduce new bus stops on existing routes, or influence

bus routes. A development could contribute financially to continue or provide a rural bus service.

Simon Hindshaw (0095)

No modifications specified but it is indicated that the rail proposals would benefit from the input of somebody who has some railway operations expertise. In terms of PTSG2, the East Coast Main Line is currently at or near capacity so the practicality of introducing three additional stops in the City in addition to those proposed or being delivered in East Lothian is questionable without a step change in infrastructure such as four tracking.

Louise Baker (0773)

No modifications specified but it is indicated that the importance of peripheral connectivity within the city requires greater consideration. Better integration of more affordable bus services and also bus with tram services would be beneficial.

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Orbital Bus routes should be shown on a clear map. Routes should be continuous (and not broken at the Musselburgh end) Orbital routes should be linked with an express bus connecting the park and ride's along the route using the Outer City Bypass.

No further modifications specified but it is indicated that it would be very useful to know what the two mass rapid transit routes for the city as stated in Section 3.212 are. It would help if they were included as dotted lines on the transport maps.

Archie Clark (0003)

The data to justify the proposals (Transport Proposals and safeguards) needs to be clearly shown. The drawings in Transport Appraisal Technical note need to be clearer. The tram option safeguards should be removed for those lines not commenced and not renewed.

The former railway tunnel should be added to table 10 and safeguarded to be utilised as a pedestrian traveller to link Waverley Station to a tram/bus stop in St Andrews Square. (See supporting document Clark, Archie ANON-CUYN-2R14-8)

Robert Drysdale (0354)

Policy Inf 11, Table 7, Table 10, Proposals Map (North East) (North West) (South East) and map 1 and 2 should be altered in accordance with my representations. (See Supporting document Drysdale, Robert)

Include my proposed additional tram line safeguards, as shown in my Diagrams (see Diagram 1 – Proposed Changes to Spatial Strategy;

Diagram 3 - Proposed safeguarding of former railway for future tram line - Crewe Toll to Ocean Terminal; Ferry Road is heavily congested and inhibits east-west travel by car or bus between Edinburgh's northern suburbs; this route would serve densely-populated areas as well as connecting into the existing tram route at Ocean Terminal and the

proposed tram route at Craigleith. The formation is wide enough to allow retention of the existing foot/cycle path and much of the existing vegetation.

Diagram 4 - Proposed safeguarding of route for future tram line: Craigleith to Silverknowes; The former double-track railway from Craigleith (on the approved tram route TR2) to Davidson's Mains, which consists of a wide tract of undeveloped open land, should also be protected as a possible future tram route to serve other densely-populated parts of the north-west of the city, connecting these residential areas to the city centre, Haymarket and west Edinburgh by fast tram on a traffic-free route.

Diagram 5 - Proposed safeguarding of route from Princes Street (West End) to Newington via Lothian Road and Melville Drive); This should be from the west end of Princes Street southwards down Lothian Road and then across the Meadows to Newington.

Table 10, page 178 - PTSG3 - South Suburban Halts - rectify omission - add safeguard for station/halt at site of former Craiglockhart Station, Colinton Road (NT233713). This should be added to the south-east proposals map. The safeguard for a station at the site of the former Craiglockhart Station on the South Suburban railway has been inexplicably omitted from the plan. The station would serve a substantial residential area in south-west Edinburgh and consequently a safeguard for this site should be added.

Tr3 option B2 should be deleted from the plan.

The following statement, based on the wording of paragraph 9.31 of the 2010 Edinburgh City Local Plan, should be added to Policy Inf 11 and also included in the introduction to Table 7, as follows: 'In addition to the specific route safeguards listed in Table 7, the city's other former railway routes represent a valuable transport asset and development proposals will be assessed to make sure the technical integrity of the route for possible future public transport purposes (e.g. rail, tram or guided busways), as well as for cycle/footway use, is not compromised. They are also often wildlife corridors and in implementing proposals steps will be taken where possible to retain their nature conservation value'. A further requirement should also be added to this policy, cross referenced to policy Inf 4, relating to the safeguarding of former railway lines as they were under the Structure Plan and City Local Plan.

Table 10, page 178 - under heading 'Public Transport - Other Safeguards', replace existing paragraph with: The council wishes to see greater use made of the city's rail network as part of the contribution towards reducing emissions and a net zero city. In particular the City Plan 2030 Proposals Map identifies locations where new railway stations will be supported. These safeguards are to ensure that other development does not prejudice the future provision of these stations / halts. This should be added to the north-east proposals map.

University of Edinburgh (0464)

No modifications specified but it is indicated that careful consideration is required to achieve a suitable balance of public transport infrastructure with the unique character of Edinburgh City Centre and if any safeguard options impact upon the landownership

of the University of Edinburgh estate, further dialogue is requested.

Cramond & Barnton Community Council (0243)

PT6 should be extended at least to Barnton, or preferably to Cramond, to provide links to The Gyle, Gateway Station and indirectly to the Airport.

Friends of Cammo (0387)

Spatial Strategy Maps 1 and 2 need to be consistent on the route taken near Maybury junction.

NatureScot (0528)

No specific modification specified however it is suggested that proposals for the North and South Orbital should have more explicit links with active travel routes.

Mrs Patricia Scott (0349)

Route PT6 should be extended at least to Barnton and Cramond to provide a link from Cramond to the Gyle, Gateway Station and the airport.

Inverdunning (Hatton Mains) Ltd.(0427)

An A71 Corridor Express Route/Rapid Bus Transit (Livingston South to City Centre) should be added to table 6.

Alasdair Gillies (0035)

PT6 should provide a link from Cramond to Edinburgh park

The Davidson's Mains and Silverknowes Association (0454)

The orbital bus services round the north west of the city should include improved direct links between Cramond and Davidson's Mains and between Davidson's Mains and Stockbridge . The transport hub at Ingliston should be fully developed as an intermodal interchange for all transport links and linked into orbital bus service routes.

Ratho and District Community Council (0289)

No modifications specified but indicates that the Orbital Bus Route should commence operation as soon as any houses/businesses open in order to relieve congestion on A8

Jean Morley (0461)

Cramond to the Gyle and the Airport should be a bus link that is introduced via Maybury Road.

Lynn Grattage (0362)

At least another orbital bus route is required. One just on the south side e.g. Corstorphine - sighthill - craiglockhart - braids - niddrie, the other a more full loop going a bit closer to the centre but still as far out as e.g. craigleith, clermiston, chesser, morningside, newington, Willowbrae. Could the hard shoulder of the bypass be made into a bus lane with a service where it exists?

Lady Road Investment S.A.R.L. (0625)

No modification specified but it is indicated that the exact location and impact of the route (TR6) should be discussed further with all stakeholders to ensure the most efficient and appropriate route is provided for.

Miller Homes Limited and Wheatlands Farming Partnership (0592)

Table 7 of the Proposed LDP should be revised to identify the safeguarding of a tram route between Newbridge and Kirkliston. Table 10 of the Proposed LDP should be revised to safeguard the location for a proposed rail station as shown as part of the proposal for a housing and mixed use development at Kirkliston East.

Alan Stevens (0646), B Hyland (0792), Sustrans (0561), Alistair Mackintosh (0650), C van der Dussen (0558), Claire Graf (0541), Connie Longmate (0707), Hannah Knechtli (0259), Jakub Szwedowicz (0547), Joseph Coulson (0017), Katarzyna Wozniak (0546), Jordan Thomson (0676), Kasper Schwartz (0576), Fraser Wilson (0536), Despoina Papadopoulou (0575), Hannah Coulson (0331), Mark Beaumont (0752), Peter Moonlight (0550), Sandra Labinjoh (0690), Sophia Lycouris (0667), Graham Jones (0340), Mattia Ventre (0763), Catherine Labinjoh (0711), Andrew Longmate (0705), Heather Duque (0746), Patrick Longmate (0708), Gareth Wheeler (0636), Katherine Kennedy (0569), Heather R Finnegan (0664), Zuleika Connolly-Jones (0656), James McMeekin (0631)

It is indicated that Tr2 Safeguard option B1b should be removed from the plan.

John Yellowlees (0024)

No modification specified but it is indicated that the existing safeguard Tr2 should remain instead of new safeguard Tr3.

John Watt (0321)

The tram network to the ERI and Bioquarter and then to Shawfair needs to be tied into a Park and Ride facility. Consideration should also be given to a congestion charge or other disincentives to reduce car access to the city centre and improve active travel modes.

Shawfair LLP (0258)

The tram safeguarded route shown in Maps 1 and 2 requires to be amended over the settlement of Shawfair.

Capital Rail Action Group (0789)

Safeguard tram route Tr4, should be replaced with the following route: Up The Mound, George IV Bridge, Potterrow, Buccleuch Street and Hope Park Terrace - to then run forward via South Clerk Street, Newington, Cameron Toll and the Old Dalkeith Road to the BioQuarter.

It is also indicated that coming from Newhaven, trams heading to the BioQuarter could run via Leith Street and the Scott Monument to form the operational loop proposed by TR5. An additional tram route running via Lothian Road, Tollcross and Melville Drive to Hope Park Terrace is also worthy of consideration.

PTSG3 should operate tram-train to heavy rail running - with a connection made from the existing tram lines around the Murrayfield area then run to Cameron Toll to then bridge down to street level to run via the Old Dalkeith Road tram alignment to the BioQuarter in time they could also run forward via Craigmillar, Brunstane and Portobello to form a tram-train loop back to the city centre via Meadowbank and an alignment allowing them to gain Regent Road and Waterloo Place via Regent Road Park. Such an alignment would also allow potential tram-train running via the Lochend Butterfly developments to Granton via Easter Road, Leith Walk, Powderhall, Ferry Road and Trinity. The old railway alignment from Crewe Toll to Ocean terminal should be safeguarded for light rail.

Indicated that Tram-trains could run via the proposed developments at Seafield to join the tram line being built at the northern end of Constitution Street. The defunct Leith South Goods Yard should also be looked at to see whether the material currently being moved by lorry from the adjacent NWH Group depot could instead be moved by rail.

#### Spokes Lothian (0545)

The plan should state that the former rail corridor will include a high quality active travel route (Active Freeway) alongside the tram, together. It must also be clear what 'high quality' would mean.

PTSG 2 and PTSG 3 should be reflected in the Transport assessment assumptions, learning from Edinburgh Strategic Sustainable Transport Study & informing the soon to be announced STPR2 outcomes by Transport Scotland.

#### Peter Brown (0672)

The south suburban railway and stations should not only be safeguarded but be reopened to passenger traffic. Other closed railway lines should also be safeguarded for future reopening

#### Suzanne McIntosh (0409)

City Plan 2030 should make provision for the re-opening of the south sub-urban rail network.

#### Theo Spanellis (0415)

No modification specified however it is indicated that safeguard PTSG3 should be removed from the plan.

Robert Falcon (0640)

No modifications specified however it is indicated that the plan should include details on the infrastructure and other developments required in order to enable the safeguards noted in table 10.

Mr Cuchulainn Gent (0047)

No modifications specified however it is indicated that new rail stations at Meadowbank and Portobello should be part of the plan as well as expanding the options for rail-to-bus or active travel interchange at these locations and upgrading the entire Eastern approach. The plan should also encourage the South Suburban Line to be opened and utilised as a light commuter rail route.

Peter Allen (0336)

The old rail tracks that still exist at Seafield, should be added as a safeguard within the plan.

Grange/Prestonfield Community Council (0192)

Insert requirement within PTSG3 to review Cameron Toll halt.

Transport Scotland (0480)

The rail stations detailed within Table 10 p178 – Public Transport – Other Safeguards under PTSG 2 and PTSG 3 should be removed.

Mike Richardson (0109)

The orbital bus route in Map 1 should be complete and continuous - it appears to be shown with a break in the Newcraighall area. It should be possible to travel around the orbital route in either direction without interruption.

Miller Homes Ltd (0256)

No modification specified but it is indicated that justification should be provided as to why the transit corridor towards the west of Hermiston, which was previously recommended for further consideration in the Edinburgh Strategic Sustainable Transport Study – Phase 1 (October 2019) has been excluded. Any longer-term vision for a transit corridor to the west of Hermiston should be included in the City Plan now. Riccarton Village can also assist with the longer-term vision of the transit corridor towards the west of Hermiston by creating a critical mass in this area and delivering a transport hub including a park and ride.

**INF 13: Road Network Infrastructure**

Edinburgh Airport Limited (0761)

No modifications specified however it is indicated that EAL object to Policy Inf 13 on the grounds it references new transport infrastructure and junction improvements listed in Part 4 and shown indicatively on the Proposals Map however the Proposals Map does not align with the requirements of WETA Refresh 2016 or indeed the listed transportation improvements in Part 4 of the proposed City Plan.

Bo Adams (0363)

No modifications specified but It is indicated that Kaimes Junction, Burdiehouse, Frogston, Captains and Liberton roads should all be included in table 9 (Road Improvements). It is also indicated that there needs to be focus on noise reduction around bypass, noise absorbing asphalt combined with noise cancelling panels should be used along the bypass.

Corstorphine Community Council (0799)

Paragraph 3.214 should be amended to state that any proposed infrastructure changes should also support and prioritise sustainable transport, including public transport and protected on-road cycle provision.

West Town Edinburgh Ltd (0660)

No modifications specified but it is indicated that policy should permit the ability of large scale development to provide a permeable network of access points for all modes of travel to ensure a legible network that maximises use of existing infrastructure, whilst prioritising sustainable travel modes over private car use.

Spokes Lothian (0545)

The City Deal should be modified at the request of City of Edinburgh Council to remove the Sheriffhall Junction upgrade (R10). Junctions citywide should be retrospectively improved to embody the transport hierarchy, prioritised for safety and VisionZero design principles.

Miller Homes Limited and Wheatlands Farming Partnership (0592)

Table 9 of the Proposed LDP should be revised to identify the delivery of a new loop road around the east of the settlement of Kirkliston. No further modifications proposed but it is indicated that the delivery of this new loop road forms part of the proposal for a housing and mixed use development submitted by Miller Homes Limited (Miller Homes) as part of this consultation process. The delivery of the proposed loop road will improve road safety and provide relief from the existing traffic issues in Kirkliston by diverting traffic away from the centre of the settlement.

Mrs Patricia Scott (0349)

No modifications specified but it is indicated that proposals to adjust the phasing or otherwise of the traffic lights (R8) will do little to alleviate existing and major problems associated with the design of the junction itself nor projected greatly increased traffic

volume.

Mr John G. Skinner (0065)

No modifications specified but it is indicated that the action (R8) is underwhelming with reference to the existing traffic at peak times.

Leonard Wallace (0314)

More specification of the proposed changes is required (In respect to action R8 in table 9) The following additional specification ought to be considered in terms of Road Improvements: Speed monitoring, control and some form of traffic calming is required on the Cammo Crescent stretch, prioritising pedestrians waiting to cross is required.

Any change to the sequence of the lights should allow short gaps which would continue to facilitate residents around the junction safely exiting their properties.

Forth Ports Limited (0496)

No modifications specified but indicates that the route (R1) crosses the operational port estate.

The Davidson's Mains and Silverknowes Association (0454)

Barnton junction (R8) should be completely re-modelled to give priority to public transport.

Network Rail (0071)

A policy statement associated with R1 should be included which makes it clear that proposals which increase the use of level crossings will generally be resisted and where development would prejudice the safe use of a level crossing, alternative approaches should be explored, and developer funded.

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Improvements to the Dalmahoy Road junction on the A71 should be included in Table 9.

Archie Clark (0003)

Works to install a MOVA system at Gillespie Crossroads junction on Lanark Road should be included in table 9 with a timescale.

Jean Morley (0461)

Changes to the lights from Cramond Brig to Craigleith (R8) must reflect the safety of residents on both sides of the road to get in and out of their drives safely.

Cramond & Barnton Community Council (0243)

Table 9 should include additional Park-and Rides, peak period congestion charges, better traffic queueing measures (Dalmeny to Barnton), a cross-Forth ferry service, while avoiding the diversion of traffic into residential areas (e.g. Cramond, Barnton, Davidsons Mains). The Queensferry Road corridor between Craigleith and Barnton should be designated as an Air Quality Management Area.

Gavin Cameron) (0782)

No modification specified, however, it is indicated that signal efficiency is not the issue at Barnton.(R8) Instead it is the Circa 600 houses which were approved and are now being built.

SEPA. (0012)

No modification specified, however ask for careful consideration of those parts of these proposals which may act against the aims of Edinburgh achieving its targets for net zero by simply enabling further use of the private car.

**INF 14: Rail Freight**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

No modification specified but the question asked if Edinburgh's current under-utilised rail network could be engaged in development of a fast and sustainable passenger transport network, or goods distribution network – even if only to the freight distribution hubs as visualised in section 3.245 on page 137.

Forth Ports Limited (0496)

Delete the second sentence of paragraph 3.215, in Inf 14 which reads “Keeping a reduced general freight rail head to the east in Seafield will complement the safeguard for a waste management facility in that location (see Policy Inf 18).”

**Summary of responses (including reasons) by planning authority:**

**Transport Strategy and General Comments**

Cramond and Barnton Community Council (0243)

One of the four key aims of City Plan (CD001) is to limit the need for people to have to own and travel by private car, by supporting everyone to travel more sustainably. This is a key element of the National Transport Strategy 2 (NTS 2) (CD110), the draft National Planning Framework 4 (NPF4) (CD099) and the Council's approved local transport strategy, the City Mobility Plan (CMP) (CD062). City Plan seeks to ensure the provision and promotion of high quality and readily accessible public transport services and well connected, safe active travel infrastructure to achieve this outcome.

Paragraph 2.111 expands on the aim and states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding public transport. City Plan 2030

aligns with and assists in the delivery of many of the CMP's objectives, policy measures and commitments and will support the Council in meeting its target of reducing car kilometres. City Plan 2030 promotes an infrastructure first approach to community development, directing development to where there is existing infrastructure. It is also noted that City Plan 2030 also has three other outcomes which are: A sustainable city which supports everyone's physical and mental wellbeing, A city where everyone lives in a home they can afford and A city where everyone shares in its economic success.

Each of the outcomes also have separate paragraphs within part 2 of the plan that provides further detail on the individual aims. The Council considers the wording of the outcome to be a succinct and accurate summary reflective of the approved CMP and relevant national policy.

Energy and Waste policies are included under this outcome as they are resources and services which are part of the City's essential infrastructure. **No modification proposed.**

Homes for Scotland (0404), Wright PDL (0078), Steve Loomes (0767)

City Plan (CD001) aligns with and assists in the delivery of the City Mobility Plan's (CD0062) commitment to make Edinburgh a city that welcomes everyone, where the streets are for people not cars, and with accessible and pleasant places to safely walk, wheel and cycle around. City Plan promotes an infrastructure-first approach to community development, directing development to where there is existing infrastructure or where infrastructure can be provided.

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the spatial strategy and allocation of sites included within the Proposed Plan. The approach taken was guided by Transport Scotland's Development Planning and Management Transport Appraisal Guidance (DPMTAG) (CD112). City Plan's spatial strategy directs growth to brownfield sites within the urban area or in strategic expansion areas where there is good public transport, including tram. City Plan reflects and embeds the travel and investment hierarchies set out in the Infrastructure Investment Plan (CD159) and NTS2 (CD110) within the appraisal and assessment of potential development options to inform the spatial strategy from the outset.

The Council considers that pursuing a redevelopment strategy, as set out in paragraph 2.112 of the Plan, is likely to have fewer overall traffic impacts than a greenfield housing development strategy because it will bring forward sites with much better accessibility to sustainable transport modes, helping to reduce car trip kilometres. City Plan also advocates the redevelopment of brownfield sites to include both residential and commercial elements. This is shown in the place policies in part 3 of the plan and in policy Econ 5, which provides support for sites to be redeveloped for mixed use development including housing in order to contribute towards meeting the city's housing requirement. Paragraph 3.240 states that small businesses contribute significantly towards the economy of the city by providing jobs and services. The policy aims to help meet the needs of small businesses and the city's residents by ensuring full consideration is given in the design and layout of developments to the retention and inclusion of small business/commercial units within mixed use developments which is a policy approach consistent with the strategy of the City Plan 2030. As a result the Council does not consider the overall car travel impacts of redeveloping existing business or industry sites to be significant. The Council's position is set out in further detail in Issue 3: Delivery of the

Strategy and Issue 35: Economy Policies. **No modification proposed**

Living Streets Edinburgh Group (0486).

One of the key aims of City Plan (CD001) is adopting an “Infrastructure first” approach, directing new development to where there is existing infrastructure. The aim also makes it clear that where required to support new development City Plan requires new and expanded community infrastructure. The potential requirement for new or upgraded infrastructure and any developer contributions required to facilitate these will be assessed during the submission of future subsequent planning applications.

Aim 8 is a short summary of the City Plans key aims. Paragraph 2.30 and policy Inf 10 makes it clear that City Plan reinforces the national sustainable travel hierarchy and walking is promoted first. The Council does not consider that it is necessary to have a definition of walking within the City Plan’s glossary.

If sites indicated in appendix D (CD002) have specific active travel and/or public transport requirements, then these are clearly indicated in the development principles section

The Council considers the wording in Paragraphs 2.118, 2.119 and 2.30 to be suitably robust and will enable decision makers to fully assess and evaluate the impacts of development proposals. **No modification proposed.**

On the 11<sup>th</sup> November 2021, mode share targets were presented to the Council’s Transport and Environment Committee for walking, cycling and public transport. However, these were not approved. Committee acknowledged the complexity of this work and asked officers to engage with key stakeholder groups to review and refine the approach. On the 18<sup>th</sup> of August 2022, the Council’s Transport and Environment Committee produced a Business Bulletin (CD160) which stated that individual mode share targets for walking, cycling and public transport are not supported by stakeholders because this would create undue competition and potentially adversely influence investment levels rather than adopting a more holistic approach, as is provided by the overarching 30% reduction in car kms target.

The approach for setting an overarching target of 30% reduction in car kms without individual mode share targets is consistent with the national and emerging regional policy approach.

If the reporter is so minded then for clarity the wording of paragraph 2.118, 3.193, 3.201, 3.202, 3.204, 3.209, 3.211 and policy Inf 3 could be amended to remove the mention of the Council’s sustainable transport targets (mode share targets) to better reflect the current approach of the Council’s Transport and Environment Committee since the proposed plan was published.

Gavin Cameron (0782)

City Plan (CD001) seeks to ensure the provision and promotion of high quality and readily accessible public transport services and active travel routes.

City Plan proposes a northern orbital bus route (PT1) that will run in relatively close proximity to Cramond, running along Queensferry/Maybury Road. There is also a strategic

active travel project and safeguard proposed. (River Almond Walkway). The Edinburgh Strategic Sustainable Transport Study (ESSTS) (CD071) is also looking at a number of strategic transport corridors which run close to Cramond. The CMP (CD062) also offers a 10 year plan to transform transport in the capital by expanding use of bus, tram, rail, walking and cycling. **No modification proposed.**

Archie Clark (0003)

LEZ's, (Low Emission Zones) and electric vehicle smart charging operates successfully in many cities globally and in the UK, such as London, Birmingham and Glasgow. Edinburgh's city centre LEZ is now in place (implemented 31 May 2022) and will be enforced at the end of the 2 year grace period on 1 June 2024. Trends in vehicle compliance show an improving picture as people get ready for the scheme's operation.

Mobility hubs are one of a number of ways to make sustainable travel more attractive through the provision of accessible, combined shared travel options and other associated facilities such as EV charging. There are many examples of mobility hubs playing an integral part of sustainable city movement in countries across the world. Examples of successful mobility hubs can be found in Vienna, Amsterdam and Austin, Texas.

The COVID-19 pandemic has impacted travel patterns in terms of overall volumes, choice of transport mode and the origin-destination of trips. There is no way of knowing if travel patterns will return to those pre-pandemic levels or if a new 'norm' will be established. Nevertheless, the TA was undertaken using the most robust datasets available and assumed the most likely future traffic scenarios. Official figures by the Office of Rail and Road show that more than double the number of rail journeys were made by passengers between April 2021 and March 2022 compared to the number of those made during the pandemic in the previous year (CD138).

City Plan's spatial strategy directs growth to brownfield sites within the urban area or in strategic expansion areas where there is good public transport, including tram.

One of the key aims of City Plan is to deliver a network of 20 minute neighbourhoods by the creation of high density, mixed use and walkable communities, linked by better active travel and public transport infrastructure. New public transport measures like the tram are less impacted by traffic and congestion and are therefore faster and more reliable. These measures will make people less car dependent and less likely to wish to take the car. It will also help towards the city's target of a reduction in car kilometres.

The Council therefore considers that the City Mobility Plan will widen travel choice and reinforce the national sustainable travel hierarchy that promotes walking, wheeling, cycling, public transport and car sharing in preference to single occupancy car use.

**No modifications proposed.**

Robert Drysdale (0354)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the spatial strategy and allocation of sites included within the Proposed Plan. The approach taken was guided by Transport Scotland's Development Planning and Management Transport Appraisal Guidance (DPMTAG) (CD112). The TA informed the City Plan spatial strategy maps (CD002-006). The Council considers the wording of

paragraph 2.114 to be suitably robust.

'A city where you don't need to own a car to move around' is an accurate summary of one of the City Plans aims. **No modifications proposed**

Crosswind Developments Ltd (0184)

Maps 1 and 8 are small city-wide illustrative maps which cannot be expected to show every aspect of the plan in detail. The larger proposals maps which separately cover the four designated areas of the city are for that purpose. No active travel routes or links in West Edinburgh are shown in map 1 and 8 for this reason, however, the active travel routes and links, like (WE27) is, however, clearly shown in the larger North-West proposals map (CD004), Map 24 and the online interactive mapping system. Map 8 is correctly titled Transport Proposals and Safeguards. Map 9 has a title and a legend and is clearly readable.

Energy and Waste policies are included under this outcome as they are resources and services which are part of the City's essential infrastructure. **No modification proposed.**

Leith Central Community Council (0614)

The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched On Towns and Cities Challenge Fund (CD153).

One of the four key aims of City Plan (CD001) is to limit the requirement for car use as advocated by the National Transport Strategy 2 (NTS 2) (CD110) and the draft National Planning Framework 4 (CD099). City Plan seeks to ensure the provision and promotion of high quality and readily accessible public transport services and active travel routes that will minimise people's requirement to own and utilise a car.

Paragraph 2.30 states that "This will enable us to meet our (Edinburgh's) target for a reduction in car kilometres by 20%". This is in line with the Scottish Government's commitment to a 20% reduction in distance travelled by car by 2030. **No modifications proposed.**

However, on the 11<sup>th</sup> of November 2021, the Council's Transport and Environment Committee approved a citywide target to reduce car kilometres (kms) by 30% by 2030 (CD161). This reflects that Edinburgh is largely a relatively compact urban environment with good public transport and therefore can aim to reduce a greater percentage of car kilometres by 2030, compared to more remote, rural expansive areas of Scotland. If the reporter is so minded then for clarity paragraph 2.30 could be amended to reflect the 30% target approved by the Council's Transport and Environment Committee since the proposed plan was published.

Frances Guy (0589)

One of the four key aims of City Plan is to limit the requirement for car use as advocated by the National Transport Strategy 2 (NTS 2) (CD111) and the draft National Planning Framework 4 (CD099). City Plan seeks to ensure the provision and promotion of high quality and readily accessible public transport services and active travel routes

that will minimise people's requirement to own and utilise a car.

Paragraph 2.30 states that "This will enable us to meet our (Edinburgh's) target for a reduction in car kilometres by 20%". This is in line with the Scottish Government's commitment to a 20% reduction in distance travelled by car by 2030. **No modifications proposed.**

However, on the 11<sup>th</sup> of November 2021, the Council's Transport and Environment Committee approved a citywide target to reduce car kilometres (kms) by 30% by 2030 (CD160). This reflects that Edinburgh is largely a relatively compact urban environment with good public transport and therefore can aim to reduce a greater percentage of car kilometres by 2030, compared to more remote, rural expansive areas of Scotland. If the reporter is so minded then for clarity paragraph 2.30 could be amended to reflect the 30% target approved by the Council's Transport and Environment Committee since the proposed plan was published.

#### Hallam Land Management (0615)

As would be expected the plan has been informed and influenced by regional context and change. Paragraphs 2.26 and 2.114 of the plan makes it clear that the City Mobility Plan (CD062) and other strategic transport strategies will be major influences on the delivery of sustainable transport modes alongside national and regionally focused projects. So too will be progress in delivering committed City Regional Deal funding for WETA refresh 2016 (CD073) and West Edinburgh Transport Improvement Projects (WETIP) (CD072) to address cross boundary transport issues in the West of Edinburgh.

As paragraph 2.23 of the plan makes clear Edinburgh's regional input to the National Planning Framework process have been made through an interim Regional Spatial Strategy approved by the SESplan Joint Committee, the City Regional Deal directors and the constituent SESplan authorities (CD093). It has been a process of collaborative working with the Scottish Government. Paragraph 2.25 states that the collaborative working with Scottish Government and the context of the National Transport Strategy 2 (NTS 2) (CD110) and the Strategic Transport Projects Review 2 (STPR2) (CD111) underpin the opportunities for progress to be made to support better connectivity and access to jobs across the entire region whilst also supporting the transition to net carbon zero movement. NTS2 (CD110) and STPR2 (CD111) have been published by Transport Scotland on their website and have been open for public consultation. Other high-level strategies were also published appropriately e.g. Interim regional spatial strategy and NPF4 consultation process (CD098). These are part of the national and regional context of the plan.

The City Mobility Plan has a section on Covid 19- Impacts and Recovery. The impact that Covid has had on transport demand is also addressed in the TA under section 1.3 The Key Challenges to be Addressed and in the Plausible Future Travel Demand Scenarios.

The Council's detailed response to suggested additional greenfield sites is set out in issue 9

City Plan aims to change travel behaviours by enabling easier access to efficient public

transport and active travel routes and to direct new development to sites which can make best use of these sustainable transport modes. City Plan aims to increase the range of reliable, efficient and convenient active and public transport options. The proposals to enable this is set out in part 4 of the plan. These proposals will not just benefit new developments but will enable Edinburgh to be “A city where you don’t need a car to get around”. These tables were informed by the City Plan TA (CD014), the Edinburgh Strategic Sustainable Transport Study (ESSTS) (CD071) and the City Mobility Plan (CMP) as well as West Edinburgh Transport Appraisal (2016 Refresh) (WETA) and emerging West Edinburgh Transport Improvement Programme (WETIP).

The phasing and programming of development is dependent on the timescales for works beginning on site and the Action Programme is updated yearly. Paragraph 2.17 states that the Strategic Transport Projects Review 2 is still underway. This statement is accurate. **No modification proposed.**

#### Tarmac (0244)

As would be expected City Plan (CD001) has been informed and influenced by regional context and change. Paragraphs 2.26 and 2.114 of the plan makes it clear that the City Mobility Plan (CD0062) and other strategic transport strategies will be major influences on the delivery of sustainable transport modes alongside national and regionally focused projects. So too will be progress in delivering committed City Regional Deal funding for WETA refresh 2016 (CD073) and West Edinburgh Transport Improvement Projects (CD072) to address cross boundary transport issues in the West of Edinburgh.

As paragraph 2.23 of the plan makes clear Edinburgh’s regional input to the National Planning Framework process have been made through an interim Regional Spatial Strategy (CD093) approved by the SESplan joint committee, the City Region Deal joint committee and the constituent SESplan and City Deal authorities. It has been a process of collaborative working with the Scottish Government. Paragraph 2.25 states that the collaborative working with Scottish Government and the context of the National Transport Strategy 2 (CD110) and the Strategic Transport Projects Review 2 (CD111) underpin the opportunities for progress to be made to support better connectivity and access to jobs across the entire region whilst also supporting the transition to net carbon zero movement. NTS2 (CD110) and STPR2 (CD111) have been published by Transport Scotland on their website and have been open for public consultation. Other high-level strategies were also published appropriately e.g. Interim regional spatial strategy and NPF4 consultation process. These are part of the national and regional context of the plan.

City Plan’s spatial strategy directs growth to brownfield sites within the urban area or in strategic expansion areas where there is good public transport, including tram. City Plan aims to increase the range of reliable, efficient and convenient active and public transport options. The proposals to enable this is set out in part 4 of the plan. These proposals will not just benefit new developments but will enable Edinburgh to be “A city where you don’t need a car to get around”. These tables were informed by the City Plan TA (CD014), the Edinburgh Strategic Sustainable Transport Study (ESSTS) (CD071) and the City Mobility Plan (CMP) (CD062) as well as West Edinburgh Transport Appraisal (2016 Refresh) (WETA) and emerging West Edinburgh Transport Improvement Programme (WETIP). The Council’s detailed response to suggested

additional greenfield site is set out in issue 9. **No modification proposed.**

Mark Ockendon (0419)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the plan which sets out Edinburgh's mass transit network, including proposed new public transport actions, from the City Mobility Plan (CD062) and the ESSTS (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (NTS2) (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport. The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153). The introduction of free public transport is out with the remit of the City Plan.

The Council considers that the current wording of the plan and its policies are robust and will help deliver the aims of the strategy. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306)

Edinburgh City Centre LEZ was approved by Scottish Ministers on 19 May 2022 and was introduced on 31 May 2022. Enforcement will start on 1 June 2024, following a two-year grace period for all. Further details of Edinburgh's proposed mass transit network are available in the City Mobility Plan (CD062) and the Edinburgh Sustainable Strategic Transport Study (CD071). **No modification proposed**

Alasdair Gillies (0035)

City Plan promotes the national sustainable travel hierarchy which is advocated in NTS 2 (CD110) in which walking and wheeling is promoted first. Spaces for People is not part of the City Plan. **No modification proposed.**

Jean Morley (0461)

City Plan (CD001) aims to provide the people of Edinburgh with a greater range of reliable, efficient and convenient active and public transport options. An orbital city bus route is proposed as well as safeguarded routes for future tram lines. A key aim of the plan is also to direct development to where there is existing infrastructure and to deliver a network of 20 minute neighbourhoods. **No modification proposed.**

SEPA (0012)

City Plan (CD001) aims to increase the range of reliable, efficient and convenient active and public transport options not just for new developments but to benefit developments which already exist throughout the City. **No modification proposed.**

Sarah Adamson (0523)

A key outcome of City Plan (CD001) is for Edinburgh to be a City where you don't need to own a car to move around. City Plan intends to provide the people of Edinburgh with a greater range of reliable, convenient and efficient active and public transport options. Another key aim of the plan is to direct development to where there is existing

infrastructure and to deliver a network of 20 minute neighbourhoods. City Plan will help reduce traffic levels and air pollution within the City. **No modification proposed.**

Donald Macaulay (0188)

The maintenance and upkeep of road and pavement infrastructure is out with the scope of the City Plan (CD001). **No modification proposed.**

Genna Spears (0081)

Any modifications to parking provision will be subject to other Council processes and consultation, however City Plan (CD001) accords with the CMP (CD062) in terms of managing private car use and public space. Dedicated cycle lanes will encourage the growth of cycling within the City in line with the sustainable transport hierarchy. **No modification proposed.**

Rodger Musson (0162)

One of the four key aims of City Plan (CD001) is to reduce the need for car use as advocated by NTS 2 (CD110) and the draft National Planning Framework 4 (CD099). City Plan seeks to ensure the provision and promotion of high quality and readily accessible public transport services and active travel routes that will minimise people's requirement to own and use a car. Policy Inf 5 states that proposals for major development which would generate a significant travel demand will not be supported where there is a reliance on private car use. **No modification proposed.**

Julie Roberts (0210)

A key outcome of City Plan (CD001) is for Edinburgh to be a City where you don't need to own a car to move around.

City Plan aims to provide the people of Edinburgh with a greater range of reliable, efficient and convenient active and public transport options. An orbital city bus route is proposed as well as safeguarded routes for future tram lines. The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153). **No modification proposed.**

Dandara East Scotland (0757)

One of the four key aims of City Plan (CD001) is to reduce the need for car use as advocated by NTS 2 (CD110) and the draft National Planning Framework 4 (CD099). City Plan seeks to ensure the provision and promotion of high quality and readily accessible public transport services and active travel routes that will minimise people's requirement to own and use a car. The Council's position relative to parking requirements is set out in Issue 32: Transport Policy-Parking. **No modification proposed.**

**Action Programme.**

Hallam Land Management (0599), Miller Homes (0649), CALA Management Ltd (0465).

The Action Programme (CD008) is about actions to deliver the plan's policy and proposals. It does not set out the delivery mechanism and funding of developers or registered social landlords. The action programme is not guidance on developer contributions.

The content of the Action Programme is set out by legislation (Section 21 of Part 2 of the Planning Scotland 2006 Act (CD153) and Town and Country Planning (Scotland) Regulations 2008, Part 5, section 26: Form and Content of Action Programmes (CD154). It states that an action programme is to set out the following matters-

- (a) a list of actions required to deliver each of the policies and proposals contained in the relevant plan (b) the name of the person who is to carry out each such action; and (c) the timescale for the conclusion of each such action.'

The evidence base for the TA (CD014) and the WETA 2016 refresh (CD073) has some high level costings of some actions but it is not a legislative requirement to include costs in an action programme. Circular 6/2013 (CD121) mentioned relates to legal agreements. Policy Inf 3 relates to infrastructure delivery and developer contributions. Paragraph 3.197 of the plan states that planning guidance will set out the mechanism for the detailed calculation of proportionate contributions within a contribution zone, as well as any exceptions.

Phasing of development has a dependency on landowner and developer decisions and timings. Therefore, the specifics of timing of infrastructure provision, where required, are part of planning application considerations. Most will be delivered with development and so will follow the delivery and phasing timescale of development at project level. Where development has a dependency on infrastructure provision that will be part of the project level considerations these will be controlled by conditions on the application. Subsequent action programmes will be updated to provide more detail on delivery timescales, as development proposals come forward and are continually informed by the pace of housing completions as evidenced by the Council's annual housing land audit and completions programme. The Council's strategy is likely to be delivered within the timeline of the plan. The Council is setting out clearly in the Action Programme (CD008) and the City Plan what the infrastructure requirements are to support development. Developers need to use this information to inform their layout designs (for transport infrastructure) and to make appropriate financial plans and decisions. There is a clear link between the action in the Action Programme and the proposed plan given that most have a City Plan reference which relates to the part 4 proposals section in the proposed plan and the tables of proposals for the various types of infrastructure. **No modification proposed.**

#### Cramond & Barnton Community Council (0243)

Adopting an infrastructure first approach, one of the City Plan 2030 aims, requires being upfront in the Action Programme (CD008) and in the proposed plan about what infrastructure is required to support and mitigate the impact of development, and to be directing/planning development where infrastructure capacity exists.

However, it is important that infrastructure is delivered timeously to mitigate negative impacts and to facilitate sustainable behaviour (in the case of, for example, Active Travel and Public Transport) and this will be dealt with either in subsequent action programmes (informed by HLACP, with Council programmes for delivery of infrastructure and/or in planning applications and associated legal agreements where the phasing of infrastructure

is tied to the completion rates of development. **No modification proposed.**

#### Tarmac (0244)

The annually updated Action Programme (CD008) will highlight the actions required to deliver the public transport and active travel improvements proposed within or around the area in the plan, which includes Ratho. Most of the phasing and programming of approved development in West Edinburgh will be delivered under project level decisions with development and so will follow the delivery and phasing timescale of development. Subsequent action programmes will provide more information on delivery timescales as development proposals come forward and are continually informed by the pace of housing completions as evidenced by the Council's annual housing land audit and completions programme. **No modification proposed.**

#### SEPA (0012)

Support Noted.

### **Transport Appraisal**

#### Hallam Land Management (0615)

One of the key aims of City Plan (CD001) is that by 2030 Edinburgh will be a city where you don't need to own a car to move around. Paragraph 2.111 of the plan states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding sustainable public transport. City Plan also promotes an infrastructure first approach to community development, directing development to where there is existing infrastructure. The TA (CD014) informed the spatial strategy of the proposed plan and the infrastructure proposals as set out in part 4 of the plan to deliver the strategy and policy outcomes. Tables 3- 10 of the plan lists a number of developments that will help improve active and public transport throughout the City.

The TA and the plan both refer to and take into account potential changing travel patterns as a result of Covid-19. No evidence of changing travel patterns as a result of covid was presented in Choices as it was published pre-pandemic on 31<sup>st</sup> January 2020. **No modification proposed.**

#### Tarmac (0244)

The Council commissioned a TA, (produced by Jacobs) (CD014) to inform the spatial strategy of the plan. The strategy is supported by the Scottish Governments National Transport Strategy 2 (CD110) and the emerging Strategic Transport Projects Review 2 (CD111), which supports investment in public transport.

The TA looks at the effects of traffic demand scenarios. It includes pre-covid or no covid scenarios, plausible post covid without policy changes and plausible post covid with policy changes and proposed mitigation measures of proposed development sites. No evidence of changing travel patterns as a result of covid was presented at choices as choices was published pre-pandemic on 31<sup>st</sup> January 2020.

City Plan aims to change travel behaviours by enabling easier access to efficient public transport and active travel routes and to direct new development to sites which can make best use of these transport modes. New technologies like electric vehicles are being provided for and the existing trams line is being extended and the plan includes safeguards for the potential north- south tram routes noted in table 10 of the plan. Tables 3, 4, 5, 6, 7, 8, 9 and 10 of the Plan list a number of proposed infrastructure interventions for improvement of active and public travel throughout the City. These have been informed by the TA, the City Mobility Plan (CD062), ESSTS (CD071) as well as WETA 2016 Refresh (CD073) and WETIP (CD072). The Council's position relative to the revised vision for West Edinburgh is set out in detail in issue 39. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

The Transport Appraisal (TA) (CD014) informs the spatial strategy of the Proposed Plan and therefore it was required to assess both the 'preferred approach' and the 'reasonable alternatives' approach of Choices for City Plan, the Main Issues Report (MIR) stage of the plan process (CD022). There are sites included and indicated in the TA that were assessed as "reasonable alternatives" that are not in the proposed plan. **No modification proposed**

Inverdunning (Hatton Mains Ltd) (0427)

The Council commissioned a Transport Appraisal (TA), (produced by Jacobs) (CD014) to inform the spatial strategy and allocation of sites included within the Proposed Plan. The approach taken was guided by Transport Scotland's Development Planning and Management Transport Appraisal Guidance (DPMTAG) (CD112). The wording of paragraph 2.112 clearly articulates the established aims of the plan.

The TA has taken trip rates directly from appropriate West Edinburgh Transport Assessments and other data sources. Generally, Census Travel to Work modal splits are more appropriate than TRICS modal splits for residential trip rates as they relate directly to the location in question and provide a more accurate reflection of the specific characteristics of each area. Mode split assumptions also reflect the ambition for West Edinburgh, with high public transport and active travel use.

The COVID-19 pandemic has impacted travel patterns in terms of overall volumes, choice of transport mode and the origin-destination of trips. There is no way of knowing if travel patterns will return to those pre-pandemic or if a new 'norm' will be established. Nevertheless, the TA was undertaken using the most robust datasets available and assumed the most likely future traffic scenarios. A key requirement in the delivery of West Edinburgh will be the monitoring of mode shares as the build out proceeds, with the package of interventions and supporting measures (e.g. parking restraint) refined as part of each subsequent planning application. Whilst it is acknowledged that COVID has had a significant impact on travel behaviours there has been a significant return to normal with public transport patronage now at approximately 80-85% of 2019 values. Even without COVID, the strategic model is a tool useful in illustrating potential future outcomes. COVID amplifies uncertainty; however, results are framed around a robust framework, encouraging active travel and public transport modes.

Modelling reflects an agreed policy compliant scenario. The City of Edinburgh Council,

Transport Scotland and the National Government have policies which seek to reduce vehicle kilometres, supporting wider emissions and climate change targets.  
(CD110)(CD114)

It is recognised that trip distribution within the strategic model will not reflect the change in travel patterns resulting from COVID. Even so, the model is the best tool available to test development proposals and to understand their potential impact. As noted above, monitoring of development traffic and emerging mode shares will be critical. Future development phases will be adapted to deliver against transport and wider policy targets as necessary.

The TA established trip rates using two different approaches, both of which follow standard methodology. One using the trip rates in the associated development TAs, and a second using rates derived from the strategy model. Values were similar when parking restraint was assumed. Generally, lower trip rates reflect the ambition to provide more sustainable travel choices along with a low parking and low traffic environment.

H59 to H63 are mixed use sites. The trip rates were derived using standard methodology, extracted from the relevant development TA or the strategic model. Sites H59 to H63 departure and arrival volumes reflect the development mixes provided. It is acknowledged that development proposals will evolve, reflecting future market conditions.

Key public transport and active travel interventions along the A8/A89 corridor between Broxburn and Maybury are being delivered through WETIP (CD072). There are a number of infrastructure elements that could have a direct bearing on the delivery of the West Edinburgh masterplan; however, individual elements of the plan can be adjusted to reflect real-world infrastructure delivery. City Plan 2030 is the Local Development Plan for a ten year period in order to reflect development in the near future. This reduces the level of uncertainty concerning traffic volumes and travel behaviours in the short to medium term.

The Council's position in relation to suggested additional greenfield sites is set out in further detail in issue 9. **No modification proposed.**

(0465) CALA Management Ltd, (0599) Hallam Land Management, (0649) Miller Homes Limited

The TA (CD014) that supports City Plan was undertaken based on guidance from Transport Scotland's Development Planning and Management Transport Appraisal Guidance (DPMTAG) (CD112). Evidence to inform the decision making process was appraised against a common set of aspirational Transport Planning Objectives and used a range of traffic modelling tools.

CEC's VISUM Strategic Model of Edinburgh was used in the supporting the TA to assess multiple travel modes, including highway, bus, rail and tram public transport. Recently used to forecast future patronage on the tram line as part of the Trams to Newhaven full business case, this multi-modal traffic model is considered the most robust transport tool available to appraise the options under review in the Proposed LDP.

Robust 'off the shelf' modelling tools for active travel are less common than for public transport and private vehicles. Therefore, trip generation for active travel was based on

published Transport Assessments of specific developments or data on trip patterns of similar sites elsewhere in the UK. Appraisal of active travel interventions relied on data from best practice which identifies what could be expected if high quality new active travel infrastructure is provided on urban corridors which currently have no dedicated provision. Although total active travel volumes may not be known, these modes are at the top of the sustainable travel hierarchy and at the forefront of local and national government policy. Therefore provision of quality active travel infrastructure at new development sites is a priority.

Lothian Buses already provide a Airlink 100 route from the City Centre to the Airport, via a number of stops which include Drum Brae South, Edinburgh Zoo, Western Comer, Murrayfield and Wester Coates before arriving at several City Centre stops. The Airlink 100 service operates 24/7 and departs Edinburgh Airport every 30 minutes between 0100-0430 and then every 10 minutes between 0430-0100.

There is also the Skylink 200 (Airport to Ocean Terminal via North Edinburgh) service. This service has numerous stops which includes Clermiston, Blackhall, Drylaw, Muirhouse, West Pilton, Granton, Starbank, Newhaven, Lindsay Road and then Ocean Terminal. The Skylink 200 leaves Edinburgh Airport every 30 minutes between 0410-0000,

The Skylink 400 (Airport to Fort Kinnaird via South Edinburgh) service also has numerous stops which includes Gyle Centre, Edinburgh Park, Wester Hailes, Gillespie Crossroads, Colinton, Oxbgangs, Fairmilehead, Kaimes, Gracemount, Royal infirmary and Fort Kinnaird. The Skylink 400 departs up to every 30 minutes between 0420-2335.

Additional patronage will need to be served but will add to the demand for these services and future enhancement of them. The detail of this is subject to collaborative working with Lothian Buses and other public transport operators. Further details will be published in the action programme. The routing of these buses and other future services will respond to the patronage created and the final approved access and movement arrangements for the development. The tram route proposals shown in table 7 are currently safeguards. The plan notes that the Edinburgh Strategic Sustainable Transport Study Phase 2 shows alignment options for the Granton to City Centre extension and the South East corridor options, being taken forward to a Strategic Business Case.

The majority of interventions summarised in Table 8 were costed as part of the WETA 2016 Refresh (CD073). Interventions are being further refined as part of the development of a detailed masterplan for West Edinburgh. This is being informed by ongoing discussions with landowners and public transport operators.

Road improvements given in Table 9 are generally being delivered through existing Section 75 agreements or are being proposed to unlock development in West Edinburgh. The Sheriffhall junction upgrade is being funded through the Edinburgh and South East Scotland City Region Deal (CD162). All of the proposals have a title and description. Table 10 only highlights safeguards.

The 20 minute neighbourhoods approach is set out in the draft NPF4 (CD099) and the 2021 Programme for Government (CD100). It is a well- established approach used worldwide as a way of delivering services within communities. Further details of the Council's position on 20 minute neighbourhoods is set out in issue 28.

Paragraph 5.6.2 of the Transport Impact Assessment in the TA clearly identifies that City Plan 2030: IBG2 – revised proposals incorporating 7,000 residential units with a reduced office use element from the previous proposals. The purpose of a TA is to inform the spatial strategy of the Proposed Plan and therefore it was required to assess both the ‘preferred approach’ and the ‘reasonable alternatives’ approach of Choices for City Plan, the Main Issues Report (MIR) stage of the plan process (CD022). Chapter 4.2 of the TA states that In order to ensure a robust assessment is undertaken, and following advice from CEC, the demand associated with Option 3 (brownfield / greenfield blend) is considered within this Transport Appraisal. The Council is not required to assess the impact of all proposed sites on the existing road network.

The TA does establish transport mitigation measures for West Edinburgh which have been incorporated into part 4 of the plan as well as those proposed by the WETA 2016 refresh (CD073). Further details of these measures will be expected with the future masterplan and with future detailed planning applications.

It must also be acknowledged that the potential transport aspects of a site being developed is only one part of the considerations that have been assessed through the city plan process. The Council’s position on the plan’s spatial strategy can be seen in issue 2. Allocation of sites is addressed in issue 20. **No modification proposed.**

#### Liberton & District Community Council (0084)

The TA (CD014) was carried out through modelling and analysis using the CEC VISUM strategic model which is focused on Edinburgh and key arterial corridors. It also covers all major commuting catchments to the city and strategic movements from the rest of Scotland. Road and rail links across the whole of mainland Britain, necessary to allow traffic to travel to/from the study area are also included. City Plan policies Inf 3 and Inf 4 require cumulative and cross boundary transport impacts to be addressed. Paragraph 3.59 states that it is expected that detailed transport assessments will be submitted in support of development proposals and that these should include modelling of the cumulative effects of increased traffic flows on trunk and local road networks taking into account all known proposed development and any potential cross-boundary impacts. **No modification proposed**

#### **West Edinburgh Transport**

#### Royal Highland & Agricultural Society of Scotland (0482)

Paragraph 3.59 states that a cumulative Transport Contribution Zone will be applied to address the area wide transport interventions as identified through the TA (CD014) and the outcomes of WETA/WETIP (CD073 & CD072), in support, of the measures being delivered as part of the City Deal (CD162), including those in part 4, table 8. Table 8 clarifies that the table comprises the list of necessary transport proposals to support the development envisaged for place 16 West Edinburgh, as set out in the development principles. It includes measures identified in the WETA 2016 Refresh.

The wording of paragraph 3.59 is robust and proportional. The West Edinburgh Development Principles states that a collaborative, multi-disciplinary, master plan led approach will be required in principle. A gravity model for development in the area has

been created and will be used to inform guidance on developer contributions. This will inform the assessment of cumulative impacts for each development for the purposes of developer contributions. **No modifications proposed.**

#### Living Streets Edinburgh Group (0486)

Criterion (g) of the West Edinburgh Development Principles state that a legible hierarchy of streets, routes and spaces designed for convenient, safe movement of pedestrians, cyclists and public transport that connects all parts of the brief area. Criteria (u)- (z) also highlight the requirements in principle of active and public transport within these sites. Paragraph 3.57 also makes it clear that the Council will coordinate a collaborative, multidisciplinary master plan approach to development across these sites. The plan reflects the aims of Scottish Planning Policy (CD096) and the National Transport Strategy 2 (CD110). **No modification proposed.**

#### Transport Scotland (0480)

City Plan (CD001) has a number of measures highlighted in table 8 which will mean that developments will be required to be designed to provide for an influence a modal shift to sustainable travel modes.

The plan confirms, under the West Edinburgh Design Principles that a collaborative, multi-disciplinary masterplan approach will be required. Criterion (m) and (n) of the West Edinburgh Design Framework confirm that master plan and phasing work should address the potential for local access to the south of the area to the A8 in conjunction with transport and traffic improvements on the A8 as well as a design, parking strategy and parking standards approach.

Further, Policy Inf 4 states that “Development proposals relating to housing or other development sites which would generate a significant amount of trips, shall demonstrate through an appropriate transport assessment or statement, and proposed mitigation that

- (a) Identified\* local, city-wide and cross boundary individual and cumulative transport impacts can be timeously addressed where this is relevant and necessary for the proposal.”

The policy also confirms that the identified transport proposals in part 4, tables 3-10 and interventions set out in the place policies take into account the cumulative impact with other sites in the plan, from the Transport Appraisal modelling and analysis (CD014). This policy requires that proposals carry out further assessment at the planning application stage to further inform any local impacts and to take into account the impact of any windfall sites progressed through the housing policies.

Policy Inf 3 also states that development will be supported where there is sufficient infrastructure capacity available or can be delivered at the appropriate time or where the development can deliver the infrastructure necessary to mitigate any negative impacts. Proposals will be required to deliver or contribute to the following infrastructure provision where relevant and necessary to mitigate any negative impact (either on an individual or cumulative basis) and to ensure that the proposal can meet the Council’s sustainable transport targets and where commensurate to the scale of the development:

- (a) Transport proposals and safeguards form part 4, tables 3-10 and/or interventions identified in transport assessments and/or transport consultations in accordance with policy Inf 4.

Further information on WE30 is provided in the City Plan Action Programme (CD008). This will be annually updated. **No modification proposed.**

Joint representation made by Crosswind Developments Ltd (0184), Edinburgh Airport Limited (0761), West Town Edinburgh Ltd (0660).

The indicative arrangements identified on the Proposals Map, Map 1, Map 2, Map 8 and Map 24 have been informed by the TA commissioned for the City Plan by Jacobs (CD014) as well as the WETA 2016 Refresh (CD073), WETIP (CD072), ESSTS (CD071) and CMP (CD062).

The airport link road is included in City Plan under reference WE 27 WE28 and WE 29 in table 8.

The Council acknowledges that there are misalignments in terms of the Gogar Link Road as shown on the north-west proposals map and that shown in map 24 (West Edinburgh). However, as the joint representation notes, these maps and the road layouts shown within them are indicative.

The maps produced for the Plan also contain different road alignments from those indicated under the WETA 2016 Refresh. This is due to the further transport, design and environmental assessments which have been undertaken in relation to the landholdings since 2016. It must be acknowledged that the vision for West Edinburgh has been revised since the WETA 2016 Refresh plans were produced, this including the decommissioning of the former Crosswinds runway in 2018, with major proposals now coming forward to redevelop this land.

The Council recognises that there are a range of constraints in the area of the Gogar Burn and Castle Gogar Estate, both relating to environmental considerations and land ownership, which will have a significant bearing to where new road alignments and related infrastructure can be reasonably located. City Plan Map 24 sought, as far as possible, to acknowledge these various constraints.

The route of the Gogar Link Road as shown in the proposals map is not dissimilar to that shown in the WETA 2016 Refresh maps, which were themselves also indicative. Layouts and road alignments within the sites would only become fully established in the required future multi-disciplinary collaborative masterplans and at the project level stage. There is further work being carried out as a collaborative process to establish the best detailed approach. The Council considers that the Reporter may wish to take account of ongoing work to further inform their recommendations.

The Council maintains that a collaborative, multidisciplinary, masterplan approach for development, including new roads and active travel routes, will be vital to ensure that this, large, complex area, which has the complications of multiple land ownerships should be brought forward in a cohesive and planned way. This will ensure that the plan's vision for West Edinburgh to become a vibrant, high density, mixed-use extension to the city with a focus on place-making, sustainability, connectivity biodiversity and a strong landscape

framework, stated in paragraph 3.56 of the plan, can be delivered. The wording of criteria l, m, n, and o, in the West Edinburgh Development Principles should remain.

The joint representation for the movement and access framework plan proposed by Crosswind Developments Ltd, Edinburgh Airport Limited and West Town Edinburgh Ltd demonstrates collaborative working albeit it proposes amending what is set out in City Plan. Assessment of this by the Council's consultants demonstrates that whilst for private car movements there is no significant difference there are concerns around the effect on public transport and active travel provision as provided for by the Place 16 approach in map 24.

The Council also notes that the Airport Link Road (the northern alignment) seems substantially based on the Airport Eastern Access Road proposal (Application reference:- 21/00217/FUL) (CD165) which is currently subject to call-in by Scottish Ministers. The routing of the Gogar Link Road (the southern alignment) could have an adverse impact to environmental features which form part of the Castle Gogar Estate. Elements of the eastern part of this alignment to the north of Myreton Drive also seem to reflect the Airport Eastern Access Road proposal and Crosswinds masterplan proposals, both of which are currently subject to Scottish Ministerial call-in.

The Council continues to work on a review of the West Edinburgh Strategic Design Framework (CD070) as a means to updating and refining the transport and other aspects of master planning this area. It aims to complete this process in the short term. As noted above, the Reporter may wish to consider updates from this work.

The Council's approach has been to set out connectivity in the area which takes account of all the previous work done. The Council's position is that the indicative mapping shows a structure that would give the right public transport and active travel connectivity in addition to sufficient provision for other traffic movements. The Council continues to work collaboratively with stakeholders to reach agreement on a transport structure that would continue to provide the required level of connectivity for all modes. As noted above that work continues and will inform the review of the West Edinburgh Strategic Design Framework, including master planning to ensure a cohesive vision for West Edinburgh can be delivered.

The errata only deals with the alignment of the orbital bus route (CD007). **No modification proposed.**

Crosswind Developments Ltd. (0184), Edinburgh Airport Limited (0761)

The route of the Gogar Link Road as shown in the proposals map is not dissimilar to that shown in the WETA 2016 Refresh maps (CD073), which were themselves also indicative. Layouts and road alignments within the sites would only become fully established in the required future multi-disciplinary collaborative masterplans and at the project level stage. There is further work being carried out as a collaborative process to establish the best detailed approach. The Council considers that the Reporter may wish to take account of ongoing work to further inform their recommendations.

The Council maintains that a collaborative, multidisciplinary, masterplan approach for development, including new roads and active travel routes, will be vital to ensure that this, large, complex area, which has the complications of multiple land ownerships should be

brought forward in a cohesive and planned way. This will ensure that the plan's vision for West Edinburgh to become a vibrant, high density, mixed-use extension to the city with a focus on place-making, sustainability, connectivity biodiversity and a strong landscape framework, stated in paragraph 3.56 of the plan, can be delivered. No evidence has been provided to support the statement that the collaborative masterplan approach proposed would cause delays to development. The wording of criteria l, m, n, and o, in the West Edinburgh Development Principles should remain.

The joint representation for the movement and access framework plan proposed by Crosswind Developments Ltd, Edinburgh Airport Limited and West Town Edinburgh Ltd demonstrates collaborative working albeit it proposes amending what is set out in City Plan. Assessment of this by the Council's consultants demonstrates that whilst for private car movements there is no significant difference there are concerns around the effect on public transport and active travel provision as provided for by the Place 16 approach in map 24.

The Council also notes that the Airport Link Road (the northern alignment) seems substantially based on the Airport Eastern Access Road proposal (Application reference:- 21/00217/FUL) (CD165) which is currently subject to call-in by Scottish Ministers. The routing of the Gogar Link Road (the southern alignment) could have an adverse impact to environmental features which form part of the Castle Gogar Estate. Elements of the eastern part of this alignment to the north of Myreton Drive also seem to reflect the Airport Eastern Access Road proposal and Crosswinds masterplan proposals, both of which are currently subject to Scottish Ministerial call-in.

The Council continues to work on a review of the West Edinburgh Strategic Design Framework (CD070) as a means to updating and refining the transport and other aspects of master planning this area. It aims to complete this process in the short term. As noted above, the Reporter may wish to consider updates from this work.

The Council's approach has been to set out connectivity in the area which takes account of all the previous work done. The Council's position is that the indicative mapping shows a structure that would give the right public transport and active travel connectivity in addition to sufficient provision for other traffic movements. The Council continues to work collaboratively with stakeholders to reach agreement on a transport structure that would continue to provide the required level of connectivity for all modes. As noted above that work continues and will inform the review of the West Edinburgh Strategic Design Framework, including master planning to ensure a cohesive vision for West Edinburgh can be delivered.

The road and mixed use development proposed under applications 20/03219/PPP (CD166) and 21/00217/FUL (CD167) are, at the time of writing, with the Scottish Ministers for their consideration. It would therefore not be appropriate to currently highlight these in map 24. Depending on their determination, they may need to be identified in future masterplans for the sites.

The indicative arrangements identified on the Proposals Map, Map 1, Map 2, Map 8 and Map 24 have been informed by the TA (CD014) commissioned from Jacobs for City Plan as well as the WETA 2016 Refresh, WETIP (CD072), ESSTS (CD071) and CMP (CD062).

The airport link road is included in City Plan under reference WE 27, WE28 and WE 29 in

table 8. Map 1 is a high level indicative map and it is not possible to indicate all proposed active travel safeguard routes at this scale. Maps 1 and 2 are of appropriate quality given their size and scale. The errata only deals with the alignment of the orbital bus route (CD007). **No modification proposed.**

#### West Town Edinburgh Ltd (0660)

The indicative arrangements identified on the Proposals Map, Map 8 and Map 24 have been informed by the Transport Appraisal (CD014) commissioned for the City Plan by Jacobs as well as the WETA 2016 Refresh (CD073) and the ESSTS (CD071).

The airport link road is included in City Plan under WE 27, WE 28 and WE 29.

Map 1 is a high level indicative map and it is not possible to indicate all proposed active travel safeguard routes at this scale. Maps 1 and 2 are of appropriate quality given their size and scale. They do not require modification.

The Council acknowledges that there are misalignments in terms of the Gogar Link Road as shown on the north-west proposals map and that shown in map 24 (West Edinburgh). However, these maps and the road layouts shown within them are indicative.

The maps produced for the Plan also contain different road alignments from those indicated under the WETA 2016 Refresh. This is due to the further transport, design and environmental assessments which have been undertaken in relation to the landholdings since 2016. It must be acknowledged that the vision for West Edinburgh has been revised since the WETA 2016 Refresh plans were produced, this including the decommissioning of the former Crosswinds runway in 2018, with major proposals now coming forward to redevelop this land.

The Council recognises that there are a range of constraints in the area of the Gogar Burn and Castle Gogar Estate, both relating to environmental considerations and land ownership, which will have a significant bearing to where new road alignments and related infrastructure can be reasonably located. City Plan Map 24 sought, as far as possible, to acknowledge these various constraints.

The route of the Gogar link Road as shown in the proposals map is not dissimilar to that shown in the WETA 2016 Refresh maps, which were themselves also, indicative. Layouts and road alignments within the sites would only become fully established in the required future multi-disciplinary collaborative masterplans and at the project level stage. There is further work being carried out as a collaborative process to establish the best detailed approach. The Council considers that the Reporter may wish to take account of ongoing work to further inform their recommendations.

The Council maintains that a collaborative, multidisciplinary, masterplan approach for development, including new roads and active travel routes, will be vital to ensure that this, large, complex area, which has the complications of multiple land ownerships should be brought forward in a cohesive and planned way. This will ensure that the plan's vision for West Edinburgh to become a vibrant, high density, mixed-use extension to the city with a focus on place-making, sustainability, connectivity biodiversity and a strong landscape framework, stated in paragraph 3.56 of the plan, can be delivered. The wording of criteria l. m. n. and o. in the West Edinburgh Development Principles should remain.

The joint representation for the movement and access framework plan proposed by Crosswind Developments Ltd, Edinburgh Airport Limited and West Town Edinburgh Ltd demonstrates collaborative working albeit it proposes amending what is set out in City Plan. Assessment of this by the Council's consultants demonstrates that whilst for private car movements there is no significant difference there are concerns around the effect on public transport and active travel provision as provided for by the Place 16 approach in map 24.

The Council also notes that the Airport Link Road (the northern alignment) seems substantially based on the Airport Eastern Access Road proposal (Application reference:- 21/00217/FUL) (CD165) which is currently subject to call-in by Scottish Ministers. The routing of the Gogar Link Road (the southern alignment) could have an adverse impact to environmental features which form part of the Castle Gogar Estate. Elements of the eastern part of this alignment to the north of Myreton Drive also seem to reflect the Airport Eastern Access Road proposal and Crosswinds masterplan proposals, both of which are currently subject to Scottish Ministerial call-in.

The Council continues to work on a review of the West Edinburgh Strategic Design Framework (CD070) as a means to updating and refining the transport and other aspects of master planning this area. It aims to complete this process in the short term. As noted above, the Reporter may wish to consider updates from this work.

The Council's approach has been to set out connectivity in the area which takes account of all the previous work done. The Council's position is that the indicative mapping shows a structure that would give the right public transport and active travel connectivity in addition to sufficiently provide for other traffic movements. The Council continues to work collaboratively with stakeholders to reach agreement on a transport structure that would continue to provide the required level of connectivity for all modes. As noted above that work continues and will inform the review of the West Edinburgh Strategic Design Framework, including master planning to ensure a cohesive vision for West Edinburgh can be delivered.

The Council's response to representations relating to developer contributions and Inf 3 can be found in issue 30: Infrastructure delivery- Transport. **No modification proposed.**

#### West Craigs Limited (0472)

It is acknowledged in the errata that the alignment as shown on the proposal map is incorrect, and the orbital bus route is proposed to instead travel to the west of HSG19, over a new proposed bus / active travel bridge (proposal WE12) through Gogar and Maybury before travelling along Maybury Road. City Plan makes it clear that this is only a potential option. The route shown is indicative only.

The Gogar Link Road (T9) allocation in the current LDP has been modified. However, a primary vehicle route is still clearly shown in map 24 of the plan and its route is still proposed to run from the tram depot and will provide access to H62. It is also clearly shown in table 8 of the plan under WE28 and WE29. **No modification proposed.**

#### Rosebery Estate (Bankhead) (0618)

The objection to WE12 is noted. WE12 is identified in City Plan only as a potential option.  
**No modification proposed**

Lynn Grattage (0362)

The ongoing WETIP work (CD072) is appraising WE5. It is considering how the additional lane would be delivered along with a segregated cycle lane. **No modification proposed**

NatureScot (0528)

Paragraph 2.118 confirms that to deliver in line with the sustainable transport hierarchy, the Council want to see all development; prioritise walking, wheeling and cycling, demonstrate high public transport accessibility, restricting private car parking and encouraging shared transport through mobility hubs.

The West Edinburgh Design Principles highlight a number of requirements in principle relating to active and public transport within West Edinburgh. It also states the requirements in principle are for a collaborative, multi-disciplinary, master plan approach. Paragraph 3.59 states a cumulative Transport Contribution Zone will be applied to address the area wide transport interventions identified through the TA (CD014) and the outcome of WETA/WETIP (CD073) & (CD072) in support of the measures being delivered as part of City Deal (CD162), including those in part 4, Table 8 of the plan. **No modification proposed**

Murrayfield Community Council (0146), Juniper Green and Baberton Mains Community Council (0306), Archie Clark (0003), Cramond and Barnton Community Council (0243)

The Council commissioned a TA, (produced by Jacobs) (CD014) to inform the spatial strategy and allocation of sites included within the Proposed Plan.

Chapter 6.18 of the TA states that of all the proposed City Plan 2030 development sites/clusters, West Edinburgh has received most consideration in this TA, on account of the scale of development and complexity of the nearby transport system. The road network in this part of Edinburgh is already congested at peak periods, and previous work has been undertaken to investigate the transport implications of potential developments in the area, not least the West Edinburgh Transport Appraisal refresh of 2016 (WETA) (CD073).

Modelling work carried out as part of the TA tested the revised proposals for the West Edinburgh area, which have a greater proportion of residential development than had previously been assessed in WETA. However, the modelling work showed that the total volume of additional vehicular trips generated in both cases (under WETA and West Edinburgh proposals) is broadly similar, but the directional flow of them is different. The accessibility analysis underpins the need both to improve active and public transport facilities, to ensure that a wide range of new services are available on site to minimise residents' need to travel elsewhere, and for strong demand restraint measures for private car use. The TA recommends a number of measures to mitigate the risk of greater general traffic growth than that identified under the WETA 2016 refresh. These have been incorporated into the West Edinburgh Development Principles and transport improvements which are set out in table 8 of the plan which also includes measures identified in the

WETA 2016-Refresh. Transport Scotland has not objected to the proposed plan. Paragraph 3.59 states a cumulative Transport Contribution Zone will be applied to address the area wide transport interventions identified through the TA and the outcome of WETA/WETIP (CD073)&(CD072) in support of the measures being delivered as part of City Deal (CD162), including those in part 4, Table 8 of the plan. Place 16 also confirms that the Council will coordinate a collaborative, multidisciplinary master plan approach to development across the sites. Table 2 of the plan also makes it clear that development in sites H59-62 should accord with the West Edinburgh Development Principles set out in place 16.

The tram route is already located through the West Edinburgh site with the location and base for a new station and crossing points in place. It forms a key part of the strategy. Further potential tram routes have been safeguarded in the plan.

Paragraph 3.224 relates to Waste Disposal Sites and does not mention road capacity. Proposed road improvements around the Gogar roundabout (R5) are designed primarily to assist bus movement. **No modification proposed**

The Council considers that the glossary is suitably thorough. No modification is proposed, however should the reporter be minded the glossary could be updated to include CPZ, WETA, WETIP and City Deal to provide more clarity.

The Council acknowledges that the use of a colon in criterion t (a) of West Edinburgh Design Principles is a technical error. This should be considered as a minor drafting matter.

#### Grange/Prestonfield Community Council (0192)

Mobility hubs are proposed through-out the city as part of the Action programme (CD008). Table 8 of City Plan indicates West Edinburgh mobility hubs WE39 and WE40. **No modification proposed**

#### Ratho and District Community Council (0289)

Paragraph 3.58 of City Plan states that development should only progress subject to sufficient infrastructure already being available or when it is demonstrated that it can be delivered as part of a phased approach to site delivery. The West Edinburgh Development Principles highlights active travel, public transport and private transport mitigation principles for West Edinburgh and these are set out on table 8 of the Plan. WE15 and WE21 are currently being appraised as part of WETIP (CD072). The request for significant consultation on WE19/20 is noted. **No modification proposed**

#### Simon Hindshaw (0095) Alasdair Gillies (0035) Spokes Lothian (0545)

The West Edinburgh Transport Improvement measures identified in table 8: WE6, WE12, WE16, WE23, WE27 AND WE28, have been informed by the TA (CD014) and includes measures identified in the WETA 2016 Refresh (CD073) and WETIP (CD072) as a number of necessary infrastructure interventions required to support major development in West Edinburgh and to encourage a shift to sustainable travel, which shall help reduce levels of congestion and pollution.

WE6 is potentially to be superseded by the Maybury junction upgrade and Maybury Road feasibility study to be considered as part of the strategic appraisal of the orbital bus route with actions and resources provided by the Bus Partnership Fund (CD168).

WE16 will come to the outskirts of Cramond at the junction of Maybury Road and Queensferry Road. WE13, WE16 and the existing tram route offer public transport to Edinburgh Park. The request that active travel and public transport improvements be enacted before the intelligent traffic signals proposed at WE38 is noted. Intelligent traffic signals can also be utilised to prioritise public and active travel modes. **No modification proposed**

#### Hallam Land Management (0615), Tarmac (0244)

The Council commissioned a TA, (produced by Jacobs) (CD014) to inform the spatial strategy and allocation of sites included within the Proposed Plan.

Chapter 6.18 of the TA states that of all the proposed City Plan 2030 development sites/clusters, West Edinburgh has received most consideration in this Transport Appraisal, on account of the scale of development and complexity of the nearby transport system. The road network in this part of Edinburgh is already congested at peak periods, and previous work has been undertaken to investigate the transport implications of potential developments in the area, not least the West Edinburgh Transport Appraisal refresh of 2016 (WETA) (CD073).

Modelling work carried out as part of the TA tested the revised proposals for the West Edinburgh area, which have a greater proportion of residential development than had previously been assessed in WETA. However, the modelling work showed that the total volume of additional vehicular trips generated in both cases (under WETA and West Edinburgh proposals) is broadly similar, but the directional flow of them is different. The accessibility analysis underpins the need both to improve active and public transport facilities, to ensure that a wide range of new services are available on site to minimise residents' need to travel elsewhere, and for strong demand restraint measures for private car use. The TA recommends a number of measures to mitigate the risk of greater general traffic growth than that identified under the WETA 2016 refresh. These have been incorporated into the West Edinburgh Development Principles and transport improvements which are set out in table 8 of the plan which also includes measures identified in the WETA 2016 Refresh and WETIP. Transport Scotland has not objected to the proposed plan. **No modification proposed.**

#### Corstorphine Community Council (0799)

The West Edinburgh Development Principles includes requirements in principle for active travel, public transport and private transport for West Edinburgh. However, further details on parking and traffic management and mitigations shall be produced in the required future masterplan process and when planning applications are submitted for assessment. The masterplan process and the detailed assessment of future applications will ensure that the sites are accessible, inclusive and comply with the Equalities Act. Paragraph 2.82 states that the planning system should ensure that development does not lead to harmful increases in air pollution, particularly in Air Quality Management Areas (AQMA's) or lead

to the creation of further AQMA's in the city. Paragraph 2.83 states that the Council monitors air quality in other locations and may need to declare further AQMA's. Policy Env 34 sets out requirements in relation to air quality amongst other matters. In the course of a planning application the Council can consult with appropriate consultees to establish if/when further work is needed to support an application and assess compliance with this policy. **No modification proposed.**

#### Network Rail (0071)

The West Edinburgh Transport Improvement measures identified in table 8, have been informed by the TA (CD014) and includes measures identified in the WETA 2016 Refresh (CD073) as a number of necessary infrastructure interventions required to support major development in West Edinburgh and to encourage a shift to sustainable travel. Table 8 identifies a number of improvements that are proposed like WE8, WE12 and WE15 to provide greater active travel and public transport facilities to the railway stations. No improvements to the stations themselves are proposed in the plan and it is noted that Network Rail have not stated any specific modifications. Further discussions can be carried out with Network Rail during the masterplan process and through the assessment of any future submitted planning application. Paragraph 3.59 states that it is expected that detailed transport assessments will be submitted in support of development proposals. **No modification proposed.**

#### Anna Goodwin (0302)

It must be acknowledged that each planning application is different and every planning application is determined on its own individual merits. The Council considers the wording of paragraph 3.59 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

#### Michael Ramsay (0011)

Paragraph 3.57 of the plan states that a West Edinburgh Master Plan will be prepared. This will consider traffic assessments and consideration of infrastructure. Paragraph 3.59 of the plan states that it is expected that detailed transport assessments will be submitted in support of development proposals. **No modification proposed.**

#### Pawel Stankiewicz (0445)

The current layout indicated in map 24 of the plan has been informed by the TA (CD014) and ongoing programmes like WETIP (CD072). **No modification proposed.**

#### Liberton & District Community Council (0084), Edinburgh Access Panel (0620)

Support noted.

### **INF 4: Provision of Transport Infrastructure.**

West Town Edinburgh Ltd, (0660) Edinburgh Airport Limited (0761), Crosswind Developments Ltd (0184).

Policy Inf 4 does not state that a transport assessment, which assesses cumulative

transport impacts, will be required with every application relating to housing or other development sites which would generate a significant amount of trips. Criterion (a) of Inf 4 states that Identified\* local, city-wide and cross boundary individual and cumulative transport impacts can be timeously addressed where this is, relevant and necessary for the proposal.

Policy Inf 4 also has an asterisk to further explain that the identified transport proposals in part 4, tables 3-10 and interventions set out in the place policies take into account the cumulative impact with other sites in the plan, from the TA modelling and analysis (CD014).

The wording of the Inf 4 is suitably robust whilst also acknowledging that every application is unique and is determined on its own merits. As such, a degree of flexibility in the wording is required when utilised in the assessment of an application.

The Council's detailed response to representations relating to infrastructure delivery-transport can be found in issue 30. **No modification proposed.**

(0404) Homes for Scotland, (0078) Wright PDL, (0677) Barratt David Wilson Homes

Policy Inf 3 states in paragraph 3.198 that it is the Council's preference that infrastructure is directly delivered by developers where possible. In most cases this will be possible where the land is in the control of the developer or the Council. Where an off-site action is needed on land not controlled by the Council or is an action that addresses cumulative impacts of more than one development, proportionate developer contributions will be sought. The council is committed to ensuring that sites are delivered in a strategic joined up manner not in isolation. **No modification proposed.**

Ratho and District Community Council (0289)

City Plan clearly states in paragraph 3.58 that development should only progress subject to sufficient infrastructure already being available or when it is demonstrated that it can be delivered as part of a phased approach to site delivery.

Inf 4 establishes that Development proposals relating to housing or other development sites which would generate a significant amount of trips, shall demonstrate through an appropriate transport assessment or statement and proposed mitigation that

- (a) Identified local, city-wide and cross boundary individual and cumulative transport impacts can be timeously addressed where this is relevant and necessary for the proposal and,
- (b) Any required transport infrastructure in place policies or development principles to be prepared has been addressed where relevant to the proposal.

**No modification proposed.**

West Town Edinburgh Ltd (0660)

Supports in terms of approach to developer contributions noted.

Mrs Patricia Scott (0349), SEPA (0012), Liberton & District Community Council (0084), Grange/Prestonfield Community Council (0192), Katherine Kennedy (0569),

Support noted.

## **INF 5- Location of Major Traffic Generating Development**

Hallam Land Management (0615) Tarmac (0244)

The Council commissioned a TA, (produced by Jacobs) (CD014) to inform the spatial strategy and allocation of sites included within the Proposed Plan. The plan directs development to brownfield sites in the urban area or in strategic expansion areas where there is good public transport including tram. The Council's detailed position in terms of the spatial strategy is set out further in issue 2.

The TA looks at the effects of traffic demand scenarios. It includes pre-covid or no covid scenarios, plausible post covid without policy changes and plausible post covid with policy changes and proposed mitigation measures of proposed development sites.

It must be acknowledged that each planning application is different and every planning application is determined on its own individual merits. The Council considers the wording of policy Inf 5 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. The Council's response to representations relating to proposed greenfield sites can be found in section 9. **No modification proposed.**

Steve Loomes (0767), Wright PDL (0078), Homes For Scotland (0404), Barratt David Wilson Homes (0677), Avison Young for Aldi Stores Ltd (0526), Miller Homes Limited (0649), Hallam Land Management (0599), Living Streets Edinburgh Group (0486), Cockburn Association (0777)

It must be acknowledged that each planning application is different and every planning application is determined on its own individual merits. The Council considers the wording of policy Inf 5 to be sufficiently robust whilst still providing the decision maker a degree of flexibility when accessing a planning application. **No modification proposed.**

Cynthia Shuken (0632)

The Council considers the wording of Inf 5 to be robust and will ensure that the aims of the strategy are delivered. The Council's detailed position on active travel can be found in issue 33: Transport Proposals-Active Travel. The Council's detailed position on the Transport Strategy can be found in Issue 31: Transport Strategy. The Council's detailed position on Infrastructure Delivery- Community Facilities can be found in Issue 28. **No modification proposed.**

SEPA (0012), Liberton & District Community Council (0084), Katherine Kennedy (0569)

Support Noted

## **INF 11: Public Transport Proposals and Safeguards, Table 6, Table 7 & Table 10**

Hallam Land Management (0615),

The TA (CD014) has informed the spatial strategy of the plan and the proposals set out in

part 4 of the plan, which includes infrastructure proposals to deliver the strategy and policies. The Council considers that the public transport strategy and proposed infrastructure are clearly stated throughout the plan. Paragraph 2.112 of the plan states that City Plan's spatial strategy directs growth to brownfield sites within the urban area or in strategic expansion areas where there is good public transport, including tram. The Council's response to representations relating to proposed greenfield sites can be found in section 9. The Council considers the wording of policy Inf 11 to be robust and will ensure the delivery of the strategy.

As paragraph 2.23 of the plan makes clear Edinburgh's regional input to the National Planning Framework process have been made through an interim Regional Spatial Strategy approved by the SESplan Joint Committee, the City Regional Deal directors and the constituent SESplan authorities (CD093). It has been a process of collaborative working with the Scottish Government. Paragraph 2.25 states that the collaborative working with Scottish Government and the context of the National Transport Strategy 2 (CD110) and the Strategic Transport Projects Review 2 (CD111) underpin the opportunities for progress to be made to support better connectivity and access to jobs across the entire region whilst also supporting the transition to net carbon zero movement. NTS2 and STPR2 have been published by Transport Scotland on their website and have been open for public consultation. Other high-level strategies were also published appropriately e.g. Interim regional spatial strategy and NPF4 (CD098) consultation process. These are part of the national and regional context of the plan.

**No modifications proposed.**

#### Bo Adams (0363)

The Road Improvements proposed in table 9 of the City Plan have been informed by the City Plan TA (CD014), ESSTS (CD071), CMP (CD062), WETA Refresh 2016 (CD073), WETIP (CD072) and the Sheriffhall project led by Transport Scotland. The Roads Authority should be contacted in relation to concerns relating to the positioning of existing bus stops. **No modifications proposed.**

#### National Galleries of Scotland (0725)

Safeguarded active travel routes are highlighted so that land owners know the Council's aspirations. Further information in relation to the Council's position in terms of CPO powers, can be viewed in issue 3. **No modifications proposed.**

#### Tarmac (0244)

The TA (CD014) has informed the spatial strategy of the plan and the proposals set out in part 4 of the plan, which includes infrastructure proposals to deliver the strategy and policies. The Council considers that the public transport strategy and proposed infrastructure are clearly stated throughout the plan. Paragraph 2.112 of the plan states that City Plan's spatial strategy directs growth to brownfield sites within the urban area or in strategic expansion areas where there is good public transport, including tram. The Council's response to representations relating to proposed greenfield sites can be found in section 9. The Council considers the wording of policy Inf 11 to be robust and will ensure the delivery of the strategy. **No modifications proposed.**

#### Simon Hindshaw (0095)

The TA (CD014) has informed the spatial strategy and allocation of sites included within the Proposed Plan with the aim of achieving the City Plan key outcomes, one of which is to be able to get around the city without owning a car.

The criticism of Edinburgh's existing tram programme is noted. The Council prioritises walking and cycling in accordance with the national transport hierarchy. Many of the proposals highlighted in part 4 of the plan are to prioritise buses. The future railway infrastructure improvements are currently safeguards. **No modification proposed.**

Louise Baker (0773)

City plan (CD001) proposes that orbital bus routes will provide linkages to more peripheral areas around Edinburgh. Mobility hubs are also proposed which shall provide better linkages between different transport modes, including bus and tram. The future railway infrastructure improvements are only safeguards at the moment. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

The detail of the proposed orbital bus routes is ongoing and is subject to collaborative working with Lothian buses and other public transport operators. Further details will be published in the action programme. The routing of these buses and other future services will respond to the patronage created and the final approved access and movement arrangements for the development. **No modifications proposed.**

Archie Clark (0003)

The City Plan 2030 Action programme (CD008) provides further details with regards to the Strategic Active Travel Projects and Safeguards. It will be annually updated. The maps included within the TA are suitably detailed.

Comments relating to Edinburgh's existing tram programme are noted. The Tram route Proposals and Option Safeguards have been informed by the City Plan TA (CD014) and the ESSTS (CD071). **No modification Proposed.**

Robert Drysdale (0354)

The alignment and routing of the Tram Route Proposal and Option Safeguard (Table 7) and Public Transport- Other Safeguard (Table 10) have been informed by the ESSTS (CD071), CMP (CD062) and the City Plan TA (CD014). The current wording makes clear the intent of the policy. Maps 1 and 2 indicate the layout of the tram routes and safeguards highlighted in table 7 and 10.

In preparing Choices for City Plan (CD022) and the City Mobility Plan, the Council commissioned an Edinburgh Strategic Sustainable Transport Study (Phase 1). Choices for City Plan stated that City Plan 2030 will identify new transport infrastructure, including public transport and road infrastructure improvements that will be required to support the growth of the city, based on a Transport Appraisal, and actions arising from the City Mobility Plan. These actions will be set out in City Plan 2030's proposed Action

Programme (CD008) and will include the extension of the tram network. The City Plan 2030 Action Programme included safeguard option B2 (Tr3). **No modification proposed.**

University of Edinburgh (0464)

The University's support is noted as well as the view that careful consideration is required to achieve a suitable balance of public transport infrastructure with the unique character of Edinburgh City Centre and to balance this with key areas of public realm and movement / connectivity, especially where tram infrastructure could introduce unwelcome impacts or barriers to permeability. Further dialogue will take place if any safeguard options impact upon the landownership of the University of Edinburgh estate. **No modification proposed.**

Cramond & Barnton Community Council (0243) Mrs Patricia Scott (0349)

The alignment and routing of PT6 has been informed by the City Plan TA (CD014). The ESSTS (CD071) notes that there are strategic Transport Corridors within proximity of Barnton and Cramond and that strategic corridor interventions will be under consideration in Transport Scotland's Strategic Transport Projects Review 2 (CD111). **No modification proposed.**

Friends of Cammo (0387)

Map 1 is a high level indicative map and it is not possible to indicate all proposed active travel safeguard routes at this scale. Maps 1 and 2 are of appropriate quality given their size and scale. **No modification proposed.** However, should the Reporter be so minded a legend could be attached to maps 1 and 2 for clarity.

NatureScot (0528)

The alignment and routing of the North and South Orbital and their links with active travel routes have been informed by the ESSTS (CD071), CMP (CD062), WETA 2016 Refresh (CD073), WETIP (CD072) and the City Plan TA (CD014). Mobility hubs are also proposed throughout Edinburgh which shall provide better linkages between different transport modes, including bus and tram. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd.(0427)

The spatial strategy and public transport proposals highlighted in table 6 and 8 have been informed by the ESSTS (CD071), CMP (CD062), WETA 2016 Refresh (CD073), WETIP (CD072) and the City Plan TA (CD014). The Council's detailed response to suggested additional greenfield site is set out in issue 9. **No modification proposed.**

Alasdair Gillies (0035)

The alignment and routing of PT6 have been informed by the ESSTS (CD071), CMP (CD062), WETA 2016 Refresh (CD073), WETIP (CD072) and the City Plan TA (CD014). . The ESSTS notes that there are strategic Transport Corridors within proximity of Barnton

and Cramond and that strategic corridor interventions will be under consideration in Transport Scotland's Strategic Transport Projects Review 2. **No modification proposed.**

Ratho and District Community Council (0289)

The City Plan proposed action programme (CD008) currently states that the proposed orbital bus routes will be delivered with development and in collaboration with Lothian Buses. The action programme and the timescales for the delivery of PT6 will be updated annually once the City Plan has been adopted. **No modification proposed.**

Jean Morley (0461)

The alignment and routing of the orbital bus routes have been informed by the ESSTS (CD071), CMP (CD062), WETA 2016 Refresh (CD073), WETIP (CD072) and the City Plan TA (CD014). The ESSTS notes that there are strategic Transport Corridors within proximity of Barnton and Cramond and that strategic corridor interventions will be under consideration in Transport Scotland's Strategic Transport Projects Review 2. **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306), Lynn Grattage (0362) The Davidson's Mains and Silverknowes Association (0454)

Orbital bus routes are shown in City Plan maps. The alignment and routing of orbital bus routes have been informed by the ESSTS (CD071), CMP (CD062), WETA 2016 Refresh (CD073), WETIP (CD072) and the City Plan TA (CD014). It is proposed that the orbital bus routes link with active travel mobility hubs. **No modification proposed.**

Lady Road Investment S.A.R.L. (0625)

TR6 is an existing safeguard which has been carried over from the existing Local Development Plan and has been in place for a number of years. Any future development proposal at Cameron Toll would have to acknowledge the existing safeguard and show how it would not be compromised. Discussions between the Council and future developers of the site would be encouraged at the pre-application stage. **No modification proposed.**

Miller Homes Limited and Wheatlands Farming Partnership (0592)

The Tram route Proposals and Option Safeguards have been informed by the ESSTS (CD071), CMP (CD062) and the City Plan TA (CD014). The spatial strategy has also been informed by the City Plan TA. The Council's detailed response to suggested additional greenfield sites is set out in issue 9. **No modification proposed.**

Alan Stevens (0646), B Hyland (0792), Sustrans (0561), Alistair Mackintosh (0650), C van der Dussen (0558), Claire Graf (0541), Connie Longmate (0707), Hannah Knechtli, (0259), Jakub Szwedowicz (0547), Joseph Coulson (0017), Katarzyna Wozniak (0546), Jordan Thomson (0676), Kasper Schwartz (0576), Fraser Wilson (0536), Despoina Papadopoulou (0575), Hannah Coulson (0331), Mark Beaumont (0752), Peter Moonlight (0550), Sandra Labinjoh (0690), Sophia Lycouris (0667), Graham Jones (0340), Mattia Ventre (0763), Catherine Labinjoh (0711), Andrew Longmate (0705), Heather Duque

(0746), Patrick Longmate (0708), Gareth Wheeler (0636), Katherine Kennedy (0569), Heather R Finnegan (0664), Zuleika Connolly-Jones (0656), James McMeekin (0631)

Tr 2 Safeguard option B1b is an existing safeguard which is carried over from the existing Edinburgh Local Development Plan (T1) and was approved by the Parliament (Tram Line 1 Act 2006) (CD126). It is prudent for the existing safeguard to be retained within City Plan as the Edinburgh Strategic Sustainable Transport Study Phase 2 has not yet been taken forward to a Strategic Business Case. **No modification proposed.**

John Yellowlees (0024)

The Tram Route Proposals and Option Safeguards have been informed by the City Plan TA (CD014) and the ESSTS (CD071). The comments made are noted. The Strategic Sustainable Transport Study Phase 2 has not yet been taken forward to a Strategic Business Case. No decision has yet been made on final routes. Tr 2 Safeguard option B1b is an existing safeguard which is carried over from the existing Edinburgh Local Development Plan (CD039). **No modification proposed.**

John Watt (0321)

Support for the Tram Route Proposal and Option Safeguards (TR8) and (TR10) is noted. TR8 is proposed to terminate at Sheriffhall Junction. Sheriffhall Junction improvements (R10) is a project ran by Transport Scotland, which aims to include active travel provision and operational benefits for public transport. Newbridge Roundabout improvements (R9) aim to involve intelligent traffic signal interventions which seek to prioritise public transport.

The Tram Route Proposals and Option Safeguards have been informed by the City Plan TA (CD014) and the ESSTS (CD071). The comments made are noted. The Strategic Sustainable Transport Study Phase 2 has not yet been taken forward to a Strategic Business Case. No decision has yet been made on final routes.

The requirement for park and rides at these locations have not been identified. Congestion charging is out with the remit of the City Plan. **No modification proposed.**

Shawfair LLP (0258)

The safeguarded tram route line indicated out with the City of Edinburgh Council boundary is noted as being illustrative. **No modification proposed.**

Spokes Lothian (0545), Peter Brown (0672), Suzanne McIntosh (0409), Theo Spanellis (0415) Peter Allen (0336) Capital Rail Action Group (0789)

The Tram Route Proposals and Option Safeguards have been informed by the City Plan TA (CD014), the CMP (CD062) and the ESSTS (CD071). The comments made are noted. The ESSTS Phase 2 has not yet been taken forward to a Strategic Business Case. No decision has yet been made on final routes. These proposals and options are only safeguards. Full details of the active travel and tram routes cannot be expected at this stage. **No modification proposed.**

Robert Falcon (0640)

Table 10 only shows other public transport safeguards. Full details of the works required to enable passenger use of the stations proposed to be opened would be provided at the project level stage. **No modification proposed.**

Mr Cuchulainn Gent (0047)

The Council believes that City Plan is ambitious and will ensure that the future growth of the City is sustainable and net-zero. The active travel plans have been informed by the City Plan TA (CD014) and the CMP (CD062). The ESSTS phase 2 is being taken forward to a strategic business case. Full details of the works required to enable passenger use of the stations proposed to be opened would be provided at the project level stage. **No modification proposed.**

Grange/Prestonfield Community Council (0192)

The comments are noted. The Tram Route Proposals and Option Safeguards have been informed by the City Plan TA (CD014), the CMP (CD062) and the ESSTS (CD071). **No modification Proposed.**

Transport Scotland (0480).

The Public Transport- Other Safeguards shown in table 10 have been informed by the City Plan TA (CD014), the CMP (CD062) and the ESSTS (CD071). . They are also long standing safeguards which are present within the current LDP. **No modification Proposed.**

Mike Richardson (0109)

The alignment and routing of orbital bus routes have been informed by the ESSTS (CD071), CMP (CD062), WETA 2016 Refresh (CD073), WETIP (CD072) and the City Plan TA (CD014). **No modification proposed**

Miller Homes Limited. (0256)

The proposals set out in the tables contained within part 4 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). City Plan has not identified Riccarton Village as a proposed housing development site. The Council's response to proposed additional greenfield sites is covered in detail in issue 9. **No modification proposed.**

SEPA (0012), West Town Edinburgh Ltd (0660), Michael Ramsay (0011), Network Rail (0071), Portobello Amenity Society (0612).

Support Noted.

**INF 13: Road Network Infrastructure & Table 9**

Edinburgh Airport Limited (0761)

The indicative arrangements identified on the Proposals Map, Map 8 and Map 24 have been informed by the TA (CD014) commissioned for the City Plan by Jacobs as well as the WETA 2016 Refresh (CD073), WETIP (CD072), CMP (CD062) and the ESSTS (CD 071).

The airport link road is included in City Plan under reference WE 27 WE28 and WE 29 in table 8.

The Council acknowledges that there are misalignments in terms of the Gogar Link Road as shown on the north-west proposals map and that shown in map 24 (West Edinburgh). However, these maps and the road layouts shown within them are indicative.

The maps produced for the Plan also contain different road alignments from those indicated under the WETA 2016 Refresh. This is due to the further transport, design and environmental assessments which have been undertaken in relation to the landholdings since 2016. It must also be acknowledged that the vision for West Edinburgh has been revised since the WETA 2016 Refresh plans were produced, this including the decommissioning of the former Crosswinds runway in 2018, with major proposals now coming forward to redevelop this land.

The Council recognises that there are a range of constraints in the area of the Gogar Burn and Castle Gogar Estate, both relating to environmental considerations and land ownership, which will have a significant bearing to where new road alignments and related infrastructure can be reasonably located. City Plan Map 24 sought, as far as possible, to acknowledge these various constraints.

The route of the Gogar Link Road as shown in the proposals map is not dissimilar to that shown in the WETA 2016 Refresh maps, which were themselves also, indicative. Layouts and road alignments within the sites would only become fully established in the required future multi-disciplinary collaborative masterplans and at the project level stage. There is further work being carried out as a collaborative process to establish the best detailed approach. The Council considers that the Reporter may wish to take account of ongoing work to further inform their recommendations.

The Council maintains that a collaborative, multidisciplinary, masterplan approach for development, including new roads and active travel routes, will be vital to ensure that this, large, complex area, which has the complications of multiple land ownerships should be brought forward in a cohesive and planned way. This will ensure that the plan's vision for West Edinburgh to become a vibrant, high density, mixed use extension to the city with a focus on place-making, sustainability, connectivity biodiversity and a strong landscape framework, stated in paragraph 3.56 of the plan, can be delivered.

The joint representation for the movement and access framework plan proposed by Crosswind Developments Ltd, Edinburgh Airport Limited and West Town Edinburgh Ltd demonstrates a degree of collaborative working albeit it proposes amending what is set out in City Plan. Assessment of this by the Council's consultants demonstrates that whilst for private car movements there is no significant difference there are concerns around the effect on public transport and active travel provision as provided for by the Place 16 approach in map 24.

The Council also notes that the Airport Link Road (the northern alignment) seems

substantially based on the Airport Eastern Access Road proposal (Application reference:- 21/00217/FUL) (CD165) which is currently subject to call-in by Scottish Ministers. The routing of the Gogar Link Road (the southern alignment) could have an adverse impact to environmental features which form part of the Castle Gogar Estate. Elements of the eastern part of this alignment to the north of Myreton Drive also seem to reflect the Airport Eastern Access Road proposal and Crosswinds masterplan proposals, both of which are currently subject to Scottish Ministerial call-in.

The Council continues to work on a review of the West Edinburgh Strategic Design Framework (CD070) as a means to updating and refining the transport and other aspects of master planning this area. It aims to complete this process in the short term. As noted above, the Reporter may wish to consider updates from this work.

The Council's approach has been to set out connectivity in the area which takes account of all the previous work done in this area. The Council's position is that the indicative mapping shows a structure that would give the right public transport and active travel connectivity in addition to sufficient provision for other traffic movements. The Council continues to work collaboratively with stakeholders to reach agreement on a transport structure that would continue to provide the required level of connectivity for all modes. As noted above that work continues and will inform the review of the West Edinburgh Strategic Development Framework, including master planning to ensure a cohesive vision for West Edinburgh can be delivered. **No modification proposed.**

Bo Adams (0363), Spokes Lothian (0545) Miller Homes Limited and Wheatlands Farming Partnership (0592)

The Road Improvements proposed in table 9 of the City Plan have been informed by the City Plan TA (CD014), ESSTS (CD071), CMP (CD062), WETA Refresh 2016 (CD073), WETIP (CD072) and the Sheriffhall project led by Transport Scotland. **No modification proposed.**

Miller Homes Limited and Wheatlands Farming Partnership (0592)

The Council's detailed response to suggested additional greenfield sites is set out in issue 9. **No modification proposed.**

Corstorphine Community Council (0799)

Paragraph 3.214 makes it clear that additional capacity on the road network for private car use is not supported. The wording of policy Inf 13 also states that development will not be supported where it would prejudice new proposed transport infrastructure and junction improvements listed in part 4. **No modification proposed.**

West Town Edinburgh Ltd (0660)

The West Edinburgh Development Principles state that the requirements in principle for H63 is a collaborative, multi-disciplinary master plan led approach instead of a site specific approach which may not produce an integrated road network infrastructure.

The Council considers the wording of Inf 13 to be robust and it could be suitably utilised in the assessment of large scale, masterplan developments. **No modification**

**proposed.**

Mrs Patricia Scott (0349), Mr John G. Skinner (0065), Leonard Wallace (0314), The Davidson's Mains and Silverknowes Association (0454), Jean Morley (0461), Gavin Cameron (0782)

The Road Improvements R8, has been informed by the City Plan TA (CD014). Concerns that changes proposed under (R8) must reflect the safety of residents on both sides of the road to get in and out of their drives safely is noted. **No modification proposed.**

Forth Ports Limited (0496)

R1 (New Street in Leith Docks) is an existing Transport Proposal and Safeguard in the existing LDP under reference T14. (New Street in Leith Docks) That R1 crosses the operational port estate is noted. **No modification proposed.**

Network Rail (0071)

Concerns relating to development potentially resulting in the increased use of level crossings is acknowledged and the Council is open to further dialogue with Network Rail. If a proposed development was to be sited close to the railway or a junction then Network Rail would be consulted as part of the assessment of an application as would the Roads Authority. Weekly lists would also provide Network Rail the opportunity to make comment on an application, which would then be addressed in the report of handling. Inf 4 confirms that development proposals relating to housing or other development sites which would generate a significant amount of trips would require a transport assessment or statement and proposed mitigation to show that identified local, city-wide and cross boundary individual and cumulative transport impacts can be timeously addressed where this is relevant and necessary for the proposal. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003), Cramond & Barnton Community Council (0243)

The Road Improvements proposed in table 9 of the City Plan have been informed by the City Plan TA (CD014), the City Plan 2030 Action Programme (CD008), WETA Refresh 2016 (CD073), WETIP (CD072) and the Sheriffhall project led by Transport Scotland. Works already carried out to roads are out with the remit of City Plan.

Any modifications to parking provision will be subject to other Council processes and consultation, however City Plan accords with the CMP in terms of managing private car use and public space. **No modification proposed.**

Cramond & Barnton Community Council (0243)

Paragraph 2.82 states that the planning system should ensure that development does not lead to harmful increases in air pollution, particularly in Air Quality Management Areas (AQMA's) or lead to the creation of further AQMA's in the city. Paragraph 2.83 states that the Council monitors air quality in other locations and may need to declare further AQMA's. Policy Env 34 sets out requirements in relation to air quality amongst other matters. In the course of a planning application the Council can consult with appropriate

consultees to establish if/when further work is needed to support an application and assess compliance with this policy. **No modification proposed.**

SEPA (0012).

Concerns noted. **No modification proposed**

Support Noted.

#### **INF 14: Rail Freight**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Comments noted. Table 10 has been informed by the City Plan TA (CD014) and the City Plan 2030 Action Programme (CD008). **No modification proposed.**

Forth Ports Limited (0496)

EW 1d is an existing safeguard for a waste management facility incorporating thermal treatment with energy recovery, within the 2016 LDP (CD039), for a waste management facility incorporating thermal treatment with energy recovery. Policy Inf 14 states that the re-designation of Leith Docks for industrial purposes assumes that a rail-sea freight transfer capability will be retained. It is prudent to retain the waste management safeguard as it reflects the current Council waste management strategy and National Waste Strategy (CD115) and thus the second sentence of paragraph 3.215, which reads “Keeping a reduced general freight rail head to the east in Seafield will complement the safeguard for a waste management facility in that location (see Policy Inf 18)” should be retained. **No modification proposed.**

Network Rail (0071), SEPA (0012), Grange/Prestonfield Community Council (0192)

Support Noted.

#### **INF 15: Edinburgh Airport Public Safety Zones**

<b>Provision of the development plan to which the issue relates:</b>	Inf 6, Inf 7, Inf 8, Inf 9, Inf 12.			
<b>Planning authority's summary of the representation(s):</b>				
<p><b>General Parking Comments</b></p> <p><u>Gareth Hutchinson (0290)</u></p> <p>Permit parking proposals are another revenue making scheme for the tram network with a complete disregard for local residents. The spaces for people programme is a debacle and there is no easy way of crossing the city with poor public transport.</p>				

The disused inner railway line should be used. Residents should not be penalised without providing the infrastructure first.

Deirdre Hutchinson (0285).

The introduction of permit parking particularly in St Clair Street would just be a tax on residents. There are no parking issues in this street.

Dr Patricia Roche (0281)

Objects to the proposed Controlled Parking Zones at Tower Place, Leith. Removing parking potential for all of the above will seriously and negatively impact on the quality of life of all residents of Queens Quay, residents of adjacent residential blocks and public access to the Shore.

Furthermore, the plan to impose Parking Zone permits is entirely unnecessary. Parking access at Tower Place is not misused. It is a vital and well-appreciated facility that allows the user-friendly, relaxed and commercially important atmosphere of the Shore to be supported and maintained. The instructions for consulting on the process are difficult to follow and unacceptable.

Sergey Gorobets (0414)

Objects to proposed Controlled Parking zones. Instead, the city needs to make the public transport better in all aspects and make the city safe to cycle around. Most people would rather take a bus or bike if it is possible, easy and safe. Penalising the locals for the city's failures by parking charges is not a solution.

Actually, in some areas, parking restrictions are generating a loss, paid by the taxpayer, as the streets are empty. The Council pushes all the cars from the streets of the privileged few at taxpayer's expense, while making the other streets busier. That must be contrary to the Code of Ethics.

Alasdair Gillies (0035)

There is a major problem with lack of car parking at the main Edinburgh hospital. By placing the hospital at one side of the city (and move more services there – e.g. sick kids, eye hospital) you have to appreciate that public transport or walking / cycling simply isn't a credible transport option for very many people.

## **Inf 6- Cycle Parking**

Watkin Jones Group (0516)

Cycle parking targets should be more informed. The current cycle parking standards for housing and student accommodation are onerous and have the potential to result in large areas of inactive frontages on the ground floor of buildings, where more family friendly flats, DDA flats, or alternative ground floor uses could be better located. If the cycle parking is not within the building it will be located externally which can also reduce the area of useable amenity space.

The 100% cycle parking provision for student accommodation is not guaranteed to

translate into 100% cycle usage as many students will also travel by alternative means such as walking or public transport.

#### Cramond & Barnton Community Council (0243)

Secure and readily accessible storage and e-charging facilities should not just be provided for cyclists, but importantly also for electric wheelchairs, mobility scooters and similar devices used by less mobile residents, especially in care home, retirement home and other accommodation used by people with mobility impairments.

#### Aldi Stores Ltd (0526)

Concerns raised about the levels of cycle parking set out which are considered unrealistic and unfeasible for a food retailer to provide. It is unclear from the guidance whether e-bike charging stations are required for employees, customers, or both. There would be significant practical challenges in providing this, not only for customers but also for staff.

Positioning cycle spaces closer than any parking spaces is at times not feasible, especially if cycle spaces would need to be closer than accessible vehicle parking spaces.

### **Inf 7- Private Car Parking**

#### Archie Clark (0003)

Is this statement realistic? "Within the Council's Low Emission Zone private car parking (other than accessible spaces) will not be permitted." It may seem a good objective but is unlikely to help the aim of Edinburgh having a vibrant city centre if people cannot be attracted to reside there.

What is meant by 'accessible spaces' or 'accessible parking'? They are not defined.

Settlements require car parking so "providing no or very limited private car parking apart from accessible parking spaces and vehicular access for servicing and deliveries" as Crewe Road South proposals (p57) is insufficient. Shops also need parking for passing trade and for the receipt and distribution of goods. The free parking in Biggar is a good example of what can be achieved with people popping in for items and driving off again. That should be possible in Edinburgh.

#### Mark Ockendon (0419)

INF 7 is hugely prejudiced in general and should be revised throughout. The aim is to reduce carbon emissions, which can be achieved with EV and other low-zero-carbon vehicles.

It is lazy thinking to presume against specific modes of transport like the car, which shall continue to be required. We should focus on the problem - reducing carbon emissions, increasing mobility and convenience - and there are a range of ways this can be addressed.

We should encourage the uptake of electric vehicles, which directly reduce emissions. Edinburgh is woefully behind other cities and other countries in providing EV charging points and this should be a major focus. If an alternative is good enough, people will use it

naturally. An Electric Vehicle Strategy should be further developed with specific focus on expanding the network of EV charging points.

Taylor Wimpey (0200), BDW Trading (0350), Stewart Milne Homes (0118)

This policy is excessively prescriptive, particularly criterion (h).

Ambassador Group (0683)

This is a highly restrictive policy on the provision of private parking spaces, particularly considering the Proposed Plan has a desire to have mixed and multi-generational communities. Large numbers of households will require the use of a private car, and this parking policy will not encourage the mixed communities that the plan is targeting.

Juniper Green & Baberton Mains Community Council.(0306)

The statement “Within the Council’s Low Emission Zone private car parking (other than accessible spaces) will not be permitted.” is not realistic and probably contrary to the aim of a vibrant city centre if people cannot be attracted to reside there.

Lidl (0181)

The wording of the policy (from “The appropriate level of provision...” onwards) is poorly worded and does not provide any clear guidance to potential developers/occupiers of units as to the appropriate level of parking that would be acceptable. This creates an unnecessary level of uncertainty.

It is not clear from the wording of the policy whether the third sentence refers to development of the type identified in the immediately preceding sentences or whether it refers to other types of development and, if the later, whether this is all other types of development or only certain categories of types of development. This needs to be clarified.

In relation to identifying the appropriate level of provision draft policy Econ 2 identifies 10 considerations that will be taken into account. This approach does not provide any clear guidance to potential developers, occupiers, local residents or any other user of the LDP, who is concerned about the appropriate level of parking that should, or should not, be provided with developments. There is no indication as to the importance to be attached to different considerations nor how these considerations will be applied. This will create inconsistent decision-making that fails to meet the objectives of the policy. As drafted the policy does not have an internal consistency that allows for reliable application.

Homes For Scotland (0404), Dandara East Scotland (0757), Wright PDL (0078), Barratt David Wilson Homes (0677), Steve Loomes (0767)

Recognise the ambition to decrease dependence on cars but consider there is a balance to be struck.

This is a highly restrictive Policy on the provision of private parking spaces, particularly considering the Proposed Plan has a desire to have mixed and multi-generational communities. The large number of households will require the use of a private car. This parking policy will not encourage the mixed communities that the plan is targeting.

Even if residents have alternative forms of transport available for getting to work this will not be feasible for everyone, including people who have to make multiple trips each morning. Also many households may wish to retain a car for other travel as reasonable public transport links are limited in Scotland away from major centres of population. Low levels of parking can be a source of community objections to planning applications. Care should also be exercised in viewing reduced levels of parking as a means to motivate greater use of public transport. There is a risk it will instead make the homes less marketable (with implications for effectiveness and delivery) and/or lead residents to park elsewhere causing parking issues in the local area.

Recommends that the size of the unit/number of bedrooms, as well as the accessibility of the location, must be considered when determining the appropriate level of private car parking. Additionally, have electric vehicles been fully considered? There appears to be no clear distinction made to separate these vehicles, and to allow for their proliferation in a targeted way.

#### HUB Residential (0582)

This is a highly restrictive Policy on the provision of private parking spaces, particularly considering the Proposed Plan has a desire to have mixed and multi-generational communities. Large numbers of households will require the use of a private car, and this parking policy will not encourage the mixed communities that the plan is targeting.

#### Lynn Grattage (0362)

I don't agree in restricting private car parking and enough parking needs to be provided within new developments for the cars people will inevitably have. If car usage is reduced the car spaces can be turned into bike lockers.

There is already pressure of parking on Gorgie Road near H73, and proposals will only make it worse. Parking on Gorgie Road needs to be reduced if the Council are serious about getting people cycling and using the bus, so you can improve the bus services (all day 7/7/7 bus lanes), and mandatory cycle lanes.

You are equating car ownership with car use. I have a car, but only use it for limited trips. Many others will also need cars for work, leisure and caring responsibilities. By limiting car parking in more densely populated parts of Edinburgh you create further inequalities, as those who can afford bigger properties with drives or garages can have a car, those in other housing can't.

What you really need and should have introduced years ago, is a congestion charge, which you can then use to fund adequate walking and cycling and bus routes. Sheltered housing still needs parking spaces for family and carers who are visiting.

#### Watkin Jones Group (0516)

In terms of private car parking, student accommodation development does not require parking spaces and students are expected to sign-up to lease agreements discouraging owning cars, which alongside a number of other initiatives ensures that students do not require a car.

Although private car ownership is likely to be higher in BTR and private residential development, car ownership is generally in decline, and it is now common across the UK for residential developments in highly accessible locations to be car free.

#### Transform Scotland (0595)

The aims of the plan in relation to parking levels, reducing the need to travel and promoting the shift from the private car are admirable objectives but look to be undermined by certain contradictory aspects of the Plan. In this respect, parking policy is crucial. However, there are numerous examples where a consistent approach has not been taken in the Plan in terms of the maximum parking limits objective. All sites must be held to the same, high standard.

Segregated cycle routes should be standard, not optional. If the car remains an alternative, it will be used, and in many cases once a private car is available, it is cheaper to use it than to use public transport. As we know from past experience in Edinburgh, attempts to make provision for many different modes of transport simultaneously within limited space reduces the efficiency of them all. Car use other than for limited purposes must not be part of any new developments in the city as it will merely add to existing problems.

#### Alasdair Gillies (0035)

The policy is too restrictive, what if family members need to visit the homeowner and there's no provision for parking? You're making it too difficult to get around which will make people more isolated.

#### Leith Central Community Council (0614)

Electric vehicle charging facilities are not properly accounted for. They should be encouraged for e-bikes and for shared or non-private car use. Many jobs rely on the use of private vehicles (trades, deliveries, etc) and will continue to do so in the near future

New developments should have a very limited net car traffic impact; this could include limited accessible onsite parking (and CPZ in the whole area) and/or car traffic reducing and public transport measures (e.g. temporary subsidies for bus routes, as for Ocean Terminal) in the vicinity (defined as: 5 minutes walking distance).

There should be a clear policy that prevents conversions of front gardens into private parking.

#### Aldi Stores Ltd. (0526)

The Council's Low Emissions Zone has yet to be fully agreed and so this policy wording appears premature, particularly where the boundaries are still unknown.

The requirements to provide electric vehicle charging infrastructure for every proposed space is considered excessive and does not acknowledge the levels of current demand. Electrical vehicle charging infrastructure is a fast-growing sector with continuously evolving technology. Implementing Electrical vehicle charging for every space would be a significant cost, potentially harming development viability, but also unnecessary and wasteful due to the predicted uptake and requirement to replace infrastructure frequently,

as technology improves. A phased approach is more reasonable and one that would not challenge the viability schemes and result in wastage, given the technological advancements that continue to occur in this fast-moving sector.

Stirling Developments Limited (0303)

We support the intention of this policy, but it must be recognised that private car ownership is still very important and will be during the plan period.

CoMoUK (0728)

The policy should be amended to encourage the repurposing of on-street parking for Mobility Hubs. A case study is found in CoMoUK's Mobility Hubs Toolkit page 21: a mobility hub inhabiting reclaimed parking spaces at South Woodford in the London Borough of Redbridge.

Prof. Rustam Salman (0207)

The lack of neighbourhood infrastructure for electric vehicle charging is the only thing that is preventing me from switching from a hybrid car. It needs to be put in place urgently. I have not seen any clear proposals from Edinburgh Council about this.

Living Streets Edinburgh Group (0486)

The first sentence of this policy is endorsed. However, the intent is subsequently watered down with too many caveats and in order to support the policy changes are needed and we would ask the Council to reconsider so that the hierarchy in Scottish Planning Policy and the National Transport Strategy can be delivered throughout the city.

Reference to the Low Emission Zone is a red herring. The whole city is accessible by public transport and much of it by walking and cycling. Where public transport or pedestrian infrastructure requires enhancement this should be done by securing developer contributions or not allowing development until the necessary upgrades are in place. This applies to residential and non-residential.

Crosswind Developments Ltd. (0184)

Supportive of Policy Inf 7 as it recognises that car lite proposals can be acceptable in well-connected locations. For reasonableness CDL request an amendment to point "g"  
" A site appropriate level of smart electric charging provision should be supplied".

Cramond & Barnton Community Council (0243)

Inf 7 states 'Within the Council's Low Emission Zone private car parking (other than accessible spaces) will not be permitted.' This blanket prohibition lacks flexibility, is unrealistic and ignores the needs young families, less able and infirm residents without blue badges, and businesses dependent on access for goods, etc.. If the LEZ extends over most, or all, of the whole City, there will be no provision within the City's boundaries for private parking. Additionally, it is unclear whether the policy applies to existing properties, or only to new development.

Criterion h should be deleted, as a blanket ban on more than one parking space per home, especially in suburban and countryside areas of the City, will result in the displacement of residents', visitors' cars and tradesmen's vehicles from driveways onto roads contrary to 'Living Streets' principles and to the inconvenience of utility and emergency service vehicles.

Andy Agnew (0562)

The City Plan should recognise that by requiring that all new domestic and commercial properties install charging capability in at least 50% of the spaces they provide. This will need supported by the provision of significant charging infrastructure. Energy networks will need storage capability especially where they are provided by solar power that is not constantly available. The provision of electric car charging in new developments as in the comment on Inf 8 will allow smart networks to use cars as storage and ensure supply is constant.

Peter Brown (0672)

Street parking in the city should be gradually eliminated.

Crosslane Co-Living SPV 2 Limited (0687)

Support the modal shift away from private car travel as set out in the Proposed Plan. The Ocean Point 2 site is well-connected in public transport terms and ideally placed to assist in bringing forward a modal shift away from private car travel.

### **Inf 8- Design of Car Parking**

Mark Ockendon (0419)

Criteria D of Inf 8 should be modified. "With less car dominance." Should be removed.

Ernest Evans (0053)

Encouraging or enforcing the use of "garden space" for parking in new development is short sighted. The paving over of green spaces will not help the environment. When we introduce these well meaning rules please consider there is a cost to the environment. Developers do not reduce the number of houses to make room for parking, instead they cut away half of the garden and call it a car park. This is dangerous.

Cramond & Barnton Community Council (0243)

There have been several examples of recent planning applications where proposed homes contain garages of an insufficient size to accommodate standard cars plus cycles. This results in on-street parking and congested streets, causing difficulties for access by emergency and utility vehicles and increasing pavement parking, which obstructs pedestrian movement.

Dave Berry (0463)

Charging infrastructure is an essential requirement to complete the shift from fossil fuel vehicles to electric vehicles and thus achieve the desired reduction in CO2 emissions, air pollution, and noise pollution. In a densely populated city, where many people live in tenements and flats, we cannot rely solely on domestic charging facilities.

Living Streets Edinburgh Group (0486)

It is anticipated that for the most part parking will only be required for disabled or essential servicing use. This should be made clear and policy worded to set out design and location expectations for such essential parking, whilst unambiguously requiring any other parking that may be justified following assessment to be located at the rear of or below properties accessed in such a way as to cause no conflict with pedestrians.

### **Inf 9- City Centre Public Parking**

Juniper Green & Baberton Mains Community Council. (0306)

This policy will lead to city-centre shops catering only for lightweight and non-bulky items, thus obliging people to get into their cars to edge of town shopping malls. It is not realistic and probably contrary to the aim of a vibrant city centre.

Mark Ockendon (0419)

Rather than having a presumption against cars the Council's focus should be on improving the alternatives and on the problem - reducing carbon emissions, increasing mobility and convenience.

People in many areas of Edinburgh have inefficient bus links. A further study of the bus network and route layouts should be undertaken, not just from a cost/efficiency perspective, but also from a quality-of-life perspective (access and journey times). Reducing the cost of bus & tram travel could encouraging people to switch to public transport.

In any case the cost of public transport is regressive and hits the poorest hardest - a policy aim to provide free public transport for ALL local residents would be socially equalising and welcomed.

We should encourage the uptake of electric vehicles, which directly reduce emissions, especially in Scotland where we generate significant amounts of renewable electricity. An Electric Vehicle Strategy should be further developed with specific focus on expanding the network of EV charging points.

Lanes used by trams should be shared with buses, cars and taxis. Bus lanes should continue to be in force only at peak times, freeing up road space at other times.

How many cars sit idling at red lights in quiet times? The council should take a proactive forward-thinking traffic management and consider introducing the green + flashing amber system used in other countries. There is also some evidence that traffic lights turned off at certain times results in no compromise to safety.

Living Streets Edinburgh Group (0486)

Support the policy but request that the low emission zone be made city wide otherwise the Council will be encouraging the relocation of emission producing car and other vehicle movements into other areas.

Cockburn Association (0777)

Support the policy subject to clarification of provision for accessible parking.

Andy Inglis (0138)

It's wrong-headed. Stop cars entering the city centre and you remove the need for much of the parking. It's political suicide, of course, but that's what it will take: a single term of government to enact the change needed in year 1, and the next 4 years to embed them so deeply that the next administration cannot overturn them. It will never happen, and I of course understand why, which is why the 2030 plan will fail. This isn't to say it shouldn't be attempted. I don't believe our species will be around in the next century but I'll keep recycling: I support the effort.

Archie Clark (0003)

The proposed policy will lead to the City centre shops only catering for lightweight and non-bulky items (which will therefore exclude the weekly shopping trip), thus obliging people to get into their cars to go to edge of town shopping malls. In addition, if CEC wants to attract people into the city centre to shop and enjoy tourist attractions, then parking has to be affordable. At present, it isn't. People will spend their money in the shops (who pay business rates) but will be deterred if they first have to pay excessive sums to the Council. Free parking would probably benefit both the Council and the shops best.

## **Inf 12- Park and Ride**

Cramond & Barnton Community Council (0243)

Additional Park-and-Rides should be safeguarded/developed on the NW edge of City, between Newton and South Queensferry, or at Craigiehall. New Park-and-Rides at the above locations could reduce some traffic pressures on the A90 corridor into Edinburgh.

Liberton & District Community Council (0084)

The policy is supported, however, Park & Ride facilities should be provided on Lasswade Road and Gilmerton Road.

Michael Ramsey (0011)

Supports the plan in general. However, a park-and-ride system collecting cars from the Forth Bridge Crossing and heading into Edinburgh would make a big difference to traffic problems. Cars could be parked in the open greenbelt land around Dalmeny and Queensferry. Better still use the train line from Queensferry or connect up to the tram network.

Friends of Cammo (0387)

Welcome the support for additional Park & Ride, but there should be a clear recommendation for a Park & Ride serving the A90 corridor, served by regular buses.

Gordon McKay Brown (0573)

Supports the policy. Through traffic from outside the city needs to be prevented through Morningside to allow it to become a true 20 minute community. A Park and ride at Hillend ski centre would help with this.

Lynn Grattage (0362)

Supports the policy. However there needs to be way more park and ride facilities as the current ones can become full. The cost of these could be recouped with a congestion charge.

Mr John G. Skinner (0065)

It is regrettable that there appears to be no specific date for the introduction of park and ride measures allowed for.

Jean Morley (0461)

The volume of traffic coming from Fife should be reduced with the addition of a south side park-and-ride

Crosswind Developments Ltd (0184)

This policy is listed as relevant to the Crosswind proposals on the proposals map. The Crosswind allocation does not include plans for a park and ride and it is therefore not relevant.

**Modifications sought by those submitting representations:**

Gareth Hutchinson (0290)

No modifications specified in relation to the proposed plan but it is indicated that permit parking proposal should not be included in housing proposal area H54 (St Clair Street) and that the disused inner railway line should be utilised.

Deirdre Hutchinson. (0285)

No modifications specified in relation to the proposed plan but it is indicated that permit parking proposal should not be included in housing proposal area H54 (St Clair Street)

Dr Patricia Roche (0281)

No modifications specified in relation to the proposed plan but it is indicated that the changes to the Council's Proposed Parking Zones be reconsidered and repealed. The consultation process should be redesigned and the consultation period should be extended.

Sergey Gorobets (0414)

No modifications specified in relation to the proposed plan but it is indicated that the Council should think about what could be done to improve public and active travel without charging locals.

Alasdair Gillies (0035)

No modifications specified in relation to the proposed plan but it is indicated capacity should be added to the car parking at the ERI to ease pressure for staff working there and remove unnecessary stress for those visiting.

**Inf 6- Cycle Parking**

Watkin Jones Group (0516)

The LDP standards for cycle parking provision should align with BREEAM. BREEAM requires a 50% cycle parking provision on new student accommodation developments, and this is recognised throughout the world as a sustainable standard. In our client's experience, cycle parking in student accommodation is typically used by up to 25% of their residents.

To offset the onsite provision applicants could also propose a bike-hire facility that will benefit the future residents and the existing community through new sustainable transport infrastructure. Other means than simply supplying 100% cycle parking provision should be considered, and this can be addressed through transport statements in support of proposals and thereafter monitored through Travel Plans.

Cramond & Barnton Community Council (0243)

This policy should be extended to include provision (e.g. secure storage, e-charging) for electric wheelchairs, mobility scooters and similar aids, especially in residential accommodation with high proportions of elderly, infirm or less-able residents.

Aldi Stores Ltd.(0526)

Paragraph 3.202 should be re-worded to enable divergence from the standards where this can be justified.

No other modifications specified in relation to the proposed plan but it is indicated that the levels of cycle parking set out is unrealistic for a food retailer to provide and guidance should be more clear about charging stations.

**Inf 7- Private Car Parking**

Archie Clark (0003)

'Accessible spaces' or 'accessible parking' should be defined in the plan.

No other modifications specified but it is indicated that the statement in Inf 7 is not realistic.

Mark Ockendon (0419)

"Private parking (other than accessible spaces) will not be permitted" should be revised to "Private parking will be permitted where traffic can be accommodated within existing road infrastructure and providing electric vehicle charging points are included for all private spaces and a proportion of on-street parking spaces."

sub-paragraph D "the proposed use assumes no or low car ownership and use by potential occupiers, for example purpose-built sheltered housing or student accommodation", should be removed.

Paragraph 3.203 should be removed in its entirety and replaced with "Determining the appropriate level of parking must be informed by location, access to public transport and other controls and incentives that can be put in place. Private car parking will be supported within developments provided traffic volumes can be managed within the existing (or modified) road infrastructure and providing EV charging points are included for all private spaces. Developments must also demonstrate connection to integrated public transport infrastructure in order to provide a suite of transport options. The Council will continue to allow residents parking permits in new development where it can be integrated as above."

Paragraph 3.204 should be removed in its entirety and replaced with "The aim of transport infrastructure is to allow flexible and convenient movement throughout the city. This must be balanced with the need to reduce carbon. An integrated approach which includes adequate provision for car parking will be supported, whilst encouraging (rather than forcing) a move to lower-carbon solutions through initiatives such as the low emission zone, progressive pricing for residents parking permits based on CO2 emission levels, and free or significantly reduced public transport throughout the city."

Paragraph 3.205, should be removed entirely.

Taylor Wimpey (0200), BDW Trading (0350), Stewart Milne Homes (0118)

Amendments to criterion (h) are required to strike a more appropriate balance between encouraging active and public transport and ensuring sufficient parking provision subject to locational and site specific considerations.

Ambassador Group (0683)

The policy requires to be amended to retain flexibility to allow appropriate levels of car parking to occur on sites depending on site specific circumstances.

Juniper Green & Baberton Mains Community Council. (0306)

No modifications are specified but it is indicated that the statement "Within the Council's Low Emission Zone private car parking (other than accessible spaces) will not be permitted." is not realistic.

Lidl (0181)

The explanation of the policy should be set out in a separate SPG and that Policy Inf 10 (sic) is amended to simply identify that:

(i) support is given to development that does not require private car use and encourages parking free/low parking standards will be applied (with “low parking standards” defined).

(ii) Reference to the provision of a SPG that sets out in detail how different considerations will be applied to determine appropriate private-parking levels. Clear detailed guidance as to the precise issues that will be considered, and how these will be used, for each of the 10 considerations identified in the policy

(iii) In the absence of the SPG continuation of the maximum parking standards currently in place in the City of Edinburgh.

Homes For Scotland (0404), Dandara East Scotland (0757), Wright PDL (0078), Barratt David Wilson Homes (0677), Steve Loomes (0767)

No modification specified but it is indicated that the size of the unit/number of bedrooms, as well as the accessibility of the location, must be considered when determining the appropriate level of private car parking.

Also a clear distinction should be made between electric and internal combustion engines and to allow for the proliferation of electric vehicles in a targeted way. Care should be exercised in viewing reduced levels of parking as a means to motivate greater use of public transport. There is a risk it will instead make the homes less marketable (with implications for effectiveness and delivery) and/or lead residents to park elsewhere causing parking issues in the local area.

HUB Residential (0582)

The policy should be amended so that there is more flexibility to allow for car parking provision below the minimum standards where this is justified against certain criteria.

Lynn Grattage (0362)

Criterion (d) of Inf 7 should be modified to ensure that sheltered housing has parking spaces for family and carers who are visiting.

It is indicated that Paragraph 2.118 should be modified to remove the point which states that Private car parking should be restricted. A congestion charge should also be introduced.

Watkin Jones Group (0516)

No modification specified but it is indicated that wider parking and public transport measures be a core part of the plan to ensure that the proposal to deliver development with reduced or no car facilities can be successfully accommodated in the fabric of the city.

Transform Scotland (0595)

The Plan should be reviewed generally in order to apply consistently the 'maximum parking limits' objective.

Alasdair Gillies (0035)

No modification specified but it is indicated that the policy is too restrictive.

Leith Central Community Council (0614)

There should be a clear policy that prevents conversions of front gardens into private parking. Electric vehicle charging facilities are not properly accounted for.

Aldi Stores Ltd. (0526)

This policy should be altered to require ducting to 'future proof' the spaces and allow for the future conversion into electrical vehicle spaces as demand grows and technology advances. We consider this a more reasonable approach to a policy, which in principle, Aldi do support.

Stirling Developments Limited (0303)

No modification specified but it is indicated that it must be recognised that private car ownership is still very important and will be during the plan period.

CoMoUK (0728)

The policy should be amended to encourage the repurposing of on-street parking for Mobility Hub.

Prof. Rustam Salman (0207)

Criterion (g) which states that any car parking spaces will have smart electric vehicle charging provision needs to be time-bound.

Living Streets Edinburgh Group (0486)

No modifications are specified however it is indicated that the policies intent should not be watered down and changes to the wording of the policy are needed.

Where public transport or pedestrian infrastructure requires enhancement this should be done by securing developer contributions or not allowing development until the necessary upgrades are in place.

Crosswind Developments Ltd. (0184)

Criterion "g" should be amended as follows:  
"A site appropriate level of smart electric charging provision should be supplied".

Cramond & Barnton Community Council (0243)

The policy states that 'Within the Council's Low Emission Zone private car parking (other than accessible spaces) will not be permitted.'. This should be amended to state that private car parking may be restricted in new developments in Low Emission Zone. It should not be a blanket prohibition.

Criterion h should be deleted, or made more flexible.

Andy Agnew (0562)

The City Plan should require that all new domestic and commercial properties install charging capability in at least 50% of the spaces they provide. Greater charging infrastructure will be required.

Peter Brown (0672)

No modifications are specified however it is indicated that street parking in the city should be gradually eliminated.

Crosslane Co-Living SPV 2 Limited (0687)

No modifications are specified but it is indicated that the Ocean Point 2 site is well-connected in public transport terms and ideally placed to assist in bringing forward a modal shift away from private car travel.

**Inf 8- Design of Car Parking**

Mark Ockendon (0419)

Criteria D of Inf 8 should be modified. "With less car dominance." Should be removed.

Ernest Evans (0053)

No modifications are specified however it is indicated that encouraging or enforcing the use of "garden space" for parking in new development is short sighted, unsafe and will not help the environment.

Cramond & Barnton Community Council (0243)

This policy should include a policy for parking provision in new housing developments, which is cross-referenced to new specifications in Edinburgh Design Guidance identifying minimum sizes of garages, to ensure that these can provide off-street parking for a standard size car and several bicycles.

Inf 8 should also include a requirement for all car parking spaces in new housing developments to have ready access to e-charging provision.

Dave Berry (0463)

A new paragraph should be inserted after 3.207 which states that  
"All parking provision should provide charging facilities for electric vehicles"

Living Streets Edinburgh Group (0486)

The policy should make it clear that parking will only be required for disabled or essential servicing use and policy should be worded to set out design and location expectations for

such essential parking, whilst unambiguously requiring any other parking that may be justified following assessment to be located at the rear of or below properties accessed in such a way as to cause no conflict with pedestrians.

### **Inf 9- City Centre Public Parking**

#### Juniper Green & Baberton Mains Community Council. (0306)

No modifications are specified but it is indicated that the statement "Within the Council's Low Emission Zone private car parking (other than accessible spaces) will not be permitted." is not realistic.

#### Mark Ockendon (0419)

Replace the wording of the policy with "Proposals for new off-street car parking will be permitted where traffic can be accommodated within existing road infrastructure, and providing electric vehicle charging points are included for all private spaces and a proportion of on-street parking spaces."

Remove paragraph 3.208 entirely and replace with "The aim of transport infrastructure is to allow flexible and convenient movement throughout the city. This must be balanced with the need to reduce carbon. An integrated approach which includes adequate provision for car parking will be supported, whilst encouraging (rather than forcing) a move to lower-carbon solutions through initiatives such as the low emission zone, progressive pricing for residents parking permits based on CO2 emission levels, and free or significantly reduced public transport throughout the city."

#### Living Streets Edinburgh Group (0486)

Request that the low emission zone be made city wide.

#### Cockburn Association (0777)

No modification specified but require clarification of provision for accessible parking.

#### Andy Inglis (0138)

No modification indicated.

#### Archie Clark (0003)

No modification specified but it is indicated that parking within the city should not be restricted, and parking should be free.

### **Inf 12- Park and Ride**

#### Cramond & Barnton Community Council (0243)

It should be specified that additional Park-and-Rides should be safeguarded/developed on the NW edge of City, between Newton and South Queensferry, or at Craigiehall.

Liberton & District Community Council (0084)

Park & Ride facilities should be provided on Lasswade Road and Gilmerton Road.

Michael Ramsey (0011)

A park-and-ride system collecting cars from the Forth Bridge Crossing and heading into Edinburgh should be part of the plan.

Friends of Cammo (0387)

The plan should recommend a Park & Ride serving the A90 corridor, served by regular buses.

Gordon McKay Brown (0573)

The plan should include a Park and ride at Hillend ski centre.

Lynn Grattage (0362)

The plan should include way more park and ride facilities.

Mr John G. Skinner (0065)

No modifications specified but it is indicated that it is regrettable that there appears to be no specific date for the introduction of park and ride measures allowed for.

Jean Morley (0461)

The plan should include a south side park-and-ride.

Crosswind Developments Ltd (0184)

This policy should be removed from the list of applicable policies for Crosswind (H61) on the proposals map.

**Summary of responses (including reasons) by planning authority:**

**General Parking Comments**

Gareth Hutchinson (0290)

Any modifications to parking provision will be subject to other Council processes and consultation, however City Plan accords with the CMP (CD062) in terms of managing private car use and public space.

One of the key City Plan aims is to adopt an infrastructure first approach. Safeguards and proposals are set out in part 4 of the plan. These have been informed by the TA (CD014), ESSTS (CD071), CMP (CD062), WETA 2016 Refresh (CD073) and WETIP (CD072). **No modification proposed**

Deirdre Hutchinson. (0285)

Any modifications to parking provision will be subject to other Council processes and consultation, however City Plan accords with the CMP (CD062) in terms of managing private car use and public space. **No modification proposed**

Dr Patricia Roche (0281)

Any modifications to parking provision will be subject to other Council processes and consultation, however City Plan accords with the CMP (CD062) in terms of managing private car use and public space. **No modification proposed**

Sergey Gorobets (0414)

Any modifications to parking provision will be subject to other Council processes and consultation, however City Plan accords with the CMP (CD062) in terms of managing private car use and public space.

One of the key outcomes of the plan is for Edinburgh by 2030 to be a city where you don't need a car to move around. Paragraph 2.111 states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding sustainable public transport. Part 4 of the plan sets out the proposals to deliver the strategy and policies. **No modification proposed**

Alasdair Gillies (0035)

Any modifications to parking provision will be subject to other Council processes and consultation, however City Plan accords with the CMP (CD062) in terms of managing private car use and public space.

One of the key outcomes of the plan is for Edinburgh by 2030 to be a city where you don't need a car to move around. Paragraph 2.111 states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding sustainable public transport. Part 4 of the plan sets out the proposals to deliver the strategy and policies.

Part 4 of the plan sets out a number of proposals and safeguards, including active travel and orbital bus routes and a tram route safeguard which shall link the ERI site with other areas of the city. **No modification proposed**

Katherine Kennedy (0569), Dave Berry (0463), Grange & Prestonfield Community Council (0192)

Support Noted

## **Inf 6- Cycle Parking**

Watkin Jones Group (0516)

Criterion (c) of Inf 6 states that proposals for residential development will be supported where the provision meets or exceeds the standards set out in Council Guidance and is in accordance with Council guidance. The current LDP (CD039) also states that planning

permission will be granted for development where proposed cycle parking and storage provision complies with the standards set out in Council guidance. The current cycle parking standards for housing and student accommodation is set out in the Edinburgh Design Guidance 2020 (CD047). **No modification proposed**

Cramond & Barnton Community Council (0243)

The majority of wheelchairs and mobility scooters can be utilised indoors. The internal storage and accessibility of new buildings is regulated by the Building Standards legislation. Many wheelchairs and scooters can also be charged using regular 3 pin internal sockets. The Council considers the wording of policy Inf 6 to be robust and will ensure that the aims of the plan are achieved. **No modification proposed.**

Aldi Stores Ltd. (0526)

The Council considers that the policy provides adequately for an appropriate balance of parking provision. No modification proposed, however, should the Reporter be so minded the policy could be amended to state that high quality cycle parking facilities should always be closer to development entrances than non-accessible car parking spaces, for clarity.

The current cycle parking standards are set out in the Edinburgh Design Guidance 2020 (CD047). The examination of the plan cannot amend existing guidance. Policy Env 25 (Layout Design) criterion (e) states that safe and convenient access and movement in and around the development will be promoted, having regard especially to the needs of people with limited mobility or special needs. Every application is unique and will be considered on its own individual merits. **No modification proposed.**

**Inf 7- Private Car Parking**

Archie Clark (0003)

Paragraph 2.118 clearly articulates the aims of the plan which are in line with the sustainable transport hierarchy. Paragraph 2.118 states that the Scottish Government intends to achieve its commitment to a 20% reduction in the distance travelled by car by 2030.

Policy Inf 7 establishes that the appropriate level of provision will be determined by sustainable transport accessibility levels, including committed public transport and active travel infrastructure or located in a central area. City Plan will realise the lifelong benefits of walking, wheeling and cycling by creating streets and public spaces over cars and improving and expanding sustainable public transport.

Every application is unique and is determined on its own individual merits. The wording of Inf 7 provides a planning officer the required degree of flexibility whilst also being suitably robust and defensible. **No modification proposed.**

Mark Ockendon (0419)

The Council considers the wording of policy Inf 7 to be robust and will ensure that the aims of the strategy will be delivered. **No modification proposed.**

Taylor Wimpey (0200), BDW Trading (0350), Stewart Milne Homes (0118)

The Council considers the wording of policy Inf 7 to be robust and will ensure that the aims of the strategy will be delivered. Criterion (h) of Inf 7 will also ensure that adequate amenity space is retained within the grounds of properties **No modification proposed.**

Ambassador Group (0683)

The Council considers the wording of policy Inf 7 to be robust and will ensure that the aims of the strategy will be delivered. **No modification proposed.**

Juniper Green & Baberton Mains Community Council.(0306)

Paragraph 2.118 clearly articulates the aims of the plan which are in line with the sustainable transport hierarchy. Paragraph 2.118 states that the Scottish Government intends to achieve its commitment to a 20% reduction in the distance travelled by car by 2030.

Policy Inf 7 establishes that the appropriate level of provision will be determined by sustainable transport accessibility levels, including committed public transport and active travel infrastructure or located in a central area. City Plan will realise the lifelong benefits of walking, wheeling and cycling by creating streets and public spaces over cars and improving and expanding sustainable public transport.

The Council considers the wording of policy Inf 7 to be robust and it will ensure that the aims of the strategy will be delivered. **No modification proposed.**

Lidl (0181)

Policy Inf 7 makes it clear that development will be supported where private car use is not needed. The fourth sentence is applicable where parking provision within a development site is required or considered acceptable. The policy clearly applies to all types of development as the policy does not specify.

Criterion (a) of policy Inf 7 makes it clear that sustainable transport accessibility levels, following a methodology to determine a locations public transport accessibility and walkability ratio will be set out in planning guidance.

Every application is unique and is determined on its own individual merits. The wording of Inf 7 provides a planning officer the required degree of flexibility when determining an application, whilst also being suitably robust and defensible. **No modification proposed.**

Homes For Scotland (0404), Dandara East Scotland (0757), Wright PDL (0078), Barratt David Wilson Homes (0677), Steve Loomes (0767)

Policy Inf 7 establishes that the appropriate level of provision will be determined by sustainable transport accessibility levels\*, including committed public transport and active travel infrastructure or located in a central area. (\*Following a methodology to determine a locations public transport accessibility and walkability ratio that will be set out in planning guidance).

Paragraph 2.114 states that the plan sets out Edinburgh's mass transit network, including proposed new public transport actions, including from the City Mobility Plan (CD062) and the Edinburgh Sustainable Strategic Transport Strategy (CD071). The strategy is supported by the Scottish Governments National Transport Strategy 2 (CD110) and the emerging case for Strategic Transport Projects Review 2 (CD111) which supports investment in sustainable public transport.

Paragraph 3.204 states that meeting our targets for shifting car use to sustainable travel modes must guide our approach to controlling the demand for car parking. Restricting car parking spaces available on site, controlling on-street parking in surrounding streets, encouraging use of sustainable and public transport and alternatives to car ownership through the provision of shared mobility services are all needed. No evidence has been provided that restricting car parking makes properties less marketable. Paragraph 2.112 explains that City Plan's spatial strategy directs growth to brownfield sites within the urban area or in strategic expansion areas where there is good public transport, including tram. It also aims to ensure that everyone has access to a range of amenities in their area through the promotion of 20 minute neighbourhoods. These strategies, proposals and policies are all designed to deliver one of the City Plan's aims which is by 2030, we want Edinburgh to be a city where you don't need to own a car to get around.

The Council considers the wording of policy Inf 7 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed.**

#### HUB Residential (0582)

Policy Inf 7 provides a range of factors in which the appropriate level of provision will be determined. This provides the required degree of flexibility. **No modification proposed.**

#### Lynn Grattage (0362)

Paragraph 2.118 clearly articulates the aims of the plan which are in line with the sustainable transport hierarchy.

Policy Inf 7 establishes that the appropriate level of provision will be determined by sustainable transport accessibility levels, including committed public transport and active travel infrastructure or located in a central area. City Plan will realise the lifelong benefits of walking, wheeling and cycling by creating streets and public spaces over cars and improving and expanding sustainable public transport. City Plan does not propose a congestion charge. Paragraph 3.204 states that meeting our targets for shifting car use to sustainable transport modes must guide our approach to controlling the demand for car parking. Restricting car parking spaces available on site, controlling on street parking in surrounding streets, encouraging use of sustainable and public transport and providing alternatives to car ownership through the provision of shared mobility services are all needed. **No modification proposed.**

#### Watkin Jones Group (0516)

Proposed public transport improvement measures are a core part of the plan. Policy Inf 7 aims to support development where private car use is not needed. **No modification proposed.**

Transform Scotland (0595)

Policy Inf 7 provides a range of factors in which the appropriate level of provision will be determined. This provides the required degree of flexibility as every application is unique and is determined on its own individual merits. **No modification proposed.**

Alasdair Gillies (0035)

Policy Inf 7 provides a range of factors in which the appropriate level of provision will be determined. The Council considers the wording of policy Inf 7 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Leith Central Community Council (0614)

Criterion (g) of policy Inf 7 states that any car parking spaces will have electric vehicle charging provision. Criterion (h) of policy Inf 7 states that no additional space for car parking can be accommodated within the curtilage of a dwelling by careful design of gardens.

For many conversions of front gardens to private parking areas planning permission is not required as they benefit from permitted development rights as set in statute by the Scottish Government (CD106). Policy Inf 7 and Inf 8 will apply where planning permission is required for the conversion of gardens to driveways. **No modification proposed.**

Aldi Stores Ltd. (0526)

Edinburgh City Centre LEZ was approved by Scottish Ministers on 19 May 2022 and was introduced on 31 May 2022. Enforcement will start on 1 June 2024, following a two-year grace period for all.

Every planning application is unique and will be determined on its own merits. If development viability was to be a concern then an open book exercise could potentially be a material consideration.

The Council considers the wording of policy Inf 7 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Stirling Developments Limited.(0303)

Comments are noted. One of the key outcomes of the plan is by 2030 Edinburgh will be a city where you don't need to own a car to move around. **No modification proposed.**

CoMoUK (0728)

Part 4 of the plan identifies a number of areas where mobility hubs are proposed. Work on the positioning and design of these hubs is ongoing. **No modification proposed.**

Prof. Rustam Salman (0207)

The Council is installing a network of electric vehicle charging points around the City through funding from Transport Scotland's Switched on Towns and Cities Challenge Fund (CD153). Criterion (g) of policy Inf 7 makes it clear that any car parking spaces in proposed new developments must have smart vehicle charging provision. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council considers the wording of policy Inf 7 to be robust and it will ensure that the aims of the strategy are delivered. One of the key aims of the plan is to adopt an infrastructure first approach, directing new development to where there is existing infrastructure. Where required to support new development, the plan requires new and expanded community infrastructure including sustainable transport to support the spatial strategy. **No modification proposed.**

Crosswind Developments Ltd. (0184)

The Council considers the wording of policy Inf 7 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Cramond & Barnton Community Council (0243)

The Council considers the wording of policy Inf 7 to be robust and it will ensure that the aims of the strategy are delivered. The policy states that only within the currently defined LEZ private car parking (other than accessible spaces) will not be permitted. The policy will only be applicable when planning permission is required for development. It will not affect existing car parking spaces or where permitted development rights exclude the requirement for planning permission. **No modification proposed.**

Andy Agnew (0562)

Criterion (g) of Inf 7 states that any car parking spaces will have smart electric vehicle charging provision. Further details of the specifics of the infrastructure required will be assessed at the planning application stage. **No modification proposed.**

Peter Brown (0672)

Paragraph 2.118 clearly articulates the aims of the plan which are in line with the sustainable transport hierarchy.

Paragraph 3.204 states that meeting our targets for shifting car use to sustainable transport modes must guide our approach to controlling the demand for car parking. Restricting car parking spaces available on site, controlling on street parking in surrounding streets, encouraging use of sustainable and public transport and providing alternatives to car ownership through the provision of shared mobility services are all needed. **No modification proposed.**

Crosslane Co-Living SPV 2 Limited (0687)

Comments noted. **No modification proposed.**

Katherine Kennedy (0569), Union Property Services Ltd/VRS Ltd (0584), SEPA (0012), Grange & Prestonfield Community Council (0192)

Support Noted

### **Inf 8- Design of Car Parking**

Mark Ockendon (0419)

The Council considers the wording of policy Inf 8 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Ernest Evans (0053)

The plan does not encourage the use of garden space for parking in new developments. Criterion (h) of policy Inf 7 supports development where no additional space for car parking can be accommodated within the curtilage of a dwelling by careful design of gardens, driveways and integral garages. The Council considers the wording of policy Inf 8 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Cramond & Barnton Community Council (0243)

The specifications of garage and driveways in future developments will be assessed at the planning application stage. Criterion (g) of policy Inf 7 states that any car parking spaces will have smart electric vehicle charging provision. The Council considers the wording of policy Inf 8 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Dave Berry (0463)

Criterion (g) of policy Inf 7 states that any car parking spaces will have smart electric vehicle charging provision. The Council considers the wording of policy Inf 8 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Living Streets Edinburgh Group (0486)

The Council considers the wording of policy Inf 8 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Katherine Kennedy (0569), SEPA (0012), Grange & Prestonfield Community Council (0192)

Support Noted

### **Inf 9- City Centre Public Parking**

Juniper Green & Baberton Mains Community Council. (0306)

Policy Inf 9 will only be applicable when planning permission is required for development. It will not affect existing car parking spaces or where permitted development rights exclude

the requirement for planning permission. The Council considers the wording of policy Inf 9 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Mark Ockendon (0419)

The Council considers the wording of policy Inf 9 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Living Streets Edinburgh Group (0486)

Any modifications to the LEZ will be subject to other Council processes and consultation. **No modification proposed.**

Cockburn Association (0777)

City Plan Policy Inf 9 (City Centre Public Parking) states that proposals for new off street car parking within the city centre and the Low Emission Zone will not be supported. This policy is not relevant to new developments where private car parking is proposed. It will also not impact upon existing public car parking facilities and it will not stop there being new accessible public parking being created on street. Paragraph 3.208 also acknowledges that the city centre is highly accessible by a range of sustainable transport modes. The Council considers the wording of policy Inf 9 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Andy Inglis (0138)

The Council considers the wording of policy Inf 9 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Archie Clark (0003)

Paragraph 3.208 of the plan states that the city centre is highly accessible by a range of sustainable transport modes and we want to manage the traffic that enters the city. The Council considers the wording of policy Inf 9 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed**

Katherine Kennedy (0569), SEPA (0012), Grange & Prestonfield Community Council (0192)

Support Noted

## **Inf 12- Park and Ride**

Cramond & Barnton Community Council (0243) Liberton & District Community Council (0084) Michael Ramsey (0011) Friends of Cammo (0387) Gordon McKay Brown (0573) Lynn Grattage (0362). Jean Morley (0461)

The City Plan TA (CD014), CMP (CD062), WETA 2016 refresh (CD073), WETIP (CD072) and ESSTS (CD071) have helped inform the spatial strategy of the plan and the infrastructure proposals required to deliver the strategy and policies. **No**

**modification proposed.**

Mr John G. Skinner (0065)

Paragraph 3.213 states that options for a new park and ride in West Lothian are being developed as part of WETIP (CD072) with improved bus and travel connections. This work is out with the remit of City Plan and is currently ongoing. **No modification proposed.**

Crosswind Developments Ltd (0184)

There are no park and rides identified on H61 and it is not shown on the proposals map. **No modification proposed.**

Grange & Prestonfield Community Council (0192)

Support Noted.

Provision of the development plan to which the issue relates:	Inf 10, Table 3, Table 5.	
Planning authority's summary of the representation(s):		

## **General Active Travel Comments**

### Joseph Coulson (0025)

The Scottish Government knows that walking and cycling should come first and cars should come last, and the council itself agreed this in February 2021. But this paper embodies exactly the opposite - it is a plan designed to wipe out walking and cycling. It does not understand the sustainable transport hierarchy. It will leave a city which is noisier, dirtier, and less efficient.

### Lennie O'Hara (0027)

The website to provide comment is poor. The Council is going out of the way to provide for cyclists when they make up a small proportion of road users. The city does not need as much cycle parking spaces. Road alterations and cycle lanes are poorly designed and not well used. Many cyclists and electric scooter riders do not follow the rules of the road.

### Cynthia Shuken (0632)

I would not like to see major changes or development within the centre of Edinburgh and Morningside. I object to active travel safeguards including widespread closure of city centre streets to traffic, which have caused travel havoc and impact upon the historic character of Edinburgh. I would like to see those that have been put in place during the last year or so removed or reduced.

Extensive pedestrianisation does not, in fact, lead to an increase in foot traffic and support of shops and other businesses. In fact, it discriminates against those who require to drive, like people who are disabled, are elderly or have young children or those who choose to, use vehicles (cars, buses and taxis) to access shops and other businesses will instead drive to areas outside the city that have extensive free parking. People make their own choices. This results in killing off businesses in the city centre, to the detriment of residents, tourists and the economy of the city and causes additional pollution. It is against the aims of Inf 1 and Inf 2 aims.

### Robert Anderson (0775)

The term active transport is an oversimplification of the personal options available now and into the future. Any facility provided for active transport will be used by a myriad of un-defined devices most of the growth these formats are actually illegal within the UK.

The designation of Moped is the ideal answer to bridging the transition to electric cars. Everyone on the road is removing the personal use of a petrol car.

### Genna Spears (0081)

Our pavements already have more than enough space for pedestrians and cyclists however they need urgent repair rather a dedicated cycle lane which put pedestrians in more danger than what we have already. We also do not want the removal of parking spaces and parking permits. Planners should Listen to the people living here for once.

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Cycling suffers from the fact that considerable distances may need to be travelled due to past approvals where workplaces, shops, etc. have been built at greater distances than 800m from people's homes. For much of the time, Edinburgh is a wet, windy, cold and hilly city beyond the centre. Many people will either be unwilling or unable to cycle to where they wish to visit. This section avoids considering these realities and is based on hope rather than geography. It is difficult to see how some of these routes can be justified in economic returns.

What are the statistics for the percentage of Edinburgh citizens who actually cycle, and would do so to do their shopping, go to school, go to work, visit the doctor, etc?.

Lynn Grattage (0362)

The wording in Paragraph 2.119 is not strong enough. Map 8 and 2.119 must take all opportunities to enhance the walking, wheeling and cycling access to local services, ensuring routes are safe, direct and pleasant (including making necessary connections to make safe routes to schools in line with school travel plans, as appropriate) and connections are made wherever possible to the wider network of protected cycleways.

Michael Ramsey (0011)

Recommend inclusion of the orbital active travel routes around the city and inclusion of the Cammo Walk active travel route.

**INF 10- Cycle and Footpath Network. (Tables 3-5)**

William Moyes (0305)

The needs of pedestrians and cycles are not always identical. Indeed, often they conflict. The strategy does not recognise this. Pedestrians should be completely physically separated from cycling or other wheeled traffic. Lessons should be learned from the Union Canal, which is miserable for pedestrians.

The description of ATPR 9 and 10 are so vague as to be virtually meaningless. Based on the few lines in the strategy it is impossible to say if I would support or oppose these. Local residents need to be given more detail to make a considered judgement. Pedestrians need to be given proper consideration and priority in the strategy and in implementing its specific plans.

Bo Adams (0363)

There is not enough focus on decent active infrastructure. There needs to be more safe segregated active infrastructure on several roads within the City. There is no way for getting from Kaimes area into the City centre safely & actively as there are no cycle lanes. There are no pavements on certain roads like Frogston & Burdiehouse. The whole area has 5 schools around and no segregated cycle lanes. The new Frogston Primary school is dangerous as there is no safe pedestrian crossing and no cycle lanes or pavements heading west on Frogston road . The roads are potholed and there is lots of pavement clutter around Kaimes Junction.

Many roads, like Captains Road are dangerous to cycle and there are no segregated cycle lanes. There is a lack of investment in the south of the City.

Friends of Cammo (0387)

Support the policy. Note that priority should be given to securing the active travel route through the former Craigiehill army base.

Crosswind Developments Ltd (0184)

There appear to be no active travel safeguards through West Edinburgh on Map 1. This is a clearly an omission in light of the other policy requirements on cycling networks.

Object to the wording as currently proposed in Policy Inf 10. The use of the word “prejudice” as shown in bullet (b) suggests harm or disadvantage but is not sufficiently clear in this context.

University of Edinburgh (0464)

Active Travel routes are shown in close proximity to many of the University of Edinburgh’s estates. Whilst the University of Edinburgh is supportive in principle of these active travel routes, further dialogue is requested with the City of Edinburgh Council on the exact route locations and impact upon the University of Edinburgh’s campus locations.

Further information on the ability to deliver against the ambitious public sector programme to introduce city wide enhancements would be helpful to ensure that University linkages can be effectively planned to integrate with the wider investment programme.

Shortbread House of Edinburgh Ltd (0619)

The closure of Jane Street would mean that there is no longer safe access for lorries to come on and off our site at 25 Tennant Street. This would mean that we are no longer able to operate our business on this site safely. Proper consideration needs to be made of businesses that require to work in this area and access routes that rely on Jane Street.

There is also an active travel route through our car park at 25 Tennant Street. (ATPR35-Leith Walk to Bowling Green Street) This would not be safe as we operate forklift trucks in our car park and there are sometimes large vehicles moving in this area. This proposal must be reconsidered.

Barratt David Wilson Homes (0677)

BDW suggest that land control constraints may make this (Policy INF 10) impossible to implement.

Archie Clark (0003)

Mobility hubs are scattered around but there is no indicative plan to show how they

might be planned. They appear to require quite a lot of space. "Protected Cycleways". These are not defined – are they off-road or just a defined part of an existing highway? The "Active Travel Safeguard" that penetrates Balerno from the NW is of doubtful benefit. Who is it going to serve – presumably not local people? The purpose of the "Strategic Active Travel Safeguard" alongside the A71 remains unclear however as its main destination seems to be the H-W university, it is not needed as the canal towpath already provides most of the route. Likewise, the proposed link from the Heriot-Watt campus to Curriehill Station duplicates an existing footpath. It doesn't seem to serve any useful function.

It is very difficult to trace the routes shown on table 3 (Active travel strategic projects and safeguards) Maps 1, 2, 8 and the main plans are not clear enough to read comprehensively. Further details of routes is required and some routes appear to be missing from maps. Others are unnecessary.

#### Homes for Scotland (0404) Steve Loomes (0767)

Land control constraints may make Policy Inf 10 impossible to implement.

#### Water of Leith Conservation Trust (0392)

A foot/cycleway should be included over the water of Leith in Slateford / Longstone linked to Sainsburys /Asda and the developments at New mart road and Inglis Green Road.

#### Edinburgh Airport Limited (0761)

EAL wish to object to the wording as currently proposed in Policy Inf 10. The use of the word "prejudice" as shown in bullet (b) suggests harm or disadvantage but is not sufficiently clear in this context. More suitable wording for the policy would be "unacceptably impedes"

#### Cramond & Barnton Community Council (0243)

CBCC seeks inclusion of the Cammo Walk Active Travel Corridor as an additional Strategic Active Travel Project/Safeguard. Although included in the previous LDP, this route has not been developed and the Council has been unable to clarify its intentions. This designation would recognise the route's values as a strategic link between the NCN1 and NCN76 cycle routes and West Edinburgh active travel networks

CBCC seeks inclusion of an orbital active travel corridor around the city as an additional strategic active travel Project/Safeguard. Such an active travel corridor around the periphery of the City (cf. City By-pass) would provide a strategic link between many communities, retail parks and greenspaces around the City and beyond. This should be shown on the respective Proposal Maps.

#### Living Streets Edinburgh Group (0486)

Alterations proposed to the title of the policy and rewording of the policy. Whilst it is encouraging to see a range of specific active travel proposals, we would like to see a preamble for all proposals that clearly sets out the Transport Hierarchy and the

priority afforded to walking within it. We expect to see a range of proposals and investment that truly reflects the position of walking and we are keen to sit down and discuss with the Council and others to this end.

CALA Management Ltd (0465), Hallam Land Management (0599)

The proposals set out in tables 3 – 5 of the City Plan 2030 Proposed Plan (Proposed LDP) are not based on a reliable or robust assessment which evidences the requirement for the delivery of these proposals. The Transport Appraisal prepared in support of the Proposed LDP does not provide any analysis of each of the proposals and the impact these will have on the existing active travel network within the local authority. It is, therefore, not possible to determine whether the delivery of these proposals will provide any tangible improvements to the existing active travel network.

Tables 3 – 5 of the Proposed LDP also fail to provide any details or associated costs for the delivery of these proposals. It is, therefore, not possible to determine what each of the proposals will deliver or, indeed, whether they are required.

Miller Homes Ltd. (0649)

The proposals set out in tables 3 – 5 of the City Plan 2030 Proposed Plan (Proposed LDP) are not based on a reliable or robust assessment which evidences the requirement for the delivery of these proposals. The Transport Appraisal prepared in support of the Proposed LDP does not provide any analysis of each of the proposals and the impact these will have on the existing active travel network within the local authority. It is, therefore, not possible to determine whether the delivery of these proposals will provide any tangible improvements to the existing active travel network.

Tables 3 – 5 of the Proposed LDP also fail to provide any details or associated costs for the delivery of these proposals. It is, therefore, not possible to determine what each of the proposals will deliver or, indeed, whether they are required.

Miller Homes Limited objects to the non-identification of a Mobility and Neighbourhood Hub on land at South of Lang Loan. Table 4 of the Proposed LDP does not include the delivery of a Mobility and Neighbourhood Hub which can be safeguarded as part of the delivery of a housing led development at land at South of Lang Loan. This housing led development at South of Lang Loan has been promoted as part of the emerging Proposed LDP.

The delivery of a Mobility and Neighbourhood Hub at land at South of Lang Loan will support the Council's previous proposal (as set out in the MIR) for a proposed new Park & Ride facility along Lasswade Road within the south east corner of the site. This will provide improvements to the existing public transport network and will be to the benefit of residents of the development and the existing population

Louise Baker (0773)

While the policy prioritises cycling and walking within the city this requires careful planning and implementation of the detail of how our city spaces function.

At many city junctions priority remains with car users making access around the city difficult for pedestrians. The junction at the north end of Liberton Brae is an example of

this, where there is no guided crossing (green man) on Kirk Brae at this point. The difficulty for pedestrians at this junction is presently exasperated by building work so that crossing Mayfield Road at this junction is not easily possible and a detour must be taken.

#### Stirling Developments Limited (0303)

Additional provision for active travel along the A8 to Newbridge needs to be included.

#### Edinburgh Access Panel (0620)

It's essential to protect pedestrians from cyclists with effective segregation including a level-change of at least 50mm. Some pedestrians, especially those with a vision impairment are dismayed by the inadequate level of protection provided by some existing infrastructure – e.g. the poor segregation on Leith Walk.

Protection is particularly important in cases where pedestrians have to cross a cycle lane to get to and from their bus stop or parked car.

#### Leith Central Community Council (0614)

The plan should state that all new developments should always increase and add to permeability and connectivity for active travel.

Wish to see options for a future active travel route at high level safeguarded (“Leith Walk Highline”) to support connections from Pilrig Park and the North Edinburgh cycle network to East Edinburgh and the coast line between Marine Esplanade and Portobello.

#### The Davidson's Mains and Silverknowes Association (0454)

ATSG1 Active Travel Safeguard - Blackhall Path westwards extension from Silverknowes Road Bridge to Cramond Road South is supported but it should be given a higher priority to be included as a specific development proposal as part of the plan.

ATSR1 - Edinburgh Waterfront Promenade is also supported. However longer term consideration should be considered to extending it to Queensferry with the provision of a crossing of the River Almond at Cramond Harbour.

#### Forth Ports Limited (0496)

The identification of public infrastructure within the boundary of operational Port estate as outlined in Appendix 2.3 is inappropriate and unimplementable and requires to be removed from the proposed Plan. Forth Ports has repeatedly advised the Council that active travel routes through the Port estate are inappropriate.

The proposed Plans' strategy in relation to strategic access routes and education, if implemented has the potential to undermine the operation of the Port of Leith. In seeking to address the need for housing and associated infrastructure, the proposal fails to recognise the wider impact and implications for the City's economy and infrastructure. In designating the 'active travel safeguards' through the operational port estate, the Council has ignored the Reporter's direction, as set out in in the proposed

Edinburgh LDP Examination Report, 2016, to assess the feasibility of creating the east west cycle route through the Port estate.

#### Tarmac (0244)

A 'direct' connection to a segregated link is not always going to be possible. The provision of a connection to facilitate direct connection can be provided, or an indirect link across barriers should be preferable to no connection.

Proposed development at Bairdview makes provision for north- south connections across the Union Canal linking the north and south of the village and a safe route to school. It promotes walking cycling and active travel as opposed to vehicular movements.

#### Inverdunning (Hatton Mains) Ltd (0427)

A New Mobility Hub at Hatton Village should be added to table 4 (Active Travel Proposals), to reflect proposed new Hatton Village allocation.

#### Hallam Land Management (0615)

A 'direct' connection to a segregated link is not always going to be possible. The provision of a connection to facilitate direct connection can be provided, or an indirect link across barriers should be preferable to no connection.

Craigiehall has the potential to deliver the River Almond Walkway proposal contained within the LDP Proposals as part of the development layout. This cannot be delivered without landowner/ developer co-operation and liaison is ongoing in relation to feasibility studies. Development at Craigiehall would also enhance cycle and walking routes linking into the core path network through improved connectivity.

The potential for improved connectivity at Goodtrees Farm should be recognised by the Council.

#### E&A Partnerships Ltd & Niddrie Development Company (0753)

Support the policy however, part of the Active Travel Safeguard ATSG25 runs through our site at The Wisp. We would be willing to reserve land within the development site to ensure this link could be completed at a later date. However, the strip of land to the north of the site is not owned by us. As such, it will not be possible to deliver the entirety of this proposal as part of development at the site.

#### Lady Road Investment S.A.R.L. (0625)

The policy is supported, however further dialogue over exact route locations, improvements to cycle parking and lighting along the routes and any potential impact upon Cameron Toll is requested.

#### Spokes Lothian (0545)

Encouraged to see active travel improvements as part of development projects. However, it is not clear that all development proposals have been sufficiently fully assessed for

active travel potential. One example is at Leith Docks, there are no specific Active Travel connections proposed. Another is at Broomhouse Terrace. It is not clear if there will be a link to Longstone over Calder Rd (A71) Furthermore, whilst it is positive to see these proposals there appears to be a disconnect from these and wider active travel network connections and integration of active travel along arterial routes.

There are only two active travel safeguards-Local connection/entry points shown in supporting documentation. One at West Granton and the other from Yeaman Place (Polwarth) to Union Canal. More should be included in the plan. The connection around Leith Docks appears to now be omitted. This is removing the ambition for a continuous off-road coastal connection between Western Harbour and Seafield.

Spokes supports but would like to see more information on certain hubs identified in the City Plan 2030. These hubs also do not appear to be in the city centre, public transport hubs or at other major development sites such as Western Harbour, International Gateway or retrospective to existing areas where active travel could be further encouraged and enabled.

Spokes is very concerned at the lack of mention of the following in City Plan 2030; Cycling by Design, Workplace Parking Levy (WPL) and wider premises levy, Active Freeways, Minimal reference to Edinburgh Design Guidance, Background data, Bringing planning approvals into line with Council policies, Coastal Path East – West, South Suburban Railway Stations.

Andy Agnew (0562)

The policy is supported. However, the provision of active travel should mention micromobility such as electric scooters. Active travel infrastructure will need to cater for scooters either in their own lanes or sharing cycle lanes.

Maciej Malaszuk (0179)

The policy is supported. However, the plan should have more active travel off road cycle routes linking Morningside with surrounding areas.

Shelagh Sharp (0111)

The policy is supported. However, it should be ensured that cycling routes have protected/segregated lanes for cyclists and that pedestrians are also protected from motorised and cycle traffic. More needs to be done to create safe cycle routes from Fairmilehead and Frogston areas in towards Morningside and then from there into the city centre.

Gordon McKay Brown (0573)

The policy is supported. However, I think we need to be as transformative as Paris with our active travel. Morningside/Brunsfeld would be incredible places to be and shop if only essential traffic passed through (public transport/emergency services) with the rest of the space given up to pedestrians and cyclists. It looks like there are no proposals to make these areas safer to cycle reducing the likely success of the 20 minute community.

David Bentley (0203)

Supports the policy. However, there are not enough active travel routes proposed and there is nothing in the south of the city, - Comiston, Fairmilehead, Swanston - and very little in adjoining areas such as Oxfangs and Morningside.

Deirdre Henderson (0727)

Supports the Policy. However, it is important that active travel does not make areas like the city centre hostile to residents living there, particularly to disabled and older people, and those that support them. Car free areas, like George Street can feel dangerous at night due to a lack of passing traffic.

The infrastructure being designed in the city centre appears to be for tourists and visitors from outside the city centre, making it less and less possible for residents to live there. The buses have areas severely lacking in services e.g. the whole of the High Street and Dumbiedykes. This needs addressed. The disused railway lines should be used for accessible transport, where possible, with lifts at station points to reduce the on street traffic and speed up travel times.

Miller Homes Limited. (0256)

The Action Programme identifies that the suggested route of ATSR11 (Currie to Heriot-Watt) passes over land owned by the Council and university, and that funding and the delivery timescale of this route is to be confirmed. However, it should be noted that this route can be fully incorporated into the proposal at Riccarton Village which can provide a direct pedestrian / cycle connection between Curriehill Station and Riccarton University Campus and Business Park.

The Action Programme suggests that ATSG17 (off road alternative to network route 75) passes over land owned by the Council and is not linked to any proposal within the City Plan and the delivery timescale is to be confirmed, albeit it should be noted that the proposals at Riccarton Village could contribute towards the delivery of this route.

Katie Soane (0260)

It is indicated that City Plan should address the following issues with Active Travel routes:

- they are not continuous connection to the existing network or people desire lines
- the missing equality act compliant ramped access from Newhaven Road to Warriston active travel path.
- the proposed (and welcomed) Powderhall active travel path northern end does not connect to the existing path network at the southern end of Chancelot path
- H44 does not protect the existing water of leith path as runs along the northern edge of the site as it connects to the eastern foot bridge that is shown as part of the route.
- H47 does not include the existing water of leith route that along its southern boundary this needs to be protected along with the western footbridge.

Morag MacLean (0326)

Any infrastructure or plans that are intended to be used by cyclists should be checked over by people that actually cycle. All infrastructure should be designed in a way that anyone would feel confident their 7 year old could safely use it. If it's not safe, easy to use, logical, and joined up then it's a waste of time. There are loads of examples all over Edinburgh that make cycling dangerous or inconvenient but with a few tweaks could be more accessible.

**Modifications sought by those submitting representations:**

**General Active Travel Comments**

Joseph Coulson (0025)

No modifications specified but it is indicated the plan will leave a city which is noisier, dirtier, and less efficient.

Lennie O'Hara (0027)

No modification specified but it is indicated that money should be spent on making Edinburgh better, not worse.

Cynthia Shuken (0632)

No modification specified but it is indicated an increase in bus stops and the frequency of buses on most routes would be of benefit and would be more likely to tempt people out of cars. All of the physical spaces for people barriers should be removed, Sunday free parking reinstated.

Robert Anderson (0775)

No modification specified but it is indicated that the plan should make a distinction for the new electric mopeds which are now available. Currently, there is little provision made for these vehicles. The definition of a cycle needs to be better defined.

Genna Spears (0081)

No modification specified but it is indicated that pavements need urgent repair rather a dedicated cycle lane. Do not remove parking spaces and parking permits.

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

No modification specified but it is indicated that cycling suffers from the fact that considerable distances may need to be travelled due to past approvals where workplaces, shops, etc. have been built at greater distances than 800m from people's homes and for much of the time, Edinburgh is a wet, windy, cold and hilly city.

Archie Clark (0003)

The plan should show how Mobility hubs are to be planned. It should be emphasised

that 'Wheeling' refers to wheelchairs, not to scooters, whether motorised or not.

Lynn Grattage (0362)

Paragraph 2.119 should read "All development must prioritise walking, wheeling and cycling to local services and through areas, joining with current routes. These routes should be laid out first, then any roads and other infrastructure laid out afterwards, to ensure that the walking, wheeling and cycling routes are the most direct and easy to use, and the driving routes have to go round them. Paragraph 2.119 should not say "wherever possible", it should read "connections have to be made to the wider network of protected cycleways"

The policy should talk about improvements on existing housing developments. These should all have either off road cycle routes or cycle priority.

Michael Ramsey (0011)

No modification specified but it is indicated that the inclusion of the orbital active travel routes around the city and inclusion of the Cammo Walk active travel route is recommended.

**INF 10- Cycle and Footpath Network. (Tables- 3-5)**

William Moyes (0305)

No modification specified but it is indicated that the strategy must recognise and acknowledge that the needs of pedestrians and cycles are not always identical and often they conflict. Pedestrians should be completely physically separated from cycling or other wheeled traffic. Local residents need to be given more detail in terms of the active travel proposals in order to make a considered judgement on the plan.

Bo Adams (0363)

There needs to be more safe segregated active infrastructure on the A701 from the Park and ride in Straiton all the way to the city centre. There also needs to be more safe segregated active infrastructure on Burdiehouse and Liberton roads. The infrastructure on Frogston road needs to be more visionary, the Frogston Road cycle lane should connect with Captains Road and Liberton.

Crosswind Developments Ltd (0184)

Active travel safeguards through West Edinburgh should be shown on Map 1.

Policy wording should be amended as below:

"b. unacceptably impedes the continuity of the core path network or off-road network generally,"

Friends of Cammo (0387)

The policy should give priority to securing the active travel route through the former Craigiehill army base.

#### University of Edinburgh (0464)

No modification specified but it is indicated that further dialogue and information is requested with the City of Edinburgh Council on the exact route locations and impact upon the University of Edinburgh's campus locations.

#### Shortbread House of Edinburgh Ltd (0619)

No modification specified but it is stated that the closure of Jane Street would mean that there is no longer safe access for lorries to come on and off the site at 25 Tennant Street. This would mean that we are no longer able to operate our business on this site safely.

The proposed active travel route through our car park at 25 Tennant Street. (ATPR35-Leith Walk to Bowling Green Street) must be reconsidered.

#### Barratt David Wilson Homes (0677)

No modification specified but it is indicated that land control constraints may make (Policy Inf 10) impossible to implement.

#### Archie Clark (0003)

Separate large maps indicating the proposals and safeguards shown under table 3, 4 and 5 is needed.

Of particular (but not exclusive note) are ATSR3, ATSR6 – (West Edinburgh Link – is shown as 'New walking, cycling and public spaces in East Craigs, South Gyle, Bankhead, Sighthill and Wester Hailes linking with Edinburgh Park/the Gyle'. But as this ends up at Lanark Road opposite Hailes Gardens and appears to run the length of Wester Hailes Road from the Clovenstone Roundabout over the canal and northwards across the Calder Road, the description above should be amended to read "...Wester Hailes linking Edinburgh Park/the Gyle to Lanark Road."

ATSR11 (Heriot-Watt to Currie – which appears unnecessary given there already is a footpath and most access is from Riccarton Mains Road on the east side of the estate). What form does this active travel project take?

ATSR12 (A71 South Livingston to West Edinburgh), ATSR16 (Lanark Road/Slateford Road – which the past year has proved is neither popular nor necessary).

In terms of Table 5 - Active Travel Safeguards – local connections, ATSG8 – Inglis Green cycle link to New Water of Leith Bridge doesn't appear to feature on the maps.

ATSG17 – Off-road alternative to NCNR75 at Newmills may be of use for a short distance at its south end though it would need to run under Lanark Road West to connect to the Water of Leith Walkway to be useful. It is unclear what purpose it would serve otherwise.

Protected cycleways should include a pedestrian/cycle route, an 'Education corridor', connecting WHEC to Currie Community High School and Balerno High School, the

Heriot-Watt University and the primary schools along the route so as to reduce the volume of traffic on the Lanark Road/Lanark Road West.

The connection between Lanark Road and the Calder Road would be best going through Wester Hailes (as CEC leaflet "On Foot – By Bike") from Lanark Rd via Clovenstone/ Wester Hailes/ Hailesland/ along the canal to link with the route to WHEC/ parallel to Wester Hailes Road to the Calder Road Roundabout underpass/ east parallel to Calder Road to Stevenson College. That way it avoids problems crossing in the vicinity of the Clovenstone roundabout.

The "Strategic Active Travel Safeguard" alongside the A71 is not needed as the canal towpath already provides most of the route.

Homes for Scotland (0404), Steve Loomes (0767)

No modifications specified but it is indicated that land control constraints may make this policy (Inf 10) impossible to implement.

Water of Leith Conservation Trust (0392)

A foot/cycleway should be included over the water of Leith in Slateford / Longstone linked to Sainsburys /Asda and the developments at New Mart Road and Inglis Green Road.

Juniper Green & Baberton Mains Community Council (0306)

No modification specified but it is indicated that the policy does not recognise that Edinburgh is not always hospitable for cycling and the aged, the infirm and mothers with young children are unlikely to take to their bikes.

Edinburgh Airport Limited (0761)

Bullet point b should be reworded as follows:

"b. unacceptably impedes the continuity of the core path network or off-road network generally"

Cramond & Barnton Community Council (0243)

Map 2 (p. 10) & Map 8 (p. 31). Active Travel Project and Safeguards should include -

- a. Cammo Walk Active Travel Project
- b. Strategic Orbital Active Travel Corridor around the periphery of the City (cf. City Bypass)

Living Streets Edinburgh Group (0486)

The policy should be retitled "Footpath and Cycle Network" to properly reflect the transport hierarchy.

Reword policy as follows:

"Development proposals must design for and deliver direct connections to adjacent segregated active travel infrastructure and/or the off-road cycle and footpath network. Development proposals must address improvements to safe walking routes ....."

Add to the list of development which will not be supported to include cases where adjoining footpaths are already inadequate or where development will reduce the width or adversely impact on other essential characteristics of existing footpaths.

We would like to see a preamble for all proposals that clearly sets out the Transport Hierarchy and the priority afforded to walking within it. We expect to see a range of proposals and investment

CALA Management Ltd (0465), Hallam Land Management (0599)

All proposals set out in tables 3 -5 of the Proposed LDP should be reviewed based on a reliable impact assessment, taking into account the issues raised in the representation to the Transport Appraisal.

Miller Homes Ltd. (0649)

All proposals set out in tables 3 -5 of the Proposed LDP should be reviewed based on a reliable impact assessment, taking into account the issues raised in the representation to the Transport Appraisal.

Table 4 of the Proposed LDP should, therefore, be amended to include the delivery of a Mobility and Neighbourhood Hub at land South of Lang Loan.

Louise Baker (0773)

No modification specified but it is indicated that accessibility within the city for walking and wheelchair users could be improved by careful consideration of the placement of street furniture and proper maintenance of footpaths and for building projects the duration the impact on pedestrians should be given more consideration when planning permission is being granted.

Stirling Developments Limited (0303)

Additional provision for active travel along the A8 to Newbridge needs to be included within the plan

Edinburgh Access Panel (0620)

The plan should state that a cycle lane or cycle track or cycle path should have effective segregation including a level-change of at least 50mm.

Leith Central Community Council (0614)

Options for a future active travel route at high level safeguarded ("Leith Walk Highline") to support connections from Pilrig Park and the North Edinburgh cycle network to East Edinburgh and the coast line between Marine Esplanade and Portobello.

No further modification specified but it is indicated that the plan should state that all new

developments should always increase and add to permeability and connectivity for active travel.

#### The Davidson's Mains and Silverknowes Association (0454)

ATSG1 Active Travel Safeguard - Blackhall Path westwards extension from Silverknowes Road Bridge to Cramond Road South should be given a higher priority to be included as a specific development proposal as part of the plan .

ATSR1 - Edinburgh Waterfront Promenade should be extended to Queensferry with the provision of a crossing of the River Almond at Cramond Harbour.

#### Forth Ports Limited (0496)

'Active travel safeguards' (both strategic and local) and 'indicative schools proposals' shown on map 8 (page 31) within the Port of Leith should be removed and relocated to a location outside of the operational port estate, the boundary of which is shown on appendix 2.3 table 3 page 166.

Proposal ATSR1 – Edinburgh Waterfront Promenade should be re-routed. Amend description text to address the requirement to re-route around the operational Port of Leith estate boundary shown at Appendix 2.3 as follows,

"Form a continuous walkway/cycleway extending for almost 17km from Joppa in the east to Cramond in the West. The route will not pass through the Port of Leith operational port estate and will require to be routed around its landward boundaries."

Remove Strategic Active Travel and Safeguards from the operational port estate boundary which is shown on Appendix 2.3, Page 9, Map 1 – The City Plan Spatial Strategy

Relocate Strategic Active Travel Project an Safeguards and Active Travel Safeguards from operational port estate boundary which is shown on Appendix 2.3, Page 10, Map 2 – The City Plan Spatial Strategy

Remove and relocate 'active travel safeguards' (both strategic and local) and 'indicative schools proposals' shown on map 8 (page 31) within the Port of Leith to a location outside of the operational port estate, the boundary of which is shown on Appendix 2.3.

Maps 14, 15, 16 and 17, pages 47 to 49, require to be revised, re-routing footpath and cycle connections to exclude the operational land within the Port estate.

Northern and Eastern Docks Development Principles (page 49) amend bullet point d to recognise that cycle and pedestrian routes are required to be routed around the operation Port of Leith estate with the following text, "Cycle and pedestrian routes will require to be routed around the boundary of the operational Port of Leith estate."

Amend policy Inf 10 to recognise that it will not always be possible to provide active travel routes as identified in the proposed Plan. The following revision to the Policy is proposed.

Development will not be supported which would:

- a. prevent the implementation of proposed cycle paths and pedestrian/wheeling routes

shown on the Proposals Map and Part 4, safeguarded routes identified in this plan, other routes identified in the Council's Active Travel Action Plan, or other routes identified through Place Policies and Development Principles or Place Briefs following community consultation, unless it is demonstrated that the routes cannot be delivered. Alternative routes may be required where it is not possible to deliver the proposed routes."

#### Tarmac (0244)

Omit the words 'direct' and 'adjacent segregated' in the first sentence of policy Inf 10.

Omit 'including these identified in school travel plans where relevant' in the second sentence of policy Inf 10 as this is unnecessary addition to the existing policy.

#### Inverdunning (Hatton Mains) Ltd (0427)

A New Mobility Hub at Hatton Village should be added to table 4 (Active Travel Proposals), to reflect proposed new Hatton Village allocation.

#### Hallam Land Management (0615)

Omit the words 'direct' and 'adjacent segregated' in the first sentence of policy Inf 10.

Omit 'including these identified in school travel plans where relevant' in the second sentence of policy Inf 10 as this is unnecessary addition to the existing policy.

#### E&A Partnerships Ltd & Niddrie Development Company (0753)

No modifications specified but it is indicated that issues with land ownership mean it will not be possible to deliver the entirety of the active travel route.

#### Lady Road Investment S.A.R.L. (0625)

No modifications specified but it is indicated that proposed routes run near to clients land. Further dialogue over exact route locations, improvements to cycle parking and lighting along the routes and any potential impact upon Cameron Toll are requested.

#### Spokes Lothian (0545)

The following Access Points should be assessed for inclusion within the plan; Ferry Road Morrisons supermarket on the NEPN near Ainslie Park, Sauchiebank to Roseburn (for continuous Roseburn to Canal route), 64 Gilmerton Dykes Street (Kilngate Brae to Gilmerton Dykes Street connection), Blackford Glen Road to King's Buildings, Cramond Road South to the Blackhall Path.

CEC to review all brownfield sites for integration into the existing and newer 'Travelling Safely' (SfP) active travel routes.

More information should be provided in relation to the Broomhouse Terrace mobility hub, Redford Barracks mobility hub, Astley Ainslie mobility hub, Granton mobility Hub, Granton Square mobility Hub, Bonnington mobility hub, Seafield mobility hub, Fettes

Avenue mobility hub, BioQuarter mobility hub 1, BioQuarter mobility hub 2.

All active travel proposals should be designed not just as standalone projects, but integrated into a safe, welcoming and connected city-wide network which includes convenient and direct access to such development areas.

The plan should have greater reference to the recently published update to Transport Scotland 'Cycling by Design' document in City Plan 2030.

Workplace Parking Levy: The City Plan should commit the Council to continue seeking such powers and based planning based on it being in place as soon as possible.

Active Freeways should be included in the City Plan.

More reference to Edinburgh Design Guidance is required:

More information and data should be available to help inform an Active Travel forecast of the proposals in the City Plan 2030.

Andy Agnew (0562)

The policy should acknowledge micromobility such as electric scooters.

Maciej Malaszuk (0179)

No modifications specified but it is indicated that the plan should have more active travel off road cycle routes linking Morningside with surrounding areas.

Shelagh Sharp (0111)

The policy should ensure that cycling routes have protected/segregated lanes for cyclists and that pedestrians are also protected from motorised and cycle traffic. More safe cycle routes are required from Fairmilehead and Frogston areas in towards Morningside and then from there into the city centre.

Gordon McKay Brown (0573)

Morningside/Bruntsfield should be made car free with the rest of the space given up to pedestrians and cyclists.

David Bentley (0203)

More active travel routes should be proposed, especially in the south of the city and in adjoining areas such as Oxbgangs and Morningside.

Deirdre Henderson (0727)

Certain areas of the City like High Street and Dumbiedykes require additional bus services. The disused railway lines should be used for accessible transport, where possible, with lifts at station points to reduce the on street traffic and speed up travel times. It is indicated that active travel measures must not make areas like the city centre hostile to residents living there.

Miller Homes Limited. (0256)

No modifications specified but it is indicated that the proposals at Riccarton Village could also contribute towards the delivery of ATSR11 and ATSG17

Katie Soane (0260)

No modifications specified but it is indicated that City Plan should address the following issues with Active Travel routes:

-they are not continuous connection to the existing network or people desire lines

-the missing equality act compliant ramped access from Newhaven Road to Warriston active travel path.

-the proposed (and welcomed) Powderhall active travel path northern end does not connect to the existing path network at the southern end of Chancelot path

- H44 does not protect the existing water of leith path as runs along the northern edge of the site as it connects to the eastern foot bridge that is shown as part of the route.

- H47 does not include the existing water of leith route that along its southern boundary this needs to be protected along with the western footbridge.

Morag MacLean (0326)

No modification specified but it is indicated that any infrastructure or plans that are intended to be used by cyclists should be checked over by people that actually cycle. If it's not safe, easy to use, logical, and joined up then it's a waste of time. There are loads of examples all over Edinburgh that make cycling dangerous or inconvenient but with a few tweaks could be more accessible.

**Summary of responses (including reasons) by planning authority:**

**General Active Travel Comments**

Joseph Coulson (0025)

One the key Outcomes of City Plan (CD001) is by 2030, we want Edinburgh to be a City where you don't need to own a car to move around. The plan aligns with the National Transport Strategy 2 (CD110), the draft National Planning Framework 4 (CD099) and the Council's approved local transport strategy, the City Mobility Plan (CMP) (CD062) which puts sustainable modes of movement (walking, wheeling, cycling and public transport at the top of the transport hierarchy and private car use at the bottom.

Paragraph 2.111 of the plan states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding sustainable public transport. Paragraph 2.118 states that we want to see development prioritising walking and wheeling and cycling, demonstrating high public transport accessibility, restricting private car parking and encouraging shared transport through mobility hubs. The CMP has been prepared alongside City Plan 2030 to help Edinburgh connect through a safer and more inclusive

carbon neutral transport system- delivering a healthier, thriving, fairer and compact capital city and a higher quality of life for all residents. The Council is also currently working on a new Active Travel Action Plan (ATAP) and a Public Transport Action Plan (PTAP) to replace the current ATAP/PTAP (CD075) & (CD169). **No modification proposed.**

Lennie O'Hara (0027)

Representations in relation to the consultation process are covered under issue 39. One the key Outcomes of City Plan is by 2030, we want Edinburgh to be a City where you don't need to own a car to move around. The plan aligns with the Nation Transport Strategy 2 which puts sustainable modes of movement at the heart of the transport hierarchy with walking, cycling and wheeling at the top and private car use at the bottom. Paragraph 2.113 of the plan states that to address the climate emergency, the plan aims to reduce transport emissions and avoids adding to congestion by managing travel demand and promoting public transport.

The City Mobility Plan (CMP) (CD062) has been prepared alongside City Plan 2030 (CD001) to help Edinburgh connect through a safer and more inclusive carbon neutral transport system- delivering a healthier, thriving, fairer and compact capital city and a higher quality of life for all residents. The plan aligns with the Nation Transport Strategy 2 which puts sustainable modes of movement at the heart of the transport hierarchy with walking, cycling and wheeling at the top and private car use at the bottom.

Paragraph 2.111 of the plan states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding sustainable public transport. Paragraph 2.118 states that we want to see development prioritising walking and wheeling and cycling, demonstrating high public transport accessibility, restricting private car parking and encouraging shared transport through mobility hubs. The layout of proposed active travel routes has been informed by the City Plan TA (CD014), the CMP, ESSTS (CD071), WETA 2016 refresh (CD073) and WETIP (CD072).

The plan cannot control the behaviours of road users. **No modification proposed.**

Cynthia Shuken (0632)

One the key Outcomes of City Plan is by 2030, we want Edinburgh to be a City where you don't need to own a car to move around. The City Mobility Plan (CMP) (CD062) has been prepared alongside City Plan 2030 to help Edinburgh connect through a safer and more inclusive carbon neutral transport system- delivering a healthier, thriving, fairer and compact capital city and a higher quality of life for all residents. The plan aligns with the Nation Transport Strategy 2 (CD110) which puts sustainable modes of movement at the heart of the transport hierarchy with walking, cycling and wheeling at the top and private car use at the bottom. Numerous reports like the one carried out by Living Streets have shown that safe and pleasant places, where people walk to and stay longer, are economically vibrant (The Pedestrian Pound) (CD145).

Paragraph 2.111 of the plan states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding sustainable public transport. Paragraph 2.118 states that we want to see development prioritising walking and wheeling and

cycling, demonstrating high public transport accessibility, restricting private car parking and encouraging shared transport through mobility hubs. The infrastructure proposals shown in part 4 of the plan, which include proposed additional bus routes, will provide people with accessible, frequent public transport options as an alternative to the car. **No modification proposed.**

Robert Anderson (0775)

The detailed design of active and public transport routes is a project level matter. Active travel routes shall be designed on a case by case basis and will align with the Council's design guidance and street design guidance which has specific information in relation to street design guidance, footways and promoting pedestrian movement.

The planning system cannot control or regulate the type or use of vehicles. In line with National Transport Strategy 2 (CD110), the plan advocates the transport hierarchy with walking cycling and wheeling at the top. **No modification proposed.**

Genna Spears (0081)

One the key Outcomes of City Plan is by 2030, we want Edinburgh to be a City where you don't need to own a car to move around. Paragraph 2.111 of the plan states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding sustainable public transport. Paragraph 2.118 states that we want to see development prioritising walking and wheeling and cycling, demonstrating high public transport accessibility, restricting private car parking and encouraging shared transport through mobility hubs. Any modifications to parking provision will be subject to other Council processes and consultation, however City Plan accords with the CMP (CD062) in terms of managing private car use and public space. Pavement management is a matter for the Roads Authority. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306) Archie Clark (0003)

City Plan (CD001) proposes a measure of infrastructure proposals that will help encourage people to walk and cycle. It also proposes a number of public transport measures, like expanded tram services and new orbital bus routes, for people who are unwilling or unable to cycle or have to do their shopping or other activities that might require public transport. **No modification proposed.**

Archie Clark (0003)

The Action Programme for the proposed plan (CD008) provides further information relating to mobility hubs as does the CMP (CD062). Further details will be available through future action plans relating to the plan and the CMP which are currently being worked on.

The glossary of the plan provides a definition of Wheeling. **No modification proposed.**

Lynn Grattage (0362)

The Council considers the wording of paragraph 2.119 is suitably robust whilst still

providing the degree of flexibility that is required when a planning application is assessed. **No modification proposed.**

Michael Ramsey (0011)

Paragraph 2.111 of the plan states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding sustainable public transport. The CMP (CD062) has been prepared alongside City Plan 2030 (CD001) to help Edinburgh connect through a safer and more inclusive carbon neutral transport system- delivering a healthier, thriving, fairer and compact capital city and a higher quality of life for all residents. The Council is also currently working on a new Active Travel Action Plan (ATAP) and a Public Transport Action Plan (PTAP) to replace the current ATAP/PTAP (CD075) & (CD169). **No modification proposed.**

#### **INF 10- Cycle and Footpath Network. (Tables 3-5)**

William Moyes (0305)

Paragraph 2.118 of the plan states that the Council want to see all development, prioritising walking, wheeling and cycling.

Where active travel routes are proposed for developers to deliver they will have to meet the Council's design guidance and street design guidance which has specific information in relation to cycle lanes, segregated cycle lanes and footways. Where the active travel proposals are likely to be delivered by the Council and funded in part by developer contributions, the exact design and type of segregation of cycle route on street will be finalised as part of the Active Travel Action Plan (in preparation). Once this is finalised, and the type of cycle segregation design is known, this can be reflected in iterations of the City Plan Action Programme (CD008). Further details of the proposed layout of active travel routes can also be found in the interactive maps. **No modification proposed.**

Bo Adams (0363)

Part 4, Tables 3-5 of the plan focuses on active travel infrastructure proposals. The thorough active travel proposals highlighted in part 4, Tables 3-5 of the plan have been informed by the plan TA (CD014), the CMP (CD062), ESSTS (CD071), WETA 2016 refresh (CD073) and WETIP (CD072). **No modification proposed.**

Friends of Cammo (0387)

The support is noted. The future development of the active travel routes proposed shall be established in the annually updated action programme for the plan (CD008). **No modification proposed.**

Crosswind Developments Ltd (0184)

Map 1 is a high level illustrative spatial strategy. Map 24 clearly indicates new, proposed, active travel routes.

The Council considers the wording of criterion (b) of Inf 10 is appropriate and will enable

the Council to ensure that no impediment to delivery arises. **No modification proposed.**

University of Edinburgh (0464)

The support in principle is noted. The Council will continue in dialogue with the University through the Action programme. **No modification proposed.**

Shortbread House of Edinburgh Ltd (0619)

25 Tennant Street forms part of place proposal 7 (Stead's Place) for housing led mixed-use development. The active travel route indicated has been safeguarded to ensure that if the site is redeveloped then an adequate active travel link through the site could be provided. **No modification proposed.**

Barratt David Wilson Homes (0677)

Policy Inf 10 states that development proposals must design for and deliver direct connections to, adjacent, segregated active travel infrastructure and/or the off road cycle and footpath network. Given that developments must only deliver connection to adjacent infrastructure or networks it is likely that connections will be made to land either owned by developers or council owned land. Therefore, there should be no obstruction to delivery in most circumstances. In occasions where land ownership concerns cannot be resolved then a developer contribution may be required in line with policy Inf 3.

It must also be noted that the proposed routes that are shown in the plan are indicative at this stage and will be delivered through project level work. **No modification proposed.**

Archie Clark (0003)

The proposed and safeguarded active travel routes highlighted in table 3 of the plan have been informed by the plans TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). Further details regarding mobility hubs and protected cycleways is available in the city plan action programme (CD008) and additional details will be forthcoming in future action programmes. **No modification proposed.**

Homes for Scotland (0404), Steve Loomes (0767)

City Plan (CD001) proposes a measure of infrastructure proposals that will help encourage people to walk and cycle. However, it also proposes a number of public transport measures, like expanded tram services and new orbital bus routes, for people who are unwilling or unable to cycle or have to do their shopping or other activities that might require public transport.

Policy Inf 10 states that development proposals must design for and deliver direct connections to, adjacent, segregated active travel infrastructure and/or the off road cycle and footpath network. Given that developments must only deliver connection to adjacent infrastructure or networks it is likely that connections will be made to land either owned by developers or council owned land. Therefore, there should be no obstruction to delivery in most circumstances. In occasions where land ownership concerns cannot be resolved then a developer contribution may be required in line with policy Inf 3. It must also be

noted that the proposed routes that are shown in the plan are indicative at this stage and will be delivered through project level work. **No modification proposed.**

Water of Leith Conservation Trust (0392)

Table 5 of the plan (Active Travel Safeguards- Local Connections) highlights (ATSG8) Inglis Green cycle link, new Water of Leith Bridge. **No modification proposed.**

Edinburgh Airport Limited (0761)

The Council's considers that the wording of criterion (b) of Inf 10 is appropriate and will enable the Council to ensure that no impediment to delivery arises. **No modification proposed.**

Cramond & Barnton Community Council (0243)

The proposed and safeguarded active travel routes highlighted in table 3 of the plan have been informed by the plans TA (CD014), the CMP (CD062), ESSTS (CD071), WETA 2016 refresh (CD073) and WETIP (CD072). **No modification proposed.**

Living Streets Edinburgh Group (0486)

Paragraph 3.209 makes it clear that increasing trips made by walking, wheeling, and cycling is central to the Sustainable Transport Hierarchy. This is also key to the Council achieving its aim to reduce the number of car kilometres travelled citywide. No modification proposed, however should the reporter be so minded the title could be altered to "Footpath and Cycle Network" to provide more clarity.

The Council considers the wording and title of policy Inf 10 to be appropriate and robust and it will ensure the delivery of the strategy. **No modification proposed.**

CALA Management Ltd (0465), Hallam Land Management (0599)

The Transport Appraisal (CD014) that supports the Proposed LDP was undertaken based on guidance from Transport Scotland's Development Planning and Management Transport Appraisal Guidance (DPMTAG) (CD112). Evidence to inform the decision making process was appraised against a common set of aspirational Transport Planning Objectives and used a range of traffic modelling tools.

Robust 'off the shelf' modelling tools for active travel are less common than for public transport and private vehicles. Therefore, trip generation for active travel was based on published Transport Assessments of specific developments or data on trip patterns of similar sites elsewhere in the UK. Appraisal of active travel interventions relied on data from best practice which identifies what could be expected if high quality new active travel infrastructure is provided on urban corridors which currently have no dedicated provision. Although total active travel volumes may not be known, these modes are at the top of the sustainable travel hierarchy and at the forefront of local and national government policy. Therefore, provision of quality active travel infrastructure at new development sites is a priority. Further details relating to the cost of these safeguards and proposals shall be provided in future action programmes and in project level works. It should also be noted that many of the infrastructure actions proposed are directly linked to developments and

are shown in place policies and associated maps. These are required to ensure that the proposal is acceptable in terms of mitigating transport impact and would be expected to be delivered with the site. **No modification proposed.**

Miller Homes Ltd. (0649)

The Transport Appraisal (CD014) that supports the Proposed LDP was undertaken based on guidance from Transport Scotland's Development Planning and Management Transport Appraisal Guidance (DPMTAG) (CD112). Evidence to inform the decision making process was appraised against a common set of aspirational Transport Planning Objectives and used a range of traffic modelling tools.

Robust 'off the shelf' modelling tools for active travel are less common than for public transport and private vehicles. Therefore, trip generation for active travel was based on published Transport Assessments of specific developments or data on trip patterns of similar sites elsewhere in the UK. Appraisal of active travel interventions relied on data from best practice which identifies what could be expected if high quality new active travel infrastructure is provided on urban corridors which currently have no dedicated provision. Although total active travel volumes may not be known, these modes are at the top of the sustainable travel hierarchy and at the forefront of local and national government policy. Therefore, provision of quality active travel infrastructure at new development sites is a priority. Further details relating to the cost of these safeguards and proposals shall be provided in future action programmes and in project level works. It should also be noted that many of the infrastructure actions proposed are directly linked to developments and are shown in place policies and associated maps. These are required to ensure that the proposal is acceptable in terms of mitigating transport impact and would be expected to be delivered with the site.

The Council's response to proposed additional greenfield sites is covered in detail in issue 9. **No modification proposed.**

Louise Baker (0773)

The proposed and safeguarded active travel routes highlighted in table 3 of the plan have been informed by the plans TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072).

The detailed design of active travel routes is a project level matter. Where active travel routes are proposed for developers to deliver they will have to meet the Council's design guidance and street design guidance which has specific information in relation to cycle lanes, segregated cycle lanes and footways. Where the active travel proposals are likely to be delivered by the Council and funded in part by developer contributions, the exact design and type of segregation of cycle route on street will be finalised as part of the Active Travel Action Plan (in preparation) (CD008). Once this is finalised, and the type of cycle segregation design is known, this can be reflected in iterations of the City Plan Action Programme. Further details of the proposed layout of active travel routes can also be found in the interactive maps.

The Roads Authority are responsible for the maintenance of roads and pavements and will provide comment at the planning application stage. Speed limits are out with the remit of the City Plan. **No modification proposed.**

#### Stirling Developments Limited (0303)

The proposals set out in tables 3 – 5 and 8 of the City Plan 2030 Proposed Plan (Proposed LDP) have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). Further considerations will be made as the active travel action plan develops (CD008). **No modification proposed.**

#### Edinburgh Access Panel (0620)

The detailed design of active travel routes is a project level matter. Where active travel routes are proposed for developers to deliver they will have to meet the Council's design guidance (CD047) and street design guidance (CD170) which has specific information in relation to cycle lanes, segregated cycle lanes and footways. Where the active travel proposals are likely to be delivered by the Council and funded in part by developer contributions, the exact design and type of segregation of cycle route on street will be finalised as part of the Active Travel Action Plan (in preparation) (CD008). Once this is finalised, and the type of cycle segregation design is known, this can be reflected in iterations of the City Plan Action Programme. Further details of the proposed layout of active travel routes can also be found in the interactive maps. **No modification proposed.**

#### Leith Central Community Council (0614)

The Council consider that policy Inf 10 is appropriate and will enable the Council to ensure that no impediment to delivery arises. The proposals set out in tables 3 – 5 of the City Plan 2030 have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). **No modification proposed.**

#### The Davidson's Mains and Silverknowes Association (0454)

The proposals set out in tables 3 – 5 of the City Plan 2030 have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). **No modification proposed.**

#### Forth Ports Limited (0496)

It is noted that the Proposal ATSR1 – Edinburgh Waterfront Promenade is already included in the adopted Local Development Plan under (T7) Edinburgh Waterfront Promenade which has been through examination. An active travel route is not incompatible with the uses proposed in EW1d (Seafield). ATSR1 will not pass through the northern and eastern docks area (EW 1e) The Council considers the wording of criterion (a) of policy Inf 10 is robust as is the wording of criterion (d) of the Northern and Eastern Docks Development Principles. **No modification proposed.**

#### Tarmac (0244)

Policy Inf 10 states that development proposals must design for and deliver direct connections to, adjacent, segregated active travel infrastructure and/or the off road cycle and footpath network. Given that developments must only deliver connection to adjacent

infrastructure or networks it is likely that connections will be made to land either owned by developers or council owned land. Therefore, there should be no obstruction to delivery in most circumstances. In occasions where land ownership concerns cannot be resolved then a developer contribution may be required in line with policy Inf 3. It must also be noted that the proposed routes that are shown in the plan are indicative at this stage and will be delivered through project level work.

The Council considers the wording of policy Inf 10 is appropriate and will enable the Council to ensure that no impediment to delivery arises.

The Council's response to proposed additional greenfield sites is covered in detail in issue 9. **No modification proposed.**

Inverdunning (Hatton Mains) Ltd (0427)

The proposals set out in tables 3 – 5 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072).

The Council's response to proposed additional greenfield sites is covered in detail in issue 9. **No modification proposed.**

Hallam Land Management (0615)

Policy Inf 10 states that development proposals must design for and deliver direct connections to, adjacent, segregated active travel infrastructure and/or the off road cycle and footpath network. Given that developments must only deliver connection to adjacent infrastructure or networks it is likely that connections will be made to land either owned by developers or council owned land. Therefore, there should be no obstruction to delivery in most circumstances. In occasions where land ownership concerns cannot be resolved then a developer contribution may be required in line with policy Inf 3. It must also be noted that the proposed routes that are shown in the plan are indicative at this stage and will be delivered through project level work.

The Council considers the wording of policy Inf 10 is appropriate and will enable the Council to ensure that no impediment to delivery arises.

The Council's response to proposed additional greenfield sites is covered in detail in issue 9. **No modification proposed.**

E&A Partnerships Ltd & Niddrie Development Company (0753)

Proposed active travel routes and safeguards are indicative at this stage. The finalised route shall be determined through future project level decisions. In occasions where land ownership concerns cannot be resolved then a developer contribution may be required in line with policy Inf 3. **No modification proposed.**

Lady Road Investment S.A.R.L. (0625)

Support for the policy is noted as is the request for further dialogue over exact route locations, improvements and potential impact upon Cameron Toll. **No modification**

**proposed.**

Spokes Lothian (0545)

The proposals set out in part 4, tables 3 – 5 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). The Council considers that the proposals established in part 4 of the plan are fully integrated and will deliver the strategy, policies and one of the key aims of the plan which is by 2030 Edinburgh will be a city where you don't need to own a car to move around.

Where active travel proposals are proposed for developers to deliver they will have to meet the Council's design guidance and street design guidance which has specific information in relation to cycle lanes, segregated cycle lanes and footways. Where the active travel proposals are likely to be delivered by the Council and funded in part by developer contributions, the details will be finalised as part of the Active Travel Action Plan (in preparation) (CD008). Once this is finalised, this can be reflected in iterations of the City Plan Action Programme.

Paragraph 2.114 states that the plan sets out Edinburgh's mass transit network, including proposed new transport actions, including from the City Mobility Plan and the Edinburgh Sustainable Strategic Transport Strategy (CD071). The strategy is supported by the Scottish Government's National Transport Strategy 2 (CD110) and the emerging case for Strategic Transport Projects Review 2 (CD111). The Council considers the wording of policy Inf 10 is appropriate and will enable the Council to ensure that no impediment to delivery arises. **No modification proposed.**

Andy Agnew (0562)

The detailed design of active travel routes is a project level matter. The design of active travel routes shall be designed on a case by case basis and will align with the Council's design guidance and street design guidance which has specific information in relation to street design guidance, footways and promoting pedestrian movement.

The planning system cannot control or regulate the type or use of vehicles. In line with National Transport Strategy 2 (CD110), the plan advocates the transport hierarchy with walking, cycling and wheeling at the top. **No modification proposed.**

Maciej Malaszuk (0179)

The proposals set out in tables 3 – 5 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). **No modification proposed**

Shelagh Sharp (0111)

Support for the policy is noted. The proposals set out in tables 3 – 5 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). The detailed design of active travel routes is a project level matter. Where active travel routes are proposed for developers to deliver they will have to meet the Council's design guidance and street design guidance which has specific

information in relation to cycle lanes, segregated cycle lanes and footways. Where the active travel proposals are likely to be delivered by the Council and funded in part by developer contributions, the exact design and type of segregation of cycle route on street will be finalised as part of the Active Travel Action Plan (in preparation) (CD008). Once this is finalised, and the type of cycle segregation design is known, this can be reflected in iterations of the City Plan Action Programme.

In line with National Transport Strategy 2 (CD110), the plan advocates the transport hierarchy with walking, cycling and wheeling at the top. **No modification proposed.**

Gordon McKay Brown (0573)

Support for the policy is noted. The proposals set out in tables 3 – 5 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). One the key Outcomes of City Plan is by 2030, we want Edinburgh to be a City where you don't need to own a car to move around.

The City Mobility Plan (CMP) has been prepared alongside City Plan 2030 to help Edinburgh connect through a safer and more inclusive carbon neutral transport system- delivering a healthier, thriving, fairer and compact capital city and a higher quality of life for all residents. The plan aligns with the National Transport Strategy 2 which puts sustainable modes of movement at the heart of the transport hierarchy with walking, cycling and wheeling at the top and private car use at the bottom.

Paragraph 2.111 of the plan states that City Plan 2030 will realise the lifelong health benefits of walking, wheeling and cycling by creating streets and public spaces for people over cars and improving and expanding sustainable public transport. Paragraph 2.118 states that we want to see development prioritising walking and wheeling and cycling, demonstrating high public transport accessibility, restricting private car parking and encouraging shared transport through mobility hubs. The Council is also currently working on a new Active Travel Action Plan (ATAP) and a Public Transport Action Plan (PTAP) to replace the current ATAP/PTAP (CD075& CD169). **No modification proposed.**

David Bentley (0203)

Support for the policy is noted. The proposals set out in tables 3 – 5 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). **No modification proposed**

Deirdre Henderson (0727)

Support for the policy is noted. The proposals set out in tables 3 – 5 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). Table 6 of the plan also highlights proposed orbital bus route and improved transport connections, whilst Table 7 highlights Tram route proposals and other safeguards and table 10 shows future railway infrastructure improvement safeguards and railway halt safeguards. **No modification proposed**

Miller Homes Limited. (0256)

The proposals set out in tables 3-5 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072). City Plan has not identified Riccarton Village as a proposed housing development site. The Council's response to proposed additional greenfield sites is covered in detail in issue 9. **No modification proposed.**

Katie Soane (0260)

The proposals set out in tables 3 – 5 of the City Plan have been informed by the TA (CD014), CMP (CD062), ESSTS (CD071), WETA 2016 Refresh (CD073) and WETIP (CD072).

Place 9 criterion (f) states that proposals will be expected to form convenient connections to adjacent core paths, pedestrian and cycle routes, integrating necessary changes in level.

Place 10 criterion (c) states that proposals will be expected to form new connection for active travel between consented cycle route (east of site boundary) and the existing footbridge on Water of Leith Walkway, integrating any necessary changes in level.

Place 10 criterion (d) states that proposals will be expected to provide section of new active travel route: Bonnington link East-West from Great Junction Street to Powderhall along Southern frontage.

Place 11 criterion (e) states that proposals will be expected to create a permeable network of streets and paths reinforcing key routes for active travel, in particular connections with nearby core paths.

Place 11 criterion (f) states that proposals will be expected to provide section of new active travel route: Bonnington link East-West from Great Junction Street to Powderhall through site and continuing along Newhaven Road and safe crossing.

Place 13 criterion (h) states that proposals will be expected to provide safe crossing of West Bowling Green Street to connect to Water of Leith walkway with national cycle route 75.

Place 13 criterion (i) states that proposals will be expected to integrate necessary changes in level between active travel routes and Water of Leith walkway.

Further details in relation to place 9, 10, 11 and 13 shall be provided and shall be fully assessed at the project level stage. **No modification proposed.**

Morag MacLean (0326)

Where active travel routes are proposed for developers to deliver they will have to meet the Council's design guidance (CD047) and street design guidance (CD170) which has specific information in relation to cycle lanes, segregated cycle lanes and footways. Where the active travel proposals are likely to be delivered by the Council and funded in part by developer contributions, the exact design and type of segregation of cycle route on street will be finalised as part of the Active Travel Action Plan (in preparation) (CD008). Further details of the proposed layout of active travel routes can also be found in the interactive

maps. The layout and design of active travel routes will also be considered at the project level stage. **No modification proposed.**

#### **INF 10- Cycle and Footpath Network**

Grange/Prestonfield Community Council (0192), Portobello Amenity Society (0612), Katherine Kennedy (0569), Dave Berry (0463), NatureScot (0528), Hillend Leisure Ltd (0080), Liberton & District Community Council (0084), SEPA (0012), Mike Richardson (0109), Alasdair Gillies (0035), Chris Byrne (0297), Andy Inglis (0138)

<b>Provision of the development plan to which the issue relates:</b>	Inf 16, Inf 17, Inf 18, Inf 19, Inf 20, Inf 21, Inf 22			
<b>Planning authority's summary of the representation(s):</b>				
<p><b>General Energy and Waste Comments</b></p> <p><u>Frances Guy (0589)</u></p> <p>The introduction should be coordinated with a commitment to promoting the circular economy and should allow for the provision of greater recycling, this is currently missing. The section needs to include commitments to recycling and how this will be managed.</p> <p><b>Policy INF 16- Sustainable Energy and Heat Networks</b></p> <p><u>Scottish Government - Planning and Architecture Division - Development Plans Team (0309)</u></p> <p>Reference should be included for development proposals to take account of the City of Edinburgh Council's Local Heat and Energy Efficiency Strategy (LHEES) and Delivery Plan, when available, and also take account of Scottish Government's Heat in Buildings Strategy and the Heat Networks Delivery Plan (when formally published). The plan should</p>				

also include a policy that fulfils the requirements of section 3F of the Town and Country Planning (Scotland) Act 1997.

It is important that local and national policies are aligned in order to ensure a consistent, co-ordinated approach to the future delivery of heat network infrastructure and wider initiatives relating to energy efficiency and heat decarbonisation. It is also important that the Council's approach to planning and development is consistent with its own wider policies (such as LHEES).

Crosswind Developments Ltd (0184)

CDL support the aims of this policy. However, the requirement for all new developments to connect to an existing or planned heat network "wherever possible to do so" does not account for feasibility, viability or costs.

Further clarification is also sought regarding the phrase "substantial developments" to ensure developers can comply with this policy. The last paragraph of the policy may be very difficult to comply with. CDL request that the council provide a clear definition of what they mean and expect when they say "when one becomes available". This should be explicit that it refers to a local network with capacity to accommodate the existing development.

Leith Harbour and Newhaven Community Council (0776)

Support the policy but suggest some modifications. Heat pumps must be used in all developments. This should be happening now and not until City Plan is approved.

Mr Rodger Thomas (0345)

Supports the policy but feels that extra emphasis should be placed on renewable heat networks as an alternative to ground and air source heat pumps in conservation areas. Many homes in conservation areas have limited exterior space for heat pumps and, when gas boilers are removed, heat networks have the potential to replace them as primary energy sources. For conservation areas, heat networks should be stressed as an alternative to existing boilers as they will do less harm to an areas character.

Barratt David Wilson Homes (0677)

Heat networks can be delivered in a variety of ways, but for housebuilders it very much depends on the scale of development, the location of the development and whether it forms part of a larger local authority scheme. There is no resistance to connecting into existing heat networks however it may not be appropriate in all locations.

Stirling Developments Limited (0303)

Policies should not place undue burden on development sites such that they become unviable. Policies must align with wider plan to ensure deliverability and flexibility.

Homes for Scotland (0404)

Heat networks can be delivered in a variety of ways, but for housebuilders it very much depends on the scale of development, the location of the development and whether it forms part of a larger local authority scheme. Unless it is a very large development with a mix of uses, housing alone will likely not secure the necessary investment to enable these.

What the housebuilding industry needs is certainty in relation to funding and how investment can be secured, assistance in improving consumer confidence to ensure uptake to secure the required returns and guidance in relation to where heat networks should be located. There is no resistance to connecting into existing heat networks however it should not be an obligation on the home building industry to provide new facilities and networks.

Steve Loomes (0767)

Heat networks can be delivered in a variety of ways, but for housebuilders it very much depends on the scale of development, the location of the development and whether it forms part of a larger local authority scheme. Unless it is a very large development with a mix of uses, housing alone will be very unlikely to secure the necessary investment to enable this provision.

What the housebuilding industry needs is certainty in relation to funding and how investment can be secured, assistance in improving consumer confidence to ensure uptake to secure the required returns and guidance in relation to where heat networks should be located. There is less resistance to connecting into existing heat networks however it should not be an obligation on the home building industry to provide new facilities and networks.

Leith Central Community Council (0614)

All new developments like wind turbines should have conditions attached to them for their recycling/dismantling once they reach their shelf life and do not operate anymore. Many private operators install the turbines on private land that they lease but do not own, potentially leaving any potential costly dismantling to the land owner. Not addressing this issue might lead to many wind turbines left abandoned in the near future.

Hallam Land Management (0615)

Hallam is supportive of this policy and is in a unique position to facilitate sustainable heat network development in this part of the city given its extensive landholdings. It intends to present viability and feasibility work in relation to future low carbon sustainable heat networks with a view to incorporating these into the development at Craigiehall.

There is however need for a clearer policy statement which meets the tests of preciseness. At present it does not give landowners/ developers clear guidance on specific development requirements or decision making criteria. This is a dynamic area of importance and Supplementary Guidance will be crucial to future development. The concept of future proofing is therefore supported.

Morag MacLean (0326)

There needs to be more detail and planning for community heating. In the next decade thousands of homes in Edinburgh will have to replace their gas boilers, but with what? Do

we really want to see everyone have to install their own individual boiler with whatever the new technology will be? Community heating works in loads of European countries, why not here? If there is a technology improvement then the community shares the cost of updating the big boiler/generator (?) for everyone instead of each individual having the burden. It would be more eco friendly to have one big boiler for lots of people rather than hundreds of individual boilers.

Cockburn Association (0777)

The Cockburn believes that it is essential if we are to meet the net-zero Caron Strategy by 2030 that we move beyond a simple operational carbon/energy perspective of development and shift to a total carbon/energy assessment, taking into account life cycle costing and embodied energy in materials. We also believe that new building including mass housing should include renewable generation technologies within the fabric, evidenced at the point of consent. Thus, the Cockburn advocates additional policies on the sustainability of building materials and building technologies as well as a policy on renewable energy generation in all new developments.

Edinburgh World Heritage (0339)

The wording of the bullet points needs to be changed, to appropriately protect the World Heritage Site from harm to its Outstanding Universal Value and mitigate the risk of de-designation. To also avoid contravention with the skyline policy and key views. The term “significant” harm is a very high test of harm and is not appropriate in this context in light of requirements to protect the historic environment.

**Policy INF 17- Safeguarding of Existing Waste Management Facilities.**

Crosswind Developments Ltd (0184)

There are currently no existing waste management facilities on site that would require safeguarding and therefore this policy should not therefore be identified on the proposals map as relevant.

Alasdair Gillies (0035)

Paragraph 2.133 is misleading. Braehead Quarry Civic Amenity site is no longer open to the public. The policies regarding waste need to be bolder. All plastic waste should be kerbside recycling.

**Policy INF 18- Provision of New Waste Management Services**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The plan needs greater alignment with para 180 of SPP. Please also note Policy 20: Zero Waste, within draft NPF4, which gives greater emphasis on supporting the circular economy and sets out the role of Local Development Plans in this.

Gordon Drummond (0382)

The infrastructure first approach to development is advocated within the strategy section of the plan. However, there is no mention of waste management in any other part of this document.

The City's waste management processes including recycling are inadequate. There does not appear to be any intention to apply improved standards to new developments. It would be far better if a coordinated, strategic plan were proposed.

#### Forth Ports Limited (0496)

Forth Ports Limited own and control land at Seafield including land identified at EW1d (safeguarded site for a waste management facility). Whilst Forth Ports support the development of such a facility they do not support the land being safeguarded for such a use.

Forth Ports will continue to retain the land at Seafield within port operational use, unless it is considered to be surplus to operational requirement. The land can accommodate business and industrial development. The development of a waste treatment facility, would be appropriate within the designated business and industrial development area however to safeguard land for a use for which there is no identified proposal or requirement could prevent alternative development proposals coming forward is not appropriate. The safeguard for a waste treatment facility should therefore be removed. There is no justification provided for the safeguarding of a waste management facility at Seafield.

#### Portobello Amenity Society (0612)

There are no safeguards for residential amenity with regards to subsection b of policy Inf 18. Those proposed for section c are too vague.

#### Diana Cairns (0452)

Does not support policy Inf 18 part b. On the proposals map, the freightliner terminal site (on Sir Harry Lauder Road, Portobello) is shown on the key as being governed by policy Econ 4 but not by policy Inf 18, which is a serious omission that might give people a false sense of security to believe that a waste management facility would not be considered on this site.

In 2010, Scottish Government Planning Reporters dismissed an appeal by Viridor for an application for a waste transfer station at this site. The appeal was dismissed on the grounds of its detrimental impact on the conservation area and residential amenity. The facility and the former freightliner terminal should be exempted from consideration for such a use due to its close proximity to a residential area, which is also an outstanding conservation area.

#### Network Rail (0071)

It should be made clear where within the Seafield Industrial Estate (EW1d) allocation, the waste management / combined heat and power safeguard is to be located. This should not be within the Network Rail land ownership. NR would not be supportive of this facility if

the designation raises issues in relation to unacceptable impacts on existing and future uses and residential amenity.

Stephen Ian Hawkins (0469)

Policy Inf 18 permits the change of use of land designated business and industry to a waste management facility. The protection of amenity for residents in urban areas or adjacent to industrial areas should be protected from the adverse effect of waste treatment or transfer sites

It should be made clear by amending policy Inf 18 that business and industry use is protected as is stated in policy Econ 4.

### **Policy INF 19- Waste Disposal Sites.**

Forth Ports Limited (0496)

Forth Ports Limited own and control land at Seafield including land identified at EW1d (safeguarded site for a combined heat and power facility). Whilst Forth Ports support the development of such a facility they do not support the land being safeguarded for such a use.

Archie Clark (0003)

It would be useful to know where waste management facilities are being planned. The plan on page 34 doesn't show anything being proposed for Torphin Quarry which would seem to be a reasonable location for certain waste types. I suggest it be considered.

### **Policy INF 20- Minerals**

Mr Rodger Thomas (0345)

On no account should the commercial extraction of peat be supported. This should be explicitly ruled out here. (3.226, p.133) Peatlands are vital carbon sinks and essential havens of biodiversity.

Archie Clark (0003)

In line with concerns expressed during COP26, a firm statement should be made within Inf 20 that extraction of coal and peat will not be permitted.

NatureScot (0528)

We consider that paragraph 3.226 should be amended to more clearly reflect the emerging national policy position in NPF4 (Policy 22: Minerals, Policy 33: Soils), ensuring that Edinburgh's City Plan 2030 plays a role in appropriately managing these resources and meeting net zero aspirations.

Juniper Green & Baberton Mains Community Council (0306)

A firm statement in section 3.226 (p133) should be made that extraction of coal and peat will not be permitted.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Policy Inf 20 should set out the factors designed to protect local communities from certain adverse aspects associated with mineral extraction. It should also outline any requirement to support the maintenance of a landbank of permitted reserves for construction aggregates of at least 10 years at all times in all market areas, and ensure restoration and aftercare requirements are outlined. The policy in the proposed plan does not reflect the current SPP requirements around paragraphs 237 and 238.

Paragraph 3.226 fails to reflect the SPP requirements around peat extraction. Paragraph 241 of SPP states 'Policies should protect areas of peatland and only permit commercial extraction in areas suffering historic, significant damage through human activity and where the conservation value is low and restoration is impossible.' SPP sets a high bar for the protection of peatland and ensures extraction is limited to only areas that have already suffered damage.

The planning authority should also consider the wording of their policy in light of draft NPF4.

SEPA (0012)

SEPA supports the provision for working quarries in the Edinburgh area on the basis that it is compatible with the aims of net zero for minerals to be won close to where they will be used.

SEPA would question the maintenance of areas for coal and peat extraction in a plan which sets out to decarbonise the economy. We consider that the rationale for further coal working must be clear and limited.

RSPB (0648)

The carbon sink value of coal should also be included here. Leaving coal in the ground protects its role as a carbon sink. The SPP also states that commercial peat extraction should only happen under very limited circumstances, therefore we suggest that wording here should be stronger.

**Policy INF 21- Telecommunications**

Juniper Green & Baberton Mains Community Council (0306)

We note the increasing number of telecoms masts, sometimes duplicating masts in close proximity (e.g. at Lanark Road near the canal). All redundant equipment should be removed. Where possible, equipment should not intrude on to footways.

Archie Clark (0003)

There are an increasing number of untidy and excessively high telecoms masts, sometimes duplicating masts in close proximity of Lanark Road. Masts that do not have adequate regard to the environment can ruin the appearance of a place. Equipment must be designed for the location and provide a unified appearance instead of the prevailing spread out miscellany of different boxes provided by different companies. All redundant equipment should be removed. Where at all possible, equipment should not intrude on to footways.

Leith Central Community Council (0614)

Telecommunication developments such as telecom masts seem exempt from public scrutiny as they are not subject to Planning applications but to Prior Approval applications. This results in free-passes for telecom operators who can install masts according to technical necessities and not being bound to a public city-wide strategy.

The lack of integration to existing buildings or existing structures is already visibly damaging Edinburgh with a growing constellation of unsightly 20m masts onto pavements. Edinburgh needs to look at other cities and their integrations of telecom antennas.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Criteria (d) should be added to the policy in respect to ensuring that telecommunications devices do not obstruct aerodrome operations, technical sites or existing transmitter/receiver facilities. This would achieve consistency with SPP and the emerging policy through draft NPF4.

### **Policy INF 22- Water Supply and Foul Waste Water.**

Crosswind Developments Ltd (0184)

CDL object to Policy Inf 22 and seek an amendment

### **Modifications sought by those submitting representations:**

#### **Resources and Services**

#### **General Energy and Waste Comments**

Frances Guy (0589)

No modification specified but it is indicated that the introduction should be coordinated with a commitment to promoting the circular economy and should allow for the provision of greater recycling, this is currently missing. The section needs to include commitments to recycling and how this will be managed.

### **Policy INF 16- Sustainable Energy and Heat Networks**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Paragraphs 2.128 and 2.129 (sustainable energy) on P33 should have a policy that states all developments in the Local Development Plan area to be designed so as to ensure that all new buildings avoid a specified and rising proportion of the projected greenhouse gas emissions from their use, calculated on the basis of the approved design and plans for the specific development, through the installation and operation of low and zero-carbon generating technologies.

It should include a specified and rising proportion of emission saved from the use of low and zero-carbon generating technologies from new development.

Reference should also be included for development proposals to take account of the City of Edinburgh Council's Local Heat and Energy Efficiency Strategy (LHEES) and Delivery Plan, when available, and also take account of Scottish Government's Heat in Buildings Strategy and the Heat Networks Delivery Plan (when formally published).

#### Crosswind Developments Ltd (0184)

The last sentence should be deleted as it is unlikely that such would be known and could be planned for. An amendment for this is set out below:

"Any developments that are not heated through heat networks must as far is possible and feasible demonstrate they are future proofed to allow future connections to heat networks to be made should capacity in a new or existing local heat network become available at a future date."

#### Leith Harbour and Newhaven Community Council (0776)

The third paragraph of the policy should be modified to state that "All new developments will be required to comply" (not should).

#### Mr Rodger Thomas (0345)

Extra emphasis should be placed on renewable heat networks as an alternative to ground and air source heat pumps in conservation areas

#### Barratt David Wilson Homes (0677)

No modification specified but it is indicated that in terms of heat networks it depends on the scale and location of development and whether it forms part of a larger scheme. No resistance to connecting to existing networks.

#### Stirling Developments Limited (0303)

No modification specified but it is indicated that policies should not place undue burden on development sites such that they become unviable. Policies must align with wider plan to ensure deliverability and flexibility.

#### Homes for Scotland (0404)

No modification specified but it is indicated that in terms of heat networks it depends on the scale and location of development and whether it forms part of a larger scheme. No resistance to connecting to existing networks. However, it should not be an obligation on the home building industry to provide new facilities and networks.

Steve Loomes (0767)

No modification specified but it is indicated that in terms of heat networks it depends on the scale and location of development and whether it forms part of a larger scheme. No resistance to connecting to existing networks. However, it should not be an obligation on the home building industry to provide new facilities and networks.

Leith Central Community Council (0614)

No modifications specified but it is indicated that all new developments like wind turbines should have conditions attached to them for their recycling/dismantling once they reach their shelf life and do not operate anymore.

Hallam Land Management (0615)

Clear reference to or identification of the existing heat network map needs to be made. Better clarification on what would constitute a 'viability and feasibility' study is required, and at what stage of planning. 'Substantial' development should be defined more clearly.

Morag MacLean (0326)

No modification specified but it is indicated that there needs to be more detail and planning for community heating. Community heating works in loads of European countries, why not here?. It would be more eco friendly to have one big boiler for lots of people rather than hundreds of individual boilers.

Cockburn Association (0777)

No modification specified but it is indicated that it is essential if we are to meet the net-zero Caron Strategy by 2030 that we move beyond a simple operational carbon/energy perspective of development and shift to a total carbon/energy assessment, taking into account life cycle costing and embodied energy in materials. New building including mass housing should include renewable generation technologies within the fabric, evidenced at the point of consent. Thus, the additional policies should be added on the sustainability of building materials and building technologies as well as a policy on renewable energy generation in all new developments.

Edinburgh World Heritage (0339)

Change bullet point wording as follows:  
"do not cause notable harm...."

Amend point a as follows:

"...including natural heritage interest and the setting, character and appearance of the World Heritage Sites (Including buildings, public realm, gardens, green spaces and views which contribute to Outstanding Universal Value), listed buildings..."

Add to paragraph 3.217 as follows:

“...will accord with policy Inf 16, policy Env 18 and Env 9”

### **Policy INF 17- Safeguarding of Existing Waste Management Facilities.**

Crosswind Developments Ltd (0184)

Safeguarding of existing waste management facilities should not be identified on the proposals map for the crosswind site.

Alasdair Gillies (0035)

No modification specified but is indicated that Braehead Quarry Civic Amenity site should be removed from 2.133. The policies regarding waste need to be bolder.

### **Policy INF 18- Provision of New Waste Management Services**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

A policy statement should be added to Page 33 – Waste to meet the requirements of SPP para 180, to encourage opportunities for reuse, refurbishment, remanufacturing and reprocessing of high value materials and products, in line with the waste hierarchy.

Gordon Drummond (0382)

Page 8, section 2.2. states:

"Adopting an 'infrastructure first' approach, directing new development to where there is existing infrastructure. Where required to support new development, the Plan requires new and expanded community infrastructure including schools, healthcare, sustainable transport, energy and waste to support our spatial strategy."

There is no mention of waste management in any other part of this document. Thus the logical change would be to remove this spurious claim.

Forth Ports Limited (0496)

Amend paragraph 2.136 (p33) as follows:

Accordingly, this plan supports existing and new waste management facilities at operational quarries and safeguarded sites. Seafeld Industrial Estate (EW1d) has potential to accommodate the development of a new waste management facility but is not safeguarded for such use.

Amend map 9 on (p34) to remove identification of the site.

Delete" point c. on (p49) "the Seafeld Industrial Estate (EW 1d) is the subject of a waste management / combined heat and power safeguard"

Delete the second sentence of paragraph 3.215, (p130) which reads "Keeping a reduced general freight rail head to the east in Seafeld will complement the safeguard for a waste

management facility in that location (see Policy Inf 18).”

Delete the following on (P 132) “Seafeld Industrial Estate is designated EW 1d on the Proposals Map for a waste management facility incorporating thermal treatment with energy recovery. Other development proposals at Seafeld will only be permitted if they do not adversely affect this waste management option.”

Portobello Amenity Society (0612)

Under the heading Inf 18 (p132) sections and b) 'business and industry' and c) 'other suitable sites' should be dropped as the statement that planning permission 'will be granted' would allow development for waste facilities on residential urban sites to the detriment of existing communities.

Diana Cairns (0452)

No modifications specified but it is indicated that the proposals map should be updated to show that the freightliner terminal site is also covered by policy Inf 18 as well as Econ 4.

Network Rail (0071)

It should be made clear where within the Seafeld Industrial Estate (EW1d) allocation, the waste management / combined heat and power safeguard is to be located.

Stephen Ian Hawkins (0469)

Sections b) and c) of Inf 18 should be deleted.

**Policy INF 19- Waste Disposal Sites.**

Forth Ports Limited (0496)

Amend paragraph 3.233 (Sic- 3.222) as follows:

Land at Seafeld Ind (identified as EW 1d) has locational advantages: it is sufficiently remote from housing areas; it has the benefit of rail access; and it has an outlet in nearby regeneration and potentially industrial uses for energy recovered after thermal treatment. Accordingly, it's potential as a location for energy from waste and combined heat and power uses is recognised.

Archie Clark (0003)

No modification specified but it is indicated that it would be useful to know where waste management facilities are being planned. Torphin Quarry which would seem to be a reasonable location for certain waste types.

**Policy INF 20- Minerals**

Mr Rodger Thomas (0345)

No modifications specified but it is indicated that paragraph 3.226, (p133) should make it clear that on no account should the commercial extraction of peat be supported.

Archie Clark (0003)

No modifications specified but it is indicated that a firm statement should be made within Inf 20 that extraction of coal and peat will not be permitted.

NatureScot (0528)

We suggest that paragraph 3.226 (page 133) should be amended to: "Proposals for the extraction of coal will not be supported other than in exceptional circumstances. Proposals for the extraction of peat will generally not be supported unless it can be demonstrated that they: Support an industry of national importance to Scotland; and There is no reasonable substitute; and Extraction is minimised and a residual depth of peat of no less than 1 metre is retained; and The time period for extraction is the minimum necessary, and the application is supported by a comprehensive restoration plan which will return the area of extraction to its original environmental status.

In both cases, applications for extraction of peat or coal will be assessed for environmental and traffic impacts using other policies in this Plan."

Juniper Green & Baberton Mains Community Council (0306)

No modifications specified but it is indicated that a firm statement should be made within Inf 20 that extraction of coal and peat will not be permitted.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Policy Inf 20 should be amended to reflect the requirements of para 241 of SPP in relation to peat extraction.

It is also indicated that the policy Inf 20 should be amended to reflect the current SPP requirements around paragraphs 237 and 238

SEPA (0012)

No modifications specified but it is indicated that the policy could make a link or requirement that minerals worked in Edinburgh to be used in Edinburgh. The rationale for further coal working must be clear and limited.

The policy relating to peat could be turned round to ensure that maintenance, restoration and 'growth' of peat as part of an application is an added benefit to be accrued from that development.

RSPB (0648)

Suggested changes to text in paragraph 3.226: "The Plan area also includes deposits of coal in the west and southeast and small areas of peat in the southwest. Proposals for their extraction will be assessed for their environmental and traffic impact using other policies in this Plan. An additional consideration, when assessing proposals affecting coal and peat, is their value as a carbon sink."

## **Policy INF 21- Telecommunications**

### Juniper Green & Baberton Mains Community Council (0306)

No modifications specified but it is indicated that the policy should state that all redundant equipment should be removed and where possible, equipment should not intrude on to footways.

### Archie Clark (0003)

The policy should make reference that all redundant equipment should be removed and where possible, equipment should not intrude into footways and be designed to have a unifying appearance. Reference should be made to 'PAN 62 Radio Telecommunications' and CEC's own 'Communications Infrastructure 2018'.

### Leith Central Community Council (0614)

No modifications specified but it is indicated that the policy needs to rebalance the need to protect the city and the need for telecom masts.

### Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Add the following criteria d. as follows:

'Telecommunications development will be supported provided:

- a. the visual impact of the proposed development has been minimised through careful siting, design and, where appropriate, landscaping,
- b. it has been demonstrated that all practicable options and alternative sites have been considered, including the possibility of using existing masts, structures and buildings and/or site sharing and
- c. the proposal would not harm the built or natural heritage of the city;
- d. there is no physical obstruction to aerodrome operations, technical sites or existing transmitter/receiver facilities.

## **Policy INF 22- Water Supply and Foul Waste Water.**

### Crosswind Developments Ltd (0184)

Seek an amendment to the wording of the policy as set out below:

"Planning permission will be supported where there is adequate water supply and foul waste water sewerage capacity available to meet the demands of the development and where necessary improvements can be provided to enable this".

## **Summary of responses (including reasons) by planning authority:**

### **General Energy and Waste Comments**

### Frances Guy (0589)

Page 33 of the plan has a section on waste. Paragraph 2.130 of the plan makes reference to Scotland's national waste strategy, the Zero Waste Plan (CD115) which is based on a waste hierarchy. It states that this means that waste should be prevented, reused, recycled or recovered and that landfilling of waste is the last resort. Paragraph 2.131 states that the waste hierarchy is being implemented through the Waste (Scotland) Regulations 2012 (CD125). These will lead to a significant increase in the number and range of waste management facilities needed in order to collect, sort and treat all waste which would have otherwise gone to landfill. Paragraph 2.134 states that the food processing and energy recovery facility at Millerhill has been provided by Midlothian and City of Edinburgh Council and deals mainly with household waste. Two enhanced waste transfer stations have been developed at Bankhead and Seafield. The provision of household waste recycling centres will be kept under review as the City grows. **No modification proposed.**

### **Policy INF 16- Sustainable Energy and Heat Networks**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Policies Env 7 (Sustainable Developments) and Env 8 (New Sustainable Buildings) address sustainable design. The Council's response to representations on these matters are addressed in Issue 13 (Sustainable Design). The Council's approach has been cognisant of the information set out in the Scottish Government's publication titled 'Research Project: Development a Scotland Wide Section 3F Planning Policy' (CD171). **No modification proposed**

The Council is of the view that the policy is robust. No modifications proposed, however, should the reporter be so minded reference could be included in Policy Inf 16 for development proposals to take account of the City of Edinburgh Council's Local Heat and Energy Efficiency Strategy (LHEES) and Delivery Plan, when available, and also take account of Scottish Government's Heat in Buildings Strategy and the Heat Networks Delivery Plan (when formally published) for clarity.

Crosswind Developments Ltd (0184)

The Council considers the wording of Policy Inf 16 to be suitably robust. It shall provide certainty in the requirements needed to be made by different scales of development, whilst still providing the required degree of flexibility where appropriate. Policy Inf 16 will ensure that development will deliver the strategy. **No modification proposed.**

Leith Harbour and Newhaven Community Council (0776)

The Council considers the wording of Policy Inf 16 to be suitably robust. It shall provide certainty in the requirements needed to be made by different scales of development, whilst still providing the required degree of flexibility where appropriate. Policy Inf 16 will ensure that the aims of the strategy will be delivered. **No modification proposed.**

Mr Rodger Thomas (0345)

The Council considers the wording of Policy Inf 16 to be suitably robust. It shall provide certainty in the requirements needed to be made by different scales of development,

whilst still providing the required degree of flexibility where appropriate. Policy Inf 16 will ensure that the aims of the strategy will be delivered. **No modification proposed.**

Barratt David Wilson Homes (0677)

The Council considers the wording of Policy Inf 16 to be suitably robust. It shall provide certainty in the requirements needed to be made by different scales of development, whilst still providing the required degree of flexibility where appropriate. Policy Inf 16 will ensure that the aims of the strategy will be delivered. **No modification proposed.**

Stirling Developments Limited (0303)

The Council considers the wording of Policy Inf 16 to be suitably robust. It shall provide certainty in the requirements needed to be made by different scales of development, whilst still providing the required degree of flexibility where appropriate. Policy Inf 16 will ensure that the aims of the strategy will be delivered. **No modification proposed.**

Homes for Scotland (0404) Steve Loomes (0767)

In line with SEPA planning background paper, (heat networks and district heating) (CD128), Policy Inf 16 states that all new developments, should connect to an existing or planned heat network or other significant heat source, wherever possible to do so. Where this is not possible then all, substantial\* ( \*'Substantial' developments may consist of new towns, urban extensions, large regeneration areas or large development sites subject to master planning) development must, subject to a viability and feasibility study, instead include a source of renewable/low carbon heat generation (and avoids any negative impact on air quality) and associated heat network within the development. Developments which are smaller than this substantial threshold are still encouraged to provide heat generation where they cannot connect to the existing network, however this is only supported where such heat generation would be from a renewable/low carbon source. The Council considers the wording of Policy Inf 16 to be suitably robust. It shall provide certainty in the requirements needed to be made by different scales of development, whilst still providing the required degree of flexibility where appropriate. Policy Inf 16 will ensure that the aims of the strategy will be delivered. **No modification proposed.**

Leith Central Community Council (0614)

The Council considers that the wording of policy Inf 16 is robust and it will enable the aims of the strategy to be delivered. **No modification proposed.**

Hallam Land Management (0615)

In line with SEPA planning background paper, (heat networks and district heating) (CD128), the policy states that all new developments, should, connect to an existing or planned heat network or other significant heat source, wherever possible to do so. Where this is not possible then all, substantial\* ( \*'Substantial' developments may consist of new towns, urban extensions, large regeneration areas or large development sites subject to master planning) development must, subject to a viability and feasibility study, instead include a source of renewable/low carbon heat generation (and avoids any negative impact on air quality) and associated heat network within the development.

Developments which are smaller than this substantial threshold are still encouraged to provide heat generation where they cannot connect to the existing network, however this is only supported where such heat generation would be from a renewable/low carbon source. The Council considers the wording of Policy Inf 16 is suitably robust so that it shall provide certainty in the requirements needed to be made by different scales of development, whilst still providing the required degree of flexibility where appropriate. Policy Inf 16 will ensure that the aims of the strategy will be delivered. The council agrees that guidance is an important part of providing further information to assist with the interpretation and implementation of this policy. In this regard paragraph 3.219 notes that guidance will be updated to this affect. **No modification proposed.**

Morag MacLean (0326)

Policy Inf 16 states that all new developments should connect to an existing or planned heat network or other significant heat source wherever possible to do so. Any developments that are not heated through heat networks must demonstrate they are future proofed to allow future connections to heat networks to be made and all buildings to be readily able to be connected to a heat network when one becomes available. The Council considers the wording of policy Inf 16 to be robust and it will ensure that the aims of the strategy are delivered. **No modification proposed.**

Cockburn Association (0777)

Policy Inf 16 states that all new developments should connect to an existing or planned heat network or other significant heat source wherever possible to do so. Where this is not possible then all substantial\* development must, subject to a viability and feasibility study, instead include a source of renewable/low carbon heat generation (and avoids any negative impact on air quality) and associated heat network within the development. The Council's position relative to new sustainable buildings is covered in detail in Issue 13: Sustainable Design. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council considers the wording of Policy Inf 16 to be suitably robust. It shall provide certainty in the requirements needed to be made by different scales of development, whilst still providing the required degree of flexibility where appropriate. Policy Inf 16 will ensure that the aims of the strategy will be delivered. Policy Env 9 (World Heritage Sites) would also be applicable in the assessment of any application that could harm the qualities of World Heritage Sites. The Council's position relative to the historic environment is covered in detail in Issue 14: Historic Environment Policies. **No modification proposed.**

Grange/Prestonfield Community Council (0192), Philip Endecott(0079), SEPA(0012),  
Juniper Green & Baberton Mains Community Council(0306), Archie Clark(0003),  
Councillor Neil Ross(0610), RSPB(0648)

Support noted.

**Policy INF 17- Safeguarding of Existing Waste Management Facilities.**

Crosswind Developments Ltd (0184)

Safeguarding of existing waste management facilities is not identified on the proposals map for the Crosswind site. **No modification proposed.**

Alasdair Gillies (0035)

The Council considers the wording of policy Inf 17 to be robust and it will ensure that the aims of the strategy will be delivered. Braehead Quarry Civic Amenity Site is currently not utilised as a recycling centre, however, it is still used by City of Edinburgh Council Waste Services and Roads department. The adjacent site is also a waste management site, operated privately. **No modification proposed.**

Grange/Prestonfield Community Council(0192), SEPA (0012), Stephen Ian Hawkins (0469)

Support noted.

### **Policy INF 18- Provision of New Waste Management Services**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Paragraph 2.130 of the plan makes reference to Scotland's national waste strategy, the Zero Waste Plan which is based on a waste hierarchy. It states that this means that waste should be prevented, reused, recycled or recovered and that landfilling of waste is the last resort. **No modification proposed.**

Gordon Drummond (0382)

Page 33 of the plan has a section on waste. Paragraph 2.130 of the plan makes reference to Scotland's national waste strategy, the Zero Waste Plan (CD115) which is based on a waste hierarchy. It states that this means that waste should be prevented, reused, recycled or recovered and that landfilling of waste is the last resort. Paragraph 2.131 states that the waste hierarchy is being implemented through the Waste (Scotland) Regulations 2012 (CD125). These will lead to a significant increase in the number and range of waste management facilities needed in order to collect, sort and treat all waste which would have otherwise gone to landfill. Paragraph 2.134 states that the food processing and energy recovery facility at Millerhill has been provided by Midlothian and City of Edinburgh Council and deals mainly with household waste. Two enhanced waste transfer stations have been developed at Bankhead and Seafield. The provision of household waste recycling centres will be kept under review as the City grows. **No modification proposed.**

Forth Ports Limited (0496)

Land at Seafield Industrial Estate identified as EW1d in the proposed plan is already identified in the adopted LDP (CD039) as a safeguarded site for a waste management facility incorporating thermal treatment with energy recovery. This site has already been through an examination process. Paragraph 3.222 explains why the site should remain safeguarded. It identifies that the site has unique location advantages: It is sufficiently remote from housing areas; it has the benefit of rail access; and it has an outlet in nearby

regeneration and potentially industrial uses for energy recovered after thermal treatment. Accordingly, its potential as a location for energy from waste and combined heat and power uses should be retained in any development proposals. **No modification proposed.**

Portobello Amenity Society (0612)

The wording of criterion (b) and (c) of policy Inf 18 is the same as that in policy Rs3 (Provision of New Waste Management Facilities) in the adopted LDP which went through an examination process (CD039). Any planning application for the construction of a waste facility, regardless of where it was proposed, would have to provide a high level of information to prove to the satisfaction of the Council that it would not materially impact residential amenity or the environment. The Council considers the wording of policy Inf 18 to be robust. **No modification proposed.**

Diana Cairns (0452)

The wording of criterion (b) of policy Inf 18 is the same as that in policy Rs3 (Provision of New Waste Management Facilities) in the adopted LDP which went through an examination process. The Business and Industry areas identified under the proposed plan were also designated as such in the current LDP (CD039). The site on Harry Lauder Road is correctly identified as a Business and Industry area in the proposals map. The interactive proposed city plan map does highlight that policy Inf 18 is a relevant policy in the consideration of development on that site. Any planning application for the construction of a waste facility, regardless of where it was proposed, would have to provide a high level of information to prove to the satisfaction of the Council that it would not materially impact residential amenity or the environment. The Council considers the wording of policy Inf 18 to be robust. **No modification proposed.**

Network Rail (0071)

Seafield Industrial Estate is designated EW 1d on the proposals map for a waste management facility incorporating thermal treatment with energy recovery. However, is only identified as a safeguard, as it is in the current LDP (CD039). The location of the facility would be determined at the planning application stage. Network Rail would be consulted as part of any planning application for the construction of the facility and the assessment of the application would look at all material planning considerations. **No modification proposed.**

Stephen Ian Hawkins (0469)

The wording of criterion (b) of policy Inf 18 is the same as that in policy Rs3 (Provision of New Waste Management Facilities) in the adopted LDP which went through an examination process. The Business and Industry areas identified under the proposed plan were also designated as such in the current LDP (CD039). The site on Harry Lauder Road is correctly identified as a Business and Industry area in the proposals map. The interactive proposed city plan map does highlight that policy Inf 18 is a relevant policy in the consideration of development on that site. Any planning application for the construction of a waste facility, regardless of where it was proposed, would have to provide a high level of information to prove to the satisfaction of the Council that it would

not materially impact residential amenity or the environment. The Council considers the wording of policy Inf 18 to be robust. **No modification proposed.**

Grange/Prestonfield Community Council(0192), SEPA(0012)  
Support noted.

### **Policy INF 19- Waste Disposal Sites.**

Forth Ports Limited (0496)

Land at Seafield Industrial Estate identified as EW1d in the proposed plan is already identified in the adopted LDP (CD039) as a safeguarded site for a waste management facility incorporating thermal treatment with energy recovery. This site has already been through an examination process. Paragraph 3.222 explains why the site should remain safeguarded. It identifies that the site has unique locational advantages. Accordingly, its potential as a location for energy from waste and combined heat and power uses should be retained in any development proposals. **No modification proposed.**

Archie Clark (0003)

The proposals maps and map 9 in the plan clearly indicate where there are safeguarded waste management facilities. Paragraph 2.134 states that the provision of household waste recycling centres will be kept under review as the City grows. **No modification proposed.**

Grange/Prestonfield Community Council(0192), SEPA(0012)

Support noted.

### **Policy INF 20- Minerals**

Mr Rodger Thomas (0345), Archie Clark (0003), NatureScot (0528), Juniper Green & Baberton Mains Community Council (0306), RSPB (0648), SEPA (0012)

Paragraph 3.266 of the plan states that proposals for the extraction of coal and peat will be assessed for their environmental and traffic impact using other policies in the plan. The plan includes a variety of environment policies, like Env 21 (Protection of Biodiversity) which states that all proposals should safeguard habitat features of biodiversity value and priority species. Policy Env 37 (Designing-in Positive effects for Biodiversity) states that so far as applicable to the scale and nature of the development, proposals must have a positive effect on biodiversity by ensuring proposals follow a sequence of specified principles which provide a mitigation hierarchy. Policy Env 37 also states that consideration of biodiversity should include, but is not limited to, soils, habitat networks and environmental quality within and linking to a site. Paragraph 3.226 also states that an additional consideration, when assessing proposals affecting peat, is its role as a carbon sink.

The Council is of the view that the wording of policy Inf 20 is adequately robust and balances the importance of protecting viable mineral deposits whilst ensuring that the potential environmental impact and role of peat as a carbon sink is considered.

**No modification proposed**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The current SPP (CD096) was published in 2014. Policy Inf 20 has the same wording as Policy Rs5 (Minerals) in the adopted LDP (CD039), which has gone through an examination process and was adopted in November 2016 after the SPP was published. The plan continues to safeguard the 4 quarries identified, Hillwood, Bonnington Mains, Ravelrig and Craigiehill Quarry and 3 out of the 4 are operational. Supporting paragraph 3.225 notes that the only mineral resource within the area likely to be economically viable in the plan period is hard rock.

Paragraph 3.266 of the plan states that proposals for the extraction of coal and peat will be assessed for their environmental and traffic impact using other policies in the plan. The plan includes a variety of environment policies, like Env 21 (Protection of Biodiversity) which states that all proposals should safeguard habitat features of biodiversity value and priority species. Policy Env 37 (Designing-in Positive effects for Biodiversity states that so far as applicable to the scale and nature of the development, proposals must have a positive effect on biodiversity by ensuring proposals follow a sequence of specified principles which provide a mitigation hierarchy. Policy Env 37 also states that consideration of biodiversity should include, but is not limited to, soils, habitat networks and environmental quality within and linking to a site. Paragraph 3.226 also states that an additional consideration, when assessing proposals affecting peat, is its role as a carbon sink.

The Council is of the view that the wording of policy Inf 20 is adequately robust and balances the importance of protecting viable mineral deposits whilst ensuring that the potential environmental impact and role of peat as a carbon sink is considered.

fitting design for place.

Cockburn Association (0777)

Support subject to inclusion of a reference to lifelong learning.

Crosswinds Developments Ltd (0184)

Support policy but amend to cover the proposed offering available in Edinburgh. Site H61 Crosswind will be site for innovation and plan should aim to accommodate commercial development, including tech industries such as is proposed for the Crosswinds Site.

Edinburgh Napier University (0731)

Support the policy and encourage the Council to keep the policy as flexible as possible to ensure the University can continue to meet its development requirements in the future. Suggest adding a reference to collaboration and the need for a partnership approach to the policy to ensure the usage of developments delivered across the city and that positive impacts on communities are maximised.

Identify further and higher education institutions on the Proposals Map if they are supported by Econ 1.

Leith Central Community Council (0614)

The policy should also explicitly mention the need to safeguard existing social enterprises, business start-ups, university linked education, research and innovation, and culture rather than seeing them being demolished as is currently the case in Leith.

National Galleries of Scotland (0725)

Support the policy but in recognition of the contribution that the national cultural institutions based in Edinburgh make towards the city's economy and culture, should amend policy to add additional cultural criteria.

NHS Lothian (0596)

Support the policy but in recognition of the NHS Lothian's commitment to improving the health and wellbeing of the population welcome the introduction to a specific reference to health and care system.

University of Edinburgh (0464)

Welcome reference to supporting University linked education, research and innovation, but benefits should not be underestimated and further support for growth and continuation of activity should be explicitly stated in the policy. Disappointed there is not a focus or encouragement for university and higher education activity or statement of the contribution it makes to innovation in Edinburgh in the plan. Edinburgh is a pre-eminent location for innovation, learning and skills and the activity of the Universities should be given appropriate recognition and weight in the planning process to support further investment enhancement and development of facilities, and recognition of the proximity and

development benefits from these institutions. Only reference to university activity is in Policy Econ 1.

The University makes a significant contribution to GVA in the UK and in Edinburgh and therefore references in policy should be expanded to actively encourage proposals related to this sector and support enhancement and development of University and innovation facilities. Also need to support proposals contained within the University estates strategies with a focus on specific opportunities for enhancement and development of facilities. Should be scope in the plan to provide policy support for established initiatives and areas of concentration of university related activity, including areas such as Edinburgh Bioquarter, Lauriston Innovation district and Kings Buildings.

The Lauriston Innovation District is referenced in the Council's City Centre Transformation Plan and is a key focus for university activity and further investment to drive innovation in the city. This focus of activity should be afforded appropriate recognition in the plan, either through a specific Place policy or definition as an area of economic importance (as is the case with both designations at BioQuarter).

King's Buildings is also a core focus for academic, research and innovation activity, and is home to a number of high profile research facilities as well as University commercialisation and collaboration ventures. The site is currently zoned as being within the 'urban area' with no specific recognition of the role, function or importance of this location to the city and knowledge economy. These areas are separate and distinct from the general use areas of the city and provide scope to maximise the benefits from university activity, and accordingly should be afforded appropriate recognition and designations in the plan. Other cities with similar leading academic institutions driving innovation ecosystems, have placed a specific focus on innovation and research. All have appropriate recognition and specific policy support to encourage activity in these areas, and the University advocates for this approach to be replicated in the City Plan.

The University of Edinburgh have a substantial estate located across Edinburgh. The University activity is closely intertwined across the city and will continue to evolve and develop in response to operational needs. The University of Edinburgh's estate provides a number of key functions in the city, from innovation, teaching and education, to accommodation and sporting facilities. It is submitted that the City Plan 2030 should recognise the importance of the University of Edinburgh's facilities and how these can benefit the city as a whole.

All of these contribute towards their immediate local area and help to sustain the Council's desired 20 minute neighbourhood concept, active travel routes and sustainable developments. The mix of uses within each location is important to the University of Edinburgh in order to provide facilities that provide for more than just education and learning.

It is noted that Heriot Watt benefits from a campus location protection. The current Edinburgh Local Development Plan 2016 states in Policy EMP3 (Riccarton University Campus and Business Park), that development specifically allows for 'uses ancillary to the University, including student accommodation'.

This policy is proposed to be continued within the Edinburgh City Plan 2030 under Place 21: Riccarton University Campus and Business Park.

It is submitted that the University of Edinburgh should also benefit from an appropriate level of encouragement and protection, whereby university facilities and ancillary uses can be developed and / or enhanced alongside each other. It is submitted that the University of Edinburgh should also be considered for similar Place designations at its key locations, or at least be given a similar level of support through policy.

In addition, it is submitted that there should be scope within the determination of planning application to consider whether an inappropriate or unacceptable concentration of a land uses would be detrimental to University operations and could negatively impact on University activities.

The introduction of a specific policy to promote and protect University activity is recommended, to allow appropriate weight to be attributed to University driven activity in the planning process, and to allow protection of existing University facilities where inappropriate uses, or concentration of uses are proposed in close proximity. This approach does not need to be specific to University of Edinburgh and could equally apply to other University facilities across the city and would accord with the approach as advocated in Place 21: Riccarton.

The approach should recognise that University activity is not defined to specific campus locations, and more should reflect the wider presence of University facilities and activity across the city – in key and strategic locations as well as being intertwined in the fabric of the city. The inclusion of policy support to ensure an appropriate level of promotion and protection of University activity will ensure that the key role that Universities play in the context of the city life and economy can continue to flourish and grow, and further support the success of the city as a whole.

#### Edinburgh World Heritage (0339)

Modify Policy and supporting text to appropriately reflect and support the economic and cultural contribution of Edinburgh's heritage.

#### Representations supporting the policy

Grange/Prestonfield Community Council (0192), Jupiter Artland (0257), Liberton & District Community Council (0084).

### **Policy Econ 3 Office Development**

#### Aviva Life and Pensions UK Limited (0598)

The Edinburgh office vacancy rate is one of the lowest in the UK regional market and this is expected to fall lower. With no continued, Grade A space, Edinburgh will not be able to attract inward investment and will be unable to accommodate existing occupiers looking to remain and/or expand. Aviva would therefore encourage the Council to further consider the future of the Haymarket area as a key city centre destination, and would welcome reference to the area as suitable place for the provision of high quality, high density office accommodation.

There is opportunity for the CEC to make reference within the Policy to sustainability standards and the need to ensure that the requirements of modern occupiers are considered from the outset of development projects, who are now, more than ever, concerned about the quality of buildings. Should a building perform poorly on one, or several, of these standards, a building will not be considered suitable by occupiers, which can then lead to said buildings become unlettable. Although these standards will continue to evolve and change over time, businesses that occupy offices require the best space to attract the best staff. These matters could be referred to, or explored further by the Council within the context of the Policy to ensure a consistent quality of office accommodation is delivered across the city.

Crosswind Developments Ltd (0184)

Object to Policy Econ 3 on the grounds that Crosswind (Site H61) is not identified on the proposals map as a strategic business centre. The policy wording of Econ 3 would preclude office development on this site as currently worded. CDL seek clarification on point b of policy Econ 3 Office Development which references three strategic business centres at Edinburgh Park/ South Gyle, West Edinburgh and Leith. CDL require site H61 to be included as part of the West Edinburgh Strategic Business Centre and the Proposals Map to be updated accordingly. Failure to make these amendments will seriously impact on the ability of site H61 to develop out as a mixed-use site and a 20 minute neighbourhood.

Elgin Haymarket Limited (0292)

Support policy but the term '20-minute city hubs' should be added to this policy to help further support higher density office led mixed use development in the city centre close to active and public transport.

Hallam Land Management (0615)

Refine clause e(i) and (ii) of policy. Site proposed by respondent at Craigiehall contains existing office developments previously used by the MoD which would potentially be suitable for Class 4 Uses. As currently drafted Policy Econ 3 would effectively preclude re-use of the site for this purpose unless a Local Centre was permitted as part of the mixed-use development. The potential for office development is being squeezed in West Edinburgh as a result of Proposed Plan policy Econ 2 and housing policy which is converting swathes of available sites in West Edinburgh to housing. The implication is a reduction of employment activity in the A8 corridor.

Juniper Green & Baberton Mains Community Council (0306)

Section 3.235 refers to, "continuing demand for office space in the city centre". However, we question whether this is a current assessment of the present situation. Further, even if it is a current assessment, we suggest further office development in the city centre should not be encouraged, but instead should be encouraged elsewhere to support and be consistent with the 20-minute neighbourhood.

Leith Central Community Council (0614)

Office development should come with a range of mixed-use units and a variety of smaller units at street level.

Living Streets Edinburgh Group (0486)

Support in principle including the intention to locate such development where accessible by public transport and walking/cycling, but to ensure that this is taken seriously the Council must also revise the policy to require that there is no car parking provision to be made other than for disabled and essential servicing.

LPBZ Commercial Ltd (0391)

Remove “preferably as part of business led mixed use proposals” from the policy wording under ECON3 which relates to new office developments within strategic business centres. If a site is allocated as a strategic business centre, LPBZ believe that business/office uses should be the only permitted uses, otherwise even more business land in Edinburgh will be lost.

LPBZ urges the City of Edinburgh Council to review the wording of this policy to ensure that small scale office proposals, particularly where they facilitate the expansion of an existing nearby business and are located in sustainable locations, do not need to carry out a sequential test or impact assessment.

Policy requirements mean that any future additional office development at the former casino site will need to demonstrate that designated office locations are unsuitable or unavailable, demonstrate access to public transport nodes and include an assessment of impact on existing town centres. This seems extremely excessive for a relatively small-scale office proposal seeking to provide additional space for a valuable and expanding business in Edinburgh.

Melford Developments Ltd (0308)

There is a threshold of 2500 sqm which does not seem to be reasonable in a city centre location.

Archie Clark (0003)

Para. 3.235 on page 135, (209-page version) refers to “continuing demand for office space in the city centre”. However, one must question whether this assessment is still valid. Even if it were a current assessment, should further office development in the city centre be encouraged, or should office development instead be distributed elsewhere to support and be consistent with the 20-minute neighbourhood policy?

Scottish Property Federation (0144)

Support the policy, but would caution against rigid planning requirements for offices to be added to developments led by other uses, that may struggle to secure office occupation for their location.

Shelborn Edinburgh Limited (0732)

The needs of modern office occupiers is changing and post-Covid it is expected that users will be focused on sustainability and staff wellbeing. Shelborn would suggest that there is opportunity for the Council to make reference to both of these matters within the scope of Policy Econ 3, to ensure a consistently high quality office offering is delivered across the city.

#### The Institute of Chartered Accountants of Scotland (0182)

ICAS agree that the city centre is the prime, and most desirable location, for office occupiers in the city centre. Given its proximity to Haymarket Train Station, the Haymarket tram halt and a range of bus services, the Haymarket Yards area is a unique, highly accessible and substantial, redevelopment opportunity within the boundary of the city centre that has the potential to provide the extent of high quality office accommodation that Edinburgh requires, as well as a range of supporting uses, amenities and infrastructure. Therefore, ICAS encourage the Council to further consider the future of Haymarket Yards as a key city centre destination, and would welcome reference to Haymarket Yards within the Proposed Plan.

Given that CA House is an active Class 4 Business premises within the city centre, ICAS would request that the Proposed Plan protects existing business uses, such as CA House, and recognises that any future alternative development proposals must not prejudice the ongoing operation of existing operations within the city centre. It is submitted that the policy approach in this regard should be to support existing established uses and that consideration should also be given to ensuring that any alternative uses introduced to the city centre are compatible with the uses and existing operations present in the area, whilst acknowledging the opportunity that wider redevelopment may bring.

#### Edinburgh World Heritage (0339)

Modify policy to ensure appropriate conservation of the historic environment.

### **Policy Econ 4 Business and Industry Areas**

#### Brain Tiplady (0641)

The section should address travel, particularly public transport. New development should only be permitted where there is good public transport access - and not just access from the city centre, which meets the needs of relatively few people. There should be active policies for identifying employment centres with poor public transport access, and improving it, or promoting shifts of employment to better serviced centres as many of the existing business and industry areas are very poorly served by public transport.

#### Diana Cairns (0452)

Do not support Econ 4 with reference to the former freightliner terminal at Sir Harry Lauder Road, Portobello. The wording of the policy seems to be deliberately vague and general, which means it can potentially allow a wide range of developments on these types of site. Therefore, a comprehensive list of types of development that would and would not be allowed on such sites should be included. It was only by looking at policy Inf 18 that I discovered that a site such as the former freightliner terminal, that is designated as being for business and industry uses, could also be considered for a waste facility. An

application for a massive waste transfer station by Viridor was rejected by Scottish government Reporters in 2010 on the grounds of the detrimental impact on residential amenity and the Portobello conservation area. Any such development would be unwelcome on this site and should not be considered.

#### Cinnamon Sedge Ltd (0594)

Royal Elizabeth Yard (REY) site should be removed from the green belt on the proposals map and allocated as an existing industrial and business site, under policy Econ 4 Business and Industry areas. If not removed from the green belt, at the very least, the site should be allocated as an industrial and business site within (and 'washed over' by) the greenbelt. This could take a similar form to RBS Gogarburn, identified by Policy Place 18, or the residential allocation HSG7 at Edinburgh Zoo. Site should be identified as having the potential for further class 5 and 6 development.

REY is a well-established business/industrial park having operated as such since around 1996. It extends to 19.7ha, provides approximately 190,000 sq ft of industrial floorspace (predominantly class 5 and 6) and offers accommodation for a wide range of occupiers. The site is well-let and therefore plays an important role in providing jobs, investment opportunities and helps to meet the city's industrial needs.

REY is a brownfield site located in the green belt as identified by the adopted Edinburgh local Development Plan (2016). The green belt is defined in the adopted LDP and City Plan glossaries as "Land defined in the adopted local plans or local development plans which protects and enhances the landscape setting and identity of Edinburgh and protects and gives access to open space around the city and smaller settlements". As a brownfield site, it stands to reason that REY is incompatible with the reasons for including land within the green belt. The Council's previous Choices document advised that the proposed City Plan 2030 would make green belt amendments as technical changes. We understand that this was to be advised by a green belt review, however, this does not appear to have taken place, likely due to the Council strategy to not release any green field sites, with housing directed to brownfield sites.

In the early stages of preparing the (now adopted) Edinburgh City Local Development Plan, the site was included as one of five sites suggested for removal from the green belt, however this was not taken forward.

Paragraph 51 of Scottish Planning Policy relates to green belts and states:

"The spatial form of the green belt should be appropriate to the location. It may encircle a settlement or take the shape of a buffer, corridor, strip or wedge. Local Development Plans should show the detailed boundary of any green belt, giving consideration to": (inter alia)

"excluding existing settlements and major educational and research uses, major businesses and industrial operations, airports and Ministry of Defence establishments".

As a large scale industrial operation, the removal of Royal Elizabeth Yard from the green belt, would accord with the above. Furthermore, the removal of Royal Elizabeth Yard from the green belt would not impact on the overall objectives of green belts which are set out in SPP as: to direct development to the most appropriate locations and supporting regeneration; protecting and enhancing the character, landscape setting and identity of the

settlement; and, protecting and providing access to open space.

Object to the city plan outcomes in relation to economic success, as they consider that the plan fails to allocate sufficient business and industrial land to satisfy the needs of the city. We therefore request that their site at Royal Elizabeth Yard is allocated as an existing industrial and business site suitable for future growth with class 5 and 6 uses. This could include bonded warehousing or any other strategic industrial or employment development which may come forward within the plan period. Should the site be allocated, the necessary changes to other parts of City Plan should be made. This would include the strategic mapping diagrams (pages 9 and 10), the proposals map and place policies.

Cinnamon Sedge welcomes the Council's support for existing businesses in the plans outcomes and the support it provides to new economic development opportunities. However, we are concerned that the proposed plan fails to allocate sufficient business and industrial land to satisfy the needs of the city.

At a strategic level, the findings and recommendations of the Commercial Needs Study, identify the need to provide additional locations for business and industrial uses. They therefore support the consolidation and enhancement of Royal Elizabeth Yard as a strategic location for economic / industrial development and support its intensification as a proposed site for new modern industrial use to meet the City's industrial needs.

There is now an even greater need to identify further land for new industrial uses given the Council's strategy to only allocate brownfield sites as locations for housing delivery. The majority of these brownfield sites are currently within active use, including many industrial sites and may require the use of CPO powers, as identified by the Council at paragraph 2.103 of the plan, in order to enable delivery of the sites to take place. If this strategy is to be taken forward, these business will need to relocate elsewhere and further industrial opportunities will need to be identified to accommodate growing demand.

As part of Choices, the Council identified a full list of sites in active industrial or business use to demonstrate what the quantum of loss might be if the brownfield strategy was progressed. Avison Young, as part of the Choices representations, identified that this comprised approximately 87 hectares of land currently used for industrial or business operations. There were a number of sites identified within Choices which are now proposed housing allocations in City Plan. It is clear that as the Council have not allocated additional land (other than the minor alterations to the industrial and business allocation at Newbridge), that this loss of floorspace to sites now allocated as housing sites has not been compensated for elsewhere within City Plan.

The Edinburgh Commercial Needs Study: Mixed Use Delivery (December 2020) identified that a large reallocation of industrial land to other uses would require a very active industrial development programme to reaccommodate even a small proportion of the displaced industrial activity. This would result in occupiers likely relocating to other authority areas.

It is clear from the Study that new locations need to be identified for further industrial floorspace to meet the city's needs and to replace existing floorspace which is now out of date or likely to be lost to other uses. Royal Elizabeth Yard presents an excellent opportunity to deliver new and improved industrial floor space to help meet the city's business/industry needs. The Study also identifies that industrial demand is increasingly

directed towards strategic locations with good transport links on the edge of urban Edinburgh. Royal Elizabeth Yard is located close to the motorway network and meets this requirement. The fact that the existing units are well let also demonstrates the attractiveness of the location.

The proposed plan identifies 10 sites as existing business and employment areas. Only one of these allocations has been increased in size. This is at Newbridge, however the extension to this allocation incorporates a large number of existing industrial properties, therefore the increase in its allocation does not actually allocate much in the way of additional land. The plan does not identify the total land that these proposals provide, however it is noted from a desk based review that a large proportion of these sites already comprise built development which is occupied, and provides limited opportunity for new development to take place, e.g. West Telferton industrial estate has no vacant sites. Whilst land available at Brunstane access is poor (enclosed by railway infrastructure). The few allocations do not provide range or choice of locations. The Council have not demonstrated how the requirement for at least 27ha (CNS) of additional employment land will be met.

REY has the capacity to accommodate further development. Only 25% of site currently utilised. Evidence of demand in paper by Lewis Sutton Property Consultants supports the principle of industrial uses at the REY and therefore that allocation is justified. Development Strategy prepared by OPEN shows the site can deliver 10.5ha of further industrial uses. A place brief may be necessary, and could be agreed in due course, which in principle would provide support for planning applications.

Royal Elizabeth Yard is a brownfield site which lies within the green belt. 'Brownfield land' is defined in the glossary of the City Plan as "land which has been previously developed", as indeed it is in Scottish Planning Policy also. In this particular case, it is therefore beyond any doubt that the site in question is brownfield. Development should always be directed to brownfield land in the first instance, which is the strategy being taken forward by the Council in the preparation of City Plan.

#### Gibson Fitness Ltd (0122)

Object to proposed Policy. Pentland Gait should be included within Policy ECON3 'Office development' and not ECON4 'business and industry'. Pentland Gait includes Currie House and Calder House, both of which are in office use. Policy ECON3 supports office use as part of a wider mix of uses to help meet economic growth and accessibility objectives in the context of the climate emergency. This flexible approach is welcomed and should either also be selectively applied to Policy ECON4, or Pentland Gait office park should be allocated ECON3 because it is; occupied by offices, accessible location, very close to Edinburgh Park/South Gyle which has Special Economic Area status under Econ 3, a struggling office location in need of a wider mix of uses to make it an attractive office location.

#### Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

In section 3.238 states that "this policy aims to retain a range of employment sites across the city where new and existing businesses can operate, expand or relocate." It therefore should apply to brownfield sites in Wester Hailes and elsewhere to prevent land having a

change of use that would encourage more commuting. This would be in line with policy Re 4 Alternative Use of Shop Units in the City Centre and Town Centres.

#### Royal Main Group Limited (0501)

The following, unallocated, Royal Mail properties should be allocated under Policy Econ 4;

1. Portobello Delivery Office, 12 Windsor Place, EH15 2AA
2. Edinburgh South East Delivery Office, 5 Bridge End, EH16 4TH
3. Edinburgh South Delivery Office, 19A Strathearn Road, EH9 2AA

Royal Mail wholly support the allocation of their properties for business and industry use and consider this entirely appropriate for the sites. We respectfully request that those Royal Mail sites which are unallocated are instead allocated under Policy ECON4.

The following Royal Mail properties, which are allocated in the Plan for housing development should be re- allocated under Policy Econ 4;

1. Dell Delivery Office, 3 Gorgie Park Road, EH14 1NL (H71)
2. Edinburgh City Delivery Office, 18 Russell Road, EH11 2DJ (H6)
3. Edinburgh North West Delivery Office, 41 Comely Bank, EH4 1AF (H32)
4. Edinburgh West Delivery Office, 21 South Gyle Crescent, EH12 9PB (Edinburgh Park Strategic Business Centre)

This policy wording will therefore help protect the long-term employment use of the sites as is Royal Mail's intention. These properties are important assets for Royal Mail and there is no short, medium- or long-term interest or intention in relocating the Delivery Offices to an alternative location. The housing allocations proposed at each of these sites are therefore not considered to be deliverable and should be removed from the Plan.

An allocation under Policy ECON4 will also address a concern about the potential for conflict with any new development introduced adjacent to their properties which may be sensitive to the nature of the Delivery Office operations. This includes; loading/unloading in external service yards and vehicular movement in the early hours of the morning and at times during the night. Royal Mail has experience of noise complaints from residents who have moved into new residential developments adjoining its operational sites in circumstances where no or insufficient noise mitigation was required as part of the new development. In some cases, these complaints have led to restrictions on the operation of its sites and Royal Mail is concerned that it may even face a situation where is forced to cease operating from a site altogether because of such restrictions. Being able to operate outside normal working hours is critical to its business.

If the Council see fit to retain any proposals for residential use on the land adjoining the properties set out above (assuming the allocation pertaining to each site is removed), the relevant policies and the associated information set out in Appendix D of the Local Plan should make reference to Royal Mail's operations and should ensure that any necessary mitigation is provided by the applicant

#### The Royal London Mutual Insurance Society Ltd (0149)

Identify Royal London's land holding at Seafeld Way as land for business and industry and allocate land for business and industry under Policy Econ 4. Royal London's land

holding should be identified as an 'employment centre' on map 1 and 'business and industry area' on map 2.

The Plan strategy's over-riding land use objective is to meet its housing land requirements on brownfield land which entails the redevelopment of around 30% the City's established industrial stock. Not only does this undermine the City's established industrial stock but it will exacerbate the limited industrial supply which may be suppressing or displacing demand, particularly in the sub 5,000 sqft market. Whilst Royal London objects to the scale of the brownfield housing strategy in principle, it also recognises that its land holding plays a valuable role in the City's industrial supply which needs to be safeguarded and identified for business and industry. This responds to para 2.140 second bullet.

The estate has been under Royal London's ownership for in excess of 25 years and performs a long-term strategic function, being one of the larger complete industrial holdings within their property fund. Significant capital investment has been deployed over recent years to ensure the accommodation is fit for modern requirements. The estate is 100% let and tenant leases are in place until November 2036, which is beyond the duration of the Plan. Royal London's land holding comprises an industrial estate with 18 units which accommodate a range of Class 4, 5 and 6 users and one unit, presently in Class 1 use and occupied by the retailer, Matalan. The landholding is situated in a location well suited for employment use within the City's established urban area. It is accessible by foot, cycle and vehicle. Vehicular access to the site is via Seafield Road (A1) to the north a main road artery and close to a rail line.

The detail within their MIR representation remains relevant and is to be considered as part of their objection.

### **Policy Econ 5 Employment Sites and Premises**

Steve Loomes (0767), Barratt David Wilson Homes (0677), Homes for Scotland (0404)

Econ 5 (Employment Sites and Premises) – how does this policy align with the allocation of new housing sites on existing employment sites

Abrdn (0425)

Criteria c) of policy Econ 5 (p.135) should be revised to apply to sites over 1ha (as per adopted policy Emp 9). Additional wording or supporting text should also be added to the policy to provide applicants with the opportunity to justify redevelopment of business floorspace for alternative uses, such as housing, for example where expert opinion is that demand for office or other employment in a particular location is too low to support its existing quantum or its continued inclusion.

Abrdn do not support the inclusion of this policy as currently worded, particularly criteria c). It is important that policies such as this incorporate sufficient flexibility to respond to the specific circumstances of individual sites and do not unreasonably restrict redevelopment of unviable business locations to uses more appropriate to their context.

Mr T Klan (0307)

Remove 'in the urban area' in first and second sentence of the Policy. There are many existing business premises that are not located in the urban area. There will be many more enterprises or businesses that may want or need a more peripheral or out of centre location. This is particularly the case if the Council's aspiration of relocating existing business and industry uses to facilitate brownfield housing development. This policy will restrict further the availability of employment land and premises, to the detriment of the economic growth of the city.

Melford Developments Ltd (0308)

Policy requires further clarification. Does first sentence in policy refer to LDP allocated business sites? Or does it just mean all proposals for new employment sites in the urban area will be supported?

Object to Clause (c) as this requires further clarification and explanation. Will this be the case for redevelopment of Proposed Plan commercial sites into housing sites?

This policy is imprecise and does not give clear guidance in terms of requirements for mixed use developments.

Scottish Property Federation (0144)

Paragraphs 3.239 - 3.241. While the SPF supports the principle of mixed-use developments, we fear that this policy could threaten to remove key commercial sites from the city centre. This could include important sites to redevelop leisure uses which will be vital to supporting the experience economy that is vital to the wider economic success of the city. The Policy should be rephrased to be clear that key sites for purely commercial uses, critical to the wider attraction of Edinburgh as a destination for major corporate occupiers, for industrial sites and for retail and leisure uses may still be considered.

Tarmac (0244)

Proposed a number of changes to the Policy text and supporting text to support proposals that are not within the urban area. There are many existing business premises that are not located in the urban area. There will be many more enterprises or businesses that may want or need a more rural location. This is particularly the case if the Council's aspiration of relocating existing business and industry uses to facilitate brownfield housing development.

The last known use for part of the Bairdview site was as a concrete batching plant and it is therefore covered by Emp 5. The proposed site is not in the urban area although it is in proximity to the built-up area, as many employment sites are. Accordingly, the policy as it stands is inflexible and overly restrictive.

Hallam Land Management (0615)

There are many existing business premises that are not located in the urban area, Craigiehall included as it was last in use for employment purposes.

There will be many more enterprises or businesses that may want or need a more peripheral or out of centre location. This is particularly the case if the Council's aspiration

of relocating existing business and industry uses to facilitate brownfield housing development. This policy will restrict further the availability of employment land and premises, to the detriment of the economic growth of the city.

If rural employment land and premises is not supported then part of the Craigiehall site will remain vacant and soon become derelict. Queen Elizabeth Yards is another example that would fall foul of this policy.

### **Responses supporting the policy**

#### Ryden LLP (0578)

Brownfield sites identified for residential led development should not need to justify the loss of employment land. The new strategy is to promote brownfield development and we support the distinction made for redundant or vacated business sites where they are identified as part of the wider development strategy.

ECON 5 Employment Sites And Premises and the specific reference to Place Policies 16-21 and support for such sites to be redeveloped for mixed use development including housing in order to contribute towards meeting the city's housing requirements is supported.

### **Policy Econ 6 Hotel Development**

#### Brian Tiplady (0641)

Policy assumes that increasing tourism is a good thing and makes no mention of the costs in terms of congestion and inconvenience imposed on ordinary residents. Should be no increase in overall tourist accommodation, including short-term lets, should without a full evaluation of impacts, and without it being clear that a majority of the city's residents approve such an increase.

#### Cockburn Association (0777)

Clarification is required on the relationship between the objectives of Econ 6 and those of Econ 2 for which seeks to 'create sustainable communities, maximise opportunities for housing and avoid large mono use developments.

#### Cramond & Barnton Community Council (0243)

Policies for hotel accommodation should be widened in scope to include all serviced visitor accommodation. Policies for any further expansion of visitor accommodation should be based on a robust review of the visitor accommodation sector, within the context of an overall sustainability assessment of tourism in Edinburgh. The policy should apply equally to all types of serviced accommodation. The Policy encourages new hotel provision, albeit with guidance on locations, but ignores and may exacerbate the unrelenting growth of tourism pressures on the Edinburgh community and the fabric and ambience of the City and result in over-supply issues. The provision of visitor accommodation should be managed at sustainable levels.

#### Crosswind Developments Ltd (0184)

Seek clarification on point b of Econ 6 Hotel Development as it advises hotel development will be permitted within the boundaries of Edinburgh Airport, the Royal Highland Centre and West Edinburgh. The inclusion of the place policies within the body of text would provide clarification on the exact of the boundaries. Modifications to policy identified. In addition, it is important that Edinburgh Airport (as covered by Place 17), the Royal Highland Centre (as covered by Place 20) and West Edinburgh (as covered by Place 16) are identified on the Proposals Map.

#### Living Streets Edinburgh Group (0486)

In addition to requiring development to be in locations accessible by public transport the Council could also require that there is no car parking provision to be made other than for disabled and essential servicing.

#### VisitScotland (0689)

Welcome the recognition given to tourism as the third biggest source of employment in Edinburgh and the subsequent reflection in policy of the importance of hotels to generating economic benefit from growth in tourism. To further improve this policy it would be appropriate for the planning authority to take a strategic view of the type and quality of hotels the City is looking to develop going forward.

Note that there is an acknowledgement (para 3.242) that much of the increase in provision has been in the budget hotel sector. One of the key priorities of Scotland Outlook 2030 is to grow the value of tourism benefits across Scotland. To achieve this in the hotel accommodation sector, Edinburgh is well placed to capitalise on provision of high-quality hotels which concentrate on delivering more value in the areas identified for potential hotel/tourism development in the Plan. Doing so will ensure the value of tourism to Edinburgh's economy continues to increase, and delivers shared prosperity for all, by encouraging the right growth in the right areas.

Proposals which move away from quantity toward quality will be more likely to attract the right kind of inward investment. Essentially, if we can improve the quality of our experiences by improving our infrastructure, facilities and services we can create the right conditions for further growth and investment.

#### Hallam Land Management (0615)

Modified text suggested for policy. This policy would not support any hotel proposal outside the urban area, which is not appropriate. Why would the Council not be supportive of a country house or boutique hotel proposal in a rural location? There is high demand for accommodation in such locations, particularly since 'staycation' holidaying is becoming much more popular. The hotel market is dynamic and diverse, many people do not want hotel accommodation in the City Centre or adjacent to busy transport hubs. Policy Econ 6 is overly and unnecessarily restrictive and demonstrates a misunderstanding of an evolving hotel market in the city. On the basis of the current policy as phrased it is likely that a hotel application as part of a mixed-use development would not be permitted without a policy change. Together with the brownfield land approach this places a serious constraint on an active market seeking to fill the gap created by short-term letting policies.

### T Klan (0307)

Modify criterion d) of the policy. This policy as it stands would not support any hotel proposal outside the urban area, which is not appropriate. Why would the Council not be supportive of a country house or boutique hotel proposal in a rural location? The hotel market is dynamic and diverse, many people do not want hotel accommodation in the City Centre or adjacent to busy transport hubs.

### Edinburgh World Heritage (0339)

Modify policy to ensure appropriate conservation of the historic environment.

### **Responses supporting the policy**

Ambassador Group (0683), CBRE Global Investors (0644), HCPII Properties 101LP (0517), Nuveen Real Estate (0734), West Town Edinburgh Ltd (0660), Creos Property Limited (0253), Elgin Haymarket Limited (0292), Ryden LLP (0578)

### **Policy Econ 7 Goods Distribution Hubs**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Could Edinburgh's rail network play a role in developing this?

### Leith Central Community Council (0614)

Plan should provide for the introduction of on-street logistics hubs (with lockers) to reduce traffic from delivery vans and to support shop deliveries; this requires supporting measures (well-maintained, smooth pavements and good road crossings for trolleys) which will also benefit and prioritise pedestrian traffic.

### Hallam Land Management (0615)

Whilst the plan suggests that household expenditure has not grown and that there is sufficient convenience floorspace, there is no real consideration of the need for local logistics and distribution hubs. Such a facility could potentially co-exist with other uses at Craigiehall utilising some of the building stock in a sustainable way, providing that the scale was limited.

### **Responses supporting the Policy**

Ryden LLP (0578)

### **Economy General**

Defence Infrastructure Organisation (0124)

Request the inclusion of a policy that covers military sites or adjacent areas. The Defence Estate Optimisation Portfolio (DEOP) seeks to optimise the existing MOD estate and enhance the quality and efficiency of capability delivery. In doing so DEOP need to reduce estate running costs and the size of the estate. DEO Generated Force

(GF) is the Army programme which covers the re-provision of infrastructure for the Units displaced by the site disposals announced under the Better Defence Estate (BDE) programme. In this case Dreghorn Barracks will be retained as a receiving site for service personnel based in Edinburgh and associated development will be required. The DIO considers that, City Plan 2030 should highlight the important role the MOD has as a significant employer in the city and should be supportive of any future growth at Dreghorn Barracks.

LPBZ Commercial Ltd (0391)

The Proposed Plan begins with setting out a list of documents that support the policies outlined in the plan. LPBZ would like to highlight that this list does not include any specific note, assessment, appraisal or report relating to employment land in the city. As a Housing Technical Note is included in this list, LPBZ would question why there is not an equivalent for Employment land included. The plan appears to rely on a Commercial Needs Study dated November 2018. Without an up-to-date background document/supporting information available to back up employment and mixed-use policies in the plan, LPBZ would question whether these policies have been adequately evidenced and will stand up at examination.

Lorraine Smith (0462)

On a general note it is disappointing that arts do not figure in these proposals. Again, Edinburgh's attraction (both for residents and the substantial numbers of tourists) is its reputation as a city of culture. However, it seems that this is not to be supported by the council in this development plan - there is no accommodation for artists or the creative arts.

**Table 13 Areas of Economic Importance**

Royal Highland & Agricultural Society of Scotland (0482)

Text in Table 13 should be edited to include hotels (plural) in terms of uses defined by the by the masterplan principles and consistent with Policy Econ 6 which is supported.

The site initially suggested as an alternative allocation at Norton Park is not supported and RHASS supports its removal. The site is isolated, ahead of any infrastructure provision and residential development would detract from landscape, environmental and green belt objectives.

Lynn Grattage (0362)

"West Edinburgh  
National Planning Framework 3 identifies West Edinburgh, including the land identified as the International Business Gateway, as being a significant location for investment."  
Table 13

I don't really understand this. The Glasgow road to Edinburgh centre is already too congested, and who wants to live or work under an airport?

## **Modifications sought by those submitting representations:**

### **Policy Econ 1 Supporting Inclusive Growth, Innovation and culture**

#### SEPA (0012)

In line with the fundamental aims of the plan, SEPA advise that the Nature-based solutions (NBS) sector is listed in first line of policy Econ 1 and the reasoning for this prioritisation explained in underlying sections of the policy.

#### Cockburn Association (0777)

Include a reference in policy Econ 1 to lifelong learning.

#### Crosswinds Developments Ltd (0184)

Amend Econ 1 to the following:

“Proposals for development associated with social enterprises, business start-ups, new and emerging industries, university linked education, research and innovation, and culture will be supported in principle, where they meet relevant LDP policies and are associated with one of the following:

- a. Addressing poverty and inequality
- b. Edinburgh city centre transformation
- c. Edinburgh’s cultural festivals and events throughout the city
- d. Edinburgh’s universities and colleges
- e. Life science research
- f. Economic development”.

#### Edinburgh Napier University (0731)

Include a reference to collaboration and the need for a partnership approach to the policy. Identify further and higher education institutions on the Proposals Map if they are supported by Econ 1.

#### Leith Central Community Council (0614)

The policy should also explicitly mention the need to safeguard existing social enterprises, business start-ups, university linked education, research and innovation, and culture.

#### National Galleries of Scotland (0725)

Add additional criterion f to policy, as follows:

f. National cultural institutions based in Edinburgh, including National Galleries of Scotland.

#### NHS Lothian (0596)

The policy should be amended to add a reference to supporting development associated with the health and care system.

#### University of Edinburgh (0464)

The policy should be amended to add an explicit reference to further support and continuation of activity in the university related sector in order to further strengthen the role and importance of the University to the city.

Policy should be amended to actively encourage proposals where they have a direct linkage to the knowledge economy and support further enhancement and development of University and Innovation facilities. This could be strengthened with direct reference to the need to support proposals contained within Estate Strategies prepared by higher education institutions, and with a focus on specific opportunities for enhancement and development of facilities where these further the aims of the sector and knowledge economy across the city.

There should be scope in the Plan to provide policy specific support for established initiatives and areas of concentration of academic, research and innovation and collaboration activity. This would include areas such as the Edinburgh BioQuarter, Lauriston Innovation district, and Kings Buildings.

The Lauriston Innovation District should be afforded appropriate recognition in the plan, either through a specific Place policy or definition as an area of economic importance (as is the case with both designations at BioQuarter).

The plan should be amended to identify the university related facilities across the city and provide specific related policy support. The University would be pleased to discuss and agree suitable wording for place or innovation specific policies.

#### Edinburgh World Heritage (0339)

Modify Policy by addition of bullet in the main policy wording as follows:

- “Protecting and enhancing Edinburgh’s outstanding historic environment”

Modify supporting text as follows:

“...for Edinburgh’s Economy, including protecting the historic environment as an important and irreplaceable economic and cultural asset.

#### **Policy Econ 3 Office Development**

##### Aviva Life and Pensions UK Limited (0598)

Modify policy to make reference within the Policy to sustainability standards and the need to ensure that the requirements of modern occupiers are considered from the outset of development projects.

##### Crosswind Developments Ltd (0184)

Modify plan to identify H61 Crosswinds as a strategic business centre.

##### Elgin Haymarket Limited (0292)

Modify the policy to add the term ‘20-minute city hubs’.

Hallam Land Management (0615)

Modify policy to allow reuse of the Craigiehall site to be in accord with the policy requirements e (i) and (ii).

Juniper Green & Baberton Mains Community Council (0306)

Modify policy so that further office development in the city centre is not encouraged, but instead encouraged elsewhere to support and be consistent with the 20-minute neighbourhood.

Leith Central Community Council (0614)

Modify policy to require a range of mixed use units and variety of smaller units at street level.

Living Streets Edinburgh Group (0486)

Modify policy to require that there is no car parking provision to be made other than for disabled and essential servicing.

LPBZ Commercial Ltd (0391)

Modify policy to remove “preferably as part of business led mixed use proposals”. Modify wording of this policy to ensure that small scale office proposals, particularly where they facilitate the expansion of an existing nearby business and are located in sustainable locations, do not need to carry out a sequential test or impact assessment.

Melford Developments Ltd (0308)

Threshold of 2500 sqm which does not seem to be reasonable in a city centre location.

Archie Clark (0003), Scottish Property Federation (0144)

No modification proposed.

Shelborn Edinburgh Limited (0732)

Modify policy to make reference to the needs of modern office occupiers is changing and post-Covid it is expected that users will be focused on sustainability and staff wellbeing.

The Institute of Chartered Accountants of Scotland (0182)

Modify the plan to include a reference to Haymarket Yards within the Proposed Plan.

Modify the Plan to introduce a policy protecting existing business uses.

Edinburgh World Heritage (0339)

Modify the policy by adding the following bullet; "Where appropriate in the context of other policies, including the conservation of the historic environment."

#### **Policy Econ 4 Business and Industry Areas**

##### Brain Tiplady (0641)

Modify policy to address travel, particularly public transport. Also add policies for identifying employment centres with poor public transport access and improve it or promote shifts of employment to better serviced centres.

##### Diana Cairns (0452)

Modify policy to specify a comprehensive list of types of development that would and would not be allowed on such sites should be included.

##### Cinnamon Sedge Ltd (0594)

Modify plan to remove Royal Elizabeth Yard (REY) site from the green belt on the proposals map and allocated as an existing industrial and business site, under policy Econ 4. If not removed from the green belt, the site should be allocated as an industrial and business site within (and 'washed over' by) the greenbelt. This allocation should be supported by related amendments to other diagrams within the plan and other supporting documents of City Plan including the proposals map and place policies.

Supporting text 3.238 should be amended to specifically reference REY.  
A place brief may be necessary, and could be agreed in due course, which in principle would provide support for planning applications.

##### Gibson Fitness Ltd (0122)

Modify Policy Econ 3 to include Pentand Gait and remove it from Policy Econ 4.

##### Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Modify plan to apply the policy to brownfield sites in Wester Hailes and elsewhere across the City to prevent, where possible, land having a change of use that is going to encourage more commuting.

##### Royal Main Group Limited (0501)

The following, unallocated, Royal Mail properties should be allocated under Policy Econ 4;  
Portobello Delivery Office, 12 Windsor Place, EH15 2AA  
Edinburgh South East Delivery Office, 5 Bridge End, EH16 4TH  
Edinburgh South Delivery Office, 19A Strathearn Road, EH9 2AA  
Dell Delivery Office, 3 Gorgie Park Road, EH14 1NL (H71)  
Edinburgh City Delivery Office, 18 Russell Road, EH11 2DJ (H6)  
Edinburgh North West Delivery Office, 41 Comely Bank, EH4 1AF (H32)  
Edinburgh West Delivery Office, 21 South Gyle Crescent, EH12 9PB (Edinburgh Park Strategic Business Centre)

The Royal London Mutual Insurance Society Ltd (0149)

The wording of the Policy itself is acceptable however the policy should identify Royal London's land holding at Seafeld Way as land for business and industry (Econ 4). Royal London's land holding should be identified as an 'employment centre' on map 1 and 'business and industry area' on map 2, and make associated changes to the Proposals Map.

**Policy Econ 5 Employment Sites and Premises**

Steve Loomes (0767), Barratt David Wilson Homes (0677), Homes for Scotland (0404), Melford Developments Ltd (0308)

No modification identified.

Abrdn (0425)

Modify Criteria c) of policy Econ 5 (p.135) to apply to sites over 1ha.

Mr T Klan (0307)

Modify Policy to remove 'in the urban area' in first and second sentence.

Scottish Property Federation (0144)

Modify policy to be clear that key sites for purely commercial uses, critical to the wider attraction of Edinburgh as a destination for major corporate occupiers, for industrial sites and for retail and leisure uses may be considered.

Tarmac (0244), Hallam Land Management (0615)

Modify policy to remove 'in the urban area' in first sentence. Remove 'in the urban area' in clause (a). Add new para 3.239 to cover first part of this policy 'This policy covers both the creation of new premises and also the redevelopment of existing employment sites or premises'. Alter existing para 3.239 to say 'When considering redevelopment of existing sites or premises, last in use for employment purposes not covered .... the policy provides support for ....'

**Policy Econ 6 Hotel Development**

Brian Tiplady (0641)

Policy should require an evaluation of impact and the support of the majority of the city's residents.

Cockburn Association (0777)

No modification suggested.

Cramond & Barnton Community Council (0243)

The policy should be modified to apply equally to all types of serviced accommodation.

Crosswind Developments Ltd (0184)

Modify policy to the following;

“Hotel development will be permitted:

- a. in the City Centre where developments may be required to form part of mixed-use schemes, if necessary, to maintain city centre diversity and vitality, especially retail vitality, on important shopping frontages
- b. within the boundaries of Edinburgh Airport (as covered by Place 17), the Royal Highland Centre (as covered by Place 20) and West Edinburgh (as covered by Place 16).
- c. in defined town, local and commercial centres
- d. in locations within the urban area with good public transport access to the city centre.”

Living Streets Edinburgh Group (0486)

Modify policy to state in addition to requiring development to be in locations accessible by public transport the Council also require that there is no car parking provision to be made other than for disabled and essential servicing.

VisitScotland (0689)

Modify the plan’s policy to take a strategic view of the type and quality of hotels the City is looking to develop going forward.

Hallam Land Management (0615)

Modify policy as follows;

Add clause (e) – ‘in exceptional circumstances where a hotel could be accommodated into an existing building and would contribute positively to effective re-use, re-development or regeneration of a wider area’.

... Or, alternatively, alter clause (d) to remove the words ‘within the urban area’.

T Klan (0307)

Modify clause (d) to remove the words ‘within the urban area’.

Edinburgh World Heritage (0339)

Modify Policy to add the following bullet; “Where appropriate in the context of other policies, including the conservation of the historic environment”.

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Modification inferred, adding reference to rail network to deliver Good Distribution Hubs.

Leith Central Community Council (0614)

Modify policy to provide for the introduction of on-street logistics hubs (with lockers)

Hallam Land Management (0615)

Modify plan to include a logistics facility as part of proposed Craigiehall site.

## **Economy General**

### Defence Infrastructure Organisation (0124)

Modify plan to include the following as policy;

1. Proposals associated with defence and military operations will be supported at existing sites where they would enhance or sustain operational capabilities.
2. Non-military or non-defence related development within or in the areas around a defence or military site will not be supported where it would adversely affect military operations or capability, unless it can be demonstrated that there is no longer a defence or military need for the site.

### LPBZ Commercial Ltd (0391)

No modification identified.

### Lorraine Smith (0462)

No modification identified.

### Royal Highland & Agricultural Society of Scotland (0482)

Modify text in table 13 to include hotels (plural) in terms of uses defined by the masterplan principles and consistent with Policy ECON 6. Remove reference to relocation of the Royal Highland Centre.

### Lynn Grattage (0362)

No modification identified.

## **Summary of responses (including reasons) by planning authority:**

### **Policy Econ 1 Supporting Inclusive Growth, Innovation and culture**

#### SEPA (0012)

The Council considers the strategy and the aims of the plan seek to support sustainable growth whilst also supporting net zero development. These aims are delivered through the policies and proposals in the plan, in particular, by maximising use of brownfield rather than greenfield land (aim 2) and by requiring all new buildings to be net zero (aim 4). The Plan supports 'nature based solutions' in Policy 6 Green Blue Infrastructure and the Council considers the reference to 'innovation' in Policy Econ 1 sufficient to embrace such solutions, the detail of which may vary over time as inventive solutions are developed and progressed.

**No modification proposed.**

#### Cockburn Association (0777)

The Council welcomes support for the policy but considers a reference to “life long learning” too vague in the context of delivering the objectives of the policy and providing a clear steer when determining planning applications. The Council considers the reference in criterion d. to Edinburgh’s universities and colleges is more appropriate and would sufficiently cover development proposals in relation to education. **No modification proposed.**

Crosswinds Developments Ltd (0184)

The Council welcomes support for the policy but considers the proposed changes to the policy too broad and vague. The Council considers the reference to “research and innovation” would be relevant to proposals related to the tech industry. The Plan should be read as a whole and there are other policies to guide proposals for business and industry, including the tech industry, such as Econ 3, Econ 4 and Econ 5. The purpose of the policy is to support proposals for inclusive growth, research and innovation, and culture and the changes would extend the policy beyond this intended focus. Furthermore, Place Policy 16 West Edinburgh is supportive of a mix of uses in west Edinburgh including office, light industrial and industrial uses, the details of which will be established through the master plan approach, which the Council considers would provide policy support for tech industries. **No modification proposed.**

Edinburgh Napier University (0731)

The Council welcomes support for the policy and considers the policy to be sufficiently flexible. The Council is supportive of working with the University, however, does not consider a specific reference to collaboration and a partnership approach in the policy, with regard to universities, would be helpful and could potentially be restrictive and difficult to implement. In addition, a reference to collaboration is included within the supporting text in paragraph 3.230. **No modification proposed.**

The Council does not consider there is a need to specifically identify the further and higher education institutions within the Edinburgh urban area on the proposals map, as there are no site specific policies that are required to cover these established uses. The Proposal Map does identify Heriot Watt University Riccarton campus as it is covered by a specific policy, Place 21. However, the circumstances are very different as the campus has an important and sensitive relationship with the adjacent green belt. **No modification proposed.**

Leith Central Community Council (0614)

The Council considers the purpose of the policy is to support development proposals being brought forward. The Council considers that extending the Policy’s remit to protect existing social enterprises, business start ups, education, research and innovation would make the policy undeliverable or difficult to implement, particularly where an existing business, due to changes in market trends, was no longer viable. **No modification proposed.**

National Galleries of Scotland (0725)

The Council welcomes support for the policy, however, it considers the references to culture in the policy to be sufficient and further detail to guide implementation is set out in para 3.231. Proposed alteration is too specific to a particular cultural institution. **No modification proposed.**

#### NHS Lothian (0596)

The Council recognises the importance of the health and wellbeing of the population of Edinburgh and as a result there are numerous references to the importance of these issues in the plan, for example a key outcome of the plan is “a sustainable city which supports everyone’s physical and mental wellbeing”. Various measures and policies are included within the plan that will assist, for example, the delivery of a green blue network and the importance of a healthcare appraisal to identify the impacts of the development on healthcare infrastructure. The Council considers the key aims of Policy Econ 1 are to deliver “inclusive” or “good” growth built round two priorities of inclusion and innovation as identified in the Council’s Economy Strategy and referred to in para 3.230. In addition, the policy in criterion a. supports proposals related to poverty and inequality, which are the key causes of negatives impacts on health and wellbeing. As a result, the Council considers an additional reference to health and wellbeing in this policy is unnecessary. **No modification proposed.**

#### University of Edinburgh (0464)

The Council welcomes support for the policy and recognises the important contribution that the universities make to the Edinburgh economy. However, it considers the references to Edinburgh’s universities and colleges in the policy to be sufficient. The policy specifically identifies education, research and innovation in the text as does the supporting text. The Council considers the proposed wording is flexible and would provide support for proposals associated with universities including innovation and learning. More detailed or specific references to universities and their proposals could potentially reduce the flexibility of the policy, carrying the risk of making the policy out of date should plans change making it more difficult to implement. **No Modification proposed.**

The City Centre Transformation Strategy (CD060) aims to change the way we move around the city centre making it more people friendly and inclusive as set out in para 3.7 of the Plan. The Plan supports the aims and objectives of the strategy, and it is identified in criterion b of the Policy. The Council does not consider is necessary to set out further details on the transformation project, to ensure the plan remains flexible to accommodate potential changes to the project as it progresses and in turn this will ensure the policy remains deliverable. **No modification proposed.**

The Council recognises the importance of the University of Edinburgh and its estate. By including the University’s estate within the built up area, there is a general presumption in favour of the expansion of university facilities where the other policy requirements of the plan are met, which provides strong policy support and flexibility. With regard to the Heriot Watt Campus, its green belt location requires a more specific policy approach. The policy supports development only where it accords with an approved master plan. The Council considers such an approach would not be appropriate for the University of Edinburgh estate. **No modification proposed.**

#### Edinburgh World Heritage (0339)

The Council considers the plan needs to be read as a whole. There are numerous policies within the plan that seek to protect Edinburgh’s Heritage as set out in the Environment and design policies section. The Council considers the key aims of Policy Econ 1 are to deliver

“inclusive” or “good” growth built round two priorities of inclusion and innovation as identified in the Council’s Economic Strategy and referred to in para 3.230. As a result, the Council considers an additional reference to Edinburgh’s heritage is unnecessary. **No modification proposed.**

### **Policy Econ 3 Office Development**

#### Aviva Life and Pensions UK Limited (0598)

The Edinburgh city centre as shown on the Proposals Map includes Haymarket. The policy states that high quality office developments will be permitted in the city centre as identified on the Proposals Map. As a result, the Council considers a specific reference to Haymarket in the policy is unnecessary. Furthermore, there is a reference to Haymarket in the supporting text in paragraph 3.234. **No modification proposed.**

#### Crosswind Developments Ltd (0184)

The Crosswinds (H61) site is adjacent to the West Edinburgh Strategic Business Centre. The site is within West Edinburgh and Place Policy 16 applies. This sets out a series of development principles to guide development in West Edinburgh. Criterion o. states that master planning will establish how a mix of uses is distributed across the area. It states that the mix will include offices. Therefore, it would be inappropriate to identify the Crosswinds site as a strategic business centre in advance of this. **No modification proposed.**

#### Elgin Haymarket Limited (0292)

The Council considers the city centre is one of the most accessible parts of Edinburgh, as indicated in paragraph 3.234. Adding a specific reference to ‘20-minute city hubs’ would require an appropriate definition and could create the risk of a less flexible policy. It is unclear how the reference could be incorporated. As a result, the Council does not consider such an alteration would help further support higher density office led mixed use development, and conversely could create confusion and or hinder the application of the policy. **No modification proposed.**

#### Hallam Land Management (0615)

The Council considers a key aim of the policy is to support office development in identified centres where they have excellent accessibility. Where proposals are outwith those defined centres, the policy requires proposals to have high levels of accessibility to public transport and active travel. As the Craigiehall site is in the green belt and does not have good accessibility by public transport or active travel it is not considered a preferable location for office development and therefore is contrary to the purpose or aims of this policy. **No modification proposed.**

#### Juniper Green & Baberton Mains Community Council (0306)

The Council considers there is plenty of evidence, for example reflected by low vacancy levels, to suggest there is continuing demand for office space in the city centre as set out in the Commercial Needs Study: Office Market report (CD034) prepared by Ryden on behalf of the Council. Even post Covid Edinburgh city centre remains a prime location for

office development demand, as reflected in some of the commercial responses received to the Plan. The Plan continues to support further office development in the city centre as it is a prime location for office development due to its proximity to other offices, services and existing public transport hubs, e.g. rail, bus etc giving it excellent accessibility to the Edinburgh population. The policy is supportive of office development in other accessible locations across the city and has been amended to include a reference to commercial centres. The Council considers the Plan should be read as a whole and the Policy as written will be supportive of the 20 minute neighbourhood approach. As a result, the Council does not consider an alteration is required. **No modification proposed.**

Leith Central Community Council (0614)

The Council agrees, and considers the policy as written does not preclude different sizes of offices being provided. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council notes the support for the policy in principle. The Council considers the plan must be read as whole. Matters relating to parking are more appropriately dealt with in the transport policies. Policies Inf7, 8 and 9 address parking. The parking policies are seeking to discourage off street parking. For example, an office development with inclusive parking would be contrary to policy Inf 9 City Centre Public Parking. **No modification proposed.**

LPBZ Commercial Ltd (0391)

Policy Econ 3 is largely carried over from the adopted LDP but with the inclusion of commercial centres as being a preferred location, on the grounds they have good accessibility. A key aim (Aim 10) of the Plan is to deliver Edinburgh's economic land use needs as part of mixed use development. Large business areas such as the Strategic Businesses Centres have the opportunity to provide a mix of uses which will strengthen them and provide benefits in terms of delivering 20 minute neighbourhoods, improving active travel and public transport mode share. Promoting mono use areas runs contrary to the underlying strategy of the plan. The Council does not consider including an exclusion from the sequential provisions of the policy for small scale proposals is justified and it should be noted that proposals below 2,500sq m do not have to provide an assessment of impact. The policy seeks to ensure that proposals outwith the identified locations are in accessible locations to discourage private vehicle trips in the context of the plan's aim to ensure the growth of the city is sustainable and net-zero. That being the case the Council considers the sequential approach is justified. **No modification proposed.**

Melford Developments Ltd (0308)

The requirement for an assessment of impact of proposals on town centres exceeding 2,500 sq m only applies to proposals in "other accessible mixed use locations". It does not apply to proposals in the city centre. **No modification proposed.**

Archie Clark (0003)

The Council considers there is continuing demand for office development in the city centre as set out in its response to 0306 above. The Council considers the strategy of the plan

seeks to support office development throughout the city on strategic business centres, in designated centres and in other accessible locations which will assist in delivering 20 minute neighbourhoods. **No modification proposed.**

Scottish Property Federation (0144)

A key aim (Aim 10) of the Plan is to deliver Edinburgh's economic land use needs as part of mixed use development. As referred to in paragraph 3.235 the Council considers the city centre in particular has an opportunity to provide office development as part of other developments. This is important given the low vacancy rate of offices in the city centre and the demand for additional high quality office floorspace. A further reference to a mix of uses can also be found in Policy Place 1 Edinburgh City Centre. Therefore, the Council considers it reasonable to seek office floorspace as part of mixed use development. **No modification proposed.**

Shelborn Edinburgh Limited (0732)

Matters relating to the quality of internal office floorspace for the purposes of ensuring staff well being are more appropriately dealt with in terms of building standards requirements. **No modification proposed.**

The Institute of Chartered Accountants of Scotland (0182)

Haymarket yards is within the City Centre boundary, as defined on the proposals map, at Haymarket and is considered a prime office location. The Plan is supportive of office development within the city centre and there is a reference to Haymarket in para 3.234. The Council considers a specific reference to development at Haymarket yards as a key city centre destination is unnecessary, as the plan already captures the importance of the Haymarket area as a whole. **No modification proposed.**

The Council considers the inclusion of a policy within the plan protecting the loss of businesses would be very difficult to implement and could hinder investment in new developments. The Council consulted on a loss of office approach in Choices for City Plan 2030 and received a lot of objection from the development industry. The council considers the policies in the plan, Econ 3 Office Development and Place 1 Edinburgh City Centre, provide the right balance supporting office development and compatible uses in the city centre. **No modification proposed.**

Edinburgh World Heritage (0339)

The Council considers the plan needs to read as a whole. There are numerous policies within the plan that seek to protect Edinburgh's Heritage as set out in the Environment and design policies section. As a result, the Council considers an additional reference to Edinburgh's heritage is unnecessary. **No modification proposed.**

**Policy Econ 4 Business and Industry Areas**

Brain Tiplady (0641)

Policy Econ 4 has been carried over from the previous adopted LDP (CD039) and therefore is established development plan policy. It seeks to protect existing business,

industry and storage sites identified on the Proposals Map from changes of use that would result in loss of floorspace for these uses. The Council considers the plan should be read as a whole. Matters related to travel and access to public transport etc are more appropriately covered by the transport policies set out in the plan. For example, Policy Inf 5 requires proposals that are likely to generate significant travel demand to be on suitable sites with very good accessibility by sustainable transport. As a result, the Council considers alterations to Policy Econ 4 to address travel is unnecessary. **No modification proposed.**

Diana Cairns (0452)

Policy Econ 4 has been carried over from the previous adopted LDP (CD039) and therefore is established development plan policy tested at Examination. It seeks to protect existing business, industry and storage sites identified on the Proposals Map from changes of use that would result in loss of floorspace for these uses. The Council considers it would be too inflexible and presumptuous to specify in the policy the specific types of uses that would be acceptable on the Sir Harry Lauder Road site. Proposals should be considered on a case by case basis through the planning application process, which will give adequate opportunity to consider a wide range of planning issues including environmental impacts. **No modification proposed.**

Cinnamon Sedge Ltd (0594)

The Royal Elizabeth Yards (REY) is a long established historical use within the Edinburgh green belt. The buildings were constructed as a depot to supply Royal Navy ships at Port Edgar just after the World War 2. The Council does not consider the REY is comparable to the Royal Bank Headquarters which is identified as an Area of Economic Importance, and is a high quality development located within a Special Landscape Area, with excellent accessibility from a range of sustainable transport modes, in particular the Edinburgh tram. The REY site was identified as part of the green belt in the current adopted LDP (CD039), which was subject to examination. The site and its current use remain unchanged since the last plan was prepared so there has been no material change in circumstances that justify removal of the site.

Scottish Planning Policy in paragraph 49 states that development plans may designate a green belt around to city to support the spatial strategy by “directing development to the most appropriate locations and supporting generation” and “protecting and enhancing the character, landscape setting and identity of the settlement”. The draft NPF4 (CD099) continues to set a similar context for green belts. Whilst it is recognised that this site is not visually prominent and enclosed by woodland the Council considers it would be inappropriate to remove the site from the green belt as it forms part of a continuous swathe of green belt from Queensferry to Cramond and needs to be viewed in that context.

The REY is already currently operating as business and industrial use and has been since 1996 within its green belt setting. Its current location within the green belt does not prevent the business operating in its existing form. However, the REY is not in a location where the Council would normally support such a use, and with regard to the greenbelt would prefer to direct this type of development to a more appropriate urban location. It is in a remote location, with poor quality local road connections to the strategic network. It does not have good accessibility by sustainable transport modes and as a result is not in a location where the Council would intentionally seek an intensification of the use.

Allocating the site under Policy Econ 4 would shift the policy position significantly, provide strong policy support for the existing use and create the risk of the policy supporting the expansion of the existing use. The change would also create inconsistency with Policy Env 18 which does not support intensification of a use not associated with a countryside use. In addition, the Policy is intended to support business and industry uses within the urban area, and this alteration would result in support for such a use on a site in a rural location, creating the risk of setting a precedent for other similar proposals in other remote locations with poor accessibility by sustainable transport modes.

The Council considers the impact of the Plan's strategy with regard to the displacement of businesses is not as significant or extensive as alleged in the representation and its position is set out in further detail in its responses in Issue 3 Delivery of the Strategy. In addition, the proposed brownfield development sites identified within the Plan which currently have business uses on them are being promoted for mixed use housing led development and not just housing development, which is a fundamental part of the strategy.

The Council considers there is sufficient business and industrial land to meet Edinburgh requirements. The Plan continues to identify 1675ha of land for employment purposes across Edinburgh as shown in the Appendix to Issue 3 (CD144) through a range of sites in various locations. Although 46 ha of land has been taken up since the SDP was approved there is still 144.5ha of vacant employment land available for this type of development. The total land identified on the Plan Proposals map as 'Business and Industry Area', is approximately 483ha (CD144).

The Council acknowledges that there may be some businesses that have to relocate as a result of the redevelopment of brownfield sites such as class 5 developments which are not appropriate in a residential environment and the Council has identified additional vacant land (40.3ha) at Newbridge Industrial Estate in the form of an extension to the West. There is also 12ha of land still available within the existing Newbridge Industrial Estate that could accommodate relocating businesses. In addition there is existing Business and Industrial land identified at Brunstane (8.6ha) and Seafield, Site EW1d (26 ha) that could potentially accommodate some relocated businesses. This gives a total of approximately 87ha of land for potential industrial relocation. In contrast the total size of the existing 15 industrial/workshop sites identified for development in the Plan is just 22.4ha. As a result, the Council considers that the development plan does have a mitigation strategy for the impacts on businesses that are unable to be retained within redeveloped sites. As a result, the Council does not consider there is a need to identify further business and industrial land. The Council's position with regard to the use of compulsory purchase powers is set out in detail in its responses in Issue 3 Delivery of the Strategy, but in summary the Council considers the use of CPO is unlikely. **No modification proposed.**

#### Gibson Fitness Ltd (0122)

Pentland Gait is identified as an existing Business and Industrial Area on the Proposals Map. As a result, it is covered by Policy Econ 4 in the plan which seeks to retain these sites for business, industrial or storage development. Office development is supported on these sites and offices can also be found on other sites designated as Business and Industrial Areas, for example, the Sighthill Industrial Estate has a number of offices within it on Mid New Cultins. The purpose of Policy Econ 3 is to support office development

within designated centres or in other accessible mixed-use locations, where it can be demonstrated that designated centres are unavailable or unsuitable. It would be inappropriate to apply the Policy Econ 3 to Pentland Gait. Policy Econ 4 also seeks to prevent changes of use that would result in loss of business and industrial floorspace, an aspect of the policy that would not apply if the site was identified under Policy Econ3. As a result, the Council does not support an alteration as proposed. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

Policy Econ 4 applies to larger industrial areas and smaller industrial estates across the city which it seeks to retain for business and industrial uses. It is not intended that the policy be applied to small brownfield sites across the city. A key aspect of the Plan's strategy is to support the redevelopment of brownfield sites for mixed use housing led development and the plan has allocated a range of sites across the city in order to deliver this. This will help to bring forward new business and industrial units as part of housing development which will help to deliver 20 minute neighbourhoods. The Council is not convinced that allocating smaller brownfield sites under Policy Econ 4 will assist in preventing commuting as envisaged by the representor. **No modification proposed.**

Royal Mail Group Limited (0501)

Policy Econ 4 applies to larger industrial areas and smaller industrial estates across the city which it seeks to retain for business and industrial uses. It is not intended that the policy be applied to individual existing business sites across the city. The strategy of the Plan is to support sustainable growth of the city and meet net zero objectives. One of the aims (aim 2) of the plan to help achieve this is to direct new development to and maximised use of brownfield rather than greenfield land. Whilst the Royal Mail Group may need their existing sites for current business requirements, those requirements may change over the life-time of the plan. By identifying these sites for potential redevelopment for housing led mixed use development the plan is showing its support for future redevelopment of these sites should they become available. By identifying these sites as industrial sites under Policy Econ 4 the plan would restrict these sites against changes of use to mixed use housing led developments, which would sit at odds with the wider objectives of the plan. As a result, the Council does not consider it justified to identify these sites under Policy Econ4.

The Edinburgh West Delivery Office at 21 South Gyle Crescent is within the Edinburgh Park Business Centre and therefore is covered by Place policy 19. This policy seeks to maintain the strategic employment role of the area. The office is within area EP5 and it states in criterion d that this area should remain in predominantly business and industrial use. Therefore, the Council considers the policy position already supports the existing use and would not support the reuse of the delivery office for housing. **No modification proposed.**

The Royal London Mutual Insurance Society Ltd (0149)

The Plan has identified site H55 Seafeld for mixed use housing led development in accord with the aims of the plan to seek mixed use development across the city seeking to maximise the use of brownfield land. The Seafeld site is identified as a strategic site within the plan. Place Policy 15 states that a Place Brief will be prepared for this site and

that key stakeholders will be consulted as part of the process of preparing the brief. Place 15 sets out a series of development principles to guide development. Criterion a makes it clear that a mixed-use urban extension is being sought. The Council acknowledges the existing real estate within Royal London's ownership and considers that the redevelopment of the site provides the opportunity to incorporate such uses as part of the redevelopment. However, the Council considers that the redevelopment of the site and its master planning needs to be done in a comprehensive and wholistic manner. This will require consideration of the various existing uses, distribution of proposed uses, environmental constraints and the need for good placemaking and the importance of embedding 20 minute neighbourhood principles in order to achieve a cohesive place. Allocating the Royal London real estate under Econ 4 would prevent the reuse of that part of the site for residential development, which may not be the optimal arrangement for the site as a whole. Therefore, as a result, the Council does not consider identifying the existing Royal London real estate under Policy Econ 4 is desirable and it could compromise the overall redevelopment of the site. **No modification proposed.**

### **Policy Econ 5 Employment Sites and Premises**

Steve Loomes (0767), Barratt David Wilson Homes (0677), Homes for Scotland (0404)

The Council considers the Policy is entirely consistent with the strategy of the plan which seeks to redevelop brownfield sites for mixed use housing led development. Policy Econ 5 makes a specific reference to supporting mixed use development in criterion c. The Council considers the displacement of businesses is not as significant or extensive as alleged in representations and its position is set out in further detail in its responses in Issue 3 Delivery of the Strategy. **No modification proposed.**

Abrdn (0425)

Policy Econ 5 is an amended version of Policy Emp 9 in the adopted LDP. The policy has been amended so that proposals for a change of use are required to retain some business and commercial uses on all sites and not just those over 1ha. This is to ensure the policy is consistent with the overall strategy of the plan to seek to deliver mixed use development on all sites across the city as part of the process of delivering 20 minute walkable neighbourhoods. The Council considers the policy includes sufficient flexibility to allow residential only development where justified. Criterion c states that proposals should include floorspace for business and commercial uses "where appropriate in the context of the site and the urban environment". The policy sets out requirements. Any exception to this will be considered through the planning application process. Section 25 of the Town and Country Planning (Scotland) Act 1997 (CD101), allows for material considerations, including viability, to be considered on a case-by-case basis. Sites and proposals vary in nature and not all policies of the development plan will be applicable to each proposal. The requirements of the development plan should be taken into account in negotiations. Therefore, the Council does not consider it necessary to have a reference to viability information in the policy. **No modification proposed.**

Mr T Klan (0307)

The purpose of policy Econ 5 is to support development for employment purposes on existing business and industrial sites or to support changes of use on such sites in certain circumstances. Policy Econ 5 is intended to apply to urban areas only. Removing the reference to urban area would mean that if a planning application was submitted for the

change of use of an established industrial use to residential and the site was within the greenbelt or countryside area, then the policy would in principle support such a change. However, that would mean the policy would then be inconsistent with the requirements of Policy Env 18 Development in the Green Belt and Countryside. **No modification proposed.**

Melford Developments Ltd (0308)

The policy applies to existing business sites within the city that are not covered by Policy Econ 4 or allocated formally in the Plan. The Council considers the policy as written clearly articulates the requirements with regard to mixed use developments. **No modification proposed.**

Scottish Property Federation (0144)

The policy as written does not require all sites to be redeveloped for mixed use purposes. The first sentence of the policy states that planning permission will be supported for employment purposes on existing business or industrial sites i.e. it is supportive of retaining sites for these uses. The Council does not consider it pragmatic to seek a blanket protection of sites or existing uses. Market requirements change and existing real estate becomes out of date over time. **No modification proposed.**

It is only where proposals are being brought forward for changes of use that the Council is seeking mixed use development. In addition, criterion c has a caveat with regard to mixed uses which states “where appropriate in the context of the site and the urban environment”. As a result, the policy could allow alternative mono uses and there is an opportunity for developers to justify that on a case by case basis. Therefore, the Council does not consider the policy would threaten to remove key commercial sites from the city centre. **No modification proposed.**

Tarmac (0244), Hallam Land Management (0615)

Policy Econ 5 is an amended version of Policy Emp 9 in the adopted LDP (CD039). The Council considers removing the reference to “in the urban area” would have significant negative consequences for the reasons set out in its response to 0307. **No modification proposed.**

**Policy Econ 6 Hotel Development**

Cockburn Association (0777)

Policy Econ 6 sets out the Council’s position on hotel developments and Policy Econ 2 sets out the Council’s position with regard to mixed use development. Where a proposal for a hotel is being brought forward on a site larger than 0.25ha, developers should incorporate housing where compatible and appropriate in the context of the site. On smaller sites Policy Econ 2 would not apply. The Council considers that the policy requirements are clear. **No modification proposed.**

Cramond & Barnton Community Council (0243), Brian Tiplady (0641)

The Council commissioned consultants to prepare a review of the visitor accommodation sector when preparing the Plan (CD032). A reference to the study is included in paragraph 3.242. The study shows that despite a significant growth in hotel bedroom supply, the hotel market has performed exceptionally well, i.e. there has been a growth in demand that has taken advantage of the growth in supply. As a result of Covid, the consequences of which were felt after the study was published, there has been an impact on tourism. The Plan has acknowledged this in the supporting text in paragraph 3.243, however, the Council's expectation is that the impacts will fade over the next few years and the market will continue to grow. Therefore, the Council has updated the policy to support hotel development in designated centres (criterion c.) reflecting the fact that the opportunity for additional hotel development within the city centre is decreasing. Although the policy refers to hotels, it will apply to a range of different types of visitor accommodation. The policy does not cover short term holiday letting but the Council's position on this is covered by Policy Hou 7 Loss of Housing. **No modification proposed.**

#### Crosswind Developments Ltd (0184)

The boundary of West Edinburgh is shown on Map 25 within the plan and the Crosswinds site (H61) is within the boundary of West Edinburgh. The Council considers the plan needs to be read as a whole and that additional references to place policies within Policy Econ 6 is unnecessary. **No modification proposed.**

#### Living Streets Edinburgh Group (0486)

The Council considers the plan needs to be read as a whole. Policies with regard to parking are set out in the Infrastructure and Transport Policies section. Policies Inf 7-9. **No modification proposed.**

#### VisitScotland (0689)

Any proposal for a hotel would be covered by class 7 of the Town and Country Planning (Use Classes) (Scotland) Order 1997 (CD105). It is not feasible to use planning policy to specify the type and quality of hotel that the strategy of the plan is seeking. **No modification proposed.**

#### Hallam Land Management (0615)

Policy Econ 6 sets out the Council's position with regard to hotel development. It applies within the boundaries of the airport, the Royal Highland Centre and West Edinburgh all of which are highly accessible by sustainable transport modes. It also applies to defined centres or accessible locations within the urban area. The policy seeks to support hotel development in highly accessible locations not rural locations. The proposed additional clause or removal of reference to "urban area" would introduce the risk of proposals being brought forward in remote locations with poor access to sustainable transport modes contrary to the aims of the policy. **No modification proposed.**

#### T Klan (0307)

The Council considers the policy applies to the urban area for the reasons set out in its response to 0615. **No modification proposed.**

#### Edinburgh World Heritage (0339)

The Council considers the plan needs to be read as whole. It is impractical to refer to the historic environment in numerous policies. The historic environment is covered in the Environment and Design policies section. **No modification proposed.**

#### **Policy Econ 7 Goods Distribution Hubs**

##### Juniper Green & Baberton Mains Community Council (0306), Archie Clark (0003)

The policy seeks to support goods distribution hubs in appropriate locations in Edinburgh. The policy does not specify that proposals are road or rail based. Therefore, the rail network could play a role in developing this. **No modification proposed.**

##### Leith Central Community Council (0614)

The Council considers the policy as written would be supportive of on street logistics hubs as it states that proposals for smaller sub- city scale neighbourhood goods distribution hubs will be supported provided they meet a number of criterion. It would not be appropriate for the policy to identify specific details as smooth pavements etc. The Council considers that criterion h. covers benefits to pedestrians through its reference to active travel. **No modification proposed.**

##### Hallam Land Management (0615) (Stuart Szylak)

The Council does not agree that there has been no real consideration of logistics and distribution hubs. Policy Econ 7 is a new policy and seeks to support logistics hubs within the urban area, or on relevant business and industrial areas with good accessibility. The Council does not consider rural locations such as Craigiehall as appropriate for a such a facility due to the lack of accessibility by sustainable transport modes. **No modification proposed.**

#### **Economy General**

##### Defence Infrastructure Organisation (0124)

Part 27 of the Town and Country Planning (General Permitted Development) (Scotland) Order 1992 (CD106) sets out a range of permitted development rights that apply to or on behalf of the Crown, and by extension the MOD. These rights allow the MOD to enhance or alter military sites for military purposes without planning consent. Where proposals for development are brought forward adjacent to military sites the Council will consider any potential conflicts as part of the process of considering the application. Where an existing military site such as Dreghorn barracks is located within the urban area the existing policies within the plan would be supportive in principle of the redevelopment of the site for appropriate alternative uses such as residential development should the military no longer require the site. In addition, the Council is willing to formally allocate military sites for redevelopment where the MOD considers sites are no longer required for their purposes and the site H367 Redford Barracks is an example of this. As a result, the Council does not consider there is justification for a specific policy within the plan that covers military sites or adjacent areas. **No modification proposed.**

#### LPBZ Commercial Ltd (0391)

The Council when preparing the Plan commissioned Consultants to prepare a Commercial Needs Study. This resulted in the publication of four papers covering the industrial market (CD035), the office market (CD034), retail and leisure (CD033), and visitor accommodation (CD032). In addition, the Council Commissioned Ryden to subsequently prepare a Mixed Use Delivery report (CD036) to update the 2018 Commercial Needs Study: Industrial Property Market report and to consider the impacts of Option 1 of Choices for City Plan 2030. Option 1 was to deliver all development within the urban area. The Council considers the findings of the report helpful for its purpose of understanding the overall implications of the Plan development strategy in terms of its impact on employment land. The Council's view is that the approach and policies set out in the Plan seek to minimise the loss of employment uses and is expected to have overall positive benefits overall compared to the existing policy position set out in the adopted LDP. The impacts of the specific developments on employment land will be considered at the time of proposals coming forward. For example, many businesses may be capable of being rehoused in smaller but more efficient units better suited to modern business needs. The Ryden report (CD036) points out on page 3 that "demand is strong for modern space, smaller units". In addition, some of the businesses may have already chosen to relocate and or existing units may be vacant, for example site H59 was allocated on the basis that the occupier had chosen to relocate. As a result, the Council does not agree that further detailed analysis of the impacts should be undertaken. The Council does not agree that it is possible to conclude at this time with any certainty there are going to be significant impacts of the development strategy on employment land. **No modification proposed.**

#### Lorraine Smith (0462)

Policy Econ 1 states that proposals for development associated with culture will be supported in principle. Paragraph 3.231 states that proposals relating to culture will be expected to be associated with relevant matters including the "Scottish Arts". As a result, the Council considers the plan takes cognisance of the Arts and seeks to support them as part of the development plan strategy. **No modification proposed.**

#### **Economy Table 13**

#### Royal Highland & Agricultural Society of Scotland (0482)

The Council acknowledges that the planning application referred to in Table 13 makes reference to "hotel(s)". The Council has no objection to a minor correction should the reporter/s be minded to alter the plan accordingly. Minor non-notifiable modification proposed.

The reference to the safeguarding of land at Norton Park for the long term relocation of the Royal Highland Centre is in the context of NPF3 as referred to in Place 20 Royal Highland Centre. The Plan must continue to safeguard this site until such time as this requirement is dropped by NPF4. **No modification proposed.**

#### Lynn Grattage (0362)

The reference in Table 13 to the NPF3 and West Edinburgh set out the factual position. A range of transport measures in West Edinburgh are identified within the plan in Table 8 to

address the traffic impacts as a result of development. The Plan, in Place Policy 16 requires development in West Edinburgh to accord with the West Edinburgh Development Principles, and master planning. This will set out the development requirements to mitigate any impacts associated with the airport. **No modification proposed.**

**Reporter's conclusions:**

**Reporter's recommendations:**

<b>Issue 36</b>	<b>Commercial Development</b>

<b>Provision of the development plan to which the issue relates:</b>	This policy sets out a requirement that proposals for commercial uses include a proportion of housing development.			
<b>Planning authority's summary of the representation(s):</b>				
<p><b>Policy Econ 2 Commercial Development</b></p> <p><u>Steve Loomes (0767), Barratt David Wilson Homes (0677)</u></p> <p>The Plan proposes to displace a significant number of active businesses so their current sites can be repurposed for housing development. This Policy gives those displaced businesses the additional problem of having to also ensure 50% of their new site is also used for housing development.</p> <p><u>Ambassador Group (0683)</u></p> <p>Delete policy for following reasons;</p> <ul style="list-style-type: none"> <li>• 50% requirement for housing would have significant viability implications on land uses other than residential housing.</li> <li>• The provision of facilities and services in commercial developments usually involve a number of fixed costs spread over a large number of units.</li> <li>• 50% requirement would significantly reduce floorspace that could be provided for commercial development because residential development has significantly more policy requirements than that of other uses, e.g. Hou3.</li> <li>• Lack of evidence as to why 0.25ha was chosen. It would be difficult to accommodate two use classes on a site of that size, that is before shape,</li> </ul>				

orientation and constraints to development are taken into consideration.

- Inefficient use of land. Proposals should seek to maximise density of development to sustainably accommodate the city's population. Therefore policy conflicts with Council's objective of maximising density and making efficient use of land.
- The negative impact from this policy would be exacerbated if residential housing demand dropped over the plan period as a result of an economic downturn. This would prevent other uses coming forward which could otherwise stimulate the economy and meet certain needs. In the current situation where the impact on the housing market from the COVID-19 lockdown is uncertain, policies need to be flexible so that there are not burdensome barriers in place which will stifle the economy.

#### AREAA (0358)

Delete policy for following reasons;

- There are inevitably instances where commercial uses may require a development footprint of 0.25ha or above and would seek a site sized accordingly. To introduce a requirement to develop 50% of that site for housing would at least double the site size required to accommodate the prospective development once the residential element was incorporated. When additional elements required by other LDP policies such as open space/gardens this might increase more.
- It would require commercial developers to deliver housing, either directly or with a development partner. In the case of the former it might be beyond their skillset and in the latter would introduce an unknown element and in turn risk to the commercial developer.
- No clarity is provided in relation to what might constitute incompatibility between uses and appropriateness within a site context. These would not be straightforward criteria to define. The result is uncertainty and a lack of clarity as to what would be policy compliant or what might be a departure from the development plan.

#### Aviva Life and Pensions UK Limited (0598)

Appreciate that housing is a fundamental need, and that the principle of the Proposed Policy is to assist in delivering the residential unit numbers required to meet predicated housing demand, Aviva submit that the Proposed Policy has the potential to inhibit investment to the city, as well as the provision of much needed commercial development uses.

To ensure that commercial investors continue to see Edinburgh as an attractive destination, and to assist in stimulating and sustaining the growth of the city economy, Aviva would encourage the Council not to apply a blanket approach such as that which is proposed by Policy Econ 2 and to continue to consider each commercial development opportunity on a site 0.25 Ha or greater on case by case basis.

If Policy Econ 2 is carried forward suggest that the Council caveat the Policy to state that viability information will be accepted, and will be a material consideration, when commercial proposals on sites 0.25 Ha or greater are assessed by the Council, if applicants can sufficiently demonstrate that they are financially unable to provide at least 50% of the site for housing.

#### Creos Property Limited (0253)

As Edinburgh recovers from the effects of the Covid-19 pandemic, the policy framework within the City Plan 2030 should play a key role in attracting further investment to the city, to assist in growing of the city economy, creating new job opportunities and will ultimately deliver successful, vibrant places. Therefore, encourage the Council to have a flexible and supportive policy approach in the Plan in relation to assessing proposals for commercial development.

Creos do not consider that all commercial development proposals on sites greater than 0.25 Ha should have to deliver at least 50% of the site for housing. Residential development will not always be compatible with commercial uses and Creos encourage the Council not to adopt the blanket policy approach as proposed by Policy Econ 2 into the City Plan 2030. Instead, suggest that the Council continue to consider commercial development proposals on sites 0.25 Ha or greater on a case-by-case basis. In order to create successful and attractive commercial developments, they are required to be complimented by high quality landscaping and public realm provision, which can include access, the creation of linkages to neighbouring developments and car and cycle parking. In addition, commercial developments are often supported by ancillary uses, such as food, drink and leisure offerings. Policy could inhibit investment to the city, as well as the provision of much needed commercial development.

Policy Econ 2, which restricts the quantum of commercial development that can be delivered on sites 0.25 Ha or greater, are potentially in conflict with, and undermine the principle of Policy Econ 6. The supporting text for the Policy Econ 6 notes the importance of hotels to the success of the city economy and to stimulating the growth of the tourism sector.

#### Crosswind Developments Ltd (0184)

The requirement to provide at least 50% of a site for housing on sites over 0.25 ha is an unreasonable request for developments and is likely unachievable. The site size threshold is too small and will render most developments unviable. This policy may be acceptable for Major Developments but it should be subject to a viability test. Whilst it is noted the policy states “where compatible and appropriate”, this is not significant enough flexibility.

#### Elgin Haymarket Limited (0292)

Object to the requirement to provide at least 50% housing on all proposals for commercial uses on sites greater than 0.25ha. This is a baseless reference and will encourage housing development in unsuitable locations across the city, at the expense of other more appropriate uses. The blanket approach proposed by this suggested policy wording will undermine, rather than facilitate, place-making and the wider Aims of the plan and its Spatial Strategy.

#### Forth Ports Limited (0496)

Revise approach supporting residential development as part of commercial development where the proposed land use, nature of development and site characteristics are compatible with residential development. Revised approach requires to ensure economic, community, public benefit and economic viability are considered. Approach should

exclude classes 5 and 6 proposals and recognise it would not be appropriate to apply to all locations including Port of Leith. Revise for the following reasons;

- No justification for setting a threshold of 0.25 ha to the application of the Policy. It takes no account of the proposed nature of the land use.
- Policy fails to recognise that residential development is not appropriate in a range of developments and has potential to stifle and prevent non-residential development.
- Policy and Glossary do not define 'commercial development.' Whilst examples are provided, it is unclear what uses it is expected to cover and is open to interpretation.
- It would be not appropriate to support such development within the Port of Leith as this would conflict with its statutory and legal obligations and duties.
- Policy does not take into account; location, character of area, character of site, wider economic/community/public benefits of commercial development, amenity considerations, impact of developer contributions.

Lady Road Investment S.A.R.L. (0625), LaSalle Investment Management (0262)

Encourage the Council not to apply a blanket approach and would suggest that the Council instead continue to consider each commercial development on a site 0.25 Ha or greater on case by case basis. Policy has the potential to inhibit investment, and provision of much needed commercial development uses. To ensure investors continue to see Edinburgh as an attractive destination and assisting growth of the economy suggest policy is not progressed. If policy taken forward encourage the Council to caveat the policy to state viability information will be accepted and will be a material consideration.

Lidl Great Britain Ltd (0181)

Delete policy for the following reasons;

- Policy is illogical and fails to recognise the realities of the development process. For example, if a site is 0.75ha is suitable for mixed residential and retail, and a single application is submitted and 0.35ha is for retail and the remainder for housing then the policy tests would be met. However, if the land is in two ownerships then it would be normal to submit two applications, and if that happened and one was only for retail for 0.35ha then it would fail the policy. No clear what is meant by "50% the site". Wording cannot address the scenario where site is used for ground floor retail and associated requirements with residential above. Correct approach is to set the mixed use requirement in development briefs and combine with a policy seeking mixed use communities.
- Policy fails to consider existing single use areas e.g. business parks. The redevelopment of any part of these sites would require residential development to be provided which would be bad planning. A residential use would conflict with adjoining uses and create a poor residential environment.

- Policy fails to provide a basis for interpreting the policy to the public and development industry. Policy states “where compatible and appropriate” which may appear to address the previous point, but the policy provides no basis to allow developers to determine the basis on which exceptions to the policy would be permitted. Essential that this is set out. One approach would be to identify on the proposals map where the policy would or would not apply, and where is does the factors relevant to consideration of the policy.
- Policy fails to recognise the crucial importance of non-residential land uses within the City. For Edinburgh to be a successful, thriving and sustainable city, it must promote and support the full range of other commercial uses. The effect of this policy is to promote residential development at the cost of these other types of development. If the Council insists on this approach it should be a policy that requires all development proposals (i.e. including residential) to provide a specified portion of land for different land uses and not a single use. In this way the policy would ensure that that the city is not dominated by residential which is, after all, the largest single mono-use present in the city. However, this is not a sensible approach. The correct approach is that any proposed development of a site of any size is to consider the land use context in which the proposal is located, the need for different types of use within the City (including both residential and commercial uses, as well as open space, community uses etc) and the benefits of providing mixed-use neighbourhoods to support sustainable communities. Draft Policy Econ 2 fails to do this.
- Policy will result in sterilisation of land, increasing vacancies and dereliction. One potential outcome is developers will acquire sites twice as large as required and not implement the proposed housing, which will have implications including driving down land values, creating areas of vacant land etc. The only development encouraged by this policy is residential and this will reduce the mixed character of the city i.e. the opposite of the stated aim.
- No evidence provided that supports the need for this policy or the aim of mixed uses cannot be achieved through more general policies and development briefs.
- The minimum area (0.25ha) is irrelevant and too low to the stated aim of the policy. A commercial development on a site as small as this will not have impact in adversely affecting the character of the surrounding area as a result of a “mono use”. If there is an intention to adopt a policy along the lines of Econ 2 the minimum size should be 0.75ha.

#### LPBZ Commercial Ltd (0391)

The threshold for Policy ECON2 is far too low and would suggest that either the site area is increased, or the percentage of housing required decreased in order to encourage investment and jobs within Edinburgh City’s boundary. For example, the former casino site at 2 Ocean Drive is 0.6ha in total so this site would meet the requirement to provide 50% housing if a commercial use was brought forward. This would not allow LPBZ to provide the quantum of space required within the constraints of other policies within the plan and therefore this location, which is also close to their other office buildings and

would assist the expansion of an existing business, would no longer be a viable option for LPBZ.

Plan does not include a definition of what is considered to be “Commercial Development”. This needs to be clarified in order to establish if office/business development is covered by Policy ECON2.

Melford Developments Ltd (0308)

Delete policy. If Council is confident it has sufficient housing land then this policy is not required. It is debatable whether the Planning Authority can influence land-use and commercial decisions in this way. Such a policy requirement is unrealistic for many sites / premises and will be unachievable. It is not clear where the threshold of 0.25 ha is derived or where the figure of 50% of the site for residential development comes from.

Mr T Klan (0307)

Add the following text to the policy ,‘within the urban area or on suitable greenfield sites ...’. There are many existing business premises not within the urban area. There will be many more enterprises or businesses that may want or need a more peripheral or out of centre location. This is particularly the case if the Council’s aspiration of relocating existing business and industry uses to facilitate brownfield housing development. This policy will restrict further the availability of employment land and premises, to the detriment of the economic growth of the city.

Parabola Edinburgh Limited (0723)

Parabola agree that housing is a fundamental need, and understand that the principle of Policy is to assist in delivering the residential unit numbers required to meet predicated housing demand. However, there is a concern that the Proposed Policy has the potential to inhibit investment to the city and it is suggested that the Council instead continue to consider each commercial development on a site 0.25 Ha or greater on case by case basis.

Scottish Property Federation (0144)

The council should also not be rigid in its approach to requiring housing as part of retail or leisure developments as proposed under Econ 2 and referred to in paragraph 3.176. The challenge of making such developments viable at all brings this policy into question. The Plan must focus on what is deliverable. Therefore the requirement for commercial developments above 0.25 h.a. should not have to provide affordable housing contributions. We would prefer any requirement for affordable housing contributions to be done on a selected basis, in discussion with potential commercial developers where the council believes there is a viable case for affordable housing contributions.

Policy does not recognise the impact of 50% housing, of which 35% must be affordable, will have on viability of commercial developments. Whilst the policy has a caveat, where compatible with the site, nevertheless consider it will be viewed negatively by investors. Policy has an extremely low threshold of 0.25ha which is little more than one or two floors in a traditional office block. It’s a blunt instrument and only City of Westminster Council has a similar policy. 50% requirement should be dropped. At the very least the threshold

must be significantly increased.

Shelborn Edinburgh Limited (0732)

Encourage the Council to have a flexible and supportive policy approach in the emerging City Plan 2030 in relation to assessing proposals for commercial development. Do not agree that all commercial development proposals on sites greater than 0.25 Ha should have to deliver at least 50% of the site for housing. Residential development will not always be compatible with commercial uses and therefore encourage the Council not to adopt the blanket policy approach as proposed by Policy Econ 2. Instead, suggest that the Council continue to consider commercial development proposals on sites 0.25 Ha or greater on a case-by-case basis.

To create successful and attractive commercial developments, high quality landscaping and public realm provision is required, which can include access, the creation of linkages to neighbouring developments and car and cycle parking. Often commercial developments also require supporting ancillary uses, such as food and drink or leisure offerings. The requirement for 50% residential may have potential to compromise the quality of commercial developments and provision of infrastructure/facilities required to create a sense of place. Policy could inhibit investment. Suggest policy is not progressed. If it is progressed request Council clarify what sites would be “compatible” and “appropriate” for housing and would encourage the Council to caveat the proposed Policy to state that viability information will be accepted, and will be a material consideration.

The interpretation of Policy Econ 2 in relation to Drummond House and the Younger Building also needs to be balanced against the requirements of Policy Econ 3. There is the potential for confusion as to which policy takes primacy in this instance, especially given the focus for office development in the strategic business centres.

The Institute of Chartered Accountants of Scotland (0182)

Appreciate that housing is a fundamental need, and that the principle of the Proposed Policy is to assist in delivering the residential unit numbers required to meet predicated housing demand, however, the Proposed Policy has the potential to inhibit investment to the city, as well as the provision of much needed commercial development uses. To ensure that commercial investors continue to see Edinburgh as an attractive destination, and assist in stimulating and sustaining the growth of the city economy, ICAS would encourage the Council to consider each commercial development on a site 0.25 Ha or greater on case by case basis, as opposed to applying a blanket approach such as that which is proposed by Policy Econ 2.

If Policy is carried forward into the City Plan 2030, alternatively suggest that the Council caveat the Proposed Policy to state that viability information will be accepted and will be a material consideration.

The Royal London Mutual Insurance Society Ltd (0149)

Delete policy and revise the approach which should be more flexible, supporting opportunities for residential development as part of commercial development proposals where, the proposed land use, nature and form of development, site characteristics including physical and environmental constraints and opportunities as well as the needs

for other land uses are compatible with residential development. The revised approach requires to ensure that economic, community and wider public benefit of the intended land use as well as economic viability to be considered. The approach should exclude proposals for development in Use Classes 5 and 6 and recognise that it will not be appropriate to apply the policy in all locations including in proximity to established business and industry areas, where its implementation would conflict these uses. The policy fails to recognise sufficiently that residential development is not appropriate in a range of developments and has potential to stifle non residential development. No definition of 'commercial development' in policy or glossary. Policy does not take into account a number of factors including; location, character of area, benefits of commercial development, amenity considerations, financial impact of developer contributions, change of use etc.

#### Tiger Developments Ltd (0602)

Delete policy. The Council should not to apply a blanket approach and would suggest that the Council instead continue to consider each commercial development on a site 0.25 Ha or greater on case by case basis. The Proposed Policy has the potential to inhibit investment to the city, as well as the provision of much needed commercial development uses. If policy taken forward alternatively encourage the Council to caveat the proposed Policy to state that viability information will be accepted and will be a material consideration when determining commercial proposals.

#### Unite Group PLC (0628)

Modify policy and supporting text add additional flexibility. Unite not adverse to principle of student schemes delivering market and affordable housing, however, this should only be required as part of larger development schemes and not a blanket approach to all sites above 0.25ha. No evidence supplied as to why threshold is 0.25ha. Do not believe a fixed site area is an appropriate way of achieving a mix of uses given the large variety of site specific criteria and constraints requiring consideration as part of any new development. Site size of 0.25ha is too small to deliver successful mix of student and residential development. PBSA developments also need to be of a sufficient scale to provide quality student welfare and amenity areas. Requiring a 50/50 split of student and residential on sites as small as 0.25ha would significantly impact upon the viability of student developments. A study prepared by Allan Murray Architects examining the difficulty of achieving a successful mixed student and residential scheme on sites of 0.25ha has been submitted.

Despite a requirement for 50/50 student/residential in the Council's Student Guidance since 2016 not aware of any developments coming forward which have delivered this on sites of 0.25ha. This requirement has also been questioned/set aside in a number of appeal decisions.

Subject to site circumstances sites of 0.5ha could be large enough for mixed student/residential schemes as evidenced by Iona Street and Abbeyhill examples. However, flexibility must be applied to these thresholds to reflect individual circumstances and where justified through the development management process. Desire to provide mainstream housing should not be at the expense of other housing types. Student housing plays an important role in meeting the city's housing needs, and this position is accepted in the English NPPF. In Edinburgh, a similar conclusion was reached in the

recent appeal decision at Gorgie Road (PPA-230-2298).

A higher percentage of student accommodation or even 100% should be permitted where there is clear evidence of student accommodation need. Where flexibility is applied to the 50% figure to allow a greater number of student beds, Unite would also be open to a scenario whereby the affordable housing provision was still calculated based on a 50/50 split to ensure there was no resultant loss in the delivery of affordable housing units to help the Council achieve its targets.

Finally, the wording of the Plan should also positively support a variety of ways that market and affordable housing could be delivered as part of mixed-use schemes.

#### University of Edinburgh (0464)

Do not support requirement for 50% housing as this conflicts with the University's ability to deliver purpose built student accommodation (PBSA) schemes at an affordable and deliverable level, and with a set target of a minimum of 200 units, as dictated within the University's Residential Strategy. Requirement would divert both financial and land resources away from the provision of learning, teaching and research. The requirement would also reduce the density of student accommodation that could be achieved on any given site, with the result being that the same quantity of student accommodation is required over a greater number of sites, making it more difficult to operate and maintain. The stated 0.25 hectares is a very small area to require 50% housing on and would result in a site where the student accommodation component would be too small to be operationally viable. 50:50 housing provision should not apply to university-led and delivered student accommodation on sites.

#### Watkins Jones Group (0516)

Supporting text of Policy Hou 6, notes that "larger sites provide an opportunity to balance the mix of land uses and to contribute to the delivery of housing. A mix of student accommodation and housing is required on all sites greater than 0.25Ha. Housing should comprise 50% of all student accommodation units. The affordable housing policy of 35% will apply. This will not apply in self-contained campus locations."

Policy Econ 2 also states that "proposals for commercial uses within the urban area on sites 0.25ha or larger, should where compatible and appropriate within the site context, provide at least 50% of the site for housing."

The supporting text of the policy notes that it applies to development for commercial uses including student housing, retail, leisure, hotels, and other commercial developments where they are compatible with residential use.

The WJG support the delivery of housing across Edinburgh, however, do not fully support the requirement for 50% mainstream housing on all sites. This should be considered on a case by case basis and should be informed by a number of factors including market demand for the accommodation in the given location, and proximity and accessibility by active travel to universities. In some locations, it may be better for most or all of developments to be for student accommodation. The stated 0.25 hectares is a very small area to require 50% housing on and could result in a site where the student accommodation component for example would be too small to be operationally viable.

Wright PDL (0078)

The Plan proposes to displace a significant number of active businesses so their current sites can be repurposed for housing development. This Policy gives those displaced businesses the additional headache of having to also ensure 50% of their new site is also used for housing development.

**Modifications sought by those submitting representations:**

Steve Loomes (0767), Barratt David Wilson Homes (0677), Elgin Haymarket Limited (0292)

No modification proposed. Council assumes respondent seeks deletion of policy.

Ambassador Group (0683), AREAA (358)

Delete Policy Econ 2.

Aviva Life and Pensions UK Limited (0598), Lady Road Investment S.A.R.L. (0625), LaSalle Investment Management (0262)

Modify policy to state that viability information will be accepted, and will be a material consideration, when commercial proposals on sites 0.25 Ha or greater are assessed by the Council, if applicants can sufficiently demonstrate that they are financially unable to provide at least 50% of the site for housing.

Creos Property Limited (0253)

If policy taken forward request that the Council further clarify what sites would be considered “compatible” and “appropriate” for housing and would encourage the Council to caveat the proposed Policy to state that viability information will be accepted and will be a material consideration when the Council determine commercial proposals on sites 0.25 Ha or greater.

Crosswind Developments Ltd (0184)

Policy should include a viability test.

Forth Ports Limited (0496)

Modify policy to ensure economic, community, public benefit and economic viability are considered. Approach should exclude classes 5 and 6 proposals and recognise it would not be appropriate to apply to all locations including Port of Leith. Also revise paragraph 2.93 to reflect revised approach.

Lidl Great Britain Ltd (0181)

Policy should be deleted. If there is an intention to adopt a policy along the lines of Econ 2 the minimum size should be 0.75ha.

LPBZ Commercial Ltd (0391)

Modify policy so that either the site area is increased, or the percentage of housing required decreased. Alternatively, LPBZ modify policy so an exception is included to allow an existing business to expand without the requirement to also provide on site housing where the site is under 1ha.

Melford Developments Ltd (0308)

Delete policy. If there is an intention to adopt a policy the modify to 0.30 ha and 25% depending on location and the individual case.

Mr T Klan (0307)

Modify policy to add the following text to the policy, 'within the urban area or on suitable greenfield sites ...'.

Parabola Edinburgh Limited (0723), The Institute of Chartered Accountants of Scotland (0181), Shelborn Edinburgh Limited (0732)

Modify policy to continue to consider each commercial development on a site 0.25 Ha or greater on case by case basis.

Scottish Property Federation (0144)

Policy should not require housing as part of retail or leisure developments. Housing developments within commercial developments above 0.25ha should not have to meet affordable housing contributions policy. They should be done on a selected basis where the Council believes there is a viable case for contributions.

Modify policy. 50% requirement should be dropped. At the very least the threshold must be significantly increased.

Delete policy. If it is progressed request Council clarify what sites would be "compatible" and "appropriate" for housing and encourage the Council to caveat the proposed Policy to state that viability information will be accepted, and will be a material consideration.

The Institute of Chartered Accountants of Scotland (0182), Tiger Developments Ltd (0602)

If Policy is carried forward into the City Plan 2030, policy should be caveated to state that viability information will be accepted and will be a material consideration when determining commercial proposals on sites 0.25 Ha or greater, if applicants can sufficiently demonstrate that they are financially unable to provide at least 50% of the site for housing.

The Royal London Mutual Insurance Society Ltd (0149)

Delete policy and revise the approach which should be more flexible, supporting opportunities for residential development as part of commercial development proposals where, the proposed land use, nature and form of development, site characteristics including physical and environmental constraints and opportunities as well as the needs

for other land uses are compatible with residential development. The approach should exclude proposals for development in Use Classes 5 and 6 and recognise that it will not be appropriate to apply the policy in all locations including in proximity to established business and industry areas, where its implementation would conflict these uses.

Unite Group PLC (0628)

Modify Policy to state: “proposals for commercial uses within the urban area on sites 0.5ha or larger, should where compatible and appropriate within the site context, provide approximately 50% of the site for housing”.

A new supporting paragraph should be added to state: “some flexibility to both the site threshold and percentage split of housing may be justified where required to reflect individual site considerations, design proposals and housing need. A variety of forms of housing delivery will be acceptable to satisfy this policy; in addition to traditional homes (built for sale) this will also include Build to Rent (BTR) and co-living developments.”

University of Edinburgh (0464)

50:50 housing provision should not apply to university-led and delivered student accommodation on sites.

Watkin Jones Group (0516),

Do not fully support the requirement for 50% mainstream housing on all sites. This should be considered on a case by case basis and should be informed by a number of factors including market demand for the accommodation in the given location, and proximity and accessibility by active travel to universities. In some locations, it may be better for most or all of developments to be for student accommodation. The stated 0.25 hectares is a very small area to require 50% housing.

Wright PDL (0078)

No modification identified.

**Summary of responses (including reasons) by planning authority:**

**Policy Econ 2 Commercial Development**

Steve Loomes (0767), Barratt David Wilson Homes (0677)

The Council considers that this statement is misleading for the reasons set out in its responses under Issue 3: Delivery of the Strategy. The Plan allocates sites for housing led mixed use development. The Council considers the plan must be read as a whole. The Council has identified land for displaced businesses within Business and Industrial land which is covered by Policy Econ 4 Business and Industry Areas. As a result Policy Econ 2 would not apply in those cases. **No modification proposed.**

Ambassador Group (0683)

The Council highlights that there are a number of responses which support the policy in principle. A key aim (aim 10) of the Plan strategy is to support mixed use housing led development. Numerous sites have been allocated across the city to meet this aim. Policy Econ 2 is entirely consistent with this aim and seeks to deliver some housing development alongside commercial uses where it is feasible to do so in the context of the site. The Council considers such an approach will help to deliver aim 1 of the Plan by supporting the delivery of 20 minute walkable neighbourhoods and mixed use walkable communities. The intention of the policy is to avoid mono use developments within the urban area.

The figures of 0.25ha and 50% were chosen to ensure consistency with the Council's Student Housing Guidance (CD048) as set out in criterion c) of the guidance, which similarly requires housing development alongside student housing on sites larger than 0.25ha. A cross reference to this is found in para 3.186 of the Plan. The Council sets out its position in relation to this in further detail in Issue 25: Student Accommodation. The Council considers that it is important that the plan sets out its aims and policies in a positive light making it clear what its intentions are, which is to deliver mixed use development across the city. Although there is the possibility of housing demand dropping, that is a relevant material consideration that can be taken into account at the planning application stage and therefore the Council does not consider it necessary to refer such an eventuality into the policy.

The Council does not consider Policy Econ 2 is in conflict with its aim to maximise density of development. The Council considers that through redevelopment of sites opportunities will be provided to create a more vertical mix of uses e.g. residential above commercial uses, and that there is scope to deliver development in a way that is more spatially optimised. **No modification proposed.**

#### AREAA (0358)

The Council considers the policy has sufficient flexibility within the wording of the policy as it states, "where compatible and appropriate within the site context". This will allow flexibility to allow some sites to be developed for single uses where it is not feasible to have a mix of uses. Compatibility will depend on numerous factors such as the size of the site, the mix and types of uses, and surrounding uses. The Council does not consider it necessary to set out further detail within the policy. Proposals will have to be considered on their own merits against the requirements of the policy. **No modification proposed.**

#### Aviva Life and Pensions UK Limited (0598)

The Council considers it is important that the plan seeks to pursue housing development across the city on all sites where it is appropriate and such an approach is consistent with the aims of the Plan. The Council considers such an approach will help to deliver aim 1 of the Plan by supporting the delivery of 20 minute walkable neighbourhoods and mixed use walkable communities. The Council considers the policy has sufficient flexibility as within the wording of the policy it states, "where compatible and appropriate within the site context". This will allow flexibility to allow some sites to be developed for single uses where it is not feasible to have a mix of uses. The policy sets out requirements. Any exception to this will be considered through the planning application process. Section 25 of the Town and Country Planning (Scotland) Act 1997 (CD101), allows for material considerations, including viability, to be considered on a case-by-case basis. Sites and proposals vary in nature and not all policies of the development plan will be applicable to each proposal. The requirements of the development plan should be taken into account in

negotiations. Therefore, The Council does not consider it necessary to have a reference to viability information in the policy. **No modification proposed.**

Creos Property Limited (0253)

The Council considers the policy has sufficient flexibility for the reasons set out in its response to 0598 above. The Council considers the Plan does have a supportive policy approach in relation to proposals for commercial development as it is seeking to directly influence the redevelopment of brownfield sites across the city to ensure a greater amount of mixed use development is delivered rather than leaving it to market trends which tends to result in mono use housing development. Further detail of the Council's position with regard to delivering mixed use development is set out in the Council's response in Issue 3 Delivery of the Strategy. The Council does not consider Policy Econ 2 is in conflict with Policy Econ 6, as the plan, its aims and policies need to be read as a whole. Furthermore, Policy Econ 6 has a reference to mixed use schemes potentially being required within the city centre. **No modification proposed.**

Crosswind Developments Ltd (0184)

The Council considers the policy has sufficient flexibility for the reasons set out in its response to 0598 above. **No modification proposed.**

Elgin Haymarket Limited (0292)

The Council considers the policy has sufficient flexibility for the reasons set out in its response to 0598 above. The rationale for the figures in the policy is set out in the Council's response to 0683 above. The Council considers the approach set out in Econ 2 is consistent with the strategy of the plan and will help to facilitate and the deliver the aims of the plan by supporting mixed use development throughout the city. **No modification proposed.**

Forth Ports Limited (0496)

The Council considers the policy has sufficient flexibility for the reasons set out in its response to 0598 above. The rationale for the figures in the policy is set out in the response to 0683 above. Examples of commercial development are set out in the supporting text in para 3.232. The reference to commercial development has been chosen to ensure the policy is flexible and future proof it against changes in the use classes order. **No modification proposed.**

Lady Road Investment S.A.R.L. (0625), LaSalle Investment Management (0262)

The Council considers the policy has sufficient flexibility for the reasons set out in its response to 0598 above. The rationale for the figures in the policy is set out in the Council's response to 0683 above. **No modification proposed.**

Lidl Great Britain Ltd (0181)

The Council considers the policy is logical and is consistent with the strategy of the plan to deliver mixed use development across the city. The Policy cannot be written to cover every possible scenario, such as a site in multiple ownership. Each proposal would have to be considered on its own merits with regard to the provisions of the policy. The Council

considers the policy has sufficient flexibility for the reasons set out in its response to 0598 above. The Council considers the policy is sufficiently flexible to address proposals for residential above retail. Furthermore, the Council considers the plan is supportive of vertical mix of uses as set out in its response to 0683 in the context of delivering high density development. The Council considers the policy seeks to support the reuse of single use business parks through mixed use development including residential and that the policy has sufficient flexibility to address issues with regard to conflicts with adjoining uses. The Council considers it impractical to identify where the policy should be applied across the Proposals map, as it cannot be predicted in advance where windfall sites will be brought forward for speculative development, nor does it consider it practical to identify a detailed list of exceptions in advance which will make the policy less flexible and more difficult to implement. Proposals will be considered on a case by case basis against the requirements of the policy. It is open to developers to justify mono use developments where they consider mixed use development inappropriate or incompatible. **No modification proposed.**

The Council considers the Plan, its strategy and its policies recognise the importance of non-residential uses, which is one of the reasons why it is seeking to deliver mixed use development across the city. Historic trends have resulted in loss of employment land and commercial sites for mono use residential development as set out in the Council's responses to Issue 3 Delivery of the Strategy. The purpose of Policy Econ 2 is to ensure consistency in the strategy of the plan by seeking residential use as part of the development of commercial proposals "where compatible and appropriate within the site context". The Council considers such an approach will help to deliver aim 1 of the Plan by supporting the delivery of 20 minute walkable neighbourhoods and mixed use walkable communities. The Council does not agree that the policy will result in the negative outcomes e.g. sterilisation of land etc. The rationale for the figures used in the policy is set out in the Council response to 0683 above. **No modification proposed.**

#### LPBZ Commercial Ltd (0391)

The rationale for the figures used in the policy is set out in the Council response to 0683 above. The Council considers the policy has sufficient flexibility for the reasons set out in the response to 0598 above. The Council does not consider a definition for "Commercial Development" is necessary for the reasons set out in its response to 0496 above. Office/business development would be covered by the Policy. **No modification proposed.**

#### Melford Developments Ltd (0308)

The purpose and justification for this policy and its provisions is set out in the Council's responses to 0683 above. **No modification proposed.**

#### Mr T Klan (0307)

This policy has been prepared, in the context of the provisions of the Plan's strategy, to support and encourage mixed use development on sites within the urban area. By including a reference to greenfield sites there is a risk that the policy could be utilised to support greenfield development contrary to the Plan's strategy or other relevant policies resulting in inconsistency in the plan's policies. Therefore, the Council does not support such a modification. Points related to the relocation of businesses have been addressed in the Council's response to Issue 3 Delivery of the Strategy. **No modification proposed.**

Parabola Edinburgh Limited (0723)

The purpose and justification for this policy and its provisions is set out in the Council's responses to 0683 above. The Council considers the policy has sufficient flexibility for the reasons set out in the response to 0598 above. The Council does not consider the policy will have the potential to inhibit investment. Proposals will be considered on a case by case basis against the requirements of the policy. It is open to developers to justify mono use developments where they consider mixed use development inappropriate or incompatible. **No modification proposed.**

Scottish Property Federation (0144)

Responses relating to CPO powers have been addressed in the Council's responses in Issue 3 Delivery of the Strategy. The Council considers the policy has sufficient flexibility for the reasons set out in the response to 0598 above. Affording housing requirements are dealt with under Issue 23. **No modification proposed.**

Shelborn Edinburgh Limited (0732)

The Council considers the policy has sufficient flexibility for the reasons set out in the response to 0598 above. Proposals will be considered on a case by case basis against the requirements of the policy. Proposals for office use would have to meet the requirements of both Econ 2 and Econ 3. It is open to developers to justify mono use developments where they consider mixed use development inappropriate or incompatible. **No modification proposed.**

The Institute of Chartered Accountants of Scotland (0182)

The purpose and justification for this policy and its provisions is set out in the Council's responses to 0683 above. The Council considers the policy has sufficient flexibility for the reasons set out in the response to 0598 above. The Council does not consider the policy will have the potential to inhibit investment. Proposals will be considered on a case by case basis against the requirements of the policy. It is open to developers to justify mono use developments where they consider mixed use development inappropriate or incompatible. **No modification proposed.**

The Royal London Mutual Insurance Society Ltd (0149)

The purpose and justification for this policy and its provisions is set out in the Council's responses to 0683 above. The Council considers the policy has sufficient flexibility for the reasons set out in the response to 0598 above. Proposals will be considered on a case by case basis against the requirements of the policy. It is open to developers to justify mono use developments where they consider mixed use development inappropriate or incompatible. The Council does not consider a definition for "Commercial Development" is necessary for the reasons set out in its response to 0496 above. **No modification proposed.**

Tiger Developments Ltd (0602)

The purpose and justification for this policy and its provisions is set out in the Council's responses to 0683 above. The Council considers the policy has sufficient flexibility for the

reasons set out in the response to 0598 above. The Council does not consider the policy will have the potential to inhibit investment. Proposals will be considered on a case by case basis against the requirements of the policy. It is open to developers to justify mono use developments where they consider mixed use development inappropriate or incompatible. **No modification proposed.**

Unite Group PLC (0628)

The purpose and justification for this policy and its provisions is set out in the Council's responses to 0683 above. The Council considers the policy has sufficient flexibility for the reasons set out in the response to 0598 above. Proposals will be considered on a case by case basis against the requirements of the policy. It is open to developers to justify mono use developments where they consider mixed use development inappropriate or incompatible. Issues relating to viability have been addressed in the Council's response to 0598 above. The Council considers the plan is seeking to positively provide for market, affordable and student housing within Policies Hou2, Hou6 and Econ 2, and the overall strategy of the Plan. The Council position with regard to student housing is set out in its responses to Issue 25 Student Housing. **No modification proposed.**

University of Edinburgh (0464)

The purpose and justification for this policy and its provisions is set out in the Council's responses to 0683 above. The Council considers the policy has sufficient flexibility for the reasons set out in the response to 0598 above. Proposals will be considered on a case by case basis against the requirements of the policy. It is open to developers, including universities, to justify mono use developments where they consider mixed use development inappropriate or incompatible. The Council's strategy of seeking housing on sites proposed for student housing if they are larger than 0.25ha is not a new policy approach as set out in Criterion c of the finalised Student Housing Guidance (2016) (CD048) and referred to in Para 3.186 of the Plan. Policy Econ 2 of the Plan seeks to formally include this existing policy requirement in the guidance within the development plan. **No modification proposed.**

Watkins Jones Group (0516)

The Council considers the policy has sufficient flexibility for the reasons set out in the response to 0598 above. Proposals will be considered on a case by case basis against the requirements of the policy. It is open to developers to justify mono use developments where they consider mixed use development inappropriate or incompatible. **No modifications proposed.**

Wright PDL (0078)

The Council disagrees with these views for the reasons set out in the response to 0767 above. **No modification proposed.**

**Reporter's conclusions:**

<b>Reporter's recommendations:</b>

Issue 37	Economy Proposals	
Development plan reference:	Policies Econ1-7 and Table 13	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):		
Crosswind Developments Ltd (0184) Edinburgh BioQuarter Partners (0478) Forth Ports Limited (0496) Mr T Klan (0307) LPBZ Commercial Ltd (0391) Lord Dalmeny (0475) NHS Lothian (0596)		
Provision of the development plan to which the issue relates:	These policies set out the development plan requirements in order to deliver the Plan's economy strategy.	
Planning authority's summary of the representation(s):		
<p><b>Economy Proposals</b></p> <p><u>Crosswind Developments Ltd (0184)</u></p> <p>Seek a modification to MAP1 and MAP2. The Crosswind development site (allocated site H61) in Map 2 is marked as Housing in an Area of Economic importance. Elsewhere in the proposed plan it also referred to as nationally important, mixed-use, housing-led and just as an Area of Economic Importance. The separate naming of the site is confusing, and the allocations are slightly contradictory. Therefore propose that marking the site mixed-use development is the most suitable and reflects the proposed plan's expectations for the site. This should be a consistent approach throughout the plan to ensure clarity around the site's allocation.</p> <p>There are no policies attributable to the designation an Area of Economic Importance. Table 13 states that supporting uses will still include significant opportunities for business however the policy position does not support this for the Crosswind site (H61). The Crosswind development site in Map 2 (Spatial Strategy) is marked as Housing in an Area of Economic importance and within Map 7 as "Housing as part of an Area of Economic Importance" but elsewhere in the plan it is referred to as housing-led development, mixed use development and as national importance. The proposed planning policy for Place 16 West Edinburgh , to which Map 7 relates, makes no reference to an Area of Economic Importance.</p> <p>These references are to a degree contradictory and it should have one fixed designation. A housing site would not be nationally important, nor would a housing site be suitable within an area of economic importance unless as part of a mixed use designation. CDL propose that marking the site mixed-use development is the most suitable and reflects the</p>		

proposed plan's expectations for the site. This should be a consistent approach throughout the plan to ensure clarity around the site's allocation. In addition, the Strategic Business Centre allocation should be extended to cover the CDOL site (H61).

#### Edinburgh BioQuarter Partners (0478)

Map 1 in the Plan defines BioQuarter as an 'Employment Centre' which compares to other employment centres defined in the Plan area at Leith Docks, Heriot-Watt University, Edinburgh Airport, and Newbridge. The EBQ Partners consider this definition, appearing on such a prominent Spatial Strategy map, is somewhat misleading in the context of the BioQuarter vision, which is "to rapidly grow the site into a new vibrant neighbourhood of Edinburgh centred around a world-leading community of healthcare innovators. By developing at scale and pace we will accelerate solutions to global health challenges". This vision, together with the nine Place Strategy Principles outlined demonstrate that BioQuarter is much more than an 'employment centre'. The vision is to transition BioQuarter from a science park with pavilions and green landscape to a high density, urbanised new neighbourhood. It seeks to build the critical mass to support a vibrant commercial environment, which will need a broad mix of uses in addition to the healthcare innovation accommodation, which collectively will create the vibrant Edinburgh neighbourhood.

In response to Choices, the EBQ Partners highlighted that Edinburgh BioQuarter is defined in the adopted LDP in a wide variety of sections and policies, including being defined as an 'Employment Centre' in Figure 1 of the LDP Spatial Strategy Summary Map (page 6). The Choices response states that "the EBQ should be included within an appropriate allocation to allow mixed use place making at the EBQ to be delivered. The allocation should be capable of delivering on the ambition for the EBQ as articulated in the Policy and Sustainability Committee approval for the site in February 2020, which sought 'the creation of a high quality, large scale sustainable development of the city, with zero net carbon ambitions' and 'additional new residential development, including a range of affordable housing' (para 4.10 of Policy and Sustainability Committee report, 25/2/20). The continued inclusion of Bioquarter as an 'Employment Centre' is a missed opportunity to reflect the BioQuarter vision and the nine Place Strategy Principles recently adopted by the EBQ Partners. Therefore the definition in the plan should be modified.

Map 2 of the spatial strategy refers to 'technical' allocations and refers to Edinburgh Bioquarter as 'Housing in Area of Economic Importance'. The EBQ Partners, again, do not consider this allocation to represent an accurate reflection of the emerging vision for Edinburgh BioQuarter, however, it is recognised the reference to an area of economic 'importance' is more generic than an economic 'centre', as referred to Map 1, and for the purposes of consistency across other areas identified for this reason in the city the EBQ Partners do not contest this allocation, nor its reference in the Housing-Led Development Map on page 27.

#### Forth Ports Limited (0496)

Identify Britannia Quay as 'Industry' / 'Employment Centre'. Identify Land South of Edinburgh Dock as 'Port of Leith Area with Potential for Change.'

FPL objected to the previous LDP which allocated these two sites for residential development and requested the land was designated for employment use. The Reporter

directed the Council to remove the housing allocations and proposed that the Council give consideration to designation of these areas for business and industry if this was appropriate during the next review of the Local Development Plan.

FPL in its response to the Choices for City Plan 2030 requested that its full estate, including these sites, should be identified for business and industry, whilst noting these areas have potential for change which may include residential development, student housing, hotel and leisure use. FPL have continued to restate their unchanged position since.

Britannia Quay will remain in port operational use and it is appropriate to identify the land for business and industry use which is commensurate with the remainder for FPL Scottish estates. Land South of Edinburgh Dock is highly likely to be released from the Port estate for development which is likely to include 700-800 houses, 12,400sqm of retail/commercial/business floor space and a hotel, however, if it does not come forward or does not get planning consent will continue to operate as an operational port.

Mr T Klan (0307)

Summerside, on Old Dalkeith Road potentially provides a useful sustainable location for employment, commercial and associated mixed uses.

There is as yet no evidence that less commercial / employment space will be required during the plan period as has been assumed in relation to West Edinburgh and Bio-Quarter where space has been substituted by homes. This is not consistent with the LDP strategy or vision.

LPBZ Commercial Ltd (0391)

A formal response was made to Choices for CP2030 requested that there was an opportunity for the car park area at 2 Ocean Drive to deliver mixed use development as part of a mixed use/office allocation in the draft City Plan. It was argued that the site is located within a highly accessible location and therefore would be suitable for high density residential and/or office development. Additionally, it was set out that the redevelopment of this site would result in the loss of a large car park which currently encourages the use of the private car and underutilises the development potential of the brownfield site within the urban area.

The Council has not taken onboard any of LPBZ's previous comments and the site has not been allocated for commercial led mixed-use development as requested. Office use appears to be excluded from the list of uses which fall within the Edinburgh Waterfront allocation and further sites for office potential (such as the site at Ocean Drive) have not been identified. Therefore, request that this allocation is modified to also include office development as a suitable use and to allocate the site for commercial-led mixed use development. No reasoning given for not including site. Disappointing given the highly sustainable location of the site (adjacent to a new tram stop). 83% of respondents (Choice 16- Delivering office, business and industry floorspace) agreed that other sustainable locations are appropriate for office use. Feedback relating to Choice 16 has been completely disregarded in the preparation of the proposed plan.

The final aim of the CP2030 states that modern business space will be delivered as part of “housing-led mixed-use development”. The policies contained in the plan do not allow for proposals for business use in isolation to come forward on sites located in mixed use areas, such as 2 Ocean Drive, despite the area being surrounded by housing uses so would very much be part of a wider housing-led mixed-use development. This aim is therefore flawed as it essentially states that small amounts of business space only will be permitted, and this can only come forward, if housing development is also proposed on site, without any consideration of existing surrounding uses. This aim should be reworded to say that business space will be permitted within mixed use areas.

The laudable planning aims of the Plan, are best achieved when the City Council and private sector work closely with one another, specifically with the private delivering the required development, with Council undertaking a facilitating role.

The objectives aim to create a community at the Waterfront and a community needs business land in order to be successful. As highlighted in previous representations and below in further detail, the business allocation for the Waterfront applies to an extremely small portion of land and has been carried over from the previous Local Development Plan (2016) without any review of the current use of this land (predominately residential). As one of the other aims will resist any change of use from housing to other uses, it is questioned as to how land in this area can possibly ever deliver economic land. In essence, the two aims contradict each other in relation to business land identified at the waterfront.

The current version of the plan does not encourage or promote business development on either existing or new sites within the urban area and actively encourages the change of use of existing business premises, even within Strategic Business Centres. In order for Edinburgh to continue to attract investment and provide jobs, within 20-minute neighbourhoods, the policies contained in this plan must allow for business development to come forward on a larger scale as part of mixed use proposals or within residential areas allocated for mixed use.

It is noted that the Proposed Plan begins with setting out a list of documents that support the policies outlined in the plan. LPBZ would like to highlight that this list does not include any specific note, assessment, appraisal or report relating to employment land in the city. As a Housing Technical Note is included in this list, LPBZ would question why there is not an equivalent for Employment land included. The plan appears to rely on a Commercial Needs Study dated November 2018. Without an up-to-date background document/supporting information available to back up employment and mixed-use policies in the plan, LPBZ would question whether these policies have been adequately evidenced and will stand up at examination.

#### Lord Dalmeny (0475)

Modify plan to allocate land to north of Lennymuir at Turnhouse road for business and mixed use offering-

CBRE's 2017 review of the industrial and logistics market in Edinburgh confirms that there is surprising little of this stock around West Edinburgh given its trunk road, rail, port and air access.

One such location is land to the north of Lennymuir at Turnhouse Road; the land is located adjacent to the eastern perimeter of Edinburgh Airport and has potential to assist in meeting the ambitions set out in National Planning Framework 3, and carried forward into the draft NPF4, to enhance the strategic role of Edinburgh Airport and increase the current business and mixed use offering.

Para 2.61 on page 22 of the Proposed Plan includes reference to the 'Countryside' policy designation and notes that it 'fulfils many of the same objectives as the green belt and where City Plan 2030 controls the types of development that will be allowed'.

However in this para, the Proposed Plan highlights that some of the boundaries of the Countryside designation have been altered for a number of reasons in the Proposed Plan, including both the addition and removal of several areas of land. Whilst most of the amendments reflect relatively insignificant strips of land, the Plan highlights the removal from the Countryside boundaries of a significant area of land to the south-west of Newbridge (north of the M8), comprising of approximately 44 hectares, which has instead been brought within the urban area and included as an extension to the settlement's Business and Industry Area.

We consider that the removal from the Countryside boundaries of this extensive area of land and its inclusion instead as part of the Newbridge Business and Industry Area sets a significant precedent for the Council to take similar action in other locations. In particular we highlight an immediate opportunity for the Council to take similar action in relation to a contained area of land, extending to approximately 4.6 ha to the north of Lennymuir at Turnhouse Road, that has potential to deliver significant benefit for in-demand employment land at this strategic location.

We therefore request that the text under para 2.6 be amended.

The Proposed Local Development Plan: City Plan 2030 ('City Plan') represents Edinburgh City Council's proposed vision for the Edinburgh City region up to 2032. As part of the preparation of the replacement plan, the proposed LDP presents the Council's settled view regarding policies, land allocations for employment, housing and commercial uses and other associated site allocations to meet the needs of the Edinburgh City region over the next 10 year period up to 2032.

We note that Para 2.61 on page 22 of the Proposed Plan includes reference to the 'Countryside' policy designation and indicates that it 'fulfils many of the same objectives as the green belt and where City Plan 2030 controls the types of development that will be allowed'.

However in this para, the Proposed Plan highlights that some of the boundaries of the Countryside designation have been altered for a number of reasons in the Proposed Plan, including both the addition and removal of several areas of land. Whilst most of the amendments reflect relatively insignificant strips of land, the Plan highlights the removal from the Countryside boundaries of a significant area of land to the south-west of Newbridge (north of the M8), comprising of approximately 44 hectares, which has instead been brought within the urban area and included as an extension to the settlement's Business and Industry Area.

The Council's reason for making this change are not expressly stated however the Environmental Report does confirm that some of the business and industry allocations carried over from the previous plan do not have consent and have therefore been subject to SEA; one of the sites is a new extension to the west of the existing Newbridge Industrial

site and, although it's a new allocation, it has been assessed together with the other industrial allocations for consistency.

We note that the Environmental Report prepared to accompany the Proposed City Plan, and which has informed which sites are taken forward for development, indicates that the Newbridge site is currently farm land and notes the following in relation to its characteristics:-

- There is a Local Nature Conservation Area adjacent to and within the site;
- There is ancient woodland within the site
- There is a watercourse adjacent to the site with potential for protected species to be within or adjacent to the site;
- The site is not brownfield;
- Part of the site is within a 1 in 200 year flood zone and there may be surface water flooding issues;
- The Strategic Flood Risk Assessment identifies the site as having a medium risk of fluvial flooding and a high risk of surface water flooding;
- The site is within the catchment area for a river or burn, where there is known to be engineered alterations to the river (considered in moderate condition by SEPA) and therefore development of the site may need to take into account the reduced resilience of this river with regard to surface water;
- The site does not have good public transport accessibility;
- The site is within 400m of designated open space;
- There is an A-listed structure (viaduct) adjacent to the site;
- The site occurs within an area of archaeological potential, in particular relating to prehistoric occupation, centred upon the River Almond valley;
- The site is within the countryside area not the green belt, and therefore has a neutral effect on the green belt;
- The site has an opportunity to contribute to the green network by being adjacent to a river corridor;
- The site does not have an impact on the landscape setting of the city but it has an effect on the characteristics of the landscape by changing it from agriculture to industrial, and it has some effects on local views in particular the landscape setting of features such as the railway viaduct and bings from the M8.

In spite of these constraints, the Environmental Report assessed the site as being an appropriate removal from the Countryside policy and appropriate for inclusion in an extension to the Business and Industry Area identified on land to the east at Newbridge. The Environmental Report suggested a series of appropriate actions to mitigate against any negative impacts of the proposed development; further detail is included in the supporting documentation submitted alongside this representation.

We consider that the removal from the Countryside boundaries of this extensive area of land and its inclusion instead as part of the Newbridge Business and Industry Area sets a significant precedent for the Council to take similar action in other locations. In particular we highlight land to the north of Lennymuir, at Turnhouse Road which we consider should also be removed from the Countryside policy designation in favour of being allocated for employment purposes. The extent of the land is identified in supporting documentation submitted alongside this representation.

Within the proposed City Plan 2030, the land to the north of Lennymuir at Turnhouse Road is identified as falling within the 'Countryside Policy Area' which will be carried forward to reflect the provisions of the adopted ELDP ENV10. Policy Env 18 Development in the

Green Belt and Countryside therefore currently remains the most relevant policy that applies to any future development on the land.

Under the currently proposed 'Countryside' designation the land at Lennymuir could only be developed for the purposes of agriculture, woodland and forestry, horticulture or countryside recreation, or where a countryside location is essential and provided that any buildings, structures or hard standing areas are of a scale and quality of design appropriate to the use.

However, the land is located in a strategic position adjacent to the airfield boundary for Edinburgh Airport and is conveniently placed for development associated with and ancillary to the existing freight/cargo hub at Turnhouse Road. The land is identified in the Edinburgh Airport Masterplan as a location for future development for cargo operations and could equally facilitate other employment uses associated with the wider operation of Edinburgh Airport.

Development on land to the north of Lennymuir is not restricted by any physical or environmental constraints; rather the current impediment to development is the inclusion of the land by City of Edinburgh Council within the 'Countryside' policy area which would restrict development to uses for the purpose of agriculture, woodland and forestry, horticulture or countryside recreation or where a countryside location is essential.

In reality, and particularly given the backdrop of a busy airfield facilitating the operation of an international aviation hub, it is unlikely that any countryside uses would be appropriate to be developed here, both in terms of the nature of the experience of countryside users and also the potential for impact from countryside uses on the operational activities of Edinburgh Airport.

Furthermore, we suggest that any development of countryside uses on the site that might be considered appropriate in policy terms have the potential to prejudice the future growth of Edinburgh airport as they could remove an area of land that has been confirmed in the Airport Masterplan as being required for future expansion.

The land is not part of the Green Belt designation to the east and is distinctly separated from that area by the Fife railway line on its eastern boundary; we consider that the land has limited landscape value and development here would be unlikely to affect either the landscape setting of the city or the visual amenity of the green belt at this location.

However, with consideration for the receiving environment of the site and the aerodrome safeguarding limitations that would have the effect of restricting development of a number of the uses set out above, we consider that the land would lend itself better to an operational employment site rather than any form of countryside recreation as the potential for dust arising and bird attractant that could result from countryside recreation uses would likely render them inappropriate at a location in such close proximity to an operational runway.

We note that the key test for all proposals in the green belt and Countryside areas will be to ensure that the development does not detract from the landscape and/or rural environment of the area in terms of quality, characteristics and views. As the site is located adjacent to the operational airfield of Edinburgh Airport - which is urbanised in character, appearance and function - we do not consider that the site is of particular landscape or visual significance nor do we consider it to be of environmental importance.

We have undertaken an assessment of the land against the SEA themes used by the Council in reaching decisions as to the identification of land for development and highlight the following in relation to its characteristics:

- There are no SAC's, SPA's, SSSI's, Ramsar Sites or other features of environmental or ecological sensitivity on the site
- The proposals will create further employment opportunities
- The amount of Prime Agricultural Land that would be lost as a consequence of any future development on the site would be negligible
- There is no woodland ancient or otherwise on the site
- There is no watercourse present on the site
- Part of the site is within both a high and medium flood zone there may be river water flooding issues
- The site does have good public transport accessibility
- The site is within 100m of the designated green belt
- There are no historical or archaeological assets on or within close proximity to the site
- The site is within the countryside area not the green belt, and therefore has a neutral effect on the green belt
- The site does not have an impact on the landscape setting of the airport but it has an effect on the characteristics of the landscape by changing it from agriculture to industrial, however it is not anticipated that development of the site would result in a negative impact on landscape setting or character.

We highlight the following mitigation that suggested that the following would be appropriate actions to safeguard against any negative impacts of the proposed development:-

- A Preliminary Ecological Appraisal of the site should be undertaken and any subsequent protected species surveys carried out if appropriate
- The design and layout of this site will have to include greater attenuation than standard practice to reduce the risk of surface water flooding and its impacts
- A Flood Risk Assessment can be undertaken to investigate flood risk mitigation for the site
- The layout and design of the development should make appropriate linkages with the established access off Lennymuir
- A Design Strategy will be adopted for the site proposals to ensure no detrimental impact on the surrounding built environment
- A Transport Assessment can be undertaken to ensure no conflict in trip generation on Lennymuir and Turnhouse Road with consideration for current users and committed development in the area.

The land located immediately to the west and south west of the site is identified under the designation of Area of Economic Importance associated with Edinburgh Airport.

Policy Place 17 Edinburgh Airport of the proposed City Plan indicates that the development and enhancement of Edinburgh Airport will be supported within the airport boundary defined on the Proposals Map, and that the approved masterplan will inform this process. As the land at Lennymuir is identified for future development in the Airport Masterplan is it essential to include it within the boundaries for the airport as shown in the Proposed Plan.

We consider that there is no physical, environmental or operational impediment to extending the boundaries of the identified Area of Economic Importance to incorporate that land to the north of Lennymuir and to apply the provisions of Place Policy 17 to the land.

Within supporting documentation submitted alongside this representation, we include an assessment of the land at Lennymuir against the SEA themes used by City of Edinburgh Council to assess potential development sites before their inclusion in the City Plan 2030; we suggest that our assessment of the land at Lennymuir demonstrates that it would have less potential for environmental impact and would constitute a considerably smaller release of land than the large area reallocated from Countryside uses at Newbridge.

#### NHS Lothian (0596)

NHS Lothian are committed to improving their health and care facilities whenever and wherever they can, and remain committed to their three campuses in Edinburgh at the Royal Edinburgh Hospital, the Western General and the Royal Infirmary. The Royal Edinburgh Hospital will be the specialist acute mental health facility for the Lothian's, providing specialised learning disabilities and rehabilitation services. The Royal Infirmary will be south east Scotland's major unscheduled care centre, incorporating the major trauma centre and specialist neurosciences and children's services. NHS Lothian will also build and commence operating a new Princess Alexandra Eye Pavilion at the Royal Infirmary campus, to bring together all aspects of specialist eye treatment for the people of Lothian. The Western General will be south east Scotland's cancer centre, with breast, urology, colorectal surgical services on site and a new Cancer Centre is to be developed on the Western General Hospital campus. As the Council will appreciate NHS Lothian and other partnership organisations have other estates interests across the city.

The NHS Lothian estate strategy is under constant review to ensure it can appropriately respond to opportunities and challenges as they arrive. Moving forward, the NHS estate will require the provision of new buildings and facilities, but will also look to consider replacing and upgrading buildings. This approach by the NHS in regards to their estate is clearly reflected in a number of the proposed Place Based Policies, which relate to the redevelopment of a number of NHS sites.

Whilst opportunities may exist to develop existing premises for health, and health related development, opportunities may exist over the lifetime of the Proposed Plan to consider opportunities for the disposal of sites for alternative uses and forms of development. Flexibility on approach and in respect of uses would therefore be supported by NHS Lothian in respect of their existing estate interests.

In this respect NHS Lothian would welcome policy support from the CEC for the ongoing operation of their three primary campuses in Edinburgh into the future. NHS Lothian would request that the CEC consider including a policy within the Proposed Plan that supports both ongoing healthcare related development across the NHS Lothian estate, but support to deliver new development opportunities or uses that may arise. NHS Lothian would also suggest that this could take the form of a Place Based Policy, or as detailed within this representation, could include specific reference to the provision of healthcare facilities as part of the range of uses that noted under Policy Econ 1 Supporting Inclusive Growth, Innovation and Culture.

In terms of the Place Policies within the Proposed Plan NHS Lothian would request that any wording included in the emerging Development Principles relating to NHS sites does not constrain development related to the ongoing operation of the NHS.

## **Modifications sought by those submitting representations:**

### **Economy Proposals**

#### Crosswind Developments Ltd (0184)

Modify plan to drop reference to site H61 as an Area of Economic Importance and instead only identify site as a mixed use development.

#### Edinburgh BioQuarter Partners (0478)

Modify plan to alter reference to Edinburgh BioQuarter which should be defined as one of the 'Major New Development Area' designations under the term 'Edinburgh Bioquarter – Health Innovation-Led Mixed Use'.

#### Forth Ports Limited (0496)

Modify plan to Identify Britannia Quay as 'Industry' / 'Employment Centre' and Business and Industrial Use.

Modify plan to identify Land South of Edinburgh Dock as 'Port of Leith Area with Potential for Change.'

Modify plan to add the following text after paragraph 2.139 and before paragraph 2.140; "There is potential for land within the Port of Leith, located to the south of Edinburgh Dock to be released from Forth Ports' operational port estate. Potential exists for mixed use development which may include residential development, student housing, hotel, leisure, commercial, including retail and business uses. However if land is not released and/or subsequent Planning Permission for such development is not forthcoming land will continue in operational port and associated uses and business and industry uses commensurate with port operational use will be supported."

#### Mr T Klan (0307)

Modify plan to identify 'South East Edinburgh' as key economic area in Map on page 36.

#### LPBZ Commercial Ltd (0391)

Modify aim 10 to say that business space will be permitted within mixed use areas.

Modify allocation at 2 Ocean Drive to also include office development as a suitable use and to allocate the site for commercial-led mixed use development.

#### Lord Dalmeny (0475)

Modify plan to allocate land to north of Lennymuir at Turnhouse road for business and mixed use offering and remove it from the countryside policy area.

Modify text under para 2.6 to include the following additional bullet point:-

An area of land at Turnhouse Road, to the north of Lennymuir and located between the north-eastern boundary of Edinburgh Airport and the Fife railway line, has been removed

from the Countryside designation and is included as an extension to the Area of Economic Importance associated with Edinburgh Airport.

Modify the airport boundary to include Lennymuir.

NHS Lothian (0596)

Modify the Plan to introduce Place policies for the three primary health care campuses.

### **Summary of responses (including reasons) by planning authority:**

#### **Economy Proposals**

Crosswind Developments Ltd (0184)

The Council considers that the Plan should be read as a whole. Map 2 sets out the spatial strategy identifies the key aspects of the plan's strategy. However, it is diagrammatic and is not equivalent to the Proposals Map and therefore does not have the detail of the proposals map itself. The whole of West Edinburgh, Edinburgh Airport and the Royal Highland Centre is identified as an Area of Economic Importance. The Crosswinds site is one of a number of sites within West Edinburgh identified for housing led mixed use development, as elaborated in Place Policy 16 West Edinburgh. Although West Edinburgh is now identified for housing led mixed use development, the whole area still has an important economic role to play given its accessible strategic location to the airport, the rail network, and the tram. That is a key factor in envisaging the development of West Edinburgh as a mixed use urban extension. The Council considers the Plan manages to strike a balance between the strategy's different objectives for West Edinburgh.

The purpose of identifying West Edinburgh as an Area of Economic Importance is to highlight its continuing important role in the context of the Plan's economic strategy. Not all parts of Edinburgh have the same level of importance in economic terms. The Council does not consider there is a need for a specific policy within the plan to cover this area. West Edinburgh is in a transitory position (Table 13), from being an international business location as envisaged in NPF3 (CD097) to a housing led, mixed use urban extension in the context of draft NPF4 (CD099). The Plan seeks to capture the change in this emphasis. This is why it is important that the plan is read as a whole. Although Place 16 does not refer to the Area of Economic Importance it still states in paragraph 3.55 that the Plan continues to support economic development opportunities within West Edinburgh whilst introducing a balanced mix of uses that promote healthy, sustainable lifestyles and a strong sense of place through the 20-minute neighbourhood principle. The Council considers the policy position does support the development site H61 for opportunities for business. However, Place Policy 16 makes it clear under criterion o that a master plan will establish a mix of uses and identifies a list of uses including office, light and heavy industrial uses.

The strategic business centres are areas which are considered strategic office locations, and the plan identifies these in the context of policy Econ 3. These centres were previously identified in the adopted LDP (CD039). Policy Place 16 applies to H61. This policy sets out a series of development principles to guide development in West Edinburgh. Criterion o. states that master planning will establish how a mix of uses is

distributed across the area. It states that the mix will include offices. Therefore, the plan does support mixed use on H61, however, the distribution and mix of uses on the site will be determined through the master planning approach. The Council considers this is a pragmatic approach given the size of West Edinburgh and the importance of taking a holistic approach to its master planning. **No modification proposed.**

Edinburgh BioQuarter Partners (0478)

Map 1 of Plan sets out the Spatial Strategy of the plan in the form of a high level conceptual diagram. The areas shown as “employment centres” vary considerably in nature and the purpose of showing them is simply to show that they are major sources of employment, and not to imply that their roles are limited to employment only, for example, Heriot Watt campus is major location of education/training and student accommodation. The Council considers the plan needs to be read as a whole, and the revised vision for the BioQuarter is reflected in Policy Place 31 which identifies in the development principles that it will take the form of a high density urban extension, and will have a mix of uses including up to 2500 houses. The Council considers that the place policy is the most appropriate means by which the new vision of the BioQuarter can be articulated, rather than the spatial strategy map. **No modification proposed.**

Forth Ports Limited (0496)

The Britannia Quay site is identified on the Proposals Map as part of Central Leith Waterfront, and as a result Policy Econ 4 Business and Industry Areas already applies to this site. A specific reference is made to Leith Docks in this respect in paragraph 3.238. As a result, the Council does not consider it necessary to identify the site specifically as a Business and Industry Area as the policy position is already articulated in the plan. Furthermore, the Plan envisages the site an area of commercial and housing led mixed use development in the longer term as referred to in paragraph 3.17 of Policy Place 4.

The land south of Edinburgh dock as shown on the Proposals Map is partly within the Central Leith Waterfront, and therefore Place Policy 4 applies to that part of the site which supports housing development in the longer term. The north part of the site is within the North and Eastern docks as an area of industrial/business and port related use. It is also identified as an Area of Economic Importance. There is some ambiguity in the response as to the level of certainty of this site being brought forward for alternative uses and the types of uses, and therefore it is not clear what allocation is being sought. The Council is reluctant to formally allocate the site in the absence of greater certainty and clarity. In addition, any proposals for retail would have to be justified, in terms of being of an appropriate scale relative to the new demand generated, as the site is located outwith a designated centre, and retail development of an inappropriate scale could have a detrimental impact on designated centres. **No modification proposed.**

Mr T Klan (0307)

The Council does not consider there is a need to allocate further land for employment purposes for the reasons set out in its responses to Issue 3 Delivery of the Strategy. As a result, the Council does not consider there is a need to identify Summerside, which is in a greenfield location, for employment purposes. **No modification proposed.**

LPBZ Commercial Ltd (0391)

The site identified forms part of a larger legacy housing site from the previous adopted LDP, Central Leith Waterfront EW 1B, and is identified for 2,138 residential units (Table 2). Development proposals are expected to accord with the Edinburgh Waterfront Development Principles set out in policy Place 4. Edinburgh Waterfront is envisaged as an opportunity for mixed use regeneration on a large scale and has already started to help meet the city's growth needs particularly for new housing. The purpose of the policy is to ensure the regeneration of the waterfront is planned in a holistic manner in the context of a long-term vision. The policy also recognises that some parts of the waterfront will remain in business and industrial uses. The development principles for the Central Leith Waterfront states that any major office development should be within the strategic business centre. This is due in part to the level of accessibility of the SBC, which is adjacent to the tram terminus and its concentration of existing offices, in particular the Scottish Government. However, proposals for minor office development as part of a mixed-use housing development would be consistent with the requirements of the place policy and consistent with the overall mixed use strategy of the plan.

The Council considers the plan does encourage office development in Policy Econ 3. But it seeks to support it within designated centres and strategic business centres as these represent the most accessibility locations across the city. Within strategic business centres, as identified in paragraph 3.233, the Council expects office development to be a significant element of any mixed development reflecting their importance as major office locations. In other locations and within the new housing led mixed use allocations the Council is supportive of new business development in the context of delivering 20 minute neighbourhoods but the scale of business uses would be proportionate to the context of the site and the surrounding area. Proposals to redevelop existing business sites would be considered under policy Econ 5, and mono use is not precluded under criterion c "where appropriate in the context of the site and the urban environment".

The Council Commissioned Ryden to prepare the Mixed Use Delivery report (CD036) to update the 2018 Commercial Needs Study: Industrial Property Market report (CD035) and to consider the impacts of Option 1 of Choices for City Plan 2030. Option 1 was to deliver all development within the urban area. The Council considers the findings of the report helpful for its purpose of understanding the overall implications of the Plan development strategy in terms of its impact on employment land. The Council's view is that the approach and policies set out in the Plan seek to minimise the loss of employment uses and is expected to have positive benefits overall compared to the existing policy position set out in the adopted LDP. The impacts of the specific developments on employment land will be considered at the time of proposals coming forward. **No modification proposed.**

#### Lord Dalmeny (0475)

The Council does not consider there is a demonstrable need to identify land north of Lennymuir for business and mixed use for the reasons set out in its response in 0475 in Issue 3 Delivery of the Strategy. In addition, regardless of the lack of need for this site the Council does not consider the site at Lennymuir is an appropriate location for an industrial allocation and is not comparable with the extension to Newbridge Industrial Estate at Newbridge, which represents a natural extension to existing estate with good existing access to the strategic network. Lennymuir does not represent a sustainable location as it does not have good access by sustainable transport modes and development here is therefore likely to result in additional private vehicle trips. In addition, vehicle access to

Turnhouse Road via Maybury is poor at present, and development would increase the number of trips by heavy goods vehicles through this poor access point.

The safeguarded route for the Gogarburn diversion (Green Blue Network Proposal BGN49), passes along the western edge of the site and there is a risk that development of this site could prejudice this proposal. It also is located within an existing countryside area, and as a result is not a location where the Council would normally seek to support Industrial or business uses. The area forms a transition between landscape character areas. Whilst the site and its environs are not located within the Green Belt, they are influenced in part by the open, fragmented character of the airport, its runways and ancillary infrastructure immediately to its west, but are also associated with the relatively rural character along the flat and low-lying valley of the River Almond to the east of the rail line. It is separated from the main built up area at Maybury/Turnhouse Road by of Turnhouse Golf Course, Lennie Hill and Cammo Estate Park to the southeast. Beyond the junction with Turnhouse Road, Lennymuir narrows to become a minor, hedge-lined, rural road merging into Cammo Road, with settlement limited to small clusters of houses, cottages, farmsteads etc – so again relatively rural in character.

The site would be visible from the Edinburgh-Fife rail line which runs on an open section of embankment across the Almond and also from Burnshot Road and Craigie Hill to the north, where the existing ridge of Turnhouse Golf Course, Lennie Hill and Cammo Estate Park contains views the urban area to the south. Further development to the north of Turnhouse Road would be more visually intrusive from northerly viewpoints across the Almond valley but nearer to the site, development would be viewed in association with the Airport. As a result, the Council does not support the allocation of the site for business and industrial use.

The boundary of Edinburgh airport as shown on the proposals map is unchanged from the adopted LDP which was subject to examination and there has been no change in circumstances to justify a change. The airport master plan is not a planning document and therefore the Council considers this is not sufficient justification to change the boundary. In addition, it should be noted that the airport boundary shown in NPF3 (CD097), in the context of a national development on strategic airport enhancements (page 77), excludes Lennymuir. **No modification proposed.**

#### NHS Lothian (0596)

The Place policies in the Plan set out development principles to guide the development of brownfield and greenfield sites across the city. Where existing NHS assets have been identified as no longer being required for long term use for health services these sites have been allocated in the Plan and place policies prepared. The Council considers it unnecessary to prepare place policies for existing healthcare campuses which have not been identified as being surplus to requirements and will continue to provide healthcare services. Should that position change in the future, the Council will consider adding further NHS sites in subsequent Local Development Plans. **No modification proposed.**

#### **Reporter's conclusions:**

<b>Reporter's recommendations:</b>

Issue 38	Retail and Leisure	
Development plan reference:	Policies Re 1-11	Reporter:
Body or person(s) submitting a representation raising the issue (including reference number):

Provision of the development plan to which the issue relates:	These policies set out the development plan requirements in order to deliver the Plan's retail strategy.	
Planning authority's summary of the representation(s):		
<div>Re 1 Town Centres First</div> <div>Leith Central Community Council (0614)</div> <div>The 2,500sq.m. threshold seems huge in comparison to the scale of retail units in Leith. This threshold should be significantly lowered and demonstrate that proposed large retails won't have a significant adverse effect on the vitality and viability of existing retails.</div> <div>Any Retail Impact Analysis should clearly look at wider impacts on the Community. Opening hours and delivery schedules should be part of any large retail application to minimise any negative impact on nearby residents.</div> <div>Crosswinds Development Ltd (0184)</div> <div>CDL seek a modification to Policy to ensure the wording of this policy helps achieve the Council's aim of securing 20-minute neighbourhoods.</div> <div>In addition, request that all new proposed town/local centres are included in Table 14 under the relevant heading so that policies such as this will apply to these development</div>		

sites. Currently Table 14 just notes West Edinburgh as a “new centre”. It is clear from the Place Policy 16 and Map 24 that there is to be a local centre located within the H61 and this must be reflected in Table 14. Without the clarification that these are new town/local centres are include the application of policies such as this are brought into question.

## **Re 2 City Centre Retail Core**

### Hazledene House Limited (0695)

Acknowledge that the purpose of this policy is to indicate the circumstances in which retail floorspace in the City Centre retail core will be supported. Notwithstanding this, a new and innovative approach to the future role of City Centre Retail Core should be adopted which takes both the changing nature of retail and significantly lower demand for shops into account.

### Edinburgh World Heritage (0339)

Support the principle and many details of this policy. However, note that given national and local trends regarding localised areas of retail decline, there is opportunity for more residential and cultural uses in the defined retail core. Therefore modify the policy so that this principle is integrated either into this policy or elsewhere as appropriate within the plan.

## **Re 3 Town Centres**

### Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Under criterion a) the policy states that “there will be no significant adverse effects on the vitality and viability of the city centre retail core or any other town centre”, this must mean that for town centres to maintain their vitality, viability and deliver good placemaking, they will require banking facilities beyond a cashline machine and/or a post office.

Juniper Green, Currie and Balerno – a very significant population – have no or virtually no such provision. Without these facilities, people go to where there is a bank and do their shopping there (a ‘linked trip’) – a substantial loss to their own community. Small shops do not always have card reader facilities which means they too suffer. As a result this militates against the establishment of local shops and has an impact on community activities (jumble sales, sales of work, etc.) that involve the exchange of small sums of money. Thus the attraction of 20-minute neighbourhoods proposed in these Plans may not be seen as meeting the needs of people who must leave their community to buy a light bulb. Banking and Postal provision must be regarded as part of the essential infrastructure of town centres.

The town centres listed in 3.250 should include reference to the needs of these communities mentioned above by the following amendment to this para: “../Tollcross, Juniper Green/Currie/Balerno.”

It is not clear why other ‘town centres’ at Chesser and Wester Hailes, for example, are not covered by this policy.

The Glossary definition of “Active frontage should be defined at “street door access”.

#### Juniper Green & Baberton Mains Community Council (0306)

The Town Centres and Local Centres featured in the map on page 37 show the lack of facilities to meet 20- minute neighbourhood requirements: many specialist shops are spread around the boundaries of the city and so require a car or protracted bus journey (or journeys) to reach them. The viability of shops may be affected by the need to provision them, a lack of free or cheap parking in the right area, or the deterrent effect of an LEZ. Juniper Green and Baberton Mains currently has about 20 retail units of varying size; in 1964, there were about 30 but, as the bank, Post Office and St Cuthbert's have gone, people leave the area to shop elsewhere, which means that there is less incentive for someone to open a shop locally. It is also clear that the large new housing estates in e.g. Balerno do not have facilities within them, so the 20-minute neighbourhood concept does not exist there unless CEC were to acquire and convert housing units.

#### Peter Allen (0336)

Given the focus on 20-minute neighbourhoods I would like to add the principle of linking together town centres (e.g. Portobello to Leith, through Seafield) to make it easier for people to access the facilities they need without using a car, and to increase retail activity along connecting routes.

Town centres (e.g. Portobello) are often cited as prime examples of 20-minute neighbourhoods. We therefore need more of them and to link them together to create "corridors" between thriving neighbourhoods.

#### The Davidson's Mains and Silverknowes Association (0454)

Welcome support for the recognition of Stockbridge and Corstorphine as town centres. Should be seen as an alternative to the main city centre and be readily accessible by public transport from the wider area. Policies should be introduced to promote and develop these including better local transport links.

### **Re 4 Alternative Use of Shop Units in the City Centre and Town Centres**

#### Hazledene House Limited (0695)

New and innovative approaches towards uses within the City Centre Retail Core should be considered. The city centre planning guidance referred to at Policy Re 4 requires to be updated to address the future role of Princes Street. Support in principle, however, the city centre planning guidance referred to at Policy Re 4 requires to be updated to address the future role of Princes Street, particularly its western end, given the high number of vacant units. New and innovative approaches towards uses on Princes Street should be considered. The city centre planning guidance should seek to address:

- The future role of Princes Street and the level of vacancies at all floors. The nature of retail is changing and there is now significantly less demand for shops and large, traditional style department stores. This trend has been accelerated by the Covid-19 pandemic and is clearly illustrated in Edinburgh by the recent closures of a number of shops and department stores on Princes Street;
- The shift of the focus of retail within Edinburgh away from Princes Street to the Eastern

End of the City Centre and the new St James Centre. The City Centre Retail Core has become fragmented as the main retail focus is now located in the eastern end of the City Centre and the policy must recognise this;

- Each case must be considered on its own merits and the policy should take into account the demand for retail units, particularly within the west end of the City Centre Retail Core; and
- Underutilised floorspace at upper floors on both Princes Street and its immediate, surrounding streets.

## **Re 5 Local Centres**

### Archie Clark (0003)

Table 14. The first two are City Centre (1) and Town Centres (8), the nearest to Juniper Green being Gorgie/Dalry. There are 63 Local Centres of varying sizes including Main Street Balerno, Juniper Green, Pentland View Court Currie, Bryce Road Currie, Corslet Place, Colinton as well as Chesser, and Wester Hailes. Local Centres are described in the Glossary as generally of 10 or more units although "In some instances, centres of less than 10 units have been included in order to provide a local centre within 15 minutes walk of residents." There are 7 Commercial Centres which include Hermiston Gait and The Gyle on the west of the City.

The wide variety in size of local centres is not reflected in how they are described. Some have banks and/or Post Offices, others have no such facilities and is the objective not to make them within 10 minutes' walk of home.

The plan should include local provisions including a museum and local council offices in central Currie so landward communities do not have to trek into town.

### Asda Stores Limited (0142)

Asda Stores Limited are a national multiple grocery retailer, with approximately 650 stores employing approximately 165,000 colleagues across our stores, logistics, industrial and administration businesses. They serve approximately 18 million customers on a weekly basis. Within the Edinburgh City Council area there are three stores and these all provide their respective communities with key services and facilities. The stores at Chesser and The Jewel are acknowledged as part of the retail hierarchy of the City through their continued allocation within Local and Commercial Centres respectively.

The store at Leith was established in 2009 as part of the Western Harbour Master Plan area. The currently adopted Local Development Plan shows the Asda site forming part of Edinburgh Waterfront: Leith Western Harbour (EW 1a) and also allocates the area as 'Indicative Shopping Proposal Leith Waterfront – Western Harbour' where policy S3 is applicable.

Table 8 of the LDP confirms the following:

"S3 - Leith Waterfront - Creation of a new local centre - The approved master plan and framework propose a new local centre as part of the overall regeneration of the area. This

has been part implemented by a superstore at Sandpiper Drive"

As such the site is identified as a Local Centre where additional retail and facilities are supported by Policy Ret 1 'Town Centres First'.

The Proposed Plan no longer acknowledges this role. The site is still within the Edinburgh Waterfront area but there is no mention of the Centre allocation. Asda consider that there is merit in identifying a Local Centre at this location. The store provides facilities for the local community – food and non-food retailing, petrol station, café, opticians, barbers and Timpsons. The continued allocation of the site as a Local Centre would acknowledge the role that the store plays in the local community and would encourage other local services to locate in the area, in line with the aspirations of the National Planning Framework.

#### Crosswind Development Ltd (0184)

Object to Policy Re 5 and seek confirmation that the centre noted within Crosswind (H61) will be a local centre. Map 24, as part of Place 16, marks both the area in site H61 as well as H63 as a town/local centre. In addition, Part 4, Table 14 lists West Edinburgh as a "Proposed New Centre" which does not provide clarity. The supporting text of Policy Re 5 at paragraph 3.256 states that "this policy applies to the local centres listed in Part 4, Table 14". If the plan was not amended this would preclude H61 from accommodating any retail development.

It is clear from the Place Policy 17 and Map 24 that there is an intention for a town/locale centre to be located within the H61 Crosswind site however the imprecise wording as currently set out in Table 14 does not make this ambition clear. CDL request that this table is amended to make it clear which is which, e.g. Town Centre at IBG and a local Centre at Crosswind as there are different local plan policies for both town and local centres.

Table 14 should be amended to include explicitly that a new local centre is proposed at CDL's site (H61) as illustrated on Map 24 and that another town centre is proposed at IBG (H63). This is important because without this status certain uses will be precluded from these new communities by other policies of the plan.

#### Tarmac (0244)

The plan identifies a hierarchy of shopping and leisure provision including 63 local centres. Local Centres across the city and some new centres are proposed in connection with new development (Part 4, Table 14). A local centre or hub is proposed as part of the Bairdview development plans. As acknowledged by the Council, these contribute to the quality of life and sense of identity of neighbourhoods. The Plan, in line with Scottish Planning Policy, continues to support the existing network of city, town and local centres in locations such as Ratho. Local Centres are important focal points for communities in the city providing community facilities in accessible locations. At present Ratho is underrepresented in terms of a whole range of social, community, leisure and commercial facilities and this will not change over the Plan period unless investment is supported and encouraged.

Therefore, policy should be modified to include a new clause. The Bairdview proposal has the potential to provide a defined local centre as part of a community hub in Ratho with space for retail, service and community facilities to serve the whole of Ratho, which will reduce convenience and service trips to remote centres, e.g. the Gyle, which would be a sustainability benefit with no adverse effect on other centres.

#### T Klan (0307)

The plan should Identify 'South East Edinburgh' as proposed new Local Centre.

Policy Re5 as phrased is misleading as it primarily relates to retail development within existing centres as opposed to the formation of a mixed-use local centre, therefore propose modifying text of policy.

#### Inverdunning (Hatton Mains) Ltd (0427)

Add new local centre at Hatton Village. The Inverdunning proposal for a new sustainable community at Hatton Village were outlined in representations to the Choices document. A summary of the case for Hatton Village and how it meets City Plan aspirations for 20 minute new neighbourhoods with strong public transport linkage is outlined in the supporting document.

#### The Davidson's Mains and Silverknowes Association (0454)

The shops at Silverknowes Road should be added to the list. There are many of a similar size or smaller listed. It is an omission which should be corrected. Support the recognition Davidson's Mains as one of 65 local centres across the city. This is seen as important in the context of development and future funding for the 20 minute neighbourhood strategy . Historical village centres have declined in importance over past decades but their reinvigoration to provide a full range of local facilities is going to be essential if the Council are going to achieve other policies in relation to the promotion of active travel, reduced car usage and reductions in pollution. The village centre will require funding for place making to enhance the environment and make it more attractive for shoppers and pedestrians.

It is a criticism of the Plan that it is very weak on how 20 minute neighbourhoods will be promoted and enhanced in mature localities , in contrast with the clear policy in relation to new developments.

#### AEW (0524)

Modify wording of policy. There is no reference to the potential for larger scale regeneration or redevelopment proposals referenced in Policy Re 5 Local Centres. This is a backward looking policy and does not reflect wider place based priorities promoted elsewhere in the plan.

Retail centres are under increased pressure and stress. Trends have been accentuated by the recent Covid pandemic but many deep rooted structural issues have resulted in long term decline in many retail sectors. A more holistic, pragmatic and flexible approach is therefore required and the terms of Re 5 require to reflect this.

City Centres: Past, Present and Future states that 'councils require to take a holistic approach to regenerating centres ....instead of trying to replace failed shops with more retail, investors and policy makers should focus on making centres attractive places to do business and spend leisure time – not just to shop'.

British High Streets: from Crisis to Recovery, recognises that structural changes have been taking place on British high streets since the late 19th/early 20th Century, and were highlighted by the global recession, successful high streets happen where 'new forms of complementary relationships' exist. In particular between retail spaces and spaces for service provision leisure and social interaction – where high streets become destinations and not just for shopping. Providing opportunities for social interaction and also creating a more vibrant night time economy.

Successful town centres – Developing effective strategies states that town centres need to re-position themselves to re-claim their rightful position and role as places that serve communities, visitors, businesses and key stakeholders with a quality of experience that encourages them to keep coming back and staying longer.

Retail is not necessarily any longer a dominant feature of successful town centres which now need to offer a mix of uses for work, play, visit and shop. Supporting town centre economies requires a holistic approach encompassing daytime, evening and night time uses.

The trends in local centres is exactly the same. The issues faced are more pressing in marginal locations where retailer demand is diminished and basic economies and viability impact on the day to day operation.

At a local level, growth can be maximised through changing the perception of a place. Defining the sense of place is key.

Wester Hailes Local Centre is clearly in need of investment and a more comprehensive and holistic approach is required to regenerate it as well as the surrounding area. The existing policy will not achieve that.

The Proposals Map simply defines the extent of the Wester Hailes centre and does not reflect the wider regeneration projects within Wester Hailes. The Neighbourhood Plan, other masterplan initiatives and community partnership projects should inform a more cohesive and positive response to the Wester Hailes Local Centre to provide a positive framework and policy response for regeneration.

A specific and additional Place Based Policy is promoted and should be considered to encourage a wider regeneration framework for a new Town centre for Wester Hailes based on the existing Westside Plaza and extending across Murrayburn Road to the Union Canal. This should embrace a similar policy response to the Gyle Shopping Centre and should recognise the local place based initiatives across the wider Wester Hailes area and the potential redevelopment opportunities to re-imagine Westside Plaza as a new town centre and to encourage housing-led redevelopment opportunities.

#### Avison Young for Aldi Stores Ltd. (0526)

We consider that the Aldi store at Dock Street, should form part of a future established Local Centre. It is unclear why, given the mix of provision within the area, comprising shops, restaurants and bars, has no policy protection and consider this should be addressed by the emerging Plan. We consider that the mix of uses present is consistent with the characteristics described within Scottish Planning Policy for identifying these areas. A suggested centre boundary is included with these representations.

### Hallam Land Management (0615)

Modify the wording of the policy, alter the definition of a local centre in the Glossary and amend Table 14 to include Craigiehall as a proposed local centre.

A new Local Centre is proposed as part of the community hub at Craigiehall. It is a suitable location and will become available for retail, community and commercial uses. The site will be an accessible high – quality designed development which will be a vibrant location giving a sense of place. It will be designed to safeguard local residential amenity.

Policy Re5 as phrased is misleading as it primarily relates to retail development within existing centres as opposed to the formation of a mixed-use local centre.

It is planned to include retail development to serve the whole neighbourhood and reduce convenience shopping trips to more remote centres in Davidson Mains, Cramond, Kirkliston and South Queensferry. This would be a major sustainability benefit for the neighbourhood and easily accessible by walking or cycling from nearby residential areas without any current provision.

Retail development would be integrated into the centre and is compatible with the function and character of the development potentially utilising existing buildings. There would be no adverse effect on other centres and there would be a clear need for convenience retail provision to serve the local catchment. As acknowledged by the Council, these hubs contribute to the quality of life and sense of identity of neighbourhoods and will assist in meeting current deficiencies within this part of the city.

Policy Re 10 deals with the potential for Entertainment, Leisure and Café /Restaurant developments and states Local Centres are a preferred location for such uses. But this is inconsistent with the Local Centres Policy Re 5 which bases its assessment on the quantum of retail, as opposed to an evaluation of all other options in a sequential test approach. This is likely to prove problematic in determining planning applications.

### **Supporting responses**

#### Terry Levinthal (313)

### **Re 6 Commercial Centres**

#### Robyn Kane (0091)

The current plan to build a cinema at Cameron Toll is a bad plan. It is not needed in the area as there is one at Fort Kinnaird retail park and it would cause a huge disturbance to locals. The current plan also greatly effects Liberton tennis club as it would stop emergency vehicles getting access to the club and this would result in the club having to close down. Putting a cinema on the site would also remove essential parking to the site that has already been cut because of other retail stores being added to the car park.

#### Nuveen Real Estate (0564)

Policy Re 6 should include a similar criterion to Policy Re 2, in requiring proposals to provide high quality, commercially attractive units to a high standard of design, that improve the appearance of the commercial centre.

Modify Table 14 by amending reference to Craighleith Retail Park to reflect planning applications that have been submitted and will be determined in due course.

Whilst supporting the aspiration of Policy Re 2, in particular in relation to criterion 'a' which seeks to raise the standard of commercial units being brought forward in the city centre retail core, are concerned that there is not an equivalent requirement for Commercial Centres in Policy Re 6. As is well known, city centres are particularly vulnerable to competition from retail and leisure development in out of centre and commercial centre locations which aren't restricted in terms of, for example, unit design, or, to the same extent, in relation to car parking provision. Placing a similar requirement in Policy Re 6 would move towards levelling the playing field in this regard.

General provisions with Policy Re 6 with respect to new retail uses are accepted. However, propose the insertion of the following sentence: "In addition to retail use, proposals for entertainment, leisure and café/restaurant, hotel, offices and housing are acceptable in principle at Commercial Centre locations subject to demonstrating compliance with other City Plan policies."

Nuveen Real Estate (0734), CBRE Global Investors (0644)

Modify text of Policy to state that in addition to retail use, proposals for entertainment, leisure and café/restaurant, hotel, offices and housing are acceptable in principle at Commercial Centre locations subject to demonstrating compliance with other City Plan policies.

In addition, there should be no material weight afforded to the Edinburgh Commercial Needs Study (ECNS) for development management purposes as it was plainly not prepared as a Development Management tool.

The proposed Policy Re 6 change is proposed to better reflect other elements of the plan. A critique of the Retail and Leisure Commercial Needs Study has been submitted as a supporting document to support the view that it should not be used as a development management tool.

CBRE Global Investors (0644)

Modify Table 14 references to Meadowbank Commercial Centre to reflect planning applications that have been determined/submitted and will be determined in due course.

Ambassador Group (0683)

Support Policy Re 6, but there is currently no proposed policy context for the change of use of shop units within Commercial Centres. We propose that Policy Re 6 (Commercial Centres) is updated to cover the change of use of shop units within Commercial Centres and reflects the same flexible approach as set out at Policy Re 5 (Local Centres)

Modify Table 14 be to identify Ocean Terminal as a Commercial Centre with the potential to deliver new homes and office space in the future.

Acknowledge that the purpose of this policy is to indicate the circumstances in which retail floorspace in a Commercial Centre will be supported. It is welcomed that the proposed policy context for Commercial Centres, such as Ocean Terminal, supports a mix of uses: i.e. Policy Re 6 (Commercial Centres), Policy Hou 1 (Housing Development), Policy Econ 3 (Office Development) and Policy Econ 6 (Hotel Development), Policy Re 10 (Entertainment, Leisure and café/restaurant Developments – Other Locations) support retail, housing, office, hotel and entertainment and leisure uses within Commercial Centres respectively.

There is currently no proposed policy context for the change of use of shop units within Commercial Centres. The adopted LDP deals covers this at Policy Ret 9 (Alternative Use of Shop Units in Defined Centres). Within the Proposed Plan it addresses this in Policies Re4, Re5 and Re8. Propose that Policy Re 6 (Commercial Centres) is updated to cover the change of use of shop units within Commercial Centres and reflects the same a flexible approach as set out at Policy Re 5.

### **Supporting Responses**

Lady Road Investment S.A.R.L. (0625)

#### **Re 7 Out of Centre Development**

Archie Clark (0003)

Para. 3.266 refers to the relaxing of the conditions of this Re7 in order to allow local small-scale convenience stores, stating “This will also help meet create[sic] more sustainable communities, one of the overall objectives of the plan.”. Rather than this passive approach, should the large scale housing proposals referred to, actually be required to contain proposals for such convenience stores in order to encourage the development of a 20-minute neighbourhood Section 3.269 of Re 8 “Alternative Use of Shop Units in Other Locations” on page 142 makes the same point.

Jamie Wallace (0167)

In order to be in line with the Plan's sustainable transport objectives, there is a need to prohibit out-of-centre retail developments that are only viable in a 'drive-thru' format, which require extensive vehicle movement areas around the retail unit itself. Therefore, when assessing permission for such developments, the total site plan requirements of the development should be assessed, not just the floor area within the retail building. By requiring the total site plan to be no more than 250sqm, this will prevent certain developers claiming that their proposals are compliant on the basis that the floorspace they require is within that limit, when in fact their development would not be feasible without occupying a much larger area.

Lidl Great Britain Ltd (0181)

Criterion e. should be deleted from this Policy.

The draft policy Re 7 needs to be read in conjunction with the supporting explanatory text. However, these provide contradictory explanations of the policy and, in relation to criterion e., it is, therefore, impossible to understand the intended meaning of the proposed policy.

The majority of the draft Policy (the introductory sentence and criteria a to d) are directly comparable to the requirements of Policy Ret 6 in the adopted LDP. No objection is made by Lidl to these aspects of the draft Policy. However, objection is made to criterion e.

1. Criterion e. contradicts criteria a. to d.

The plain English reading of the policy is that all five criteria have to be met for an out-of-centre retail proposal to be acceptable. However, e. sets out three specific requirements that render the earlier criteria irrelevant. For criterion e. bans any retail proposal in excess of 250 sq m regardless of whether or not it meets a clearly identified deficiency, satisfies the sequential approach etc.

2. Criterion e. contradicts with the sequential approach/town centres first policy (Policy Re 1 and Re 7 b.)

Draft Policies Re 1 and Re 7 a. set out clearly that proposals for out of centre locations can be acceptable in principle if they demonstrate compliance with the town centres first policy. Criterion e. makes this an irrelevance and, in fact, directs out of centre development to locations at least 800m from town/local centres. There is no clear distance cut off that determines whether or not there will be interaction between a retail/leisure proposal and a centre, however, it is evident that a location that is, say, 350m from a centre, is more likely to support some linked trips into that centre than one that is located 1000m from that centre, even if both locations are correctly identified as out-of-centre. Criterion e. will discourage linked trips, especially those made on foot, between out-of-centre developments and town/local centres.

3. Para 3.265 contradicts the wording of Draft Policy Re 7.

Para 3.265 seeks to explain and justify the proposed policy Re 7. However, it is impossible to understand what is intended in the policy from this explanatory text. It is probable that para 3.265 is intended to refer to criterion e. but this is not clear. It refers to “four mutually exclusive scenarios” – but there are five criteria in the policy and the wording of the policy is not that they are mutually exclusive but that all should be satisfied.

If one considers e. then there are only three scenarios described i.e.:

- No more than 250 sq m in size
- Located where there is a need for a retail unit
- And is >800m from a designated centre/established out of centre retail units

Again there is no suggestion that these are mutually exclusive. Rather the wording of e. is that they all need to be satisfied.

Para 3.265, rather than explain and clarify the policy simply confuses and, when one reads the policy with the supporting text as a whole, it is not possible to understand what the policy is meant to mean.

3. Criterion e. is already covered by other policies.

The requirement for a proposal to be located “where there is a need” is already addressed in criterion a. and, as noted above, the principle of location is already addressed through draft Policies Re 1 and Re 7 b. (and this principle is contradicted in e.). If there is a situation where either a qualitative or quantitative deficiency is identified then the imposition of an arbitrary floorspace limit ensures that these cannot be addressed because the maximum permitted unit is far too small (see point 4 below).

4. The proposed 250 sq m is too restrictive: it will cause social inequality and increase driving to shopping facilities (i.e. it will promote unsustainable development).

Placing a limit of 250 sq m demonstrates a complete lack of understanding of retail and leisure requirements. For example, there is no question that a convenience-format store serves, primarily, local walk-in catchments. However, these formats require up to 400-500 sq m GFA. Criterion e. therefore prevents the provision of even local convenience goods shops that are designed to serve local areas. Similar principles will apply to different retail sectors.

It also prevents the ability of retail to meet identified retail deficiencies. Although the City is generally well-endowed with retail provision there are significant areas that do not have easy access to good quality retail. For example, the Edinburgh City Plan 2030 Commercial Needs Study: Retail & Leisure states, at para 7.9, in the context of limited “capacity” for convenience floorspace:

“This situation still presents opportunities to improve the quality, range and choice of existing convenience stores generally.”

In relation to comparison goods it states at para 9.8:

“with considerable additional expenditure capacity to support more new retail floorspace by 2028 under the high forecast. The low forecast should be regarded as a less likely scenario in any case.”

This study, prepared to support the preparation of the draft LDP, clearly identifies that there will be significant retail opportunities/deficiencies/capacity that should be addressed within different parts of the City. Although the preference is that the requirement for additional floorspace should be directed towards town centres. there will be requirements where it is appropriate for both convenience and comparison goods proposals in out-of-centre locations, will be well-placed to meet identified deficiencies in accordance with the town centres first principle. A restriction of 250 sq m floor area will prevent these deficiencies being met.

The effect of this is that it will deprive existing and proposed new residential areas of access to important retail facilities. This will exacerbate social inequalities and cause some residents to drive to other locations for access to shopping – this is directly contrary to the

aims of the proposed LDP to increase sustainable development and to reduce social deprivation.

5. The 800m distance threshold will encourage dispersal of retail

As well as being directly contrary to the principle of town centres first, the 800m threshold will increase the dispersal of retail activity. Where retail facilities are concentrated, either with other retail or with mixed uses, such as in centres, this encourages and supports the provision and use of public transport networks. However, dispersal reduces the potential for public transport use and, thereby, encourages use of private cars. This is directly contrary to the principle of sustainable development.

6. Criterion e. discourages new investment in retail reducing choice and competition to the disbenefit of City residents

The apparent intention of criterion e. appears to prevent any new significant retail development in any out-of-centre location. This is achieved through the three requirements of part e. This approach will reduce investment in an important sector of the City's economy reducing choice for residents and exacerbating social inequalities and deprivation.

This is illustrated by reference to the recent successful appeal made by Lidl for a new foodstore at Seafield Road. This store provides a substantial improvement to retail choice for residents in Restalrig and adjoining areas. Restalrig is an area of multiple deprivation without easy access to modern food retail. At the appeal the Reporter accepted that the proposal addressed significant deficiencies, satisfied the sequential approach and did not adversely affect the vitality or viability of centres, and was easily accessible by sustainable modes of transport. As a result the appeal was upheld and planning permission granted enabling Lidl to trade from the unit. However, criterion e. would not allow a similar new retail unit in the Seafield Road location, if only on the grounds of size. This demonstrates how e. would prevent the improvement of access to important retail facilities even when the proposals are identified by an independent Reporter to be acceptable and sustainable. Criterion e. is therefore a significant retrograde proposal that will exacerbate social and economic deprivation contrary to the aims and principles set out in much of the draft LDP.

Proposed Re 7 e., read in the context of the supporting text, is unclear as to its meaning or intention. As drafted (and ignoring the explanatory text) it places a ban on all retail development in out-of-centre locations in excess of 250 sq m and will encourage the dispersal of retail within the City. It will reduce choice, increase prices and exacerbate deprivation within the city. Parts of the policy are already successfully covered by other policies (notably Re 1 and Re 7a. to d.). Rather than encourage sustainable development criterion e. will discourage sustainable development and travel.

Juniper Green & Baberton Mains Community Council (0306)

Section 3.266 refers to the relaxing of the conditions of this Re 7 in order to allow local small-scale convenience stores, stating "This will also help meet create more sustainable communities, one of the overall objectives of the plan.". Rather than this passive approach, the large-scale housing proposals referred to should actually be required to contain proposals for such convenience stores in order to encourage the development of a

20-minute neighbourhood. Section 3.269 of Re 8 “Alternative Use of Shop Units in Other Locations” on page 142 makes this very point.

Living Streets Edinburgh Group (0486)

It is noted that the policy hopes to reduce the number of car trips made for shopping. This should be reinforced by more specific requirements for accessibility by public transport, walking and cycling and contributions to be sought where enhancement is needed. There must also be a restriction on the level of parking provision to act as encouragement to provide alternatives.

Avison Young for Aldi Stores Ltd. (0526)

Delete criterion e) of Policy. Support the first 4 criterions (a-d) of policy Re 7, being consistent with national planning policy. Respondent is accustomed to the provisions of these policies, including the town centre first principle, which are commonplace across every local authority within Scotland. However, do not agree with the inclusion of criterion e), which is inconsistent with national policy and does not appear to be properly justified by any evidence available either within the emerging plan or its supporting papers. The effects of such a test within policy would have far wider implications for choice, quality of provision and allowing for innovation in the retail sector, whilst also undermining other objectives of the Plan.

The findings of the Council’s Commercial Needs Study contradicts previous findings by the Council in terms of supermarket provision across the city highlighting its limitations as a tool to inform new planning policies. This policy criterion would effectively ban any future retail development in an out of centre location over 250sqm, even where criterions a-d can be satisfied, including the criterion where it can be demonstrated that the site may be highly accessible. This is clearly unreasonable, as by improving choice within a local area, in an accessible location, this may improve the sustainability of existing shopping trips, which may for example, be to strictly car borne destinations at present.

By removing the opportunity for competition, this criterion would limit any future change and the benefits this can bring to consumer choice and access to cheaper and healthier goods, undermining wider objectives of the emerging Plan. It would limit effective competition, stifle innovation and work actively against the desire to establish effective 20-minute neighbourhoods. As a result, request that criterion e) be deleted from the Plan.

Finally, wish to comment on the supporting text to Policy Re7, including the commentary around catchment areas. The specific nature of the comments within the Plan, at paragraph 3.265, are very detailed and considered inappropriate for inclusion in a Local Development Plan. These would be better included within supporting planning guidance, if the City Council considers this to be necessary.

Also question the reason for the inclusion of supporting text which states that “Proposals seeking to meet the additional needs of a growing population should demonstrate that there [sic] are specifically meeting their needs and not the needs of the existing population”. Not only would this be impossible to demonstrate as part of a planning application submission, but the motives behind the requirement aren’t clear, particularly in cases where it is assumed, criterions a-d of the policy Re 7 have been satisfied. It is unclear why a new retail development proposal that meets all of those tests, would then

not be allowed to cater for the shopping needs of both existing and new populations within certain parts of the city. Again, this commentary appears to want to stifle any future change in retail choice within Edinburgh, and limit competition, even where this may lead to wider benefits in terms of providing local and more sustainable choice to an area. This is not supported by national planning policy and this oversteps in terms of planning working actively against the wider public interest.

Furthermore, note the comments that “Proposals for non-local provision, for example a free-standing retail unit which would trade over a much wider area and encourage car-borne shopping, would not be acceptable in terms of this policy.” Whilst the aspirations behind these comments seem obvious and have merit, in that they seek to encourage more sustainable means to access foodstore provision, which we actively support, they fail to recognise the existing retail landscape that exists, whereby the majority of Edinburgh’s population (as across the UK) will utilise their private vehicles to undertake food shopping given the volume of goods often purchased. Restrictions on allowing greater choice and particularly those within policy that would actively limit new competition, which may, depending on the site, be more sustainably located, will not lead to a transformation of the shopping patterns that currently exist and instead would regrettably work against those ambitions.

While Aldi may be able to address criterions a-d of Policy Ret 7, criterion e) would effectively prevent any further store development within Edinburgh city, despite all the wider benefits that would be delivered. It is therefore clear that policy criterion (e) should be deleted. This would not undermine the other aspects of the policy but instead allow for balanced decision making, which is an essential part of the planning system.

## **Re 8 Alternative Use of Shop Units in Other Locations**

### Leith Central Community Council (0614)

Single convenience shops and parades of small shops should be protected like at 106-154 Leith Walk.

### Edinburgh World Heritage (0339)

Generally support the identification of speciality shopping streets, though we are unclear as to the specific policies governing these and greater clarity would be beneficial.

As a number of these areas fall within those we wish to focus our grants and advice, we would welcome engagement in development proposals so we can add value to this city strategy.

## **Re 9 Entertainment, Leisure and café/restaurant Developments: Preferred Locations**

### Crosswind Development Ltd (0184)

Object to Re 9 (a) on the grounds that not all town and local centres have been appropriately identified within Table 14 ‘Network of Centres’. Table 14 lists West Edinburgh as a “Proposed New Centre” however the imprecise wording does not provide clarity on the site’s allocation. Place Policy 17 and Map 24 show that there is an intention for a town/locale centre to be located within the H61 however this needs to be confirmed

within Table 14. If it is not amended this would preclude H61 from accommodating entertainment, leisure and café/restaurants development.

In addition, seek an amendment to include text to support the principles of the 20-minute neighbourhood.

Leith Central Community Council (0614)

Noise Impact Assessments made by independent professionals should be required for all arts, café/ restaurant, leisure, entertainment facilities and visitor attractions. Planning applications should assess potential negative impacts on the environment and local residents.

Cockburn Association (0777)

Seek clarification of the criteria for determining ‘ a significant increase in noise, disturbance and on-street activity at unsocial hours to the detriment of living conditions for nearby residents’.

Terry Levinthal (313)

Support. Particularly welcome the importance of amenity and impact to residential amenity in these policies, supporting the statement that "unacceptable increase in noise, disturbance, on-street activity or anti-social behaviour" is a criteria for refusal or non-support. It is therefore essential that criteria are agreed as to what is "unacceptable" and that the focus for this is from the resident's view as opposed to the operator or applicant.

In several cases, CEC planners have dismissed these issues under a bland view that if you live in the centre, you are not entitled to a level of amenity enjoyed by others, a point echoed by many applicants and business associations.

**Support Responses**

Theatres Trust (0183), Living Streets Edinburgh Group (0486)

**Re 10 Entertainment, Leisure and café/restaurant Developments: Other Locations**

Archie Clark (0003)

This section should include proposals on how to develop the use of local arts and cultural centres such as Whale Arts and North Edinburgh Arts that promote learning and culture and a sense of community for residents of all ages and backgrounds.

Local Churches are often places where people gather for a variety of reasons – church-related (services), entertainment, organisations, nursery school, community meetings and to place their vote. Are these not worthy of a mention in this section.

Crosswinds Development Ltd (0184)

Seek a modification to Policy Re 10 to include text to support the principles of the 20-minute neighbourhood. This will provide recognition that sites outside of recognised

centres may support sustainable development choices.

#### Juniper Green & Baberton Mains Community Council (0306)

This section should include proposals on how to develop the use of local arts and cultural centres such as Whale Arts and North Edinburgh Arts that promote learning and culture and a sense of community for residents of all ages and backgrounds. Local places of worship are often places where people gather for a variety of reasons – faith-related, entertainment, organisations, nursery school, community meetings and to vote, and should also be mentioned in this section.

#### T Klan (0307)

Policy Re 10 deals with the potential for Entertainment, Leisure and Café /Restaurant developments and states Local Centres are a preferred location for such uses. But this is inconsistent with the Local Centres Policy Re 5 which bases its assessment on the quantum of retail, as opposed to an evaluation of all other options in a sequential test approach. This is likely to prove problematic in determining planning applications. Therefore, delete “in the urban area”. There are a number of locations outside the urban area that do, or will, have good sustainable transport links and a character that would support such development, such as at Summerside on Old Dalkeith Road.

#### Living Streets Edinburgh Group (0486)

Support if b. revised for consistency to refer to public transport, foot and cycle rather than sustainable transport which arguably could include electric or low emission cars. Is there such a thing as an “acceptable” increase in traffic, we don't think so. The policy requires tightening up and clarifying.

#### Cockburn Association (0777)

Support subject to clarification of the criteria for determining “a significant increase in noise, disturbance and on-street activity at unsocial hours to the detriment of living conditions for nearby residents.”

### **Supporting Responses**

Nuveen Real Estate (0564), CBRE Global Investors (0644), Nuveen Real Estate (0734)

### **Re 11 Food and Drink Establishments**

#### New Town & Broughton Community Council (0254)

Policy is a direct copy of the existing LDP Policy Ret 11. However, under the footnote (3.277) it references the Council's ‘Guidance for Businesses’ which identifies sensitive areas in this regard, including ‘Broughton Place/Picardy Place and their environs’.

This seems incorrect and it would be helpful to correct the description which may include parts of Broughton Street and Leith Walk. As far as we are aware, there are few remaining residential units in Picardy Place.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

No changes are required at this stage, however, the Council should note that, as it stands, draft NPF4 would extend the impacts of Policy Re 11 Food and Drink Establishments to include health and wellbeing which could also be reflected in the policy criteria of the proposed plan.

Cockburn Association (0777)

Support subject to clarification of the criteria for determining 'an unacceptable increase in noise, disturbance, on-street activity or anti-social behaviour to the detriment of living conditions for nearby residents'.

**Appendix B**

Nuveen Real Estate (0564)

For clarity, Nuveen request that the addresses against 'City Centre Retail Core' under the 'Town Centres' section of this table be updated to reflect the new postal addresses of the St James Quarter, rather than the now demolished St James Centre (e.g. 1-111 St James Centre). A list of these can be provided separately.

**Retail Strategy**

Brian Tiplady (0641)

There should acknowledgement of the probable actual decline in retail space in the city, and plans for managing it. This should include identifying areas where retail can be sensibly converted to other uses, and encouraging this. In particular, accordance with the centres-first policy, a reduction in commercial centre space may be required, though retail in the city itself will also be affected.

The policy completely ignores the structural changes that are continuing to take place in retailing. In the time-frame of the plan we will need less bricks-and-mortar retailing capacity. How much less is unclear, but the implicit assumption in the report that the shift to online will involve a slowing of growth rather than an actual and substantial shrinkage, looks completely unrealistic. In accordance within the centres-first policy, which I support, a reduction in commercial centre space may be required. Hermiston Gait appears to be a prime candidate for eventual closure - as is made clear in another section of the report it has poor public transport connections, and no local function - the nearest residents are more than 10 minutes walk away. The Gyle is only two miles away and much better connected. It is important that the decline in retail capacity be managed, as this will ensure that alternative uses are appropriate, and avoid areas with numerous boarded up units among shops that are trying to operate normally.

Avison Young for Aldi Stores Ltd. (0526)

Remove paragraph 2.143. Pleased to note the strong support given by the emerging City Plan to the retail sector, highlighting its importance for the wider economy, particularly by providing employment for Edinburgh citizens. The significance of the retail sector extends

further than this though, and also needs to be viewed in terms of its contributions to the supply chain through sourcing products from a range of food and beverage manufacturers both within Edinburgh, the Lothians and across wider Scotland and in terms of ensuring the local population have access to affordable, high quality and healthy food products delivering much wider benefits to the city region.

Within this context wish to comment directly on the references within the Plan to the findings of the Commercial Needs Study. A number of these comments were previously submitted to the 'Choices' consultation in April 2020 and remain relevant here, given that the evidence paper is continuing to be used for longer term policy-making purposes and has led to the introduction of severely inflexible planning policies that we consider are inappropriate and contrary to national policy set out within SPP.

Firstly, it is important to reassert that the evidence paper, known as the 'Commercial Needs Study', provides very specific information about certain aspects of retail provision across Edinburgh, however it has significant limitations in terms of decision-making on individual planning applications.

Where the study is most helpful is in assessing future requirements in terms of both convenience and comparison floorspace that need planned for at a macro level, particularly given the extent of population growth anticipated within the city.

In terms of convenience retailing, note the key findings of the document referenced regarding the general provision of supermarkets and discount foodstores. This means that the emerging LDP does not, except for within large areas of residential expansion, need new allocations made for supermarket floorspace. It does not however mean that there should be a policy to ban the development of additional retail floorspace, where this can be justified (typically through a retail impact assessment). We consider that this is best considered during the determination of planning applications and not set out explicitly within the development plan.

On this point, the author of the Retail Study supports this view at paragraph 7.4 when they discuss 'Acceptable levels of retail impact.' The report acknowledges that "Across Edinburgh as a whole, the scope for further new convenience floorspace will mostly be in the form of trade diversion from existing stores, and in opportunities to improve the quality, range and choice of convenience shopping." This acknowledges that qualitative improvements can still be required in certain pockets across the city, given that qualitative deficiency is afforded the same level of weight within Scottish Planning Policy as quantitative matters. It also acknowledges that there can be situations where acceptable levels of trade diversion can occur without undermining the vitality and viability of centres and that these can then be acceptable in policy terms.

This is important to recognise given that competition is not a planning matter and it should not be for the planning system to protect existing out of centre retailers from this. This limits choice for the consumer and protects existing retail outlets from competition. This cannot be in the public interest and protects incumbents only. The points made about Aldi, being a disruptor in the convenience retail market, reducing grocery goods prices for consumers, and as a result, competitors doing the same, are very important here and would not have happened if such restrictive policies had been in place.

The report concludes that section by stating that "This situation still presents opportunities to improve the quality, range and choice of existing convenience stores generally." We do

not consider that this position has been accurately reflected within the emerging Plan and this requires reconsideration.

In support of the above request, we note that this was considered by the Examination into the Perth and Kinross Local Development Plan, where a respondent queried why the capacity identified in Perth's own retail study had not been identified within the plan itself. The reporter who considered this issue in their Examination report, concluded that: "I see no need to make reference to the retail studies produced in 2014 and 2016. These studies are an important part of the evidential underpinning for the proposed plan. However, they are only a snapshot of activity and potential within the sector. They may only be relied upon in the determination of individual planning applications at the time of their production. A more agile approach to retail data is needed when determining individual proposals over the plan period. This approach should take account of the effect of changing trends in the retail sector and the findings of any retail impact assessment produced for the proposal. Writing the findings of existing retail studies into development plan policies now would not be compatible with this more agile approach."

It is therefore clear from the statements above that the wording within the emerging Plan is inflexible and inappropriate for inclusion, given it represents only a fixed time period and has little relevance to the more agile considerations needed for individual planning applications for retail developments. Moreover, it is worth noting that the conclusions that there is no need for more retail floorspace in future rely largely on an expectation that all current commitments, as outlined in Table 6.12 of the Commercial Needs Study are delivered within the timespan of the Plan (some of which date back to 2014). This further highlights why it is inappropriate to use the conclusions of the capacity study to formulate policies within the Plan.

The weaknesses of relying on the Study are particularly apparent when the conclusions of the report contradict the position set out within the Council's previous analysis, 'Access to supermarkets and food shopping in Edinburgh', which was published in September 2011. At that time, the City Council undertook a detailed review of provision across the city and concluded (amongst other matters), that "areas where choice is significantly constrained are on the western fringes of the city". However, we note that since then there have been no improvements to the provision within this part of Edinburgh, yet the Commercial Needs Study, which includes this whole area within 'Zone 5' fails to reach a similar conclusion, no doubt because the area incorporates Corstorphine and the Gyle, where there are foodstores of a significant scale leaving a highly unbalanced range of provision in this area. A retail impact assessment for that part of the city would therefore likely identify a high level of local deficiency to be addressed, as per the Council's previous report. Basing decisions for future provision on the Commercial Needs Study would mean that there is no need for improved choice to serve the villages of Juniper Green, Currie and Balerno for example and it is difficult to understand how the Council's aims for the delivery of 20-minute neighbourhoods can be achieved in such circumstances and where such deficiencies will continue to remain.

Ultimately it is clear that the Council's position within the emerging Plan contradicts their previous, better evidenced, analysis that there are pockets of the city that do require improvements to shopping choice. We therefore strongly assert that the proposed policies within the Plan, that rely on the Commercial Needs Study, specifically policy Re7, are unnecessarily restrictive and lack sufficient evidence to support them and as a result, require significant amendment.

Leith Central Community Council (614)

2.141 “In Edinburgh, shopping and leisure uses are mainly provided in a network of centres distributed across the city.”

This sentence is repeated twice in the same paragraph

**Modifications sought by those submitting representations:**

**Re 1 Town Centres First**

Leith Central Community Council (0614)

Modify text of Policy Re1 to reduce 2,500sqm threshold requirement for Retail Impact Analysis.

Crosswind Development Ltd (0184)

Modify policy to the following;

“Planning permission will be permitted for retail and other uses which attract a significant amount of people including commercial leisure use, community and cultural facilities and where appropriate libraries, education and healthcare facilities in the following order of preference:

- a. Town centres (including city and local centres)
- b. Edge of town centre
- c. Other commercial centres as identified in the plan
- d. Out of centre locations that are or can be made easily accessible by a range of sustainable transport modes.

In addition, the provision of such facilities will be supported where by in doing so the creation of or support for a 20 minute neighbourhoods would be achieved.

Where a retail or leisure development with a gross floorspace over 2,500sq.m. or occasionally for smaller proposals, if proposed outwith a town centre and contrary to the development plan, a retail impact analysis will be required sufficient to demonstrate that there is no significant adverse effect on the vitality and viability of existing town centres. To support the role of town centres in a 20-minute neighbourhood, the town centre first assessment and associated requirements should be applied flexibly and realistically for community, education, health and social care and sport and leisure facilities. Town and local centres within adjoining council areas will also be considered when assessing retail impact if they fall within the intended catchment area of the proposal”.

Modify Table 14 so all new proposed town/local centres are included under the relevant heading.

**Re 2 City Centre Retail Core**

Hazledene House Limited (0695)

Modify policy to adopt a new and innovative approach to the future role of City Centre Retail Core which takes both the changing nature of retail and significantly lower demand for shops into account.

Edinburgh World Heritage (0339)

Modify the policy to add the following as a consideration; “The balance of overall uses in the area, including residential and cultural uses”

**Re 3 Town Centres**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

Modify the town centres listed in 3.250 to include the following “../Tollcross, Juniper Green/Currie/Balerno.”

Modify the Glossary definition of “Active frontage” to “street door access”

Juniper Green & Baberton Mains Community Council (0306)

No specific modification identified.

Peter Allen (0336)

Modify policy to link together town centres (e.g. Portobello to Leith, through Seafield)

The Davidson's Mains and Silverknowes Association (0454)

Modify Plan to introduce policies to promote and develop these including better local transport links.

**Re 4 Alternative Use of Shop Units in the City Centre and Town Centres**

Hazledene House Limited (0695)

No modification to plan proposed.

**Re 5 Local Centres**

Archie Clark (0003)

Modify the plan to include provision of a museum and local council offices in central Currie. Response infers change to glossary definition of Local Centre.

Asda Stores Limited (0142)

Modify the plan to identify Leith Waterfront local centre.

Crosswinds Development Ltd (0184)

Modify Table 14 to include explicitly that a new local centre is proposed at site H61 as illustrated on Map 24 and that another town centre is proposed at H63.

Tarmac (0244), T Klan (0307)

Modify policy Re 5 to include the following; 'planning permission for new Local Centres which support existing or proposed communities will be permitted provided the proposal ..... '

T Klan (0307)

Modify definition of Local Centre in the Glossary to include Class 1, 2 and 3 uses.  
Modify Part 4 Table 14 in Appendix B to include South East Edinburgh as a proposed Local Centre.

Inverdunning (Hatton Mains) Ltd (0427)

Modify Table 14 to include Hatton Village as a proposed new local centre/hub

The Davidson's Mains and Silverknowes Association (0454)

Modify the plan to include the shopping centre at Silverknowes Road as a Local Centre.

AEW (0524)

Modify the policy to the following;  
Proposals for non-retail development in a local centre or on edge of a local centre which would have a detrimental impact on the function of the centre will not be permitted, .....unless as part of a comprehensive mixed use redevelopment or regeneration proposal to re purpose or re-invigorate a local centre.

The change of use of a shop unit in a local centre to a non-shop use will be permitted provided:

f) The change of use would not result in half the units in the centre being in nonshop use, and

g) The proposal is for an appropriate commercial, community or business use, which would complement the character of the centre and would not be detrimental to its vitality and viability.

.....or .....

h) The proposal is part of a comprehensive residential led mixed use redevelopment

Avison Young for Aldi Stores Ltd. (0526)

Modify plan to include the Aldi at Dock Street as part of a future established Local Centre.

Hallam Land Management (0615)

Modify policy to add following clause; 'planning permission for new Local Centres which support existing or proposed communities will be permitted provided the proposal ..... '

Modify definition of Local Centre in the Glossary to include Class 1, 2 and 3 uses.

Modify Table 14 to include Craigiehall as a proposed Local Centre.

Policy Re 5 local Centres is inconsistent with Policy Re 10 Entertainment, Leisure and Café/Restaurant developments, however, no modification identified.

## **Re 6 Commercial Centres**

Robyn Kane (0091)

No modification identified

Nuveen Real Estate (0564)

Modify Policy to include a similar criterion to Policy Re 2, in requiring proposals to provide high quality, commercially attractive units to a high standard of design, that improve the appearance of the commercial centre.

Modify Table 14 by amending reference to Craighleith Retail Park to the following;

"Existing – Retail park which opened in 1996. 20 Units. Mix of bulky goods, fashion, food retailing, leisure, petrol station and shopper amenities including drive through restaurant.

Future – Scope for future reconfiguration and enhancement. "

Modify policy to include similar provision to criterion a) of Policy Re 2.

Modify policy to insert of the following sentence: "In addition to retail use, proposals for entertainment, leisure and café/restaurant, hotel, offices and housing are acceptable in principle at Commercial Centre locations subject to demonstrating compliance with other City Plan policies."

Nuveen Real Estate (0734)

Modify policy to insert of the following sentence: "In addition to retail use, proposals for entertainment, leisure and café/restaurant, hotel, offices and housing are acceptable in principle at Commercial Centre locations subject to demonstrating compliance with other City Plan policies."

CBRE Global Investors (0644)

Modify policy by inserting the following text;

"In addition to retail use, proposals for entertainment, leisure and café/restaurant, hotel, offices and housing are acceptable in principle at Commercial Centre locations subject to demonstrating compliance with other City Plan policies."

Modify Table 14 references to Meadowbank Commercial Centre as follows;

[Existing Role] "Smaller urban retail park which opened in 1997. 10 units. Mix of homeware and clothing stores, supermarkets, leisure uses, drive through restaurants/coffee shops and local amenities. Located in high density residential area with good bus services."

[Future Role] "Permission granted in 2021 to allow change of use of a retail unit from comparison to convenience goods. Scope for future reconfiguration or enhancement."

Ambassador Group (0683)

Modify Policy to cover the change of use of shop units within Commercial Centres and reflects the same flexible approach as set out at Policy Re 5 (Local Centres)

Modify Table 14 be to identify Ocean Terminal as a Commercial Centre with the potential to deliver new homes and office space in the future. Also update to the following;

- Role and character - The table notes that Ocean Terminal has 87 units, whereas the current LDP indicates the Centre has 80 units
- Current Commitments and Future Role - We request that the table be updated to identify Ocean Terminal as a Commercial Centre with the potential to deliver new homes and office space in the future. The demand for retail and leisure space at Ocean Terminal is likely to change over time and it is vital that the policies set out in City Plan 2030 support the adaptation of accessible brownfield sites such as Ocean Terminal to provide a mix of uses in the future. This flexibility will ensure creation of vibrant, sustainable places and spaces and contribute towards the regeneration of Leith and the waterfront.

## **Re 7 Out of Centre Development**

Archie Clark (0003)

Modification not specified but infers removing reference to small retail units less than 250sqm.

Jamie Wallace (0167)

Modify policy to apply to total site plan requirements and not just the floor area within the retail building.

Lidl Great Britain Ltd (0181), Avison Young for Aldi Stores Ltd. (0526)

Modify the policy to delete Criterion e.

Juniper Green & Baberton Mains Community Council (0306)

Modify plan so the large-scale housing proposals referred are required to contain proposals for such convenience stores in order to encourage the development of a 20-minute neighbourhood.

Living Streets Edinburgh Group (0486)

Modify policy to add more specific requirements for accessibility by public transport, walking and cycling and contributions to be sought where enhancement is needed. There must also be a restriction on the level of parking provision to act as encouragement to provide alternatives.

## **Re 8 Alternative Use of Shop Units in Other Locations**

Leith Central Community Council (0614)

Modify policy so single convenience shops and parades of small shops are protected like at 106-154 Leith Walk.

Edinburgh World Heritage (0339)

No modification identified.

**Re 9 Entertainment, Leisure and café/restaurant Developments: Preferred Locations**

Crosswinds Development Ltd (0184)

Modify Table 14 to include a local centre in allocation H61

Modify the text to include the following;

“Planning permission will be permitted for high quality, well designed arts, café/ restaurant, leisure and entertainment facilities and visitor attractions in the City Centre, at Leith and Granton Waterfront, in a town centre, and local centres provided:

- a. the proposal can be integrated satisfactorily into its surroundings with attractive frontages to a high quality of design that safeguards existing character,
- b. the proposal is compatible with surrounding uses and will not lead to a significant increase in noise, disturbance and on-street activity at unsocial hours to the detriment of living conditions for nearby residents, and
- c. Support the principles of the 20-minute neighbourhood by ensuring the development will be easily accessible by public transport, foot and cycle.”

Leith Central Community Council (0614)

Modify policy to require Noise Impact Assessments made by independent professionals for all arts, café/ restaurant, leisure, entertainment facilities and visitor attractions.

Cockburn Association (0777)

No modification identified.

Terry Levinthal (313)

No modification identified.

**Re 10 Entertainment, Leisure and café/restaurant Developments: Other Locations**

Archie Clark (0003)

Modify plan to include proposals on how to develop the use of local arts and cultural centres.

Crosswinds Development Ltd (0184)

Modify policy as follows;

“Planning permission will be granted for entertainment, leisure and café/restaurants developments in commercial centres and other locations in the urban area provided:

- a. all potential City Centre, town centre, and local centre options have been thoroughly

assessed and can be discounted as unsuitable or unavailable,  
b. Support the principles of the 20-minute neighbourhood the site is or will be made easily accessible by a choice of sustainable transport and not lead to an unacceptable increase in traffic locally,  
c. the proposal can be integrated satisfactorily into its surroundings with attractive frontages to a high quality of design that safeguards existing character, and  
d. the proposal is compatible with surrounding uses and will not lead to a significant increase in noise, disturbance and on-street activity at unsocial hours to the detriment of living conditions for nearby residents.”

Juniper Green & Baberton Mains Community Council (0306)

Modify plan to include proposals on how to develop the use of local arts and cultural centres.

T Klan (0307)

Modify policy to delete “in the urban area”

Living Streets Edinburgh Group (0486)

Modify policy criterion b) to refer to public transport, foot and cycle rather than sustainable transport.

Cockburn Association (0777)

No modification identified.

**Re 11 Food and Drink Establishments**

New Town & Broughton Community Council (0254)

Modify reference to Council’s ‘Guidance for Businesses’, which may include parts of Broughton Street and Leith Walk.

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

Modify plan to extend the impacts of Policy Re 11 Food and Drink Establishments to include health and wellbeing which could also be reflected in the policy criteria, if provisions of draft NPF4 are implemented.

Cockburn Association (0777)

No modification identified.

**Appendix B**

Nuveen Real Estate (0564)

Modify Appendix B to update addresses against 'City Centre Retail Core' under the 'Town Centres' section of this table to reflect the new postal addresses of the St James Quarter, rather than the now demolished St James Centre (e.g. 1-111 St James Centre). A list of these can be provided separately.

### **Retail Strategy**

Brian Tiplady (0641)

Modify plan to include acknowledgement of probable decline in retail space in the city, and plans for managing it.

Avison Young for Aldi Stores Ltd. (0526)

Modify plan to remove paragraph 2.143.

Leith Central Community Council (614)

Modify plan to delete duplicate sentence: 2.141 "In Edinburgh, shopping and leisure uses are mainly provided in a network of centres distributed across the city."

### **Summary of responses (including reasons) by planning authority:**

#### **Re 1 Town Centres First**

Leith Central Community Council (0614)

Policy Re 1 is largely unchanged from Policy Ret 1 in the adopted LDP (CD039). The reference to 2,500sq m is consistent with the advice in Scottish Planning Policy (CD096) paragraph 71. In addition, Policy Re 1 states that retail impact analysis (RIA) will be required where a proposal is "over 2,500sq.m. or occasionally for smaller proposals, if proposed outwith a town centre and contrary to the development plan". So the policy does require a RIA for a proposal less than 2,500sq m where it is contrary to the Plan's policies. As a result, the Council considers the requirements set out in the plan are reasonable.

Matters related to residential amenity such as opening hours and delivery schedules are material considerations, but they are matters that are more appropriately considered as part of the planning application process through an environment or noise assessment rather than as part of a retail impact analysis. Policy Env 33 of the Plan relates to preserving residential amenity and includes a requirement with regard to noise, which the Council considers is the most appropriate means to address this issue. **No modifications proposed.**

Crosswinds Development Ltd (0184)

The purpose of Policy Re 1 is to set out the Plan's town centre first approach with the application of a sequential approach. This policy is consistent with the requirements of Scottish Planning Policy (CD096) as set out in paragraphs 68 and 69, and also paragraph 71 with regard to retail impact analysis. The Council has concerns that the additional sentence proposed could result in difficulties in implementing the policy by creating the

risk of a contradiction within the policy, for example, proposals could be promoted on the grounds that they would help support 20 minute neighbourhoods and therefore arguments could be made that proposals were consistent with the policy despite being outwith designated centres, and/or without demonstrating that the sequential approach had been followed. Policy Re 7 Out of Centre Development supports small scale retail proposals, in certain circumstances in the context of creating more a sustainable community i.e. 20 minute neighbourhoods, as referred to in para 3.266. The Council considers that it is more appropriate that any such proposals, in the context of 20 minute neighbourhoods, are dealt with under this policy rather than Policy Re 1.

Table 14 identifies the network of centres across Edinburgh. There is a separate section titled, "Proposed New Centres", and West Edinburgh is identified. The Council considers it is important that the plan is read as a whole. Place Policy16 covers West Edinburgh. It sets out a series of development principles to guide development and a plan. The only reference to a town centre is in development principle b, which identified site H63 as a focus for a town centre development. The Council acknowledges that map 25 identifies a town centre on the Crosswinds site. However, the Council emphasises that the West Edinburgh area is a significant development which will take the form of an urban extension and as a result is seeking to prepare a West Edinburgh Master Plan to ensure a collaborative, and multidisciplinary approach. The optimal locations for a new town or town centres will emerge as part of that process, and it would be premature to identify Site H61 for a town centre at this stage. **No modification proposed.**

## **Re 2 City Centre Retail Core**

### Hazledene House Limited (0695)

Edinburgh City Centre represents the regional shopping centre for the Lothian city region. Evidence from the Commercial Needs Study (CD033), as referred to in paragraphs 2.143 and 2.144 of the Plan, shows that comparison goods expenditure is expected to grow over the lifetime of the plan and that the city centre is the best location capable of attracting additional comparison expenditure. The purpose of Policy Re 2 is support proposals for retail development within the city centre retail core subject to a number of considerations and is consistent with the findings of the commercial needs study. However, the Council has acknowledged the way town centres are changing and the impacts of on-line shopping by altering Policy Re 4 Alternative Use of Shop Units in the City Centre and Town Centres from the previous policy (Ret 9) in the adopted LDP. The new policy is more flexible and uses supplementary guidance as a material consideration, whereas the previous policy used statutory guidance directly to determine proposals. As a result, the Council considers the new policy strikes a healthy balance by being more supportive of a complementary range of uses with the city centre, whilst still preserving the importance of its retail function. **No modification proposed.**

### Edinburgh World Heritage (0339)

The Council considers that Edinburgh is not experiencing the same level of impact from retail decline as other cities for the reasons set out in its response to 0695 above, but has nevertheless made some policy changes to be more supportive of a complementary range of uses with the city centre, which it considers strikes a healthy balance. The Council considers the policies in the plan are supportive of residential development in the city centre and the new policy Econ 1, which is supportive of cultural uses, is an appropriate

means to encourage more of these types of uses within the city including its centre. **No modification proposed.**

### **Re 3 Re 3 Town Centres**

#### Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306)

The Council considers that the reference in criterion a to “there will be no significant adverse effects on the vitality and viability of the city centre retail core or any other town centre”, relates to the overall vitality of the centre and does not apply to specifics details e.g. whether or not there a bank branch or an ATM, or whether a local shop has a card reader, as these are not matters over which the planning system has control. The Council in preparing the Plan carried out a review of town and local centres and some alterations were made. Juniper Green, Main Street Balerno, and Bryce Road Currie continue to be identified as local centres within the Plan rather than town centres, due to their modest size and limited facilities. The Council considers there has been no material change in circumstances since the previous plan was adopted to justify altering the designation of these centres. Chesser Avenue and Wester Hailes also continue to be identified as local centres for the same reason.

The Council prefers the definition of “active frontage” as defined in the glossary. There are some shops which have access to the street but the shop is on an upper level or basement level, and therefore considers the existing text more clearly defines what an active frontage is. “Active frontage” is an established design and placemaking term used in both national policy and guidance. **No modification proposed.**

#### Juniper Green & Baberton Mains Community Council (0306)

The retail policies in the Plan seek to protect town and local centres from changes of use likely to affect their vitality and viability. However, the Plan cannot prevent shops from closing, prevent changes in broader retail trends or require designated centres to have certain shopping facilities. **No modification proposed.**

#### Peter Allen (0336)

The Council has some concerns regarding the concept of linking together centres. There is a risk of creating ribbon development, and losing the identity of the individual town centres. It would create the risk of new retail development outwith centres, which could compromise the vitality of viability of existing centres. There is no guidance in Scottish Planning Policy (CD096) to support such a concept. In contrast, the 20 minute neighbourhood approach seeks to provide an appropriate scale of facilities in areas of the city which don't have existing facilities without the risk of creating ribbon development, and without threatening the vitality and viability of existing centres. As a result, the Council does not support a change in policy to link centres. **No modification proposed.**

#### The Davidson's Mains and Silverknowes Association (0454)

The Council considers the existing policy seeks to promote town centres through the use of planning guidance which seeks to protect town and local centres from changes of use likely to affect their vitality and viability. **No modification proposed.**

## **Re 4 Alternative Use of Shop Units in the City Centre and Town Centres**

Hazledene House Limited (0695)

Policy Re 4 sets out policy with regard to proposals for change of use of a shop unit to a non-shop use in the city centre and town centres. The policy allows changes of use where they will not undermine the retailing function of the centre and where it is an appropriate use. The Council has prepared individual planning guidance for the centres which are tailored to their individual characteristics in order to guide decision making with regard to assessing whether a proposal will undermine the retail function.

Edinburgh City Centre represents the regional shopping centre for the Lothians city region. Evidence from the Commercial Needs Study (CD033), as referred to in paragraphs 2.143 and 2.144 of the Plan, shows that comparison goods expenditure is expected to grow over the lifetime of the plan and that the city centre is the best location capable of attracting additional comparison expenditure. However, the Council has acknowledged the way town centres are changing and the impacts of on-line shopping by altering Policy Re 4 from the previous policy Ret 9 in the adopted LDP. The new policy is more flexible and uses supplementary guidance as a material consideration, whereas the previous policy used statutory guidance directly to determine proposals. As a result, the Council considers the new policy strikes a healthy balance by being more supportive of a complementary range of uses within the city centre, whilst still preserving the importance of its retail function. In addition, the Council has recently adopted updated City Centre Supplementary Guidance (CD046) in January 2020. The updated guidance significantly changes the policy position particularly for Princes Street where it allows up to a third of the units within each block to change to non-shop use. The previous guidance (CD150) adopted in February 2014, in contrast, only allowed a change of use on Princes Street to Class 3 food and drink where it was in a location that could accommodate outdoor seating and the unit was under 500 sq m. The Council considers the change in policy and guidance is radical, and given the new guidance was introduced during Covid 19 it will take time for the consequences of this change to be realised. However, the Council is committed to regular review of the guidance. With regard to the use of upper floors the supporting text in paragraph 3.252 makes it clear that policy is only intended to apply to ground floor units or basement/first floor units that are directly accessed from the pavement. **No modification proposed.**

## **Re 5 Local Centres**

Archie Clark (0003)

The Council agrees that the local centres identified in the plan are quite variable and that the definition in the glossary is unintentionally inconsistent with the aims of the plan. The Council considers the glossary should state, "centres of less than 10 units have been included in order to provide a local centre within 10 minutes walk of residents where possible." While local centres may vary in terms of size and facilities, the Council still considers them to provide the function of a local centre. In addition, it is important to recognise that the planning system has some limitations in terms of how much it can influence facilities and changes to facilities within local centres. Occupiers of units can change over time, without it resulting in a change of use class and the Council cannot prevent that. In addition, it is important to recognise that a key reason for identifying local centres is to enable Policy Re 5 to be applied. This policy is supportive of further retail

development in these designated centres where the criterion of the policy are met and it also supports change of use of shop units in certain circumstances. If local shopping parades are not identified as local centres, then Policy Re 7 and Re 8 would apply. These policies generally are more restrictive. The Council acknowledges there is a technical error and that the glossary should be correct as a minor drafting/technical matter.

The Council notes the suggestion for a museum and local council office in Currie. However, the Council has no committed plans to bring forward such schemes at this time and therefore it would be inappropriate to identify such proposals in the plan. **No modification proposed.**

#### Asda Stores Limited (0142)

The Council carried out a review of the Town Centres and Local Centres identified in the adopted LDP (CD039) when preparing the Plan, including the proposed centres, and took a decision to drop the proposed centre at Leith Waterfront. The Council considers the Asda at Leith has a different context to the other Asda stores and doesn't constitute a local centre. The Store at the Jewel is adjacent to the Newcraighall Commercial Centre, a significant commercial centre that has one of the largest turnovers in the UK. The store at Chesser forms part of a larger local centre including the Corn Exchange and the Edinburgh West Retail Park. In contrast, the Leith store is a single isolated store and the locality lacks the characteristics, the sense of place and range of shops or facilities one would expect in a local centre. The Council considers the character of the locality is unlikely to change and therefore has dropped the proposal to identify the store as part of a local centre. Should circumstances change and further development occur that alters the character to be more in keeping with a local centre the Council could subsequently factor that into the next review of local centres. **No modification proposed.**

#### Crosswinds Development Ltd (0184)

The Council does not agree that Table 14 should be amended for the reasons set out in its response to 0184 under Policy Re 1. **No modification proposed.**

#### Tarmac (0244)

The Council does not support the allocation of the Bairdview site (Site )as set out in its response to 0244 in Issue 9: Suggested additional greenfield sites Therefore, the Council does not support the allocation of a new proposed local centre at Bairdview. **No modification proposed.**

#### T Klan (0307)

The Council does not support the allocation of the South East Edinburgh site (Site 14) as set out in its response to 0307 in Issue 9: Suggested additional greenfield site Therefore, the Council does not support the allocation of a new proposed local centre at South East Edinburgh. **No modification proposed.**

#### Inverdunning (Hatton Mains) Ltd (0427)

The Council does not support the allocation of the Hatton Village site ( Site 31) as set out in its response to 0307 in Issue 9: Suggested additional greenfield sites Therefore, the

Council does not support the allocation of a new proposed local centre at Hatton Village.  
**No modification proposed.**

The Davidson's Mains and Silverknowes Association (0454)

The Council carried out a review of the Town Centres and Local Centres identified in the adopted LDP (CD039) when preparing the Plan. There are a number of small parades of shops across Edinburgh that serve a local function, but are not considered to constitute a Local Centre in terms of its characteristics, the sense of place and range of shops or facilities one would expect in a local centre. For example, there is a small parade of shops on Comiston Road in the vicinity of Craiglea Drive that does not constitute a centre and there is a parade of shops on Saughton Road North, Carrick Knowe that also does not constitute a centre. There has been no material change in circumstances at Silverknowes Road since the last LDP was adopted and therefore the Council considered there was no justification to identify it as a local centre. **No modification proposed.**

AEW (0524)

The purpose of policy Re 5 is to support appropriate retail development within or on the edge of local centres. The policy also has flexibility, supporting changes of use to non-retail use where the criterion of the policy has been met. This criterion has been altered from the adopted LDP policy (Ret 9), which would not allow changes where it would result in four or more units in non-shop use. The new policy allows up to half the units in a local centre to be in non-shop use. The Council considers this a significant change, which responds to the change in retail trends. The Council does not support the proposed changes to the wording of the policy which imply that a proposal that would have a detrimental impact on a local centre would be acceptable as long as it was part of comprehensive redevelopment. It is important to recognise that the Ryden Commercial Needs Study retail report (CD033) shows that over the lifetime of the plan whilst there is no requirement for further convenience retail floorspace that does not mean there is justification for less of it. The population of Edinburgh is still rising, which will offset any fall in expenditure over time. It is important that the retail function of centres is still protected whilst allowing more flexibility to provide supportive uses to maintain vibrancy.

The Council carried out a review of the Town Centres and Local Centres identified in the adopted LDP (CD039) when preparing the Plan. The Council acknowledges that the Wester Hailes local centre is one of the larger ones as referred to in paragraph 2.141 of the Plan. The Council does not consider that Wester Hailes has the character of a town centre. The glossary of the plan defines town centres as, "Centres that provide a diverse and sustainable mix of activities and land uses which create an identity that signals the function and wider role." There are eight existing town centres identified in the Plan. They all have a distinctive historic identity, many of which were historic towns which became merged with Edinburgh as it expanded and provide a wider social and community role to the communities around them. Wester Hailes is different to these, it has the feel of a local centre "a local centre is a shopping centre, usually of 10 units or greater, serving a local retail function" as defined in the glossary, but the appearance of a small commercial centre, with a series of large buildings surrounded by large area of cumulative car parking.

The Council notes that since the representation was submitted the Wester Hailes Plaza has been sold and purchased by a new owner. Although the Plan does identify a housing led mixed use development next to Wester Hailes local centre (H82) it is an isolated

development. The Council has commissioned masterplanning for regeneration of the wider area and the community is preparing a local place plan. As a result, the Council does not consider it would be appropriate to allocate this site and prepare a place based policy at this time. Policy within the plan is supportive of office development in Policy Econ 3 in designated centres, including local centres. In addition, Policy Econ2 is supportive of housing within proposed commercial developments if the site is larger than 0.25ha. Therefore, proposals for mixed use development, including residential, could be considered in principle as being consistent with the requirements of the plan. The Council considers there is no requirement for this specific proposal to be included within the plan as its not required in order to deliver the development plan strategy and that the proposal could be considered in the context of the existing provisions of the Plan through the planning application process. **No modification proposed.**

#### Avison Young for Aldi Stores Ltd. (0526)

There is a basic definition of a local centre as set out in the glossary of the plan which states, "For the purposes of this Plan a local centre is a shopping centre, usually of 10 units or greater, serving a local retail function." The Council acknowledges that the local centres identified in the plan are quite variable. However, it is important that a local centre has the sense of place and coherent form that gives it the character of a local centre. In a large urban area like Edinburgh there are parades of shops distributed throughout the city providing retail facilities, but they don't all provide the coherent form or sense of place of a local centre. In the Leith area there are two local centres identified, both on Ferry Road. One of them is centred around Leith Public Library which has a clear sense of place, and the other further to the west which has a long parade of shops and a traditional Scottish High Street feel. In contrast the Aldi store is a standard format stand-alone supermarket unit, with a blank façade that faces onto Commercial Street opposite former commercial buildings. On Dock Street it faces on to its own a car park, and is immediately surrounded by blocks of flats. As a result, the Council does not consider the Aldi store itself constitutes a local centre nor does it form part of a local centre. The Council does not agree that the boundary proposed constitutes a local centre. Whilst it does include various parades of shops including the Aldi store it does not have the clear sense of place or coherent form that a local centre has, instead it represents an area or segment of urban form with no common identity. Identifying the area proposed as a local centre would create a local centre that was inconsistent with the others within the plan. **No modification proposed.**

#### Hallam Land Management (0615)

The Council does not support the allocation of Craigiehall for residential led mixed use development for the reasons set out in its response to 0615 in Issue 9 Suggested additional greenfield sites. Therefore, it does not support Craigiehall being identified as a proposed local centre.

The Policy is intended to apply to identified local centres, supporting proposals for retail and changes of use, where they meet the terms of the policy. Proposals for new centres are set out in the Place policies in the context of new allocations.

The Council does not consider it helpful to modify the definition of Local Centres to make reference to use classes. The types of uses within a centre can be variable and include a

wide range of uses including retail, leisure, garages, cafes, community facilities, churches etc. As a result, the definition needs to be more flexible.

Policy Re 10 and Policy Re 5 are very similar to Policies Ret 10 and Ret 5/Ret 9 of the adopted Plan, the latter two having been merged into Re 5. The Council has not experienced any problems determining planning applications. Policy Re 10 sets out the policy position for Entertainment, Leisure and Restaurant uses in Commercial Centres and other locations outwith designated centres. It applies the sequential approach preferring designated centres first. Only where other locations are not available, and that may include a local centre, where a proposal is unable to meet the criterion of policy Ret 5, then a proposal may be considered in an out of centre location subject to all the criterion of the policy being met. As a result, the Council does not agree the policies are inconsistent. **No modification proposed.**

### **Re 5 Commercial Centres**

#### Robyn Kane (0091)

The proposal for a cinema at Cameron Toll has been granted planning permission. The Plan sets out the factual position. **No modification proposed.**

#### Nuveen Real Estate (0564)

The city centre is a world heritage site and has numerous buildings of historic importance. As a result, the Council considers it reasonable for Policy Re 2 to require high quality commercial units with a high standard of design. The Council does not consider it necessary to stipulate the same requirements for Commercial Centres, nor does it consider it relevant to 'levelling the playing field'.

The Council does not consider it reasonable or pragmatic to refer to planning applications that have been submitted but are yet to be determined as it implies that the proposals are acceptable.

The Council does not consider it necessary to include a reference to entertainment, leisure and restaurants etc within the policy. The Council considers the plan should be read as a whole. Policy Re10 sets out the policy position with regard to entertainment, leisure and restaurant developments in commercial centres. Policy Econ 6 sets out the policy position with regard to hotel developments and Policy Econ 3 sets out the policy position with regard to office developments. Paragraph 3.262 also has a cross reference to Econ 3. **No modification proposed.**

#### Nuveen Real Estate (0734), CBRE Global Investors (0644)

The Council does not consider it necessary to include a reference to entertainment, leisure and restaurants etc within the policy for the reasons set out in its response to 0564 above.

The Commercial Needs Study Retail paper (CD033) was prepared to inform the preparation of the Plan. The status of the Commercial Needs Study in the context of assessing planning applications is not relevant for the purposes of the examination of the Plan. What is a relevant material consideration is a matter for a decision maker at the

time of the assessment of the planning application and will depend on the individual circumstances of the case. **No modification proposed.**

#### CBRE Global Investors (0644)

The Council considers it reasonable or pragmatic to only refer to planning applications that have been determined. The Council acknowledges there is a technical error and the text should be corrected as a minor drafting/technical matter as follows;

Existing Role:

“Smaller urban retail park which opened in 1997. 10 units. Mix of homeware and clothing stores with two supermarkets, leisure use and drive through restaurant/cafe. Located in high density residential area with good bus services”. And

Future Role:

“Permission granted in 2021 to allow change of use of a retail unit from comparison to convenience goods. May be scope for future reconfiguration or enhancement”

#### Ambassador Group (0683)

Policy Re 6 sets out the policy requirements for proposals for retail development within existing commercial centres. The Council considers the plan should be read as a whole. Policy Re10 sets out the policy position with regard to entertainment, leisure and restaurant developments in commercial centres and is supportive in principle subject to the requirements of the policy being met. Policy Econ 6 sets out the policy position with regard to hotel developments and Policy Econ 3 sets out the policy position with regard to office developments. Paragraph 3.262 also has a cross reference to Econ 3. These policies are supportive of these uses in commercial centres. In addition, Policy Hou1 is also supportive of housing development in principle on commercial centres. The policy position with regard to commercial centres is different to local centres and complex. The Council does not consider it pragmatic to refer to change of use within Policy Re 6 and prefers to set out these matters in other policies as a means of more clearly articulating the Plan’s strategy.

With regard to Table 14, the strategy of the Plan in principle supports housing, and office development in Commercial Centres. No modification proposed, however, should the Reporter be so minded the text of Table 14 under the column “Current Commitments and Future Role” could be amended to include a specific reference to “the strategy of the plan supporting housing, office and hotel uses in principle” in each of the Commercial centres after the existing sentence “Maybe scope for future reconfiguration or enhancement” in order to provide more clarity. **No modification proposed.**

### **Re 7 Out of Centre Development**

#### Archie Clark (0003)

Policy Re 7 sets out the Plan’s policy position with regard to proposals being brought forward for retail development in out of centre locations. Criterion e relates to small scale proposals less than 250sqm in size. With regard to the Plan’s housing led mixed use allocations, the plan is looking to proactively support proportionate retail facilities in the context of the allocation, and there is reference to this in relevant Place policies, Place 11 Newhaven Road 2, Place 12 Bangor Road, Place 13 South Fort Street etc. However, it is

also important to set out the policy position for proposals being brought forward elsewhere, and that is the role of Policy Re 7. **No modification proposed.**

Jamie Wallace (0167)

Policy Re 7 relates to retail developments only. The only drive through format businesses in Edinburgh relate to cafés and restaurants and proposals for new ones will be assessed under policies Re 9 Entertainment, Leisure and café/restaurant developments - preferred locations and Re 10 Entertainment, Leisure and café/restaurant developments-preferred locations - other Locations. As a result, the Council considers the suggested changes to policy Re 7 are not required. **No modification proposed.**

Lidl Great Britain Ltd (0181)

Policy Re 7 sets out the Plan's requirements with regard to retail proposals in out-of-centre locations. The Council emphasises that the provisions of the Plan with regard to out-of-centre retail proposals have been carried over from the adopted LDP, which was subject to examination. There is only a minor alteration to the text of policy Re 7 compared to Policy Re 6 of the adopted LDP. The requirements of Criterion e in the Plan, which were previously set out in paragraph 251 of the adopted plan. The Council chose to include the provisions of paragraph 251 in Criterion e in order to ensure the provisions are more transparent and to ensure consistency in decision making. It is important that the requirements of criterion e are understood and paragraph 3.266 of the Plan sets this out clearly, which is to support small scale convenience stores in the context of creating more sustainable communities, i.e. 20 minute neighbourhoods. These small scale proposals do not have to meet the requirements of criterion b, but they do have to meet the requirements a, c and d. **No modification proposed.**

Proposals for retail in an out of centre location have to meet criterion a-d of the policy except for proposals less than 250sqm, which don't have to meet the requirements of criterion b. Criterion a. sets out four mutually exclusive scenarios that proposals have to meet, i.e. that a proposal will address a quantitative deficiency, or a proposal will address a qualitative deficiency, or a proposal will meet the needs of a growing residential population, or a proposal will meet the needs of a growing working population. As long as a proposal demonstrates it meets one of the scenarios in criterion a, it is considered to be in accord with that first criterion. Where a proposal is larger than 250sqm then clearly criterion e does not apply. **No modification proposed.**

The Council does not agree that criterion e contradicts criterion a to d. Criterion e only applies to proposals that are less than 250sqm and paragraph 3.266 explains this clearly. No modification proposed, however, should the reporter be so minded the policy could be altered to remove criterion e and to rely on the provisions within the supporting text as per the adopted LDP if it is considered to provide more clarity.

The Council disagrees that paragraph 3.265 contradicts the wording of Policy Re 7. As explained above the four mutually exclusive scenarios referred to relate to criterion a. No modification proposed, however, should the reporter be so minded the second sentence of the paragraph could be modified to state "Criterion a of the policy sets out four mutually exclusive scenarios.." if it is considered to provide more clarity.

Juniper Green & Baberton Mains Community Council (0306)

The Council has addressed these matters in its response to 0003 above. **No modification proposed.**

Living Streets Edinburgh Group (0486)

Criterion d of the Policy already requires proposal sites to be easily accessible and if not to be made easily accessible by sustainable transport modes. As a result, the Council does not consider an additional reference is required. **No modification proposed.**

Avison Young for Aldi Stores Ltd. (0526)

The Council has addressed matters relating to criterion e in its response to 0181 above.

The Council considers the explanatory text in paragraph 3.265 to be essential in order to provide clarification with regard to how the policy is implemented and to explain the provisions and criterion of the policy. The Council does not consider it pragmatic or reasonable to include such information, of direct relevance to the policy, within supporting planning guidance.

The Council considers reference to “Proposals seeking to meet the additional needs of a growing population should demonstrate that there are specifically meeting their needs and not the needs of existing population.” is reasonable and justified. New retail proposals should be of proportionate scale to meet the additional retail expenditure generated by the growing population. If a proposal is providing retail floorspace beyond the needs of the additional population, then an applicant would have to demonstrate that there is a retail deficiency (quantitative deficiency), otherwise the requirements of the criterion a policy will not be met. The Council considers this is reasonable, to ensure proposals are “of an appropriate type and proportionate scale that can justify an out of centre location” (paragraph 3.265). The Council does not consider the purpose of the policy is to stifle any future change but to ensure the national planning policy objective of town centres first is met, and that any proposals for retail in out of centre locations are fully justified. **No modification proposed.**

**Re 8 Alternative Use of Shop Units in Other Locations**

Leith Central Community Council (0614)

Policy Re 8 is largely the same as Policy Ret 10 in the adopted LDP. The Council considers there is balance to be struck between protecting existing individual convenience stores or small parades of shops and allowing the normal functioning of the market, where businesses come and go as part of market trends. Policy Re 8 sets out a range of criterion and seeks to prevent loss of shop units in certain circumstances as defined in the policy. Paragraph 3.268 makes reference to Leith where commercial uses outwith local centres are considered to make a positive contribution to the vibrancy of the city. The Council considers the Policy Re 8 strikes the right balance. **No modification proposed.**

Edinburgh World Heritage (0339)

The only policy applying to speciality shopping streets is policy Re 8. The supporting text in paragraph 3.267 provides further detail on these streets and more detailed information

on the relevant frontages is set out in Appendix B. The Council considers further clarity is unnecessary. **No modification proposed.**

## **Re 9 Entertainment, Leisure and café/restaurant Developments: Preferred Locations**

### Crosswinds Development Ltd (0184)

The Council does not agree that Table 14 should be amended to identify a town/local centre on the Crosswinds site (H61) for the reasons set out in the Council's response to 0184 under Re 1.

The Council considers the Plan should be read as a whole. Delivering a network of 20 minute neighbourhoods is a key underlying aim of the plan (aim 1). Whilst the proposed modification draws attention to this aim, in the context of policy Re 9, it does not materially change the requirements of the policy. As a result, the Council does not have any objection to it, however, nor does it consider it necessary. **No modification proposed.**

### Leith Central Community Council (0614)

The Council considers the issue of noise is an important planning consideration, particularly in the context of residential amenity, with regard to these issues. However, the type of assessment required is a matter for the development management process and therefore the Council considers it is unnecessary for the policy to specifically identify the assessment required. **No modification proposed.**

### Cockburn Association (0777)

The Council considers the issue of noise is an important planning consideration, particularly in the context of residential amenity, with regard to these issues. However, the type of assessment required is a matter for the development management process and therefore the Council considers it is unnecessary for the policy to specifically identify the assessment required. **No modification proposed.**

### Terry Levinthal (313)

The Council welcomes the support for the policy. The definition of what is "acceptable" will depend on the individual circumstances of the proposal, the likely impacts and what mitigation measures are proposed. As a result, this is a matter for the Development Management process, and it would not be feasible to provide specific details within the plan. **No modification proposed.**

## **Re 10 Entertainment, Leisure and café/restaurant Developments: Other Locations**

### Archie Clark (0003)

Policy Re 10 is largely the same as Policy Ret 8 in the adopted LDP (CD039). Its purpose is to set out policy with regard to proposals for entertainment, leisure and restaurants. The Council considers the Plan should be read as a whole. Matters related to the arts are addressed in Policy Econ 1, which is supportive in principle of proposals related to culture as defined in paragraph 3.231. As a result, the Council considers a reference to the arts

in Policy Re10 is unnecessary. Furthermore, if Policy Re 10 was altered policy Re 9 would also have to be altered to match. **No modification proposed.**

Crosswinds Development Ltd (0184)

The Council considers the Plan should be read as a whole. Delivering a network of 20 minute neighbourhoods is a key underlying aim of the plan (aim 1). Whilst the proposed modification draws attention to this aim, in the context of policy Re 9, it does not materially change the requirements of the policy. As a result, the Council does not have any objection to it, however, nor does it consider it necessary. **No modification proposed.**

Juniper Green & Baberton Mains Community Council (0306)

The Council has set out its position with regard to this point in its response to 0003 above. **No modification proposed.**

T Klan (0307)

Policy Re 10 is largely the same as Policy Ret 8 in the adopted LDP (CD039), which has been subject to examination. Its purpose is to set out policy with regard to proposals for entertainment, leisure and restaurants. In contrast Policy Re 5 sets out policy with regard to proposals for retail development and proposals for change of use of retail units. The two policies address different uses and therefore its only reasonable that the policies differ to take account of the different planning issues they raise. There is no requirement to take account of the quantum impacts of new restaurant or entertainment proposals and the Council has not encountered any difficulties in determining planning applications in this respect since the LDP was adopted. The proposal to delete reference to “in the urban area” will not assist the application of this policy as it is intended to apply to the urban area only. The alteration could result in proposals being brought forward for entertainment purposes in the green belt which would be in accord with the revised policy but inconsistent with the green belt policy Env 18. As a result, the Council considers the suggested change is unreasonable. **No modification proposed.**

Living Streets Edinburgh Group (0486)

The Council considers the reference to “sustainable transport” has a useful degree of flexibility to cover a range of transport modes and also future proofs the policy in terms of new emerging sustainable transport solutions. **No modification proposed.**

Cockburn Association (0777)

The Council welcomes the support for the policy. The Council considers it is a matter for the Development Management process to decide what data is required to determine what constitutes “a significant increase in noise, disturbance and on-street activity at unsocial hours to the detriment of living conditions for nearby residents.” Much will depend on the individual circumstances of the application and decisions will have to be made on a case by case basis. **No modification proposed.**

**Re 11 Food and Drink Establishments**

New Town & Broughton Community Council (0254)

The Council's Guidance for Businesses (CD050) identifies areas of restriction where there will be a presumption against new public houses and entertainment venues on page 10. The plan shows Broughton Place and Picardy Place form part of an area of restriction. As a result, the Council considers the references to these streets in the Plan is factually correct. **No modification proposed.**

Scottish Government - Planning and Architecture Division - Development Plans Team (0309)

The Council notes the reference to health and wellbeing in the draft NPF4 (CD099). Until it is approved there is the possibility it may be changed from its current form. However, in the circumstances where it is not altered and should the reporter be so minded the policy could be altered to replace the text "living conditions" with "the health and well being" if it is considered to be more consistent with the approved NPF. **No modification proposed.**

Cockburn Association (0777)

The Council welcomes the support for the policy. The Council considers it is a matter for the Development Management process to decide what data is required to determine what constitutes "a significant increase in noise, disturbance and on-street activity at unsocial hours to the detriment of living conditions for nearby residents." Much will depend on the individual circumstances of the application and decisions will have to be made on a case by case basis. **No modification proposed.**

## **Appendix B**

Nuveen Real Estate (0564)

The Council acknowledges that in Appendix B the addresses against 'City Centre Retail Core' under the 'Town Centres' section of this table with regard to the new St James Quarter are now out of date. The Council has no objection to a minor correction should the reporter/s be minded to alter the plan accordingly. Minor non-notifiable modification proposed.

## **Retail Strategy**

Brian Tiplady (0641)

The Council in preparing the Plan commissioned consultants to prepare a Commercial Needs Study Retail Paper (CD033). A summary of the conclusions of the study are set out in paragraphs 2.143 to 2.148 of the Plan. The evidence from the report shows that Edinburgh is more robust than many other cities in the UK and is well placed to deal with the consequences of changes in retail trends. The growing population will to a certain extent help to offset the fall in retail expenditure.

The retail strategy set out in the plan has sought to provide a careful balance between supporting the existing retail provision whilst providing more flexibility to allow more non-retail uses within centres without compromising their retail function and their vitality. One example of this increased flexibility is the alterations made to Policy Re 4 Alternative Use of Shop Units in the City Centre and Town Centres. Policy Re 4 sets out policy with

regard to proposals for change of use of a shop unit to a non-shop use in the city centre and town centres. The policy allows changes of use where they will not undermine the retailing function of the centre and where it is an appropriate use. The Council has prepared individual planning guidance for the centres which are tailored to their individual characteristics in order to guide decisions making with regard to assessing whether a proposal will undermine the retail function. However, the Council has acknowledged the way town centres are changing and the impacts of on-line shopping by altering Policy Re 4 from the previous policy Ret 9 in the adopted LDP. The new policy is more flexible and uses supplementary guidance as a material consideration, whereas the previous policy used statutory guidance directly to determine proposals. As a result, the Council considers the new policy strikes a healthy balance by being more supportive of a complementary range of uses within the city centre, whilst still preserving the importance of its retail function. In addition, the Council has recently adopted updated City Centre Supplementary Guidance (CD046) in January 2020. The updated guidance significantly changes the policy position particularly for Princes Street where it allows up to a third of the units within each block to change to non-shop use. The previous guidance (CD150) adopted in February 2014, in contrast, only allowed a change of use on Princes Street to Class 3 food and drink where it was in a location that could accommodate outdoor seating and the unit was under 500 sq m. The Council considers the change in policy and guidance is radical, and given the new guidance was introduced during Covid 19 it will take time for the consequences of this change to be realised. However the Council is committed to regular review of the guidance. As a result, the Council considers the Plan is acknowledging the changing retail trends, and has amended policy accordingly. However, it has amended policy in a measured way, by continuing to support the retail functions of centres in the context of a rising population, whilst allowing more flexibility for a range of uses within them to maintain and support their vitality.

With regard to the commercial centres the Council has also altered the policies in the plan, to encourage a broader range of uses within them. Policy Hou 1 now supports housing development, Policy Econ 3 supports office development and Policy Econ 6 supports hotel development, in principle, on commercial centres which will help to support them, and meet the aim (aim 1) of the plan to deliver 20 minute walkable neighbourhoods through the creation of high quality, high density, mixed use and walkable communities. **No modification proposed.**

#### Avison Young for Aldi Stores Ltd. (0526)

The Council in preparing the Plan commissioned consultants to prepare a Commercial Needs Study Retail Paper (CD033). A summary of the conclusions of the study and its implications for the retail strategy are set out in paragraphs 2.143 to 2.148 of the Plan. The purpose of the report was to provide an up to date evidence base and to inform the preparation of the plan. The Council considers it important that a summary of the findings of the report are set out in the strategy section of the plan to set the context for the retail strategy. The Council has not included the detailed findings of the study within the retail policies of the plan, nor is there any reference to the study in the retail policies. The Council does not agree the retail policies, particularly Re7, rely on the findings of the Commercial Needs Study, nor are unnecessarily restrictive. In addition, the Council emphasises that the provisions of Re7 are largely unchanged from Policy Ret 6 of the adopted LDP. **No modification proposed.**

#### Leith Central Community Council (0614)

The Council acknowledges that the sentence in 2.141 “In Edinburgh, shopping and leisure uses are mainly provided in a network of centres distributed across the city.” is repeated twice. The Council acknowledges there is a technical error that should be corrected as a minor drafting/technical matter.

**Reporter’s conclusions:**

**Reporter’s recommendations:**

Planning authority's summary of the representation(s):		
<div>General</div> <div><u>Archie Clark (0003)</u>  Format for consultation exceptionally difficult to use. It discriminates against those who do not have access to the internet.  The period to review and comment on the large document is not encouraging and more thought could have been given to enable more people to discuss and respond to the Plan.  <u>Barratt David Wilson Homes (0677)</u>  Minimal cognisance has been paid to representations made at Choices stage. A lack of reasoning is available to explain the decisions made.  <u>David McGowan (0168)</u>  City does not consult in an effective way and should sort out existing problems before moving forward. Plan is not in tune with residents.</div>		

Dr Helen Forrest (0315)

Concerned how little this plan has been advertised to the general public.

Juniper Green & Baberton Mains Community Council (0306)

Community Councils are not able to review 1400-page documents of this complexity and specialised nature and require more support to aid them in responding to LDPs.

Homes for Scotland (0404), Steve Loomes (0767), Wright PDL (0078)

Little attention paid appears to have been paid to comments received at the Choices stage. A lack of reasoning is available to explain the decisions made.

Lennie O'Hara (0027)

The website to provide comment is poor.

Wright PDL (0078)

Disappointed at 6 week consultation period and that supporting evidence to justify the Council's strategy has been so limited.

**Place 16: West Edinburgh**

Crosswind Developments Ltd (0184)

Question the consultation approach to date on the removal of economic development as a priority from the sites formally known as IBG. This is a process point rather than a principle point and we are concerned that limited transparency of the process will undermine the outcomes noted in the plan. For example we note that this change of emphasis from economic development to housing led development is contrary to the current National Planning Framework (NPF3).

Hallam Land Management (0615), Tarmac (0244)

There have been unacceptable changes in approach and philosophy for development in West Edinburgh since Choices report. The map on page 27 of the Proposed Plan, which identifies housing-led development, reflects in no way whatsoever the previously proposed map in the earlier Choices report, map 11. This reflects the inconsistency in approach and lack of joined up thinking between relevant stages in the Plan process. This change has not been supported or justified by additional supporting studies, nor has it been subject to proper consultation prior to being presented in the Proposed Plan.

**H61: Crosswind (Elements)**

Rosebery Estate (Bankhead) (0618)

Neither the potential public transport proposal (Ref: WE12), nor the proposed allocation from which it arises (land adjacent to H61), were included in the Choices Consultation and this is a significant, unwelcome change to the plan which we have had no contact from the Council in respect of. The Council has not mentioned to the owner, or their agent, that

they were considering imposing the landing point of a public transport corridor on to an allocated, recently serviced site with residential development in the process of being brought forward. This land is not available for the landing point of a potential public transport corridor and should be considered to have a landowner constraint and be removed as a viable option to be explored further at this stage. Under emerging Policy Env 2, this proposal may result in the refusal of consent for land adjacent to H61 as it would “compromise the effective development of adjacent ground”.

## **H62: Land adjacent to Edinburgh Gateway**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Proposal was not identified as a housing led development in relation to Choice 12 in the MIR. As shown on Map 11 – Area 2 West Edinburgh: the site is identified as employment land. Choice 14 Delivering West Edinburgh identifies that the two potential changes being:

- Remove the safeguard in the existing plan for the Royal Highland Showground site to the south of the A8 at Norton Park and the site allocated for other uses.
- Allocate the Airport’s contingency runway, the “crosswinds runway” for the development of alternative uses next to the Edinburgh Gateway interchange.

It therefore cannot be included in the Proposed LDP as a housing proposal as it has not been subject to public consultation at a formative stage in the process.

Crosswind Developments Ltd (0184)

Question the consultation approach to date on the removal of economic development as a priority from the sites formally known as IBG. This is a process point rather than a principle point and we are concerned that limited transparency of the process will undermine the outcomes noted in the plan

## **H63: Edinburgh 205**

BDW Trading (0350), BDW Trading (0678), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential Group Limited (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

The re-allocation of strategic business sites at the International Business Gateway (Edinburgh 205) and Edinburgh’s Bioquarter to housing (9,500 homes) combined was not even identified as a ‘choice’ at the Main Issues Report stage of the City Plan.

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

Delete proposal H63: Edinburgh 205

Proposal was not identified as a housing led development in relation to Choice 12 in the MIR. As shown on Map 11 – Area 2 West Edinburgh: the site is identified as employment land. Choice 14 Delivering West Edinburgh identifies that the two potential changes being:

- Remove the safeguard in the existing plan for the Royal Highland Showground site

to the south of the A8 at Norton Park and the site allocated for other uses.

- Allocate the Airport's contingency runway, the "crosswinds runway" for the development of alternative uses next to the Edinburgh Gateway interchange.

It therefore cannot be included in the Proposed LDP as a housing proposal as it has not been subject to public consultation at a formative stage in the process.

#### Crosswind Developments Ltd (0184)

Question the consultation approach to date on the removal of economic development as a priority from the sites formally known as IBG. This is a process point rather than a principle point and we are concerned that limited transparency of the process will undermine the outcomes noted in the plan

#### SEEDCo (0198)

Proposal should be removed from the Plan until such time as it has undergone proper assessment and consultation: The Proposed City Plan departs from all of the housing delivery options identified in Choices. It does not allocate Area 1 or any of the other greenfield Areas identified in Options 2 and 3. Nor does it restrict the housing allocations to the brownfield sites identified in Option 1 of page 33 of Choices. Instead, Option 1 has been supplemented to allocate greenfield housing sites at the previously undeveloped employment allocations at the IBG (Edinburgh 205) and Bioquarter for housing. Therefore, neither of these proposals were subject to consultation at the MIR stage. We object to the process by which the decision has been taken by the Council to re-allocate these greenfield sites for predominantly residential development without consultation.

#### Stirling Developments Limited (0303)

Indicated that H63 proposes 7000 units on what appears to be a greenfield site that was not identified through the Choices document.

#### **BioQuarter**

BDW Trading (0350), BDW Trading (0678), CALA Management Ltd (0465), Hallam Land Management (0599), Hallam Land Management (0615), Miller Homes Limited (0649), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential Group Limited (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

The approach to reallocating strategic business land to housing was not consulted upon at MIR stage.

BDW Trading (0350), BDW Trading (0678), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential Group Limited (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

The re-allocation of strategic business sites at the International Business Gateway (Edinburgh 205) and Edinburgh's Bioquarter to housing (9,500 homes) combined was not even identified as a 'choice' at the Main Issues Report stage of the City Plan.

## **Modifications sought by those submitting representations:**

Barratt David Wilson Homes (0677), David McGowan (0168) Dr Helen Forrest (0315), Juniper Green & Baberton Mains Community Council (0306), Homes for Scotland (0404), Steve Loomes (0767), Lennie O'Hara (0027), Wright PDL (0078)

No modification specified.

Wright PDL (0078), Steve Loomes (0767), Homes for Scotland (0404)

No modification specified.

Barratt David Wilson Homes (0677)

No modification specified.

### **Place 16: West Edinburgh**

Hallam Land Management (0615), Tarmac (0244)

No modifications specified but it is indicated that this section on West Edinburgh needs a complete review and clear justification before any decisions on a finalised plan is made.

Crosswind Developments Ltd (0184)

It is indicated that representee questions the consultation approach to date on the removal of economic development as a priority from the sites formally known as IBG.

### **H61: Crosswind (Elements)**

Rosebery Estate (Bankhead) (0618)

Delete the annotation on Maps 2 & 8, and all other references relating to the West Edinburgh Transport Improvements (WE12) in so far as they show a potential connection from the new addition to Place 16 adjacent to H61 linking over the railway into the Maybury (Place 22/HSG19) housing allocation being carried forward from the LDP.

Remove the new land allocation adjacent to H61 identified in Place 16 and its associated potential public transport link (WE1).

The following development principles should be deleted:

- “m) Address the transport infrastructure mitigation requirements at Maybury junction, Barnton junction and Craigs Road Junction and support delivery of the bus priority and interchange recommendations that emerge from the on-going West Edinburgh Transport Improvement Programme study.” Transport Contribution Zone (Para 3.59) should only apply to those sites in Place 16/West Edinburgh allocated in this document, not sites being brought forward from the LDP which are in the

process of being delivered.

### **H62: Land adjacent to Edinburgh Gateway**

CALA Management Ltd (0465), Hallam Land Management (0599), Miller Homes Limited (0649)

No modification specified but it is indicated that H62 should be removed from the plan.

Crosswind Developments Ltd (0184)

It is indicated that the representee questions the consultation approach to date on the removal of economic development as a priority from the sites formally known as IBG.

### **H63: Edinburgh 205**

Delete proposal H63: Edinburgh 205

Stirling Developments Limited (0303)

No modification specified but it is indicated that H63 proposes 7000 units on what appears to be a greenfield site that was not identified through the Choices document.

SEEDCo (0198)

H63 should be removed from the plan.

Crosswind Developments Ltd (0184)

It is indicated that the representee questions the consultation approach to date on the removal of economic development as a priority from the sites formally known as IBG.

### **H86: BioQuarter**

BDW Trading (0350), BDW Trading (0678), CALA Management Ltd (0465), Hallam Land Management (0599), Hallam Land Management (0615), Miller Homes Limited (0649), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential Group Limited (0490), SEEDCo (0198), Stewart Milne Homes (0118), Taylor Wimpey (0200)

No modification specified but infers removing reference to housing on the site.

### Summary of responses (including reasons) by planning authority:

#### General

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306), Lennie O'Hara (0027)

On accessibility, the Council's consultation hub has been used successfully by a range of Council services for many engagement exercises. The format used on the hub followed the order of the Proposed Plan to allow users to follow it through logically. The Council offered on line and telephone assistance for those wishing to respond but were unable to access the hub directly. Further details are set out in the Report of Conformity with the Participation Statement (CD021). **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306), David McGowan (0168), Wright PDL (0078)

On the timescale of the Representation Period, this was for six weeks in accordance with statutory requirements. Further details are set out in the Report of Conformity with the Participation Statement (CD021). **No modification proposed.**

Archie Clark (0003), Juniper Green & Baberton Mains Community Council (0306), David McGowan (0168), Dr Helen Forrest (0315)

On publicising the Proposed Plan for Representation a number of activities, as set out in the Report of Conformity with the Participation Statement (CD021), were carried out to raise awareness of the Plan. Notification was provided to organisations, groups and individuals on the project mailing list. Hard copies of documents were provided to Community Councils and public libraries. Statutory notification was provided by advert in the Edinburgh Evening News and by statutory neighbour notification. The Proposed Plan and supporting documents were available on the Council website along with a proposals map and the supporting documents. The Representation stage is to provide those who feel the plan should be changed in some way the opportunity to express this and for their views to be part of the Examination process if unresolved.

Earlier in the process Choices for City Plan was the statutory consultation stage in the preparation of the Proposed Plan. The Report of Conformity with the Participation Statement (CD021) sets out the activities carried out at that stage. As the consultation period for this was affected by the Covid-19 pandemic and associated restrictions, the Council publicised that it would accept responses for a further month after the previously advised end date. Within this period 8 drop-in sessions were provided to allow opportunity to find out more about consultation proposals, staffed exhibitions were held in public places to raise awareness and consultation hub surgeries held to enable people to ask detailed questions and complete the survey online. **No modification proposed.**

David McGowan (0168)

On addressing existing issues, the purpose of the Plan is to set the strategy, policies and

land use allocations for future development. In developing the Plan, account is taken of existing issues through the Monitoring Statement (CD023). The majority of comments made during the statutory consultation period were supportive of the aims, objectives, policies and proposed land use principles to be taken forward in the Proposed Plan along with the approach to taking forward existing undeveloped sites from the LDP 2016 and new allocations proposed. **No modification proposed.**

Barratt David Wilson Homes (0677); Homes for Scotland (0404), Steve Loomes (0767), Wright PDL (0078)

On the consideration of consultation responses, subsequent to conclusion of the Choices Main Issues Report consultation, an overview of the consultation responses (CD022) was reported to the Council's Planning Committee. The majority of comments made during the statutory consultation period were supportive of the aims, objectives, policies and proposed land use principles to be taken forward in the Proposed Plan along with the approach to taking forward existing undeveloped sites from the LDP 2016 and new allocations proposed. This was used to inform the Proposed City Plan 2030 as reported to Planning Committee in September 2021 (CD009). The Council considers that there are clear links between the options supported through the consultation and the strategy and policies of the plan. **No modification proposed.**

Wright PDL (0078)

On evidence to support the plan, both the statutory Choices Main Issues Report Stage and the statutory Proposed Plan Representations stage were supported by all required statutory documents and a wide range of non-statutory supporting documents. The Council considers that an appropriate evidence base was defined, used and made available for comment at consultation and representation stages. **No modification proposed.**

### **Place 16: West Edinburgh**

Crosswind Developments Ltd (0184), Hallam Land Management (0615), Tarmac (0244)

The Council disagrees that the approach set out for Place 16: West Edinburgh was not adequately consulted on. Nor does it agree that it constitutes the 'removal' of economic development as a priority.

Before preparing the Proposed Plan the Council had a statutory duty in terms of Section 17 of the Town and Country Planning (Scotland) Act 1997 (CD101, the "1997 Act") to produce and consult upon a single Main Issues Report (CD022, Choices for City Plan 2030). As with any Report, to be properly understood it must be read & considered on its whole terms.

The site was previously allocated for development through the development plan process. The MIR made clear in Choice 13 and Choice 14 that the consultation included for review of the site and its EMP 6 policy allocation. The introduction to Choice 14 makes clear the infrastructure attributes of the area, including the existing tramline. Choice 14 A makes clear the desire to make best use of public transport infrastructure in the area and accommodate a mix of uses to support inclusive sustainable growth. The uses proposed include housing amongst others.

Choice 2 B set out the preferred option for policies on density to ensure best use of the limited space in the city with a minimum of 65 dwellings per hectare on all sites and, where identified in the plan, higher density housing development with a minimum of 100 dwellings per hectare and a vertical mix of uses to support the efficient use of land. This is to provide for and to maximise the benefits of being close to public transport services and along high-quality active travel routes, provided that the design of such developments is of a high quality, respects amenity, and is of an appropriate character.

Choice 10 B set out provision for a new policy framework to set out a requirement for housing on all sites over 0.25 hectares coming forward for development of student housing, hotels and short-stay commercial visitor accommodation, and other commercial business, retail and leisure developments, at least 50% of the site should be provided for housing. There are some caveats to this.

Choice 12 sets out housing supply targets, housing land supply and potential housing sites with:

- a preferred strategy, Option 1 Urban Area Sites and shown on Map 7 including the Crosswinds site;
- a reasonable alternative, Option 2 Greenfield land and shown on Map 9 and including the IBG and Crosswinds sites; and
- a further alternative, Option 3 Blended Approach with Urban Area and Greenfield Sites and including IBG and Crosswinds

The Council considers that within Choice 12 Map 11 - Area 2 shows the IBG land identified as employment land which, as set out in Choices 2 and 10, would require to be mixed use (including a vertical mix of uses) and include for high density housing on at least 50% of the site. This high density, mixed use approach is clearly set out on in Choice 12 page 38, preceding map 11, under the heading 'Uses'.

Other maps within Choice 12 show:

Map 7 - Option 1 Delivery by the Council and its partners within the Urban Area shows Crosswinds

Map 9 - Option 2 Delivery through market housing by releasing Greenfield and includes IBG and Crosswinds

Map 15 - All potential housing-led mixed-use sites, a range of which could form Option 3 a blended approach, shows IBG and Crosswinds

Additionally mapping in other sections of Choices shows the following:

Choice 13

Map 16 - Areas of support for inclusive growth, innovation, universities, & culture includes IBG, Crosswinds and Bioquarter

Choice 14

Map 17 - Area of Search West Edinburgh includes IBG, Crosswinds and wider West

Map 19 – Crosswinds Runway Site

Map 21 - Strategic Office Locations shows IBG

Map 23 - Business and Industry Areas Map indicatively shows Crosswinds

The Council considers that Choices set out the review of the sites and that mapping and policies made clear the nature of that review as sufficient consultation on options for

development for IBG and the wider West Edinburgh area, and also through the Housing Study and Appendix D. The mapping of Choices, due to accommodating the statutory preferred and reasonable alternative approaches, is best done by the use of several maps. The Council considers that there is a strong relationship between the Choices mapping overall and the Housing Led Development Map on Page 27 of the Proposed Plan and that the housing led approach was consulted on.

In addition to this, the Council, in line with provisions of Section 16(2) of the Town and Country Planning (Scotland) Act 1997 (the “1997 Act”), considered the existing and emerging NPF, other information and considerations as prescribed, including consultation responses, and other information and considerations as appear to be relevant, in writing the Proposed Plan. In that context the emerging NPF4 was a relevant material consideration. The Proposed Plan had regard to emerging national spatial strategy and policies, as provided by the Scottish Government’s Position Statement on NPF4 (CD098), the Programme for Government 2021 (CD100) and by regional and local approaches through the interim Regional Spatial Strategy (CD093, approved by the SESplan Joint Committee, City Region Deal Joint Committee and ratified by the constituent authorities) and the emerging Wider West Edinburgh Spatial Strategy (CD149), as information and considerations for an emerging Local Development Plan in terms of the Act. In timing, it is appropriate that the Council plans with due regard for emerging policy and spatial considerations. The appropriateness of that approach is now underlined by the proposed removal of the NPF3 national development status for mainly business led development at IBG in draft NPF4 (CD099), and that policies on development, housing, density and mixed use and including for 20 minute neighbourhoods meant that the previous large scale, largely single use approach would be superseded in national policy requirements.

Responses to the Choices consultation (CD038) included reference to the potential for the type of development set out in the Proposed Plan, demonstrating how people understood what was being proposed.

The Covid 19 pandemic triggered significant shifts in working practices and the office and wider property markets. These changes further underlined the potential for the review of the IBG to adopt the approach set out in the Proposed Plan as an outcome of the review of the site and the policy considerations consulted on through Choices.

Therefore, the Council considers that when Choices is read as a whole, there is a clear central thread of a City wide housing led mixed development approach and that there was sufficient consultation on the specifics of the sites themselves. Choices clearly set out, that these sites were under review in terms of their existing 2016 LDP allocations, that they required to have significant housing allocations, and that those allocations would be high density and mixed use.

The Council notes that there was strong support for the preferred Choices as reported to Planning Committee (CD038) in advance of the consideration of the Proposed Plan.

The Council notes that on appointment the Reporter will, in terms of Section 19(4) of the 1997 Act, firstly consider the adequacy of the consultation, and that if they consider further consultation to be required they have the power to recommend it to Scottish Ministers, in terms of Section 19A of the 1997 Act. **No modification proposed**

## **H61: Crosswind (Elements)**

### Rosebery Estate (Bankhead) (0618)

The objection to WE12 is noted. WE12 is identified in City Plan as a potential option. WE1 is currently being progressed in discussion with the redesign of Maybury Junction (R7). The Council considers that the criterion (m) should remain as it has been informed by the plan's Transport Assessment and is part of the ongoing West Edinburgh Transport Improvement Programme. **No modification proposed**

## **H62: Land adjacent to Edinburgh Gateway**

### BDW Trading (0678), CALA Management Ltd (0465), Crosswind Developments Ltd (0184), Hallam Land Management (0599), Miller Homes Limited (0649), SEEDCo (0198), Stewart Milne Homes (0118),

The Council disagrees that the approach set out for H62: Land adjacent to Edinburgh Gateway, formerly part of the IBG land, was not adequately consulted on. Nor does it agree that it constitutes the 'removal' of economic development as a priority.

Before preparing the Proposed Plan the Council had a statutory duty in terms of Section 17 of the Town and Country Planning (Scotland) Act 1997 (CD101, the "1997 Act") to produce and consult upon a single Main Issues Report (CD022, Choices for City Plan 2030). As with any Report, to be properly understood it must be read & considered on its whole terms.

See response for Place 16 West Edinburgh above, applicable to H62 as part of the IBG land. **No modification proposed**

## **H63: Edinburgh 205**

### BDW Trading (0350), BDW Trading (0678), CALA Management Ltd (0465), Crosswind Developments Ltd (0184), Hallam Land Management (0599), Miller Homes Limited (0649), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential Group Limited (0490), SEEDCo (0198), Stirling Developments Limited (0303), Taylor Wimpey (0200),

The Council disagrees that the approach set out for H63: Edinburgh 205 was not adequately consulted on. Nor does it agree that it constitutes the 'removal' of economic development as a priority.

Before preparing the Proposed Plan the Council had a statutory duty in terms of Section 17 of the Town and Country Planning (Scotland) Act 1997 (CD101, the "1997 Act") to produce and consult upon a single Main Issues Report (CD022, Choices for City Plan 2030). As with any Report, to be properly understood it must be read & considered on its whole terms.

See response to Place 16 West Edinburgh above, applicable to H63 as the main part of the IBG land (otherwise known as Edinburgh 205 or now as West Town).

### SeedCo (0198)

The Council's further assessment of the options set out in Choices is given in Issue 2: Spatial Strategy. The Council considers it has followed the preferred approach of the MIR stage which included the review of existing land allocations. **No modification proposed.**

#### Stirling Developments Limited (0303)

The Council considers its responses above together with Issue 20: Assessment of Housing Land Supply respond to this matter. **No modification proposed.**

#### **H86: BioQuarter**

BDW Trading (0350), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential Group Limited (0490), SEEDCo (0198), Taylor Wimpey (0200)

The Council's position on Aim 10 is set out in the response to Issue 1: Issues and Aims. The reallocation of strategic business land at BioQuarter to housing is an appropriate approach to promoting sustainable, high density mixed use development. **No modification proposed.**

BDW Trading (0350), BDW Trading (0678), CALA Management Ltd (0465), Hallam Land Management (0599), Hallam Land Management (0615), Miller Homes Limited (0649), Murray Estates (0197), Persimmon Homes (0495), Robertson Residential Group Limited (0490), SEEDCo (0198), Taylor Wimpey (0200)

The Council disagrees that the approach set out for the H86 Bioquarter site was not adequately consulted on. The site was previously allocated for development through the development plan process. The Main Issues Report (CD022, Choices for City Plan 2030) made clear in Choice 13 that the consultation included for review of the site and its EMP 2 policy designation.

Before preparing the Proposed Plan the Council had a statutory duty in terms of Section 17 of the Town and Country Planning (Scotland) Act 1997 (CD101, the "1997 Act") to produce and consult upon a single Main Issues Report. As with any Report, to be properly understood it must be read & considered on its whole terms.

Choice 2 B set out the preferred option for policies on density to ensure best use of the limited space in the city with a minimum of 65 dwellings per hectare on all sites and, where identified in the plan, higher density housing development with a minimum of 100 dwellings per hectare and a vertical mix of uses to support the efficient use of land. This is to provide for and to maximise the benefits of being close to public transport services and along high-quality active travel routes, provided that the design of such developments is of a high quality, respects amenity, and is of an appropriate character.

Choice 10 B set out provision for a new policy framework to set out a requirement for housing on all sites over 0.25 hectares coming forward for development of student housing, hotels and short-stay commercial visitor accommodation, and other commercial business, retail and leisure developments, at least 50% of the site should be provided for housing. There are some caveats to this.

The Council acknowledges that within Choice 12, Map 10 - Area 1 shows the BioQuarter

land identified as employment land which, as set out in Choices 2 and 10, would require to be mixed use (including a vertical mix of uses) and include for high density housing on at least 50% of the site. This high density, mixed use approach is clearly set out on in Choice 12 page 36, preceding map 10, under the heading 'Uses'.

Other maps within Choice 12 show:

Choice 13 - Supporting inclusive growth, innovation, universities, & culture

Map 16 - Areas of support for inclusive growth, innovation, universities, & culture includes Bioquarter

The Council considers that Choices set out review of the site and mapping and policies that made clear the nature of that review as a sufficient consultation on options for development for the BioQuarter as identified through both the text and mapping of Choices, and also through the Housing Study and Appendix D. The mapping of Choices, due to accommodating the statutory preferred and reasonable alternative approaches, is best done by the use of several maps. The Council considers that there is a strong relationship between the mapping overall and the Housing Led Development Map on Page 27 of the Proposed Plan and that the housing led approach was consulted on.

In addition to this, the Council, in line with provisions of Section 16(2) of the Town and Country Planning (Scotland) Act 1997, considered the existing and emerging NPF, other information and considerations as prescribed, including consultation responses, and other information and considerations as appear to be relevant, in writing the Proposed Plan. In that context the emerging NPF4 was a relevant material consideration. The Proposed Plan had regard to emerging national spatial strategy and policies, as provided by the Scottish Government's Position Statement on NPF4 (CD098), the Programme for Government 2021 (CD100) and by regional and local approaches through the interim Regional Spatial Strategy (CD093, approved by the SESplan Joint Committee, City Region Deal Joint Committee and ratified by the constituent authorities, all relevant considerations for an emerging Local Development Plan in terms of the Act. In timing, it is appropriate that the Council plans with due regard for emerging policy and spatial considerations. The appropriateness of that approach is underlined by the proposed policies on development, housing, density and mixed use and including for 20 minute neighbourhoods which meant that the large scale, largely single use approach would be superseded in national policy requirements.

Responses to the Choices consultation (CD038) included reference to the potential for the type of development set out in the Proposed Plan, demonstrating how people understood what was being proposed.

The Covid 19 pandemic triggered significant shifts in working practices and the office and wider property markets. These changes further underlined the potential for the review of the BioQuarter to adopt the approach set out in the Proposed Plan as an outcome of the review of the site and the policy considerations consulted on through Choices.

Therefore, the Council considers that when Choices is read as whole, there is a clear central thread of a City wide housing led mixed development approach and that there was sufficient consultation on the specifics of the sites themselves. Choices clearly set out, that these sites were under review in terms of their existing 2016 LDP allocations, that they required to have significant housing allocations, and that those allocations would be high density and mixed use.

The Council notes that there was strong support for the preferred Choices as reported to Planning Committee (CD038) in advance of the consideration of the Proposed Plan

The Council notes that on appointment the Reporter will, in terms of Section 19(4) of the 1997 Act, firstly consider the adequacy of the consultation, and that if they consider further consultation to be required they have the power to recommend it to Scottish Ministers, in terms of Section 19A of the 1997 Act. **No modification proposed**
