

Policy Des 11 Tall Buildings – Skyline and Key Views

Planning permission will only be granted for development which rises above the building height prevailing generally in the surrounding area where:

- a) a landmark is to be created that enhances the skyline and surrounding townscape and is justified by the proposed use
- b) the scale of the building is appropriate in its context
- c) there would be no adverse impact on important views of landmark buildings, the historic skyline, landscape features in the urban area or the landscape setting of the city, including the Firth of Forth.

166 Proposals for development that would be conspicuous in iconic views of the city will be subject to special scrutiny. This is necessary to protect some of the city's most striking visual characteristics, the views available from many vantage points within the city and beyond, of landmark buildings, the city's historic skyline, undeveloped hillsides within the urban area and the hills, open countryside and the Firth of Forth which create a unique landscape setting for the city. In addition, the height of new buildings may need to be suppressed where necessary so that the city's topography and valley features continue to be reflected in roofscapes. This policy will play an important role in protecting the setting of the World Heritage Sites.

167 A study undertaken for the Council identifies key public viewpoints and is used in assessing proposals for high buildings. Further advice is provided in Council guidance.

Policy Des 12 Alterations and Extensions

Planning permission will be granted for alterations and extensions to existing buildings which:

- a) in their design and form, choice of materials and positioning are compatible with the character of the existing building
- b) will not result in an unreasonable loss of privacy or natural light to neighbouring properties
- c) will not be detrimental to neighbourhood amenity and character

168 Every change to a building, street or space has the potential to enrich or, if poorly designed, impoverish a part of the public realm. The impact of a proposal on the appearance and character of the existing building and street scene generally must be satisfactory and there should be no unreasonable loss of amenity and privacy for immediate neighbours.

Policy Des 13 Shopfronts

Planning permission will be granted for alterations to shopfronts which are improvements on what already exists and relate sensitively and harmoniously to the building as a whole. Particular care will be taken over proposals for the installation of illuminated advertising panels and projecting signs, blinds, canopies, security grills and shutters to avoid harm to the visual amenity of shopping streets or the character of historic environments.

169 Shopfront design, shop designs and shopfront advertising play an important role in the visual environment of the city. Important traditional or original features on older buildings, such as stall risers, fascias and structural framing of entrances and shop windows, should be retained and incorporated into the design. In conservation areas and on listed buildings, design and materials used will be expected to be of a high standard, and not damaging to existing fabric of buildings or wider character. Detailed advice on shopfronts is provided in Council guidance.

Policy Hou 6 Affordable Housing

Planning permission for residential development, including conversions, consisting of 12 or more units should include provision for affordable housing amounting to 25% of the total number of units proposed. For proposals of 20 or more dwellings, the provision should normally be on-site. Whenever practical, the affordable housing should be integrated with the market housing.

- 230 Government policy states that where a shortage of affordable housing has been identified, this may be a material consideration for planning and should be addressed through local development plans.
- 231 Affordable housing is defined as housing that is available for rent or for sale to meet the needs of people who cannot afford to buy or rent the housing generally available on the open market. Affordable housing is important in ensuring that key workers can afford to live in the city as well as helping meet the needs of people on low incomes.
- 232 A key aim is that affordable housing should be integrated with market housing on the same site and should address the full range of housing need, including family housing where appropriate. Provision on an alternative site may be acceptable where the housing proposal is for less than 20 units or if there are exceptional circumstances. Where planning permission is sought for specialist housing an affordable housing contribution may not always be required depending on the nature of the specialist housing being proposed and economic viability considerations.
- 233 Further information on affordable housing requirements is provided in planning guidance. The details of provision, which will reflect housing need and individual site suitability, will be a matter for agreement between the developer and the Council.

Policy Hou 7 Inappropriate Uses in Residential Areas

Developments, including changes of use, which would have a materially detrimental effect on the living conditions of nearby residents, will not be permitted.

- 234 The intention of the policy is firstly, to preclude the introduction or intensification of non-residential uses incompatible with predominantly residential areas and secondly, to prevent any further deterioration in living conditions in more mixed use areas which nevertheless have important residential functions. This policy will be used to assess proposals for the conversion of a house or flat to a House in Multiple Occupation (i.e. for five or more people). Further advice is set out in Council Guidance

Policy Hou 8 Student Accommodation

Planning permission will be granted for purpose-built student accommodation where:

- a) The location is appropriate in terms of access to university and college facilities by walking, cycling or public transport
 - b) The proposal will not result in an excessive concentration of student accommodation (including that in the private rented sector) to an extent that would be detrimental to the maintenance of balanced communities or to the established character and residential amenity of the locality.
- 235 It is preferable in principle that student needs are met as far as possible in purpose-built and managed schemes rather than the widespread conversion of family

taken to mitigate any adverse effects on networks and bring accessibility by and use of non-car modes up to acceptable levels if necessary.

- 271 The policy applies to major offices, retail, entertainment, sport and leisure uses and other non-residential developments which generate a large number of journeys by employees and other visitors. These developments should be accessible by a choice of means of transport which offer real alternatives to the car. For this reason, a location in the City Centre will normally be preferable. Major travel generating developments will also be encouraged to locate in the identified town centres and employment centres, provided that the scale and nature of the development is such that it can be reached conveniently by a majority of the population in its catchment area by walking, cycling or frequent public transport services.
- 272 Out-of-centre development will only be acceptable where it can clearly be demonstrated that the location is suitable, and that access by sustainable forms of transport and car parking provision and pricing mean that the development will be no more reliant on car use than a town centre location. This means that good public transport, walking and cycling accessibility will still need to be assured.
- 273 Applications should be accompanied by travel plans to demonstrate how development, particularly in out of centre locations, will meet the requirements of Policy Tra 1. Travel plans should accord with Scottish Government guidance and will be monitored to assess their impact on reducing demand for car travel and maximising use of existing and new transport infrastructure. Travel plans may also be relevant when assessing residential applications in terms of Policy Hou 4 Housing Density or Policy Tra 2 Private Car Parking.

Car and Cycle Parking

Policy Tra 2 Private Car Parking

Planning permission will be granted for development where proposed car parking provision complies with and does not exceed the parking levels set out in Council guidance. Lower provision will be pursued subject to consideration of the following factors:

- a) whether, in the case of non-residential developments, the applicant has demonstrated through a travel plan that practical measures can be undertaken to significantly reduce the use of private cars to travel to and from the site
- b) whether there will be any adverse impact on the amenity of neighbouring occupiers, particularly residential occupiers through on-street parking around the site and whether any adverse impacts can be mitigated through control of on-street parking
- c) the accessibility of the site to public transport stops on routes well served by public transport, and to shops, schools and centres of employment by foot, cycle and public transport
- d) the availability of existing off-street parking spaces that could adequately cater for the proposed development
- e) whether the characteristics of the proposed use are such that car ownership and use by potential occupiers will be low, such as purpose-built sheltered or student housing and 'car free' or 'car reduced' housing developments and others providing car sharing arrangements
- f) whether complementary measures can be put in place to make it more convenient for residents not to own a car, for example car sharing or pooling arrangements, including access to the city's car club scheme.

- 274 The purpose of this policy is to ensure car parking provided as part of development proposals accords with the Council standards which are tailored to local circumstances, including location, public transport accessibility and economic needs, but generally fulfil the wider strategy of encouraging sustainable, non-car modes. The standards express the maximum amount of car parking that different types of development may provide.
- 275 The policy sets out the circumstances in which a lesser amount of car parking than the standards require may be appropriate to help reduce car use. This is only likely to be acceptable in locations where there are existing or planned on-street parking controls.
- 276 At least half the space saved by omitting or reducing car parking should be given over to landscape features and additional private open space (see Policy Hou 3), so that residents will have the amenity benefits of a car-free environment.

Policy Tra 3 Private Cycle Parking

Planning permission will be granted for development where proposed cycle parking and storage provision complies with the standards set out in Council guidance.

- 277 The provision of adequate cycle parking and storage facilities is important in meeting the objective of the Local Transport Strategy to increase the proportion of journeys made by bicycle. The Council's parking standards set out the required levels of provision of cycle parking and storage facilities in housing developments and a range of non-residential developments.

Policy Tra 4 Design of Off-Street Car and Cycle Parking

Where off-street car parking provision is required or considered to be acceptable, the following design considerations will be taken into account:

- a) surface car parks should not be located in front of buildings where the building would otherwise create an active frontage onto a public space or street, and

main entrances to buildings should be located as close as practical to the main site entrance

- b) car parking should preferably be provided at basement level within a building and not at ground or street level where this would be at the expense of an active frontage onto a public street, public space or private open space
- c) the design of surface car parks should include structural planting to minimise visual impact
- d) the design of surface car parking or entrances to car parking in buildings should not compromise pedestrian safety and should assist their safe movement to and from parked cars, for example, by the provision of marked walkways.
- e) Space should be provided for small-scale community recycling facilities in the car parking area in appropriate development, such as large retail developments.

Cycle parking should be provided closer to building entrances than general car parking spaces and be designed in accordance with the standards set out in Council guidance.

- 278 This policy sets out important design considerations for car and cycle parking provision including environmental quality, pedestrian safety and security. Poorly located or designed car parking can detract from the visual appearance and vitality of the surrounding area. Car parking in front of supermarkets which widely separates entrances from main roads, is an added discouragement to public transport use and walking, and detracts from urban vitality and safety. A high standard of design for surface car parking will be sought, with landscaping to soften its visual impact, and in larger car parks the provision of marked walkways for ease of pedestrian movement and safety. New off-street car parking provides an opportunity to expand the city's network of small recycling points to complement larger community recycling centres. Provision of well located high quality cycle parking suitable to the type of development and to users is an essential component of the Council's efforts to encourage cycling.
