## Additional Transport & Environment Committee

26 October, 2021

Report. 7.1

Report Title: Low Emission Zone - Consultation and Development

Delete 1.1.3 - 1.1.5 and insert;

1.1.3 notes the findings of the Council's earlier 2019 Low Emission Zone (LEZ) consultation in which:

- 78% of respondents supported the proposed city-wide LEZ applying to buses and coaches, with 81% support for the city-wide LEZ applying to HGVs, LGVs and vans.
- support for a city wide LEZ was greater than that for a city centre only LEZ.

1.1.4. notes that the results of the 2019 consultation compare starkly to the 2021 consultation which shows the proposed city centre LEZ scheme has failed to attract even majority support amongst respondents.

1.1.5 notes the continued concern expressed by residents on the potential for traffic displacement to areas around a city centre zone, and that the air quality modelling forecasts increases in NOx concentration in a number of streets outside the LEZ boundary following the implementation of the proposed scheme.

1.1.6 notes the frustration expressed that, despite having unacceptably low levels of air quality, major streets like Queensferry Road and St John's Road are not covered by the low emission zone.

1.1.5 believes that, after almost six years of work and another two years before restrictions are enforced, it is important to be ambitious in driving down pollution levels and improving air quality for all communities, not just those within the core city centre area.

1.1.6 therefore agrees not to approve the proposed scheme and agrees that officers should return to committee in two cycles with plans for a city wide LEZ and the necessary statutory and non-statutory consultations which would be required.
