

Policy and Sustainability Committee

10.00am, Tuesday, 21 March 2023

Driving for the Council – Telematics Policy

Executive/Routine Wards Council Commitments	Executive All
---	------------------

1. Recommendations

- 1.1 It is recommended that the Policy and Sustainability Committee:
 - 1.1.1 Approves the Driving for the Council - Telematics Policy;
 - 1.1.2 Notes the action taken to address the concerns raised by Union representatives; and
 - 1.1.3 Notes that there are currently a number of systems providing telemetry data for fleet assets that have been in place for several years and are being used across the Council, however there is no specific Telematics Policy in place for management of these systems.

Paul Lawrence

Executive Director of Place

Contact: Scott Millar, Fleet and Workshops Manager, Operational Services

Report

Driving for the Council - Telematics Policy

2. Executive Summary

- 2.1 The draft Driving for the Council – Telematics Policy was submitted to Committee for approval in January 2023. The policy defines how telematics will be managed and used in Council operated fleet assets.
- 2.2 This report provides an update to inform the further work that has taken place since January to address the action points raised by Union representatives.
- 2.3 The policy in appendix 1 contains highlighted sections in yellow that are specifically relevant to these action points.

3. Background

- 3.1 On [17 January 2023](#) Policy and Sustainability Committee approved an amendment by the administration requesting action was paused to allow further information to be presented back in one cycle to Committee.
- 3.2 This followed an email shared with the Committee which provided a summary of the trade unions view on vehicle telematics highlighting both the advantages and disadvantages of such systems and data available.
- 3.3 The ask from Committee was that further discussions take place with the trade unions to address the disadvantages raised as well as provide further detail on aspects relating to insurance, alternative transport models and training and communications.
- 3.4 Telematics is a hardware device installed in vehicles for capturing live and historic data regarding vehicle operation including on board diagnostics information, fuel consumption, miles travelled, location data and benchmarking parameters around driver and vehicle performance.
- 3.5 There are various systems already operating across different parts of the organisation which provide telemetry information regarding vehicle utilisation. However, there is currently no policy covering the management and appropriate control of the information captured on these systems and how it can be utilised.

- 3.6 A Policy is required to cover pre-existing technology that has been in place for a number of years as well as the planned installation of telematics systems across all Council fleet operated assets.
- 3.7 Many modern fleet assets come with telematics systems preinstalled by the manufacturer to provide essential diagnostics information in the event of a major unit failure and subsequent warranty work and investigation.
- 3.8 Alternative powered hybrid vehicles that have the capability to switch between engine operation and electric only are equipped with vehicle telematics in order to facilitate operation in electric only mode where there are restrictions in place, for example, in a city centre where there is an enforced low emission zone.
- 3.9 The Council operates approximately 1,200 fleet assets. The Council's insurance handlers have highlighted an inherent risk in the operation and management of these assets that the installation and management of telematics across all vehicle assets would be a recognised measure for the Council to demonstrate a level of control of these mobile assets.
- 3.10 Telematics information is utilised as supporting evidence for investigation purposes and, as such, can be used to defend the Council against spurious claims that continue to be an issue.
- 3.11 The Council Emissions Reduction Plan (CERP) was approved in [November 2021](#) outlining a phased action plan for reducing vehicle emissions. With telemetry information, the Council can accurately report on vehicle emissions, track improvement over time and better understand utilisation of fleet assets in order to make better informed decisions regarding future use of fleet assets (whether it be reduced numbers, alternative methods of travel or alternatively powered road going vehicles).

4. Main report

- 4.1 An email communication was shared with committee members detailing the position of the trade union on the general use of telematics and highlighted the advantages and disadvantages of the system.
- 4.2 A further working group meeting took place with union officials in February to discuss their position and the four disadvantages raised.
- 4.3 The outcome of this is described in the table below:

<u>System Disadvantage</u>	<u>Remedial Action</u>
<ul style="list-style-type: none"> The system is open to management misuse/abuse. As a licence holder, managers have access to live data, which could 	<ul style="list-style-type: none"> The Telematics Policy (Appendix 1) has been updated to reflect the appropriate use of the system

<p>be used to follow individual staff members.</p>	<p>and how misuse will be managed.</p> <ul style="list-style-type: none"> • The system has an audit trail providing detail of information accessed by individual users. • The number of licence users has been reviewed and reduced.
<ul style="list-style-type: none"> • The system should not be used for the use/purpose of disciplinary action against staff, unless it can be proven that there has been a breach of the Road Traffic Act 1988 or the Employees Code of Conduct. 	<ul style="list-style-type: none"> • The Telematics Policy (Appendix 1) has been updated to reflect this suggestion specifically referencing the Council Employee Code of Conduct and Road Traffic Act 1988.
<ul style="list-style-type: none"> • The current number of licence holders' council wide is excessive. We would propose the licences be limited to senior managers only. If a line manager has identified a potential accident/incident then a written request should be made to the senior manager/licence holder who will make a formal request for live data to the Fleet and Workshops senior manager, Scott Millar, who is the council's Duty Licence Holder. 	<ul style="list-style-type: none"> • The number of licence holders has been reviewed and a number of licence holders have been removed from the system. This has equated to a user access reduction from circa 130 to 25 across the Council excluding Fleet Services. • Access has been limited to Senior/ Duty Managers. • A dedicated inbox has been set up for formal requests for live data.
<ul style="list-style-type: none"> • If a member of staff is placed under investigation and Live Data has been requested that individual should be made aware of this without delay. This is not currently in place. 	<ul style="list-style-type: none"> • Agreement within the working group that with any investigation taking place where a request has been made for Live Data that the individual involved will be notified of this action. In line with existing policies, any evidence gathered in an investigation would be disclosed in an investigation report and would be made available to the employee.

- 4.4 Access is limited to Fleet Services and Senior/ duty Managers in the following service areas;
- 4.5 **Passenger Transport:** Responsible for transporting vulnerable children and adults and their supervisors have access to telematics in case of any incidents whereby they need to locate buses quickly. The service is currently in the process of implementing Flexiroute and following this staff will not require access to live telematics data.
- 4.6 **Roads Operations:** Responsible for gritting duties and therefore have access to telematics to oversee gritting operations to provide up to the minute data on work completed. Access also supports lone working so that in case of an emergency staff can be located quickly. This access would need to be maintained in order to ensure the safety of our staff.
- 4.7 **Waste and Street Cleansing Services:** Supervisors have access to help monitor and support route completion whereby resources can be re-allocated quickly in the case of vehicles breakdowns etc to ensure bin collection routes are completed. This information is also critical in being able to resolve complaints from citizens effectively.
- 4.8 Committee members discussed the issue of insurance and potential implications of elevated risk and consequently premium costs associated with not installing telematics within Council fleet assets. It is challenging to put into context any savings or exact values around savings or costs associated with telematics within a vehicle fleet. However, industry information advises driver data collated over a period of time can be invaluable for assessing road risk, tailoring training needs and demonstrating good overall fleet performance which all in turn contribute to reduced risk overall. Having this approach in place would then allow the Council to seek a reduced premium or, at the very least, avoid future premium increases.
- 4.9 As highlighted at January committee, the information captured with the aid of telematics will influence alternative models of how we can maintain the same levels of future service delivery but with an alternative approach to transport. This may include; overall vehicle reductions, alternative powered vehicles, reducing the number of unnecessary journeys or utilising public transport more for colleagues to get round the city. Other options include exploring the possibility of use of cargo bikes which are cheaper to operate, purchase, maintain and provide health and wellbeing benefits to staff operating them as well as the local air quality of the city.
- 4.10 The installation process for such a diverse fleet provides a timeline and schedule to be developed for each vehicle across every department. This provides a natural opportunity for planning and providing engagement groups and sessions with staff to better understand the purpose for a telematics system and how it operates.
- 4.11 Consideration could then also be given to explore training opportunities for overall driver improvement where it may be identified supporting colleagues to improve driver performance which will ultimately contribute to reduced risk associated with

vehicle incidents and make potential fuel or energy savings which in turn would contribute to targets.

- 4.12 The policy (Appendix 1) has been developed to make employees aware of the presence of telematics devices in all Council fleet assets and to explain the purpose of the devices, what data can be gathered and how the data may be used.
- 4.13 The main objectives of vehicle telematics systems are to:
 - 4.2.1 Reduce driving for work incidents/injury rates and costs;
 - 4.2.2 Improve the driving behaviour of Council drivers;
 - 4.2.3 Improve claims and complaints defensibility;
 - 4.2.4 Reduce exposure to high risk driving situations;
 - 4.2.5 Improve the Councils safety record and management of occupational road risk (MORR);
 - 4.2.6 Optimise routes and schedules;
 - 4.2.7 Reduce vehicle, fuel and other driving costs to support savings targets; and
 - 4.2.8 Optimise asset use and life cycle.
- 4.14 Information on driving ability allows the organisation to proactively seek support for tailored training and improvement programmes for individuals. This will reduce the organisational risk and contribute to future targets for low emissions by improving driver performance and efficiency.
- 4.15 The Council has approved a sustainability approach which sets a net zero carbon target by 2030. Fleet assets contribute 9% of total Council emissions. Installing vehicle telematics into all vehicles at this stage provides time to analyse and plan for future service delivery, utilising alternative fuel powered vehicles, understanding the challenges faced with that and equip the Council with the information to inform fleet users on how to get the most out of the vehicle utilisation from each tank of fuel or battery charge.
- 4.16 A working group was established in the summer of 2022 specifically to focus on developing this policy and there has been extensive consultation with the Trade Unions in developing the policy.
- 4.17 A guidance document, developed in conjunction with the policy, will support implementation by providing operational details on how the system will be used by the Council. This guidance is evolving and seeks to answer a number of frequent questions around the purpose of such systems, how data is managed and who specifically has access or how it is obtained. It will also define where legitimate access to live data will be obtained in the case of emergency scenarios.

5. Next Steps

- 5.1 If Committee approve the policy:

- 5.1.1 It will be published on the Council's intranet and internet, along with the guidance document. The guidance document will continue to be updated;
- 5.1.2 Installations will be completed to ensure that all Council fleet operated assets will be installed with a telematics system by the end of 2023; and
- 5.1.3 A communication and training plan will be developed to ensure a transparent and consistent approach to the application of the telematics policy. Colleagues will be given clarity on the capability of the system prior to it being rolled out in their departmental fleet.

6. Financial impact

- 6.1 The monthly cost for a standard telemetry system for a typical car or van is £13.63 per month, totalling £163.56 per annum.
- 6.2 Costs vary for specialist vehicle types where more information is required (for example, winter gritting vehicles can provide further detail on salt spreading activity at a greater cost). Many vehicles across the fleet are already equipped with a telemetry system, with the Council already spending £130,000 per annum on this technology. The overall cost will not be more than £220,000 per annum to cover the cost of telematics for the whole Council fleet including hire vehicles. The additional costs will be met by service budgets and are expected to be met by cost savings arising from the use of telematics.
- 6.3 Housing Operations are the largest fleet operator that currently have no form of vehicle telematics installed, with 214 vans. The annual cost for this group will be approximately £35,000 per annum to be equipped with this technology. There are other areas of the Council where telematics has not been fully rolled out (for example in Passenger Transport where only 50% of the vehicles currently have telematics installed).
- 6.4 It is also intended to install telematics into hire vehicles (approximately 300 vehicles). Where efficiency gains are made through overall fleet reductions the telemetry hardware can be reinstalled in other fleet assets to minimise the overall additional cost impact.
- 6.5 Council Vehicle Maintenance staff are trained in the hardware installation process to eliminate installation charges associated with each asset.
- 6.6 Case studies from other organisations demonstrate that telematics installation can deliver fuel savings in excess of 10%. The total cost of fuel associated with Council fleet assets in 2022/23 is currently forecasted to be approximately £3.6m. Telematics could save £360k in fuel costs whilst reducing the Council's carbon footprint.
- 6.7 Insurance premiums are rising, and providers are looking to operators to demonstrate effective control of fleet assets. Having an effective policy and telemetry system in place would be a key step towards reducing the risk and likely premium costs associated.

7. Stakeholder/Community Impact

- 7.1 A working group was established in the summer of 2022 with a group of key Service and trade union representatives. Through this working group, there has been continued feedback and ongoing engagement from all members to come to a collaborative agreement on the policy document and supporting guidance document.
- 7.2 An integrated impact assessment has been developed with further input from the Telematics Working Group.

8. Background reading/external references

- 8.1 None.

Driving for the Council- Telematics Policy

Purpose

The purpose of this policy is to make employees aware of the presence of telematic devices used in all Council vehicles and plant items and explain the purpose of the devices, the rules on their use, what data the system can provide and how the data gathered may be used.

It also serves as a means to regulate the management and use of telematics systems fitted to all City of Edinburgh Council operated vehicles and equipment.

Telematics is technology that assists fleet operators in understanding and improving the operation of their fleet by providing data on aspects of driving behaviour and vehicle surveillance. The data provided helps operators deliver on key objectives such as

- vehicle reduction
- alternative vehicle choice
- better scheduling around maintenance
- reducing the carbon output of the fleet.

In addition, it mitigates risks by providing information related to vehicle incident management, which can defend the organisation against complaints and provide supporting evidence to justify the level of risk associated with the organisation.

Review

The policy will be reviewed annually, or when a change to the existing policy deems this necessary, primarily as a result of changes to legislation or statute; agreement of new national terms and conditions of service or Government Policy; organisational change; incident learning lessons; or resulting from changes agreed through Trade Union consultation.

Scope

This policy applies to all Council employees.

Policy content

The policy relates to all Council employees, those authorised by the Council to drive a Council vehicle or use an item of plant, and those who are required to manage telematics devices.

In line with the Council's approach to managing data and its obligations under the data protection act, any deviations from the prescribed use of the telematics system may be regarded as a breach of one or more of our policies including:

The Employee Code of Conduct:

Personal Conduct

7.3 The Council aims to provide a safe working environment where employees are treated fairly and with respect. As an employer, we are committed to ensuring equality of opportunity and fair treatment for all employees. Discrimination, bullying, victimisation or harassment of any kind is not tolerated.

Council Assets, Systems and Information

11.2 You may be permitted access to telephones, intranet / internet, and email systems, as well as other equipment and information systems. Your use of these must be for a legitimate Council business purpose, and comply with relevant policies and codes.

11.4 Misuse of Council assets, systems or information may lead to disciplinary action and in certain cases may constitute a criminal offence.

The Disciplinary Code:

Forms of misconduct

Behaviour: unauthorised use of council property or to property not belonging to the Council whilst engaged on Council business; carelessness or negligence in carrying out the duties and responsibilities of the post

Forms of Gross Misconduct

Governance and Regulations: gross carelessness or negligence in carrying out the duties and responsibilities of the post and abuse of authority vested in a post.

Computer or Technology Related Issues: serious misuse of, or deliberate damage to, any council computer hardware or software; any deliberate attempt to breach data protection or computer security rules e.g. misusing passwords; misuse of council information systems which hold staff, customer, service user or pupil information.

The ICT Acceptable Use Policy:

4.16 Individuals must not:

- attempt to access data that they're not authorised to use or access.
- use computer equipment as a means of breaching our policies or to break the law.

This policy covers all members of staff using fleet vehicles, including those who take their vehicles home to either provide emergency on-call cover, or because, due to the nature of their duties, their place of work is variable on a day-to-day basis.

This policy should be read in conjunction with the Driving for the Council Policy which outlines the responsibilities for drivers, line managers as well as Fleet Services in operating and managing our fleet.

Aims

The Council has a large and diverse fleet in excess of 1000 vehicles. It is essential that there are sufficient controls in place to safely protect these assets and to maximise efficient operational use. The Council has committed through its Carbon Emissions Reduction Plan and Climate Strategy to achieve net zero by 2030. The Council's fleet is a contributor to the emissions and needs to be modernised to achieve these aims. It is critical that the Council has accurate data to inform fleet strategy and minimise any potential adverse impact on service delivery.

The Council also has a duty of care to ensure employees are safe and protected whilst at work. Telematic systems can be used to support the management of occupational road risks through informing driver behaviours and vehicle activities, routes and diagnostics, which help to reduce vehicle incident / injury rates and improve vehicle reliability.

The aims of the vehicle telematics system are to:

- Reduce driving for work incidents/ injury rates and costs.
- Improve the driving behaviour of Council drivers.
- Improve claims and complaints defensibility.
- Reduce exposure to high risk driving situations.
- Improve the Councils safety record and management of occupational road risk (MORR).
- Optimise routes and schedules.
- Reduce vehicle, fuel and other driving costs to support savings targets.
- Optimise asset use and lifecycle.

It is acknowledged that telematics is not the only way to achieve these aims. Advanced driver training and regular refresher training, especially when new vehicles and plant are brought in, are important. However, it is critical that the Council has a system to measure the effectiveness of the training.

Telematics General Principles

- Telematics are a demonstrable means of improving fleet safety culture and performance, generating financial savings by reducing incident rates, premiums and self-insured costs, reducing fuel usage, reducing maintenance and decreasing vehicle numbers, improving operational efficiencies and helping to reduce CO₂ emissions.
- Any monitoring must not be intrusive or excessive and must be proportionate to the aim. It should not be used to target individuals or seek out breaches. Whilst the vehicle tracking system is a useful management tool, it should not be used to replace normal good management practices.
- Current asset/ user locations will be visible to permitted staff for legitimate operational purposes only. This access will be monitored and subject to regular review.
- All Council vehicles and plant assets are fitted with operating telemetry hardware.
- This policy covers what data is recorded by the telematics device, how it is stored, who the data is handled by and the terms under which it would be used.
- Information held within the telematics system is stored and retained in accordance with the Council's Data Protection Policies and Procedures.

Data Access and Information

Information held within a GPS system will only be accessed for legitimate interests of the Council or other organisations, where the law allows. This may include 'live' location information or archived data retrieved via reports.

Live location data (live feeds) will only be available to Fleet Services and Senior/ Duty Managers within Operational Services by default. Managers may request live data from Fleet Services when it is required for specific purposes, such as discharging legal duties, ensuring health and safety of staff and agreed operational purposes. Examples of these will be laid out in the guidance document. Requests must be documented to ensure they are appropriate.

Access is monitored and will be reviewed every six months to determine whether the requirement still exists. Specific purposes need to be agreed and included in the guidance document.

The system will produce reports to periodically review service business activities detailing information regarding vehicle utilisation, fuel and CO2 consumption and general vehicle information including onboard diagnostics which can all aid the efficient delivery of the service and operation.

Archived data may be retrieved by reports commissioned by line managers, Insurance, Legal or Internal Audit Services or any person as duly authorised by the respective service areas 'Head of Service.

Data will be deleted or corrected in accordance with the Council's Document Retention Policy.

Individual users of Council vehicles will be issued with a 'unique fob' and upon starting a vehicle the driver will be prompted to present it to a location on the dashboard. This will in turn identify the individual driving the vehicle. These fobs are not transferrable and should not be shared.

Identifying the driver can provide feedback on specific training needs or demonstrate improvement following the completion of any driver training. Information relating to individual drivers will be redacted or anonymised, prior to distribution to those other than the line manager and their next tier of management.

Data provided by telematics is not a substitute for appropriate risk assessments and lone worker protection measures. Proper health and safety controls must be in place to ensure the welfare of peripatetic workers, this may include provision of two-way communication devices and personal safety alarms.

An employee may request to see their data in accordance with GDPR legislation. They also have the right to ask for any data errors to be corrected or removed in line with legislation. These requests must be fulfilled within 20 working days.

Where there is evidence of criminal activity, data may be provided to the Police or other law enforcement agencies, if requested. Any such disclosure would be made in accordance with DPA, GDPR and the relevant law.

Breaches and Non-Compliance with Policy

This policy serves to regulate the management, operation and use of the telematics system fitted to Council fleet assets.

Due to the potential for misuse of data generated by the telematics system, this policy is clear on the management of the system and any deviation from its prescribed use can result in an investigation. Telematics usage is monitored and tracked to ensure it is used for its intended purposes. Where it is found that individuals accessed or used data in a way not prescribed by the policy, this may constitute gross misconduct and lead to disciplinary action.

Deliberate damage or tampering with telematics/ location devices or settings may constitute Gross Misconduct and will be dealt with in accordance with the Council's Disciplinary Policy.

Any employee, who believes that the vehicle tracking system is being used inappropriately by a manager or supervisor and not for the purposes for which it was introduced, can raise these concerns to a more senior manager in line with the Council's Grievance or Whistleblowing Policies.

Information captured on the system may be used to support in any investigations in line with the Council's [Employees Code of Conduct and the Road Traffic Act 1988](#). Managers must be aware that while telematics data can be used as evidence, a full investigation is still required to establish the facts. Employees can also request access to the information captured. Requests for data must be fulfilled within 20 working days.

Integrated impact assessment

An integrated impact assessment has been completed to support this policy.
