

The Storehouse in Kirkwall opened in 2018. Originally built as a herring curing store, it was adapted and reused into a large restaurant on the ground floor with rooms on the two floors above © Start Point Media.

2. ADAPTATION

Adaptation will normally involve working within the existing building envelope, focusing more on internal alterations. The first step towards finding a practical scheme of adaptation is to look critically at the existing building to see what alterations are necessary to make the building work. This could include the upgrading or insulating of the building to address heat loss. Smaller scale additions and removals might also be required.

The interest and quality of an interior will vary for each listed building. Some public buildings, like town halls, may have very important interiors, which should influence the approach taken. For the most part, buildings that are not used as homes, such as schools and hospitals, will have interiors that are utilitarian, and designed for use rather than appearance. They may therefore be capable of more radical change, including the removal of internal walls to create larger spaces.

The interiors of non-domestic buildings are also more likely to have been changed in the past. These alterations can affect their original character and appearance. If a building's interior is no longer making a meaningful contribution to its special interest, it is likely that further changes will not do more harm.

In certain circumstances, adaptation can provide opportunities to restore the appearance and special interest of a listed building. Conservation-based approaches can involve removing later additions of little interest on the exterior of a building. It can also include positive changes internally, such as reinstating missing features or taking down later partitions and suspended ceilings.

Changes like these can help to restore a building to its original plan-form and room proportions. Such works can often revitalise old buildings, giving them a new lease of life. Successful conservation-based solutions on one part of a site or building might balance out a higher level of intervention or additions elsewhere in the scheme – as long as these involve less significant elements.

3. EXTENSION

Many listed buildings have the capacity for some form of extension. In some cases buildings can successfully accommodate sizeable additions, particularly if the building is not domestic.

Sometimes an extension is essential to keep the listed building in use, for example where there is little scope for internal intervention or where the original building is very small. In these cases, the decision-maker will have to balance this against any adverse impacts.

There will also be some circumstances where all elevations of a building have been designed to be visible and appreciated. In these cases, other options for the site may have to be considered, including excavation for new facilities, or new free-standing buildings in the grounds.

4. SELECTIVE DEMOLITION

Selective demolition is a different consideration from substantial demolition, which would involve the total or substantial loss of a listed building.

Selective demolition involves the removal, or demolition, of parts of a listed building in order to enable the significant parts of a listed building to be retained. Later extensions of little interest, or even less important component parts of the original building are likely to be the best options for removal.

Most buildings have a primary 'display' frontage or principal façade, and often the building's side elevations were also intended to be seen. Important frontages were often the most elaborate or expensively treated and make a particular contribution to special interest. Changes to these areas are likely to have a higher impact on character.

Sometimes the extent of removal of fabric can be radical. The most extreme form of this is known as 'façade retention'. This term refers to the removal of all but the principal façade or façades of a building, with an entirely new structure built behind.

Façade retention schemes will not normally be appropriate because of the degree of loss they entail. However, in the right place, a façade retention scheme might be an appropriate course of action when no other options are feasible. This is usually in an urban context, particularly when the façades are of such special interest that they could continue to be a listed building in their own right, or where they make an important contribution to the surrounding townscape.

5. ENABLING

In the planning system, 'enabling development' has a very specific purpose; it allows development to take place which would normally be contrary to planning policies, in order to obtain a desired objective. This might include the reuse of a historic asset, particularly if it would mean saving it from continued deterioration and potential loss.

In such cases the enabling development should be the minimum necessary to secure the asset's future. In many cases the opportunity for enabling development will depend on the availability of land, which should not be parcelled up separately from the asset. The enabling development should be securely tied to the reuse of the historic asset through a planning or other legal agreement.

BUILDINGS NOT IN USE

MINIMISING RISK TO EMPTY OR UNDERUSED BUILDINGS

When a group or organisation moves out of a listed building, the building will often stand empty for a period of time. This is more likely to be the case in situations such as a school relocating, where the building may need a new use.

Once a building is empty or underused its long-term future is immediately at risk. It is often challenging to spend money on a building that has no readily identifiable use. This means that maintenance and minor repairs may stop, and the building can quickly fall into a cycle of decline. In the most severe cases, this can lead to the loss of the building. Unmaintained buildings can quickly deteriorate, and often attract other risks such as vandalism and arson.

One of the best ways to protect a building is to minimise any time it stands empty. If possible, the owner should start planning for the period in which the building will be empty well before they move out.

A quick turnaround from one use to another is likely to be better for the building, and more financially viable. However, this is not always possible; often time is needed to consider and develop schemes for alternative uses. Other processes, such as marketing and changes in ownership can also take time.

The only way to protect a vacant building and prevent it falling into disrepair is by routine maintenance. This is also the best way to make it more attractive to potential new owners.

Harlaw Hill House in Prestonpans is a case where a program of non-traditional repairs was undertaken to help avoid the total or substantial demolition of the A-listed building © Courtesy of HES.

Empty buildings can be viewed negatively and seen as eyesores, their potential masked by disrepair. In such cases the goodwill of the community towards a building may seep away if nothing is seen to be being done. Although 'mothballing' an asset may be successful in the short to medium term, it is not normally a long-term solution.

A range of actions can be taken to help manage the risk and to buy time to allow a long-term solution to develop. These can be broadly grouped as temporary fixes, and 'meanwhile uses'.

Temporary fixes normally involve the pragmatic use of cheaper non-traditional materials in repair works. This might include plastic rainwater goods instead of cast iron, felt instead of lead (particularly if theft is an issue) and metal sheeting or even tarpaulins in roof repairs.

Short term security measures or aesthetic works (for example, painted shop boarding) may also be helpful. Works of this type can tide the building over and will be reversible once a longer term solution to reuse the building is found.

A 'meanwhile use' is an occasional or temporary use of a vacant building or land until it can be brought back into long-term use. These can often be for storage, workshops or socially beneficial purposes, such as temporary offices for a charity. Maintaining a building in some sort of use, even as storage, will assist in safeguarding its long-term future.

Further and more detailed advice can be found in our [Buildings at Risk Toolkit](#).

100 High Street in Dumfries, known as 'the stove', opened in April 2015. Dumfries and Galloway Council agreed to provide a 25 year lease at £1 per year, £20,000 grant towards running costs for 3 years and a rebate on business rates. This once empty shop has now been converted to a cultural use © The Stove Network.

FINDING A NEW USE

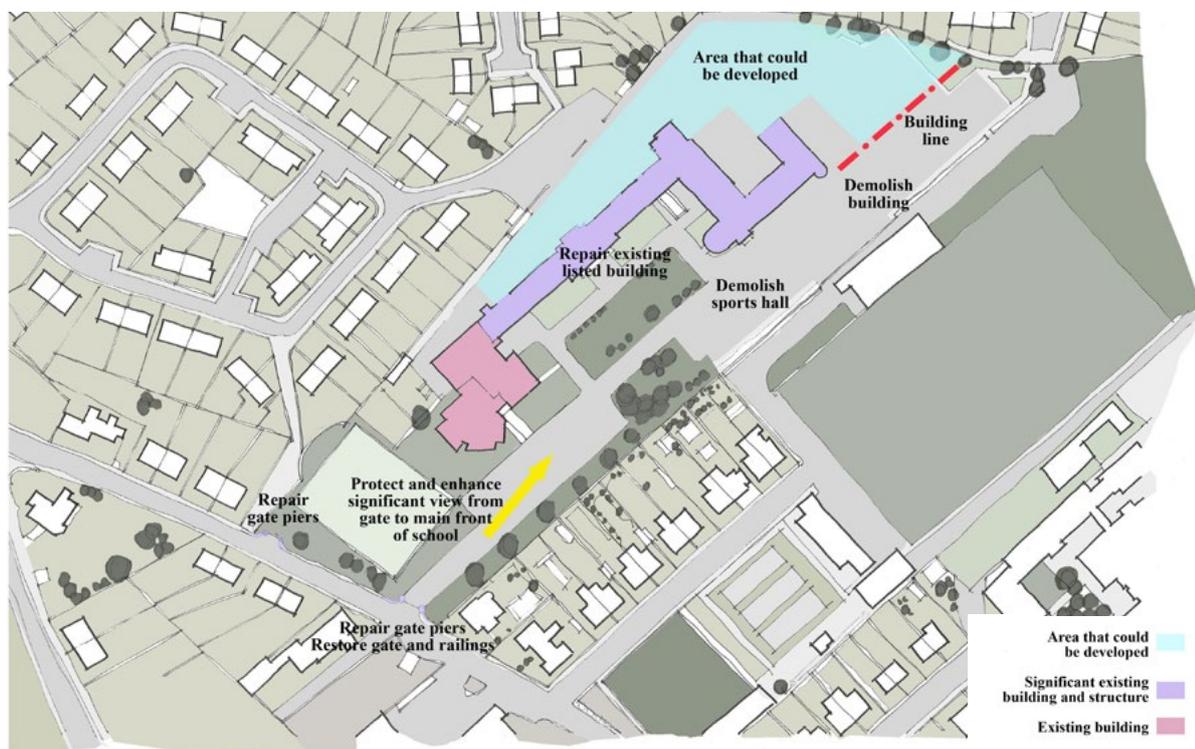

Normally, when a building changes use, it will involve a change of ownership. This will often happen when schools, hospitals or businesses relocate. With large sites, experienced developers will often be needed, due to the scale of works and finance required.

The reuse of listed buildings will have planning implications. Any proposals will have to comply with local and national planning policies. There may also be other issues to take into account when determining a planning application. These should be identified and made clear to all parties from the outset.

When putting a building or site to the open market there may be competing interests. The existing owner will want to maximise its sales value; potential new owners will want to make a profit; decision-makers will want to preserve the listed building in line with planning policy.

An effective way to manage expectations, and secure a good outcome, can be to promote a positive case for any development through the initial sales and marketing process. One way of doing this is for the planning authority to produce a planning brief, which can stand alongside a conservation statement. This should set out what is likely to be achievable for the site – and give prospective buyers more certainty.

A planning brief can cover a single building or, more commonly, be used to guide development over large sites which may include numerous heritage assets. These documents should form part of the sales literature, which may also include contact details for individuals involved within local authorities and, if applicable, us.

As part of the marketing process for Kelso High School, Scottish Borders Council produced a Concept Design Report which included an plan identifying the most significant parts of the site and areas of opportunities for new development © Simpson & Brown.

Wherever possible, it is best to sell sites as a whole, rather than sub-divided into lots. This allows for more coordinated redevelopment. In sites which have larger areas of open ground, some form of enabling development may be required to achieve the reuse of a listed building. As above, dividing the site into separate lots would potentially remove this option and put the reuse of the building at risk.

If possible, a planning brief should be in place (and the sales process initiated) before a listed building becomes empty. Briefs can also be used for sites that have been vacant for a long time and where it has been difficult to secure redevelopment. In some cases it may be helpful for the local authority to undertake a more comprehensive masterplanning exercise.

Where there are multiple buildings on a site, it is sometimes worth considering whether the removal of less significant buildings is possible in the interests of making the overall site more attractive to potential new owners. It may be helpful to make a start on the process for consents regarding these less significant buildings before marketing takes place.

COMMUNITY OWNERSHIP

Concern for the future of an unused listed building may result in a community effort to take over ownership. A range of options exists, and might include:

- working in partnership with the owner
- leasing the building
- negotiating a private sale
- purchasing on the open market

Community Right to Buy (CRtB) now allows communities throughout Scotland to register an interest in land and the opportunity to buy that land when it comes up for sale. Further information on CRtB can be found on the [Community Ownership Support Service website](#).

FINANCIAL CONSIDERATIONS

VALUING A LISTED BUILDING

For sites that contain listed buildings, the valuation of the land has to include the buildings, and take account of likely costs in repairing and reusing them. Prospective buyers should not pay a price inflated by an assumption that the listed building will be demolished.

If a buyer has assumed that a listed building can be demolished, this can cause significant delays. These delays can result in further deterioration in the condition of the building. The best way to make sure that any business decisions the buyer makes are fully informed is through early engagement at the beginning of the process.

GRANT AID

Where the cost of works is higher than the end value, the difference is referred to as the 'conservation deficit'. Where proposals show a conservation deficit, grant aid may be able to help. Under our [Historic Environment Repair Grant program](#) we can offer grants from £10,000 - £500,000 to support conservation-standard repair projects. You can also find advice on further sources of funding [on our website](#).

The Dalkeith Corn Exchange was restored and converted in 2016 with grant assistance from ourselves. Previously a market hall, it was transformed into the Headquarters of a housing association and the Dalkeith Museum space. MANAGING CHANGE IS A
SERIES OF NON-STATUTORY
GUIDANCE NOTES ABOUT
MANAGING CHANGE IN THE
HISTORIC ENVIRONMENT.
THEY EXPLAIN HOW TO APPLY
GOVERNMENT POLICIES.

The aim of the series is to identify the main issues which can arise in different situations, to advise how best to deal with these, and to offer further sources of information. They are also intended to inform planning policies and the determination of applications relating to the historic environment.

INTRODUCTION

This note sets out the principles that apply to alterations to the interiors of historic buildings. It should inform planning policies and help with decisions relating to applications for historic buildings. It also provides guidance on how to manage the impact of change in a sympathetic way that respects the inherent value of these buildings in the context of a dynamic and changing environment.

KEY ISSUES

1. The interior of a historic building is important in defining its character and special interest. If a historic building has the protection of statutory listing then this includes the interior, whether or not the list description itemises interior features. Listed building consent, which is administered through local authorities, is required for any works affecting the character of a listed building.
2. The interest, experience and enjoyment of a historic interior can be derived from a number of factors including its design, structural plan and layout, the quality of its decorative scheme, materials and craftsmanship, fixtures and fittings, any associated archaeology, and historical and cultural associations.
3. Thorough and appropriately informed inspection of historic interiors is necessary to evaluate their interest fully.
4. The significance of the interior and the nature of proposed works and their impact should be carefully assessed. A Heritage Statement, and if appropriate a Design Statement, will help assess and inform the appropriateness of any proposed changes. Proposals for interior alteration should always seek to protect the character of the building.
5. Planning authorities give advice on the requirement for listed building consent, planning and other permissions.

1. WHY ARE HISTORIC INTERIORS IMPORTANT?

The interior makes a substantial contribution to the special architectural or historic interest of a building. Its nature, style, detailing and materials help us understand when and how a building was constructed and adapted, its social and cultural significance, what it was used for, and how this has been influenced by advances in technology and changes in fashion. Historic interiors can enrich our daily lives and wellbeing in how we use, experience and appreciate them.

This impressive Edwardian kitchen at category A listed Pollok House in Glasgow retains much of its original character while functioning as a restaurant. Its scale gives us insight into the social history and functioning of a large country house in the early 20th century.
© www.nealesmith.com

2. IDENTIFYING THE INTEREST OF A HISTORIC INTERIOR

The significance of a historic interior, or part of an interior, is usually derived from a number of factors, including those set out in the paragraphs below. The degree to which an interior remains intact from key periods in its history, and its rarity in a broader context, are also important considerations.

Plan form

The 'plan form' is the arrangement and division of internal spaces into rooms and circulation spaces such as halls, stairs and corridors, and is a key component of the character and special interest of any building. The interrelationship of rooms and circulation space is a reflection of the building's design, function, status and period. Where rooms are arranged to create particular spatial effects or views, the position of features such as doors, windows, fireplaces and cupboards can be significant. When the historic layout is altered, for instance to superimpose an open-plan layout, this can be harmful to the character of a building.

Room proportions are important to the integrity of a design. The size and height of a room is normally carefully proportioned to suit its historic function. For example, the size and arrangement of a principal space such as a dining or drawing room normally contrasts with the less formal or less elaborate 'private' spaces, such as bedrooms. Windows, doors and fireplaces were normally designed and located to complement the design and proportions of the room as a whole.

Decorative schemes

The decorative treatment of a historic interior is normally an important element of a building's character, whether it is a simple functional space or a grand and imposing one. Depending on the building's type, or the location within a building, interior schemes range from utilitarian bare surfaces to elaborate applied fixtures and finishes.

Decorative schemes can illustrate much about the function/status of a room and broader stylistic movements. The design of chimneypieces, cornicing, doors and architraves were often coordinated throughout a room or a building in one style or a contemporary variety of styles. Some schemes have a theme or purpose reflecting the outlook of a patron and/or designer or reflect the use of the space.

Most interiors have been redecorated on a number of occasions, and older buildings in particular may have 'layers' of differing fashions or styles, possibly built up over generations. These later schemes may illustrate and document key periods in changes of ownership/use/patronage and often enable a fuller understanding and appreciation of the building's history, significance and interest. A Heritage Statement, and if appropriate a Design Statement, will help assess and inform the appropriateness of any proposed changes.

Materials and craftsmanship

Even relatively modest interior spaces can display high levels of craftsmanship and quality of materials. The enormous variety of materials and skills employed in historic interiors can range from simple panelled timber doors and shutters to elaborate marble and timber fireplaces, high-quality plasterwork, intricately designed staircases and hand-painted wallpaper.

Fixtures and fittings

Statutory protection extends to all features that form a part of the listed building. It is not necessary for the feature to be specified in the list description for it to be considered as integral to the structure and subject to the need for consent if change is proposed. Local authorities advise on whether consent is required for the removal or alteration of a feature.

Fixed objects such as staircases, chimneypieces, doors and doorpieces, timber panelling, shutters, built-in furniture, etc. are likely to be considered fixtures, integral parts of a listed building. The degree of physical attachment and the extent to which a feature is an integral part of the building are relevant factors for assessing items such as bathroom and kitchen fixtures, overmantel mirrors, overdoor paintings, window pelmets, fire grates, lighting and machinery.

Non-fixed or portable objects are not included in the statutory listing of properties.

A surviving section of 16th century painted wall panelling discovered beneath later works at category A listed Northfield House, Prestonpans. In this instance a section of the panelling has been left exposed and the later work retained. © Crown Copyright: HES. Licensor canmore.org.uk

Archaeological potential

Early structural evidence or decorative schemes may survive below later work, possibly concealed, and the discovery of these can enhance understanding of a building's special interest. Interior structural evidence, such as timber framework, masonry vaulting, or blocked openings, can reveal much about the development of a building through time.

Common discoveries of decorative features include chimneypieces, grates and ranges in blocked fireplaces, wall and door panelling under hardboard or plasterboard finishes, and original plaster ceilings above suspended ceilings. Mural and other painted decorative schemes may also be recovered from beneath later paintwork. Where such features are found, but it has been agreed to conceal them again, they may be significant enough to merit recording. In cases where a decorative scheme cannot be recovered in full, it may be appropriate to repair, for example by replicating mouldings, or by paint sampling and matching.

Historical, cultural and social associations

The link between particular interior spaces and notable people or events in history forms a significant element of their interest. Interiors connected to important historical figures can provide an invaluable insight into their lives, inspiration and works. Similarly the context of a historical event of cultural/ social activity can be better understood when the physical surroundings are intact.

This late 19th century door handle and fingerplate at an unlisted building in Esplanade Terrace, Joppa combines beauty and practicality with its ornate design and its function in protecting the door from marks and damage. Details like this are an important part of a building's character. © Royal Commission on the Ancient and Historical Monuments of Scotland; D/12556/cn. Licensor www.scran.ac.uk

3. GENERAL PRINCIPLES FOR REPAIRS, ALTERATIONS AND UPGRADING

Character and interest

Alteration to a historic building should protect its character. The contribution of the interior to that character must therefore be fully understood before considering how to alter the building. A Heritage Statement, and if appropriate a Design Statement, may help assess and inform the appropriateness of any proposed changes.

Significance of the interior spaces

Alterations should be carefully planned and located to best protect the interest of the internal spaces. In general, the principal spaces in a building are more sensitive to change as these are the spaces that normally make the most significant contribution to its character. Sometimes secondary spaces such as basement kitchens or attic rooms are sensitive to change, for example where they survive in their original form, or are particularly noteworthy.

Category A listed George Square, University of Edinburgh. A comprehensive refurbishment scheme to refresh this post-war building, including the basement area repurposed as a lively social hub. New design elements have taken their cue from the original 1960s design features such as the original waffle concrete ceiling which has been retained with the addition of some decorative timber light boxes. ©www.andrewleephoto.com

Subdivision and amalgamation of spaces

Where the original plan form or a later plan form of special interest survives, particularly in regard to the entrance hall, main stair, common spaces and principal rooms or spaces, these spaces should normally be retained without subdivision, because of their inherent significance. Likewise, it is usually advisable to avoid the amalgamation of rooms, or the creation of an 'open-plan' layout, within a historic building with an important cellular plan form. There may, however, be more scope to make significant interventions within areas of secondary importance.

When planning new openings between rooms or circulation spaces it is important to take account of the historic design and layout, and also of distinctions between different types of space. For example, in most pre-20th-century townhouses or villas a direct opening between a 'public' dining

This 17th century panelled and decorated wall at category A listed Argyll's Lodging, Stirling is highly significant due to its age, rarity and craft value which inhibits the removal of fabric to create a wider opening. Its arrangement provides evidence of the transition in social history from the open communal space of a large hall to the more fashionable private domestic use of rooms as seen on the Continent.

or drawing room and a 'private' parlour would be uncharacteristic of the traditional arrangement. A new opening in such a location should be carefully designed to minimise disruption to the appearance and character of the spaces being linked. Solid doors are likely to best retain the sense of enclosure in these cases, rather than glazed doors or openings without doors.

In some instances, the quality of the decorative scheme or importance of the plan form and layout of the spaces may inhibit removal of building fabric to create an opening.

Historic materials

Historic materials make an important contribution to the character of a building's interior and should be retained where possible. Removal of lath-and-plaster walls, original floors and joinery, decorative plaster, or ironwork, is almost always damaging to the interest of the interior and is often unnecessary. Even where not in use, features such as doors, fireplaces or machinery, where practicable, should be left in-situ.

Fabric upgrades for energy efficiency

The Climate Change (Scotland) Act 2009 commits Scotland to some of the most ambitious carbon reduction targets in the world. There are a number of practical solutions to improve energy efficiency to the interior of traditional and historic buildings whilst retaining the historic character and minimising impacts. A key aim should be to recognise that traditional buildings generally require vapour permeable and ‘breathable’ solutions rather than standard energy efficiency products.

Historic Environment Scotland has carried out a series of trials and pilot projects in which energy-saving measures were trialled at a variety of traditional properties throughout Scotland, including detached rural cottages, tenement flats, townhouses and public buildings dating from the 18th, 19th and 20th centuries. The results of these projects and the lessons drawn from them are published as a series of Refurbishment Case studies available on the [Historic Environment Scotland website](#).

New design

Alterations to historic interiors should be considered in the context of the type and quality of the existing interior and plan form. Interventions should at all times respect and complement the interest and significance of the historic interior. A Heritage Statement, and if appropriate a Design Statement, may help assess and inform the appropriateness of any proposed changes.

This elegant swept stair at category A listed McManus Gallery and Museum, Dundee, has been invigorated by the subtle addition of contemporary lighting. The encaustic tiled floor and stained glass window further reinforces the decorative Gothic nature of this impressive stair hall. © www.andrewleephoto.com

Structural works

In undertaking structural works, it is often best to repair the existing structure rather than replace it. Where this is impractical it may be possible to incorporate modern structural components, but care should always be taken to avoid harming the structural integrity of the building and its fabric, or damaging decorative work of quality.

The loss of a building’s interior through the removal of interior walls and floor plates while retaining the outer faces of

Historic ceramic tiles often greatly contribute to the appearance and character of an interior space. Due to their durable nature they were often used in locations where cleanliness and hygiene were highly valued or in areas such as communal stairs, as in this example in an unlisted building in Sandringham Terrace, Greenock.
©. Dr Peter Robinson Licensor www.scran.ac.uk

the building, known as façade retention, will almost always harm the character of a historic building and should not normally be considered. If the interior of a property has to be completely rebuilt because of structural weakness, careful consideration needs to be given to how the new internal arrangement will affect the surviving character of the building.

Decorative schemes

High-quality decorative schemes should be retained in-situ where possible. If the scheme is largely intact, it may be possible to undertake discreet repairs without damaging either the historic fabric or the authenticity of the scheme as a whole. If there is significant damage, or the scheme is incomplete, it may be better to protect the historic fabric and add a new layer of decoration. Where consent is required, evidence should be provided for the reinstatement of previous schemes of decoration in high-quality internal spaces.

Reversibility

Where alterations are essential, it is often possible to undertake works that allow the future reinstatement of original features or finishes. Measures to consider include storage of removed fixtures on site, protection and concealment of items such as panelling, tiling or fireplaces in-situ, and construction of new elements around existing features (for instance, leaving plasterwork in place and scribing new partitions around existing cornice profiles).

Fire and security measures

With careful attention to detail, fire and security protection measures can usually be incorporated with minimal visible or physical disruption to historic interiors. However, care must be taken to ensure that unnecessary harm is not caused to the character of the interior by unnecessarily exposed equipment or wiring/pipework, fire retardant measures such as additional screens and doors, and in the upgrading of existing doors and historic surfaces (e.g. intumescent paint or varnish). Further advice on fire safety management can be found in our [Managing Change guidance note](#) on the subject.

Construction works and vacant buildings

Historic interiors and collections should be protected from damage during construction works, whether or not the building is occupied. Particular care should be taken to protect fixtures that are vulnerable to theft, such as chimneypieces, when a building is vacant. Measures can include physical protection by covering, security surveillance, or in some cases temporary removal of valuable items to agreed secure locations. This should form part of a consent process.

Fixtures

Where fixtures contribute to the character of a building, these should be retained. In some cases, such as agricultural, industrial or ecclesiastical buildings, internal fixtures may include large pieces of machinery or built-in furniture that contribute to the interest and understanding of the building. If retention of such fixtures makes reuse of the building impractical, moving or consolidating the items within the building, or retaining exemplars of multiple units, should be considered. If removal of fixtures from the building is appropriate, rare or unusual items may be of interest to museums.

4. RECORDING

Where alterations are proposed to important decorative schemes or layouts, photographic or other recording of the interior in its unaltered state may be required as a condition of listed building consent. In some cases evidence of early decorative schemes comes to light in the course of works. Evidence of earlier schemes, such as fragments of wallpaper, can provide an interesting insight into the history of the building and its occupants. *Historic Environment Scotland* may record buildings, structures and sites prior to significant alteration or conversion, and in emergencies where they face imminent risks such as fire or collapse: www.rcahms.gov.uk

These traditional timber numbered pews in category A listed Cromarty East Church, Highland have a decorative and craft value but also a functional use. Historic fixtures such as these, give us a very tangible connection with the past. © Iain Sarjeant/Scottish Viewpoint

Archaeology

Archaeological resources may survive within or beneath a listed building or unlisted building in a conservation area. Planning authorities manage such archaeological issues, by using conditions or legal agreements to record or preserve in-situ. Advice on archaeological sensitivity should be obtained from the planning authority's archaeological adviser at an early stage.

5. CONSENTS

You may require planning permission, building warrant(s) and other permissions or consents for any proposed scheme. The granting of scheduled monument consent or listed building consent does not negate this requirement, and you should contact your planning authority for advice.

Listed building consent

Listed building consent is required for any work to a listed building which will affect its character (see the Planning (Listed Buildings and Conservation Areas) (Scotland) Act 1997). The planning authority is the main point of contact for all applications for listed building consent. They decide whether consent is required, and they can also offer advice on applications.

The planning authority will consider applications using guidance such as Historic Environment Scotland's managing change guidance notes and other national policy documents including SHEP, SPP and their own policies.

Scheduled monument consent

Scheduled monument consent is required for any works to a monument scheduled under the Ancient Monuments and Archaeological Areas Act 1979. Scheduled monument consent is determined by Historic Environment Scotland. We offer a free pre-application discussion and checking service for scheduled monument consent applications. You can find out more about this on [our website](#).

6. SEARCHING FOR LISTED BUILDINGS AND OTHER DESIGNATIONS

You can search for listed buildings, scheduled monuments, battlefields, gardens and designed landscapes on [Historic Environment Scotland's website](#): (please read the guidelines on the search page). If you are not sure whether a particular building or feature is designated, you can also email or telephone us for help.

For a map-based search and wider environmental information, including conservation area boundaries, see the [Scotland's Environment website](#). You can also ask your local authority to tell you whether the building or feature in which you are interested is listed, and what is covered by the listing.

7. FURTHER INFORMATION AND ADVICE

Historic Environment Scotland is charged with ensuring that our historic environment provides a strong foundation in building a successful future for Scotland. One of its roles is to provide advice about managing change in the historic environment.

MERCHISTON & GREENHILL CONSERVATION AREA CHARACTER APPRAISAL

LOCATION AND BOUNDARIES

The Merchiston and Greenhill Conservation Area is situated some 2.5 kms to the south west of the City centre.

The boundary of the Conservation Area follows the line of Newbattle Terrace westwards to Morningside Road, runs south of Morningside Place and George Watson's to Colinton Road. It then turns northwards onto Polwarth Terrace, running to the rear of properties on Colinton Road, turning northwards again on Gray's Loan, then runs to the rear of properties on the west of Polwarth Terrace, turning north on Merchiston Avenue, east along Granville Terrace and south to the rear of properties on Merchiston Park. It then turns east to the rear of properties on Chamberlain Road, northwards on Forbes Road, eastwards on Bruntsfield Crescent and southwards on Whitehouse Loan, to the starting point on Newbattle Terrace.

DATES OF DESIGNATION/AMENDMENTS

The Merchiston and Greenhill Conservation Area was originally designated on 25 May 1986. The boundary was amended on 29 March 1996 to include the late classical villa properties in Merchiston Park and to exclude the Astley Ainslie Hospital which was included in the Grange Conservation Area. Article 4 Directions were approved in 1996.

STATEMENT OF SIGNIFICANCE

The character of the Merchiston and Greenhill Conservation Area is dominated by Victorian villas interspersed with substantial terraces of outstanding quality. The buildings are complemented by a profusion of mature trees, extensive garden settings, stone boundary walls and spacious roads. The villas are in a considerable variety of architectural styles, unified by the use of local building materials.

CONSERVATION AREA CHARACTER APPRAISALS

Conservation Area Character Appraisals are intended to help manage change. They provide an agreed basis of understanding of what makes an area special. This understanding informs and provides the context in which decisions can be made on proposals which may affect that character. An enhanced level of understanding, combined with appropriate management tools, ensures that change and development sustains and respects the qualities and special characteristics of the area.

"When effectively managed, Conservation Areas can anchor thriving communities, sustain cultural heritage, generate wealth and prosperity and add to quality of life. To realise this potential many of them need to continue to adapt and develop in response to the modern-day needs and aspirations of living and working

communities. This means accommodating physical, social and economic change for the better.

Physical change in Conservation Areas does not necessarily need to replicate its surroundings. The challenge is to ensure that all new development respects, enhances and has a positive impact on the area. Physical and land use change in Conservation Areas should always be founded on a detailed understanding of the historic and urban design context.”

From PAN 71, Conservation Area Management.

HOW TO USE THE APPRAISAL

The analysis of the Merchiston and Greenhill Conservation Area’s character and appearance focuses on the features which make the area special and distinctive. These are considered in terms of:

- Historical Origins and Development;
- Structure and Townscape, which describes and draws conclusions regarding the overall organisation and macro-scale features of the area;
- Key Elements, which examines the smaller-scale features and details which fit within the structure; and
- Management: The Management section outlines the policy and legislation relevant to decision-making in the area. Issues specific to the area are discussed in more detail and recommendations or opportunities identified.

This document is not intended to give prescriptive instructions on what designs or styles will be acceptable in the area. Instead, it can be used to ensure that the design of an alteration or addition is based on an informed interpretation of context. This context should be considered in conjunction with the relevant Local Development Plan (LDP) policies and planning guidance.

HISTORICAL ORIGINS AND DEVELOPMENT

‘When the outbound tram car reaches Churchill, before travelling steeply into the valley at Morningside, that fine view of the Pentlands, the scarred flank of Caerketton ahead, opens up before us, with perhaps a plough-man turning a furrow in the middle-distance, and a shepherd with his dogs, driving white sheep across the dark green background.’ (*Auld Reekie*, Alasdair Alpin MacGregor, 1942).

The Conservation Area consists of the former estates of Greenhill, East Morningside and Merchiston which were located on the historic Burgh Muir, an area of woods and marshland to the south of Edinburgh.

In 1586, the western Burgh Muir was feued and the Greenhill Estate was established. The Estate was in the ownership of the Livingstone family during the seventeenth century, and the name was possibly coined by John Livingstone, who acquired the Estate in 1636. The name may be descriptive of the cultivated land

contrasting with the adjoining heathland of Bruntsfield Links, and the -hill would have been the slight eminence (between Bruntsfield Gardens and Forbes Road) which became the site of the Livingston's Greenhill House in the latter part of the seventeenth century. The house is depicted as three storeys and attic in traditional style on a stone plaque at the corner of Bruntsfield Gardens and Bruntsfield Place, and is described as a 'gable ended and gabled manor house. It was located in extensive grounds at the end of the present-day Forbes Road. The house was demolished in 1884. The mausoleum, reputedly that of John Livingstone, the original owner of the Estate stands within a garden in Chamberlain Road. Churchhill was established after Dr Thomas Chalmers built a house known as Kirkhill (now 1 Church Hill) in 1842.

By 1849, a new road, formed by Bruntsfield Terrace and Greenhill Gardens, connected Bruntsfield Place with the east end of Church Hill. The east end of Chamberlain Road was formed by 1852 and Greenhill Park was developing by 1859. Forbes Road was opened through the policies of Greenhill House in 1864, and the House itself was pulled down in the course of forming Bruntsfield Gardens in 1884. The development of the eastern part of Greenhill began in 1871 with Bruntsfield Crescent and Greenhill Terrace, followed by Strathearn Place and, by 1875, Greenhill Place and St Margaret's Road.

References to Merchiston first appear in the mid-thirteenth century. Alexander Napier, a successful merchant and provost of Edinburgh, acquired Merchiston in 1438, and the Napier family were responsible for the construction of Merchiston Tower in the fifteenth century. John Napier, the inventor of logarithms which made a major contribution to the advancement of science, was born at Merchiston in 1550. The Tower was used as the base for Merchiston Castle School for around 100 years from the 1830s. Following the School's move to new premises at Colinton, the Tower was left unoccupied for most of the period up to its amalgamation into the then Napier College's new building in 1964.

From the 1850s, the Merchant Company sold feus in the land of Merchiston Castle. The development was supervised by David Rhind until 1864, when he was replaced by David MacGibbon. Merchiston Place was begun by 1861, and Merchiston Avenue (1867) replaced an early loan connecting the Burghmuirhead with Fountainbridge. Burghmuirhead was the name applied to the triangle of ground between Colinton Road, Abbotsford Park and Morningside Road. It was feued from the Burgh Muir in 1586 and the name derived from its position at the summit of the Muir.

The Greenhill Estate was feued for building in 1840 and substantial villas were constructed in Greenhill Gardens (1852) and Abbotsford Park (1858). Following the demolition of Greenhill House in 1884, a number of quarries were opened within its grounds, the stone from which was used to construct many of the local tenements.

Whitehouse Loan and Terrace take their names from the ancient Whitehouse estate. The earliest mansion-house was built on the estate in the early sixteenth century, and in the 1830s the house, then dating from 1670, was rebuilt and extended to form St Margaret's Convent. The complex of buildings is now the Gillis Centre. Strathearn Place was originally closed off at its west end by a villa. This was demolished in 1900 when the horse-drawn tramline between Churchill and Marchmont was

replaced by a cable car. The sharp corner at Strathearn Place and Greenhill Gardens required a manned set of points, and the small stone building in the garden of 17 Strathearn Place is the attendant's booth. Greenhill Cottage which was located at the east end of Bruntsfield Terrace formed the nucleus for the development of Bruntsfield Hospital in the late nineteenth century, which was converted to flats in 1989.

The spatial layout of the area was well established by the end of the late nineteenth century, affording little opportunity for new development. Change during the twentieth century has mainly been associated with the expansion of educational uses, the conversion of villas into flats, and a degree of infill development and development within garden grounds.

STRUCTURE AND TOWNSCAPE

Essential Character

- The topography accentuates the urban form and landmark buildings.
- Key views to landscape and townscape features throughout the city.
- Solidity, robustness, spaciousness, intimacy and impressive visual variety are derived from the formal and informal layout of blocks of villas, terraces, and other groups of buildings.
- A dominant traditional layout and mature townscape of consistent and human scale.
- The distinctive integration of townscape and landscape.
- Sensitive changes of density and building types, and a consistent domestic grain scale and building mass.
- Generous settings which provide effective separation between changes in urban form, land uses and villa pattern are an important townscape element.
- Permeability and legibility derived from numerous long and short vistas to open spaces, panoramic views, landmarks and focal points.

The Conservation Area has a prominent location situated on a localised ridgeline between the edge of the city centre and the Braid Burn valley. From the edge of the Old Town, the topography undulates, descending to a low point along the edge of the Meadows. From here the land rises through Bruntsfield Links to a high point close to Holy Corner in the heart of the Conservation Area, before descending again through Morningside down to the Braid Burn. Blackford Hill and Craiglockhart Hill rise to the south in the intervening area creating foreground landscape features against the more distant Braid Hills and Pentland Hills.

As a result of this elevated location there are fine views afforded many of the properties and streets in the area, to the Castle, Arthur's Seat, the Braid Hills, the Pentlands, and as distant as the Moorfoot and Lammermuir Hills. The prominence of the ridgeline also reinforces the visibility of landmark buildings within the area.

Two major roads define the structure of the core of the Conservation Area. Morningside Road connects Merchiston with Greenhill while Colinton Road, largely a tree lined avenue, runs between two distinct parts of Merchiston. Both roads provide

the major entry points to the Conservation Area. They meet at Holy Corner forming one of the most striking and well-known townscape features in the city outside of the central area. The corner is part of the 'high street' running along Morningside Road extending towards Brunstfield. The four impressive church buildings, together with adjacent houses and tenements, present a cluster of landmarks providing focus, vistas and legibility to considerable parts of the surrounding area.

The most regular pattern of development occurs in the predominantly rectangular grid layout on the north side of Colinton Road between Merchiston Park and Gillsland Road. In contrast, the part of Merchiston to the south of Colinton Road, focused around Albert Terrace, is much more organic with curved roads and building frontages.

There are some small lanes and culs-de-sac within the perimeter blocks which contribute towards a feeling of semi-rural seclusion, intimacy and offer contrast and variety. At the south western end of this section, near George Watson's school, there is a change of layout with substantial villas and semi-detached houses fronting Colinton Road and two terraces at right angles to one another behind.

Churchill has its own varied building types and layout character. Some, such as the terrace in Greenhill Place, are more urban while others, as in Pitsligo Road and Clinton Road, are very low density and unmistakably suburban with very large houses in generous landscape. A contrasting part with a semi-rural feel occurs to the southeast between the villas of Newbattle Terrace and Whitehouse Loan. It is formed by a combination of cottages, very secluded houses, gatehouses, high stone walls and prevailing dense mature vegetation. This same impression extends along

The spatial layout of the area was well established by the early years of the twentieth century. Although there have been several significant developments of which the university buildings are the most substantial and prominent. Elsewhere the changes have been small scale and incremental, and the overall spatial structure of the area has remained substantially unchanged for a significant period of time.

There are very few large public open spaces in the area, although Bruntsfield Crescent has its superb setting facing the Links. Greenhill Gardens contains an important private open space with a strong public dimension. The Union Canal defines the western edge of Merchiston while the private gardens in Merchiston Gardens present a secluded local amenity. The large lawn in front of Watson's College adds to the imposing presence of the building and helps to separate its institutional function from the residential environment.

A number of sites have been redeveloped with modern blocks of flats. This is most evident in the area west of Colinton Road, notably in Etrick Road. In some instances, their bulk and siting contrasts sharply with the more domestic, elegant setting and fine grain of houses prevailing in the area. The provision of traditional generous separation distances between new mansion blocks of flats and original villas nearby is an important factor in retaining the character and appearance of the area. Large rear gardens are also an important feature of the urban structure.

Over the years, changes in the way the land and buildings have been used have mainly been the result of the conversion of villas and terraced houses into flats. There has also been a limited amount of demolition, infill and backland development in garden grounds.

The largest modern buildings are Napier University and George Watson's College. The university is a dominating presence placed hard against Colinton Road, while the college is well set back, less assertive and well-integrated into its surroundings. Other substantial structures are the Gillis Centre in Whitehouse Loan, the Churchill Theatre, and the Holy Corner churches. The substantial more modern telephone exchange offices in Newbattle Terrace are well set back and partially screened by dense mature vegetation.

Traditional purpose-built flatted development is restricted to a limited number of places, notably Morningside Road and Merchiston Crescent/ Mardale Crescent. The latter group, with its distinct geometrical layout, fine grain, curved facades, and striking grey stonework, presents an imposing tenement form in the area. These buildings contrast in mass, scale and density with the surrounding predominant villa pattern. However, the contrast is not harsh. Human scale is provided by the clear vertical rhythm expressed in the elevational composition, the picturesque roof profile, the widths of bay windows with low sills, continuous individual and shared access doors flanked by a regular pattern of grouped windows and small enclosed front gardens. In the middle of both these crescents semi-detached and terraced villas create a break of scale and add variation to the grouping. The tenements also offer attractive end vistas to nearby streets providing a clear sense of direction. Their compactness, solidity and durability add to their valuable contribution to the townscape.

Within the predominantly villa areas there are also fine two and three storey Victorian and Edwardian terraces. Some, such as Albert Terrace, are quiet and secluded while others, such as Rochester Terrace and Bruntsfield Crescent are boldly urban. The longest terrace is in Greenhill Place. Its frontage is punctuated by a taller pavilion at its centre and by wider plots at both ends. The terrace is an excellent example of closure of vista to St. Margaret's Road with the entrance to and the highest part of the Gillis Centre containing the vista at the other end. The terrace faces a classic low density and heavily landscaped villa area. Although so different in character they sit in attractive harmony. The integration of the contrasting styles is assisted by high stone walls, the number of mature trees, and green open space which flow around the houses.

The care shown in the design of several other terraces is noteworthy. Merchiston Gardens, for example, shows verticality and subtle variety in height and roof detailing in what seems to be, at first inspection, uniformity. The neighbouring terrace in Gillsland Road also has a pleasant scale, detailing and stepped skyline following the topography.

Morningside Road, and its short continuation into Colinton Road, is the only part with a sizeable number of traditional shops, cafes and restaurants. They occupy the ground floor of three and four storey tenements. This is the most vibrant and busy

part of the Conservation Area in close proximity to the university, churches, theatre, cinema and supermarket.

KEY ELEMENTS

Architectural Character

Essential Character

- The architectural significance of individually designed villas and terraces in the area.
- The variety of architectural styles that contribute to the overall character.
- High quality stone-built architecture of restricted height, generous scale and fine proportions enclosed by stone boundary walls and hedges which define the visual and physical seclusion of the villas.
- The significant degree of uniformity resulting from the predominant use of traditional building materials: of local sandstone for buildings and boundary walls and Scots slate for roofs.

The architectural character of the area is dominated by Victorian villas interspersed with substantial terraces of outstanding quality. The buildings are complemented by the profusion of mature trees, extensive garden settings, stone boundary walls and spacious roads. The villas are in a considerable variety of architectural styles, unified by the use of local building materials.

Architectural unity is also emphasised by the location of properties within predominantly generous feus which gives the area a generally low density. The stone boundary walls, which typify boundary treatments, contribute to the visual and physical seclusion of the villa development, give definition to the street layout and create a clear distinction between public and private spaces.

Tenement development is restricted to Morningside Road which separates the two main villa areas, and contains the notable grouping of churches at 'Holy Corner', an important part of the area's character. The tenement buildings contrast in mass, density and scale with the main area of villa development. A number of good quality timber shop fronts are included within the tenement group.

The fine collection of spacious and stylish, mainly Victorian villas incorporate buildings of distinguished architectural character. The diversity of styles range from restrained classical through the picturesque to the exuberance of Victorian eclecticism. Villa development also afforded the opportunity for architectural enrichment. Finials, trellises, towers, gazebos and campaniles are evident throughout the area and all contribute to the overall character. Despite this variety, a significant degree of unity is achieved by the predominant use of local grey sandstone for buildings and garden walls and natural slates for roofs.

Significant buildings in the area include:

- The succession of elaborate French-style villas by Edward Calvert around Spylaw Road.

- The baronial St Bennet's on Greenhill Gardens with its crowsteps and corner tower which dominates the 'Arcadian formality' of Greenhill Gardens, and is adjoined by the distinctive copper domed Greek-looking archiepiscopal chapel.
- Lammerburn at 10 Napier Road is a two-storey villa designed in 1860 by Sir James Gowans. It is an example of Gowans' eccentric style with a roofscape of strongly projecting bracketed eaves and walls of variegated stonework. Gowans' Rockville, which stood opposite on Napier Road, was demolished in 1966 and replaced with flatted blocks - only the boundary walls now survive.
- The original East Morningside House on Clinton Road, home of Susan Ferrier, the Georgian novelist, which is complete with an old stone lectern dovecote.
- The mid-seventeenth century burial enclosure in Chamberlain Road is the only remaining relic of the Greenhill estate.
- 'Holy Corner' is a crossroads, a well-known local landmark and an architectural focal point within the Conservation Area. The four churches which make up 'Holy Corner' are all category 'B' Listed Buildings of Special Historical or Architectural Interest:

North Morningside Church stands on the corner of south east corner of Chamberlain Road and Morningside Road. It dates from 1879. It is a large Romanesque aisled church with church hall and vestry, orientated to the south with a tower to the north west. It is finished in grey sandstone, squared and snecked rubble with ashlar dressings. It is no longer in ecclesiastical use, having been converted to the Eric Liddell Centre in the early 1990s. It is named for Eric Liddell, the Olympic runner and missionary whose life was featured in the film, 'Chariots of Fire'. The centre is used for a variety of community care and education projects, and has a bookshop and coffee house. The building retains fine quality stained glass work.

Morningside United, originally Morningside Congregational Church, on the north corner of Chamberlain Road and Bruntsfield Place. Designed in an Early Christian Revival style in 1927 by James McLachlan, it replaced an earlier church built in 1863. It is a small elaborately composed Art Deco-Romanesque building finished in a pinkish rough stone with a red pantiled roof, a series of arcades along the side of Chamberlain Road, and an attractive small-scale campanile or bell-tower.

Christ Church dates from 1875 and was designed by Hippolyte Jean Blanc in a cruciform-plan French Gothic style with a tall elegant ashlar spire which dominates the north-west quadrant. It is finished in cream sandstone, and squared and snecked rubble with ashlar dressings. There are low rubble boundary walls, with octagonal ashlar gatepiers and cast-iron railings with fleur-de-lis heads.

The Baptist Church was designed by MacGibbon & Ross in 1872 for the Free Church and opened in 1894. The church, designed in a Gothic style, has a tall pinnacle south-east steeple. The church hall and offices are to the north west, with modern additions flanking to the south and north. It is finished in cream sandstone, and squared and snecked stugged rubble with ashlar dressings. The low rubble wall

to the front has octagonal coped gatepiers. The church was built in the old area of Burghmuirhead within the lands of Greenhill.

Other prominent non-ecclesiastical buildings at 'Holy Corner' include the curved corner tenement block with a mansard French pavilion roof and ground floor shops on the south west quadrant and the Classical building designed by Peddie & Kinnear on the north west quadrant. Beyond, down Colinton Road and visible above the trees, is the modern seven-storey block of Napier University.

Significant public buildings include:

- Napier College which dates from 1962 and is designed around Merchiston Castle, a fifteenth century L-plan tower house which is a Scheduled Ancient Monument. The eastern block is seven storeys of brickwork with other elevations in quartz-faced slabs.
- George Watson's College on the south side of Colinton Road.
- The Church Hill Theatre was originally built as the Morningside Free Church and dates from 1892. It has a substantial rectangular-plan in a Renaissance style finished in red ashlar sandstone, and was converted for use as a theatre in 1962-5.
- The category 'A' listed Gillis Centre complex of buildings on Whitehouse Loan including the neo-Norman chapel and the pink and cream sandstone rubble main Convent buildings with their high coped boundary walls and distinctive ashlar gatepiers with ball finials to Whitehouse Loan.
- The red sandstone former Warrender Church on Whitehouse Loan which was converted to residential use in the 1980s.

Napier House is a rare example in Scotland of the American-influenced mansion flats, designed in the mid-1930s by the Arts & Crafts architect John Jerdan. It is a five-storey block of horizontally-proportioned flats in yellow harling with strong red brick string courses, plinth and parapet. Typical 1930's details include the horizontally proportioned modern styling and windows.

Activities and Uses

Essential Character

- The predominance of residential uses within the area.
- The proximity to the Morningside neighbourhood shopping centre.
- The contrast between activity on the through routes and general tranquillity in the main villa areas.
- The concentration of educational establishments in the area.

The area is principally residential with a range of shops and other commercial activities occupying ground floor units on Morningside Road. A limited number of villas are used for non-residential uses such as schools and offices. The area also

contains a theatre and three major educational institutions at Napier University, Gillis Centre and George Watson's College. Morningside Road and Colinton Road act as through routes to the south and west.

The general atmosphere of most of the area is of high amenity and serenity. However, this is in contrast to the main through routes which are characteristically places of activity terms of social and commercial activities, and traffic movement.

Natural Heritage

Essential Character

- Limited public open spaces.
- Private open space as the setting to buildings is essential in maintaining the character of the area.
- Importance of natural heritage features forming the boundary to the Conservation Area, the Union Canal and Bruntsfield Links.

There are few public open spaces within the Conservation Area. Those that exist are formal in nature, bowling greens, gardens etc. Open spaces, although not public, are provided by the extensive private gardens.

Examples of open spaces which are important to the character of the Conservation Area include:

- The ground on the corner of Thirlestane Road and Whitehouse Loan which is bounded by the original high stone boundary wall that formed the boundary to the Gillis Centre.
- The central green space on Greenhill Gardens. It is said that this small garden area was an ancient burial ground for plague victims.
- The bowling green/ tennis courts at the corner of Polwarth Terrace, which form an important green space on the approach to the town centre. It is also on the edge of the Conservation Area and forms an important node/confluence in the surrounding townscape.
- The private gardens on Merchiston Gardens, forming the setting to the surrounding terrace and George Watson's Upper primary School.

Public open spaces influence the boundaries to the Conservation Area, Bruntsfield Links to the north and the Union Canal to the west. These spaces are important to the overall setting of the Conservation Area. The scale of these open spaces and the diverse landscape structure are important for biodiversity.

Significant tree specimens are apparent along Strathearn Place, Clinton Road and Napier Road. These were once tree lined avenues or boundaries to estates in the area that were incorporated into development plots at a later stage. Since then the tree cover in the area has been developed substantially within individual plots and gardens giving an extensive landscape framework to the built development.

Within the majority of the Conservation Area the scale of the plots has allowed trees to become features of both the rear and front gardens. The trees help to integrate the built development throughout the area.

Four Tree Preservation Orders (TPOs) have been applied in the Conservation Area:

- Area TPO 14 Merchiston Crescent
- Individual TPO Napier Road (The Limes)
- Group TPO 9 Merchiston Park
- Woodland TPO Cranley School (Spylaw Road and Colinton Road)

Individual trees within gardens play a significant role in creating the character of the Conservation Area. Particular attention should be given to existing trees when considering changes to any development layout in the area. Opportunities for introducing further trees and replacing trees that are lost to age should be considered throughout the area. The long-term management of trees in these situations is of paramount importance.

MANAGEMENT

Legislation, policies and guidance

Conservation Areas

The Planning (Listed Buildings and Conservation Areas) (Scotland) Act 1997 states that Conservation Areas are 'areas of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance. Local authorities have a statutory duty to identify and designate such areas.

Special attention must be paid to the character and appearance of the Conservation Area when planning controls are being exercised. Conservation Area status brings several special controls:

- The demolition of unlisted buildings requires Conservation Area Consent;
- Some permitted development rights, which allow improvements or alterations to the external appearance of dwelling houses and flatted dwellings, are removed; and
- Works to trees are controlled (see Trees for more detail).

The removal of buildings which make a positive contribution to an area is only permitted in exceptional circumstances, and where the proposals meet certain criteria relating to condition, conservation deficit, adequacy of efforts to retain the building and the relative public benefit of replacement proposals. Conservation Area Character Appraisals are a material consideration when assessing applications for development within Conservation Areas.

Alterations to windows are also controlled in Conservation Areas in terms of the Council's guidelines. uPVC windows are not considered acceptable in the Conservation Area in terms of the Council's Guidance on Replacement Windows.

Listed buildings

A significant number of buildings within the Conservation Area are listed for their special architectural or historic interest and are protected under the Planning (Listed Buildings and Conservation Areas) (Scotland) Act 1997. Listed building consent is required for the demolition of a listed building, or its alteration or extension in any manner which would affect its special character.

Planning guidance

More detailed, subject-specific guidance is set out in Planning Guidance documents. Those particularly relevant to the Merchiston and Greenhill Conservation Area are:

- Guidance for Householders;
- Guidance for Businesses;
- Listed Buildings and Conservation Areas;
- Developer contributions and affordable housing;
- Edinburgh Design guidance;
- Communications Infrastructure; and
- Street Design Guidance.

In addition, several statutory tools are available to assist development management within the Conservation Area.

Article 4 Direction Orders

The Town and Country Planning (General Permitted Development) (Scotland) Order 1992, amended 2012, (abbreviated to GPDO), restricts the types of development which can be carried out in a Conservation Area without the need for planning permission. These include most alterations to the external appearance of dwelling houses and flats. Development is not precluded, but such alterations will require planning permission and special attention will be paid to the potential effect of proposals.

Under Article 4 of the GPDO, the planning authority can seek the approval of the Scottish Ministers for Directions that restrict development rights further. The Directions effectively control the proliferation of relatively minor developments in Conservation Areas which can cumulatively lead to the erosion of character and appearance. The Merchiston and Greenhill Conservation Area has Article 4 Directions covering the following classes of development:

- 7 The erection, construction, maintenance, improvement or alteration of a gate, fence, wall or other means of enclosure;
- 38 water undertakings;
- 39 development by gas suppliers; and
- 40 development by electricity undertakers.

Trees

Public and private mature trees contribute to the character of the Conservation Area. Larger trees are also complementary to the scale of Merchiston and Greenhill's wide streets and large villa grounds. Loss of mature trees and the planting of trees of an inappropriate scale have a significant impact on the character of the Conservation Area.

Trees within Conservation Areas are covered by the Town and Country Planning (Scotland) Act 1997 as amended by the Planning Act 2006. This Act applies to the uprooting, felling or lopping of a tree having a diameter exceeding 75mm at a point 1.5m above ground level. The planning authority must be given six weeks' notice of the intention to uproot, fell or lop trees. Failure to give notice will render the person liable to the same penalties as for contravention of a Tree Preservation Order (TPO).

Tree Preservation Orders are made under planning legislation to protect individual and groups of trees considered important for amenity or because of their cultural or historic interest. When assessing amenity, the importance of trees as wildlife habitats will be taken into consideration. There is a strong presumption against any form of development or change of use of land which is likely to damage or prejudice the future long-term existence of trees covered by a Tree Preservation Order. The removal of trees for arboriculture reasons will not imply that the space created by their removal can be used for development.

Appropriate planting is encouraged in areas which have lost a substantial number of large trees or would benefit from such planting, particularly on corner sites where large trees could easily be accommodated. Tree maintenance which preserves the scale, character and outline of the tree will be promoted. Replacement trees should be selected to form appropriate settings for individual houses and contribute to an integrating framework for the whole area. Framework trees should be substantial, long lived, hardy, and interesting in form. They should be in scale with and provide a setting for the buildings.

Trees in the City contains a set of policies with an action plan used to guide the management of the Council's trees and woodlands.

Assessing Development within the Conservation Area

The richness of Merchiston and Greenhill's built heritage is considerable. It is this complexity and diversity which make it attractive yet make these qualities hard to define. It also has a fragility and human scale which often does not sit easily with the demands of present-day development requirements. These are qualities and conflicts that must be resolved if the character of the Conservation Area is to be sensitively interpreted and enhanced.

General Criteria

General issues to be considered in assessing development proposals in the Conservation Area include the appropriateness of the overall massing of development, its scale (the expression of size indicated by the windows, doors, floor heights, and other identifiable units), its proportions and its relationship with its context i.e. whether it sits comfortably. Development should be in harmony with, or

complimentary to, its neighbours having regard to the adjoining architectural styles. The use of materials generally matching those which are historically dominant in the area is important, as is the need for the development not to have a visually disruptive impact on the existing townscape. It should also, as far as possible, fit into the “grain” of the Conservation Area, for example, by respecting historic layout, street patterns or existing land form. It is also important where new uses are proposed that they respect the unique character and general ambience of the Conservation Area, for example certain developments may adversely affect the character of a Conservation Area through noise, nuisance and general disturbance. Proposals outside the boundaries of the Conservation Area should not erode the character and appearance of Merchiston and Greenhill. The natural environment along the Water of Leith should be protected, conserved, enhanced and managed.

New Buildings

New development should be of good contemporary design that is sympathetic to the spatial pattern, scale, massing, proportions, building line and design of traditional buildings in the area. Any development, either within or outside the Conservation Area, should be restricted in height and scale in order to protect the key views of the Conservation Area. New development should protect the setting of individual buildings and the historic context. The quality of alterations to shop fronts, extensions, dormers and other minor alterations should also be of an appropriately high standard.

The development of new buildings in the Conservation Area should be a stimulus to imaginative, high quality design, and seen as an opportunity to enhance the area. What is important is not that new buildings should directly imitate earlier styles, rather that they should be designed with respect for their context, as part of a larger whole which has a well-established character and appearance of its own. Therefore, while development of a gap site in a traditional terrace may require a very sensitive design approach to maintain the overall integrity of the area; in other cases, modern designs sympathetic and complimentary to the existing character of the area may be acceptable.

Alterations and Extensions

Proposals for the alteration or extension of properties in the Conservation Area will normally be acceptable where they are sensitive to the existing building, in keeping with the character and appearance of the particular area and do not prejudice the amenities of adjacent properties. Extensions should be subservient to the building, of an appropriate scale, use appropriate materials and should normally be located on the rear elevations of a property. Very careful consideration will be required for alterations and extensions affecting the roof of a property, as these may be particularly detrimental to the character and appearance of the Conservation Area.

Definition of ‘Character’ and ‘Appearance’

Conservation Areas are places of special architectural or historic interest, the character and appearance of which it is desirable to preserve or enhance.

The character of an area is the combination of features and qualities which contribute to the intrinsic worth of an area and make it distinctive. Special character does not derive only from the quality of buildings. Elements such as the historic layout of roads, paths and boundaries, paving materials, urban grain and more intangible features, such as smells and noises which are unique to the area, may all contribute to the local scene. Conservation Area designation is the means of recognising the importance of all these factors and of ensuring that planning decisions address these qualities.

Appearance is more limited and relates to the way individual features within the Conservation Area look.

Care and attention should be paid in distinguishing between the impact of proposed developments on both the character and appearance of the Conservation Area.

OPPORTUNITIES FOR DEVELOPMENT

Development opportunities for infill or replacement may arise within the area and will be considered in terms of the relevant guidance. The Edinburgh Design Guidance, Guidance for Householders and Listed Buildings and Conservation Areas explain the Council's approach to design in historic contexts.

The unsympathetic subdivision of garden grounds can erode the quality of a building's form and proportion, and the historic relationship between buildings.

OPPORTUNITIES FOR ENHANCEMENT

The character appraisal emphasises the more positive aspects of character in order that the future can build on what is best within the Conservation Area. The quality of urban and architectural design needs to be continuously improved if the character of the Conservation Area is to be enhanced. The retention of good quality buildings (as well as listed buildings) and the sensitive interpretation of traditional spaces in development are of particular importance.

Streetscape

Careful consideration should be given to floorscape which is an essential part of the overall appreciation of Merchiston and Greenhill's rich townscape heritage. Repair and renewal work to street surfaces should be carefully detailed and carried out to the highest standards using quality natural materials.

High Buildings

The buildings within the Conservation Area have generally consistent heights and the character of the area is particularly susceptible to buildings that break the prevailing roof and eaves height and impinge on the many important views. It is also important to protect the character of the Conservation Area from the potentially damaging impact of high buildings outside the Conservation Area.

Repair, Maintenance and Alterations

The character of the Conservation Area is maintained through regular maintenance of the built fabric in appropriate quality materials. Alterations should maintain the character and appearance. The reinstatement of boundary enclosures to the original pattern would benefit the overall architectural character of the area.

Boundary Treatments

Stone boundary walls are a key feature within the Conservation Area. They should be repaired and reinstated where appropriate.

Ministerial Foreword

Tom Arthur MSP
Minister for Public Finance,
Planning and Community Wealth

I am delighted to publish this revised version of Scotland's fourth National Planning Framework. I am proud that, for the first time, we have brought together our long-term spatial strategy with a comprehensive set of national planning policies to form part of the statutory development plan.

The world is changing, and so are Scotland's places. This strategy sets out how we will work together in the coming years to improve people's lives by making sustainable, liveable and productive places. This will play a key role in delivering on the United Nations Sustainable Development Goals, as well as our national outcomes.

Planning carries great responsibility – decisions about development will impact on generations to come. Putting the twin global climate and nature crises at the heart of our vision for a future Scotland will ensure the decisions we make today will be in the long-term interest of our country.

As we recover from the pandemic we are working towards achieving net zero in a way which also tackles longstanding challenges and inequalities. We live in challenging times, but better places will be an important part of our response to our strategic priorities of net zero, child poverty and a wellbeing economy. Planning will also play a critical role in delivering the National Strategy for Economic Transformation and in community wealth building.

Planning is already a fully devolved function of the Scottish Government. Our global reputation

for excellence and expertise in this field demonstrates what can be achieved when the choices are in our own hands. We can build on this. By securing a new future for Scotland as an independent country, additional powers will be available to support public and private sector investment in development and infrastructure across our country.

Changes to our places will not always be easy. People care about their neighbourhoods and rightly and reasonably expect that new development should improve their lives, rather than undermining what they value most. To help deliver on this strategy I am committed to involving a wider range of people in planning. A fairer and more inclusive planning system will ensure that everyone has an opportunity to shape their future so that our places work for all of us. I also recognise that planning authorities across Scotland will need support and guidance to put our proposals and policies into practice, and will continue to work with the profession and local government to ensure our system can realise its full potential.

The process for preparing this strategy has shown what can be achieved when we work together. I greatly appreciate the ideas that people and organisations have contributed. I am also very grateful to the Scottish Parliament for the time and energy they have put into their scrutiny of the draft document. This finalised version has benefited considerably from their thoughtful and constructive input.

Part 1 – A National Spatial Strategy for Scotland 2045

The world is facing unprecedented challenges. The global climate emergency means that we need to reduce greenhouse gas emissions and adapt to the future impacts of climate change. We will need to respond to a growing nature crisis, and to work together to enable development that addresses the social and economic legacy of the coronavirus pandemic, the cost crisis and longstanding inequality.

Scotland's rich heritage, culture and outstanding environment are national assets which support our economy, identity, health and wellbeing. Many communities benefit from great places with excellent quality of life and quality, affordable homes. Many people can easily access high quality local greenspaces and neighbourhood facilities, safe and welcoming streets and spaces and buildings that reflect diverse cultures and aspirations. Increasingly, communities have been finding new ways to live sustainably, including by taking control of their property or land.

However, people living in Scotland have very different life chances, at least partly a result of the places where they live.

Past industrial restructuring has had significant impacts in some places and communities. Disadvantage, child poverty and poor health

outcomes are concentrated in parts of Scotland where life expectancy is significantly lower than in more advantaged areas. Access to the natural environment varies, and pollution and derelict land is concentrated in some places. Population change will bring further challenges in the future, particularly in rural parts of Scotland. Many people have limited access to opportunities because of the way our places have been designed in the past, and our city and town centres have experienced accelerating change in recent years.

We have already taken significant steps towards decarbonising energy and land use, but choices need to be made about how we can make sustainable use of our natural assets in a way which benefits communities.

Planning is a powerful tool for delivering change on the ground in a way which brings together competing interests so that decisions reflect the long-term public interest. Past, present and future challenges mean that we will need to make the right choices about where development should be located. We also need to be clear about the types of infrastructure we will need to build, and the assets that should be protected to ensure they continue to benefit future generations.

Spatial principles

We will plan our future places in line with six overarching spatial principles:

- **Just transition.** We will empower people to shape their places and ensure the transition to net zero is fair and inclusive.
- **Conserving and recycling assets.** We will make productive use of existing buildings, places, infrastructure and services, locking in carbon, minimising waste, and building a circular economy.
- **Local living.** We will support local liveability and improve community health and wellbeing by ensuring people can easily access services, greenspace, learning, work and leisure locally.
- **Compact urban growth.** We will limit urban expansion so we can optimise the use of land to provide services and resources, including carbon storage, flood risk management, blue and green infrastructure and biodiversity.
- **Rebalanced development.** We will target development to create opportunities for communities and investment in areas of past decline, and manage development sustainably in areas of high demand.
- **Rural revitalisation.** We will encourage sustainable development in rural areas, recognising the need to grow and support urban and rural communities together.

These principles will play a key role in delivering on the United Nations (UN) Sustainable Development Goals (SDGs) and our national outcomes.

Applying these principles in practice

We want our future places to work for everyone. Rather than compromise or trade-offs between environmental, social and economic objectives, this is an integrated strategy to bring together cross-cutting priorities and achieve sustainable development.

By applying these spatial principles, our national spatial strategy will support the planning and delivery of:

- **sustainable places**, where we reduce emissions, restore and better connect biodiversity;
- **liveable places**, where we can all live better, healthier lives; and
- **productive places**, where we have a greener, fairer and more inclusive wellbeing economy.

Eighteen **national developments** support this strategy, including single large scale projects and networks of several smaller scale proposals that are collectively nationally significant. National developments will be a focus for delivery, as well as exemplars of the Place Principle, placemaking and a Community Wealth Building (CWB) approach to economic development. Regional spatial strategies and Local Development Plans (LDPs) should identify and support national developments which are relevant to their areas.

The strategy will be taken forward in different ways across Scotland, reflecting the diverse character, assets and challenges of our places. To guide this, we have identified **regional spatial priorities** for five broad regions of Scotland which will inform the preparation of regional spatial strategies (RSS) and LDPs by planning authorities.

Sustainable places

Our climate is changing, with increasing rainfall, extreme weather events and higher temperatures that will intensify in the coming years. This will increase flood risk, water scarcity, environmental change, coastal erosion, impact on forestry and agriculture, and generate risks to health, food security and safety. Impacts will not be equal and communities who already face disadvantage will be particularly affected.

Scotland's high quality environment, and the natural capital it supports, underpin our approach to tackling climate change and the economy and is fundamental to our health and wellbeing. It provides the essentials we all need to survive, including clean air water and food.

However, the health of the planet's ecosystems is declining faster than at any point in human history and our natural environment is facing significant challenges, including ongoing loss of biodiversity. Since the 1990s alone, wildlife populations in Scotland have declined, on average, by around a quarter. This threatens the capacity of the natural environment to provide the services we all rely on, and reduces our resilience to the impacts of climate change.

Scotland's Climate Change Plan, backed by legislation, has set our approach to achieving net zero emissions by 2045, and we must make significant progress towards this by 2030 including by reducing car kilometres travelled by 20% by reducing the need to travel and promoting more sustainable transport.

Just Transition sector plans, designed and delivered with those impacted, will play an important role in delivering the change we need to see. We must also adapt to the impacts of climate change that are already locked in, by delivering Scotland's Climate Change Adaptation Programme.

Scotland's Climate Assembly set out recommendations for how Scotland should change to tackle the climate emergency and gives us a key insight into the measures the Scottish Public expect for a just transition to net zero emissions by 2045.

Scotland's Energy Strategy will set a new agenda for the energy sector in anticipation of continuing innovation and investment. The interplay between land and sea will be critical, given the scale of offshore renewable energy resources. Our Infrastructure Investment Plan and National Transport Strategy are clear that we must work with our existing infrastructure assets first, before investing in additional assets.

Scotland's Environment Strategy sets out the Scottish Government's vision for tackling the twin climate and nature crises. Building on this, a new Scottish Biodiversity Strategy will set targets for halting biodiversity loss by 2030 and restoring and regenerating biodiversity by 2045. Scotland's Land Use Strategy aims to make efficient use of our land by managing competing activities in a sustainable way.

National spatial strategy

Scotland’s future places will be net zero, nature-positive places that are designed to reduce emissions and adapt to the impacts of climate change, whilst protecting, recovering and restoring our environment.

Meeting our climate ambition will require a rapid transformation across all sectors of our economy and society. This means ensuring the right development happens in the right place.

Every decision on our future development must contribute to making Scotland a more sustainable place. We will encourage low and zero carbon design and energy efficiency, development that is accessible by sustainable travel, and expansion of renewable energy generation. It is also crucial that we build resilience to the future impacts of climate change including water resources and assets and development on our coasts. Our places will also need to evolve to help us cope with changing temperatures.

Our commitment to a **just transition**, means that our journey to a net zero society and nature recovery must involve, and be fair to, everyone. We will grow a circular economy and make best use of embodied carbon by **conserving and recycling assets**, including by encouraging sustainable design and the wise use of resources.

To respond to the global biodiversity crisis, nature recovery must be at the heart of future places. We will secure positive effects for biodiversity, create and strengthen nature networks and invest in nature-based solutions to benefit natural capital and contribute to net zero. We will use our land wisely including through a renewed focus on reusing vacant and derelict land to help limit the new land that we build on. We will protect and enhance our historic environment, and safeguard our shared heritage for future generations. We will also work together to ensure that development onshore aligns with national, sectoral and regional marine plans.

National developments

Six national developments support the delivery of sustainable places:

- **Energy Innovation Development on the Islands** provides infrastructure for low carbon fuels for communities and commerce, as well as for export. This will contribute to improved energy security, unlock opportunities for employment and business, and help to put Scotland at the forefront of low carbon fuel innovation.
- **Pumped Hydro Storage** extends hydro-electricity capacity to support the transition away from fossil fuels, whilst also providing employment opportunities in rural areas.
- **Strategic Renewable Electricity Generation and Transmission Infrastructure** supports electricity generation and associated grid infrastructure throughout Scotland, providing employment and opportunities for community benefit, helping to reduce emissions and improve security of supply.
- **Circular Economy Materials Management Facilities** facilitates delivery of zero waste objectives by reducing the need for new materials, resource use and emissions.
- **Urban Sustainable, Blue and Green Surface Water Management Solutions** is an exemplar of a nature based, infrastructure first approach to catchment wide surface water flood risk management to help our two largest cities adapt to the future impacts of climate change.
- **Urban Mass/Rapid Transit Networks** facilitates a shift towards sustainable transport in Glasgow, Edinburgh, and Aberdeen and their wider regions, helping to reduce transport related emissions and supporting accessibility for all.

CROSS-CUTTING OUTCOME AND POLICY LINKS:

REDUCING GREENHOUSE GAS EMISSIONS

Our strategy and policies support development that helps to meet greenhouse gas emissions targets.

The global climate emergency and the nature crisis have formed the foundations for the spatial strategy as a whole. The regional priorities share opportunities and challenges for reducing emissions and adapting to the long-term impacts of climate change, in a way which protects and enhances our natural environment.

[Policy 1](#) gives significant weight to the global climate emergency in order to ensure that it is recognised as a priority in all plans and decisions. [Policy 2](#) will ensure that emissions from new development are minimised as far as possible.

A healthy natural environment is key to reducing emissions. [Policies 3](#) and [4](#) protect biodiversity and natural assets, which in turn play a crucial role in carbon reduction. [Policy 5](#) provides significant protection for peatland and carbon rich soils and [Policy 6](#) aims to protect and expand forests, woodland and trees. Blue and green infrastructure is supported by [Policy 20](#). [Policy 10](#) encourages the use of natural solutions to coastal protection. [Policy 7](#) protects the embodied carbon in the historic built environment, and [Policy 9](#) makes better use of previously used land and buildings, helping to lock in carbon.

By supporting the transition of key emissions generating activities, [Policy 11](#) supports renewable energy development, [Policy 19](#) helps to decarbonise heat, alongside [Policy 18](#) and its encouragement of an infrastructure first approach. [Policy 12](#) encourages sustainable waste management, and [Policy 13](#) will facilitate a transition towards more sustainable, lower emissions travel including active travel and public transport.

Several policies support more local living and limit the use of additional land for development. This includes [Policy 8](#) which manages development in the greenbelt, [Policy 15](#) which promotes local living, including where feasible 20 minute neighbourhoods, and [Policy 16](#) which focuses on delivering new homes that are designed to a high standard and located in sustainable places. Minimising and reducing emissions is also integral to the six qualities of successful places, as set out in [Policy 14](#). [Policies 17](#) and [29](#) support rural development which is compatible with climate change targets. [Policy 24](#) facilitates the roll out of digital infrastructure, helping to reduce the need to travel. [Policy 27](#) promotes a town centre first approach to development and [Policy 28](#) restricts additional out of town retail development.

Policies relating to productive places are consistent with our ambition for green growth in the futures. More specifically, [Policy 33](#) is clear that fossil fuel exploration, development and production (excluding unconventional oil and gas) will not be supported other than in exceptional circumstances, and that the Scottish Government does not support the development of unconventional oil and gas in Scotland.

CROSS-CUTTING OUTCOME AND POLICY LINKS:

IMPROVING BIODIVERSITY

Our strategy and policies support development that helps to secure positive effects for biodiversity.

The nature crisis, together with the global climate emergency, underpinned the spatial strategy as a whole. The action areas include proposals which protect and enhance the natural environment.

[Policy 1](#) gives significant weight to the nature crisis to ensure that it is recognised as a priority in all plans and decisions. [Policy 4](#) protects and enhances natural heritage, and this is further supported by [Policy 5](#) on soils and [Policy 6](#) on forests, woodland and trees. [Policy 20](#) also promotes the expansion and connectivity of blue and green infrastructure, whilst [Policy 10](#) recognises the particular sensitivities of coastal areas.

Protection of the natural features of brownfield land is also highlighted in [Policy 9](#), and protection of the green belt in [Policy 8](#) will ensure that biodiversity in these locations is conserved and accessible to communities, bringing nature into the design and layout of our cities, towns, streets and spaces in [Policy 14](#).

Most significantly, [Policy 3](#) plays a critical role in ensuring that development will secure positive effects for biodiversity. It rebalances the planning system in favour of conserving, restoring and enhancing biodiversity and promotes investment in nature-based solutions, benefiting people and nature. The policy ensures that LDPs protect, conserve, restore and enhance biodiversity and promote nature recovery and nature restoration. Proposals will be required to contribute to the enhancement of biodiversity, including by restoring degraded habitats and building and strengthening nature networks. Adverse impacts, including cumulative impacts, of development proposals on the natural environment will be minimised through careful planning and design, taking into account the need to reverse biodiversity loss. Development proposals for national, major or Environmental Impact Assessment (EIA) development will only be supported where it can be demonstrated that the proposal will conserve, restore and enhance biodiversity, including nature networks, so they are in a demonstrably better state than without intervention. Proposals for local development will include appropriate measures to conserve, restore and enhance biodiversity.

Liveable places

The global pandemic has left a social legacy that requires urgent, as well as long-term action. Many people need better places to support their lifelong health and wellbeing and build their future resilience. In recent years communities have found ways to work together to find local solutions to shared challenges. However, the cost crisis is again underlining the need for our future buildings and places to do more to support our long-term resilience.

There remain significant differences between the healthy life expectancy of people living in the most and least deprived parts of Scotland. More people need to be involved in planning their future places so that the built environment is safe and welcoming to everyone, including women, disabled people, children and young people and black and ethnic minority groups.

Scotland's Tackling Child Poverty Delivery Plan sets out actions required to continue to reduce the number of children living in poverty. It recognises the importance of place and continued investment in regeneration, targeted to areas where the need is greatest.

Access to affordable, quality homes in better places, as supported by Housing to 2040, will make an important contribution to addressing the impact of the cost crisis, particularly on younger people who will also benefit from reduced transport costs. The planning system has an important role to play in supporting the delivery of homes which meet our future needs.

Consistent with this, Scotland's Population Strategy reflects the need for planning to identify the amount of land required for future homes and to enable more balanced demographic change including sustainable rural development.

Health policies, including Scotland's diet and healthy weight delivery plan reflect the importance of places which provide opportunities for exercise and access to healthy food. Our strategy for tackling social isolation and loneliness also recognises the importance of providing quality, accessible and welcoming places for everyone through placemaking and regeneration.

National spatial strategy

Scotland's future places will have homes and neighbourhoods that are healthier, affordable and vibrant places to live.

We have an opportunity to significantly improve our places, address longstanding inequality and eliminate discrimination, helping to transform our country for the better. Cleaner, safer and greener places and improved open spaces will build resilience and provide wider benefits for people, health and biodiversity, in a balanced way.

We will plan our future places in a way that improves **local living**, so that we live in communities that are inclusive, empowered, resilient, safe and provides opportunities for learning. Quality homes will be better served by local facilities and services by applying the principles of local living to development proposals. The concept of 20 minute neighbourhoods will help to support this, particularly in more urban areas. In rural areas the approach to local living will be shaped by local context.

Planning must also enable the delivery of good quality, affordable homes by allocating enough land in the right locations to meet current and future needs and aspirations.

Recognising the need for liveable places to be consistent with our ambition for net zero and nature recovery, we will promote **compact urban growth**. Higher density development which will help to sustain public transport and support local living. Virtual connectivity and continued investment in active travel links will also be important.

We want to make better use of our spaces to support physical activity, relaxation and play, to bring people together and to celebrate our culture, diversity and heritage. Buildings and other physical assets can also support activities based on intangible cultural assets such as Gaelic language.

We will improve green infrastructure to bring nature into our towns and cities, connecting people with nature, building resilience and helping our biodiversity to recover and flourish. We will ensure we work towards a stronger infection-resilient society through adaptations to our buildings and the spaces around them.

Our strategy is to value, enhance, conserve and celebrate our places and to build better communities for future generations. A stronger commitment to placemaking, through a design-led approach and a focus on quality, will ensure every new development improves the experience of our places.

Underpinning this, everyone must have an opportunity to help shape their local neighbourhoods. We will continue to work to broaden involvement in the planning system as a whole.

National developments

Six national developments support the delivery of liveable places:

- **Central Scotland Green Network** restores nature at scale and acts as an exemplar of green infrastructure in placemaking that provides benefits for communities and supports a wellbeing economy. This will provide multiple benefits for health, biodiversity, and will help us to mitigate and adapt to climate change. Action should continue to focus on areas where community wellbeing and resilience would benefit most.
- **National Walking, Cycling and Wheeling Network** strengthens and extends a national active travel network to reduce emissions from transport, focusing on areas where improvements to accessibility are most needed.
- **Edinburgh Waterfront** creates a high quality, mixed use, locally liveable place, contributing to the sustainable future development of Scotland's capital city.
- **Dundee Waterfront** delivers a high quality, mixed use, locally liveable place demonstrating resilient waterfront regeneration which anticipates and responds to climate impacts.
- **Stranraer Gateway** acts as a hub for surrounding communities. Regeneration will help create a high quality, mixed use, locally liveable place, optimising the area as a national and international gateway.
- A **Digital Fibre Network** enhances the connectivity of communities and help to facilitate more sustainable ways of living including in rural and island communities.

CROSS-CUTTING OUTCOME AND POLICY LINKS:

A FAIR AND INCLUSIVE PLANNING SYSTEM

Our strategy and policies support development that helps to eliminate discrimination and promote equality.

We expect everyone involved in planning to take steps to ensure that a wide range of people are involved in shaping their future places. Planning authorities are required to respect, protect and fulfil human rights in accordance with the Human Rights Act 1998. As per the Equality Act 2010, the Public Sector Equality duty is applicable and Equality Impact Assessments, Fairer Scotland Duty Assessments and where applicable Island Communities Impact Assessments are required for LDPs. The UN Convention of the Rights of the Child also means that young people must be encouraged to play an active role in planning.

Throughout the planning system, opportunities are available to engage in development planning and decisions about future development. Such engagement, undertaken in line with statutory requirements, should be early, collaborative, meaningful and proportionate. Support or concern expressed on matters material to planning must be given careful consideration in the determination of development proposals.

Our places can only work for everyone if the views of all users are properly understood, but experience shows that some people can find it more challenging to engage with planning.

There are opportunities to involve a wider range of people in the planning system. It is essential, and a statutory requirement, that people with protected characteristics, including disability, race, age, sex and sexual orientation, and including people from a range of socio-economic backgrounds, are given particular support to express their views on plans and decisions, with consultations designed to meet the communication needs of people.

The spatial strategy as a whole is clear that our future development must support a just transition, and it highlights opportunities for development and regeneration that are designed to tackle social, economic and health inequalities. [Policy 14](#), focusing on the six qualities of successful places recognises that diversity is an integral part of placemaking. Children and young people will have an important contribution to make, given the long-term impacts of planning for future generations. Women, as well as disabled people and their representatives, can ensure that barriers and challenges of the design of our living and working environments are tackled effectively. We have also provided clear support for development that will help to ensure human rights are maintained, for example: [Policy 16](#) on quality homes which addresses the need for accommodation for Gypsy/Travellers and Travelling Showpeople yards, as well as homes for older people and disabled people; and [Policy 21](#) which supports and facilitates spaces and opportunities for play, recreation and sport in our natural and built environments for children and people for all ages.

Our impact assessment has demonstrated that there is potential for significant benefits from more sustainable, liveable and productive places which will be delivered by these and other policies. We recognise that delivery will also depend on fair and inclusive engagement with people, and we will therefore continue to promote best practice and innovation, including in guidance on effective community engagement.

CROSS-CUTTING OUTCOME AND POLICY LINKS:

HOMES THAT MEET OUR DIVERSE NEEDS

Our strategy and policies support development that helps to meet the housing needs of people living in Scotland including, in particular, the housing needs of older people and disabled people.

The spatial strategy has taken into account future population and household projections, and highlights areas where there will be particular challenges arising from an ageing population. Spatial principles, including local living and just transition, will also help to ensure that the needs of all people are reflected in our future places.

Policy 16 supports the delivery of high quality, sustainable homes that meet the needs of people throughout their lives. In particular, it supports proposals for new homes that improve affordability and choice by being adaptable to changing and diverse needs, and which address identified gaps in provision. This could include: accessible, adaptable and wheelchair accessible homes; homes that meet the needs of older people; a range of size of homes; and other specialist groups.

The majority of older people want to remain in their home as they age, preferring mainstream housing, and so accessible and adaptable homes can allow people to continue to live independently. The close alignment of planning and housing delivery at the local level, through LDPs and Local Housing Strategies, will help to deliver the right type and mix of homes in the right locations. In addition Housing to 2040 sets out a commitment to Scottish Accessible Home Standard in 2025/26.

Development that provides homes to meet the needs of older people and disabled people will be further promoted by LDPs. Evidence reports will explain the action taken to support and promote the construction and/ or adaptation of homes to meet their needs. Spatial strategies will take into account housing needs and the availability of land for new homes, including for older people and disabled people through the Accessible Home Standard, wheelchair housing targets and the consideration of accessibility in design of the wider development and local amenity. The planning authority must also keep their plan under review, and monitor any changes in this.

Placemaking and choices about the location of development will also help to meet the needs of older people and disabled people. **Policy 14** supports development that is consistent with the six qualities of successful places, including health and wellbeing, and safe and pleasant places for people to meet. **Policy 15** supports development that is consistent with the principles of local living and 20 minute neighbourhoods, helping to ensure our homes and wider neighbourhoods meet all of our needs. As part of this, it recognises that affordable housing options, ability to age in place and housing diversity are an integral part of more liveable places. **Policy 13** is also clear that the views of disabled people must be sought when seeking to reduce reliance on the car including by managing car parking provision.

Productive places

The economic performance of different parts of Scotland varies considerably, with challenges and opportunities for different places and sectors. At present, some communities are particularly affected by high rates of poverty, one in five people of working age is economically inactive, and there is significant scope to improve our productivity and the scale and rate of business development.

The unprecedented challenge of the pandemic has created difficult conditions for some sectors including hospitality, tourism, and culture. The cost crisis and our exit from the European Union have combined with this to exacerbate labour shortages particularly in our more remote, rural and island communities. World-wide supply chain issues have generated severe challenges, including for the construction sector.

Scotland's National Strategy for Economic Transformation aims to make Scotland a successful place with opportunities for everyone, in every region of Scotland, to share in our economic prosperity. It tackles the challenges of structural inequality, the transition to net zero, and achieving a green recovery from the pandemic. It also supports entrepreneurship and aims to play to the strengths and assets of each part of Scotland to build community wealth.

Building community wealth should be founded on an assessment of local assets in partnership with communities. It also involves better co-ordinated state investment at national, regional and local levels to strengthen of Scotland's indigenous business base and create sustainable fair work opportunities. Opportunities will flow from more land and assets being placed in the hands of communities or under their guiding influence.

Our city centres are socially and culturally important, supporting our productivity and stimulating innovation and investment. The pandemic has generated severe impacts and longer term challenges for these places. The City Centre Recovery Taskforce has developed a shared vision for their future with support from the City Centre Recovery Fund for recovery and repurposing. Through playing their part in the delivery of the National Strategy for Economic Transformation, Scotland's cities have a nationally significant opportunity to contribute to Scotland's economic recovery and to achieve a wellbeing economy.

The Town Centre Action Plan Review and our subsequent response recognises the critical importance of planning with and for communities sets a new vision for town centres, and reaffirms our commitment to the Town Centre First Principle. It recognises the critical importance of planning in diversifying the offer within our city and town centres, to help them thrive, improve their resilience and anticipate continuing societal, environmental and economic change. The Place Based Investment Programme supports our commitment to town centre action, places, local living and community wealth building.

National spatial strategy

Our future places will attract new investment, build business confidence, stimulate GDP, export growth and entrepreneurship, and facilitate future ways of working.

Planning will play a key role in creating a globally competitive, entrepreneurial, inclusive and sustainable economy, with thriving and innovative businesses, quality jobs and fair work for everyone.

We will actively encourage investment where it is needed most by **rebalancing development**. This will play to the economic strengths and opportunities of each part of Scotland. Significant investment opportunities include strategic sites which were previously a focus for industrial activity but which have experienced decline. These locations will play a significant role in our transition to net zero as they are served by strategic infrastructure, well located on or close to developed coasts, and could provide added benefits for communities that are in greatest need. They also include areas that have been overlooked historically, but which are now strategically located for extensive renewable energy generation.

Planning can enable diversification of city, town and commercial centres, to better manage their role and respond to ongoing changes to the way we shop and access services. The way we work is changing, and we will need to be flexible to facilitate future business and employment that benefits communities and improves places. Digital connectivity will play a crucial role in supporting sustainable work in the future.

The way we plan our places can contribute to our short term recovery, as well as longer term restructuring to tackle long standing inequalities. Our strategy is to build a wellbeing economy that benefits everyone, and every place, in Scotland. We want the planning system to create a society that is thriving across economic, social and environmental dimensions, and that delivers prosperity for all.

Scotland's national and international connectivity for people and freight will remain important, for the economic, social and cultural benefits it delivers and for supporting wider Government ambitions on trade, tourism, and business development. Airports, ports and rail links will provide vital connections within Scotland and beyond which will be crucial to building on a sustainable recovery whilst helping to decarbonise transport through low and zero emissions technologies. Looking ahead, there will also be opportunities to build on inclusive growth within communities and support economic transformation through Green Freeports in Scotland.

Rural revitalisation, achieved by distributing development, investment and infrastructure strategically and by actively enabling rural development in particular, will play an important role in this. Key sectors including energy and food and drink focus on natural resources and provide significant employment in rural parts of Scotland. These sectors also depend on supporting services and access to markets and there is significant potential for associated investment to develop a sustainable supply chain. Digital connectivity will also be critical to their continued success.

Urban areas are a focus for investment in the built environment and many of our industries and businesses are located in and around our cities. These areas will also be more attractive to future investors and their employees if they are greener and healthier places to live.

National developments

Six national developments support the delivery of productive places:

- **Clyde Mission** brings together substantial public and private investment to remediate and regenerate brownfield land along the River Clyde for economic, social and environmental uses.
- **Aberdeen Harbour** facilitates completion of the South Harbour and access to it as well as a more mixed use waterfront for Aberdeen on areas of the harbour that will not in future be required for port uses. This will contribute to international and national connectivity, freight and the renewable energy sector.
- **Industrial Green Transition Zones** support transformation of key sites including by putting in place the infrastructure needed to commercialise carbon capture and storage and decarbonise industry. Innovation will provide green jobs, reduce emissions and help Scotland lead the way on new technologies.
- **Hunterston Strategic Asset** supports re-use the port and wider site, engaging in new technologies and creating opportunities from nuclear decommissioning to make best use of existing infrastructure and provide local benefits.
- **Chapelcross Power Station Redevelopment** involves the reuse of a key site to provide a range of economic opportunities for local communities. Energy produced will help to reduce heating and transport emissions within the wider region.
- **High Speed Rail** ensures connectivity with the United Kingdom (UK) and beyond, reduce long distance transport emissions and optimise the benefits more widely.

CROSS-CUTTING OUTCOME AND POLICY LINKS:

RURAL REVITALISATION

Our strategy and policies support development that helps to retain and increase the population of rural areas of Scotland.

The spatial strategy reflects a wide range of proposals for development in rural areas, supported by national developments that recognise the potential and need to expand key sectors including renewable energy, sustainable transport and green infrastructure.

[Policy 17](#) promotes the development of rural homes, to ensure the needs of communities are met in a sustainable way. Similarly, [Policy 29](#) encourages development that will contribute to rural economies and communities. Development proposals that contribute to the viability, sustainability and diversity of rural businesses are supported while ensuring planning policies take into consideration local characteristics. Both policies support development in previously inhabited areas in a way that is guided by LDPs. Greater constraint will be applied in areas of pressure whilst in rural areas with fragile communities, a more enabling approach has been taken to support communities to be sustainable and thrive. LDPs are required to set out an appropriate approach to development in areas of pressure and decline informed by an understanding of population change and settlement characteristics and how these have changed over time as well as an understanding of the local circumstances including housing and travel.

Many policies will also play an important role in supporting rural communities and population growth. Some focus on supporting sustainable development in key sectors for rural areas such as [Policy 30](#) on tourism, which aims to ensure community, environmental and business considerations are fully taken into account. [Policy 32](#) encourages sustainable aquaculture, whilst [Policy 10](#) supports development in coastal areas that takes into account future vulnerability to climate change. [Policy 11](#) supports opportunities for renewable energy development whilst [Policy 24](#) will support the delivery of digital infrastructure to support investment and population growth in rural areas.

Care has been taken to ensure policies reflect the specific needs and constraints of rural areas. [Policy 13](#) ensures that in assessing the transport impacts of development, the area's needs and characteristics are taken into account. [Policy 15](#) aims to promote local living in broad terms, including through 20 minute neighbourhoods where practical, recognising varying settlement patterns and the particular characteristics and challenges of different areas in applying these principles in practice. [Policy 28](#) also recognises the importance of retail facilities for rural communities and economies.

Alongside this, recognising that environmental quality is a key asset for rural areas, Policies [3](#), [4](#), [5](#) and [6](#) ensure that natural assets are protected and enhanced.

CROSS-CUTTING OUTCOME AND POLICY LINKS:

LIFELONG HEALTH AND WELLBEING

Our strategy and policies support development that helps to improve health and wellbeing. The spatial strategy as a whole recognises that there are significant health inequalities in Scotland that future development can help to address. The spatial principles aim to ensure that future development is directed to sustainable locations, recognising that the role of planning in supporting development in places which would benefit most from regeneration and investment.

The natural environment is fundamental to our health and wellbeing from the benefits we get from being in nature to the design and delivery of blue and green infrastructure. Policies [1](#), [3](#), [4](#), [5](#) and [6](#) manage the effects of development on biodiversity and on natural places. [Policy 20](#) supports development that will provide good quality, accessible greenspaces and nature networks and [Policy 21](#) supports development that will provide opportunities for sport and play. Active travel is encouraged by [Policy 13](#) with walking and cycling providing wider health benefits.

[Policy 23](#) helps to protect health and wellbeing, including by ensuring that air and noise pollution are taken into account, and by planning and managing development to take hazards into account. [Policy 22](#) ensures that future flood risk is not exacerbated by development, and facilitates the delivery of sustainable flood risk management solutions. [Policy 10](#) manages development to reflect future vulnerability of coastal areas. [Policy 9](#) encourages the redevelopment of brownfield land, helping to reduce the impact of vacant and derelict sites on communities.

Housing plays a critical role in supporting our health and wellbeing. [Policy 16](#) enables the delivery of well planned, good quality, affordable, safe and warm homes. Alongside this, [Policy 13](#) supports development that provides, or is accessible by active travel and [Policy 15](#) ensures people have access to facilities from their homes, including healthcare facilities. Development is also required to take into account the capacity and any additional needs for community services and facilities, as part of the infrastructure first approach set out in [Policy 18](#).

[Policy 14](#) applies the six qualities of successful places to development proposals, including health and wellbeing. As part of this it prioritises key aspects including women's safety and suicide risk and aims to ensure development does not undermine the amenity of our existing homes and places. Climate related mental and physical health effects will be addressed by the strategy as a whole and in particular by Policies [1](#) and [2](#) by ensuring future development minimises emissions and is built to reflect the future risks of climate change. Health and wellbeing will also be supported by development that helps us to transition to net zero, as reflected in [Policy 11](#) on renewable energy, [Policy 12](#) on zero waste, and [Policy 19](#) on heat and cooling. Wider policies relating to economic development will have a further positive effect on overall health and wellbeing by supporting employment and investment in our places in a fair and sustainable way.

Regional Spatial Priorities

North and West Coast and Islands

This part of Scotland will be at the forefront of our efforts to reach net zero emissions by 2045. It is a diverse area, from Shetland and Orkney in the north, to the Outer and Inner Hebrides and the coastal areas of Highland and Argyll and Bute. As one of the most renewable energy rich localities in Europe with significant natural resources, there is a real opportunity for this area to support our shared national outcomes.

Key centres where lifeline links provide access to the islands include Lerwick, Kirkwall, Stromness, Stornoway, Wick and Thurso, Ullapool, Mallaig and Oban, whilst Tarbert, Lochgilphead and Campbeltown are important hubs to the south of the area. These centres provide important services to their wider hinterlands. Local projects are ongoing, including the regeneration of Stromness, the Stornoway Deep Water Port development, the linked Islands Growth Deal Outer Hebrides Energy Hub project in Stornoway, and the Islands Growth Deal Knab Redevelopment project in Shetland.

The area has an exceptional environment with coastal and island landscapes that are an important part of our national identity. It is rich in biodiversity, sustaining many internationally significant ecological sites, including the United Nations Educational, Scientific and Cultural Organization (UNESCO) Global Geoparks in the North West Highlands and Shetland, and Wester Ross UNESCO Biosphere Reserve and species including some of the best remaining temperate rainforest sites in Europe. It has a rich history, language and distinctive cultural heritage including the St Kilda and the Heart of Neolithic Orkney UNESCO World Heritage Sites. These key assets require careful management to ensure they continue to benefit communities.

There will be significant climate challenges for this part of Scotland. Island and coastal ecosystems, and the communities they support, are naturally more vulnerable to the effects of climate change, sea level rise and extreme events. Of particular concern are the impacts on vulnerable low-lying coastal zones and

infrastructure, with potentially wide-ranging effects from biodiversity loss to coastal erosion, flooding and landslips. If we do not take action to plan and build resilience, communities could suffer disproportionately from the impacts of climate change.

A climate and nature conscious approach to development of this area can help to tackle wider challenges. The Carbon Neutral Islands project will support six islands (Hoy, Islay, Great Cumbrae, Raasay, Barra and Yell) to become carbon neutral by 2040. This will act as a catalyst for further climate action across all Scottish islands to make more attractive, resilient and sustainable communities in the long-term.

The relatively high levels of community land ownership, particularly in the Outer Hebrides, and strong ties with the land and sea reflect this area's strong sense of place and local resilience. Scotland's National Islands Plan aims to grow the population and economy, improve transport and housing, and ensure island communities are served by the facilities, jobs, education and services they need to flourish. Environmental wellbeing, clean and affordable energy, strong communities, culture and identity are also priorities.

Around 94 of Scotland's 900 islands are permanently inhabited. The size and composition of each population has changed over the years and continues to do so. Whilst most recent estimates indicate population growth across the majority of local authority areas with islands, population change within each area is more complex, with areas of growth and depopulation varying between islands and coastal communities, and across different strata of the population. An ageing population in some parts of the area will mean that we need to do more to reverse past patterns of population decline and sustain local facilities and services that support rural and dispersed communities.

Public service provision, transport, energy consumption, fuel poverty, child poverty and housing, including its affordability, will continue to be significant challenges. Employment varies across the area, and can tend to rely on the public sector, tourism and lower wage sectors,

limiting the scope and choice of skilled jobs in some locations. It can be difficult to attract and retain a local workforce to support some jobs, underlining the importance of building skills and promoting fair work principles to support future investment. Language skills are also important in many areas where Gaelic is used by the community.

Challenges from the end of free movement and changing markets, and the agriculture and fishing industries, will need support to ensure long-term sustainability, but there are also substantial economic opportunities presented by developments in sectors such as renewable energy generation.

Priorities

Alongside Scotland’s marine planning authorities, we will work with the area’s exceptional assets and natural resources to build a more resilient future for island and coastal communities. By guiding RSS and LDPs in this area, our strategy aims to:

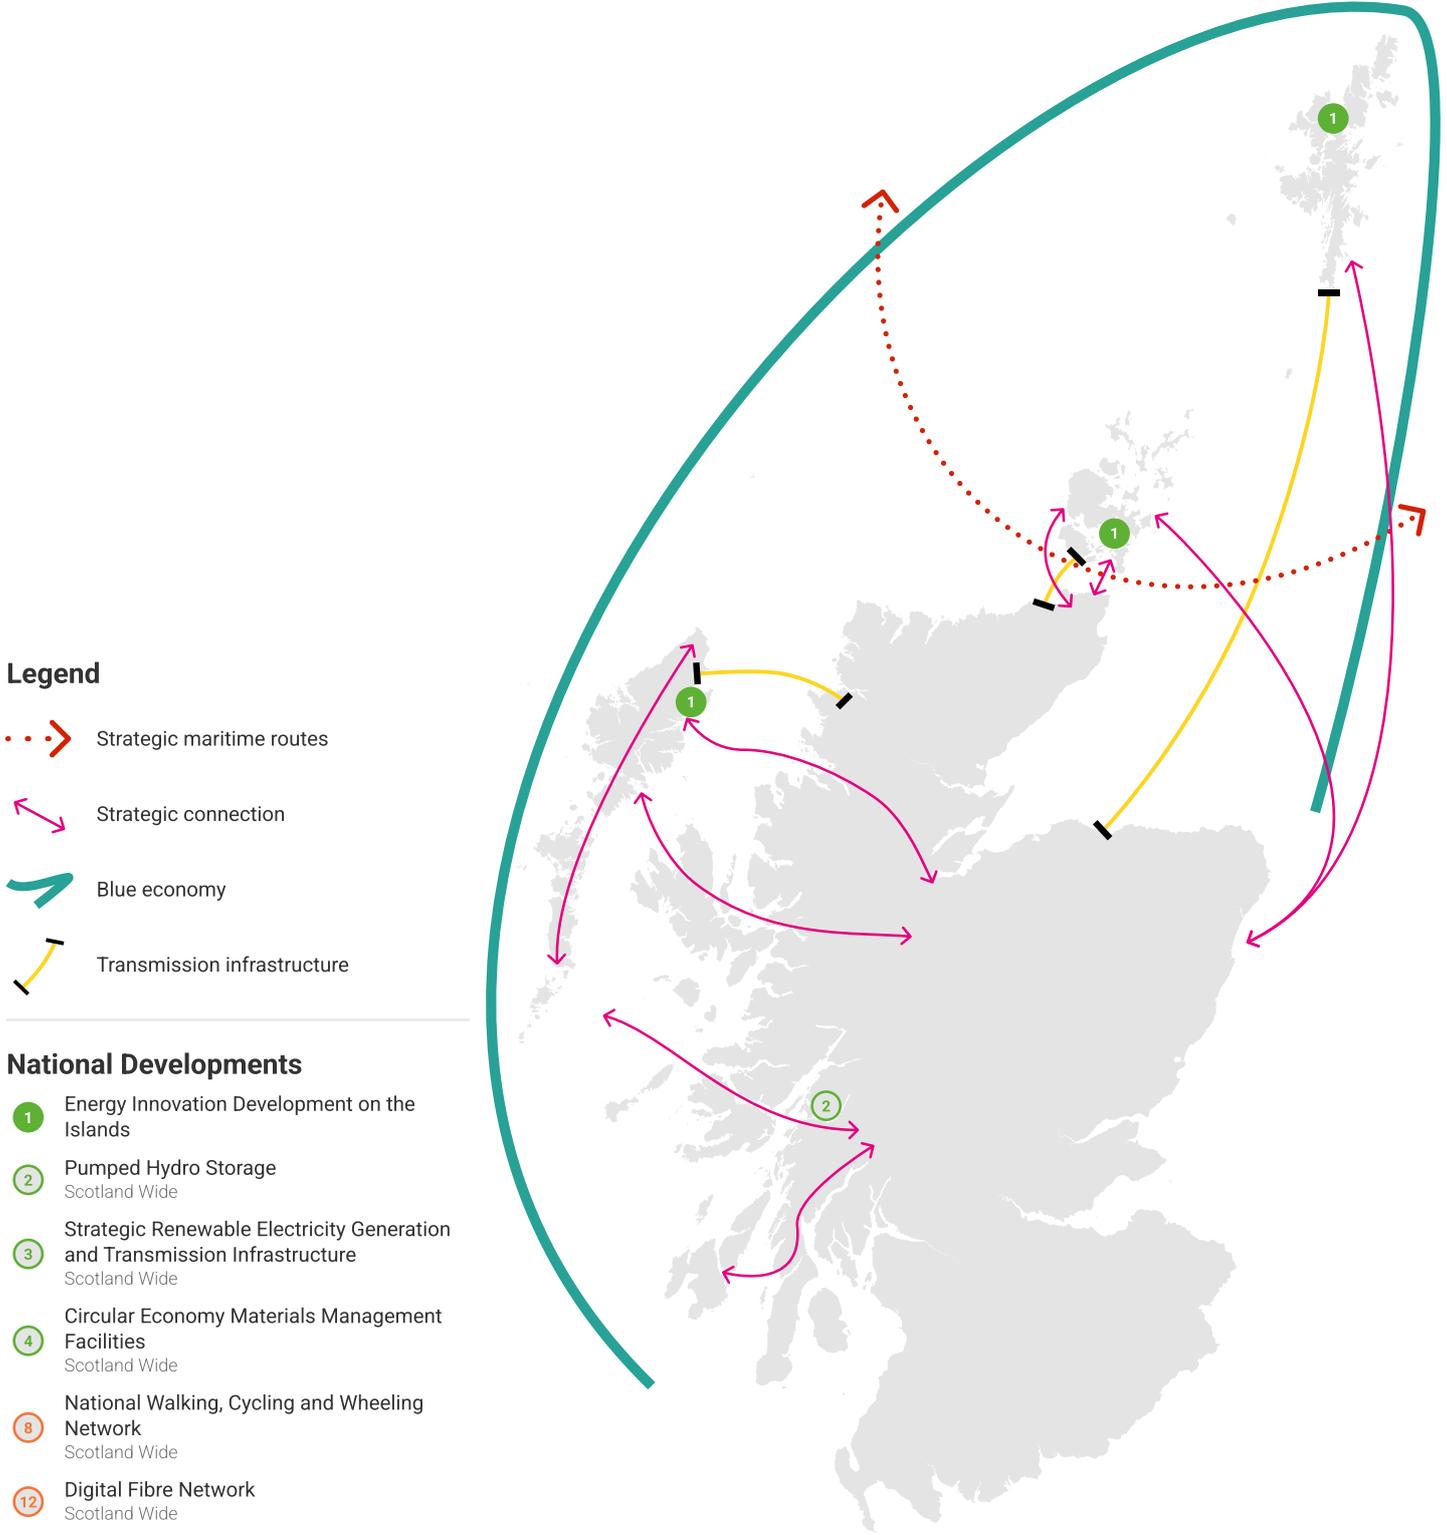

- Maximise the benefits of renewable energy whilst enhancing blue and green infrastructure, decarbonising transport and building resilient connections.
- Support coastal and island communities to become carbon neutral, thus contributing to net-zero commitments and reducing fuel poverty.
- Seize the opportunities to grow the blue and green economy, recognising the world-class environmental assets that require careful management and opportunities to develop skills and diversify employment.

The following national developments will support delivery of the spatial strategy for this area:

- [Energy Innovation Development on the Islands](#)
- [Pumped Hydro Storage](#)
- [Strategic Renewable Electricity Generation and Transmission Infrastructure](#)
- [Circular Economy Material Management Facilities](#)
- [National Walking, Cycling and Wheeling Network](#)
- [Digital Fibre Network](#)

Further detail about the priorities for this area is contained in [Annex C](#). Further details of national developments are contained in [Annex B](#).

North and West Coast and Islands

Indicative

North

The Highlands of Scotland, Moray, mainland Argyll, northern parts of rural Stirling and Perthshire are world renowned for their stunning landscapes, rich biodiversity and cultural heritage.

Settlement patterns vary, from dispersed or low density crofting townships, to key centres such as Inverness, Ullapool, Dingwall, Grantown-on-Spey, Aviemore, Elgin, Pitlochry and Aberfeldy. Cairngorms National Park is a national asset with internationally significant habitats and landscapes and there is currently a proposal to make the Flow Country a UNESCO World Heritage Site. The northern part of the Loch Lomond and The Trossachs National Park also extends into this area.

Emissions here are partly offset by the climate sequestration from land use and forestry so that the area acts as a net carbon sink overall. There are few sources of significant industrial emissions. Climate change risks include changing levels of rainfall, increased storm events, temperature rise, flood risk, rising sea levels and associated erosion. Tailored measures will be required to assist communities in adapting to climate change and transitioning to net zero.

This rural heartland is much more than a place of beauty and isolation. Many thriving communities live here, and they depend on local jobs and learning to support their quality of life. Some communities have experienced outmigration, particularly the loss of younger people, especially outwith Inverness. Further population decline is a future risk, particularly for the west and north. People often depend on the car and more limited access to services creates disadvantage, despite the quality of life and good health that many living here enjoy. An ageing population will put pressures on some services.

Parts of the area have recently experienced an accelerated increase in house prices. The pandemic has reinforced long standing issues of affordability and a more mobile remote workforce has been attracted to the area, adding increased pressure. Without intervention, access to affordable homes, jobs and services that enable local people, including young people, to stay in their communities could become more challenging. Fuel and transport poverty is a particular challenge towards the north and west and there are significant areas which do not currently benefit from good quality digital connectivity.

The area's environmental quality, culture, language, landscape and wildlife sustain key economic sectors including tourism, food and drink, distilling and clean energy. Extensive areas of woodland and peatland act as a carbon sink, contributing significantly to our national sustainability. The area has a strong economy with growing income and low unemployment overall, but there remain pockets of deprivation both in urban areas and in more remote areas where there is a need for alternatives to low skilled and low paid jobs.

Priorities

This part of Scotland can continue to make a strong contribution towards meeting our ambition for a net zero and nature positive country by demonstrating how natural assets can be managed and used to secure a more sustainable future. By guiding RSS and LDPs in this area, our strategy aims to:

- Protect environmental assets and stimulate investment in natural and engineered solutions to climate change and nature restoration, whilst decarbonising transport and building resilient connections.
- Maintain and help to grow the population by taking a positive approach to rural development that strengthens networks of communities.
- Support local economic development by making sustainable use of the areas' world-class environmental assets to innovate and lead greener growth.

The following national developments will also support delivery of the spatial strategy for this area:

- [Pumped Hydro Storage](#)
- [Strategic Renewable Electricity Generation and Transmission Infrastructure](#)
- [Circular Economy Material Management Facilities](#)
- [National Walking, Cycling and Wheeling Network](#)
- [Digital Fibre Network](#)

Further detail about the priorities for this area is contained in [Annex C](#). Further details of national developments are contained in [Annex B](#).

North East

The north east is a centre for the skills and expertise we will need to meet our climate change commitments. This area will evolve, through a just transition, to move industry and business away from the oil and gas sector towards a cleaner, greener future. Rich in natural assets, this area, along with the wider Moray and Cromarty Firths, has built on its oil and gas experience to pioneer new technologies. This makes it a uniquely investable proposition that could benefit Scotland as a whole. We can build on the area's experience to find innovative solutions to climate change.

Emissions generated from this area arise mainly from transport, industrial and commercial activity and domestic properties, with land use and forestry providing carbon sequestration. Car ownership is particularly high in Aberdeenshire. Significant parts of the coast will be vulnerable to future climate impacts.

This area is amongst the most prosperous parts of Scotland, but has experienced significant economic challenges in recent years and has pockets of deprivation. The area comprises a mix of rural and urban communities, with the city of Aberdeen and a surrounding network of towns including Huntly, Fraserburgh, Peterhead, Ellon, Inverurie and Stonehaven, and significant rural areas including countryside around Aberdeen city. Whilst parts of the area have experienced population decline, several settlements around Aberdeen have grown. Links from Aberdeenshire to communities in Moray, Angus and Tayside are also important.

Affordability and choice of homes is acute across the area, especially within Aberdeen. The growing proportion of retirees in Aberdeenshire presents a further challenge to housing and service delivery. There are lower levels of educational attainment and limited access to services for communities along the Aberdeenshire and Moray coast. Many of these places will benefit from further regeneration that builds on their identity and natural assets.

The excellent quality of the built environment, natural assets and cultural heritage already contribute to health and wellbeing in the area

and can form the basis of a transition to net zero. Some of our highest quality productive agricultural land is concentrated here, together with other land-based industries, and the economy benefits from a strong fishing industry, alongside its globally significant energy sector. The dominance of these sectors, together with wider changes including from the pandemic, European Union (EU) Exit and global markets, means that economic diversification and repurposing of buildings and infrastructure will be key priorities.

Priorities

This part of Scotland will play a crucial role in achieving Just Transition to net zero. By guiding RSS and LDPs in this area, our strategy aims to:

- Plan infrastructure and investment to support the transition from oil and gas to net zero whilst protecting and enhancing blue and green infrastructure and decarbonising connectivity.
- Focus on continued regeneration through the principles of local living and 20 minute neighbourhoods to sustain the skilled workforce and improve local liveability.
- Support continued economic diversification and innovation.

The following national developments will also support delivery of the spatial strategy for this area:

- [Pumped Hydro Storage](#)
- [Strategic Renewable Electricity Generation and Transmission Infrastructure](#)
- [Circular Economy Material Management Facilities](#)
- [Urban Mass/Rapid Transit Networks](#)
- [National Walking, Cycling and Wheeling Network](#)
- [Digital Fibre Network](#)
- [Aberdeen Harbour](#)
- [Industrial Green Transition Zones](#)

Further detail about the priorities for this area is contained in [Annex C](#). Further details of national developments are contained in [Annex B](#).

Central

We will only meet our climate change commitments if we make significant changes to the densely populated central belt of Scotland. Our urban communities will play a critical role in reducing the emissions generated by the way we live our lives.

This area includes the Glasgow, Edinburgh, Stirling, Dundee and Perth city regions as well as networks of towns and smaller settlements, and more rural surroundings.

Many of our largest emitters of greenhouse gas emissions are located in this area, including Grangemouth where industrial activity is concentrated, providing high value manufacturing and employment, and playing a key role in our resilience. Other key sources include industrial, manufacturing and waste management sites and facilities. Overall emissions from domestic properties and transport are high as a result of the area's population density and the scale of daily movement within and between city regions. The growing risk of flooding could have significant impacts in the future, as many key settlements and economic assets are located on the Clyde, Forth and Tay estuaries.

We need to work together to decarbonise buildings and transport and tackle congestion, make more efficient use of existing land and buildings, generate renewable energy and establish supporting electricity and heat networks and create more inclusive, greener and sustainable places that will stand the test of time. By weaving blue and green infrastructure across our urban fabric we can ensure that nature and the outdoors are accessible to everyone, supporting lifelong health and wellbeing and creating places that are more resilient to flooding.

There are significant social and economic differences across the area – at a broad scale there are relatively high concentrations of poor health, child poverty, economic disadvantage and population decline in parts of the Glasgow city region contrasting with strong demand

and expected population growth in parts of the Edinburgh city region. The broad pattern is repeated for children living in poverty, who are more likely to live in the Glasgow city region. Across the area as a whole, however, there are localised areas of high and low deprivation.

As a nation we have a particular obligation to do more to tackle the concentration of poor health outcomes in west central Scotland. Action is needed to reduce inequality and improve health and wellbeing so that everyone is able to thrive. Better places can do more to support lifelong health and wellbeing by providing warm homes that are connected to services. Access to quality greenspace and nature-based solutions can help to mitigate health inequalities and improve physical and mental health, by providing opportunities for play, socialising, relaxation and physical activity. Developing our communities to promote local living and 20 minute neighbourhoods can help reduce inequalities in health. The frequency of urban car use can be reduced by improving local liveability and improved access to facilities, helping to reduce emissions and air pollution. Access to health and social care facilities will need to be built into our future places and can benefit from continuing investment in digital infrastructure and innovation.

Household projections show there will be a continuing demand for more homes across the most urban parts of Scotland. There has been a strong market, high levels of housebuilding and pressure on infrastructure in some 'hot spots' including the Edinburgh city region, Stirling and Falkirk, and Perth. In contrast, despite good connections and infrastructure capacity, it can be more challenging to encourage the market to deliver new homes particularly in parts of the west where unemployment is also higher.

There are also inequalities across each of the city regions, with local concentrations of economic deprivation and many former coalfield communities. Overall, economic performance is higher in Edinburgh and Glasgow and lower in surrounding areas including Inverclyde, Ayrshire, along parts of the Clyde Coast and Lanarkshire.

The diverse business base reflects nationally important sectors including financial services, business administration, life sciences, distribution and transport, retail and commercial, and manufacturing and production. City centres are experiencing significant challenges, caused or accelerated by the pandemic, but each retain a strong character and distinctive identity, offering opportunities for new business, homes, and services. Similar issues apply to the towns across this area.

A wellbeing economy goes beyond strategic investment sites to link more closely with the wellbeing of communities and their local environments. It will be critical to recognise the importance of anchor institutions who can support local investment in our places and natural and historic assets, provide education, employment and other services, and act as community hubs. Significant investment in our health and social care, justice and learning estates will continue to provide important sources of employment and income for smaller scale local businesses.

Around the area's settlements there are many high quality environments, from World Heritage Sites, historic burghs and conservation areas to protected biodiversity sites of international importance, ancient woodlands and areas of high landscape quality, including the coastline, country and national parks, and canals. This brings opportunities for outdoor recreation within a short distance of the majority of Scotland's population.

The coast is an integral part of the area's identity, combining natural and cultural heritage and acting as a focus for investment and regeneration. We have made progress in restoring and reusing areas that were historically a focus for heavy industry and mining, leaving a legacy of disused sites and areas blighted by dereliction. Key sites for further investment include urban waterfronts and former industrial sites where existing infrastructure can be reused to support the transition to a low carbon economy.

Priorities

A coherent strategy that focuses on climate change and responds to the challenges of the pandemic will drive forward change to tackle inequalities and build a new, greener, future for this part of the country. By guiding RSS and LDPs in this area, our strategy aims to:

- Provide net zero energy solutions including extended heat networks and improved energy efficiency, together with urban greening and improved low carbon transport.
- Pioneer low carbon, resilient urban living by rolling out networks of 20 minute neighbourhoods, future proofing city and town centres, accelerating urban greening, investing in net zero homes, and managing development on the edge of settlements.
- Target economic investment and build community wealth to overcome disadvantage and support a greener wellbeing economy.

The following national developments will also support delivery of the spatial strategy for this area:

- [Pumped Hydro Storage](#)
- [Strategic Renewable Electricity Generation and Transmission Infrastructure](#)
- [Circular Economy Material Management Facilities](#)
- [Urban Sustainable, Blue and Green Drainage Solutions](#)
- [Urban Mass/Rapid Transit Networks](#)

South

The South of Scotland is strategically important with a strong sense of identity centred on networks of towns and villages, supported by distinctive landscapes and coasts. This is a place with a rich cultural heritage and exceptional environmental assets and natural resources, such as the Galloway and Southern Ayrshire UNESCO Biosphere and Galloway Forest Dark Sky Park. This area is ambitious for positive change in the coming years, and the immediate work to recover from the pandemic will form the basis of a longer term plan to respond to the challenges of climate change and support nature restoration and recovery.

Settlements across this area provide services to the surrounding rural communities. Towns are well placed to be models of sustainable living, with many undergoing regeneration. Larger settlements include Dumfries, Stranraer, Galashiels, Hawick, with a network of towns and villages throughout Dumfries and Galloway and the Scottish Borders. The area extends northwards to include Ayrshire towns such as Ayr, Girvan, Dalmellington and Cumnock in the west, as well as towards the southern rural parts of East Lothian in the east and parts of South Lanarkshire including Biggar and Moffat. Beyond the towns there are many small settlements and rural homes, farms and smallholdings.

Cross border relationships are important in this area, together with strategic transport connections to England, Northern Ireland and Ireland.

Emissions in this area are moderate, with transport and industry emissions being partly offset by land use. The area has significant areas of woodland and peatland which act as a carbon sink and form the basis for future investment opportunities. The few sites that are significant sources of greenhouse gas emissions include industrial and commercial activities, including some food and drink processing facilities. Coastal erosion and flood risk is expected to be a significant challenge in the future, particularly where there is a risk of impacts on key transport corridors or settlements.

Working with communities to find new ways of rural living that are consistent with climate change will be a challenge for this part of Scotland, given the relatively high levels of dependence on the car, limited public transport, housing affordability challenges and the dispersed population.

Despite having high levels of wellbeing and quality of life, population decline is projected to continue in some regions to the west of the area, with fewer younger people and more retired people living in the area in the future. Economic diversification will help to address dependence on low wage and public sector employment.

Priorities

Our strategy aims to ensure that this part of Scotland fulfils its potential. There is significant potential for the area to develop and increase recognition of it as a place to live, work and visit. By guiding RSS and LDPs in this area, our strategy aims to:

- Protect environmental assets and stimulate investment in natural and engineered solutions to climate change and nature restoration, whilst decarbonising transport and building resilient physical and digital connections.
- Increase the population by improving local liveability, creating a low carbon network of towns and supporting sustainable rural development.
- Support local economic development whilst making sustainable use of the area's world-class environmental assets to innovate and lead greener growth.

The following national developments will also support delivery of the spatial strategy for this area:

- [Pumped Hydro Storage](#)
- [Strategic Renewable Electricity Generation and Transmission Infrastructure](#)
- [Circular Economy Material Management Facilities](#)
- [National Walking, Cycling and Wheeling Network](#)
- [Stranraer Gateway](#)
- [Digital Fibre Network](#)
- [Clyde Mission](#)
- [Chapelcross Power Station Redevelopment](#)
- [High Speed Rail](#)

Further detail about the priorities for this area is contained in [Annex C](#). Further details of national developments are contained in [Annex B](#).

Indicative

Part 2 – National Planning Policy

Sustainable Places

Tackling the climate and nature crises

Policy Principles

Policy Intent:

To encourage, promote and facilitate development that addresses the global climate emergency and nature crisis.

Policy Outcomes:

- Zero carbon, nature positive places.

Local Development Plans:

LDPs must address the global climate emergency and nature crisis by ensuring the spatial strategy will reduce emissions and adapt to current and future risks of climate change by promoting nature recovery and restoration in the area.

Policy 1

When considering all development proposals significant weight will be given to the global climate and nature crises.

Policy impact:

- ✓ Just Transition
- ✓ Conserving and recycling assets
- ✓ Local living
- ✓ Compact urban growth
- ✓ Rebalanced development
- ✓ Rural revitalisation

Key policy connections:

All other policies.

Climate mitigation and adaptation

Policy Principles

Policy Intent:

To encourage, promote and facilitate development that minimises emissions and adapts to the current and future impacts of climate change.

Policy Outcomes:

- Emissions from development are minimised; and
- Our places are more resilient to climate change impacts.

Local Development Plans:

The LDP spatial strategy should be designed to reduce, minimise or avoid greenhouse gas emissions. The six spatial principles should form the basis of the spatial strategy, helping to guide development to, and create, sustainable locations. The strategy should be informed by an understanding of the impacts of the proposals on greenhouse gas emissions.

LDPs should support adaptation to the current and future impacts of climate change by taking into account climate risks, guiding development away from vulnerable areas, and enabling places to adapt to those risks.

Policy 2

- Development proposals will be sited and designed to minimise lifecycle greenhouse gas emissions as far as possible.
- Development proposals will be sited and designed to adapt to current and future risks from climate change.
- Development proposals to retrofit measures to existing developments that reduce emissions or support adaptation to climate change will be supported.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development
- ✔ Rural revitalisation

Key policy connections:

All other policies.

Biodiversity

Policy Principles

Policy Intent:

To protect biodiversity, reverse biodiversity loss, deliver positive effects from development and strengthen nature networks.

Policy Outcomes:

- Biodiversity is enhanced and better connected including through strengthened nature networks and nature-based solutions.

Local Development Plans:

LDPs should protect, conserve, restore and enhance biodiversity in line with the mitigation hierarchy. They should also promote nature recovery and nature restoration across the development plan area, including by: facilitating the creation of nature networks and strengthening connections between them to support improved ecological connectivity; restoring degraded habitats or creating new habitats; and incorporating measures to increase biodiversity, including populations of priority species.

Policy 3

- a) Development proposals will contribute to the enhancement of biodiversity, including where relevant, restoring degraded habitats and building and strengthening nature networks and the connections between them. Proposals should also integrate nature-based solutions, where possible.
- b) Development proposals for national or major development, or for development that requires an Environmental Impact Assessment will only be supported where it can be demonstrated that the proposal will conserve, restore and enhance biodiversity, including nature networks so they are in a demonstrably better state than without intervention. This will include future management. To inform this, best practice assessment methods should be used. Proposals within these categories will demonstrate how they have met all of the following criteria:
 - i. the proposal is based on an understanding of the existing characteristics of the site and its local, regional and national ecological context prior to development, including the presence of any irreplaceable habitats;
 - ii. wherever feasible, nature-based solutions have been integrated and made best use of;
 - iii. an assessment of potential negative effects which should be fully mitigated in line with the mitigation hierarchy prior to identifying enhancements;
 - iv. significant biodiversity enhancements are provided, in addition to any proposed mitigation. This should include nature networks, linking to and strengthening habitat connectivity within and beyond the development, secured within a reasonable timescale and with reasonable certainty. Management arrangements for their long-term retention and monitoring should be included, wherever appropriate; and
 - v. local community benefits of the biodiversity and/or nature networks have been considered.
- c) Proposals for local development will include appropriate measures to conserve, restore and enhance biodiversity, in accordance with national and local guidance. Measures should be proportionate to the nature and scale of development. Applications for individual householder development, or which fall within scope of (b) above, are excluded from this requirement.
- d) Any potential adverse impacts, including cumulative impacts, of development proposals on biodiversity, nature networks and the natural environment will be minimised through careful planning and design. This will take into account the need to reverse biodiversity loss, safeguard the ecosystem services that the natural environment provides, and build resilience by enhancing nature networks and maximising the potential for restoration.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Rebalanced development
- ✔ Rural revitalisation

Natural places

Policy Principles

Policy Intent:

To protect, restore and enhance natural assets making best use of nature-based solutions.

Policy Outcomes:

- Natural places are protected and restored.
- Natural assets are managed in a sustainable way that maintains and grows their essential benefits and services.

Local Development Plans:

LDPs will identify and protect locally, regionally, nationally and internationally important natural assets, on land and along coasts. The spatial strategy should safeguard them and take into account the objectives and level of their protected status in allocating land for development. Spatial strategies should also better connect nature rich areas by establishing and growing nature networks to help protect and restore the biodiversity, ecosystems and natural processes in their area.

Policy 4

- a) Development proposals which by virtue of type, location or scale will have an unacceptable impact on the natural environment, will not be supported.
- b) Development proposals that are likely to have a significant effect on an existing or proposed European site (Special Area of Conservation or Special Protection Areas) and are not directly connected with or necessary to their conservation management are required to be subject to an “appropriate assessment” of the implications for the conservation objectives.

- c) Development proposals that will affect a National Park, National Scenic Area, Site of Special Scientific Interest or a National Nature Reserve will only be supported where:
 - i. The objectives of designation and the overall integrity of the areas will not be compromised; or
 - ii. Any significant adverse effects on the qualities for which the area has been designated are clearly outweighed by social, environmental or economic benefits of national importance.

All Ramsar sites are also European sites and/or Sites of Special Scientific Interest and are extended protection under the relevant statutory regimes.

- d) Development proposals that affect a site designated as a local nature conservation site or landscape area in the LDP will only be supported where:
 - i. Development will not have significant adverse effects on the integrity of the area or the qualities for which it has been identified; or
 - ii. Any significant adverse effects on the integrity of the area are clearly outweighed by social, environmental or economic benefits of at least local importance.
- e) The precautionary principle will be applied in accordance with relevant legislation and Scottish Government guidance.
- f) Development proposals that are likely to have an adverse effect on species protected by legislation will only be supported where the proposal meets the relevant statutory tests. If there is reasonable evidence to suggest that a protected species is present on a site or may be affected by a proposed development, steps must be taken to establish its presence. The level of protection required by legislation must be factored into the planning and design of development, and potential impacts must be fully considered prior to the determination of any application.

g) Development proposals in areas identified as wild land in the Nature Scot Wild Land Areas map will only be supported where the proposal:

- i. will support meeting renewable energy targets; or,
- ii. is for small scale development directly linked to a rural business or croft, or is required to support a fragile community in a rural area.

All such proposals must be accompanied by a wild land impact assessment which sets out how design, siting, or other mitigation measures have been and will be used to minimise significant impacts on the qualities of the wild land, as well as any management and monitoring arrangements where appropriate. Buffer zones around wild land will not be applied, and effects of development outwith wild land areas will not be a significant consideration.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Rebalanced development
- ✔ Rural revitalisation

Soils

Policy Principles

Policy Intent:

To protect carbon-rich soils, restore peatlands and minimise disturbance to soils from development.

Policy Outcomes:

- Valued soils are protected and restored.
- Soils, including carbon-rich soils, are sequestering and storing carbon.
- Soils are healthy and provide essential ecosystem services for nature, people and our economy.

Local Development Plans:

LDPs should protect locally, regionally, nationally and internationally valued soils, including land of lesser quality that is culturally or locally important for primary use.

Policy 5

- a) Development proposals will only be supported if they are designed and constructed:
 - i. In accordance with the mitigation hierarchy by first avoiding and then minimising the amount of disturbance to soils on undeveloped land; and
 - ii. In a manner that protects soil from damage including from compaction and erosion, and that minimises soil sealing.
 - b) Development proposals on prime agricultural land, or land of lesser quality that is culturally or locally important for primary use, as identified by the LDP, will only be supported where it is for:
 - i. Essential infrastructure and there is a specific locational need and no other suitable site;
 - ii. Small-scale development directly linked to a rural business, farm or croft or for essential workers for the rural business to be able to live onsite;
 - iii. The development of production and processing facilities associated with the land produce where no other local site is suitable;
 - iv. The generation of energy from renewable sources or the extraction of minerals and there is secure provision for restoration; and
- In all of the above exceptions, the layout and design of the proposal minimises the amount of protected land that is required.
- c) Development proposals on peatland, carbon-rich soils and priority peatland habitat will only be supported for:
 - i. Essential infrastructure and there is a specific locational need and no other suitable site;
 - ii. The generation of energy from renewable sources that optimises the contribution of the area to greenhouse gas emissions reductions targets;
 - iii. Small-scale development directly linked to a rural business, farm or croft;
 - iv. Supporting a fragile community in a rural or island area; or
 - v. Restoration of peatland habitats.
 - d) Where development on peatland, carbon-rich soils or priority peatland habitat is proposed, a detailed site specific assessment will be required to identify:
 - i. the baseline depth, habitat condition, quality and stability of carbon rich soils;
 - ii. the likely effects of the development on peatland, including on soil disturbance; and
 - iii. the likely net effects of the development on climate emissions and loss of carbon.

This assessment should inform careful project design and ensure, in accordance with relevant guidance and the mitigation hierarchy, that adverse impacts are first avoided and then minimised through best practice. A peat management plan will be required to demonstrate that this approach has been followed, alongside other appropriate plans required for restoring and/ or enhancing the site into a functioning peatland system capable of achieving carbon sequestration.

- e) Development proposals for new commercial peat extraction, including extensions to existing sites, will only be supported where:
- i. the extracted peat is supporting the Scottish whisky industry;
 - ii. there is no reasonable substitute;
 - iii. the area of extraction is the minimum necessary and the proposal retains an in-situ residual depth of part of at least 1 metre across the whole site, including drainage features;
 - iv. the time period for extraction is the minimum necessary; and
 - v. there is an agreed comprehensive site restoration plan which will progressively restore, over a reasonable timescale, the area of extraction to a functioning peatland system capable of achieving carbon sequestration.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Rebalanced development
- ✔ Rural revitalisation

Forestry, woodland and trees

Policy Principles

Policy Intent:

To protect and expand forests, woodland and trees.

Policy Outcomes:

- Existing woodlands and trees are protected, and cover is expanded.
- Woodland and trees on development sites are sustainably managed.

Local Development Plans:

LDPs should identify and protect existing woodland and the potential for its enhancement or expansion to avoid habitat fragmentation and improve ecological connectivity, helping to support and expand nature networks. The spatial strategy should identify and set out proposals for forestry, woodlands and trees in the area, including their development, protection and enhancement, resilience to climate change, and the expansion of a range of types to provide multiple benefits. This will be supported and informed by an up to date Forestry and Woodland Strategy.

Policy 6

- Development proposals that enhance, expand and improve woodland and tree cover will be supported.
- Development proposals will not be supported where they will result in:
 - Any loss of ancient woodlands, ancient and veteran trees, or adverse impact on their ecological condition;
 - Adverse impacts on native woodlands, hedgerows and individual trees of high biodiversity value, or identified for protection in the Forestry and Woodland Strategy;
 - Fragmenting or severing woodland habitats, unless appropriate mitigation measures are identified and implemented in line with the mitigation hierarchy;
 - Conflict with Restocking Direction, Remedial Notice or Registered Notice to Comply issued by Scottish Forestry.

- Development proposals involving woodland removal will only be supported where they will achieve significant and clearly defined additional public benefits in accordance with relevant Scottish Government policy on woodland removal. Where woodland is removed, compensatory planting will most likely be expected to be delivered.
- Development proposals on sites which include an area of existing woodland or land identified in the Forestry and Woodland Strategy as being suitable for woodland creation will only be supported where the enhancement and improvement of woodlands and the planting of new trees on the site (in accordance with the Forestry and Woodland Strategy) are integrated into the design.

Policy impact:

- ✓ Just Transition
- ✓ Conserving and recycling assets
- ✓ Rebalanced development
- ✓ Rural revitalisation

Historic assets and places

Policy Principles

Policy Intent:

To protect and enhance historic environment assets and places, and to enable positive change as a catalyst for the regeneration of places.

Policy Outcomes:

- The historic environment is valued, protected, and enhanced, supporting the transition to net zero and ensuring assets are resilient to current and future impacts of climate change.
- Redundant or neglected historic buildings are brought back into sustainable and productive uses.
- Recognise the social, environmental and economic value of the historic environment, to our economy and cultural identity.

Local Development Plans:

LDPs, including through their spatial strategies, should support the sustainable management of the historic environment. They should identify, protect and enhance valued historic assets and places.

Policy 7

a) Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place. The assessment should identify the likely visual or physical impact of any proposals for change, including cumulative effects and provide a sound basis for managing the impacts of change.

Proposals should also be informed by national policy and guidance on managing change in the historic environment, and information held within Historic Environment Records.

- b) Development proposals for the demolition of listed buildings will not be supported unless it has been demonstrated that there are exceptional circumstances and that all reasonable efforts have been made to retain, reuse and/or adapt the listed building. Considerations include whether the:
- i. building is no longer of special interest;
 - ii. building is incapable of physical repair and re-use as verified through a detailed structural condition survey report;
 - iii. repair of the building is not economically viable and there has been adequate marketing for existing and/or new uses at a price reflecting its location and condition for a reasonable period to attract interest from potential restoring purchasers; or
 - iv. demolition of the building is essential to delivering significant benefits to economic growth or the wider community.
- c) Development proposals for the reuse, alteration or extension of a listed building will only be supported where they will preserve its character, special architectural or historic interest and setting. Development proposals affecting the setting of a listed building should preserve its character, and its special architectural or historic interest.
- d) Development proposals in or affecting conservation areas will only be supported where the character and appearance of the conservation area and its setting is preserved or enhanced. Relevant considerations include the:
- i. architectural and historic character of the area;
 - ii. existing density, built form and layout; and
 - iii. context and siting, quality of design and suitable materials.
- e) Development proposals in conservation areas will ensure that existing natural and built features which contribute to the character of the conservation area and its setting, including structures, boundary walls, railings, trees and hedges, are retained.

- f) Demolition of buildings in a conservation area which make a positive contribution to its character will only be supported where it has been demonstrated that:
 - i. reasonable efforts have been made to retain, repair and reuse the building;
 - ii. the building is of little townscape value;
 - iii. the structural condition of the building prevents its retention at a reasonable cost; or
 - iv. the form or location of the building makes its reuse extremely difficult.
- g) Where demolition within a conservation area is to be followed by redevelopment, consent to demolish will only be supported when an acceptable design, layout and materials are being used for the replacement development.
- h) Development proposals affecting scheduled monuments will only be supported where:
 - i. direct impacts on the scheduled monument are avoided;
 - ii. significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or
 - iii. exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.
- i) Development proposals affecting nationally important Gardens and Designed Landscapes will be supported where they protect, preserve or enhance their cultural significance, character and integrity and where proposals will not significantly impact on important views to, from and within the site, or its setting.
- j) Development proposals affecting nationally important Historic Battlefields will only be supported where they protect and, where appropriate, enhance their cultural significance, key landscape characteristics, physical remains and special qualities.
- k) Development proposals at the coast edge or that extend offshore will only be supported where proposals do not significantly hinder the preservation objectives of Historic Marine Protected Areas.
- l) Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.
- m) Development proposals which sensitively repair, enhance and bring historic buildings, as identified as being at risk locally or on the national Buildings at Risk Register, back into beneficial use will be supported.
- n) Enabling development for historic environment assets or places that would otherwise be unacceptable in planning terms, will only be supported when it has been demonstrated that the enabling development proposed is:
 - i. essential to secure the future of an historic environment asset or place which is at risk of serious deterioration or loss; and
 - ii. the minimum necessary to secure the restoration, adaptation and long-term future of the historic environment asset or place.

The beneficial outcomes for the historic environment asset or place should be secured early in the phasing of the development, and will be ensured through the use of conditions and/or legal agreements.
- o) Non-designated historic environment assets, places and their setting should be protected and preserved in situ wherever feasible. Where there is potential for non-designated buried archaeological remains to exist below a site, developers will provide an evaluation of the archaeological resource at an early stage so that planning authorities can assess impacts. Historic buildings may also have archaeological significance which is not understood and may require assessment.

Where impacts cannot be avoided they should be minimised. Where it has been demonstrated that avoidance or retention is not possible, excavation, recording, analysis, archiving, publication and activities to provide public benefit may be required through the use of conditions or legal/planning obligations.

When new archaeological discoveries are made during the course of development works, they must be reported to the planning authority to enable agreement on appropriate inspection, recording and mitigation measures.

Policy impact:

Green belts

Policy Principles

Policy Intent:

To encourage, promote and facilitate compact urban growth and use the land around our towns and cities sustainably.

Policy Outcomes:

- Development is directed to the right locations, urban density is increased and unsustainable growth is prevented.
- The character, landscape, natural setting and identity of settlements is protected and enhanced.
- Nature networks are supported and land is managed to help tackle climate change.

Local Development Plans:

LDPs should consider using green belts, to support their spatial strategy as a settlement management tool to restrict development around towns and cities.

Green belts will not be necessary for most settlements but may be zoned around settlements where there is a significant danger of unsustainable growth in car-based commuting or suburbanisation of the countryside.

Green belts should be identified or reviewed as part of the preparation of LDPs. Boundary changes may be made to accommodate planned growth, or to extend, or alter the area covered as green belt. Detailed green belt boundaries should be based on evidence and should be clearly identified in plans.

Policy 8

- a) Development proposals within a green belt designated within the LDP will only be supported if:
- i) they are for:
 - development associated with agriculture, woodland creation, forestry and existing woodland (including community woodlands);
 - residential accommodation required and designed for a key worker in a primary industry within the immediate vicinity of their place of employment where the presence of a worker is essential to the operation of the enterprise, or retired workers where there is no suitable alternative accommodation available;
 - horticulture, including market gardening and directly connected retailing, as well as community growing;
 - outdoor recreation, play and sport or leisure and tourism uses; and developments that provide opportunities for access to the open countryside (including routes for active travel and core paths);
 - flood risk management (such as development of blue and green infrastructure within a “drainage catchment” to manage/mitigate flood risk and/or drainage issues);
 - essential infrastructure or new cemetery provision;
 - minerals operations and renewable energy developments;
 - intensification of established uses, including extensions to an existing building where that is ancillary to the main use;
 - the reuse, rehabilitation and conversion of historic environment assets; or
 - one-for-one replacements of existing permanent homes.
- and

ii) the following requirements are met:

- reasons are provided as to why a green belt location is essential and why it cannot be located on an alternative site outwith the green belt;
- the purpose of the green belt at that location is not undermined;
- the proposal is compatible with the surrounding established countryside and landscape character;
- the proposal has been designed to ensure it is of an appropriate scale, massing and external appearance, and uses materials that minimise visual impact on the green belt as far as possible; and
- there will be no significant long-term impacts on the environmental quality of the green belt.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development
- ✔ Rural revitalisation

Brownfield, vacant and derelict land and empty buildings

Policy Principles

Policy Intent:

To encourage, promote and facilitate the reuse of brownfield, vacant and derelict land and empty buildings, and to help reduce the need for greenfield development.

Policy Outcomes:

- Development is directed to the right locations, maximising the use of existing assets and minimising additional land take.
- The contribution of brownfield land to nature recovery is recognised and opportunities for use as productive greenspace are realised where appropriate.
- Derelict buildings and spaces are regenerated to improve wellbeing and transform our places.

Local Development Plans:

LDPs should set out opportunities for the sustainable reuse of brownfield land including vacant and derelict land and empty buildings.

Policy 9

- Development proposals that will result in the sustainable reuse of brownfield land including vacant and derelict land and buildings, whether permanent or temporary, will be supported. In determining whether the reuse is sustainable, the biodiversity value of brownfield land which has naturalised should be taken into account.
- Proposals on greenfield sites will not be supported unless the site has been allocated for development or the proposal is explicitly supported by policies in the LDP.

- Where land is known or suspected to be unstable or contaminated, development proposals will demonstrate that the land is, or can be made, safe and suitable for the proposed new use.
- Development proposals for the reuse of existing buildings will be supported, taking into account their suitability for conversion to other uses. Given the need to conserve embodied energy, demolition will be regarded as the least preferred option.

Policy impact:

- ✓ Just Transition
- ✓ Conserving and recycling assets
- ✓ Local living
- ✓ Compact urban growth
- ✓ Rebalanced development

Coastal development

Policy Principles

Policy Intent:

To protect coastal communities and assets and support resilience to the impacts of climate change.

Policy Outcomes:

- Coastal areas develop sustainably and adapt to climate change.

Local Development Plans:

LDP spatial strategies should consider how to adapt coastlines to the impacts of climate change. This should recognise that rising sea levels and more extreme weather events resulting from climate change will potentially have a significant impact on coastal and islands areas, and take a precautionary approach to flood risk including by inundation. Spatial strategies should reflect the diversity of coastal areas and opportunities to use nature-based solutions to improve the resilience of coastal communities and assets. LDP spatial strategies should identify areas of developed and undeveloped coast and should align with national, sectoral and regional marine plans.

Policy 10

- a) Development proposals in developed coastal areas will only be supported where the proposal:
 - i. does not result in the need for further coastal protection measures taking into account future sea level change; or increase the risk to people of coastal flooding or coastal erosion, including through the loss of natural coastal defences including dune systems; and
 - ii. is anticipated to be supportable in the long-term, taking into account projected climate change.
- b) Development proposals in undeveloped coastal areas will only be supported where they:
 - i. are necessary to support the blue economy, net zero emissions or to contribute to the economy or wellbeing of communities whose livelihood depend on marine or coastal activities, or is for essential infrastructure, where there is a specific locational need and no other suitable site;
 - ii. do not result in the need for further coastal protection measures taking into account future sea level change; or increase the risk to people of coastal flooding or coastal erosion, including through the loss of natural coastal defences including dune systems; and
 - iii. are anticipated to be supportable in the long-term, taking into account projected climate change; or
 - iv. are designed to have a very short lifespan.
- c) Development proposals for coastal defence measures will be supported if:
 - i. they are consistent with relevant coastal or marine plans;
 - ii. nature-based solutions are utilised and allow for managed future coastal change wherever practical; and
 - iii. any in-perpetuity hard defense measures can be demonstrated to be necessary to protect essential assets.
- d) Where a design statement is submitted with any planning application that may impact on the coast it will take into account, as appropriate, long-term coastal vulnerability and resilience.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development
- ✔ Rural revitalisation

Energy

Policy Principles

Policy Intent:

To encourage, promote and facilitate all forms of renewable energy development onshore and offshore. This includes energy generation, storage, new and replacement transmission and distribution infrastructure and emerging low-carbon and zero emissions technologies including hydrogen and carbon capture utilisation and storage (CCUS).

Policy Outcomes:

- Expansion of renewable, low-carbon and zero emissions technologies.

Local Development Plans:

LDPs should seek to realise their area's full potential for electricity and heat from renewable, low carbon and zero emission sources by identifying a range of opportunities for energy development.

Policy 11

- a) Development proposals for all forms of renewable, low-carbon and zero emissions technologies will be supported. These include:
 - i. wind farms including repowering, extending, expanding and extending the life of existing wind farms;
 - ii. enabling works, such as grid transmission and distribution infrastructure;
 - iii. energy storage, such as battery storage and pumped storage hydro;
 - iv. small scale renewable energy generation technology;
 - v. solar arrays;
 - vi. proposals associated with negative emissions technologies and carbon capture; and
 - vii. proposals including co-location of these technologies.
- b) Development proposals for wind farms in National Parks and National Scenic Areas will not be supported.
- c) Development proposals will only be supported where they maximise net economic impact, including local and community socio-economic benefits such as employment, associated business and supply chain opportunities.
- d) Development proposals that impact on international or national designations will be assessed in relation to Policy 4.
- e) In addition, project design and mitigation will demonstrate how the following impacts are addressed:
 - i. impacts on communities and individual dwellings, including, residential amenity, visual impact, noise and shadow flicker;
 - ii. significant landscape and visual impacts, recognising that such impacts are to be expected for some forms of renewable energy. Where impacts are localised and/or appropriate design mitigation has been applied, they will generally be considered to be acceptable;
 - iii. public access, including impact on long distance walking and cycling routes and scenic routes;
 - iv. impacts on aviation and defence interests including seismological recording;
 - v. impacts on telecommunications and broadcasting installations, particularly ensuring that transmission links are not compromised;
 - vi. impacts on road traffic and on adjacent trunk roads, including during construction;
 - vii. impacts on historic environment;
 - viii. effects on hydrology, the water environment and flood risk;
 - ix. biodiversity including impacts on birds;
 - x. impacts on trees, woods and forests;
 - xi. proposals for the decommissioning of developments, including ancillary infrastructure, and site restoration;
 - xii. the quality of site restoration plans including the measures in place to safeguard or guarantee availability of finances to effectively implement those plans; and
 - xiii. cumulative impacts.

In considering these impacts, significant weight will be placed on the contribution of the proposal to renewable energy generation targets and on greenhouse gas emissions reduction targets.

Grid capacity should not constrain renewable energy development. It is for developers to agree connections to the grid with the relevant network operator. In the case of proposals for grid infrastructure, consideration should be given to underground connections where possible.

- f) Consents for development proposals may be time-limited. Areas identified for wind farms are, however, expected to be suitable for use in perpetuity.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Rebalanced development

Zero waste

Policy Principles

Policy Intent:

To encourage, promote and facilitate development that is consistent with the waste hierarchy.

Policy Outcomes:

- The reduction and reuse of materials in construction is prioritised.
- Infrastructure for zero waste and to develop Scotland's circular economy is delivered in appropriate locations.

Local Development Plans:

LDPs should identify appropriate locations for new waste management infrastructure to support the circular economy and meet identified needs in a way that moves waste as high up the waste hierarchy as possible.

Policy 12

- a) Development proposals will seek to reduce, reuse, or recycle materials in line with the waste hierarchy.
- b) Development proposals will be supported where they:
 - i. reuse existing buildings and infrastructure;
 - ii. minimise demolition and salvage materials for reuse;
 - iii. minimise waste, reduce pressure on virgin resources and enable building materials, components and products to be disassembled, and reused at the end of their useful life;
 - iv. use materials with the lowest forms of embodied emissions, such as recycled and natural construction materials;
 - v. use materials that are suitable for reuse with minimal reprocessing.
- c) Development proposals that are likely to generate waste when operational, including residential, commercial, and industrial properties, will set out how much waste the proposal is expected to generate and how it will be managed including:
 - i. provision to maximise waste reduction and waste separation at source, and
 - ii. measures to minimise the cross-contamination of materials, through appropriate segregation and storage of waste; convenient access for the collection of waste; and recycling and localised waste management facilities.
- d) Development proposals for waste infrastructure and facilities (except landfill and energy from waste facilities) will be only supported where:
 - i. there are no unacceptable impacts (including cumulative) on the residential amenity of nearby dwellings, local communities; the transport network; and natural and historic environment assets;
 - ii. environmental (including cumulative) impacts relating to noise, dust, smells, pest control and pollution of land, air and water are acceptable;
 - iii. any greenhouse gas emissions resulting from the processing and transportation of waste to and from the facility are minimised;
 - iv. an adequate buffer zone between sites and sensitive uses such as homes is provided taking account of the various environmental effects likely to arise;
 - v. a restoration and aftercare scheme (including appropriate financial mechanisms) is provided and agreed to ensure the site is restored;
 - vi. consideration has been given to co-location with end users of outputs.
- e) Development proposals for new or extended landfill sites will only be supported if:
 - i. there is demonstrable need for additional landfill capacity taking into account Scottish Government objectives on waste management; and
 - ii. waste heat and/or electricity generation is included. Where this is considered impractical, evidence and justification will require to be provided.

- f) Proposals for the capture, distribution or use of gases captured from landfill sites or waste water treatment plant will be supported.
- g) Development proposals for energy-from-waste facilities will not be supported except under limited circumstances where a national or local need has been sufficiently demonstrated (e.g. in terms of capacity need or carbon benefits) as part of a strategic approach to residual waste management and where the proposal:
- i. is consistent with climate change mitigation targets and in line with circular economy principles;
 - ii. can demonstrate that a functional heat network can be created and provided within the site for appropriate infrastructure to allow a heat network to be developed and potential local consumers have been identified;
 - iii. is supported by a heat and power plan, which demonstrates how energy recovered from the development would be used to provide electricity and heat and where consideration is given to methods to reduce carbon emissions of the facility (for example through carbon capture and storage)
 - iv. complies with relevant guidelines published by Scottish Environment Protection Agency (SEPA); and
 - v. has supplied an acceptable decarbonisation strategy aligned with Scottish Government decarbonisation goals.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Compact urban growth

Sustainable transport

Policy Principles

Policy Intent:

To encourage, promote and facilitate developments that prioritise walking, wheeling, cycling and public transport for everyday travel and reduce the need to travel unsustainably.

Policy Outcomes:

- Investment in transport infrastructure supports connectivity and reflects place-based approaches and local living.
- More, better, safer and more inclusive active and sustainable travel opportunities.
- Developments are in locations which support sustainable travel.

Local Development Plans:

LDPs should prioritise locations for future development that can be accessed by sustainable modes. The spatial strategy should reflect the sustainable travel hierarchy and sustainable investment hierarchy by making best use of existing infrastructure and services.

LDPs should promote a place-based approach to consider how to reduce car-dominance. This could include low traffic schemes, shared transport options, designing-in speed controls, bus/cycle priority, pedestrianisation and minimising space dedicated to car parking. Consideration should be given to the type, mix and use of development; local living and 20 minute neighbourhoods; car ownership levels; the accessibility of proposals and allocations by sustainable modes; and the accessibility for users of all abilities.

LDPs should be informed by an appropriate and effective transport appraisal undertaken in line with relevant transport appraisal guidance. Plans should be informed by evidence of the area's transport infrastructure capacity, and an appraisal of the spatial strategy on the transport network. This should identify any potential cumulative transport impacts and deliverable

mitigation proposed to inform the plan's infrastructure first approach. Where there is likely to be an impact on the trunk road or rail network, early engagement with Transport Scotland is required.

Policy 13

- a) Proposals to improve, enhance or provide active travel infrastructure, public transport infrastructure or multi-modal hubs will be supported. This includes proposals:
 - i. for electric vehicle charging infrastructure and electric vehicle forecourts, especially where fuelled by renewable energy.
 - ii. which support a mode shift of freight from road to more sustainable modes, including last-mile delivery.
 - iii. that build in resilience to the effects of climate change and where appropriate incorporate blue and green infrastructure and nature rich habitats (such as natural planting or water systems).
- b) Development proposals will be supported where it can be demonstrated that the transport requirements generated have been considered in line with the sustainable travel and investment hierarchies and where appropriate they:
 - i. Provide direct, easy, segregated and safe links to local facilities via walking, wheeling and cycling networks before occupation;
 - ii. Will be accessible by public transport, ideally supporting the use of existing services;
 - iii. Integrate transport modes;
 - iv. Provide low or zero-emission vehicle and cycle charging points in safe and convenient locations, in alignment with building standards;
 - v. Supply safe, secure and convenient cycle parking to meet the needs of users and which is more conveniently located than car parking;
 - vi. Are designed to incorporate safety measures including safe crossings for walking and wheeling and reducing the number and speed of vehicles;

- vii. Have taken into account, at the earliest stage of design, the transport needs of diverse groups including users with protected characteristics to ensure the safety, ease and needs of all users; and
 - viii. Adequately mitigate any impact on local public access routes.
- c) Where a development proposal will generate a significant increase in the number of person trips, a transport assessment will be required to be undertaken in accordance with the relevant guidance.
- d) Development proposals for significant travel generating uses will not be supported in locations which would increase reliance on the private car, taking into account the specific characteristics of the area.
- e) Development proposals which are ambitious in terms of low/no car parking will be supported, particularly in urban locations that are well-served by sustainable transport modes and where they do not create barriers to access by disabled people.
- f) Development proposals for significant travel generating uses, or smaller-scale developments where it is important to monitor travel patterns resulting from the development, will only be supported if they are accompanied by a Travel Plan with supporting planning conditions/obligations. Travel plans should set out clear arrangements for delivering against targets, as well as monitoring and evaluation.
- g) Development proposals that have the potential to affect the operation and safety of the Strategic Transport Network will be fully assessed to determine their impact. Where it has been demonstrated that existing infrastructure does not have the capacity to accommodate a development without adverse impacts on safety or unacceptable impacts on operational performance, the cost of the mitigation measures required to ensure the continued safe and effective operation of the network should be met by the developer.

While new junctions on trunk roads are not normally acceptable, the case for a new junction will be considered by Transport Scotland where significant economic or regeneration benefits can be demonstrated. New junctions will only be considered if they are designed in accordance with relevant guidance and where there will be no adverse impact on road safety or operational performance.

Policy impact:

Liveable Places

Design, quality and place

Policy Principles

Policy Intent:

To encourage, promote and facilitate well designed development that makes successful places by taking a design-led approach and applying the Place Principle.

Policy Outcomes:

- Quality places, spaces and environments.
- Places that consistently deliver healthy, pleasant, distinctive, connected, sustainable and adaptable qualities.

Local Development Plans:

LDPs should be place-based and created in line with the Place Principle. The spatial strategy should be underpinned by the [six qualities of successful places](#). LDPs should provide clear expectations for design, quality and place taking account of the local context, characteristics and connectivity of the area. They should also identify where more detailed design guidance is expected, for example, by way of design frameworks, briefs, masterplans and design codes.

Planning authorities should use the Place Standard tool in the preparation of LDPs and design guidance to engage with communities and other stakeholders. They should also where relevant promote its use in early design discussions on planning applications.

Policy 14

- Development proposals will be designed to improve the quality of an area whether in urban or rural locations and regardless of scale.
- Development proposals will be supported where they are consistent with the six qualities of successful places:

Healthy: Supporting the prioritisation of women's safety and improving physical and mental health.

Pleasant: Supporting attractive natural and built spaces.

Connected: Supporting well connected networks that make moving around easy and reduce car dependency

Distinctive: Supporting attention to detail of local architectural styles and natural landscapes to be interpreted, literally or creatively, into designs to reinforce identity.

Sustainable: Supporting the efficient use of resources that will allow people to live, play, work and stay in their area, ensuring climate resilience, and integrating nature positive, biodiversity solutions.

Adaptable: Supporting commitment to investing in the long-term value of buildings, streets and spaces by allowing for flexibility so that they can be changed quickly to accommodate different uses as well as maintained over time.

Further details on delivering the [six qualities of successful places](#) are set out in Annex D.

- Development proposals that are poorly designed, detrimental to the amenity of the surrounding area or inconsistent with the six qualities of successful places, will not be supported.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development
- ✔ Rural revitalisation

[All other policies.](#)

Local Living and 20 minute neighbourhoods

Policy Principles

Policy Intent:

To encourage, promote and facilitate the application of the Place Principle and create connected and compact neighbourhoods where people can meet the majority of their daily needs within a reasonable distance of their home, preferably by walking, wheeling or cycling or using sustainable transport options.

Policy Outcomes:

- Places are planned to improve local living in a way that reflects local circumstances.
- A network of high-quality, accessible, mixed-use neighbourhoods which support health and wellbeing, reduce inequalities and are resilient to the effects of climate change.
- New and existing communities are planned together with homes and the key local infrastructure including schools, community centres, local shops, greenspaces, health and social care, digital and sustainable transport links.

Local Development Plans:

LDPs should support local living, including 20 minute neighbourhoods within settlements, through the spatial strategy, associated site briefs and masterplans. The approach should take into account the local context, consider the varying settlement patterns and reflect the particular characteristics and challenges faced by each place. Communities and businesses will have an important role to play in informing this, helping to strengthen local living through their engagement with the planning system.

Policy 15

- a) Development proposals will contribute to local living including, where relevant, 20 minute neighbourhoods. To establish this, consideration will be given to existing settlement pattern, and the level and quality of interconnectivity of the proposed development

with the surrounding area, including local access to:

- sustainable modes of transport including local public transport and safe, high quality walking, wheeling and cycling networks;
- employment;
- shopping;
- health and social care facilities;
- childcare, schools and lifelong learning opportunities;
- playgrounds and informal play opportunities, parks, green streets and spaces, community gardens, opportunities for food growth and allotments, sport and recreation facilities;
- publicly accessible toilets;
- affordable and accessible housing options, ability to age in place and housing diversity.

Policy impact:

- ✓ Just Transition
- ✓ Conserving and recycling assets
- ✓ Local living
- ✓ Compact urban growth
- ✓ Rebalanced development
- ✓ Rural revitalisation

Quality homes

Policy Principles

Policy Intent:

To encourage, promote and facilitate the delivery of more high quality, affordable and sustainable homes, in the right locations, providing choice across tenures that meet the diverse housing needs of people and communities across Scotland.

Policy Outcomes:

- Good quality homes are at the heart of great places and contribute to strengthening the health and wellbeing of communities.
- Provision of land in the right locations to accommodate future need and demand for new homes, supported by the appropriate infrastructure.
- More energy efficient, net zero emissions homes, supporting a greener, fairer and more inclusive wellbeing economy and community wealth building, tackling both fuel and child poverty.

Local Development Plans:

LDPs are expected to identify a Local Housing Land Requirement for the area they cover. This is to meet the duty for a housing target and to represent how much land is required. To promote an ambitious and plan-led approach, the Local Housing Land Requirement is expected to exceed the 10 year [Minimum All-Tenure Housing Land Requirement \(MATHLR\) set out in Annex E](#).

Deliverable land should be allocated to meet the 10 year Local Housing Land Requirement in locations that create quality places for people to live. Areas that may be suitable for new homes beyond 10 years are also to be identified. The location of where new homes are allocated should be consistent with local living including, where relevant, 20 minute neighbourhoods and an infrastructure first approach. In rural and island areas, authorities are encouraged to set out tailored approaches to housing which

reflect locally specific market circumstances and delivery approaches. Diverse needs and delivery models should be taken into account across all areas, as well as allocating land to ensure provision of accommodation for Gypsy/Travellers and Travelling Showpeople where need is identified.

The LDP delivery programme is expected to establish a deliverable housing land pipeline for the Local Housing Land Requirement. The purpose of the pipeline is to provide a transparent view of the phasing of housing allocations so that interventions, including infrastructure, that enable delivery can be planned: it is not to stage permissions. Representing when land will be brought forward, phasing is expected across the short (1-3 years), medium (4-6 years) and long-term (7-10 years). Where sites earlier in the deliverable housing land pipeline are not delivering as programmed, and alternative delivery mechanisms identified in the delivery programme are not practical, measures should be considered to enable earlier delivery of long-term deliverable sites (7-10 years) or areas identified for new homes beyond 10 years. De-allocations should be considered where sites are no longer deliverable. The annual Housing Land Audit will monitor the delivery of housing land to inform the pipeline and the actions to be taken in the delivery programme.

Policy 16

- a) Development proposals for new homes on land allocated for housing in LDPs will be supported.
- b) Development proposals that include 50 or more homes, and smaller developments if required by local policy or guidance, should be accompanied by a Statement of Community Benefit. The statement will explain the contribution of the proposed development to:
 - i. meeting local housing requirements, including affordable homes;
 - ii. providing or enhancing local infrastructure, facilities and services; and
 - iii. improving the residential amenity of the surrounding area.

- c) Development proposals for new homes that improve affordability and choice by being adaptable to changing and diverse needs, and which address identified gaps in provision, will be supported. This could include:
- i. self-provided homes;
 - ii. accessible, adaptable and wheelchair accessible homes;
 - iii. build to rent;
 - iv. affordable homes;
 - v. a range of size of homes such as those for larger families;
 - vi. homes for older people, including supported accommodation, care homes and sheltered housing;
 - vii. homes for people undertaking further and higher education; and
 - viii. homes for other specialist groups such as service personnel.
- d) Development proposals for public or private, permanent or temporary, Gypsy/Travellers sites and family yards and Travelling Showpeople yards, including on land not specifically allocated for this use in the LDP, should be supported where a need is identified and the proposal is otherwise consistent with the plan spatial strategy and other relevant policies, including human rights and equality.
- e) Development proposals for new homes will be supported where they make provision for affordable homes to meet an identified need. Proposals for market homes will only be supported where the contribution to the provision of affordable homes on a site will be at least 25% of the total number of homes, unless the LDP sets out locations or circumstances where:
- i. a higher contribution is justified by evidence of need, or
 - ii. a lower contribution is justified, for example, by evidence of impact on viability, where proposals are small in scale, or to incentivise particular types of homes that are needed to diversify the supply, such as self-build or wheelchair accessible homes.
- The contribution is to be provided in accordance with local policy or guidance.
- f) Development proposals for new homes on land not allocated for housing in the LDP will only be supported in limited circumstances where:
- i. the proposal is supported by an agreed timescale for build-out; and
 - ii. the proposal is otherwise consistent with the plan spatial strategy and other relevant policies including local living and 20 minute neighbourhoods;
 - iii. and either:
 - delivery of sites is happening earlier than identified in the deliverable housing land pipeline. This will be determined by reference to two consecutive years of the Housing Land Audit evidencing substantial delivery earlier than pipeline timescales and that general trend being sustained; or
 - the proposal is consistent with policy on rural homes; or
 - the proposal is for smaller scale opportunities within an existing settlement boundary; or
 - the proposal is for the delivery of less than 50 affordable homes as part of a local authority supported affordable housing plan.
- g) Householder development proposals will be supported where they:
- i. do not have a detrimental impact on the character or environmental quality of the home and the surrounding area in terms of size, design and materials; and
 - ii. do not have a detrimental effect on the neighbouring properties in terms of physical impact, overshadowing or overlooking.
- h) Householder development proposals that provide adaptations in response to risks from a changing climate, or relating to people with health conditions that lead to particular accommodation needs will be supported.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development
- ✔ Rural revitalisation

Rural homes

Policy Principles

Policy Intent:

To encourage, promote and facilitate the delivery of more high quality, affordable and sustainable rural homes in the right locations.

Policy Outcomes:

- Improved choice of homes across tenures so that identified local needs of people and communities in rural and island areas are met.
- Homes are provided that support sustainable rural communities and are linked with service provision.
- The distinctive character, sense of place and natural and cultural assets of rural areas are safeguarded and enhanced.

Local Development Plans:

LDPs should be informed by an understanding of population change over time, locally specific needs and market circumstances in rural and island areas.

LDPs should set out tailored approaches to rural housing and where relevant include proposals for future population growth – including provision for small-scale housing such as crofts and woodland crofts and the appropriate resettlement of previously inhabited areas. The Scottish Government's 6 fold Urban Rural Classification 2020 should be used to identify remote rural areas. Plans should reflect locally appropriate delivery approaches. Previously inhabited areas that are suitable for resettlement should be identified in the spatial strategy.

Policy 17

- a) Development proposals for new homes in rural areas will be supported where the development is suitably scaled, sited and designed to be in keeping with the character of the area and the development:
- i. is on a site allocated for housing within the LDP;
 - ii. reuses brownfield land where a return to a natural state has not or will not happen without intervention;
 - iii. reuses a redundant or unused building;
 - iv. is an appropriate use of a historic environment asset or is appropriate enabling development to secure the future of historic environment assets;
 - v. is demonstrated to be necessary to support the sustainable management of a viable rural business or croft, and there is an essential need for a worker (including those taking majority control of a farm business) to live permanently at or near their place of work;
 - vi. is for a single home for the retirement succession of a viable farm holding;
 - vii. is for the subdivision of an existing residential dwelling; the scale of which is in keeping with the character and infrastructure provision in the area; or
 - viii. reinstates a former dwelling house or is a one-for-one replacement of an existing permanent house.
- b) Development proposals for new homes in rural areas will consider how the development will contribute towards local living and take into account identified local housing needs (including affordable housing), economic considerations and the transport needs of the development as appropriate for the rural location.
- c) Development proposals for new homes in remote rural areas will be supported where the proposal:
- i. supports and sustains existing fragile communities;
 - ii. supports identified local housing outcomes; and

- iii. is suitable in terms of location, access, and environmental impact.
- d) Development proposals for new homes that support the resettlement of previously inhabited areas will be supported where the proposal:
- i. is in an area identified in the LDP as suitable for resettlement;
 - ii. is designed to a high standard;
 - iii. responds to its rural location; and
 - iv. is designed to minimise greenhouse gas emissions as far as possible.

Policy impact:

Infrastructure first

Policy Principles

Policy Intent:

To encourage, promote and facilitate an infrastructure first approach to land use planning, which puts infrastructure considerations at the heart of placemaking.

Policy Outcomes:

- Infrastructure considerations are integral to development planning and decision making and potential impacts on infrastructure and infrastructure needs are understood early in the development planning process as part of an evidenced based approach.
- Existing infrastructure assets are used sustainably, prioritising low-carbon solutions.
- Infrastructure requirements, and their planned delivery to meet the needs of communities, are clear.

Local Development Plans:

LDPs and delivery programmes should be based on an integrated infrastructure first approach. Plans should:

- be informed by evidence on infrastructure capacity, condition, needs and deliverability within the plan area, including cross boundary infrastructure;
- set out the infrastructure requirements to deliver the spatial strategy, informed by the evidence base, identifying the infrastructure priorities, and where, how, when and by whom they will be delivered; and
- indicate the type, level (or method of calculation) and location of the financial or in-kind contributions, and the types of development from which they will be required.

Plans should align with relevant national, regional and local infrastructure plans and policies and take account of the Scottish Government infrastructure investment hierarchy and sustainable travel and investment hierarchies in developing the spatial strategy. Consistent early engagement and collaboration between relevant stakeholders will better inform decisions on land use and investment.

Policy 18

- a) Development proposals which provide (or contribute to) infrastructure in line with that identified as necessary in LDPs and their delivery programmes will be supported.
- b) The impacts of development proposals on infrastructure should be mitigated. Development proposals will only be supported where it can be demonstrated that provision is made to address the impacts on infrastructure. Where planning conditions, planning obligations, or other legal agreements are to be used, the relevant tests will apply.

Where planning obligations are entered into, they should meet the following tests:

- be necessary to make the proposed development acceptable in planning terms
- serve a planning purpose
- relate to the impacts of the proposed development
- fairly and reasonably relate in scale and kind to the proposed development
- be reasonable in all other respects

Planning conditions should only be imposed where they meet all of the following tests. They should be:

- necessary
- relevant to planning
- relevant to the development to be permitted
- enforceable
- precise
- reasonable in all other respects

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development

Heating and cooling

Policy Principles

Policy Intent:

To encourage, promote and facilitate development that supports decarbonised solutions to heat and cooling demand and ensure adaptation to more extreme temperatures.

Policy Outcomes:

- Development is connected to expanded heat networks which use and store heat from low or zero emission sources.
- Buildings and places are adapted to more extreme temperatures.

Local Development Plans:

LDPs should take into account the area's Local Heat & Energy Efficiency Strategy (LHEES). The spatial strategy should take into account areas of heat network potential and any designated Heat Network Zones (HNZ).

Policy 19

- Development proposals within or adjacent to a Heat Network Zone identified in a LDP will only be supported where they are designed and constructed to connect to the existing heat network.
- Proposals for retrofitting a connection to a heat network will be supported.
- Where a heat network is planned but not yet in place, development proposals will only be supported where they are designed and constructed to allow for cost-effective connection at a later date.
- National and major developments that will generate waste or surplus heat and which are located in areas of heat demand, will be supported providing wider considerations, including residential amenity, are not adversely impacted. A Heat and Power Plan should demonstrate how energy recovered from the development will be used to produce electricity and heat.

- Development proposals for energy infrastructure will be supported where they:
 - repurpose former fossil fuel infrastructure for the production or handling of low carbon energy;
 - are within or adjacent to a Heat Network Zone; and
 - can be cost-effectively linked to an existing or planned heat network.
- Development proposals for buildings that will be occupied by people will be supported where they are designed to promote sustainable temperature management, for example by prioritising natural or passive solutions such as siting, orientation, and materials.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Rebalanced development

Blue and green infrastructure

Policy Principles

Policy Intent:

To protect and enhance blue and green infrastructure and their networks.

Policy Outcomes:

- Blue and green infrastructure are an integral part of early design and development processes; are designed to deliver multiple functions including climate mitigation, nature restoration, biodiversity enhancement, flood prevention and water management.
- Communities benefit from accessible, high quality blue, green and civic spaces.

Local Development Plans:

LDPs should be informed by relevant, up-to-date audits and/or strategies, covering the multiple functions and benefits of blue and green infrastructure. The spatial strategy should identify and protect blue and green infrastructure assets and networks; enhance and expand existing provision including new blue and/or green infrastructure. This may include retrofitting. Priorities for connectivity to other blue and/or green infrastructure assets, including to address cross-boundary needs and opportunities, should also be identified.

LDPs should encourage the permanent or temporary use of unused or under-used land as green infrastructure. Where this is temporary, this should not prevent future development potential from being realised.

LDPs should safeguard access rights and core paths, including active travel routes, and encourage new and enhanced opportunities for access linked to wider networks.

Policy 20

- a) Development proposals that result in fragmentation or net loss of existing blue and green infrastructure will only be supported where it can be demonstrated that the proposal would not result in or exacerbate a deficit in blue or green infrastructure provision, and the overall integrity of the network will be maintained. The planning authority's Open Space Strategy should inform this.
- b) Development proposals for or incorporating new or enhanced blue and/or green infrastructure will be supported. Where appropriate, this will be an integral element of the design that responds to local circumstances.

Design will take account of existing provision, new requirements and network connections (identified in relevant strategies such as the Open Space Strategies) to ensure the proposed blue and/or green infrastructure is of an appropriate type(s), quantity, quality and accessibility and is designed to be multi-functional and well integrated into the overall proposals.

- c) Development proposals in regional and country parks will only be supported where they are compatible with the uses, natural habitats, and character of the park.
- d) Development proposals for temporary open space or green space on unused or under-used land will be supported.
- e) Development proposals that include new or enhanced blue and/or green infrastructure will provide effective management and maintenance plans covering the funding arrangements for their long-term delivery and upkeep, and the party or parties responsible for these.

Policy impact:

- ✔ Just Transition
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development
- ✔ Rural revitalisation

Play, recreation and sport

Policy Principles

Policy Intent:

To encourage, promote and facilitate spaces and opportunities for play, recreation and sport.

Policy Outcomes:

- Natural and built environments are improved, with more equitable access to opportunities for play and recreation.
- Physical and mental health are improved through provision of, and access to, outdoor recreation, play and sport facilities.

Local Development Plans:

LDPs should identify sites for sports, play and outdoor recreation for people of all ages. This should be based on an understanding of the needs and demand in the community and informed by the planning authority's Play Sufficiency Assessment and Open Space Strategy. These spaces can be incorporated as part of enhancing and expanding blue and green infrastructure, taking account of relevant agencies' plans or policy frameworks, such as flood risk and/or water management plans. New provisions should be well-designed, high quality, accessible and inclusive.

Policy 21

- a) Development proposals which result in the loss of outdoor sports facilities will only be supported where the proposal:
 - i. is ancillary to the principal use of the site as an outdoor sports facility; or
 - ii. involves only a minor part of the facility and would not affect its use; or
 - iii. meets a requirement to replace the facility which would be lost, either by a new facility or by upgrading an existing facility to provide a better quality facility. The location will be convenient for users and the overall playing capacity of the area will be maintained; or
- iv. can demonstrate that there is a clear excess of provision to meet current and anticipated demand in the area, and that the site would be developed without detriment to the overall quality of provision.

This should be informed by the local authority's Open Space Strategy and/or Play Sufficiency Assessment and in consultation with sportscotland where appropriate.
- b) Development proposals that result in the quantitative and/or qualitative loss of children's outdoor play provision, will only be supported where it can be demonstrated that there is no ongoing or future demand or the existing play provision will be replaced by a newly created, or improved existing asset, that is better quality or more appropriate.

This should be informed by the planning authority's Play Sufficiency Assessment.
- c) Development proposals for temporary or informal play space on unused or underused land will be supported.
- d) Development proposals likely to be occupied or used by children and young people will be supported where they incorporate well-designed, good quality provision for play, recreation, and relaxation that is proportionate to the scale and nature of the development and existing provision in the area.
- e) Development proposals that include new streets and public realm should be inclusive and enable children and young people to play and move around safely and independently, maximising opportunities for informal and incidental play in the neighbourhood.
- f) New, replacement or improved play provision will, as far as possible and as appropriate:
 - i. provide stimulating environments;
 - ii. provide a range of play experiences including opportunities to connect with nature;
 - iii. be inclusive;
 - iv. be suitable for different ages of children and young people;
 - v. be easily and safely accessible by children and young people independently, including those with a disability;

- vi. incorporate trees and/or other forms of greenery;
 - vii. form an integral part of the surrounding neighbourhood;
 - viii. be well overlooked for passive surveillance;
 - ix. be linked directly to other open spaces and play areas.
- g) Development proposals that include new or enhanced play or sport facilities will provide effective management and maintenance plans covering the funding arrangements for their long-term delivery and upkeep, and the party or parties responsible for these.

Policy impact:

- ✔ Just Transition
- ✔ Compact urban growth
- ✔ Local living
- ✔ Rebalanced development
- ✔ Rural revitalisation

Flood risk and water management

Policy Principles

Policy Intent:

To strengthen resilience to flood risk by promoting avoidance as a first principle and reducing the vulnerability of existing and future development to flooding.

Policy Outcomes:

- Places are resilient to current and future flood risk.
- Water resources are used efficiently and sustainably.
- Wider use of natural flood risk management benefits people and nature.

Local Development Plans:

LDPs should strengthen community resilience to the current and future impacts of climate change, by avoiding development in areas at flood risk as a first principle. Resilience should also be supported by managing the need to bring previously used sites in built up areas into positive use; planning for adaptation measures; and identifying opportunities to implement improvements to the water environment through natural flood risk management and blue green infrastructure.

Plans should take into account the probability of flooding from all sources and make use of relevant flood risk and river basin management plans for the area. A precautionary approach should be taken, regarding the calculated probability of flooding as a best estimate, not a precise forecast. For areas where climate change is likely to result in increased flood exposure that becomes unmanageable, consideration should be given to alternative sustainable land use.

Policy 22

- a) Development proposals at risk of flooding or in a flood risk area will only be supported if they are for:
- i. essential infrastructure where the location is required for operational reasons;
 - ii. water compatible uses;
 - iii. redevelopment of an existing building or site for an equal or less vulnerable use; or.
 - iv. redevelopment of previously used sites in built up areas where the LDP has identified a need to bring these into positive use and where proposals demonstrate that long-term safety and resilience can be secured in accordance with relevant SEPA advice.

The protection offered by an existing formal flood protection scheme or one under construction can be taken into account when determining flood risk.

In such cases, it will be demonstrated by the applicant that:

- all risks of flooding are understood and addressed;
- there is no reduction in floodplain capacity, increased risk for others, or a need for future flood protection schemes;
- the development remains safe and operational during floods;
- flood resistant and resilient materials and construction methods are used; and
- future adaptations can be made to accommodate the effects of climate change.

Additionally, for development proposals meeting criteria part iv), where flood risk is managed at the site rather than avoided these will also require:

- the first occupied/utilised floor, and the underside of the development if relevant, to be above the flood risk level and have an additional allowance for freeboard; and
- that the proposal does not create an island of development and that safe access/ egress can be achieved.

- b) Small scale extensions and alterations to existing buildings will only be supported where they will not significantly increase flood risk.
- c) Development proposals will:
- i. not increase the risk of surface water flooding to others, or itself be at risk.
 - ii. manage all rain and surface water through sustainable urban drainage systems (SUDS), which should form part of and integrate with proposed and existing blue-green infrastructure. All proposals should presume no surface water connection to the combined sewer;
 - iii. seek to minimise the area of impermeable surface.
- d) Development proposals will be supported if they can be connected to the public water mains. If connection is not feasible, the applicant will need to demonstrate that water for drinking water purposes will be sourced from a sustainable water source that is resilient to periods of water scarcity.
- e) Development proposals which create, expand or enhance opportunities for natural flood risk management, including blue and green infrastructure, will be supported.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development
- ✔ Rural revitalisation

Health and safety

Policy Principles

Policy Intent:

To protect people and places from environmental harm, mitigate risks arising from safety hazards and encourage, promote and facilitate development that improves health and wellbeing.

Policy Outcomes:

- Health is improved and health inequalities are reduced.
- Safe places protect human health and the environment.
- A planned approach supports health infrastructure delivery.

Local Development Plans:

LDP spatial strategies should seek to tackle health inequalities particularly in places which are experiencing the most disadvantage. They should identify the health and social care services and infrastructure needed in the area, including potential for co-location of complementary services, in partnership with Health Boards and Health and Social Care Partnerships.

LDPs should create healthier places for example through opportunities for exercise, healthier lifestyles, land for community food growing and allotments, and awareness of locations of concern for suicide.

Spatial strategies should maintain appropriate distances between sites with hazardous substances and areas where the public are likely to be present and areas of particular natural sensitivity or interest.

Policy 23

a) Development proposals that will have positive effects on health will be supported. This could include, for example, proposals that incorporate opportunities for exercise, community food growing or allotments.

- b) Development proposals which are likely to have a significant adverse effect on health will not be supported. A Health Impact Assessment may be required.
- c) Development proposals for health and social care facilities and infrastructure will be supported.
- d) Development proposals that are likely to have significant adverse effects on air quality will not be supported. Development proposals will consider opportunities to improve air quality and reduce exposure to poor air quality. An air quality assessment may be required where the nature of the proposal or the air quality in the location suggest significant effects are likely.
- e) Development proposals that are likely to raise unacceptable noise issues will not be supported. The agent of change principle applies to noise sensitive development. A Noise Impact Assessment may be required where the nature of the proposal or its location suggests that significant effects are likely.
- f) Development proposals will be designed to take into account suicide risk.
- g) Development proposals within the vicinity of a major accident hazard site or major accident hazard pipeline (because of the presence of toxic, highly reactive, explosive or inflammable substances) will consider the associated risks and potential impacts of the proposal and the major accident hazard site/pipeline of being located in proximity to one another.
- h) Applications for hazardous substances consent will consider the likely potential impacts on surrounding populations and the environment.
- i) Any advice from Health and Safety Executive, the Office of Nuclear Regulation or the Scottish Environment Protection Agency that planning permission or hazardous substances consent should be refused, or conditions to be attached to a grant of consent, should not be overridden by the decision maker without the most careful consideration.
- j) Similar considerations apply in respect of development proposals either for or near licensed explosive sites (including military explosive storage sites).

Policy impact:

- ✔ Just Transition
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development

Digital infrastructure

Policy Principles

Policy Intent:

To encourage, promote and facilitate the roll-out of digital infrastructure across Scotland to unlock the potential of all our places and the economy.

Policy Outcomes:

- Appropriate, universal and future proofed digital infrastructure across the country.
- Local living is supported and the need to travel is reduced.

Local Development Plans:

LDPs should support the delivery of digital infrastructure, including fixed line and mobile connectivity, particularly in areas with gaps in connectivity and barriers to digital access.

Policy 24

- a) Development proposals that incorporate appropriate, universal, and future-proofed digital infrastructure will be supported.
- b) Development proposals that deliver new digital services or provide technological improvements, particularly in areas with no or low connectivity capacity, will be supported.
- c) Development proposals that are aligned with and support the delivery of local or national programmes for the roll-out of digital infrastructure will be supported.
- d) Development proposals that deliver new connectivity will be supported where there are benefits of this connectivity for communities and the local economy.
- e) Development proposals for digital infrastructure will only be supported where:
 - i. the visual and amenity impacts of the proposed development have been minimised through careful siting, design, height, materials and, landscaping, taking into account cumulative impacts and relevant technical constraints;

- ii. it has been demonstrated that, before erecting a new ground based mast, the possibility of erecting antennas on an existing building, mast or other structure, replacing an existing mast and/or site sharing has been explored; and
- iii. there is no physical obstruction to aerodrome operations, technical sites, or existing transmitter/receiver facilities.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets

Productive Places

Community wealth building

Policy Principles

Policy Intent:

To encourage, promote and facilitate a new strategic approach to economic development that also provides a practical model for building a wellbeing economy at local, regional and national levels.

Policy Outcomes:

- local economic development that focuses on community and place benefits as a central and primary consideration – to support local employment and supply chains.
- support community ownership and management of buildings and land.

Local Development Plans:

LDPs should be aligned with any strategy for community wealth building for the area. Spatial strategies should address community wealth building priorities; identify community assets; set out opportunities to tackle economic disadvantage and inequality; and seek to provide benefits for local communities.

Policy 25

- Development proposals which contribute to local or regional community wealth building strategies and are consistent with local economic priorities will be supported. This could include for example improving community resilience and reducing inequalities; increasing spending within communities; ensuring the use of local supply chains and services; local job creation; supporting community led proposals, including creation of new local firms and enabling community led ownership of buildings and assets.
- Development proposals linked to community ownership and management of land will be supported.

Policy impact:

- ✓ Just Transition
- ✓ Rebalanced development
- ✓ Rural revitalisation

Key policy connections:

- [Brownfield, vacant and derelict land and empty buildings](#)
- [Local Living and 20 minute neighbourhoods](#)
- [Business and industry](#)

Business and industry

Policy Principles

Policy Intent:

To encourage, promote and facilitate business and industry uses and to enable alternative ways of working such as home working, live-work units and micro-businesses.

Policy Outcomes:

- Recovery within the business and industry sector is sustainable and inclusive.
- Investment in the business and industrial sector contributes to community wealth building.

Local Development Plans:

LDPs should allocate sufficient land for business and industry, taking into account business and industry land audits, in particular ensuring that there is a suitable range of sites that meet current market demand, location, size and quality in terms of accessibility and services. This allocation should take account of local economic strategies and support broader objectives of delivering a low carbon and net zero economic recovery, and a fairer and more inclusive wellbeing economy.

Policy 26

- a) Development proposals for business and industry uses on sites allocated for those uses in the LDP will be supported.
- b) Development proposals for home working, live-work units and micro-businesses will be supported where it is demonstrated that the scale and nature of the proposed business and building will be compatible with the surrounding area and there will be no unacceptable impacts on amenity or neighbouring uses.
- c) Development proposals for business and industry uses will be supported where they are compatible with the primary business function of the area. Other employment uses will be supported where they will not prejudice the primary function of the area and are compatible with the business/industrial character of the area.

- d) Development proposals for business, general industrial and storage and distribution uses outwith areas identified for those uses in the LDP will only be supported where:
 - i. It is demonstrated that there are no suitable alternatives allocated in the LDP or identified in the employment land audit; and
 - ii. The nature and scale of the activity will be compatible with the surrounding area.
- e) Development proposals for business and industry will take into account:
 - i. Impact on surrounding residential amenity; sensitive uses and the natural and historic environment;
 - ii. The need for appropriate site restoration at the end of a period of commercial use.
- f) Major developments for manufacturing or industry will be accompanied by a decarbonisation strategy to demonstrate how greenhouse gas emissions from the process are appropriately abated. The strategy may include carbon capture and storage.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development

Key policy connections:

[City, town, local and commercial centres](#)

[Rural development](#)

City, town, local and commercial centres

Policy Principles

Policy Intent:

To encourage, promote and facilitate development in our city and town centres, recognising they are a national asset. This will be achieved by applying the Town Centre First approach to help centres adapt positively to long-term economic, environmental and societal changes, and by encouraging town centre living.

Policy Outcomes:

- Centres are vibrant, healthy, creative, enterprising, accessible and resilient places for people to live, learn, work, enjoy and visit.
- Development is directed to the most sustainable locations that are accessible by a range of sustainable transport modes and provide communities with easy access to the goods, services and recreational opportunities they need.

Local Development Plans:

LDPs should support sustainable futures for city, town and local centres, in particular opportunities to enhance city and town centres. They should, where relevant, also support proposals for improving the sustainability of existing commercial centres where appropriate.

LDPs should identify a network of centres that reflect the principles of 20 minute neighbourhoods and the town centre vision.

LDPs should be informed by evidence on where clustering of non-retail uses may be adversely impacting on the wellbeing of communities. They should also consider, and if appropriate, identify any areas where drive-through facilities may be acceptable where they would not negatively impact on the principles of local living or sustainable travel.

LDPs should provide a proportion of their Local Housing Land Requirements in city and town centres and be proactive in identifying opportunities to support residential development.

Policy 27

- a) Development proposals that enhance and improve the vitality and viability of city, town and local centres, including proposals that increase the mix of uses, will be supported.
- b) Development proposals will be consistent with the town centre first approach. Proposals for uses which will generate significant footfall, including commercial, leisure, offices, community, sport and cultural facilities, public buildings such as libraries, education and healthcare facilities, and public spaces:
 - i. will be supported in existing city, town and local centres, and
 - ii. will not be supported outwith those centres unless a town centre first assessment demonstrates that:
 - all centre and edge of centre options have been sequentially assessed and discounted as unsuitable or unavailable;
 - the scale of development cannot reasonably be altered or reduced in scale to allow it to be accommodated in a centre; and
 - the impacts on existing centres have been thoroughly assessed and there will be no significant adverse effect on the vitality and viability of the centres.

Town Centre First Assessment

For development proposals which are out of city/town centre and which will generate significant footfall a Town Centre First Assessment will be provided. Applicants should agree the data required with the planning authority before undertaking the assessment, and should present information on areas of dispute in a succinct and comparable form.

The town centre first assessment should:

- identify the potential relationship of the proposed development with the network of centres identified in the LDP;
- demonstrate the potential economic impact of the development and any possible displacement effects, including the net impact on jobs; and
- consider supply chains and whether local suppliers and workers will be a viable option; and
- the environmental impact of transporting goods and of staff and visitors travelling to the location.

The town centre first assessment should be applied flexibly and realistically for community, education, health and social care and sport and leisure facilities so that they are easily accessible to the communities they are intended to serve.

- c) Development proposals for non-retail uses will not be supported if further provision of these services will undermine the character and amenity of the area or the health and wellbeing of communities, particularly in disadvantaged areas. These uses include:
- i. Hot food takeaways, including permanently sited vans;
 - ii. Betting offices; and
 - iii. High interest money lending premises.

- d) Drive-through developments will only be supported where they are specifically supported in the LDP.

Town centre living

- e) Development proposals for residential development within city/town centres will be supported, including:
- i. New build residential development.
 - ii. The re-use of a vacant building within city/town centres where it can be demonstrated that the existing use is no longer viable and the proposed change of use adds to viability and vitality of the area.
 - iii. The conversion, or reuse of vacant upper floors of properties within city/town centres for residential.
- f) Development proposals for residential use at ground floor level within city/town centres will only be supported where the proposal will:
- i. retain an attractive and appropriate frontage;
 - ii. not adversely affect the vitality and viability of a shopping area or the wider centre; and
 - iii. not result in an undesirable concentration of uses, or 'dead frontages'.
- g) Development proposals for city or town centre living will take into account the residential amenity of the proposal. This must be clearly demonstrated where the proposed development is in the same built structure as:
- i. a hot food premises, live music venue, amusement arcade/centre, casino or licensed premises (with the exception of hotels, restaurants, cafés or off licences); and/or
 - ii. there is a common or shared access with licenced premises or other use likely to be detrimental to residential amenity.

Policy impact:

- ✔ Just Transition
- ✔ Conserving and recycling assets
- ✔ Local living
- ✔ Compact urban growth
- ✔ Rebalanced development
- ✔ Rural revitalisation

- [Rural development](#)
- [Tourism](#)
- [Culture and creativity](#)

Retail

Policy Principles

Policy Intent:

To encourage, promote and facilitate retail investment to the most sustainable locations that are most accessible by a range of sustainable transport modes.

Policy Outcomes:

- Retail development and the location of shops support vibrant city, town and local centres.
- Communities can access the shops and goods they need by a range of sustainable transport modes including on foot, by bike, and by public transport, as part of local living.

Local Development Plans:

LDPs should consider where there may be a need for further retail provision, this may be:

- where a retail study identifies deficiencies in retail provision in terms of quality and quantity in an area; or
- when allocating sites for housing or the creation of new communities, in terms of the need for neighbourhood shopping, and supporting local living.

LDPs should identify areas where proposals for healthy food and drink outlets can be supported.

Policy 28

- a) Development proposals for retail (including expansions and changes of use) will be consistent with the town centre first principle. This means that new retail proposals:
 - i. will be supported in existing city, town and local centres, and
 - ii. will be supported in edge-of-centre areas or in commercial centres if they are allocated as sites suitable for new retail development in the LDP.
 - iii. will not be supported in out of centre locations (other than those meeting policy 28(c) or 28(d)).
- b) Development proposals for retail that are consistent with the sequential approach (set out in a) and click-and-collect locker pick up points, will be supported where the proposed development:
 - i. is of an appropriate scale for the location;
 - ii. will have an acceptable impact on the character and amenity of the area; and
 - iii. is located to best channel footfall and activity, to benefit the place as a whole.
- c) Proposals for new small scale neighbourhood retail development will be supported where the proposed development:
 - i. contributes to local living, including where relevant 20 minute neighbourhoods and/or
 - ii. can be demonstrated to contribute to the health and wellbeing of the local community.
- d) In island and rural areas, development proposals for shops ancillary to other uses such as farm shops, craft shops and shops linked to petrol/service/charging stations will be supported where:
 - i. it will serve local needs, support local living and local jobs;
 - ii. the potential impact on nearby town and commercial centres or village/local shops is acceptable;
 - iii. it will provide a service throughout the year; and
 - iv. the likely impacts of traffic generation and access and parking arrangements are acceptable.

Policy impact:

- ✔ Local living
- ✔ Compact urban growth
- ✔ Rural revitalisation

[Rural development](#)

Rural development

Policy Principles

Policy Intent:

To encourage rural economic activity, innovation and diversification whilst ensuring that the distinctive character of the rural area and the service function of small towns, natural assets and cultural heritage are safeguarded and enhanced.

Policy Outcomes:

- Rural places are vibrant and sustainable and rural communities and businesses are supported.
- A balanced and sustainable rural population.

Local Development Plans:

LDPs should identify the characteristics of rural areas within the plan area, including the existing pattern of development, pressures, environmental assets, community priorities and economic needs of each area. The spatial strategy should set out an appropriate approach to development in rural areas which reflects the identified characteristics. The Scottish Government's 6 fold Urban Rural Classification 2020 should be used to identify remote rural areas. Spatial strategies should support the sustainability and prosperity of rural communities and economies. Previously inhabited areas which are suitable for resettlement should be identified in the spatial strategy.

Policy 29

- a) Development proposals that contribute to the viability, sustainability and diversity of rural communities and local rural economy will be supported, including:
- i. farms, crofts, woodland crofts or other land use businesses, where use of good quality land for development is minimised and business viability is not adversely affected;
 - ii. diversification of existing businesses;
 - iii. production and processing facilities for local produce and materials, for example sawmills, or local food production;
- iv. essential community services;
- v. essential infrastructure;
- vi. reuse of a redundant or unused building;
- vii. appropriate use of a historic environment asset or is appropriate enabling development to secure the future of historic environment assets;
- viii. reuse of brownfield land where a return to a natural state has not or will not happen without intervention;
- ix. small scale developments that support new ways of working such as remote working, homeworking and community hubs; or
- x. improvement or restoration of the natural environment.
- b) Development proposals in rural areas should be suitably scaled, sited and designed to be in keeping with the character of the area. They should also consider how the development will contribute towards local living and take into account the transport needs of the development as appropriate for the rural location.
- c) Development proposals in remote rural areas, where new development can often help to sustain fragile communities, will be supported where the proposal:
- i. will support local employment;
 - ii. supports and sustains existing communities, for example through provision of digital infrastructure; and
 - iii. is suitable in terms of location, access, siting, design and environmental impact.
- d) Development proposals that support the resettlement of previously inhabited areas will be supported where the proposal:
- i. is in an area identified in the LDP as suitable for resettlement;
 - ii. is designed to a high standard;
 - iii. responds to their rural location; and
 - iv. is designed to minimise greenhouse gas emissions as far as possible.
